Now, it may be admitted that, in some of the Southern States, perhaps in all of them, there cannot be found a statute which contains the words: "And be it enacted that slavery shall exist;" and this was what was denied in the Senate. But this does not shake the decision of the Supreme Court above referred to. Usage of great antiquity acquires the force of law. The denial therefore that slavery existed by virtue of an express law, or by statute law, which was intended to be denied, was no denial at all.

"That is what Judge McLean decided. It was a case of this character: a slave had eloped from the State of Kentucky; there were certain citizens of the State of Ohio who gave aid to that slave in making his escape to Canada; they were sued under the law of Congress for giving that aid, and they were held to pay damages for having aided the slave to escape. The counsel for the defence assumed as one of the grounds of defence that there was no positive law, no statute enacted in Kentucky, at least none shown upon the trial, which established slavery. Judge McLean conceded that to be the fact; but instead of that being a denial that the right of property existed in the claimant, he expressly stated in words that it was no denial at all. In the case of Jones *vs.* Vanzandt (2 McLean, 602) the same learned judge said:

In our colonial governments, and under the confederation, no general provision existed for the surrender of slaves. From our earliest history, it appears that slavery existed in all the colonies.

"How did it exist in all the colonies? Not by positive enactment, not by any positive law; it existed only by public, national law, based upon the usage of the civilized world, and the

engaging in the slave trade of the whole civilized world. That is the origin and foundation of the slave trade; that is the origin and foundation of the property of the owner of a slave to that slave; and Judge McLean decided in this case that, for the defence to assume that there was no statute, no positive law giving to the claimant of a slave a right of property in the slave, was no denial whatever of his right of property. In the case I last referred to—Jones *vs.* Vanzandt—Judge McLean said:

> From our earliest history it appears that slavery existed in all the colonies; at the adoption of the Federal Constitution it was tolerated in most of the States.
>
> Property, real or personal, takes its designation from the laws of the States. It was not the object of the Federal Government to regulate property. A Federal Government was organized by conferring on it certain delegated powers, and by imposing certain restrictions on the States. Among these restrictions it is provided that no State shall impair the obligation of the contract, nor liberate a person who is held to labor in another State from which he escaped. In this form the Constitution protects contracts and the right of the master, but it originates neither.

"There is a decision in which the right of the master to his slave is expressly recognized, and it is recognized to the form and extent of giving a judgment for a large sum of money against a citizen of Ohio who had aided a slave to make his escape; and yet the honorable Senator from New Hampshire and the honorable Senator from Maine assume that there can be no property in slaves.

"Well, sir, I have got some more law upon that subject. We are all familiar with the provision of the Constitution that authorized the reclamation of fugitive slaves from the States. We are familiar with the provision that establishes the ratio of representation on the basis of three fifths of the slaves, including all the white population and the free population. We are all familiar with the provision that bases direct taxation on the same basis of population. We are all familiar with the provision that continued the slave trade up to 1808. What did Congress do? In 1793 it passed a fugitive slave law to authorize the owners of slaves to reclaim them. That law was decided by the Supreme Court to be constitutional. Now, sir, if property cannot exist in a slave when a slave escaped from the State of Kentucky and went to Ohio, a Free State, what principle of law, or of reason, or of common sense would authorize the courts of the country to render a judgment in favor of the claimant, the owner of that slave, who pursued him into the State, against a man who aided in his escape? In 1850 another and a more efficient fugitive slave law was passed. The constitutionality of the previous fugitive slave law of 1793 came up in the case of Prigg against the State of Pennsylvania, in which the opinion of the court was rendered by Justice Story, and the other judges gave their opinions *seriatim*. Every judge of the Supreme Court decided that law to be constitutional. It would be absurd and nonsensical for the court to decide that a law is constitutional for pursuing a subject of property in a State in which subject the right of property cannot possibly exist! I will read a clause from that decision. The provision of the Constitution is in these words:

> No person held to service or labor in one State under the laws thereof, escaping into another, shall, in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered up on claim of the party to whom such service or labor may be due.

"I admit that the Legislatures may regulate the property of the owner of a slave in the slave. I admit that the Constitution treats slaves as persons as well as property; that it is murder, in my State, to kill a slave; that if a slave is treated with inhumanity, the laws provide a mode by which the slave may be taken from the inhuman owner and sold; but the law may make the same provisions in regard to horses and stock. If horses are treated with cruelty and brutality by the owners, the Legislatures of the State in which such owners live may regulate the usage which the owner may make of his horse, and compel him to observe the laws of humanity and mercy in the use even of a dumb beast, as well as of a slave. That only proves that the law makes different regulations in relation to different subjects of property, according to their nature. The law may regulate the use which the owner of real estate may make of his real estate in towns, and does. He cannot establish a potter's field upon his lot; he cannot, I believe, in my State, treat his beasts, horses at least, with barbarity. If he does, he is subject to a penal law that fines him. He cannot murder his slave. He holds possession of the slave, and has the right to the service of the slave, and that is all the property that could exist practically in a slave. A man cannot kill a slave, and barbecue him, and eat him. He would not be disposed to do that. These laws do not interfere with the just use of slave property at all. They permit to the owner of the slave every free and proper use of the slave of which that slave is capable, notwithstanding their object is to preserve the laws of humanity and mercy in the ownership of the slave; and so of a horse. But because the law makes different regulations in relation to different species of property, according to the nature and essence of that property, it does not at all prove that the property in all the classes has the same origin. That origin, as I said before, is in universal usage and custom."

Mr. Howard: "I would ask the gentleman from Kentucky, with his permission, whether all property has its origin in force? Slavery certainly has."

Mr. Davis: "Property in a horse has its origin in force. The horse has to be subdued, broken, and reduced to obedience to the laws and usages of his owner; and so of many other things. There is property in wild beasts, in the lion that once prowled in the forest. In many

articles property can exist only by force, and does exist by force.

"But that is immaterial to the issue. Here is first the Constitution declaring, and then here are the courts in all their judgments in which the question came up, deciding that property does exist in slaves, although it has its origin in force and against natural law. Let me read from the decision in the case of Prigg vs. Pennsylvania. After quoting the clause of the Constitution for the rendition of fugitive slaves, the court say:

The last clause is that, the true interpretation whereof is directly in judgment before us. Historically, it is well known that the object of this clause was to secure to the citizens of the slaveholding States the complete right and title of ownership in their slaves, as property, in every State in the Union into which they might escape from the State where they were held in servitude. The full recognition of this right and title was indispensable to the security of this species of property in all the slaveholding States; and, indeed, was so vital to the preservation of their domestic interests and institutions, that it cannot be doubted that it constituted a fundamental article, without the adoption of which the Union could not have been formed. Its true design was to guard against the doctrines and principles prevalent in the non-slaveholding States, by preventing them from intermeddling with, or obstructing or abolishing the rights of the owners of slaves.—16 *Peters's Reports*, p. 611.

"Could anything be more clear or specific? Here the right of property of the owner in the slave is fully recognized by the decision of the Supreme Court. That decision was rendered by Mr. Justice Story, and all the other members of the court sanctioned and approved the same principle. He states it as a matter of history that the incorporation of the article recognizing the full right of the owners of slaves to that property and providing that if they escaped and went into other States the laws of those other States should in no degree and to no extent interfere with the right of the owner to the slave, was the essential condition upon which the Constitution was formed and without which it never would have been formed. Any gentleman who reads Mr. Madison's Papers, in which he gives the propositions and debates of the convention upon the subject of slavery, will, if his mind is not wholly obfuscated by prejudice, give immediate consent to the proposition here laid down by Judge Story. I could refer to a dozen cases decided by the Supreme Court of the United States and by the circuit court of Ohio, of which Judge McLean was presiding judge, recognizing in the most distinct and unqualified terms the right of property of the owner of a slave. There have been various cases tried in that State and in Indiana, and in Michigan, in which all these questions came up, and in every solitary case it was urged in the clearest and most conclusive legal logic that the right of the master to pursue his slave and take him wherever he found him without committing a breach of the peace, was secured to him by the Constitution and by the fugitive slave law; and that if any citizen interfered with that right and aided the slave in making his escape, that citizen should respond to the claimant of the slave in the amount of the damages which he sustained by such interference. The ordinance of 1787 has a peculiar provision in relation to the reclamation of slaves. There was a slave sought to be reclaimed from Indiana in contravention to that provision—I have the case here—and Judge McLean decided explicitly that the provision of the Constitution of the United States and the fugitive slave law controlled and overruled the provision in the ordinance of 1787, and authorized the reclamation of the slaves precisely according to the letter of the Constitution and of the fugitive slave law."

The question was subsequently taken on the bill, when it was passed by the following vote:

YEAS.—Messrs. Anthony, Browning, Chandler, Clark, Collamer, Dixon, Doolittle, Fessenden, Foote, Foster, Grimes, Hale, Harlan, Harris, Howard, Howe, King, Lane of Indiana, Lane of Kansas, Morrill, Pomeroy, Sherman, Sumner, Ten Eyck, Trumbull, Wade, Wilkinson, Wilmot, and Wilson of Massachusetts —29.

NAYS.—Messrs. Bayard, Carlile, Davis, Henderson, Kennedy, Latham, McDougall, Nesmith, Powell, Saulsbury, Stark, Willey, Wilson of Missouri, and Wright —14.

The debate in the House on this bill was brief. Mr. Nixon, of New Jersey, Mr. Blair, of Missouri, Mr. Bingham, Mr. Riddle, of Ohio, and Mr. Crittenden, of Kentucky, were the principal speakers.

Mr. Crittenden thus expressed his views of the measure: "The immediate question before us is the abolition of slavery in the District of Columbia. That is the object proposed in the bill under consideration. It has been a question for a long time agitating the country. For the first thirty or forty years of our existence as a nation, the records of Congress bear no evidence of any such motion ever having been made, of any measure having ever been proposed for the abolition of slavery here, or to change the condition in which the Government accepted and found it. It was only, sir, when a new spirit sprung up in the land, when a new agitation commenced for the abolition of slavery generally, that this feeling concentrated, in some degree, upon the District of Columbia, and from that time down to the present, with an always persevering purpose, this measure has been pressed. It has been rejected time and again. It has been judged impolitic by our predecessors, or beyond their power. For one reason or another, Congress has always refused to act upon the subject. These are the lessons of the past. In the earliest and purest and best and palmiest days of the Republic no attempt was ever made to pass such a measure; and for the last twenty-five or thirty years it has been presented only to be rejected. The Senate of the United States has now given its sanction to the measure, and it is before you for your final consideration.

"Of all inauspicious times, it seems to me

that this is the most inauspicious for the measure which we are called upon to adopt. We are not only engaged in this tremendous war, now, I trust, coming to its end, but we are engaged in a war founded upon the apprehension of the people that it is the intention of Congress ultimately to violate the constitutional rights of the different States in adopting or rejecting slavery as they please. It is that apprehension which has kindled this war. No one will dispute that. Whether it was the real motive with this or that leader, or whether they had other and more traitorous views, it is not necessary to determine.

"The masses of the people, so far as they were influenced by any political considerations, were, I say, influenced to unite in this rebellion by the apprehension of such an intention on the part of Congress. I believed then, and I believe now, that they are mistaken, and that the Congress of the United States will not exercise any such unconstitutional power over them. But that was their apprehension. They are now laboring under that apprehension. Under that apprehension they have fought with fury against us. Out of that apprehension has been attempted to be deduced by the leaders of the rebellion every motive to continued resistance and to everlasting hostility to us. That is our condition now, and it is under these circumstances that this bill is introduced, and we are asked to pass it. What will be the effect of it? Will it not, in the minds of the suspicious, and even of the unsuspicious, strengthen an opinion that that is the purpose of Congress? If it were entirely unconnected with any question of slavery in the States, it might be of less importance; but in principle and in character it is connected with it, and it will be so considered, at any rate, by those in rebellion. It will be considered as an evidence of the general purpose and intent of Congress. I do not say that you have not the power; but would not that power be, at such a time as this, most unwisely and indiscreetly exercised. That is the point. Of all the times when an attempt was ever made to carry this measure, is not this the most inauspicious? Is it not a time when the measure is most likely to produce danger and mischief to the country at large? So it seems to me.

"But are the views of gentlemen limited merely to giving to the slaves of this District the benefit of the law? Those who urge it will have more candor than to say so. They do not limit their views merely to the locality of this District. No, sir, it is the commencement of a great system; it is the beginning, not the end. You try your power here. You execute it here. This thing done, it opens the prospect of further action, and of further disturbance of the community. Having done it here, where it involves, perhaps, in the judgment of men, nothing but a mere question of good faith, the measure can be effected elsewhere, where it will involve a question scarcely less vital—a question of constitutional power. You are trying your strength now. You are practising for the greater combat. From this ground, occupied as a sort of camp for the purpose, it is suspected you intend to make war on the same institution in the States.

"It seems to me, Mr. Chairman, that that apprehension will be increased by another thing, by another consideration. This measure might be of itself of but little significance, if it could be entirely limited to the District of Columbia. If that was to be 'the be-all and the end-all' of it, it might not be a thing worth debating. But, sir, we cannot avoid connecting it with the whole system that has been presented to us here for the abolition of slavery elsewhere. There are now on our table from ten to twenty propositions of one sort or another, all contemplating the confiscation, or, in terms, the liberation of the slaves of the people of the United States. This is one of them. The public mind cannot avoid making the connection. This is but one link in the chain, and a small one; but it is a link in the mighty chain of measures which are in progress here now. It is that which gives it its most disastrous effect. Is there not, then, danger that we create a feeling of apprehension which will disturb our country—to what extent we cannot imagine? The weary rebels, who are now fainting under the defeats which our brave army has inflicted on them, will feel a new desperation with every new assurance that peace is to bring the spoliation of their property of all descriptions. It will inspire an instinctive spirit of hostility and desperation. That is the nature of man."

The vote was finally taken in the House on the bill with the following result:

YEAS.—Messrs. Aldrich, Alley, Arnold, Ashley, Babbitt, Baker, Baxter, Beaman, Bingham, Francis P. Blair, Samuel S. Blair, Blake, George H. Browne, Buffinton, Campbell, Chamberlin, Clark, Colfax, Frederick A. Conkling, Roscoe, Conkling, Covode, Davis, Dawes, Delano, Diven, Duell, Dunn, Edgerton, Edwards, Eliot, English, Fenton, Fessenden, Fisher, Franchot, Frank, Gooch, Goodwin, Granger, Haight, Hale, Hanchett, Harrison, Hickman, Hooker, Hutchins, Julian, Kelley, Francis W. Kellogg, Killinger, Lansing, Loomis, Lovejoy, McKnight, McPherson, Mitchell, Moorhead, Anson P. Morrill, Justin S. Morrill, Nixon, Odell, Olin, Patton, Pike, Porter, Potter, Alexander H. Rice, John H. Rice, Riddle, Edward H. Rollins, Sargent, Sedgwick, Shanks, Sheffield, Shellabarger, Sloan, Spaulding, Stevens, Stratton, Benjamin F. Thomas, Train, Trowbridge, Van Horn, Van Valkenburg, Verree, Wallace, E. P. Walton, Washburne, Wheeler, Albert S. White, Wilson, and Windom—92.

NAYS.—Messrs. Allen, Joseph Baily, Biddle, Jacob B. Blair, William G. Brown, Casey, Crittenden, Delaplaine, Dunlap, Grider, Hall, Harding, Holman, Johnson, Knapp, Law, Lazear, Mallory, Menzies, Morris, Noble, Norton, Nugen, Pendleton, Perry, Price, James S. Rollins, Shiel, John B. Steele, William G. Steele, Francis Thomas, Vallandigham, Voorhees, Wadsworth, Ward, Chilton A. White, Wickliffe, and Wright—38.

After being signed by the President it was returned to the Senate with the following Message:

Fellow Citizens of the Senate and House of Representatives:

The act entitled "An act for the release of certain persons held to service or labor in this District of Columbia," has this day been approved and signed.

I have never doubted the constitutional authority of Congress to abolish slavery in this District; and I have ever desired to see the national capital freed from the institution in some satisfactory way. Hence there has never been in my mind any question upon the subject except the one of expediency, arising in view of all the circumstances. If there be matters within and about this act which might have taken a course or shape more satisfactory to my judgment, I do not attempt to specify them. I am gratified that the two principles of compensation and colonization are both recognized and practically applied in the act.

In the matter of compensation, it is provided that claims may be presented within ninety days from the passage of the act, "but not thereafter;" and there is no saving for minors, *femmes covert*, insane, or absent persons. I presume this, is an omission by mere oversight, and I recommend that it be supplied by an amendatory or supplemental act.

ABRAHAM LINCOLN.

April 16, 1862.

In the Senate, on the 11th of February, Mr. Sumner offered the following resolutions:

Resolutions declaratory of the relations between the United States and the territory once occupied by certain States, and now usurped by pretended Governments, without constitutional or legal right.

Whereas, certain States, rightfully belonging to the Union of the United States, have through their respective governments wickedly undertaken to abjure all those duties by which their connection with the Union was maintained; to renounce all allegiance to the Constitution; to levy war upon the national Government; and, for the consummation of this treason, have unconstitutionally and unlawfully confederated together, with the declared purpose of putting an end by force to the supremacy of the Constitution within their respective limits; and whereas this condition of insurrection, organized by pretended governments, openly exists in South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas, Arkansas, Tennessee, and Virginia, except in Eastern Tennessee and Western Virginia, and has been declared by the President of the United States, in a proclamation duly made in conformity with an act of Congress, to exist throughout this territory, with the exceptions already named; and whereas the extensive territory, thus usurped by these pretended governments and organized into a hostile confederation, belongs to the United States, as an inseparable part thereof, under the sanctions of the Constitution, to be held in trust for the inhabitants in the present and future generations, and is so completely interlinked with the Union that it is forever dependent thereupon; and whereas the Constitution, which is the supreme law of the land, cannot be displaced in its rightful operation within this territory, but must ever continue the supreme law thereof, notwithstanding the doings of any pretended governments acting singly or in confederation, in order to put an end to its supremacy: therefore,

1. *Resolved*, That any vote of secession or other act by which any State may undertake to put an end to the supremacy of the Constitution within its territory is inoperative and void against the Constitution, and when sustained by force it becomes a practical abdication by the State of all rights under the Constitution, while the treason which it involves still further works an instant forfeiture of all those functions and powers essential to the continued existence of the State as a body politic, so that from that time forward the territory falls under the exclusive jurisdiction of Congress, as other territory, and the State being, according to the language of the law, *felo-de-se*, ceases to exist.

2. *Resolved*, That any combination of men assuming to act in the place of such State, and attempting to insnare or coerce the inhabitants thereof into a confederation hostile to the Union, is rebellious, treasonable, and destitute of all moral authority; and that such combination is a usurpation, incapable of any constitutional existence, and utterly lawless, so that everything dependent upon it is without constitutional or legal support.

3. *Resolved*, That the termination of a State under the Constitution necessarily causes the termination of those peculiar local institutions which, having no origin in the Constitution or in those natural rights which exist independent of the Constitution, are upheld by the sole and exclusive authority of the State.

4. *Resolved*, That slavery being a peculiar local institution, derived from local laws, without any origin in the Constitution or in natural rights, is upheld by the sole and exclusive authority of the State, and must therefore cease to exist legally or constitutionally when the State on which it depends no longer exists; for the incident cannot survive the principal.

5. *Resolved*, That in the exercise of its exclusive jurisdiction over the territory once occupied by the States, it is the duty of Congress to see that the supremacy of the Constitution is maintained in its essential principles, so that everywhere in this extensive territory slavery shall cease to exist practically, as it has already ceased to exist constitutionally or legally.

6. *Resolved*, That any recognition of slavery in such territory, or any surrender of slaves under the pretended laws of the extinct States by any officer of the United States, civil or military, is a recognition of the pretended governments, to the exclusion of the jurisdiction of Congress under the Constitution, and is in the nature of aid and comfort to the rebellion that has been organized.

7. *Resolved*, That any such recognition of slavery or surrender of pretended slaves, besides being a recognition of the pretended governments, giving them aid and comfort, is a denial of the rights of persons who, by the extinction of the States, have become free, so that, under the Constitution, they cannot again be enslaved.

8. *Resolved*, That allegiance from the inhabitants and protection from the Government, are corresponding obligations, dependent upon each other, so that while the allegiance of every inhabitant of this territory, without distinction of color or class, is due to the United States, and cannot in any way be defeated by the action of any pretended government, or by any pretence of property or claim to service, the corresponding obligation of protection is at the same time due by the United States to every such inhabitant, without distinction of color or class; and it follows that inhabitants held as slaves, whose paramount allegiance is due to the United States, may justly look to the national Government for protection.

9. *Resolved*, That the duty directly cast upon Congress by the extinction of the States is reënforced by the positive prohibition of the Constitution that "no State shall enter into any confederation," or "without the consent of Congress keep troops or ships-of-war in time of peace or enter into any agreement or compact with another State," or "grant letters of marque and reprisal," or "coin money," or "emit bills of credit," or "without the consent of Congress lay any duties on imports and exports," all of which have been done by these pretended governments, and also by the positive injunction of the Constitution, addressed to the nation, that, "the United States shall guarantee to every State in this Union a republican form of government;" and that in pursuance of this duty cast upon Congress, and further enjoined by the Constitution, Congress will assume complete jurisdiction of such vacated territory where such unconstitutional and illegal things have been attempted, and will proceed to establish therein republican forms of government under the Constitution; and in the execution of this trust will provide carefully for the protection of all the inhabitants thereof, for the security of families, the organization of labor,

the encouragement of industry, and the welfare of society, and will in every way discharge the duties of a just, merciful, and paternal government.

Subsequently Mr. Davis, of Kentucky, submitted the following on the same subject:

1. *Resolved*, That the Constitution of the United States is the fundamental law of the Government, and the powers established and granted, and as pointed out and vested by it, the limitations and restrictions which it imposes upon the legislative, executive, and judicial departments, and the States, and the rights, privileges, and liberties which it assures to the people of the United States and the States, respectively, are fixed, permanent, and immutable through all the phases of peace and war, until changed by the power and in the mode prescribed by the Constitution itself; and they cannot be abrogated, restricted, enlarged, or differently apportioned or vested, by any other power or in any other mode.

2. *Resolved*, That between the Government and the citizen, the obligation of protection and obedience form mutual rights and obligations; and to enable every citizen to perform his obligations of obedience and loyalty to the Government, it should give him reasonable protection and security in such performance; and when the Government fails in that respect, for it to hold the citizen to be criminal in not performing the duties of loyalty and obedience, would be unjust, inhuman, and an outrage upon this age of Christian civilization.

3. *Resolved*, That if any powers of the Constitution or Government of the United States, or of the States, or any rights, privileges, immunities, and liberties of the people of the United States, or of the States, are or may hereafter be suspended by the existence of this war, or by any promulgation of martial law, or by the suspension of the writ of *habeas corpus*, immediately upon the termination of the war, such powers, rights, privileges, immunities, and liberties would be resumed, and would have force and effect as though they had not been suspended.

4. *Resolved*, That the duty of the Congress to guaranty to every State a republican form of government, to protect each of them against invasion, and, on the application of the Legislature or Executive thereof, against domestic violence; and to enforce the authority, Constitution, and laws of the United States in all the States, are constitutional obligations which abide all times and circumstances.

5. *Resolved*, That no State can, by any vote of secession, or by rebellion against the authority, Constitution, and laws of the United States, or by any other act, abdicate her rights and obligations under that Constitution or those laws, or absolve her people from their obedience to them, or the United States from their obligation to guaranty to such State a republican form of government, and to protect her people by causing the due enforcement within her territories of the authority, Constitution, and laws of the United States.

6. *Resolved*, That there cannot be any forfeiture or confiscation of the rights of person or property of any citizen of the United States who is loyal and obedient to the authority, Constitution, and laws thereof; or of any person whatsoever, unless for acts which the law has previously declared to be criminal, and for the punishment of which it has provided such forfeiture or confiscation.

7. *Resolved*, That it is the duty of the United States to subdue and punish the existing rebellion, by force of arms and civil trials, in the shortest possible time, and with the least cost to the people, but so decisively and thoroughly as to impress upon the present and future generations as a great truth that rebellion, except for grievous oppression of Government, will bring upon the rebels incomparably more of evil than obedience to the Constitution and the laws.

8. *Resolved*, That the United States Government should march their armies into all the insurgent States and promptly put down the military power which they have arrayed against it, and give protection and security to the loyal men thereof, to enable them to reconstruct their legitimate State governments, and bring them and the people back to the Union and to obedience and duty, under the Constitution and the laws of the United States, bearing the sword in one hand and the olive branch in the other; and whilst inflicting on the guilty leaders condign and exemplary punishment, granting amnesty and oblivion to the comparatively innocent masses. And if the people of any State cannot or will not reconstruct their State government and return to loyalty and duty, Congress should provide a government for such State as a territory of the United States, securing to the people thereof their appropriate constitutional rights.

No special debate took place on the first series of these resolutions. They did not meet with favor either in Congress or among the people.

In the House, on the 10th of March, the following resolution was introduced by Mr. R. Conkling. The resolution was recommended by the President in his Message to Congress on the 6th of March. (*See* PUBLIC DOCUMENTS.)

Resolved by the Senate and House of Representatives of the United States in Congress assembled, That the United States ought to coöperate with any State which may adopt gradual abolishment of slavery, giving to such State pecuniary aid, to be used by such State in its discretion, to compensate for the inconveniences, public and private, produced by such change of system.

A motion was made to postpone the consideration of the resolution, which was lost. Mr. Wickliffe, of Kentucky, then took the floor. He asked: "Where, sir, do you find the power in the Constitution to appropriate the money of the people to carry out the purposes of this resolution? I made the same pertinent inquiry yesterday, and the response was that it was to be found in the preamble of the Constitution of the United States, in the words 'to provide for the general welfare.' It was alleged that it was competent for the legislative department of the Government, under these words in the preamble of the Constitution, 'to provide for the general welfare,' to do anything and everything which could be considered as promotive of the general welfare. I have spent some time in the practice of my profession; I have spent some portion of my life in the public service, especially in the halls of legislation, national and State, yet in all my life I have never before heard any lawyer or statesman claim the right or the power under the recitals in the preamble of the Constitution which is now so boldly asserted. Never before this present Congress have I heard that any such power was delegated under the phrase in the preamble in the Constitution, 'provide for the general welfare.' Under this pretence of power, Congress might think that it would be advancing the interests of the General Government to dot the whole country over with turnpikes, railroads, and bridges, or with schools and colleges, or to do anything or everything that a legislative body, unrestrained by a constitution, may do for the benefit of the people. I thought that this idea of a general-welfare power had long since been exploded by our statesmen and

jurists and courts whenever it was attempted to be asserted in the State or Federal tribunals. If you were to allow that to be taken as a granting power in the Constitution, then there is no limit to which the Federal Government or Congress may not go.

"But we are told that this measure is to be consummated under the war power. It is alleged that we are now in a state of war, and we are told that the Constitution is, therefore, to be disregarded. It is said that whatever is necessary to carry on this war to a successful conclusion, may be done with perfect freedom under the license and authority, not of the Constitution, but as a military necessity. I deny that a state of war, and especially the present state of war, enlarges the power of Congress. I believe that Congress is vested with no more power than the people have already given to it for the purpose of doing all that is necessary and proper to carry on this or any other war.

"Is it necessary and proper, while pretending to restore this Constitution all over the territory of the United States, that we should repudiate the authority and power of the Constitution? I greatly fear there are many who desire more the emancipation of the slaves of the South than the restoration of the Union of the States. If it had not been for that strong desire, I think that we would never have heard of this military-necessity power."

Mr. Diven, of New York, replied: "The distinguished gentleman from Kentucky (Mr. Wickliffe) inquired under what clause of the Constitution the power was derived by which we could enact a law providing for the payment of emancipated slaves. Sir, it seems to me it is too late to raise or discuss that question. It has long since been passed upon; and if the testimony of distinguished statesmen, lawyers, and jurors in times past will have weight with the gentleman, I can mention, I think, a number of cases in which the same question was involved and passed upon. I can remind him of an early day when a bill was introduced into this Congress, when Kentucky was represented on this floor by one of her sons of whom she is always proud, a bill was introduced making an appropriation for the establishment of an asylum for the deaf and dumb, when this very question of want of power to make such an appropriation was raised, and it was most eloquently and successfully answered by Henry Clay, in which the existence of the power in Congress to pass laws having reference to the amelioration of the condition of any portion of the people of the country was regarded as within the scope of the Constitution.

"Well, sir, from that time down to the present, the question has often been raised as to the appropriation of the money of the United States or the property of the United States for the benefit or amelioration of citizens of the United States, and it has always been acquiesced in, and appropriations have been made from time to time the purpose of which was the education or aid of the unfortunate. There are many instances which I could mention. I have not taken the pains to brief the cases; but I am reminded by my colleague of the expedition to the Dead Sea, an expedition for scientific purposes, for the increase of general knowledge. I place this resolution upon the ground that it is for the amelioration of a race of men, most unfortunately, as I think, placed upon this continent. Another gentleman mentions the case of affording relief to the starving poor of Ireland. Yes, sir, if I were to receive the suggestion of all the cases which could be mentioned in which this power has been exercised by Congress, I should occupy the time of the House for a long period. It is too late, in my judgment, to raise this question."

Mr. Fisher, of Delaware, said: "I rather view it as an olive branch of peace and harmony and good faith presented to the border States, and indeed to all the Southern States—even those which have seceded. I see in its adoption a settlement and a final settlement of all angry discussion and agitation upon this terrible question of slavery, which comes up here and in almost all public deliberative bodies in this country, like Satan among the sons of God, to afflict and destroy our happiness and prosperity. I hear, in its kindly invitation, the voice of the mighty North, composed of twenty millions of free white men—men who labor for themselves—having the power now to overrun and lay waste the entire southern country and liberate its slaves."

Mr. Hickman, of Pennsylvania, followed, saying: "It is, in my judgment, simply a declaration of opinion as to a policy, and nothing more. As I look at it, it is rather a compensation to the North for disappointed hopes, and a warning to the people of the border Slave States, who are most interested at the present moment in the subject to which it makes special reference. The President of the United States cannot be ignorant of the fact that he has, thus far, failed to meet the just expectation of the party which elected him to the office he holds; and his friends are to be comforted, not so much by the resolution itself as by the body of the Message, while the people of the border Slave States will not fail to observe that with the comfort to us is mingled an awful warning to them."

The vote was subsequently taken on the resolution and it was adopted. Ayes, 89; noes, 31.

In the Senate, on the 24th of March, this resolution as adopted by the House, was considered.

Mr. Saulsbury, of Delaware, took the floor, saying: "It is to my mind the most extraordinary resolution that was ever introduced into an American Congress; extraordinary in its origin; extraordinary in reference to the source from whence it proceeds; extraordinary in the object which it comtemplates; mischievous in

its tendency; and I am not at all sure that it is anywise patriotic, even in its design. Sir, it is an ignoring of the policy which has always been proclaimed by the party now in power. I am not a member of that party, and I thank my God to-day that I never was and never expect to be, especially after the introduction of such a resolution as this into the Congress of the United States. What was the declaration made by that party before the recent presidential election? What have been their declarations ever since they came into power? It was that they did not intend nor contemplate any interference with the subject of domestic slavery within the States.

"It is folly to say that this is not an interference with the domestic institution of slavery in the States. To be sure, it does not propose, by force and in terms, to liberate the slaves in the slaveholding States. It does not say, "If you do not emancipate them, we will;" but it is an interference in this wise and to this extent: it is an attempt to awaken a controversy in those States, to initiate emancipation in those States, to commence the work of abolition in those States, by holding out pecuniary aid to the States, by holding out an inducement. That is virtually as much an interference as though they had proposed directly and by force to liberate the slaves in those States. It is not an interference of the same character and of the same kind; but still it is an interference with the subject of domestic slavery within the States.

"Now, sir, where is the propriety for the introduction of such a resolution as this? Has any one of those States asked your aid? Has any one of them suggested that they would like to be relieved from this incubus of slavery, if incubus it be? Have they called upon you for advice? Have the persons interested in this question sent any petition here asking the Congress of the United States to aid them in the work of emancipation? If they have not asked your aid, I submit that your proffered aid is not very delicate, to say the least of it; and when I say this, I say it because, representing one of those States, the smallest slaveholding State in the Union, I have a right to say it, because my State has said it.

"But, sir, there is another consideration involved in this resolution. I should like some one of the members of the Judiciary Committee, who are presumed to be gentlemen learned in the law, to show me any authority in the Constitution of the United States for this Government to apply money in freeing the slaves in the States."

Mr. Davis, of Kentucky, offered the following amendment:

Although the whole subject of slavery in the States is exclusively within the jurisdiction and cognizance of the government and people of the States respectively having slaves, and cannot be interfered with directly or indirectly by the Government of the United States, yet when any of those States or their people may determine to emancipate their slaves, the United States will pay a reasonable price for the slaves they may emancipate, and the cost of their colonization in some other country.

Mr. Sherman, of Ohio, objected to the amendment. He thought the President's resolution carefully excluded the idea that Congress had any right to interfere with slavery in the States. It contained two or three simple propositions. One was that, whenever any State desired to relieve itself of the existence of slavery, the General Government would help that State to the extent of its ability, without pointing out the mode or manner. It was a simple proposition. It recognized the right of each State to regulate and control its domestic institutions in the broadest terms. The language was simple and plain. He hoped, therefore, that no amendment would be allowed to pass.

Mr. Davis, of Kentucky, admitted that the general principle both of the original resolution and of the substitute which he had offered was the same; but the substitute proceeded to define the nature and the extent of the assistance that the Congress of the United States was disposed to give to the States where slavery existed or to individual slaveholders in those States, provided they should proceed in the work of emancipation. He wanted Congress to express its will and its purpose in relation to that particular view of this subject. The original resolution on that point was wholly indefinite.

Mr. Doolittle, of Wisconsin, desired to say that he understood the resolution suggested by the President covered two ideas: first, emancipation by the States at their own pleasure, in their own way, either immediately or gradual; and, second, the idea of colonization, a thing believed to be necessary to go along side by side with emancipation by nine tenths of the people of the States interested, and without which they declare emancipation impossible. The resolution did not mention compensation or colonization either, but implied and looked to both.

Mr. Saulsbury, of Delaware, said: "It is all folly to say that the proposition made by the President is the same as that made by the Senator from Kentucky. The Senator from Kentucky proposes, in plain words, to pledge the faith of this Government that the value of the slaves shall be paid upon emancipation. The proposition of the President promises nothing. It does not say that slaveholders, when the slaves are liberated, shall ever receive a dollar. It is a vague, unmeaning proposition, saying that Congress ought to coöperate; not saying that Congress will, not saying how Congress shall coöperate, not saying that Congress shall pay the value of the slaves, as is said by the proposition of the Senator from Kentucky."

Mr. Browning, of Illinois, insisted that the joint resolution did not propose any interference whatever on the part of the General Government with the question of slavery in the States or elsewhere. It was simply a declara-

tion that, in the event of any State hereafter choosing to enter upon a system of gradual emancipation of slaves, or gradual abolishment of slavery, the United States ought to coöperate with that State by giving it pecuniary aid, to be used by the State, in its discretion, to compensate for the inconveniences, public and private, produced by such change of system.

Mr. McDougall, of California, expressed his views thus: "I have learned in the school wherein I studied the Constitution of my country, that this Federal Government was one of limited powers, contained and defined in the grant of powers, and that nothing was granted to this Federal Government but for the purposes of administration and government—for public and general purposes. Is there or is there not any limitation upon the Federal Government in disposing of the moneys assessed upon the people, and brought into the Federal Treasury? May it or may it not be expended for any and for every purpose? If they can be expended for all purposes or for any purpose in the will of Congress, then there can be no objection to this measure, so far as the question of power is concerned. But if there be a limitation, I would ask what limitation? And then, if I were to answer the question I asked, I would for its resolution look to the Constitution. It is not at this time denied but that the Federal power is power granted by the terms, express or implied, in the Constitution. The power granted is the limit of power. The question then is, Is this a power granted? That is, the power to take money from the Federal Treasury, not for the purposes of government, not for any purpose indicated in that instrument, but as a charity to any one of the States of the Union who may come and ask a particular charity at its hands. I do not myself, with the instructions I have had, understand that we have the constitutional right to make ourselves almoners for the States of this Union any more than we have for the States of Europe."

The amendment of Mr. Davis was lost—ayes 4, noes 34—and the resolution was subsequently passed, as follows:

YEAS.—Messrs. Anthony, Browning, Chandler, Clark, Collamer, Davis, Dixon, Doolittle, Fessenden, Foot, Foster, Grimes, Hale, Harlan, Henderson, Howard, Howe, King, Lane of Indiana, Lane of Kansas, Morrill, Pomeroy, Sherman, Sumner, Ten Eyck, Thomson, Trumbull, Wade, Wilkinson, Willey, Wilmot, and Wilson of Massachusetts—32.

NAYS.—Messrs. Bayard, Carlile, Kennedy, Latham, Nesmith, Powell, Saulsbury, Stark, Wilson of Missouri, and Wright—10.

The resolution, as adopted, was as follows:

That the United States ought to coöperate with any State which may adopt gradual abolishment of slavery, giving to such State pecuniary aid, to be used by such State in its discretion, to compensate for the inconveniences, public and private, produced by such change of system. (*See* PUBLIC DOCUMENTS.)

In the Senate, on the 25th of February, the bill "to confiscate the property of rebels," &c., was taken up.

The confiscation of the property of the people of the seceded States became a subject of great interest at this session of Congress. It was anticipated by those members who introduced the proposition before Congress, that by an act of this nature the slaves could be reached and emancipated. The views presented in favor of, and against this measure, possess the highest importance.

Mr. Trumbull, of Illinois, took the floor to explain the bill. He said: "The bill is intended to operate upon property, and not to affect the person of the rebel or traitor; and it only operates upon the property belonging to such rebels as are beyond the jurisdiction of the courts in the ordinary course of judicial proceeding. Where the rebel can be reached by judicial process, the punishment for his crimes can be visited upon him personally, and this bill does not propose to interfere with his property at all. It does not touch that class of cases; and one reason why it does not was to steer clear of any difficulty growing out of this clause in the Constitution of the United States:

The Congress shall have power to declare the punishment of treason; but no attainder of treason shall work corruption of blood or forfeiture, except during the life of the person attainted.

"Under that clause of the Constitution, I have been inclined to the opinion that it was not competent for Congress to forfeit the real property of a convicted traitor, except during life; and as the punishment for treason by our law is death, the forfeiture of his realty for life would amount, of course, to very little. But I understand that it is competent for the Congress of the United States to prescribe a punishment for those persons who, though aiding and abetting the rebellion, cannot be reached and prosecuted for treason; and this bill applies to that class of persons. They may be non-residents; they may be foreigners; for instance, an Englishman owning property in the city of New York may be contributing to this rebellion—may be aiding it. I do not understand that Congress is without power to punish such a person, by confiscating his property. He may aid the rebellion by contributing the very means derived from his property in New York to the support of the army which is now arrayed against the Government. I wish to put this question to those who doubt the constitutionality of this bill, if there are such: I wish to ask them if it is not competent for Congress to reach that class of cases?

"This bill also provides for reaching the property of all rebels in States where the judicial authorities are overborne. It is manifestly impossible to try a man for treason in South Carolina. You cannot practically carry out the provisions of the Constitution which guarantee to a man a jury trial, and also make it necessary that he should be indicted before he is put on his trial, where you have no courts. It is because these persons are beyond the

reach of judicial process that I suppose their property may be reached in this way. As our armies advance into the South, if this bill becomes a law, all the property belonging to these rebels, as fast as we get possession of it, will be appropriated to the use of the Government: it is forfeited by the act.

"I know that some have objected that this bill amounts to nothing; that we have not possession of this property. Why declare, they say, the slaves of rebels free, and why forfeit and confiscate the property of rebels when, for want of possession of the property and slaves, the law can have no practical effect? But if you pass such a law as this, and it goes into effect immediately, you may take possession of this property next year or any time hereafter; the forfeiture is effected; the title is divested in these military districts; and in the other districts of the United States where there is property belonging to non-resident rebels the forfeiture is to be perfected through the courts. Perhaps I had better read two sections of the bill in order to show the mode of forfeiting property. The fourth section provides for the mode of doing this where judicial authority is overborne. It declares

That it shall be the further duty of the President of the United States, as often as in his opinion the military necessities of the army, or the safety, interest, and welfare of the United States, in regard to the suppression of the rebellion, shall require, to order the seizure and appropriation, by such officers, military or civil, as he may designate for the purpose, of any and all property confiscated and forfeited under and by virtue of this act, situated and being in any district of the United States beyond the reach of civil process in the ordinary course of judicial proceedings by reason of such rebellion, and the sale or other disposition of said property, or so much of it as he shall deem advisable.

"Under that provision it will be perceived that the President may appoint persons to take possession of this property as our armies advance, and he may order the sale of it. Under this section of the bill, we go through no judicial proceeding whatever for the purpose of condemning this property. Confiscation is not a judicial matter in regard to this property. You cannot condemn the property by a judicial proceeding, because you have no court there to do it. The very fact of the existence of the rebellion and of the necessity to call out the army for the purpose of putting it down, presupposes that your judicial tribunals are overborne, and this confiscation of the property is to be made effective through the military tribunals. I think this may be done.

"We have toward these people in the rebellious States a twofold right. There would be no difficulty in determining our rights as against them if they were an independent nation; but what makes the difficulty is the relation which the persons in arms against the Government bear to it, that is, as enemies, and at the same time as citizens. That is what seems to embarrass some minds. That is the precise condition that persons now in arms against the United States in the rebel States are in. We may treat them as traitors, and we may treat them as enemies, and we have the right of both, belligerent and sovereign, so far as they are concerned.

"When an insurrection assumes such formidable proportions as the present, and when armies are arrayed against each other and the power of the nation called forth to put it down, the international law writers all agree that the rebels are entitled to be treated as belligerents or as enemies. We have been treating the rebels in the South as belligerents during this present war. We have sent flags of truce to them. We have taken them as prisoners of war. Whenever a rebellion becomes of such magnitude as to be entitled to be called a civil war, then the rights of the parties are to be governed by the ordinary rules of war between independent nations; but that does not prevent the Government, after the war is over, from trying as a traitor any person that may be in its hands. That is the way, I take it, that this rebellion is to be finally put down. Nobody expects to try for treason the two or three hundred thousand men now in arms against the Government, every one of whom is a legal traitor; but we will give them the rights of belligerents; we will take them as prisoners of war; and when those who have been seduced from their loyalty to the Union shall have returned to their allegiance, we will release them again. But the ringleaders of this rebellion—the instigators of it, the conspirators who set it on foot—will, I trust, be brought to trial for treason, and, if found guilty, be executed as traitors. These are our rights as against rebels.

"One of the rights as against an enemy is the right of confiscation. We have the right to take the persons and the property of our enemy and destroy them both if necessary.

"I desire to call attention for a moment to the second and third sections of this bill, which I regard as among the most important in it. The second section forfeits the right or the claim of any person to the service or labor of any other person, when the person claiming the service has been engaged in any manner in this rebellion, and makes the person owing the service forever afterward free. I take it there can be no doubt of the power of Congress to pass this provision. Congress has authority to raise armies, and it may draft soldiers. It may take the hired man of my friend from Kentucky (Mr. Davis), whom he has engaged at a stipulated price to work upon his farm for the next year, and in the middle of his contract, in the midst of his harvest, the Government of the United States may come along and draft that man into the service of the United States, and what becomes of the contract? Can you enforce it as against the United States? Can you plead that you are entitled to the service for which you had, perhaps, paid in advance? The paramount au-

thority of the Government of the United States may, if necessary, take into its service the employé of any person, and the employer has no remedy.

"The power to do this cannot be questioned; and does the master hold his slave by any stronger tenure? You cannot draw a contract so strong by which one person shall give his time and services to another, that the paramount authority of the Government cannot abrogate that contract, and take from your control the person and bring him into the service of the country. If this can be done in reference to a hired man, or in reference to your own child, why not in reference to a slave? By the laws of nearly all the States of the Union, every parent has the control of his child until he is twenty-one years of age; and yet, notwithstanding, if the necessity requires it, if the public safety demands it, the Government of the United States may take your son at eighteen years of age, or even younger, from under your control, and bring him into the army of the United States and into the battle-field in defence of the honor and integrity of the United States. And does a master hold his slave by any stronger tenure than this? Why, sir, the persons, all the property, everything connected with your enemy, may be taken and condemned and destroyed, if it be necessary to preserve the country; and not only of your enemy, but you may take the property of your friend. We are now taxing the loyal men of this country to the furthest limit, and sacrificing thousands of valuable lives in support of this war. While all this is being done, can it be pretended that we cannot touch the negro of a man who is fighting against the Government?

"The second section of the bill declares that hereafter whenever any person claiming to be entitled to the service or labor of any other person, shall seek to enforce such claim, he shall, in the first instance, and before any order for the surrender of the person whose service is claimed, establish not only his title to such slave as now provided by law, but also that he is and has been during the existing rebellion loyal to the Government of the United States. Is there any hardship in that provision? Will it not be a very easy matter for the owner of any slave, when he sends his agent to reclaim him, to send along the evidence that he himself is loyal to the Government of the United States?

"Another portion of the section prohibits the rendering of fugitives by our military and naval officers, and forbids their undertaking to pass upon the freedom or slavery of any person. Now we have various policies pursued by different commanders. One commander in the West, General Halleck, forbids all fugitive slaves to come within his lines. Now, I want it upon the statute-book that he shall not determine anything about fugitive slaves, that he shall not inquire whether a man is a fugitive slave or not; and if he knows him to be so, that he shall not surrender him, but shall treat him as a person, as he is, and make no distinction between him and other persons whom he may meet in the country.

"The third section makes provision for the colonization of negroes who may be freed by the act, and are willing to emigrate. There is a very great aversion in the West—I know it to be so in my State—against having free negroes come among us. Our people want nothing to do with the negro. When we tell them that slavery has been the cause of this rebellion, and that the traitors who are fighting us are supported by their slaves, they admit it; but they say: 'What will you do with them; we do not want them set free to come in among us; we know it is wrong that the rebels should have the benefit of their services to fight us; but what do you propose to do with them?' This bill proposes—and it is in harmony with the recommendation of the President of the United States—to colonize them, and it authorizes the President to provide for their settlement in some country beyond the limits of the United States."

Mr. Willey, of Virginia, said: "I should like to have heard the Senator's opinion as to where and how he derives the constitutional power to vest authority in the President of the United States to make provision for the transportation, colonization, and settlement of emancipated negroes; and moreover, if there be such power and we shall be satisfied of its existence, in what manner should the President exercise it? Here is a general duty prescribed, a general authority vested in the President, without any limitation, without any prescription of the manner in which he shall exercise it. Where is he to get the funds? How are they to be raised?"

Mr. Ten Eyck, of New Jersey, also said: "We cannot close our eyes to the state of things which must necessarily exist in the Southern States, where they have this institution of human slavery, by setting at liberty all the slaves that have heretofore belonged or that the rebels have claimed to belong to themselves, and leaving them there in that locality to roam at large under the circumstances in which they will be placed in their ignorance, destitution, want of knowledge, and want of care and providence. What is to become of them, and what is to become, under such a state of things, of the loyal Union men of the South, with millions of freed slaves left to roam the country at large, to go and come when and where they will? I may be mistaken in the view which I take of this case; but it seems to me that if we were by an enactment to declare all the slaves of rebels in the South free, without making provision of some kind for their removal to a district where they may be safe, and where the community may be safe, where they themselves may be taken care of, we may have ruin and destruction and even all the horrors which have been witnessed in some of the West India Isl-

ands reënacted within the borders of the Southern States. It seems to me to be entirely inconsistent with the safety of those communities that such a large body of freed slaves should be kept there uncontrolled and unrestrained except by the power which may exist within those States."

Mr. McDougall, of California, said: "Sir, as far as I am able to read of the wisdom taught by the history and counsellings of the past, the measure now proposed can never secure peace. The policy involved in it will continue an angry, remorseless, relentless war, which, if it do not involve subjugation, will involve extirpation. I fear that the country, and not only the country but the Senate have been led wild with anger; that they have caught some of the angry spirit of their adversaries, and instead of taking lessons from the great states of the world, and the great teachers of ancient and modern times, have taken their advice from Richmond and Montgomery."

Mr. Cowan, of Pennsylvania, followed, in opposition to the bill, saying: "Mr. President, I agree with the honorable Senator from California, and look upon the bill now under consideration as the most important, by far, upon our calendar, involving the gravest questions and most momentous issues. If it passes, I think it will be the great historic event of the times—times which are as fruitful of events as any the world has ever witnessed. Upon the disposition we may make of it, perhaps the fate of the American Republic may depend; and no one surely can overrate the magnitude of anything which may be attended with such consequences.

"We are standing now squarely face to face with questions of most pregnant significance. Shall we stand or fall by the Constitution, or shall we leave it and adventure ourselves upon the wide sea of revolution? Shall we attempt to liberate the slaves of the people of the rebellious States, or shall we leave them to regulate their domestic institutions the same as before the rebellion? Shall we go back to the doctrine of forfeitures which marked the middle ages, and introduce feuds which intervening centuries have not yet sufficed to quiet? These are great questions, and they are in this bill, every one of them. If, for one moment, we can suppose the scheme consummated which it contemplates, we shall have the following results:

"I suppose it is reasonable and moderate to estimate the number of people engaged in the rebellion to be equal to one-half of the whole white population of the confederate States—say four millions. If so, this bill proposes, at a single stroke, to strip all this vast number of people of all their property, real, personal, and mixed, of every kind whatsoever, and reduce them at once to absolute poverty; and that, too, at a time when we are at war with them, when they have arms in their hands, with four hundred thousand of them in the field opposing us desperately.

"Now, sir, it does seem to me that if there was anything in the world calculated to make that four millions of people and their four hundred thousand soldiers in the field now and forever hostile to us and our Government, it would be the promulgation of a law such as this. Will they yield to us sooner in view of such a result to them? What would we be likely to do if they were to threaten us with a similar law? Would we ever, under any circumstances, yield on terms like those? I need hardly ask that question to men descended from sires who refused to pay the tax on teas, and from grandsires who rose in rebellion and overturned a monarchy rather than pay twenty shillings ship money.

"Again: the forfeitures of William the Conqueror, decreed upon the property of the Saxons who followed Harold to the field of Hastings, sink into utter insignificance compared with those enacted in the bill before us. The proud Norman and his rapacious barons were content with the castles and fiefs of the Saxon leaders whom they had overcome; but they did not dare to strip the people, or, indeed, even much to increase their burdens. They knew, victorious and all-powerful as they were, that would have involved them in a new and far more dangerous struggle, in which every peasant would have been a principal combatant, with his all at stake.

"Neither did the English conquerors of Ireland, in their long series of forfeitures and confiscations, from the time of Strongbow down to the rebellion of 1798, ever, at any time, venture upon such a sweeping measure as this; their attainders exhausted themselves upon the Irish nobility, and they never were rash enough to strip the Irish people. I do not know the value of the property forfeited by this bill; I cannot even approximate it, except to say that it is enormous—to be computed by billions. But, sir, the bill goes further, and forfeits a vast amount of property of the rebels which, when forfeited, cannot be confiscated or put into the coffers of the conquerors—I mean their property in negro slaves.

"Now, I do not mean to stop here to discuss their right to this species of property; it is enough for me to say that all the people of the Slave States, loyal and rebellious, seem to agree as to this with a wonderful unanimity, and to resent with an excessive sensibility any interference with it whatever. And, although in the bitterness of the feuds engendered by the civil war now raging among them, the loyalists there would be glad to join in inflicting upon the rebels even the severest punishments, yet this one they abhor and refuse, because they aver that it would be equally injurious to them as to their enemies; and it makes no manner of difference whether that view is correct or not, if they believe it—and this their representatives can tell us. What I mean to say is, that this bill would liberate, perhaps, three millions of slaves; surely the most stupendous stroke

for universal emancipation ever before attempted in the world; nay, I think it equivalent, if carried out, to a virtual liberation of the whole four millions of slaves in the Union.

"But what is to be the effect of it upon the war? Will we be stronger after it than before; or will we find we have doubled the number of those in arms against us? They have now no cause of war; will not this measure furnish them one, and one they think more just and holy than any other? Let the loyal men who know them also answer this question. I will abide their answer, and submit again that no deliberative assembly in the world ever before sat in judgment upon an issue of such magnitude.

"Not content, however, with this, those who favor this bill seem determined to bewilder and blind us still more by an additional project of greater magnificence and, if possible, of greater difficulty; and that is, in the duty it imposes upon the President, in the third section, of procuring a home for these emancipated millions in some tropical country, and of transporting, colonizing, and settling them there, if they desire to go, with guarantees for their rights as freemen; and this is all provided for in a section of a single sentence of nine lines! Surely, sir, we must have been recently transported away from the sober domain of practical fact, and set down in the regions of eastern fiction, if we can for a moment entertain this proposition seriously. Do the advocates of the scheme propose to confer upon the President the gold-making touch of Midas? One would think the universal menstruum of the philosopher's stone had been at last discovered. Certainly, nothing short of the ring and lamp of Aladdin, with their attendant genii, would enable us in our present condition to assure the President of his ability to enter upon such a task, unless, indeed, it is conceived the Treasury note is of equal potency in this behalf. If so, the sovereign of the tropical country and the transportation companies ought to be consulted in regard to the legal tender clause. I suppose it is not expected that the exodus can be supported on the way by quails and manna; and yet, I am free to say, it will need the miraculous interposition of Heaven quite as much as did that of the Israelites of old.

"But to return: At a time when every energy of the country is put in requisition to suppress the rebellion; when we are in debt equal to our resources of payment, is it not strange that this scheme, which would involve us in a cost more heavy than even the present war, should be so coolly presented for our consideration, and urged to its final consummation with a kind of surprise that any one should oppose it? It is certainly due to ourselves, if not to the country, that we should not be in haste about engaging in such gigantic schemes.

"Then there is a further consideration involved in this bill, of still greater moment than even those I have already glanced at; and that is, its direct conflict with the Constitution of the United States, requiring us, indeed, should we pass it, to set aside and ignore that instrument in all its most valuable and fundamental provisions; those which guarantee the life, liberty, and property of the citizen, and those which define the boundaries between the powers delegated to the several departments of the Government.

"Pass this bill, sir, and all that is left of the Constitution is not worth much. Certainly it is not worth a terrible and destructive war, such as we now wage for it. And it must be remembered that that war is waged solely for the Constitution, and for the ends, aims, and purposes sanctioned by it, and for no others.

"I am aware, however, that some think the Constitution is a restraint upon the free action of the nation in the conduct of the war, which they suppose could be carried on a great deal better without it, &c. Now, sir, I have no hesitation in saying that no greater mistake ever was made in the world than is made by such people.

"I am, therefore, opposed to this bill, to all and every part of it, except the last two sections, which, although not free from objections, yet these are not of such a serious character but that I could give my assent to them."

Mr. Morrill, of Maine, followed. He thus expressed his views of the power of Congress: "Assuming now the state of the nation to be that of general internal hostility; and that, being so involved, it possesses the power of self-defence, it is still important to inquire in what department of the Government this authority is lodged. Happily this is no longer an open question. The supreme power of making and conducting war is expressly placed in Congress by the Constitution. 'The whole powers of war,' says the Supreme Court of the United States, in Brown vs. The United States (1 Cranch), 'are vested in Congress.' Surely all will agree there is no such power in the judiciary, and the Executive is simply 'Commander-in-Chief of the Army and Navy;' all other powers and duties, not necessarily implied in the command of the military and naval forces, are expressly given to Congress. Congress declares war; grants letters of marque and reprisal; makes rules for captures on land and water; raises and supports armies; provides and maintains a navy; makes rules for the government of land and naval forces; provides for organizing, arming, and disciplining the militia, and for governing them in actual service; and is thus invested, in the language of the court, 'with the whole powers of war.'

"In the contingency of actual hostilities the nation assumes a new and extraordinary character, involving new relations and conferring new rights, imposing extraordinary obligations on the citizens, and subjecting them to extraordinary penalties.

"There is then, sir, no limit on the power of Congress; but it is invested with the abso-

lute powers of war—the civil functions of the Government are, for the time being, in abeyance when in conflict, and all State and national authority subordinated to the extreme authority of Congress, as the supreme power, in the peril of external or internal hostilities. The ordinary provisions of the Constitution, peculiar to a state of peace, and all laws and municipal regulations must yield to the force of martial law, as resolved by Congress."

Mr. Browning, of Illinois, followed in opposition to the bill, the object of which he thought could be easily accomplished under the "war powers" of the Government. He said: "This bill has no reference whatever to captured property, but to that which neither has been nor is expected to be captured. Nor is it restricted to property which, by its character and uses, is adapted to aid the rebellion, but strikes at all the property of every kind and character of all the citizens of the seceded States with scarcely an exception. It sweeps away everything, even the most ordinary comforts and necessaries of domestic life, and reduces all to absolute poverty and nakedness. It leaves them the ownership of nothing, and when executed will leave them the possession and enjoyment of nothing. If the bill is constitutional, the instant it passes millions of people in the private walks of life will be stripped of the ownership of everything, and, the moment the strong arm of power can reach them to execute the law, will also be stripped of the possession of everything. They may repent of their past rebellion and return to their allegiance the next day or the next month, but they return bankrupts and beggars, with nothing on earth to make government desirable.

"But if this bill passes, would they return? What possible inducement would they have to do so? What could they hope or expect from a Government which had shown itself so stern and remorseless in the execution of vengeance, not upon the guilty few, whose vaulting ambition conceived the treason and hatched the rebellion, but upon the deluded masses, who are fitter subjects of commiseration than of vengeance? The sure and certain effect of this bill would be to make peace and reunion an impossible thing. It would fill the hearts of the entire people with despair, and nerve their arms with the energy and desperation which despair inspires. It would turn to the blackness of night the last glimmering hope of future fraternity between now alienated and exasperated brethren.

"A simple statement of the case will, I think, demonstrate our want of power to legislate as proposed. If we recognize the existing state of things as war, then we must also recognize the rebels as public enemies, and deal with them according to the rules of war established by the law of nations, which we cannot change. We must deal with them precisely as we would deal with a foreign nation with which we were at war. And if at war with a foreign nation, the law of nations would forbid us to pass a law to confiscate the property of the private citizens of that nation, or even to plunder them when our victorious army had invaded their country. I think it will not be contended that we could do either. Our Constitution, I concede, would not restrain us. We would be restrained by the law of nations. We could confiscate all the property which we captured during the progress of the war; but we would do it under the war power, and not by legislation.

"If we do not recognize the rebellion as war and the rebels as public enemies, but as insurgent citizens only, and deal with them and treat them as citizens, then we cannot pass the law proposed, because the Constitution forbids the enactment of bills of attainder, and this is, in the meaning of the Constitution, a bill of attainder.

"When our arms have triumphed and the rebellion is suppressed and the rebels reduced to obedience, the Government will be restored to its authority over them as citizens, and may pass laws of amnesty, embracing all or any part of them, or elect to treat them as traitors, and indict, convict, and punish them for treason. But this must be done in accordance with constitutional provisions and guarantees, and within constitutional limitations; and we could not even then, in the case of a convicted traitor, confiscate to the extent proposed by this bill.

"Thus, Mr. President, whether we regard the rebels as public enemies with whom we are at war, or only as insurgent citizens, we are, in either case, without power to pass the bill under consideration. But in renouncing this power of legislation we renounce no power necessary to the defence of the Government and the maintenance of its authority—the suppression of the rebellion and the condign punishment of the traitors. The powers of the Government for these purposes are ample and plenary. But they are war powers, and not powers of legislation. The inexpediency of this bill is as manifest as its unconstitutionality. Let it pass, and its provisions be heralded in advance of the army as it marches south, and what other effect can it have than to consolidate the entire people for one last despairing struggle against those whom they might then justly regard as enemies and oppressors instead of friends and benefactors? What possible inducement could they have to prefer submission to death? For one, I do not wish to waste the fortunes and devastate the homes of all. Leave something to make the guardianship of Government and the protection of law desirable. Surely it is most desirable, if we can, to win back our erring brethren to their allegiance to and love for the good old Government of our fathers; and if we cannot do this, the success of our effort to put down the rebellion will be almost as disastrous as failure."

Mr. Carlile, of Virginia, followed in opposition to the bill. He said: "The bill denies to the citizen the constitutional right of testing

the constitutionality of the act before the tribunal created by the Constitution. It would seem as if the authors of the bill, conscious of the unconstitutionality of the proposed measure, purposely framed it so that its constitutionality could not be pronounced upon by the Supreme Court.

"The bill proposes to confiscate to the use of the Government all the property, real and personal, belonging to the citizens of the seceded States who are or may be in the service of the so-called Confederate States, or who in any way give aid and comfort to the rebellion. When it is remembered that the authors of the rebellion were in possession of the various State governments, and used the power and machinery of their respective State governments to compel the people to acquiesce in their unconstitutional acts, and to recognize their usurped authority, it will be seen that all the property of each and every citizen in the seceded States would be forfeited under this bill. Such a sweeping proposition, so unjust and cruel a measure, one better calculated to continue the war forever and exhaust the whole country, never has been in the history of the world, and I predict never will be again, proposed to any legislative assembly representing a civilized community.

"By the bill all the property, except slaves, is to be sold, and the proceeds put into the public treasury. The slaves are to be emancipated in violation of the Constitution and in disregard of the acknowledged constitutional rights of their owners and of the States wherein they reside. The want of power in Congress to interfere with slavery in the States where it exists has always heretofore been admitted; the most ultra abolitionists admit that Congress cannot interfere with slavery in the States, and because this is so they denounce the Constitution as a covenant with death and a league with hell."

Mr. Henderson, of Missouri, argued that such measures would not increase the Union feeling at the South or strengthen the hands of the Government. He said: "I have no objection to confiscating the property of the rebel, including his slave; but let it only be done when guilt has been established under the forms of judicial investigation.

"I crave this, not for the sake of the traitor, but for our own sake and in behalf of constitutional liberty. If we cling to the Constitution, whatever is right will yet be accomplished; if we depart from its just restraints no man can tell the excesses of the future. In the midst of storms upon ocean's wilderness, the mariner's only trust is upon his unerring compass. In the midst of a revolution so vast and terrible as the present, with armies in the field even greater than those with which Napoleon brought the nations of Europe to his feet, our only trust is in the Constitution. In the plenitude of power to-day, we may deny mercy to others; to-morrow we may ourselves cling in vain to the horns of the altar. To-day we may insolently disregard the settled convictions of the people, by gross perversions of the charter of their liberties; to-morrow the dangerous precedents may be urged to our own ruin. The inventor of the guillotine, we are told, was soon forced to test the merits of his own invention, and Haman, by sudden change of fortune, met the fate he had prepared for the offending Jew.

"Pass this bill, by which the owner is stripped of his real and personal property wherever your armies march, then enact the measure proposed by the able and excellent Senator from New York (Mr. Harris), by which he is outlawed and driven from the courts of the land, and I have no promises to make in regard to future exhibitions of loyal sentiment in the Southern States. Let Congress adopt the course pursued by that practical statesman and distinguished soldier who commands the department of the Mississippi, pledging the power of the Government to the protection of life, liberty, and property, and our battles like his will be victories—victories beneficial alike to the victor and the vanquished, removing prejudice, reforming sentiment, and regenerating the public mind."

Mr. Harris, of New York, offered a substitute to the bill, and expressed his views in these words: "Ours should not be a revengeful policy. On the contrary, by adopting measures of mildness and mercy, our effort should be to extinguish the fires of hate which now burn so fiercely. Exile and the gallows for leaders. Confiscation and outlawry for those who have, with 'malice aforethought,' conceived and planned and brought into hideous maturity this monstrous iniquity; but pity and pardon for their deluded followers—those whose greatest crime has been that they have loved the bones of their fathers more than they loved their country, who have from their childhood been educated in the heresy that their first and highest allegiance is due to their State, even if it requires them to take up arms against the Union. Such, in my judgment, is an outline of the policy which a great, magnanimous, and Christian people should adopt in dealing with conquered treason."

Mr. Howard, of Michigan, thus argued that Congress had the power to enact such a law: "I come now to the question of power, the great question whether under our written Constitution we as a Government have in law the right to declare and enforce the forfeitures and confiscations contemplated by the bill.

"I admit that if we have not this power under the Constitution, we cannot forfeit and confiscate the property of rebels, real or personal, and that any title we might assume to give would be void in law.

"There is no clause in the instrument expressly conferring the power, and unless it is implied as a means of carrying into execution some one of the powers expressly granted and

enumerated, or some other power not so expressed and enumerated, but nevertheless 'vested (to use the terms of the instrument) by this Constitution in the Government of the United States, or in any department thereof,' we are unable to exercise it. I need not say to candid and reflecting men that the dangers arising from too broad an interpretation of the Constitution are by no means less to be dreaded and avoided than those proceeding from one too narrow and illiberal. The instrument must be construed with reference to the state of things existing at its formation, and the purposes had in view by its framers. Those purposes are plainly announced in the comprehensive language of the preamble, and no one can misunderstand them. They were 'to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defence, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity.' The insuring of domestic tranquillity is thus expressly indicated as one of the prominents objects of the Constitution, and nothing can be plainer than that it means, not mere family or neighborhood tranquillity, not the tranquillity of the fireside, but the internal tranquillity of the nation as a nation, and of the States as political bodies and constituent parts of the nation. It was political tranquillity, as opposed to political disturbance, as opposed to anarchical and insurrectionary movements of classes, districts, or communities, tending to disturb the internal peace of the nation, and to overthrow law and order.

"Such is one of the ends for which the Constitution was made—an important end; one without which the Government itself would have been but vanity and vexation of spirit, and the liberties it was to secure a chimera."

Mr. Davis, of Kentucky, in opposition to the bill, said: "It will be observed from the reading of the bill that it creates two classes of persons whose property shall be forfeited. One class is composed of those who are out of the United States, or who are within the States now in rebellion, and in such position that the ordinary process of the courts cannot be served upon them. It then provides by different modes of proceeding for all that class of persons in arms in the rebellion, or giving it aid and comfort, who can be found within the loyal States, or in such position in the United States that the ordinary process of law can be served upon them. The white population of the disloyal States amounts to 5,450,831. The slaves in the same States amount to a fraction above the number of 3,500,000. By the last census, there are 3,953,587 slaves in the United States. There are 3,500,000 in the disloyal States—in the States that have seceded—and about 450,000 in the States that are yet loyal, including the western portion of the State of Virginia. I assume that there are as many disloyal men in the loyal States as there are loyal men in the seceding States; and I have no doubt that the number of disloyal men in the loyal States is larger than the number of the Union men in the seceding States. The result, then, is, that the bill takes from a number of white people equivalent to the entire white population of the loyal Slave States a slave population equivalent to the entire slave population of the disloyal States. It not only takes their slave property, but it takes all the property that they own. What is the aggregate amount of the property of the disloyal States, according to the census tables? It is $6,792,585,742 in amount. The property of the loyal Slave States amounts to $1,983,702,055; so that the aggregate amount of property in the Southern States that is subject to be acted upon by the provisions of this bill, if it becomes a law, will affect upward of six millions of people, and will deprive them of property of the value of $4,808,883,687—nearly five thousand millions of dollars. Now, sir, I ask if this measure in its proportions is not as gigantic as the insurrection and the war itself? Was there ever in any country that God's sun ever beamed upon a legislative measure involving such an amount of property, and such numbers of property holders?

"I will take another view of this subject. The surplus production of the States that have seceded, amounts annually to between five hundred and six hundred millions of dollars. Of this large surplus, at least one hundred and fifty millions are distributed to the loyal and Free States for cereal grains, for meats, for stock, for mules, horses, and manufactured articles of various kinds. My own State of Kentucky finds a market annually in the Southern States, growing out of the productions of their slave labor, to the amount of eight or ten millions of dollars, and the Free States in the same market find a sale for their articles of natural or artificial productions to the amount of at least one hundred and fifty millions of dollars. Look at the great grain-growing regions of the West, the Egypt of America in fertility and production. Where do they find their principal markets for their corn and their meats? Where do Indiana, Missouri, Ohio, Kentucky, and every other portion of the United States that produces and sells stock find a market for their stock? They find it in the same sunny South, producing cotton and sugar. Where do Chicago, Cincinnati, and the other manufacturing points of plows, agricultural implements, and all the machinery by which crops are produced and harvested, find their market for the sale of their manufactured articles? It is in the South. Where does New England, where does Massachusetts, find the principal market for her boots and her shoes, her coarse woollens, her coarse cottons, and her ice even? It is in the South.

"I intend to maintain and shall endeavor to show that this great and enriching market for the loyal and Free States will be cut off by this iniquitous measure—for I so denominate it—if it should become a law. The great devotees

to labor and industrial pursuits in the field of agriculture, and in the workshops, who find their markets and the rewards of their toil and of their labor and of their skill in the South, will rise up in earnest protest against any such measure as this. Their voice will be heard before long in this chamber. It will be heard resounding throughout this nation; and it will be heard in a majesty and strength that will command obedience to it, and it will repress and put down such wholesale measures of confiscation, of injustice, of oppression, and iniquity."

Mr. Collamer, of Vermont, followed in opposition to the bill in its present form, saying: "I come now, Mr. President, to talk more particularly in relation to another branch of this bill, which is not so obvious perhaps. It seems to me that there is another purpose that is covered up by this pretence of forfeiture or confiscation and proceedings *in rem*, which have really nothing to do with it. When we are communing together, and talking freely, we may as well tell the truth as not. I cannot exactly recommend my example in that respect, as the old gentleman did who told his sons that honesty was the best policy, 'because,' says he, 'I have tried it both ways.' Now, the truth is, that there is a large provision in this bill for the liberation of slaves, and I am strongly apprehensive that the more particular friends of this bill regard that as the bill. Without that, they would care nothing about it. Many of them, I have no doubt, are exactly in that condition. Are you going to have these slaves seized as prize of war? There is no provision of that kind, because you know that what you declare prize of war must be seized during the war; and if it is not, when the peace comes it escapes, and you cannot take it at all. No; this provision is made to declare all slaves free without ever taking them. There is no caption of them required. They are not declared prize of war, or required to be proceeded with as such. How is it, then? They are regarded as property. I do not mean to fall into any objectionable point on that. I do not believe in having property in man any more than anybody else; but certain it is that the master, as he is called, is acknowledged by the Constitution to have an interest in the labor and service of his slave. There is an acknowledged pecuniary interest there recognized. It is a pecuniary interest. You propose to get rid of that interest, clear it out, discharge it. Can you do that by a proceeding *in rem?* I know we made a law at the last session declaring that where slaves were made the instruments of wrong by using them for military purposes in aid of the rebellion, they should be free, and that falls within the doctrine, within the principle, I have stated. But nothing of that kind is here. It was not put here purposely, because a proceeding *in rem* implies that you have possession of the thing, and brought it into court to be adjudicated upon. It is not provided that these slaves are to be taken or brought into any court, or in any way adjudicated upon. There is not any proceeding *in rem* required upon them, nor any other proceeding. If that is not depriving a man of his interest in a slave without any conviction of himself, and without any process of law, and operating as a punishment on him, and yet leaving him to be hanged, I do not understand it. It seems to me to be all that, every particle of it.

"Again, Mr. President, we have individually, and the Republican party as a party, thrown our creed and articles of political faith before the world. We have subscribed to them, most of us personally, individually at different stages, and I believe it is not necessary for me to make any personal professions about that. I am still very much inclined to abide by a plighted public faith, and by private faith too. I cannot but observe that those gentlemen who certainly have been distinguished as much or more for their activity in relation to the subject of slavery as for anything else, are committed to the creed of the Republican party on this point. Take, for instance, the honorable Senator from Massachusetts (Mr. Sumner). I will read his words. On offering a certain memorial, on the 25th of February, 1861, he said:

> I offer this memorial, sir, because I deem it my duty to offer all memorials that are respectful in form, when sent to me; but in offering it, I take this occasion to declare, most explicitly, that I do not think that Congress has any right to interfere with slavery in a State.

"I do not know that the gentleman has ever spoken in any other way."

Mr. Sumner: "Never."

Mr. Collamer: "I have never heard him speak otherwise, and I have generally heard what he had to say. I have been glad to find that this somewhat early and uniform doctrine of our party had not become outlawed by war, and hence I was pleased to hear some Senators who sit near me, and whom I always hear with very great pleasure and respect, make use of the expressions which I am about to read. I will use their language as better expressing the idea than any language I could employ. The honorable Senator from Maine (Mr. Fessenden), in the course of the debate upon the bill for the abolition of slavery in this District, said:

> Mr. President, that the Republican party would rejoice to see slavery abolished everywhere, that they would rejoice if it no longer existed, that they feel it to be a blot upon our fair institutions, and a curse to the country, there is no doubt. I can answer, for one, that has been my opinion always, and I have expressed it here and elsewhere; but, sir, I have held, and I hold to-day, and I say to-day, what I have said in my place before, that the Congress of the United States, or the people of the United States through the Congress, under the Constitution as it exists now, have no right whatever to touch, by legislation, the institution of slavery in the States where it exists by law, I have said that, and I say it again, boldly; for my position never has been misunderstood on this subject.

"The honorable Senator from Ohio (Mr. Sherman), on the same occasion, said:

> We ought now to abolish slavery in this District.

We have the right, and it is our duty to do it; and if we had wasted less time in doing it, it would probably be just as well. We ought, then, religiously to adhere to the promises we made to the people of this country when Mr. Lincoln was elected President. We ought religiously to abstain from all interference with the domestic institutions of the Slave or the Free States. We ought to stand by the Constitution as it is, by the Union as it is. Whether rebels are in arms or not, our duty is to stand by our pledges, to stand by our manhood; and I, for one, will do it.

"If we make a law, intending it to be operative, by which we declare that the slaves of all engaged in this rebellion, or of all the officers and classes mentioned in the amendment of the Senator from Ohio are free, and all right over them abolished, do you believe, does any man of common sense believe, that you can make the world understand that we have not interfered with slavery in the States, and not to a very limited extent either, but to about the whole extent to which it exists? All remarks, however ingenious, and all sophistry, however plausible, which can make this look any otherwise, is but a delusion. It cannot be seen in any other light. This is not put on the ground that it is a military operation, not on the ground of proceedings *in rem*, not that it deprives a man of his property and yet leaves him to be hung, not upon any conviction, not upon any process of law whatever, except this law which we now make.

"It seems to me, obtuse as I am, perhaps, in my perceptions, that that is directly interfering with this plighted faith; and it seems to me, further, that it is in direct violation of the provisions, prohibitions, and securities which the Constitution enacts. I, for one, will not do it. I do not regard myself as needing any apology for not doing it. I do not think my people wish me to contribute to breaking any provision of the Constitution, and they know I would not do it if they did wish it; nor do they need any apologies from me for regarding the oath I have taken."

Mr. Collamer then submitted an amendment, or bill of his own, which with several other amendments were referred to a select committee of nine Senators.

The following committee was afterward appointed: Mr. Clark chairman, Mr. Collamer, Mr. Harlan, Mr. Cowan, Mr. Wilson of Massachusetts, Mr. Harris, Mr. Sherman, Mr. Henderson, and Mr. Willey.

This committee subsequently reported a bill, the first section of which provided that every person who should hereafter commit the crime of treason against the United States and be adjudged guilty thereof, should suffer death, and all his slaves, if any, be declared and made free, or he should be imprisoned not less than five years, and fined not less than ten thousand dollars and all his slaves, if any, be declared and made free.

Mr. Clark, of New Hampshire, said: "The desire of the committee was to harmonize the various shades of opinion and the various plans, and to present something to the Senate which they thought might be passed.

Mr. Trumbull, of Illinois, moved to strike out the first section of the bill. He said: "If any unconstitutional bill has been offered to the Senate, this bill in its first section is unconstitutional. Beyond that, the section is a provision simply to make treason easy. It is a provision to lighten the punishment for treason. I doubt whether this is the best time to do that. Our fathers prescribed the penalty for treason. They regarded it as the most atrocious crime that man could commit."

Mr. Clark, of New Hampshire, replied: "I expected an assault to be made upon the bill by those who wanted to take property without any trial. I did not suppose a trial would suit such persons; it is not quick enough. But I hope, notwithstanding, the Senate will not consent to strike out this section. By the old law, the punishment of treason was death, and is death by the law now. In the circumstances of this rebellion, where there is a great variety of shades of guilt, where there is the man who leads on and incites the rebellion, and the man who is drawn into it, the committee thought there should be a difference in punishment; that in some cases death would not be too severe, and in other cases death would be too severe, where some punishment should be inflicted. If the law should be permitted to stand as it now stands, if you try a person for treason he must be executed unless pardoned. You cannot imprison him; you cannot fine him; but you must take his life, or pardon him. We desired to give discretion to the court."

Mr. Davis, of Kentucky, moved to amend by striking out the words "and all his slaves, if any, shall be declared and made free."

Mr. Clark, of New Hampshire, said: "I want to inquire of the Senator why, when he has taken away the life for treason, or when he has incarcerated the body and shaved the head and made the man sit in sackcloth, he objects to taking away his negro also? Take his life, or shave his head, put manacles on him, set him down in sackcloth and ashes, but do not touch his negro!"

Mr. Davis: "I have no objection to taking his negro, or any property whatever, if you just confiscate it *bona fide*. The Congress of the United States have no power to liberate a slave in a State, or to authorize it to be done. I have no objection to slaves being treated like lands, or any other property. I think myself they ought to be subjected to the same law and to the same course of appropriation that other property is. I do not think there ought to be any distinction. The reason that I do not give in to the view of the gentleman is, that I believe it is not competent for Congress to liberate or to authorize the liberation of a negro anywhere, and particularly in the States."

Mr. Clark: "Let the Senator give me his attention a moment, and I think he will agree with me that it is not competent for Congress

to go into the State of Virginia or Kentucky and pass a law taking away $10,000 of property from a man; but it can impose a punishment that shall take it from him. It may not be competent directly to take the slave from him, but it can impose a punishment which shall take it from him. I have not any doubt about it, and that is what this bill seeks to do."

Mr. Davis: "Will the gentleman permit me to answer that?"

Mr Clark: "Certainly."

Mr. Davis: "I admit that Congress may authorize the punishment of treason, and I admit that it may authorize the punishment of treason prospectively by a forfeiture of property for the lifetime of the criminal; but I deny that to take property and not appropriate the proceeds to the public treasury is a forfeiture at all. Every definition of confiscation and forfeiture is to this effect, that a party charged with the commission of a crime or some legal default of duty, loses his interest and estate in the property, and the property is transferred to the nation or to individuals to remunerate them for the real or supposd loss by the default of the person who is charged with the default. That is forfeiture or confiscation."

Mr. Clark: "Then as I understand it, the objection is not that we take the negro from the master by way of punishment, but that we do not give him to somebody else, or put him into the public treasury."

Mr. Davis: "Yes, sir; that is the objection; that you do not sell the negro, do not appropriate the negro as you would other property."

Mr. Clark: "Now, I want to submit this question to my honorable friend: suppose we had forfeited a horse or a mule, could we not turn it free?"

Mr. Davis: "I think not."

Mr. Clark: "Could we not turn a horse loose if he was expensive to keep?"

Mr. Davis: "You might refuse to appropriate him, but your duty and the execution of the idea of forfeiture would require you to appropriate that property, to sell that property, and put the proceeds into the public treasury."

Mr. Clark: "Very well. Suppose Congress thought that its duty required him to go free: what then? Who is to judge of the duty!"

Mr. Davis: "I will answer that, with the gentleman's permission. The term 'forfeiture' is a legal phrase. It is a term of art. It has as precise a legal significance, and had at the time of the adoption of the Constitution, as the term '*ex post facto*,' or the term 'bill of attainder,' or any other technical legal term of art. My position is that the term 'forfeiture' necessarily imports, as the principal and essential idea, that the property is to be disposed of for the benefit of the party that is injured in fact, or supposed to be injured, whether that party be the United States or individuals. I ask the Senator from New Hampshire to bring me a definition of confiscation or forfeiture, or a decision of a court where the proceeds of the property confiscated or forfeited were not appropriated. Give me a single example. I say that the essence of forfeiture, the main idea of forfeiture, is not so much to deprive the person in default and charged with crime of property as it is to transfer that property to the public or to individuals who are supposed to be injured by the act of the criminal."

Mr. Clark: "Will the honorable Senator permit me to ask him if he has read this section?"

Mr. Davis: "Yes, I have."

Mr. Clark: "Is the word 'forfeiture' in it?"

Mr. Davis: "Certainly not."

Mr. Clark: "Then I do not understand the necessity of a definition of forfeiture. It simply provides that his slaves shall go free. Suppose it provided that he should stand in the pillory?"

Mr. Davis: "If you were to present a rose and were not to name it, would it not be a rose still? I suppose that a thing is a thing, whether you give it a designation or not. I was very much impressed with the objections of the Senator from Illinois, but I do not propose to go into that question. I plant myself upon this ground: that Congress has no power to emancipate a slave under the pretence of forfeiture or of punishing a traitor, or under any other pretence whatever; that the act of emancipating a slave in a State is not within the powers of Congress."

Mr. Clark: "There the Senator and I entirely disagree. He says Congress has no power to do it. I assert the power of Congress to do it; but this section does not attempt to forfeit a slave. It sets him free. It declares, as a punishment of the master's offence, that the slave shall go free, and that the owner shall not hold him. That, I think, we have a right to do."

Mr. Davis: "I think not."

The motions to amend and strike out were both lost.

Mr. Sumner, of Massachusetts, offered a substitute to the bill, which he sustained in a speech of much length, and concluded by saying relative to the liberation of slaves, thus:

"The slaves of rebels cannot be regarded as property, real or personal. Though claimed as property of their masters, and though too often recognized as such by individuals in the Government, it is the glory of our Constitution that it treats slaves always as 'persons.' At home, beneath the lash and local laws, they may be chattels; but they are known to our Constitution only as men. In this simple and indisputable fact there is a distinction, clear as justice itself, between the pretended property in slaves and all other property, real or personal. Being men, they are bound to allegiance and entitled to reciprocal protection. It only remains that a proper appeal should be made to their natural and instinctive loyalty; nor can any pretended property of their masters supersede

this claim, I will not say of eminent domain, but of eminent power, inherent in the national Government, which at all times has a right to the services of all. In declaring the slaves free, you will at once do more than in any other way, whether to conquer, to pacify, to punish, or to bless. You will take from the rebellion its mainspring of activity and strength; you will stop its chief source of provisions and supplies; you will remove a motive and temptation to prolonged resistance, and you will destroy forever that disturbing influence which, so long as it is allowed to exist, will keep this land a volcano ever ready to break forth anew. But while accomplishing this work, you will at the same time do an act of wise economy, giving new value to all the lands of slavery, and opening untold springs of wealth; and you will also do an act of justice destined to raise our national name more than any triumph of war or any skill in peace. God, in His beneficence, offers to nations as to individuals, opportunity, *opportunity*, OPPORTUNITY, which, of all things, is most to be desired. Never before in history has He offered such as is now ours. Do not fail to seize it. The blow with which we smite an accursed rebellion will at the same time enrich and bless; nor is there any prosperity or happiness which it will not scatter abundantly throughout the land. And such an act will be an epoch marking the change from barbarism to civilization. By the old rights of war, still prevalent in Africa, freemen were made slaves; but by the rights of war which I ask you to declare, slaves will be made freemen."

Mr. Davis, of Kentucky, offered the following amendment:

Provided, That all the property owned by any person convicted of any crime under this act shall be first subject to the payment of all his debts and liabilities due and subsisting at the time thereof to loyal creditors.

This was rejected—yeas 12, nays 26. Mr. Powell, of Kentucky, moved to strike out the following section:

SEC. 11. *And be it further enacted*, That the President of the United States is authorized to employ as many persons of African descent as he may deem necessary and proper for the suppression of this rebellion, and for this purpose he may organize and use them in such manner as he may judge best for the public welfare.

The question, being taken by yeas and nays resulted—yeas 11, nays 25; as follows:

YEAS.—Messrs. Carlile, Davis ,Henderson, Latham, Pearce, Powell, Saulsbury, Stark, Willey, Wilson of Missouri, and Wright—11.

NAYS.—Messrs. Anthony, Browning, Clark, Collamer, Cowan, Dixon, Doolittle, Fessenden, Foot, Foster, Grimes, Harlan, Harris, Howard, Howe, Lane of Kansas, Pomeroy, Sherman, Sumner, Ten Eyck, Trumbull, Wade, Wilkinson, Wilmot, and Wilson of Massachusetts—25.

Mr. Henderson, of Missouri, offered the following amendment:

That every person who shall hereafter commit the crime of treason against the United States, as defined by the first section of the act of April 30, 1790, and shall be convicted on confession in open court, or on the testimony of two witnesses to the same overt act of treason whereof he shall stand indicted, such person shall suffer death, or be punished by imprisonment, with or without hard labor, not less than five years; and all judgments on convictions of treason under this act shall have the effect to forfeit to the United States all the property, real and personal, rights, credits, and effects of the party so convicted for and during his natural life.

The yeas and nays were ordered; and being taken, resulted—yeas 12, nays 25; as follows:

YEAS.—Messrs. Carlile, Cowan, Davis, Henderson, Latham, Powell, Saulsbury, Sherman, Stark, Willey, Wilson of Missouri, and Wright—12.

NAYS.—Messrs. Anthony, Browning, Chandler, Clark, Collamer, Dixon, Doolittle, Fessenden, Foot, Foster, Grimes, Harlan, Harris, Howard, Howe, King, Lane of Kansas, Pomeroy, Sumner, Ten Eyck, Trumbull, Wade, Wilkinson, Wilmot, and Wilson of Massachusetts—25.

Mr. Davis, of Kentucky, offered the following amendment:

Provided, That no slave shall be emancipated under this act until such slave shall be taken into the possession of some agent of the United States, and be *in transitu* to be colonized without the United States of America.

The yeas and nays were ordered; and being taken, resulted—yeas 6, nays 30; as follows:

Yeas.—Messrs. Davis, Powell, Saulsbury, Stark, Wilson of Missouri, and Wright—6.

NAYS.—Messrs. Anthony, Browning, Chandler, Clark, Collamer, Cowan, Dixon, Doolittle, Fessenden, Foot, Foster, Grimes, Harlan, Harris, Henderson, Howard, Howe, King, Lane of Kansas, Latham, Pomeroy, Sherman, Sumner, Ten Eyck, Trumbull, Wade, Wilkinson, Willey, Wilmot, Wilson of Massachusetts —30.

Mr. Saulsbury, of Delaware, moved to strike out the following section:

SEC. 9. *And be it further enacted*, That at any time after the passage of this act, whenever the President of the United States shall deem it necessary for the suppression of this rebellion, he shall issue his proclamation commanding all persons immediately to lay down their arms and to return to their allegiance to the United States; proclaiming that if any person within any State or district declared by him in a state of insurrection, shall be found in arms against the Government of the United States thirty days after the date of such proclamation, or giving aid and comfort to the present rebellion, the slaves of all such persons, within such State or district, shall be made free, and thereupon the slaves of all such persons, at the expiration of said thirty days, shall be free and forever discharged from any and all claim to their labor or service, any law or custom of any State notwithstanding

Mr. Saulsbury said: "The only intention of the section, as a whole, is to attempt to confer on the President a power which this Congress cannot confer on him, and that is to liberate slaves in the States by proclamation. If any benefit could result to the country from any such proceeding, certainly some benefit would have been experienced heretofore, for we have had two or three generals attempting that game."

Mr. Trumbull, of Illinois, followed in favor of a still stronger section, saying: "I shall vote with the Senator from Delaware to strike out this ninth section; and I hope that all the friends of a really efficient measure will vote with me. Let us strike it out, and put in a

section that will be effective. Let us strike out this section, and then afterward we can supply its place with a section making it the duty of the President to issue this proclamation, if you propose to give the thirty days' notice. I would free the slaves of all who shall continue in arms after the passage of the act. That would be my proposition; and I cannot conceive how it is, when these men are with arms in their hands, as the Senator from New Hampshire said, shooting our brothers and our sons, that we can insist upon holding their negroes in their possession to enable them to shoot our sons and our brothers. I think we ought to make that section imperative."

Mr. Cowan, of Pennsylvania, objected to the bill on grounds of expediency: "I suppose there is no gentleman upon this floor who is not now of opinion that the President may, if he chooses, under the pressure of a military necessity, make such proclamation as is contemplated in this section; and I suppose further that there is no one here who believes that under any circumstances other than a pressing necessity he would order and direct such a proclamation to be made.

"I may say further, Mr. President, that I am exceedingly sorry that at this stage of the business we seem to be tending toward a rock upon which, in my opinion, we shall inevitably and fatally split, and that very soon, for I think if there is one truth well established in the world it is that our guide in constitutional legislation is the will of the people—I mean of the majority. What are we doing here to-day? Laws are proposed, the operation of which is to be confined to the Slave States. A number of those States are represented in this Chamber by loyal men, men of approved loyalty and patriotism. What are they here for? They are here to let us know what the will of the people is in those States where these laws are to operate.

"Now, Mr. President, it is not a question whether the opinions and beliefs of that people are in accordance with our views. Suppose them to be erroneous opinions and erroneous beliefs, and having for their end, aim, object, and purpose to sustain a mischievous and dangerous system, yet, sir, we cannot disguise the fact that they do exist there, and for my own part, I cannot relieve myself from the obligation to respect them. How is it in the North? We of the majority forget here that we do not represent the whole people of the North. We do not represent the opinions and the beliefs of all the people of the Free States upon this subject. We forget that there is another and a powerful party all through the North everywhere who are utterly and totally hostile, if we are to be allowed to take the ordinary indications of public opinion, to this system of legislation, this system of congressional emancipation and liberation, no matter under what shape or form you disguise it. Well, how are we to maintain ourselves with one half of the people of the Free States against it; and I think the gentlemen who represent the border States will say to us that their people are unanimously opposed to it. Under these circumstances, it does not matter to me a particle what my opinions may be, what my belief may be. We are here to legislate for the people. We are here, in the first place, to stand upon the Constitution, because the Constitution is paramount, and no matter what the will of the people might be, if the will of the whole people were in favor of any particular project which is unconstitutional, it is our duty to throw out that project and discard it; but where the legislation is constitutional, and within the purview of that instrument, then our next guide is the will of the people. Now, I ask Senators who come from the Free States, do you believe, do you suppose that you can get along here and suppress this rebellion by disregarding what these gentlemen from the border States tell us?"

Mr. Wilson, of Massachusetts: "We have so far."

Mr. Cowan: "The Senator from Massachusetts says we have so far; and where are we now; how far have we got? We have gotten so far that oftentimes the heart of the patriot despairs. And do we strengthen ourselves by violating the opinions and the beliefs and feelings of these men? Are we making them friends? I think it is exceedingly unkind to the representatives from those States here. What right have we to drive away from the Senators from Virginia the friends who have stood about them in these dark hours? What right have we to do the same with the Senators from Missouri, or the Senators from any border State? Is that proper treatment? I would defer to those gentlemen as to all things relating to their own States, and as to all laws which are to operate on their own people. Upon what presumption do we decide that they are not interested in putting down this rebellion—ay, even more than we are? I should like to know from the honorable Senator from Massachusetts how he comes to know better than they do how to put down this rebellion."

Mr. Wilson, of Massachusetts, replied: "I take it that some of us have studied this question quite as long as the Senator from Pennsylvania, or gentlemen of the border States; that we have looked into it quite as minutely, and that we have a right to our opinions. I see no reason why I should give up my opinions to those of any gentleman from the border States. I do not know anything in the history of this contest, from the time it opened in the attack on Fort Sumter up to this time, in the advice we have received from gentlemen of the border States, whether we have followed it or not, that entitles their opinions to any more weight than the advice received from any other portion of the country. I think the history of this war shows that if we have failed anywhere, it has been because too much deference has been paid by the Government, and by Congress, to

those opinions. As we look back over the history of the past, we see it. It marks every furlong of this contest. Our own feebleness of purpose, our own deference to fears and anxieties, have prolonged the contest, and have cost us hundreds of millions of dollars, and thousands of lives. That is my judgment."

A contest, as indicated in the preceding remarks, had arisen in the Senate upon the bill reported by the committee. Some Senators wanted a more stringent bill, whilst others were satisfied with the report.

Mr. Sumner, of Massachusetts, one of those who desired a more stringent measure, spoke of the report thus: "Mr. President, there is a character in one of Dickens's novels, who says to another, 'Take a glass of water, put into it a little piece of orange peel, and then make believe very hard and you will have a strong drink.' Now, sir, I would apply these words to the bill of the committee. It is like a glass of water with a bit of orange peel in it, and if you make believe very hard you may have a strong bill. To my mind, it amounts to nothing. It only plays with the subject. At a moment when the life of our Republic is struck at, Senators propose to proceed as if by an indictment in a criminal court. I have, therefore, no sympathy with the bill. It is inadequate to the occasion. It is a perfect nonentity. And yet, sir, I took part in raising the committee which has reported the bill. I remember well that my friend from Ohio (Mr. Wade) said, when we were considering whether that committee should be raised, that confiscation would be lost by it, and I replied to him at once that he was mistaken, that confiscation would be saved by it. Such was my opinion."

Mr. Collamer, of Vermont, was brought to his feet by this speech. He said: "I have been perfectly silent upon this particular bill, willing that the subject should be treated by all men in their own way, according to their own tastes; but when I am appealed to by name, personally, I suppose I am not at liberty to sit still. Common courtesy to the honorable Senator will not admit it, though he thinks that I am one of a committee that helped to concoct a measure like putting a piece of orange peel into a tumbler of water, for the purpose of deceiving and duping Senators: addressing myself to their faith to make them believe there was great virtue in it, when I knew there was nothing in it—a sort of bread pill. He accuses me of that, and calls that courtesy."

Mr. Sumner replied: "The Senator misunderstands me when he says I attribute any such motive to him."

Mr. Collamer thus described the course taken in the debate: "At almost every step in the consideration of this subject, Senators have indulged in terms of reproach to those who differ with them in opinion—terms of contumely—terms which impute to them all sorts of bad motives; more than intimating that they are leagued with the enemies of the country to get votes, and that that is their purpose. Now, sir, I am aware that the history of the world is full of that sort of spirit. I have long experienced it here. It has sometimes been called the crack of the plantation whip. No matter in whose hands it is wielded, the music of that whip is the same, the sound is the same, and the effect is the same. It is totally immaterial whether that spirit is indulged in relation to one subject or another. Whether, by the bigotry of religious sentiment, it sends a man to the *auto da fé*, or whether it sends a man to the guillotine under political excitement, it is all the same the world over."

The discussion became somewhat of a personal nature, and was continued at considerable length between the Senators of extreme and those of conservative views.

Meantime the subject had been taken up in the House of Representatives, and extensively debated, with nearly similar arguments to those advanced in the Senate. Mr. Thomas, of Massachusetts, among other speakers, in opposition to the bill, thus spoke: "Mr. Speaker, no man can desire more earnestly than I do the suppression of this rebellion, and the restoration of order, unity, and peace. But there are two things I cannot, I will not do. I will not trample beneath my feet the Constitution I have sworn before God to support. I will not violate even against these rebels the law of nations as recognized and upheld by all civilized and Christian states. I believe I must do both, to vote for these bills, and at the same time do an act unwise and especially adapted to defeat the end in view, if that end be the restoration of the Union and the salvation of the Republic.

"I propose very briefly to examine the bills before the House (and especially that as to confiscation of property) under the law of nations and under the Constitution of the United States, and then to say a word upon their policy.

"The positions assumed by the friends of these measures are, that we may deal with those engaged in this rebellion as public enemies and as traitors; that regarding them as enemies, we may use against them all the powers granted by the law of nations; and viewing them as rebels or traitors, we may use against them all the powers granted by the Constitution; and that in either view, these bills can be sustained.

"Dealing with them as public enemies, it is said that under the existing law of nations we have a clear right to confiscate the entire property on the land as well as the sea, real and personal, of those in arms, and of non-combatants who may in any way give aid and comfort to the rebellion. This first bill sweeps over the whole ground. I deny the proposition, Mr. Speaker. In the name of that public law whose every humane sentiment it violates; in the name of that civilization whose amenities it forgets and whose progress it overlooks; in the name of human nature itself, whose better in-

stincts it outrages, I deny it. Such is not the law of nations.

"To give a plausible aspect to the proposition, the advocates of this bill have gone back to Grotius and to Bynkershoek for the rules of war, and even then have omitted to give what Grotius calls the *temperamenta*, or restraints upon the rules. You might as well attempt to substitute the code of Moses for the beatitudes of the gospel. Anything can be established by such resort to the authorities.

"But what then, Mr. Speaker? Does any man suppose that these writers give us the laws of war as upheld, sanctioned, and used by the Christian and civilized states of to-day? Nothing would be further from the fact. Commerce, civilization, Christian culture, have tempered and softened the rigor of the ancient rules; and the state which should to-day assume to put them in practice would be an outcast from the society of nations. Nay, more, they would combine, and rightfully combine, to stay its hand. For the modern law of war, you must look to the usages of civilized states, and to the publicists who have explained and enforced them. Those usages constitute themselves the laws of war.

"In relation to the capture and confiscation of private property on the land, I venture to say, with great confidence, and after careful examination, that the result of the whole matter has never been better stated than by our own great publicist, Mr. Wheaton:

> But by the modern usages of nations, which has now acquired the force of law, temples of religion, public edifices devoted to civil purposes only, monuments of art, and repositories of science, are exempted from the general operations of war. Private property on land is also exempt from confiscation, with the exception of such as may become booty in special cases, when taken from enemies in the field or in besieged towns, and of military contributions levied upon the inhabitants of the hostile territory. This exemption extends even to the case of an absolute and unqualified conquest of the enemy's country.—*Elements of International Law*, p. 421.

"It is not too much to say that no careful student of international law will deny that this passage from Mr. Wheaton fairly expresses the modern usage and law upon the subject; but you will permit me to refer for a moment to the doctrine stated by my illustrious predecessor, whose name has been so often invoked in this debate, John Quincy Adams. 'Our object,' he says, in a letter to the Secretary of State, 'is the restoration of all the property, including slaves, which, by the usages of war among civilized nations, ought not to have been taken.' 'All private property on shore was of that description. It was entitled by the laws of war to exemption from capture.' (Mr. Adams to the Secretary of State, August 22, 1815.)

"Again, he says, in a letter to Lord Castlereagh, February 17, 1816:

> But as by the same usages of civilized nations private property is not the subject of lawful capture in war upon the land, it is perfectly clear that in every stipulation private property shall be respected, or that upon the restoration of places during the war, it shall not be carried away.—4 *American State Papers*, pp. 116, 117, 122, 123.

"A volume might be filled with like citations from modern writers. I will content myself with perhaps the latest expression, and from a great statesman, a native of Massachusetts, and of my own county of Worcester:

> The prevalence of Christianity and the progress of civilization have greatly mitigated the severity of the ancient mode of prosecuting hostilities. * * * It is a generally received rule of modern warfare, so far at least as operations upon land are concerned, that the persons and effects of non-combatants are to be respected. The wanton pillage or uncompensated appropriation of individual property by an army even in possession of an enemy's country, is against the usage of modern times. Such a proceeding at this day would be condemned by the enlightened judgment of the world, unless warranted by particular circumstances. Every consideration which upholds this conduct in regard to a war on land favors the application of the same rule to the persons and property of citizens of the belligerents found upon the ocean.—*Mr. Marcy to the Count de Sartiges*, July 28, 1856.

"Such I believe to be the settled law and usage of nations. A careful examination of the arguments made on this subject has served but to strengthen and deepen this conviction.

"I do not forget, Mr. Speaker, that the case of Brown *vs.* The United States (8 Cranch, 110), has been often referred to in this debate as affirming the contrary rule. The points decided in that case I have before stated to the House. The points, the only points, decided were that British property found in the United States on land, at the commencement of hostilities (war of 1812), could not be condemned as enemy's property without an act of Congress for that purpose, and that the declaration of war was not sufficient. Gentlemen have referred to the *obiter dicta*, the discussions of the judges, as the decision of the court. The distinction is familiar and vital, but has been lost sight of in this debate. Only the points necessarily involved in the result constitute the decision.

"But I return from this digression to say, Mr. Speaker, that the distinction sought to be established by the passages cited from the discussions, in the case of Brown *vs.* The United States, between the law of war and the mitigations of that law which the usages of modern nations have introduced, has no foundation in principle. It is in the usages of civilized and Christian nations that we are to seek the law of nations. As the law merchant has grown up from the usages of trade and commerce, so has the modern law of nations grown up from the usages of enlightened states. The ancient barbarous rules of war have been tempered and softened by commerce, by the arts, by diffused culture, and, more than all, by the spirit of the gospel; and all Christian states recognize with joy and with obedience the milder law. In the jurisprudence of nations, as in our own, there is one law felt above all others, the law of progress. Apparently at rest, it is ever si-

lently moving onward, quickened, purified, and illumined by the inspiration of that higher law, 'whose seat is the bosom of God, and its voice the harmony of the world.' The great, prophetic thought of Pascal may yet be realized—'*Deux lois suffisent pour régler la république chrétienne, mieux que toutes les lois politiques: l'amour de Dieu, et celui du prochain.*'

"I do not know that I can more fitly conclude what I can say, in the brief time allotted to me, on the capture and confiscation of the private property of rebels, viewed in the light of international law, than in the words of John Marshall, near the close of his judicial life:

> It may not be unworthy of remark that it is very unusual, even in cases of conquest, for the conqueror to do more than to displace the sovereign and assume dominion over the country. The modern usage of nations, which has become law—

mark the words, Mr. Speaker, 'the modern usage of nations, which has become law'—

> would be violated; that sense of justice and of right which is acknowledged and felt by the whole civilized world would be outraged, if private property should be generally confiscated and private rights annulled. The people change their allegiance; their relation to their ancient sovereign is dissolved; but their relations to each other and their rights of property remain undisturbed. If this be the modern rule, even in cases of conquest, who can doubt its application to the case of an amicable cession of territory?—*United States* vs. *Percheman*, 7 *Peters*, 51.

"It is against the light of these considerations and authorities, and against the prevailing law and judgment of the Christian world, that it has been so often confidently, I will not say flippantly, asserted on this floor that there could be no doubt of our power, under the law of nations, to seize and confiscate the entire property of the rebels, as public enemies.

"I pass to the second branch of the subject, our power under the Constitution to pass these bills. It has been often said, in the course of this debate, and in terms without qualification, that the rebels hold to us the twofold relation of enemies and traitors, and that we may use against them all the appliances of war and all the penalties of municipal law. To a certain limited extent the proposition is sound. Treason consists in levying war against the United States. The act of treason is an act of war, and you use the powers of war to meet and subdue traitors in arms against the Government.

"It is also true that, in the relations between the Government and its subjects, the rightful power of punishment does not necessarily cease with the war; but is it also true that you can exercise both powers at the same time? And is not here the utter fallacy of this whole argument? Take an example. You have been accustomed to exchange flags of truce; you have recognized, to a certain extent, belligerent powers. An officer of the rebel army comes to you under a flag of truce: can you take him from under that flag and hang him for treason? He stands to you in the double relation of enemy and traitor, but you cannot touch a hair of his head while he is under that white flag. Take another case. You have stipulated for an exchange of prisoners of war. The cartel has been sent, and the prisoner of war is on his way to make the exchange. Does any man on this floor say that you can take him on his way and try and hang him? And if not, why not? The plain answer is, because having recognized him as under the law of nations, while he is subject to its power, he is entitled to its protection.

"Pass what bills we may, Mr. Speaker, when the war is ended these questions will come up to be settled. I hope I may be pardoned for saying, with great respect, to my friends on all sides of the House, that they will be as difficult questions as statesmen or jurists were ever called upon to decide, and that it is wise to reserve, as far as possible, our judgment. No thoughtful man will content himself with the declaration that belligerent rebels have no rights. Passion may say that, reason never. Passion, sooner or later, subsides, and reason reascends the judgment seat, and these questions must be answered there and to that august tribunal before which the conduct of men and nations passes in review—the enlightened opinion of the Christian world. Such questions are, how far, *flagrante bello* (while war was raging), with respect to prisoners of war the civil power was restrained; how far the treating with rebels and exchanging them as prisoners of war may affect their punishment as traitors, either in person or property. I express no opinion, except to say they must be calmly met and answered.

"But assuming, for the sake of argument, that during the war even, and while recognizing their belligerent rights, you may visit upon the rebels the full force and weight of the municipal law, I proceed to inquire whether the mode proposed by these bills is in conformity to the organic and supreme law, the Constitution of the United States. I am not to be deterred from this discussion by any suggestions from weak or wicked men—none other can make them—of leniency to rebels and compassion for traitors. There is but little elevation in contempt, but such suggestions do not rise high enough to meet it. They pass by me as the idle wind. If a man has no other arrows in his quiver, let him use these; I am content.

"The favorite argument, Mr. Speaker, of those who claim for Congress the power to confiscate the property of traitors without trial by jury is, that the want of this power would show a fatal weakness in the Constitution and a lack of wisdom and foresight in its framers. They will not believe the Constitution is so weak and helpless, so incapable of self-defence. Nothing, in my judgment, so shows its majesty and strength, pray God, immortal strength. The powers of war are almost infinite. The resources of this vast country spring to your open hand. All that men have, even their lives, are at the service of their country; and

in this great conflict how nobly and freely given! You can raise an army of seven hundred thousand men; you can give them all the best appliances of war; you can cover your bays and rivers and seas with your navy; you can blockade a coast of three thousand miles; you may cut down the last rebel on the field of battle. Such is the power of war. But, Mr. Speaker, when you shall have used all these powers, when peace shall have been restored, or when the rebels shall come and lay themselves at your feet, or be taken captive by your arms, then, also, will the power of that Constitution be made manifest; then, also, will this Government be shown to be the most powerful and the noblest on the earth, not because the captured rebel is at your mercy, but because he is not. Because, under the shield of the Constitution, the rebel at your feet is stronger than armies, stronger than navies. You cannot touch a hair of his head or take from him a dollar of his property until you shall have tried and condemned him by the judgment of his peers and by the law of the land. Does this show the weakness of the Constitution, or does it show its transcendent strength? Are these written constitutions established to give to Government power, without limit, over the property, liberty, and life of the citizen, or are they made to define and limit the power of the Government, and to shield and protect the rights of the subject?

"I have always been taught that the people is the sovereign; that these constitutions are carefully defined grants from the sovereign power, so framed as to establish justice, and at the same time secure the blessings of liberty and the protection of law even to the humblest and meanest citizen. I know, Mr. Speaker, that these are getting to be old-fashioned sentiments. Magna Charta is soiled and worm-eaten. The Bill of Rights, the muniments of personal freedom, habeas corpus, trial by jury, what are they all worth in comparison with this new safeguard of liberty, the proceeding *in rem?*

"Was you ever at Runnymede, Mr. Speaker? I remember going down, on a beautiful day in July, from Windsor Castle to the plain, and crossing the narrow channel of the Thames to that little island on which, more than six centuries ago, in the early gray of morning, those sturdy barons wrested from an unwilling king the first great charter of English freedom—the germ of life of the civil liberty we have to-day. I could hardly have been more moved had I stood in the village and by the manger in which was cradled 'the Son of Mary and the Son of God.' From the gray of that morning streamed the rays which, uplifting with the hours, coursing with the years, and keeping pace with the centuries, have encircled the whole earth with the glorious light of English liberty—the liberty for which our fathers planted these commonwealths in the wilderness; for which they went through the baptism of fire and blood in the Revolution; which they imbedded and hoped to make immortal in the Constitution; without which the Constitution would not be worth the parchment on which it was written.

"But I must not linger by the way, Mr. Speaker. What do these bills propose? The immediate object is to confiscate the property of the rebels. For what end? For punishment, is it not? If you strip these men of their property, it is not because they are innocent, although this bill does, in fact, confiscate the property of persons who may be guiltless of any offence. But the theory of the bill is to punish men for the crime of rebellion, or treason, or give it what name you will. The bill, indeed, recites, as an ulterior purpose, the payment of the expenses of the rebellion. But there is no man on this floor so verdant as to suppose this means much. If the courts enforce the statute (I believe they will not), how much treasure can you wring from those States, poor at the best, but whom the close of this war will leave impoverished, seared, and swept, as by fire? You might as well pasture your cattle on the desert of Sahara. The land will indeed be left, but who will be your purchasers, when they know they must take at the best a doubtful title, but a sure, bitter, and lasting feud. The strife and hate growing out of the confiscations of the Revolution are scarcely yet appeased, and it was with these confiscations fresh in the memories of the framers of the Constitution that the limitation of the power of forfeiture was adopted. There never was a wilder dream than that of paying the expenses of the rebellion with the fruits of confiscation.

"The real object of the bill is punishment, the punishment of an offence clearly defined in the Constitution, of the highest offence known to the laws. The punishment is the forfeiture of the property of the offender. The forfeiture is to be established before judicial tribunals, and upon proof of the guilt of the owner. You have, then, these three elements: punishment—upon proof of the commission of crimes—before a judicial tribunal. One element is wanting. One has been diligently excluded—trial by jury. Human ingenuity has been exhausted to shut the door against it, and your bill is like Hamlet with the Prince of Denmark omitted by particular request. Here is the plain imperative mandate of the Constitution, which he who runs may read:

> The trial of all crimes except in cases of impeachment, shall be by jury.—*Constitution*, art. 3, sec. 2.

"The property to which the bill applies is not, under the law of nations, prize, it is not booty, it is not contraband of war. It is not enforced military contribution. It is not property used or employed in the war or in resistance to the laws, and, therefore, clearly to be distinguished from that covered by the statute of August 6, 1861. It is private property outside of the conflict of arms, forfeited not because it is the instrument of offence, but as a penalty

for the crime of the owner. The disguise of the proceeding *in rem* is too thin and transparent. No lawyer, no man of common sense will be deceived by it. The proceeding in spirit, in substance, and effect, is the punishment of treason by the forfeiture of a man's entire estate, real and personal, without trial by jury, and in utter disregard of the provision of the Constitution which limits the forfeiture for treason to the life of the person attainted. (Article 3, section 3).

"Was there ever a bolder contrivance to get around the plainest and most sacred provisions of the Constitution than this attempt to get a man's farm, his cattle and fodder, his plough, spade, and hoe into a maritime court and try them by the law of prize? With all respect for my excellent friends upon the committee, such a proposition 'shocks our common sense' as well as our sense of justice and right. You make the plea of necessity, and necessity is the mother of invention; but do you expect to satisfy sensible men, when reason resumes its sway, that under a Constitution which defines treason to consist in levying war against the United States, which will not suffer the traitor to be condemned except by the judgment of his peers, and when condemned will not forfeit his estate except during his life, you can, by this proceeding *in rem*, without indictment, without trial by jury, without the proof of two witnesses (article 3, section 3), for treason, for the act of levying war, deprive him of all his estate, real and personal, for life and in fee? Nay, more; and that, after he has thus been punished, without trial by jury, and by the loss of his whole estate, you can, for the same act of levying war, try him and hang him? To suggest a doubt whether, after all, this is plain sailing under the flag of the Constitution, is to have too nice constitutional scruples!"

After examining the details of the confiscation and emancipation bills, Mr. Thomas proceeded thus: "That the bills before the House are in violation of the law of nations and of the Constitution I cannot—I say it with all deference to others—I cannot entertain a doubt. My path of duty is plain. The duty of obedience to that Constitution was never more imperative than now. I am not disposed to deny that I have for it a superstitious reverence. I have 'worshipped it from my forefathers.' In the school of rigid discipline by which we were prepared for it, in the struggles out of which it was born, the seven years of bitter conflict, and the seven darker years in which that conflict seemed to be fruitless of good, in the wisdom with which it was constructed and first administered and set in motion, in the beneficent Government it has secured for more than two generations, in the blessed influences it has exerted upon the cause of freedom and humanity the world over, I cannot fail to recognize the hand of a guiding and loving Providence. But not for the blessed memories of the past only do I cling to it. He must be blinded with excess of light, or with the want of it, who does not see that to this nation, trembling on the verge of dissolution, it is the only possible bond of unity. With this conviction wrought into the very texture of my being, I believe I can appreciate this conflict, can understand the necessity of using all the powers given by the Constitution for the suppression of this rebellion. They are, as I believe, and as the progress of our arms attests, ample for the purpose. I do not, therefore, see the wisdom of violating or impairing the Constitution in the effort to save it, or of passing from the pestilent heresy of State secession to the equally fatal one of State suicide. The fruits of the first are anarchy and perpetual border war; of the second the growth of military power, the loss of the centrifugal force of the States, the merging of the States in the central Government; a republic in name and form, in substance and effect a despotism."

Subsequently the bill before the House was passed, and sent to the Senate. It came up before that body on the 25th of June.

Matters had now reached a crisis in the Senate. A few of its members, determined, if possible, to secure the passage of all such measures as would extinguish slavery, conceiving that they had now reached the great and crowning act to be adopted. In the heat of their zeal, they had overlooked the Constitution and the courtesy due to the halting, conscientious convictions of more cool and considerate members. The result of the struggle which ensued was such as to convince these extreme Senators that the Senate was not yet ripe for, or 'educated up to' a compliance with their wishes.

Mr. Browning, of Illinois, took the floor. The special order was this bill from the House, and a substitute which had been moved. He said: "I deny and I defy, though I do not like to use that word, any man to point to one single word or letter in the Constitution which confers upon Congress any power to do any act in the exigency of war which it cannot do in times of peace. There, sir, is where the heresy lies. I give the Senator (Mr. Sumner's) own words, and while I desire to treat him with every possible respect, and have yielded to him repeatedly—a thing the Senator rarely does for the accommodation of anybody—I feel it incumbent upon me, as an American citizen, to say nothing of my position as a Senator, to enter my most earnest protest against this dangerous and revolutionary heresy that the powers of Congress are enlarged and amplified by a state of war. It overthrows the Government and accomplishes here in this Chamber what the rebels have not accomplished, and never can accomplish.

"Such, sir, are the extremities to which the Senator is driven, the inconsistencies in which he is involved, by his effort to compass an object which, in my humble judgment, is not only unconstitutional, but which, if successful, will

be fatal to the integrity of the Government itself, and change its entire character. Is it uncharitable to say that another object seems to lie much nearer the gentleman's heart than the crushing out of the rebellion and the re-establishment of the authority of the Government in all the States?

"I avow my object to be, with all the terrible enginery of war, to crush down and trample out, at once and forever, this wicked and diabolical rebellion; then to pursue and blast its leaders and fomenters with the severest punishments that can be visited upon this most malignant and unpardonable treason, and to win back the hearts of the deluded masses to the good old Government which protected them through all the past, and which they cannot, even now, remember without a tear of gratitude and a sigh of regret, and from the shelter of which they were cruelly enticed away to be exposed to the pelting of the pitiless storm of treason and rebellion which has wasted their fortunes, desolated their homes, murdered their families, embittered their lives, and darkened all their future. I wish to win them back; and, as the strongest possible inducement to return, I wish them to be fully assured that when they come they will find the same beneficent Government to which they had proved faithless, as magnanimous in mercy, as bounteous in blessing, as equal in justice, as strong in protection, as when they betrayed it. Through weal and through woe, in the sunshine of peace and amid the storm and tempest of war, I wish to stand by the Constitution. I desire that every battle fought and every victory won, shall be fought and won under the Constitution and for the Constitution, and that every life that is poured out in this terrible strife shall be a libation to its great principles. Let us stand by the Constitution. We shall need its protection hereafter more than we ever have heretofore. We shall need its restraints in the times to come more than we ever have in the times that are past. When, hereafter, this Chamber shall be filled with Senators, fresh from the battle-field, whose laurels are yet green upon their brows, accustomed to command, and impatient of restraint, let there be no act of ours to be drawn into bad precedent in breaking down the bulwarks which the Constitution has erected for the security of the people. Let us leave no record behind to be pointed at as authority for encroachment upon the powers and prerogatives of a coördinate department. Power is always grasping, always struggling for the enlargement of its dominion. If we begin by denuding the Executive, how long will it be before the judiciary is stripped of its ermine, and all power concentrated in the hands of an irresponsible legislature? When that is done, the history of the Republic is closed and the history of anarchy and despotism begins its melancholy record of tyranny and oppression and confusion and blood."

Mr. Hale, of New Hampshire, said: "Sir, a doctrine has been advanced on this floor again and again, and reiterated and promulgated, which, to my mind, is more fatal in its character, more destructive of the Government, more at war with every principle of the Constitution, than secession itself. It is the doctrine that would concentrate all the executive power of the nation—when I say executive power, I speak of it in its broadest sense, its power of activity, its energy, its power to be something and do something—in the President of the United States, negativing and denying to Congress any power at all. If that doctrine prevails your Constitution is gone, the dream of your fathers is over, the idea of a republic has vanished like the clouds of the morning before the rising glories of the sun, a practical despotism has stolen in upon us while our guardians have slept, the Constitution is perverted, and we are but a monarchy, having a name to live while we are in fact dead.

"I confess, sir, that if that is to be the Constitution we are to have left when the war is over, it is a matter of indifference to me whether the Federal or the confederate States prevail, for either of them will have but an iron despotism."

Mr. Sumner, of Massachusetts, thus explained what he regarded as the war power of the Government: "Pray, sir, where in the Constitution is the limitation of the war powers of Congress? Let Senators who would limit them mention a single section, line, or phrase, which even hints at any limitation. If it be constitutional to make war, to set armies in the field, to launch navies, to occupy fields and houses, to bombard cities, to kill in battle—all without trial by jury or any process of law or judicial proceedings of any kind—it is equally constitutional, as a war measure, to confiscate the property of the enemy and to liberate his slaves. Nor can it be doubted on principle that if the latter be unconstitutional, then are all the other agencies of war unconstitutional. You may condemn confiscation and liberation as impolitic, but you cannot condemn them as unconstitutional unless, in the same breath, you condemn all other agencies of war, and resolve our present proceedings into the process of a criminal court, guarded at each step by the technicalities of jurisprudence.

"Sir, I speak frankly, according to my convictions, claiming nothing for myself which I do not freely accord to others. In this discussion there is no need of sharp words or of personal allusions of any kind: nor can anything be gained by any missatement of the position of another. It is easy to say that Senators who insist upon the war powers of Congress are indifferent to the Constitution; but I do not admit that any Senator is more anxious for the Constitution than myself. The war powers of Congress are derived from the Constitution, but, when once set in motion, are without any restraint from the Constitution, so that what is

done in pursuance of them is at the same time under the Constitution and outside the Constitution. It is under the Constitution in its beginning and origin. It is outside the Constitution in the latitude with which it may be conducted. But, whether under the Constitution or outside the Constitution, all that is done in pursuance of the war powers is constitutional. It is easy to cry out against it; it is easy, by misapplication of the Constitution, to call it in question; but it is only by such a misapplication, or by a senseless cry, that its complete constitutionality can for a moment be drawn into doubt.

"The language of the Constitution is plain and ample. It confers upon Congress all the specific powers incident to war, and then further authorizes it 'to make all laws which shall be necessary and proper for carrying into execution the foregoing powers.' Here are the precise words:

> The Congress shall have power to declare war, to grant letters of marque and reprisal, to make rules concerning captures on land and water, to raise and support armies—to provide and maintain a navy; to make rules for the government and regulation of the land and naval forces; to provide for calling forth the militia to execute the laws of the Union, suppress insurrections, and repel invasion; and to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.

"Can language be clearer? There may be other parts of the Constitution open to question; but there is no room for question here. The text is full and unequivocal. The powers are enumerated. Without stopping to consider them in detail, it will be seen that the most important are exclusively incident to a state of war, and not to a state of peace. A declaration of war is of course war, and 'all laws necessary and proper for carrying into execution' this declaration are called into being by the war."

Mr. Browning, of Illinois, took up the positions advanced by Mr. Sumner, thus: "I intend to notice a few of the propositions of the Senator from Massachusetts. A fair example of his construction of constitutional provisions is found in his commentaries on this clause:

> No soldier shall in time of peace be quartered in any house without the consent of the owner; nor in time of war, but in a manner to be prescribed by law.

"A custom obtained, a right of war was exercised by the British Government of quartering soldiers in private houses for their maintenance; not putting them in hospitals, sick and wounded, to be cared for; but soldiers who were engaged in the active prosecution of war. They quartered them, without the consent of the owners, upon the families of citizens, to be supported and maintained as long as the Government chose at the cost of the citizen and without his consent. The Senator, to make his construction of the Constitution good upon other clauses as well as this, tortures this into a clause which would prohibit, if it were enforced, the taking of a rebel house to be used for the purposes of a hospital, or the appropriation of the house of any of our own citizens for hospital purposes. Now, sir, if the Senator really believes that the cases he has cited are within the purview of this clause of the Constitution, I certainly shall despair of ever producing any impression upon him by any constitutional argument I could enter into with him. And yet I think it is a fair specimen of his interpretation of all the clauses of the Constitution upon which he relies to establish his claim of despotic power; I will not say 'slavish;' I will not, as was said the other day, 'bandy words,' but I will say a claim of absolute and despotic power for a single department of the Government.

"The Senator claims that absolute and despotic power for Congress in the conduct of the war, and calls with something of an air of triumph upon those of us who deny it to point him to the limitation which the Constitution imposes upon the war powers of Congress. Mr. President, I have always understood the Constitution of the United States to be a grant of powers. It is true there are limitations. Its framers were not content with simply withholding grants; but in some cases—and that of confiscation was one—not content with witholding a grant of power, the convention did proceed to impose express limitations, and negatived the possession and use of any such power. It did so in several instances. But, sir, the Constitution, instead of being a limitation upon the powers of Congress in the sense in which the Senator speaks of it, is a grant of powers, and Congress can exercise no power relating to war or peace that is not expressly granted to it by the Constitution.

"And now, sir, I ask him, when he claims this unlimited and despotic power for Congress on the conduct of the war, to point me to the grant of power in the Constitution, and not content himself by turning with an air of triumph and saying 'gentlemen have pointed to no limitation in the Constitution upon the war power.' Where is his grant of power? The only place that he professes to find it, I believe, is here:

> Congress shall have power to make all laws which shall be necessary and proper for carrying into execution the foregoing powers—
>
> the powers previously granted—
>
> and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.

"Mr. President, I ask, is it seriously contended that the powers of Congress are one atom greater by the insertion of this provision than they would have been if it had never appeared in the Constitution at all?

"The gentleman insists that the Constitution confers upon Congress all the rights of war. I think I do not state him too largely. He says, in addition to that, that all the powers that are

granted to the President by the Constitution may be used by him in association with Congress; that he has no power which Congress may not, if it chooses, associate itself with him in the exercise of. One of the powers of war is the power to command the army. Does the Senator intend to be understood as insisting that Congress has the right and power, under the Constitution, to take the actual command of the army in the field?"

Mr. Sumner: "Is the Senator serious in putting the question?"

Mr. Browning: "Unquestionably, I am serious."

Mr. Sumner: "The Senator knows very well that by the Constitution of the United States the President is commander-in-chief of the army; but he also knows very well, that by the Constitution of the United States, Congress may make all laws to regulate the duties and the powers of the commander-in-chief. That is my answer to the question."

Mr. Browning: "Mr. President, I ask the Senator whether he was serious when he asserted that all the rights and powers of war were conferred by the Constitution upon Congress; whether he was serious when he further asserted that the President possessed no power which might not be used by him in association with Congress. I am serious in asking these questions, for these are doctrines which, in my judgment, are subversive of every principle of free government, which tend to establish, and which, if carried into legislation and into operation, will establish the most odious, despotic tyranny that the world ever saw.

"I do not intend to go any further into the argument, Mr. President. The Senator, repeating what had previously been said by another Senator, that the doctrine which had been advocated upon this floor, that the President could not be controlled by Congress in the exercise of the duties peculiarly devolving upon him by the Constitution, has chosen to characterize that as absurd and slavish, and deserving only of contempt, and, I believe he added, of execration. Mr. President, harsh and vulgar words prove nothing but the passion and malignity of him who uses them. They constitute no argument; they deserve no answer."

Mr. Howard, of Michigan, followed, saying: "I rise, Mr. President, to detain the Senate for a few minutes in the discussion of one single proposition, which has been frequently insisted upon during this debate respecting confiscation, that has run through so many weeks of this session —I mean the proposition which asserts the absolute authority of the President of the United States as derived from that provision of the Constitution which declares that he shall be commander-in-chief of the army and the navy and of the militia of the several States, when called into the actual service of the United States. If I understand this proposition correctly, it may be stated briefly thus: that in virtue of the clause of the Constitution which I have recited, the Executive of the nation has the absolute, independent, irresponsible authority to control, use, and employ the army and the navy of the United States, and all the implements and instruments of war, as he pleases, not being, in these regards, subject to the control of Congress in any degree, and not being in any sense or degree responsible to Congress for the exercise of this supposed power, and not being subject to any legislation which the two Houses of Congress may adopt in reference to his authority.

"The question which I propose to discuss, as connected with this proposition, is, Has Congress authority under the Constitution to control and direct the President in the application and use of the military force of the nation in carrying on war, and is he bound to apply and employ it as they may direct? It is a simple question of power under the Constitution. All will admit its magnitude and importance.

"Sir, this new heresy deserves rebuke. It has been justly characterized by the Senator from Ohio (Mr. Wade) as slavish. And nothing is more certain than that, if it shall get a permanent hold on the public mind, we shall, in the no very distant future, lose our liberties or become a conquered people. And I warn the country against the insidious and fatal sophistry, as I warn them against the less insidious and far less fatal doctrine of secession. Secession must and will be refuted and put down by the arms of freemen; but when they, too, have consented to surrender the power of the sword wholly to the President, denying to their representatives all power to control him in the use of it; when Congress shall have abdicated this, the highest function of the national sovereignty, Cæsar has no Rubicon to pass; the boundaries of his military command, once fixed by the Senate, are blotted out forever. The consular general becomes a military dictator, an *imperator*, and all the powers of the Government, civil and military, pass into his irresponsible hands; his decrees will constitute the laws of the Republic, and his prætorian bands will make the President of the United States."

Mr. Browning, of Illinois, thus replied: "I will not occupy the attention of the Senate over five minutes. As my attention was especially invited by the Senator from Michigan to a portion of his speech, to all of which I have listened with interest, I think it proper that I should make a word of reply to that part to which he invited my attention. He, like every other Senator who contends for the new doctrine he advocates, is forced to go outside of the Constitution to find authority to sustain it, and no better authority has been found by the Senator than that of Washington's commission under the Continental Congress, and the practice of the Government under the Articles of Confederation. He says that Washington himself did not assume or pretend to claim any authority independent of the appointing power. Of course he did not; the Continental Congress

was the appointing power, and the Continental Congress was competent to impose any conditions, limitations, and restraints it chose to do, and it did impose them; so did the Congress under the old Articles of Confederation. And it was the continued and repeated blundering and bungling of military operations when controlled and governed by Congress that influenced the convention to ignore the doctrine, and separate forever the direction of the army from the control of Congress. It was the very authority upon which the Senator relies to sustain his doctrine that led to a change of the doctrine, and the clothing of the President of the United States with all the authority of commander-in-chief. Now, sir, the Constitution, and not Congress, is the appointing power of the commander-in-chief of the army and navy of the United States, and he is subject to all the restraints that the Constitution imposes upon him, and he is subject to none others. Congress can impose no restraint upon any power that is necessary to the execution of the office with which the Constitution clothes him.

"The gentleman, however, attributes to me a denial of all control by Congress over the army, or the commander-in-chief. I am perfectly willing to stand by my sentiments as I have myself uttered them. I am not willing to have attributed to me absurdities that I never entertained and never expressed, whether they result from a misunderstanding or from a misrepresentation of what I did say. I certainly do not intend to intimate that the Senator makes any wilful misrepresentations of my views; but they are upon record; I am willing to abide by them, defend them; but I am not willing to undertake the defence of all the absurdities that he suggests in interrogatories to me. I do not deny the control of Congress, and never have denied the control of Congress over the armies of the United States to the extent that the Constitution gives it control. I admit all the control which the Constitution has given; that is, Congress has power to raise armies and support armies. Congress may refuse to raise armies; it may refuse to support armies; it may disband armies after they are raised, and to that extent it can control the commander-in-chief, and to no other extent than the extent that the Constitution has authorized it to control him."

The debate was further continued in the Senate with much feeling among the members in favor of a confiscation bill. Mr. Cowan, of Pennsylvania, thus described the proceedings: "I came here with the firm conviction that it was the duty as well as the policy of the Republican party, the majority upon this floor, to take by the hand every loyal man who came from a Southern State, to forget any differences that we might have had before the territorial question of slavery (which was really settled by the election of Mr. Lincoln to the Presidency), to let that all be past and bygone, and all, unitedly, as brothers, stand together, shoulder to shoulder, in order to suppress this rebellion. Could we have done this earnestly and heartily, confining our legislation solely to such laws as were necessary to raise and support our armies in the field, we should, in my judgment, have saved life and treasure, and we should have been nearer the end than we are to-day. But what has been the course of the school to which I have alluded? Why, sir, hardly a day has elapsed here that some measure was not introduced relating to slavery, and which was calculated to irritate, to wound, and to alienate those loyal and willing friends from us. How is it now? The gulf which separates the loyal men from the border States and the ultra school of the Republican party, is nearly as wide on this floor as that which separated the secessionists and the Republicans of former times. Mr. President, is that the way to suppress the rebellion? Never, never. Do the Senators from the Slave States say you are making friends for them by your projects of emancipation and confiscation, and all that kind of thing? They will tell you, and have told you, one and all, that instead of so doing, you are weakening them at home, and multiplying enemies against the Republic. Let the Senator from Minnesota go home and count his dead—and he has not one for every twenty that I have—and let him ask himself whether this unrelenting bitterness toward a whole people because they happen to live in Slave States, whether this fierce denunciation of that whole people at all times, and upon all occasions, without regard to their loyalty or disloyalty, whether the measures insisted upon here daily, and which were obnoxious to them, whether all that can be reconciled with an honest and sincere desire to put down this rebellion? I hope he may be satisfied with his answer; but if I were in his case, thinking as I do, I could not."

The bill from the House, which had been under consideration, was now amended by substituting the bill reported by the Special Committee of the Senate, by the following vote:

YEAS.—Messrs. Anthony, Browning, Clark, Collamer, Cowan, Davis, Dixon, Doolittle, Fessenden, Foot, Foster, Harlan, Harris, Henderson, Howe, Nesmith, Rice, Simmons, Stark, Ten Eyck, and Willey—21.

NAYS.—Messrs. Chandler, Grimes, Hale, Howard, King, Lane of Indiana, Lane of Kansas, Morrill, Pomeroy, Sherman, Sumner, Trumbull, Wade, Wilkinson, Wilmot, Wilson of Missouri, and Wright—17.

The bill from the House was drawn upon the principle that the confederates were belligerents, and could be proceeded against by all those measures which can be resorted to in a state of war. Those Senators who supported this bill also maintained the principle that Congress alone had the right to direct and control the war, and that the President was subject to their instructions. The key to these views is found in the fact that these Senators considered the immediate emancipation of the slaves the most important of all measures, and by this

route they hoped to achieve that end. On the other hand, the bill reported by the Special Committee of the Senate, contemplated the conviction and punishment of the traitor by due process of law, and authorized the President, whenever he deemed it expedient, to issue a prospective proclamation of emancipation. The confiscation of the property of principal offenders was the chief idea of the bill.

Mr. Trumbull, of Illinois, now moved to amend, by striking out the substitute reported by the Senate's committee, and to insert a bill from the House, authorizing emancipation. His remarks express his views on the position of the question, as follows: "Now, it is very manifest that the twenty-one Senators who voted a few minutes ago for a substitute to the House bill will never pass any confiscation bill. If it depends upon their votes, no confiscation bill will be passed, although they are quite willing to strike out a confiscation bill. The Senate has it in its power to make a law. The House has passed two bills. The Senate has the power to pass the bills of the House, and they are laws. The Senate also has it in its power to disagree with the House, and probably defeat any confiscation whatever. If some of the friends of confiscation think proper to unite with the enemies of all confiscation and disagree with the House and defeat any measure, that cannot be helped. Every Senator votes in view of his own responsibility, and if he thinks that the best course, he will, of course, pursue it. It is not my province to say anything about that for any other Senator than myself. I think that the wise policy would be, now that the House has passed measures, even if they were not quite satisfactory, to take them and enact them at once into laws. I think now it would be better to take up the other branch of the subject relating to emancipation, and substitute it, if the Senate would do so, in lieu of the amendment that the Senate proposes to adopt here; because then we shall adopt a measure that the House has agreed upon; that will be a law. But who supposes that the House will agree to the amendment that has been adopted here by the enemies of all confiscation aiding a few of its friends? Probably many persons do not want them to adopt it. That is the very thing they desire, to defeat any action. But I am for some action. I want something practical; and hence I want to agree to one of the House bills, if I cannot agree to the other; I would agree to both if I could, although they are not just such bills as I would prefer, particularly the confiscation bill."

A debate ensued which indicated much feeling on the part of the Republican Senators, who had been defeated in their bill, which was thus described by Mr. Wade, of Ohio: "Mr. President, I have witnessed, with a great deal of pain, the scenes that have been presented before us to-day in the Senate. I feel that the eye of the civilized world is upon us, and that on the Republican party of this continent now rests the question of free government throughout the world. It seems so to me; and I say I am pained the more, because it seems to me that here is a radical division that has elicited a manifestation of some degree of feeling which may tend, not only on this important question, but on others, to divide that party on whom the hopes of the whole world must rest. We have stood together, shoulder to shoulder, upon the great questions which have come before us during this session, and never, in any legislative assembly, has so much been accomplished for the welfare of mankind, for the hope of the world, as has been accomplished thus far by the action of the Republican party in this Congress. Sir, posterity will be amazed at the great work we have performed thus far."

A vote was finally reached upon the bill, which passed, as follows:

YEAS.—Messrs. Anthony, Clark, Collamer, Cowan, Dixon, Doolittle, Fessenden, Foot, Foster, Grimes, Hale, Harlan, Harris, Howe, King, Lane of Indiana, Lane of Kansas, Morrill, Pomeroy, Sherman, Simmons, Sumner, Ten Eyck, Trumbull, Wade, Wilkinson, Willey, and Wilmot—28.

NAYS.—Messrs. Bayard, Browning, Carlile, Chandler, Davis, Henderson, Howard, Nesmith, Pierce, Powell, Stark, Wilson of Missouri, and Wright—13.

In the House, the amendment of the Senate was disagreed to—yeas 8, nays 124.

A committee of conference on the part of each House was appointed, and the Senate bill, with amendments, was reported and concurred in by the Senate and House.

Subsequently, a joint resolution explanatory of this act was passed in the House and sent to the Senate. It provided that the bill should be so construed "as not to apply to any acts done prior to its passage; nor to include any member of a State legislature, or judge of any State court who has not, in accepting or entering upon his office, taken an oath to support the constitution of the so-called Confederate States of America."

Mr. Clark, of New Hampshire, also offered the following, to be added to the resolution:

Nor shall any punishment or proceedings under said act be so construed as to work a forfeiture of the real estate of the offender beyond his natural life.

Mr. Trumbull, of Illinois, objected, saying: "I cannot consent to that amendment. The Senate will observe that it is a very important amendment. It provides that you shall confiscate the real estate only for life. What will that amount to? What is a life estate worth in lands in the West, where these traitors chiefly hold their real estate? It is not worth anything; it amounts to nothing."

Mr. Clark, of New Hampshire, replied: "I trust the amendment will be agreed to. It may be sometimes desirable to secure as much as we can, if we cannot get all we wish. I would desire to get the real estate in fee; but if we cannot do that, it may be worth while for us to consider whether we will not take the personal property of the individual and the real estate for life, if we cannot get the estate in fee."

Mr. Sherman, of Ohio, said: "I should like to know by what authority the Senator says we cannot get any more, because if we are acting under a kind of duress, I want to understand it."

Mr. Clark replied: "I do not say that we are acting under any duress; but it may be that there may be objections to the bill as it now stands, somewhere, and it may be that an amendment like this will cure the difficulty and enable us to get over it. I suggest to Senators whether it may not be better to adopt the amendment in that view of it, rather than to reject it."

Mr. Sherman: "If the Senator from New Hampshire will state to us in explicit language that the President of the United States will veto the bill unless we pass this amendment, I am in favor of passing it; but I want to throw that responsibility upon those who ought properly to assume it. I will not shirk myself, and I do not want anybody else to shirk. If the President desires to say that in his view of the Constitution—and I do not criticise him—he wishes this amendment in order to enable him conscientiously to sign the bill, I will pass it; but I want him to take that position before the people of the United States."

Mr. Clark: "Mr. President, I think I may say that I am authorized to declare that I do know that that is one of the objections made to the bill by the President, and it is with a view of removing that objection and inducing his signature to the bill that I offer this amendment, not that it satisfies me."

Mr. Sherman: "Then I will vote for it."

Mr. Clark: "There is one other amendment that I propose to make, and I may as well, as I am upon the floor, state what that is. I propose, after this amendment be adopted, if it shall be adopted, to move this further amendment:

"*And be it further resolved,* That the words granting an amnesty in the thirteenth section of said act shall be so construed as to authorize the President to restore the offender any property which may have been seized and condemned under any proceedings of this act, or the proceeds thereof."

Mr. Grimes, of Iowa, said: "Will the Senator state whether that is also at the instance of the President?"

Mr. Clark: "It is. The thirteenth section of the bill provides:

That the President is hereby authorized, at any time hereafter, by proclamation, to extend to persons who may have participated in the existing rebellion in any State, or part of a State, pardon and amnesty, with such exceptions, and at such times and on such conditions as he may think fit.

"The question was, whether that would authorize him, if a man showed himself to be innocent, to restore his property; and it is only to extend the words to give him that privilege, if he finds the man has been innocent, to let him have his property back again."

Mr. King, of New York, likewise objected to the amendment, saying: "Mr. President, this mode of proceeding presents to us a question that is entirely new. We are called upon to make a precedent as to the manner in which communications shall take place between coördinate branches of the Government in the exercise of their powers. I look upon it as a graver question, if possible, than the merits of this particular proposition.

"I am astonished that this proposition should be made. I regret it. I think it ought not to be made or acted on."

Mr. Fessenden, of Maine, said: "Now, sir, what is the part of common sense under such circumstances? If all the essential features of the bill can be retained, or if the greater number of the most essential features can be secured by yielding one, without which the bill cannot become a law, or may not become a law, what is the objection, as a matter of common sense and common prudence, to taking the best we can and the most we can under such circumstances? Is there any loss of dignity in that? Is there any loss of character on the part of the Senate? Is it better that no bill be passed with regard to this object, which gentlemen profess to have, and have, so much at heart? Is it best to have an open defiance, and to say that nobody shall have an opinion but ourselves? That would seem to be the inference from the argument. I have always been opposed to that idea. While I am very anxious to have my own views carried out into practice, I acknowledge the same right on the part of others in the same position with myself, and those in a different position from myself, if they are to act on the same subject."

Mr. Powell, of Kentucky, proposed an amendment, saying: "I now notify the Senate that at the proper time I will move to amend the pending amendment by striking out the word 'real' before 'estate,' so that, confining the forfeiture to life, it shall apply to all estates, both real and personal; and upon that point I will remark very briefly.

"I am clearly of opinion, and have expressed it heretofore in the Senate, that the clause in the Constitution which declares that 'no attainder of treason shall work corruption of blood or forfeiture, except during the life of the personal attainted,' applies both to personal and real estate. The chief object I have in view now, however, is to call the attention of the Senate to a very short, but in my mind a very cogent argument that cites the authorities on this subject. I have delivered to the clerk a written article upon this very subject, which was sent to me some days ago, by Judge Nicholas, of Louisville, Kentucky, who is one of the best lawyers in the country, and he has written most luminously on all this subject of confiscation and the war power. Judge Nicholas cites the opinions expressed upon this point by the Senator from Illinois (Mr. Browning), and by the Senator from Massachusetts (Mr. Sumner), and he makes his argument, adduces

his authorities, to overthrow the error into which those Senators had fallen.

"I am delighted, sir, to see that the President has indicated a desire to regard the Constitution in this measure. I pray God that he will do it in all cases, and I am sorry he has not heretofore done it more resolutely than he has. I now ask the clerk to read the manuscript that I have placed in his hands."

The Secretary read as follows:

Forfeiture—Confiscation.—"Personalty, by the English law, was never forfeited by an attainder of treason. It was the realty, and the realty only, that the attainder acted on; and when they say no attainder shall hereafter work a forfeiture, they mean it shall not hereafter work a forfeiture upon the same estate that it heretofore acted upon. An attainder never did act upon the personalty at all, never touched it; it affected the realty only, leaving the personalty to be dealt with as the wisdom of Congress might see fit."—*Senator Browning, Congressional Globe*, 2171.

"It is admitted by Senators that the words of the Constitution do not forbid the forfeiture of personal estate; so that a person attainted of treason would be made to forfeit all his personal estate, no matter what its amount."—*Senator Sumner, Congressional Globe*, 2190.

To prevent a repetition of such gross, pernicious blunders, the attention of those Senators and others is invited to the following citations from so familiar and accurate an authority as Blackstone's Commentaries:

"By attainder for treason or other felony, forfeiture of lands and of whatsoever else the offender possessed, was the doctrine of the old Saxon law."—*Vol.* 2, 251.

"Upon judgment of outlawry or of death, for treason or felony, a man shall be said to be attainted."—*Vol.* 4, 381.

"The forfeiture of goods and chattels accrues in every one of the higher kinds of offence: in high treason or misprision thereof, petit treason, felonies of all sorts, whether clergyable or not," &c.—*Vol.* 4, 386.

"There is a difference between the forfeiture of lands and of goods and chattels. Lands are forfeited upon attainder and not before; goods and chattels are forfeited by conviction. Because, in many of the cases where goods are forfeited there never is any attainder; which happens only where judgment of death or outlawry is given. The forfeiture of lands has relation to the time of the fact committed, so as to avoid subsequent sales and conveyances; but the forfeiture of chattels has no relation backwards; so that those only which a man has at the time of conviction shall be forfeited. Therefore, a traitor or felon may, *bona fide*, sell any of his chattels, real or personal, between the fact and conviction, for no buyer could be safe if he were liable to return the goods he had fairly bought, provided any of the prior vendors had committed treason or felony."—*Vol.* 4, 387.

Therefore the Constitution, in saying "no attainder of treason shall work forfeiture except during the life of the person attainted," includes personal as much as real estate.

Therefore, also, Congress can in no way, directly or indirectly, punish treason by emancipation, for *quo ad* the punishment of treason the owner of a slave has only a life estate, and the owner of such life estate has no power of emancipation. Or, at most, all that Congress could do in the way of penalty, would be to emancipate during the life of the owner; but this would be so manifestly unjust to the remainder-man that no fair-minded person would contend for that mode of exercising the power.

There is still a stronger reason against such exercise of the supposed power. Senator Sumner, in the same speech (page 2190) admits: "Congress has no power under the Constitution over slavery in the States." "Congress has no direct power over slavery in the States so as to abolish or limit it." Now, all the slave States prohibit emancipation, except in the manner their statutes specially prescribe. Congress can rightfully, legally, do nothing in reference to this peculiar property, whether by way of punishment or otherwise, in violation of this necessary settled policy of those States. Congress may forfeit and hold, or forfeit and sell slaves by due process of law in punishment of treason, but the Government or its purchaser must take and hold the property subject to the State law.

This equally disposes of all claim of power in the President, or of one of his sub-military commanders, to emancipate by proclamation. They can have in that particular, or any other no power not given by Congress expressly or impliedly. As Congress cannot give such power directly, it cannot be implied. If claimed as an incident to the right of eminent domain, then it becomes private property taken for public use, for which just compensation must be made to the owner according to the recent precedent of emancipation in the District of Columbia. If claimed as an incident to the power of carrying on the war, then it is met by that highest authority, the Declaration of Independence, denouncing it as contrary to the usages of civilized warfare. It therefore cannot be implied in the silence of the rules and articles of war, nor can Congress rightfully make it part of them.

Respectfully submitted by S. S. NICHOLAS.

The amendment moved by Mr. Powell was rejected.

Mr. Harris, of New York, thus explained the proposition before the Senate: "Mr. President, the bill in question, as it has passed both House of Congress, provides for the seizure and condemnation of the property of rebels in two ways: first, where the traitor has been proceeded against personally and convicted. In that case, the first section of the bill provides that a fine may be imposed upon him, and that his property may be sold for the payment of that fine. His whole estate in the realty may, under the provisions of that section, be divested. The Senator from Illinois thinks that provision is unconstitutional, and yet he has supported the bill and desires to have it a law. He thinks that, under the provisions of that section, only the life estate can be divested. So the President thinks. Thus far they agree.

"Now there is another provision of that bill which the Senator from Illinois does not seem to understand. He has stated that it is provided in the bill that the real estate of the rebel may be seized by the army, and made a prize or capture of war. The Senator is mistaken about that. The seventh section of the bill provides that where the proceeding is not against the rebel *in personam*, where there are no personal proceedings against him, his estate may be seized by the Government by a proceeding *in rem*, and condemned and sold. The President thinks that that proceeding *in rem* against the property instead of the person is equally unconstitutional with the other; and I am not sure that the Senator from Illinois would not think so. It is accomplishing indirectly what the first section accomplishes directly, in my judgment. The one is a judgment *in rem* against the property, the other is a judgment *in personam*, accompanied with a fine under which the property is sold. The Senator from Illinois and the President differ

widely in respect to this. The principle is the same. The Senator has entirely misapprehended, at least it would seem so from the remarks he has made, the scope and extent of the provisions of this bill in regard to proceedings *in rem*. If I understand the bill, the seventh section of the bill provides for the seizure of rebel property where there are no proceedings against the person, not by the army merely, but by proceedings instituted on behalf of the Government by the executive department of the Government. It seems to me that the Senator from Illinois is of all others the last person who should object to this explanatory provision by which the bill is made to conform to his own principles."

The joint resolution, with the amendments, was subsequently passed in the Senate and approved by the House.

The bill and joint resolution were signed by the President, after which he sent the following Message to the House.

Fellow Citizens of the Senate and House of Representatives:

Considering the bill for "An act to suppress insurrection, to punish treason and rebellion, to seize and confiscate the property of rebels, and for other purposes," and the joint resolution explanatory of said act, as being substantially one, I have approved and signed both.

Before I was informed of the resolution, I had prepared the draft of a Message, stating objections to the bill becoming a law, a copy of which draft is herewith submitted. ABRAHAM LINCOLN.

July 12, 1862.

[Copy.]

Fellow Citizens of the House of Representatives:

I herewith return to your honorable body, in which it originated, the bill for an act entitled "An act to suppress treason and rebellion, to seize and confiscate the property of rebels, and for other purposes," together with my objections to its becoming a law.

There is much in the bill to which I perceive no objection. It is wholly prospective; and it touches neither person nor property of any loyal citizen, in which particular it is just and proper.

The first and second sections provide for the conviction and punishment of persons who shall be guilty of treason, and persons who shall "incite, set on foot, assist, or engage in any rebellion or insurrection against the authority of the United States, or the laws thereof, or shall give aid or comfort thereto, or shall engage in or give aid and comfort to any such existing rebellion or insurrection." By fair construction, persons within those sections are not punished without regular trials in duly constituted courts under the forms and all the substantial provisions of law and the Constitution applicable to their several cases. To this I perceive no objection; especially as such persons would be within the general pardoning power, and also the special provision for pardon and amnesty contained in this act.

It is also provided that the slaves of persons convicted under these sections shall be free. I think there is an unfortunate form of expression, rather than a substantial objection, in this. It is startling to say that Congress can free a slave within a State, and yet if it were said the ownership of the slave had first been transferred to the nation, and Congress had then liberated him, the difficulty would at once vanish. And this is the real case. The traitor against the General Government forfeits his slave at least as justly as he does any other property; and he forfeits both to the Government against which he offends. The Government, so far as there can be ownership, thus owns the forfeited slaves, and the question for Congress in regard to them is, "Shall they be made free or sold to new masters?" I perceive no objection to Congress deciding in advance that they shall be free. To the high honor of Kentucky, as I am informed, she is the owner of some slaves by *escheat*, and has sold none, but liberated all. I hope the same is true of some other States. Indeed, I do not believe it will be physically possible for the General Government to return persons so circumstanced to actual slavery. I believe there would be physical resistance to it, which could neither be turned aside by argument, nor driven away by force. In this view I have no objection to this feature of the bill. Another matter involved in these two sections and running through other parts of the act will be noticed hereafter.

I perceive no objections to the third and fourth sections.

So far as I wish to notice the fifth and sixth sections, they may be considered together. That the enforcement of these sections would do no injustice to the persons embraced within them is clear. That those who make a causeless war should be compelled to pay the cost of it is too obviously just to be called in question. To give governmental protection to the property of persons who have abandoned it and gone on a crusade to overthrow that same Government is absurd, if considered in the mere light of justice. The severest justice may not always be the best policy. The principle of seizing and appropriating the property of the person embraced within these sections is certainly not very objectionable, but a justly discriminating application of it would be very difficult, and, to a great extent, impossible. And would it not be wise to place a power of remission somewhere, so that these persons may know they have something to lose by persisting and something to gain by desisting? I am not sure whether such power of remission is or is not within section thirteen. Without any special act of Congress, I think our military commanders, when, in military phrase, "they are within the enemy's country," should, in an orderly manner, seize and use whatever of real or personal property may be necessary or convenient for their commands; at the same time preserving, in some way, the evidence of what they do.

What I have said in regard to slaves while commenting on the first and second sections is applicable to the ninth, with the difference that no provision is made in the whole act for determining whether a particular individual slave does or does not fall within the classes defined in that section. He is to be free upon certain conditions; but whether those conditions do or do not pertain to him, no mode of ascertaining is provided. This could be easily supplied.

To the tenth section I make no objection. The oath therein required seems to be proper, and the remainder of the section is substantially identical with a law already existing.

The eleventh section simply assumes to confer discretionary power upon the Executive. Without the law, I have no hesitation to go as far in the direction indicated as I may at any time deem expedient. And I am ready to say now, I think it is proper for our military commanders to employ, as laborers, as many persons of African descent as can be used to advantage.

The twelfth and thirteenth sections are something better than unobjectionable; and the fourteenth is entirely proper, if all other parts of the act shall stand.

That to which I chiefly object pervades most part of the act, but more distinctly appears in the first, second, seventh, and eighth sections. It is the sum of those provisions which results in the divesting of title forever.

For the causes of treason and ingredients of treason, not amounting to the full crime, it declares forfeiture extending beyond the lives of the guilty parties; whereas the Constitution of the United States declares that 'no attainder of treason shall work corruption of blood or forfeiture, except during the life of the person attainted.' True, there is to be no formal attainder in this case; still, I think the greater punishment cannot

be constitutionally inflicted, in a different form, for the same offence.

With great respect I am constrained to say I think this feature of the act is unconstitutional. It would not be difficult to modify it.

I may remark that the provision of the Constitution, put in language borrowed from Great Britain, applies only in this country, as I understand, to real or landed estate.

Again, this act, *in rem*, forfeits property for the ingredients of treason without a conviction of the supposed criminal, or a personal hearing given him in any proceeding. That we may not touch property lying within our reach, because we cannot give personal notice to an owner who is absent endeavoring to destroy the Government, is certainly satisfactory. Still, the owner may not be thus engaged; and I think a reasonable time should be provided for such parties to appear and have personal hearings. Similar provisions are not uncommon in connection with proceedings *in rem*.

For the reasons stated, I return the bill to the House in which it originated.

Some of the acts of a general nature passed at this session of Congress, provided for the following purposes:

The number of members of the House of Representatives was fixed at two hundred and forty-one. Eight additional members were assigned, one each to Pennsylvania, Ohio, Kentucky, Illinois, Iowa, Minnesota, Vermont, and Rhode Island.

The following additional article of war was adopted for the government of the army and navy:

ARTICLE. — All officers or persons in the military or naval service of the United States are prohibited from employing any of the forces under their respective commands for the purpose of returning fugitives from service or labor, who may have escaped from any persons to whom such service or labor is claimed to be due, and any officer who shall be found guilty by a court martial of violating this article shall be dismissed from the service.

The act for the abolition of slavery in the District of Columbia emancipated all persons of African descent held to service in the District immediately upon its passage; loyal owners of slaves only were allowed ninety days to prepare and present to commissioners appointed for that purpose the names, ages, and personal description of their slaves, who were to be valued by the commissioners. No single slave could be estimated to be worth more than three hundred dollars. The amount of these claims was to be paid to each owner after the final report of the commissioners at the end of nine months. One million of dollars was appropriated to carry the act into effect. The sum of one hundred thousand dollars was appropriated to colonize any of the liberated slaves, who might desire to go to Hayti, Liberia, or any country beyond the limits of the United States, as the President might select.

A department of agriculture was established, the design and duties of which are to acquire and to diffuse among the people of the United States useful information on subjects connected with agriculture in the most general and comprehensive sense of that word, and to procure, propagate, and distribute among the people new and valuable seeds and plants.

A commissioner, with a salary of three thousand dollars, and a chief clerk, with a salary of two thousand dollars, are the officers of the department.

An act to secure homesteads to actual settlers on the public domain, provides that any loyal citizen of twenty-one years of age or upward, or one who has filed his intention to become a citizen, may enter one quarter section or a less quantity of unappropriated public land upon which such persons may have filed a preëmption claim, or is subject to preëmption. The applicant must file an affidavit that the said entry is made for actual settlement and cultivation, and not for the use or benefit of any other person. No certificate is given or patent issued until the land has been occupied and cultivated for five years by the applicant. No land thus acquired can become liable for the satisfaction of any debt contracted previous to the issue of the patent. No individual can acquire title to more than one quarter section under the act.

An act was passed to provide for the construction of a railroad and telegraph line from the Missouri river to the Pacific Ocean.

The following sections of an act to punish and prevent the practice of polygamy in the Territories of the United States, &c., were enacted:

The first section punishes with a fine of five hundred dollars and imprisonment not exceeding five years, any person convicted of bigamy in any Territory of the United States.

SEC. 2. *And be it further enacted*, That the following ordinance of the provisional government of the State of Deseret, so called, namely: "An ordinance incorporating the Church of Jesus Christ of Latter Day Saints," passed February eight, in the year eighteen hundred and fifty-one, and adopted, reënacted, and made valid by the Governor and Legislative Assembly of the Territory of Utah by an act passed January nineteen, in the year eighteen hundred and fifty-five, entitled "An act in relation to the compilation and revision of the laws and resolutions in force in Utah Territory, their publication, and distribution," and all other acts and parts of acts heretofore passed by the said Legislative Assembly of the Territory of Utah, which establish, support, maintain, shield, or countenance polygamy, be, and the same hereby are, disapproved and annulled: *Provided*, That this act shall be so limited and construed as not to affect or interfere with the right of property legally acquired under the ordinance heretofore mentioned, nor with the right "to worship God according to the dictates of conscience," but only to annul all acts and laws which establish, maintain, protect, or countenance the practice of polygamy, evasively called spiritual marriage, however disguised by legal or ecclesiastical solemnities, sacraments, ceremonies, consecrations, or other contrivances.

SEC. 3. *And be it further enacted*, That it shall not be lawful for any corporation or association for religious or charitable purposes to acquire or hold real estate in any Territory of the United States during the existence of the territorial government of a greater value than fifty thousand dollars; and all real estate acquired or held by any such corporation or association contrary to the provisions of this act shall be forfeited and escheat to the United States; *Provided*,

That existing vested rights in real estate shall not be impaired by the provisions of this section.

Every person hereafter elected or appointed to any office of honor or profit under the Government of the United States, either in the civil, military, or naval departments, except the President, is, by another act, required to take the following oath before entering upon the duties of such office:

I, A B, do solemnly swear (or affirm) that I have never voluntarily borne arms against the United States since I have been a citizen thereof; that I have voluntarily given no aid, countenance, counsel, or encouragement to persons engaged in armed hostility thereto; that I have neither sought, nor accepted, nor attempted to exercise the functions of any office whatever, under any authority or pretended authority in hostility to the United States; that I have not yielded a voluntary support to any pretended government, authority, power, or constitution within the United States, hostile or inimical thereto. And I do further swear (or affirm) that, to the best of my knowledge and ability, I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion, and that I will well and faithfully discharge the duties of the office on which I am about to enter, so help me God.

The Confiscation, Tax, Tariff, and Militia Laws are noted elsewhere in these pages.

This session of Congress closed on the 17th of July, 1862. It was marked by industry on the part of the members, and a disposition not only to sustain the Executive in the conflict with the Confederate States, but to urge him to all such measures as should tend to liberate the slaves in those States. It is a singular fact that not a proposition for conciliation or one that looked to a redress of any conceived grievance on the part of the South was entertained in either House. One was offered by Mr. Saulsbury, of Maryland, on the second day of the session, and immediately laid on the table. It does not appear to have been alluded to afterward, nor was any other offered. The resolutions expressing the sense of Congress on the object of the war adopted at the previous session were repudiated, and bills providing for the emancipation of the millions of slaves through the confiscation of all the property of disloyal owners in those immense Southern States, were passed into laws.

Slavery, and the laws regulating it, were abolished in the District of Columbia. Slavery was forbidden in all the Territories of the United States. Liberia and Hayti were recognized as independent republics, and as belonging to the family of nations. A new treaty, relative to the slave trade, was ratified with Great Britain, which allowed to her the liberty of searching American vessels under certain circumstances. All persons in the army or navy were prohibited from returning slaves, or sitting in judgment on the claim of their masters. The slaves of disloyal persons in the Confederate States were declared to be emancipated on coming within the lines of the Federal army. A resolution to tender compensation to loyal masters on the voluntary emancipation of their slaves was also adopted by Congress.

CONNECTICUT, one of the Eastern or New England States, first settled in 1633. Area, 4,674 square miles. Population in 1860, 460,147. Governor till first Wednesday in May, 1863, William A. Buckingham, of Norwich. Secretary of State, till same date, James Hammond Trumbull, of Hartford. The election for State officers takes place on the first Monday of April. At the election of April, 1862, the total vote was 70,430, of which William A. Buckingham received 39,782, and was elected. The Legislature consists of 21 senators, and 251 representatives. The Senate was unanimously Republican. The House of Representatives had 195 Republican members, and 56 Democrats. The State expenditure for the year, aside from school-fund revenue, was $2,148,257, of which about $1,866,097.52 was for war purposes; two thirds of this amount would be refunded by the general government. The valuation of the State, as returned by the assessors, which does not include State or other property exempt from taxation, and estimates real estate much below its true value, was $254,742,695. The census valuation in 1860, which probably comes nearer the actual property of the State, was $444,274,114. The resources and liabilities of the banks of the State in April, 1862, amounted to $39,211,643, the capital of the banks being $21,790,937, their circulation, $8,023,681, and the specie in their vaults $1,518,317. The assets of the savings banks of the State (forty-five in number) were $20,539,758.55, showing a surplus of $556,799.11 over their liabilities. The railroad property of the State (twelve railroads) cost about $26,000,000, and seven of the twelve roads paid dividends during the year, varying from two to twelve per cent. The total expenditure for common-school purposes during the year was $486,000, of which $130,850.40 was from the revenue of the school fund. The State has a normal school, with 9 teachers and 174 pupils, and three colleges, with 55 professors and instructors and 809 students. There are also an asylum for the deaf and dumb, at Hartford, the first founded in the United States, with 18 teachers and 222 pupils, and the Connecticut School of Imbeciles, at Lakeville, Litchfield county, with 2 teachers and 19 pupils, and a State reform school at West Meriden, with 148 inmates. The Retreat for the Insane, at Hartford, is an incorporated institution, founded in 1824, and had in April, 1862, 221 patients. It is under the charge of John S. Butler, M. D. The State had increased its population during the decade ending in 1860 by 89,355 inhabitants, or 24.10 per cent; but this increase was almost entirely in the cities and large towns, the increase of New Haven county being 31,757, of which 18,922 was in the city of New Haven, and nearly 6,000 in the city of Waterbury, while the remainder was distributed

through the large manufacturing towns of the county; Hartford county had increased 19,995, of which 15,599 was in the city of Hartford, and most of the remainder in the towns of New Britain and Windsor Locks; Fairfield county had increased 17,701, almost entirely in the large towns along the Sound shore; New London county had gained 9,910, of which 4,905 was in her two cities, New London and Norwich; while the other four counties, which were mainly agricultural, and contained among them but one city, and few considerable towns, had gained but 9,992 in the aggregate, though embracing about $\frac{2}{7}$ of the population of the State. The State is largely engaged in manufacturing, its aggregate industrial products being stated in round numbers at $83,000,000. The cash value of its farms and farming implements was $93,169,486. Connecticut had furnished to November 10, 1862, 28,551 men for the volunteer army. They constitute twenty-seven regiments of infantry, one regiment of heavy artillery, two batteries of light artillery, and one battalion of cavalry. At the close of the year, six regiments, one battery, and the battalion of cavalry were at different points in Virginia, one regiment in Maryland, six in North Carolina, two and a battery at Hilton Head or its vicinity, three in New Orleans, and the remainder in camp awaiting orders, or recruiting. The quota required to fill the two calls of July and August, 1862, being short about 2,000 on the 10th of September, Governor Buckingham directed a draft to be made in the towns where there was a deficiency on that day. In New Haven, Hartford, and some other towns, the deficiency was made up by volunteering before the day closed, bounties of large amounts being offered by patriotic citizens to volunteers. In other places the draft was made. Slight opposition was offered in Fairfield and Newtown, but it was soon quelled, without any injury. In all, 1,212 persons were drafted, but of these only 218, of whom 142 were substitutes, were mustered into the service of the United States, 81 having deserted after reporting at camp; 623 were exempted by surgeons and selectmen, 10 had previously volunteered, 34 were not subjects of military duty, and 166 were unaccounted for on the 12th of December, 1862. The number needed was, however, made up by volunteers.

At its regular session, in May, 1862, the Legislature passed a militia law, or rather revised and modified that of the previous year, which had proved objectionable in many particulars. This law divided the able-bodied males of the State between the ages of eighteen and forty-five, except the usual State and United States exempts, into two classes, the active and inactive militia; the first to consist of all the volunteer companies then in existence, or who might be organized under the act, and to constitute one division of such number of brigades and regiments as the commander-in-chief (the governor of the State) should direct; the second class (inactive militia) to be composed of all other able-bodied persons not exempt, to be enrolled, and (except minors) to pay a commutation tax of one dollar per annum, and not to be liable to serve except in case of rebellion or invasion of the State, when they might be drafted by the commander-in-chief to fill up the ranks of the active militia. The organized, or active militia, were required to be properly armed and equipped, arms being furnished by the State, and a sum allowed for the rent of an arsenal. They were to be paid two dollars a day and mileage when mustered for drill and camp duty, and if belonging to a cavalry corps were allowed two dollars more for horse hire per day. They were also exempted from the commutation tax and jury duty. The officers were obliged to assemble once a year for officers' drill, under a competent drill master, and were compensated for the time thus spent. The law does not seem to have been perfect in its operations, much complaint being made in regard to it.

The expense of fitting out and providing for so large a number of troops as was called for by the President's proclamations in July and August, 1862, having drained the treasury, and causing a large prospective deficit, Governor Buckingham deemed it necessary to call a special session of the Legislature, which met in Hartford on the 9th of December, 1862. In his message, addressed to them, the governor stated the inefficiency of the draft, showed the defects of the militia law, and advocated the extension of suffrage to the soldiers in the field. He also recommended that the State bonds be issued for a definite number of years, and that the towns be allowed to issue bonds. The funded debt of the State was $2,000,000, and the unfunded debt amounted, on the 1st of December, to $1,212,800. Exclusive of this unfunded debt, and of new appropriations, the estimated necessities of the treasury to the 31st of March, the close of the financial year, were $768,333, and the estimated receipts only $642,580, leaving a deficiency of $125,753, which, added to the unfunded debt, made the entire indebtedness to be provided for $1,338,553. Nearly one half of this was for bounties to volunteers. The Legislature passed an act authorizing a loan of $2,000,000, which was taken in February, 1863, at about twelve per cent. premium. They also passed a law permitting the soldiers in the field to vote for State officers, but this was subsequently pronounced by the judges of the supreme court of the State unconstitutional. They also made some modifications in the State militia law.

D

DECATUR, a village in Morgan co., Alabama, is on the left bank of the Tennessee river, and thirty miles west of southwest of Huntsville. It is one hundred and twenty-two miles from Nashville in Tennessee, and is the termination of a railroad from Nashville to Decatur, which crossed the Tennessee river by a long bridge. This bridge was burnt by a Federal force of the division of Gen. Mitchell to prevent the pursuit of a Confederate force. The Memphis and Charleston railroad passes through Decatur, which is 188 miles from the former point. Steamboats of light draft descend the Tennessee from this point into the Ohio and Mississippi rivers.

DELAWARE, one of the Middle Atlantic States, first settled in 1627. Its area is less than that of any other State of the Union except Rhode Island, being 2,120 square miles. Its population in 1860 was 112,216. The governor elected in Nov. 1862, for four years from Jan. 1863, was William Cannon of Bridgeville; the Secretary of State appointed by the governor elect and holding office for the same time, was Nathaniel B. Smithers, of Dover. At the election on the 2d Tuesday of November, 1862, the Republican Union candidate for Governor, Cannon, received 8,155, while Samuel J. Jefferson, the democratic candidate, received but 8,044. For Congress, William Temple, the democratic candidate, had 8,051 votes, and was elected; the Republican Union candidate, George P. Fisher, having only 8,014. The Senate, composed of 9 members, has 5 democrats and 4 Republican Union members, and the House, which has 21 members, has 14 democrats to 7 Republican Union. The receipts into the State Treasury, for the year ending January 1, 1862 (the last published), were $97,810.50, and the expenditures for the same period were $76,414.04, of which $38,989.05 were for general purposes, and $37,428.99 for education. The State has no debt, but possesses a general fund of $771,750, and a school fund of $431,392. The census valuation of the State in 1860 was $46,242,181. The assessors' valuation in 1862, which omits all property exempt from taxation, was $41,521,498. The total taxes of the State were $121,121.36. There are 14 banks in the State, which in May, 1862, had an aggregate capital of $1,915,010, a circulation of about $1,000,000, and $250,000 in specie. Small as is the territory of the State, it has 137 miles of railroad, which cost for road and equipment $4,312,129; and one canal, the Chesapeake and Delaware, 12.63 miles in length, and having a width and depth sufficient for the passage of vessels drawing 9 ft. of water. The cost of construction of this canal was $3,547,561.

The State has two colleges, St. Mary's (Catholic) at Wilmington, and Delaware College (Protestant) at Newark. The preparatory department only of the latter is now in operation. There are 296 public schools in the State. In 1861, 15,036 children attended the schools, which were maintained an average period of 6.97 months. The whole amount expended for school purposes was $85,333.03. Of this sum $33,359.49 was derived from the school fund and $53,485.08 was raised by contribution, and of this $37,731.80 (more than two thirds) was raised in New Castle county. The income of the general school fund is distributed to the counties, according to their population in 1830, and the income of the U. S. surplus fund equally to each county. By this arrangement New Castle county, which has 54,796 inhabitants, receives $12,807.36, and Sussex county, which has only 29,615 inhabitants, receives $12,011.22.

The constitution of the State provides that each county shall have an equal number of Senators and Representatives in its Legislature; a provision fair enough when the constitution was adopted, since at that time the counties varied little in population; but now manifestly unjust, since the population of New Castle county is very nearly double that of either of the other two counties.

According to the census report of 1860, there are in the State 90,589 white inhabitants, 19,827 free colored, and 1,798 slaves. Of the slaves 1,341 (three fourths) are in Sussex county, 254 in New Castle and 203 in Kent; of the free colored, 8,188 are in New Castle, 7,271 in Kent, and 4,370 in Sussex; of the whites, New Castle has 46,355, Sussex 23,904, and Kent 20,330. The aggregate manufactures of the State were $9,920,000, and consisted principally of shipping, flour and meal, steam engines and machinery, railroad cars, carriages, lumber, cotton and woollen goods, and boots and shoes. The war has greatly increased the productive industry of Wilmington, the principal city of Delaware, several of the iron clad and other gunboats having been built there, and the demand for locomotives and cars having been much greater than at any previous period. The cash value of the farms of the State was $31,426,357, which, taking into account the small amount of territory in the State, was as high as most of the other States. Great attention has been paid to fruit growing in the State, and its peach and apple orchards, supply a large part of the demand in the neighboring cities of Philadelphia and Baltimore. The wheat of Delaware has a high reputation, and the flour from its mills is in demand and brings high prices. The State raised its quotas for the volunteer army under the calls of July and August, 1862, without a resort to drafting. In all about 5,000 men have been furnished by the State.

DIPLOMATIC CORRESPONDENCE OF THE UNITED STATES IN 1862. The correspondence of the Federal Governments with

foreign governments during 1862 was more voluminous than during the preceding year, and embraces some interesting and important subjects arising out of the unusual state of affairs.

Great Britain.—As early as November, 1861, the action of the British Consul at Charleston, Mr. Bunch, became a subject of complaint by the Federal Government. This action consisted in communicating, under instructions from home, to the Confederate authorities the desire of her Majesty's Government that the second, third, and fourth articles of the declaration of Paris should be observed by the Confederate States in the prosecution of the hostilities in which they were engaged. The grounds alleged for complaint against this action of the Consul by the Federal Government were, that a statute of the United States forbids, under a heavy penalty, any person not specially appointed, or duly authorized or recognized by the President, whether citizen or denizen, privileged or unprivileged, from counselling or advising, aiding or assisting in any political correspondence with the Government of any foreign state whatever, with an intent to influence the measures of any foreign Government, or of any officer or agent thereof, in relation to any disputes or controversies with the United States, or to defeat the measures of their Government. The conduct of Mr. Bunch was thus taken to be a wanton violation of the law of the United States, and its Government announced, as the result of the most calm and impartial deliberation, a necessity put upon it to revoke the exequatur of the Consul.

The reply of Earl Russell was, that the United States Government, by quoting this statute as the foundation on which to rest their complaint, seemed distinctly to admit that the Government of the Confederate States at Richmond was, as regards the United States, "the government of a foreign state"—an admission which goes further than any acknowledgment with regard to those states which her Majesty's Government had hitherto made. And if the Confederate States are, as regards the United States, a foreign state, which is implied by the grounds taken by the latter, then the President of the United States has no competence one way or the other, with respect to the functions of the Consuls of other Governments in that foreign state, and the exequaturs of such Consuls can be granted or withdrawn only by the government of such foreign state. The Confederate States cannot be at one and the same time "a foreign state," and part of the territory of the United States.

It had been further asserted by the United States Government that any communication to be addressed to the Government of the Confederate States respecting goods of a belligerent on board of neutral ships, &c., should have been made by diplomatic and not by consular agents, and the only authority in the United States to receive such a communication was the Government of the United States itself.

To this assertion Earl Russell replies, that it is gravely telling her Majesty's Government that an application to the Confederate Government for redress ought to be made through the President of the United States. Her Majesty's Government may well ask whether such a position is seriously laid down, and whether the President of the United States can affirm that, in the present condition of things, he has the power to give effect to any such application which might be made to him. Could the President of the United States restore a British subject impressed into the Confederate service, or could he recover private debts due a British subject and confiscated under a Confederate or State law? It is then declared by Earl Russell to be a principle of international law, that when the persons or property of the citizens or subjects of a state are injured by a *de facto* government, the state so aggrieved has a right to claim from the *de facto* government redress and reparation. It may be necessary in future, for the protection of the interests of her Majesty's subjects, to have further communications both with the central authority at Richmond, and with the governors of the separate states, and in such cases communications will continue to be made, but such communications will not imply any acknowledgment of the Confederates as an independent state.

Mr. Adams, in reply, expressed astonishment that he should have given any justification of the view of the statute taken by Earl Russell through ambiguity in his previous communications, and proceeded to explain that the statute was designed to punish all persons, whether native or foreign, citizen or privileged, who knowingly made themselves instruments of foreign states to foment factious disturbances within the United States. In applying the law in a mitigated form to Mr. Bunch, he could not have made so great a mistake as to have assumed that he was dealing with "the government of a foreign state."

Respecting the other position taken by him, namely, that the Government was the only authority to which any diplomatic communication could be made, he urged that otherwise every proceeding was an attempt to undermine the authority to which an agent had been accredited, by his recognizing for any purpose the validity of a domestic antagonism within the limits of that authority. Other arguments were advanced by Mr. Adams, but the subject appears to have then been dropped. More than a year afterward, when an attack on Charleston was about to be made, the British war steamer Cadmus entered that port and took away Mr. Bunch.

The next subject of discussion with her Majesty's Government arose from reports received by the Navy Department, that although the United States had a deposit of coal at Nassau, the Federal steamers were denied the right of taking it for use by the colonial authorities at that place. On the 24th of Feb., Mr. Adams

addressed a letter to Earl Russell stating the disbelief of the President that these proceedings had been sanctioned by her Majesty's Government, but if they had been, he requested such action in the proper quarter as might lead to a rectification of the error.

On the 25th of March, Earl Russell replied that coal had arrived at Nassau in the schooners Stetson and Perry, which could hardly be described as a deposit of coal existing at Nassau, although it was doubtless the coal referred to. On the arrival of the Stetson, the coal appeared by the vessel's papers to have been shipped by the Navy Department. The governor therefore gave directions that the coal should be admitted to an entry and landing, but that the United States Consul should be informed that it could not be permitted to be used in any manner which might involve a breach of the Queen's proclamation of the 13th of May, 1861, and particularly that the coaling at Nassau of vessels of war of either of the belligerent powers could not be allowed without the express sanction of her Majesty's Government having been first obtained. Meantime the Perry arrived, laden with coal. On the 11th of Dec. the U. S. war steamer Flambeau arrived, and on the next day the American Consul applied for permission to land the cargo of the Stetson, as she was leaking badly, or to discharge a part of it on board the Flambeau. Permission was given to him to land the coal, but not to tranship it to the Flambeau. The coal was not however landed. The Consul then complained that the Confederate vessel Theodora had been supplied with coal by a merchant, to which the governor, in reply, said, that the Theodora was a merchant vessel trading to the port at Nassau, and that being propelled by steam, it was necessary, to enable her to pursue her occupation as a trader, that she should be supplied with coal. The furnishing this necessary article, therefore, for her use by a merchant in the way of trade, was perfectly lawful, and could not be construed into a breach of neutrality. On the other hand, the Flambeau was avowedly an armed vessel in the service of the Federal Government. To supply her with coal might facilitate her belligerent operations, and this would constitute an infraction of the neutrality prescribed by the Queen's proclamation. The object of the authorities at Nassau was to preserve a strict neutrality, and her Majesty's Government could not therefore withhold from the governor the approval to which he was entitled for the course which he had pursued.

It was also pointed out that the cases of the James Adger and the Nashville at Southampton were not parallel cases. Those vessels were some thousands of miles distant from their respective homes, and to them, consequently, coal was an article of real necessity; whereas the Flambeau was within a very short distance of the ports of her own nation, Key West, for instance, where her necessities could readily be supplied. The application of the United States Consul was not founded on the necessities of the Flambeau, but on the alleged necessities of the Stetson. The view taken of this decision is thus stated by Mr. Seward in a despatch to Mr. Adams, dated April 16: "The approval of the British Government of the proceedings of the governor of Nassau is regarded by the President as unfriendly toward a power that extends unrestricted hospitalities to the naval as well as the mercantile marine of Great Britain in its ports and harbors. The grievance is not sensibly alleviated by the fact that the Government of her Majesty are able to reconcile it with a proclamation issued by her Majesty in May last, conceding the rights of a belligerent to the insurgents in arms against the United States. The explanation obliges us to renew the declaration this Government has so often made, that it regards the proclamation itself as unnecessary, unfriendly, and injurious."

The next subject of interest related to the preparation of the steam gunboat Oreto, which has subsequently appeared as a cruiser of the Confederate navy. On the 18th of February, Mr. Adams writes to Earl Russell that he had been informed of the preparation at Liverpool of an armed steamer, evidently intended for hostile operations on the ocean. In reply, Earl Russell stated that the commissioners of the customs at Liverpool reported that she was built for certain parties in Liverpool, and intended for the use of Thomas, Brothers, of Palermo, one of whom had frequently visited the vessel during the process of building—that she had taken nothing on board but coal and ballast—that she was not fitted for the reception of guns; nor were the builders aware that she was to be supplied with guns whilst she remained in England, and the collector at Liverpool stated that he had every reason to believe that the vessel was for the Italian Government—also that special directions had been given to the officers at Liverpool to watch the movements of the vessel. Mr. Adams subsequently writes to Mr. Seward—"the nominal destination of the Oreto to Sicily is the only advantage which appears to have been derived from my attempt to procure the interference of the Government to stop her departure."

On the 25th of March, Mr. Adams writes again to Earl Russell, enclosing a letter from the American Consul at Liverpool, stating certain facts relative to the Oreto. Mr. Adams says: "It is with great reluctance that I am driven to the conviction that the representations made to your lordship of the purposes and destination of that vessel were delusive, and that though at first it may have been intended for service in Sicily, yet that such an intention has been long since abandoned in fact, and the pretence has been held up only the better to conceal the true object of the parties engaged. That object is to make war on the United States. All the persons thus far known to be most connected with the undertaking are either

directly employed by the insurgents in the United States of America, or residents of Great Britain, notoriously in sympathy with, and giving aid and comfort to them on this side of the water."

On the 8th of April, Earl Russell replied to Mr. Adams, enclosing a report from the Lords Commissioners of her Majesty's treasury, which states that the Oreto was registered on the 3d of March in the name of John Henry Thomas, of Liverpool, as sole owner, that she cleared on the following day for Palermo and Jamaica in ballast, but did not sail until the 22d, having a crew of fifty-two men, all British with the exception of three or four, one of whom was an American. She had no gunpowder, nor even a signal gun, and no colors save Marryatt's code of signals and a British ensign, nor any goods on board excepting the stores enumerated in an accompanying copy of her victualling bill.

On the 15th of April, a conference took place between Mr. Adams and Earl Russell. Its close is thus stated by the former:

In the case of the Oreto, upon which I had addressed a note to him, he had directed an investigation to be made, and the authorities at Liverpool had reported that there was no ground for doubting the legality o. her voyage.

I replied that this was exactly what gave such unpleasant impressions to us in America. The Oreto, by the very paper furnished from the custom-house, was shown to be laden with a hundred and seventy tons of arms, and to have persons called troops on board, destined for Palermo and Jamaica. The very statement of the case was enough to show what was really intended. The fact of her true destination was notorious all over Liverpool. No commercial people were blind to it. And the course taken by her Majesty's officers in declaring ignorance only led to an inference most unfavorable to all idea of their neutrality in the struggle. It was just such action as this that was making the difficulties of our Government in the way of giving the facilities to the supply of cotton, which they hoped to furnish in a short time if the whole control of means to put an end to the contest was left to them.

His lordship concluded by a polite expression of regret at these circumstances, at the same time that he could not see how the Government could change its position.

The assertion of Mr. Adams relative to troops &c. is not sustained by the copy of the paper from the custom house contained in this volume of documents. The only part referring to troops and guns is as follows:—

"Men, 52; passengers or troops, ——; guns, ——; 178 tons."

Again, on the 26th of June, Mr. Seward writes to Mr. Adams that a gunboat called the Oreto, built in England for the service of the insurgents, with ports and bolts for twenty guns, and other equipments, arrived at Nassau; and that the United States Consul, on the basis of the facts relative to her, made a protest upon the subject and she was seized by the authorities. She was, however, released soon after, on the arrival at Nassau of Capt. Semmes, late of the Sumter, and was about to start on a privateering cruise. This release by the authorities of Nassau, Mr. Seward was instructed by the President to protest against, as it seemed to be particularly at variance with her Majesty's proclamation of neutrality—and to ask the consideration of her Majesty's Government upon the proceeding as one calculated to alarm the Government and people of the United States. The subject was duly brought to the notice of Earl Russell, who, on the 29th of August, replied that the Oreto had been seized at Nassau, and was to be tried before the admiralty court for a breach of the foreign enlistment act. This was accompanied by the statements of the collector, surveyor and inspector of the port of Liverpool, and the affidavit of the pilot, that the vessel, when she went to sea, had no munitions of war in her, that is guns, carriages, shot, shell, or powder.

No further reference is made to the Oreto in this correspondence, but the 290, or Alabama, is introduced as a more formidable object. On the 23d of June, Mr. Adams writes to Earl Russell, saying:—"I am now under the painful necessity of apprising your lordship that a new and still more powerful war steamer is nearly ready for departure from the port of Liverpool on the same errand as the Oreto. This vessel has been built and launched from the dockyard of persons, one of whom is now sitting as a member of the House of Commons, and is fitting out for the especial and manifest object of carrying on hostilities by sea." Accompanying this was a letter from the United States Consul at Liverpool in confirmation of these and other statements.

The subject was immediately referred to the Lords Commissioners of her Majesty's treasury, who, on the 1st of July, report that the fitting out of the vessel had not escaped the notice of the revenue officers, but that as yet nothing had transpired concerning her which had appeared to demand a special report. The vessel was intended for a ship of war, reported to be built for a foreign government, but as yet had neither guns nor carriages on board, and the builders did not appear disposed to reply to any questions respecting the destination of the vessel after she left Liverpool. Their solicitor, however, reported his opinion that there was not at that time sufficient ground to warrant the detention of the vessel, or any interference by the department. The Consul at Liverpool was then instructed by Mr. Adams to lay his evidence before the Commissioners. At the same time, he called Capt. Craven, in command of the U. S. gunboat Tuscarora, to Southampton. To Capt. Craven was given all the information respecting the objects and destination of the 290 in possession of Mr. Adams, who advised him to take such measures as might in his opinion be effective to intercept her on her way out.

Meanwhile evidence was procured of the character and objects of the vessel by the U. S. Consul at Liverpool, which, in the opinion of a Queen's solicitor, was sufficient to justify the collector of the port in seizing the vessel, and

laid before the commissioners. While the subject was under their consideration the 290 sailed from Liverpool, without register or clearance. The captain of the Tuscarora was immediately notified by Mr. Adams and he started in pursuit. Earl Russell, in a conference with Mr. Adams, stated that a delay in determining upon the case had most unexpectedly been caused by the sudden development of a malady of the Queen's advocate, Sir John D. Harding, totally incapacitating him for the transaction of business. This had made it necessary to call in other parties, whose opinion had been at last given for the detention of the gunboat, but before the order got down to Liverpool the vessel was gone. He should however send directions to have her seized if she went, as was probable, to Nassau. Instructions were also despatched to Ireland to detain the vessel, if she put in to Queenstown.

On the 30th of Sept. Mr. Adams wrote to Earl Russell, relating the injuries done by the 290 or Alabama, saying, "I have strong reasons to believe that still other enterprises of the same kind are in progress in the ports of Great Britain at this time. Indeed they have attained so much notoriety, as to be openly announced in the newspapers of Liverpool and London." Earl Russell, acknowledging the letter, in reply said: "I have to state to you that, much as her Majesty's Government desire to prevent such occurrences, they are unable to go beyond the law, municipal and international."

On the 9th of October Mr. Adams enclosed to Earl Russell the following intercepted letter, "as substantiating the allegations made of the infringement of the enlistment law by the insurgents of the United States in ports of Great Britain." He also added: "In the representations which I have had the honor lately to make, I beg to remind your lordship that I base them upon evidence which applies directly to infringements of municipal law itself, and not to anything beyond it."

CONFEDERATE STATES OF AMERICA,
NAVY DEPARTMENT, RICHMOND, *July* 12, 1862.

SIR: Your letter of the 29th of March last reached me this morning.

The department notified you, on the 11th of January last, that you would receive orders to command the second vessel then being built in England, but for reasons satisfactory to the department, you were subsequently assigned to the command of the first vessel, the Florida (Oreto), now at Nassau, and any just ground for "the surprise and astonishment" in this respect at the department's action is not perceived.

A commission as commander for the war was sent you on the 5th of May, and your failure to follow the Oreto, which left England about the 21st of March, and to take command of her, as was contemplated, and as you were apprised by Captain Bullock, on the 26th of March, is not understood, and has been productive of some embarrassment.

Captain Bullock was nominated by the executive for his position in the navy under existing law, and was duly confirmed by the Senate, and your protest to this department against the action of these coördinate branches of your government is out of place.

Upon the receipt of this letter you will turn over to Lieutenant G. F. Sinclair the instructions which you may have received, together with any public funds in your hands, and return to the Confederate States in such manner as your judgment may direct.

Should you not be provided with funds for this purpose, Commander Bullock will, upon your application, supply them.

I am, respectfully, your obedient servant,
S. H. MALLORY, Secretary of the Navy.

Commander JAS. H. NORTH,
C. S. N., London, England.

On the 16th of October Mr. Adams writes home to Mr. Seward that, "It is very manifest that no disposition exists here to apply the powers of the Government to the investigation of the acts complained of, flagrant as they are, or to the prosecution of the offenders. The main object must now be to make a record which may be of use at some future day."

Among the papers laid before Earl Russell by Mr. Adams was an affidavit of a person who sailed from Liverpool in the 290, stating that arms were furnished to her in or near Augra Bay, part of the Azores. To which Earl Russell replies that the transaction does not appear to have taken place in any part of the United Kingdom, or of her Majesty's dominions, but in part of the Portuguese dominions. No offence, therefore, cognizable by the laws of the country, appears to have been committed by the parties engaged in the transaction. Respecting a statement in a letter of the American consul at Liverpool, that a bark was to take out a cargo of coals, either from Cardiff or Troon, near Greenock, for the 290, Earl Russell replies that "there would be great difficulty in ascertaining the intention of any parties making such a shipment; and we do not apprehend that our officers would have any power of interfering with it, were the coals cleared outward for some foreign port in compliance with the law." No further correspondence relative to the 290 and the Oreto took place. (*See* NAVY, CONFEDERATE.)

The discussions between the two Governments relating to these vessels were also extended to the subject of furnishing supplies to the Confederate States by means of vessels fitted out in English ports to run the blockade. On the 11th of March, Mr. Seward wrote to Mr. Adams that information had been received that insurance companies in England were insuring vessels engaged in running the blockade, and even vessels carrying contraband of war. This, he said, "was, in effect, a combination of British capitalists, under legal authority, to levy war against the United States. It is entirely inconsistent with the relations of friendship, which we, on our part, maintain toward Great Britain." Earl Russell, in reply to the representations of Mr. Adams, said:—"The matter shall have the due consideration of her Majesty's Government." On the 25th of March, Mr. Adams writes to Earl Russell as follows:

It is obvious that just in proportion to the success of the efforts made by the ill-intentioned people of foreign countries to violate the blockade must be the endeavors to enforce it with increased stringency. So, also, in proportion to the success of such persons in

supplying, by violation of law, the insurgents with the means of continuing their resistance, must be the delay in restoring to all honest people the customary facilities of trade and intercourse to which they are justly entitled. It has not been without great regret that the Government has been compelled to observe the extent to which her Majesty's flag has been abused to subserve the purposes of the disaffected, and thus to continue the present depressed condition of legitimate trade. A very great proportion of the vessels which attempted to violate the blockade appear to be fitted out directly from Great Britain, or some of her dependencies. The effect of permitting such violations of good faith to go unnoticed by Government is not merely to create an unfortunate degree of irritation in America, implicating many far beyond the sphere of the unworthy parties concerned in producing it, but to postpone proportionately the prospect of bringing about a better state of things. It is for this reason, as well as from a desire earnestly felt by the President to maintain unbroken all the customary relations of amity with Great Britain, that I have been directed to make the present representation. Any suggestion of the means best adapted to remedy the evils complained of is deemed a matter exclusively within the competency of those in whom the decision to act is vested.

On the 27th, Earl Russell replied as follows:

The charge that nearly all the assistance now obtained from abroad by persons still in arms against the Government of the United States, and which enables them to continue the struggle, comes from Great Britain and its dependencies, is somewhat vague. I believe the greater part of the arms and ammunition sent from this country to America during the struggle has gone to the United States.

I agree with you in the statement that the duty of nations in amity with each other is not to suffer their good faith to be violated by ill-disposed persons within their borders, merely from the inefficiency of their prohibitory policy. But it is, at the same time, a duty not to punish persons on suspicion, without any proof of their evil intent. It is not the custom of this country to deprive any person of liberty or property without evidence of some offenee. If such evidence can be obtained, the laws are sufficient to prevent the accomplishment of their evil designs against friendly nations.

You have not yourself hitherto furnished me with evidence that any vessel has received a hostile or warlike equipment in British waters, which has been afterward used against the United States. The care that was taken to prevent the warlike equipment of the Nashville in British waters must be familiar to your recollection.

With regard to coöperation with the policy of the United States in respect to the blockade, I must remind you that Great Britain has abstained, as far as possible, from complaints of the irregularity of the blockade which has been instituted.

Her Majesty's government have been mindful of the suddenness of the danger with which the United States were threatened; of the inadequacy of the naval force then at the disposal of the Government, and of the great difficulty of blockading a coast of three thousand miles. But beyond forbearance and a liberal interpretation of the law of nations in favor of the United States, her Majesty's Government cannot go. If by cooperation with the policy of the United States is meant either taking part in the civil war still raging, or imposing restraints on the Queen's subjects unknown to international law, I cannot undertake that her Majesty's Government will adopt either of those courses. It would be an unheard-of measure to prohibit merchants from sending ships to sea destined to the Southern ports. Should such ships attempt to violate the blockade, capture and condemnation are the proper penalty of such attempts. No authority can be found for any other.

On the 4th of April, Mr. Seward again requests Mr. Adams to bring the subject to the notice of Earl Russell, "in the hope that the time may have at last come when British subjects, deliberately and wickedly engaged as abettors in the existing warfare against the Government, may be subjected to some restraint, or, at least, be made to feel Her Majesty's severe displeasure." In reply to these views presented by Mr. Adams, on the 15th of April, Earl Russell expressed his belief that the parties engaged in these undertakings were not so much interested in the cause of the insurgents as in the profits to be expected by running the blockade. Such attempts always would be made in similar cases. For the rest, these adventurers were compelled to take their own risk. They had the dangers of capture to encounter, and the certainty of being deprived of their rights of reclamation. The Government had no disposition to give them protection.

On the 25th of April, Mr. Adams writes to Mr. Seward: "Meantime outfits of vessels with supplies to run the blockade go on with increased vigor. Every account received of a successful voyage stimulates to enlarged contributions."

In a letter, on the 30th, to Earl Russell, Mr. Adams refers to the subject again, saying:

I deem it my duty to represent to your lordship the fact that the Government of the United States finds itself involved in peculiar embarrassment in regard to its policy toward the vessels of Great Britain, from the difficulty, to which I have repeatedly called your lordship's attention, of distinguishing between the lawful and the unlawful trade carried on upon the coast of the United States in vessels bearing her Majesty's flag. It comes presented to me in so many forms of evidence, that I cannot avoid the painful conviction that a systematic plan, founded on the intent to annul her Majesty's proclamation by steady efforts to violate the blockade through vessels either actually British, or else sailing under British colors, has been in operation in this island for many months, and becomes more rather than less extensive with the progress of time.

To this letter Earl Russell emphatically replied on the 6th of May, in these words:

With regard to the "systematic plan" which you say has been pursued by her Majesty's subjects "to violate the blockade by steady efforts," there are some reflections which I am surprised have not occurred to you.

The United States Government, on the allegation of a rebellion pervading from nine to eleven States of the Union, have now for more than twelve months endeavored to maintain a blockade of three thousand miles of coast. This blockade, kept up irregularly, but when enforced, enforced severely, has seriously injured the trade and manufactures of the United Kingdom. Thousands of persons are now obliged to resort to the poor rate for subsistence, owing to this blockade. Yet her Majesty's Government have never sought to take advantage of the obvious imperfections of this blockade, in order to declare it ineffective. They have, to the loss and detriment of the British nation, scrupulously observed the duties of Great Britain toward a friendly state. But when her Majesty's Government are asked to go beyond this, and to overstep the existing powers given them by municipal and international law for the purpose of imposing arbitrary restrictions on the trade of her Majesty's subjects, it is impossible to listen to such suggestions. The ingenuity of persons engaged in commerce will always, in some degree, defeat attempts to starve or debar from commer-

cial intercourse an extensive coast inhabited by a large and industrious population.

If, therefore, the Government of the United States consider it for their interest to inflict this great injury on other nations, the utmost they can expect is that European powers shall respect those acts of the United States which are within the limits of the law. The United States Government cannot expect that Great Britain should frame new statutes to aid the Federal blockade, and to carry into effect the restrictions on commerce which the United States, for their own purposes, have thought fit to institute, and the application of which it is their duty to confine within the legitimate limits of international law.

Two days later Mr. Adams responded as follows:

In declaring that blockade the Government of the United States are believed to have done nothing which has not been repeatedly done heretofore, and the right to do which at any time hereafter, whenever the necessity shall appear to call for it, is not distinctly affirmed by the Government of Great Britain. Neither does the fact that this proceeding pressed with the greatest severity upon the interests of neutral nations appear formerly to have been regarded in any other light than as an incidental damage, which, however much regretted in itself, unavoidably follows from the gravity of the emergency which created it. For it can scarcely be supposed that so onerous a task as a veritable blockade will be undertaken by any nation for causes not deemed of paramount necessity, or will be persevered in one moment longer than those causes continue to operate. I am very sure that it is the desire of the Government of the United States to accelerate the period when the blockade now in operation may be safely raised. To that end it is bending all its efforts. And in this it claims to be mindful, not simply of the interests of its own citizens, but likewise of those of all friendly nations. Hence it is that it views with deep regret the strenuous efforts of evil disposed persons in foreign countries, by undertakings carried on in defiance of all recognized law, to impair, so far as they can, the efficacy of its measures, and in a corresponding degree to protract the severity of the struggle. Hence it is, likewise, that it has been profoundly concerned at the inefficacy of the laws of Great Britain, in which a large proportion of the undertakings originate, to apply any adequate policy of prevention. For I doubt not your lordship will see at a glance the embarrassment in which a country is necessarily involved by complaints raised of the continued severity of a blockade by a friendly nation, which at the same time confesses its inability to restrain its subjects from stimulating the resistance that necessitates a continuance of the very state of things of which they make complaint.

That a sense of the difficulties consequent upon the action of such persons prompted the enactment of the statute of his Majesty George the Third, of the 3d July, 1819, is made plain by the language of its preamble. It is therein stated that it was passed because the laws then in force were not sufficiently effectual to prevent the evil complained of. It now appears from the substance of the representations which I have heretofore had the honor to make to your lordship, that the provisions of that law are as little effectual in curing the evil as those of any of its predecessors. But I am pained to be obliged to gather from the concluding words of your lordship's note that the expression of an opinion that the United States, in the execution of a measure conceded to be correct, as well as justified by every precedent of international law as construed by the highest British authorities, cannot expect that Great Britain should frame new statutes to remedy the deficiency of its own laws to prevent what it acknowledges on the face of that statute to be evils created by its own refractory subjects. I must be permitted to say, in reply, that, in my belief, the Government of the United States would scarcely be disposed to make a similar reply to her Majesty's Government were the relative position of the two countries to be reversed.

Permit me, in conclusion, to assure your lordship that the grounds upon which the representations I have had the honor to make [were founded] have not been hastily considered. So far from it, the extent of the evil complained of has been under rather than overstated. I have now before me a list of eleven steamers and ten sailing vessels that have been equipped and despatched within thirty days, or are now preparing, freighted with supplies of all kinds for the insurgents from one port of Great Britain alone. These supplies, I have reason to believe, are to be conveyed to Nassau, which place is used as an entrepot for the convenience of vessels under British colors, employed for the sole purpose of breaking the blockade. I have reasons for supposing that the business is reduced to a system, emanating from a central authority situated at London; and, further, that large sums of money have been contributed by British subjects to aid in carrying it on. If the United States have, in any of their relations with her Majesty's Government, committed some act not within the legitimate limits of international law which justifies the declaration of a disposition not to provide against such obvious violations of the neutrality proclaimed at the outset of this deplorable struggle, I trust I may be so clearly presented to their consideration by your lordship as to supply the means either of explanation or of remedy.

On the 10th of May, Mr. Adams, writing relative to the case of the Emily St. Pierre, hereafter mentioned, argued the duty of the Government to suppress these attempts to send supplies to the Confederate States, from the intention of the queen's proclamation. (*See* ANNUAL CYCLOPÆDIA, 1861; PUBLIC DOCUMENTS.) Earl Russell immediately replied as follows:

FOREIGN OFFICE, *May* 10, 1862.

SIR: In the letter I had the honor to receive from you yesterday you appear to have confounded two things totally distinct:

The foreign enlistment act is intended to prevent the subjects of the crown from going to war when the sovereign is not at war. Thus private persons are prohibited from fitting out a ship-of-war in our ports or from enlisting in the service of a foreign state at war with another state, or in the service of insurgents against a foreign sovereign or state. In these cases the persons so acting would carry on war, and thus might engage the name of their sovereign and of their nation in belligerent operations. But owners and masters of merchant ships carrying warlike stores do nothing of the kind. If captured for breaking a blockade or carrying contraband of war to the enemy of the captor, they submit to capture, are tried, and condemned to lose their cargo. This is the penalty which the law of nations has affixed to such an offence, and in calling upon her Majesty's Government to prohibit such adventures you in effect call upon her Majesty's Government to do that which it belongs to the cruisers and the courts of the United States to do for themselves.

There can be only one plea for asking Great Britain thus to interpose. That plea is, that the blockade is in reality ineffective, and that merchant ships can enter with impunity the blockaded ports. But this is a plea which I presume you will not urge. Her Majesty's Government have considered the blockade as an effective blockade, and have submitted to all its inconveniences as such.

They can only hope that, if resistance should prove to be hopeless, the Confederate States will not continue the struggle; but if, on the other hand, the restoration of the Union should appear to be impossible, the work of devastation now going on will cease.

Her Majesty's Government can only desire the prosperity of the inhabitants of the United States, whatever may be the event of the present civil war.

Mr. Adams's answer was dated on the 12th, as follows:

LEGATION OF THE UNITED STATES, LONDON, *May* 12, 1862.

MY LORD: I have the honor to acknowledge the reception of your note of the 10th instant. From the purport of it I am led to fear that I may have been unfortunate heretofore in my attempts to express my own meaning. If I have appeared to your lordship to confound two things so very dissimilar as the penalties of the enlistment act and the liabilities which follow from the attempt to break a blockade, I can only say that the fault must be laid to my want of ability to use words properly to express my thoughts.

The position which I did mean to take was this: that the intent of the enlistment act, as explained by the words of this preamble, was to prevent the unauthorized action of subjects of Great Britain, disposed to embark in the contests of foreign nations, from involving the country in the risk of a war with these countries. This view of the law does not seem to be materially varied by your lordship; when speaking of the same thing you say that the law applies to cases where "private persons so acting would carry on, and thus might engage the name of their sovereign and of their nation in belligerent operations." It is further shown by that preamble that that act was an additional act of prevention, made necessary by experience of the inefficiency of former acts passed to effect the same object.

But it is now made plain that whatever may have been the skill with which this latest act was drawn, it does not completely fulfil its intent, because it is very certain that many British subjects are now engaged in undertakings of a hostile character to a foreign state which, though not technically within the strict letter of the enlistment act, are as much contrary to its spirit as if they levied war directly. The measures embrace all of the operations preliminary to openly carrying on war—the supply of men, and ships, and arms, and money to one party in order that they may be the better enabled to overcome the other, which other is in this case a nation with which Great Britain is now under treaty obligations of the most solemn nature to maintain a lasting peace and friendship. The Government of the United States having, in the course of its hostile operations, had occasion to experience the injurious effects of this virtual levying of war against itself from the ports of a friendly power, and seeing the obstacle in the way of the removal of them to be alleged to be the inefficiency of a statute intended to effect that object, does not regard it as asking anything unreasonable, or more than it would in like case be willing itself to grant if it solicits some action to render effective the spirit as well of the law as of her Majesty's enunciation of the national will.

I perceive that your lordship appears to be of opinion that, in this proceeding, the Government of the United States is asking more than is reasonable. It is, in your view, sufficient to declare that owners and masters of merchant ships, fitted out with intent to break a blockade or carry contraband of war to one of two parties engaged in war, are subject to capture, trial, and condemnation, if caught by the offended party. And hence, in this case, that the Government of the United States, in calling upon her Majesty's Government to prohibit such adventures, is in effect calling upon it to do that which it ought to do for itself. The only valid plea, your lordship remarks, for asking interposition, is, that the blockade is in reality ineffective; and this, you very justly presume, I shall not be disposed to urge.

But I pray your lordship's pardon if I submit that you appear to have entirely overlooked another plea, which I am confident enough to imagine of no inconsiderable weight. That plea is that the kingdom of Great Britain endeavor in spirit as well as in letter to preserve the principle of neutrality, if not of friendship, toward a foreign power in amity with it to which it has pledged itself. The precise mode in which that shall be done, it does not presume to prescribe. That the toleration of such conduct in subjects of Great Britain, as I have had the pain heretofore to expose, is surely in violation of that neutrality, is justly to be inferred from the very language of her Majesty's proclamation. For it is therein declared that precisely such acts of theirs as I have been compelled to complain of are done "in derogation of their duty to her as a neutral sovereign, and incur her high displeasure." If such, then, be the true character of the proceedings to which I have heretofore called your lordship's attention, they surely merit something more of notice from her Majesty's ministers than an intimation that they will be suffered to pass unreproved unless the punishment shall be inflicted by the nation whom they are designed to injure. The object of the Government of the United States has not been to relieve itself of the duty of vigilance to capture offenders against the law. It has rather been to avoid the necessity of applying additional stringent measures for their own security against British subjects found to be engaged in such illicit enterprises, made imperative by the conviction that no preventive coöperation whatever can be expected from her Majesty's Government. It has rather been to avoid the risk of confounding the innocent with the guilty, because all happen to be involved in a general suspicion. And, lastly, it has rather been to remove, at as early a day as may be, consistently with its own safety, the restrictions on the trade with foreign countries, which these evil-doers are laboring with so much industry to force it to protract. Your lordship's language leaves me little hope of any coöperation of her Majesty's Government to these ends. Nevertheless, I trust I may be permitted to indulge the belief that the time is not now far distant when the difficulties thus interposed in the way of its progress will have been so far removed by its own unassisted action as to relieve both countries from the painful necessity of further continuing the discussion.

The correspondence on this subject was closed by the following note from Earl Russell to Mr. Adams:

FOREIGN OFFICE, *May* 17, 1862.

SIR: I do not wish to prolong this correspondence, and shall only make one remark in answer to your last letter.

If the British Government, by virtue of the prerogative of the crown or by authority of parliament, had prohibited and could have prevented the conveyance in British ships of arms and ammunition to the Confederate States, and had allowed the transport of such contraband of war to New York and to other Federal ports, her Majesty's Government would have departed from the neutral position they have assumed and maintained.

If, on the other hand, her Majesty's Government had prohibited and could have prevented the transport of arms and ammunition to both the contending parties, they would have deprived the United States of a great part of the means by which they have carried on the war. The arms and ammunition received from Great Britain, as well as from other neutral countries, have enabled the United States to fit out the formidable armies now engaged in carrying on the war against the Southern States, while by means of the blockade established by the Federal Government, the Southern States have been deprived of similar advantages.

The impartial observance of neutral obligations by her Majesty's Government has thus been exceedingly advantageous to the cause of the more powerful of the two contending parties.

I have the honor to be, sir, your most obedient, humble servant, RUSSELL.

CHARLES FRANCIS ADAMS.

The action of her Majesty's Government in according to the Confederate States belligerent rights, was a subject of constant correspondence. It was pressed by Mr. Seward as the most im-

portant of all the questions arising between the two Governments. Nevertheless, her Majesty's Government remained inflexible in the position which it had taken. At one time, on August 22d, Mr. Adams writes to Mr. Seward that he had been told, but not by authority such as to place the matter altogether beyond a doubt, that his (Mr. Seward's) despatch in connection with preceding ones likewise communicated, and other considerations, had had so much effect on the Ministry as to incline them to leave open a way to the revisal of their former policy depending on the issue of the movement upon Richmond. Had that been successful, the recognition of belligerent rights was to have been withdrawn.

Representations were also made to her Majesty's Government, relative to the proceedings at Nassau, by parties engaged in running the blockade, but they were not successful in obtaining any interference of the Government. Representations were also made by British subjects at Liverpool, relative to a kind of blockade of the island by American cruisers. (*See* BLOCKADE.) But the Government made no concessions to the petitioners.

The case of the ship Emily St. Pierre was one of considerable interest. On the 24th of April, Mr. Adams wrote to Earl Russell that this ship, being under a British register, and belonging to British subjects residing in Liverpool, was found on the 18th of March previous, attempting to run into the port of Charleston, in South Carolina, in violation of the blockade, there legitimately established. She was seized, and the crew, with the exception of the commander, the steward, and cook, taken out, and a prize crew of three officers and twelve men put on board, with directions to proceed to Philadelphia. The captain being left at liberty on board, concerted a scheme by which he surprised and took possession of the vessel, and compelled the seamen to navigate the ship to the port of Liverpool, where he sent them ashore, and took shelter for himself under the authority of the British Government. Mr. Adams asked for the restoration of the vessel, on the ground that it had been decided that such an act would work a total confiscation of vessel and cargo, and that the unlawful intent of the voyage was too strongly indicated to justify the extension to it of any protection by the Government.

Earl Russell replied, on the 7th of May, that her Majesty's Government were unable to comply with the request for the restoration of the ship, inasmuch as they had no jurisdiction or legal power whatever to take or to acquire possession of her, or interfere with her owners in relation to their property in her. Further, her Majesty's Government could not raise in an English court the question of the validity of the capture of this ship, or of the subsequent rescue and recapture, for such recapture is not an offence against the municipal law of England.

On the 9th of May, Mr. Seward writes to Mr. Adams:—"Your proceeding, in asking from the British Government the restoration of the prize ship Emily St. Pierre, is approved, equally for its promptness and the grounds upon which it was adopted."

Mr. Adams replied to Earl Russell on the 10th of May, by quoting the opinion of Lord Stowell, as the highest judicial authority of Great Britain, as follows:—"If a neutral master attempts a rescue, he violates a duty which is imposed upon him by the law of nations to submit to come in for inquiry as to the property of the ship or cargo; and if he violates that obligation by a recurrence to force, the consequence will undoubtedly reach the property of his owner; and it would, I think, extend also to the confiscation of the whole cargo intrusted to his care, and thus fraudulently attempted to be withdrawn from the rights of war."

Mr. Adams then refers to the Queen's proclamation as warning her subjects, and all persons entitled to her protection, that if they shall presume, in contempt thereof, to do any act in derogation of their duty as subjects of a neutral sovereign, or in violation, or contravention of the law of nations in that behalf, they will incur and be liable to the several penalties and penal consequences, by statute or by the law of nations imposed. From the words of this proclamation he inferred a jurisdiction existing in Great Britain, capable of taking cognizance of cases arising under the law of nations, and beyond the range of the municipal law.

On the 12th of June Earl Russell replied by stating the principles involved in the case, and closed the correspondence on the subject as follows:

You speak of the rescue of the Emily St. Pierre as being a fraud by the law of nations. But whether the act of rescue be viewed as one of fraud or of force, or as partaking of both characters, the act was done only against the rights accruing to a belligerent under the law of nations relating to war, and in violation of the law of war; which, whilst it permits the belligerent to exercise and enforce such rights against neutrals by the peculiar and exceptional right of capture, at the same time leaves to the belligerent alone the duty and confers upon him the power of vindicating such rights and of enforcing such law. The same law not only does not require, but does not even permit, neutral nations to carry out belligerent rights.

You allude to the conduct of the United States Government in the case of the Trent; but the flagrant wrong done in that case was done by a naval officer in the service of the United States; the prisoners whose release was demanded were in the direct custody and keeping of the executive Government, and the Government of the United States had actually the power to deliver them up, and did deliver them up, to the British Government. But the Emily St. Pierre is not in the power of the Executive Government of this country; and the law of England, as well as the law of nations, forbids the Executive Government from taking away that ship from its legal owners.

I do not think it necessary to dwell, or even to remark, on the observations which you repeat in your present letter as to the terms of her Majesty's proclamation, and as to the course which you suggest her Majesty's Government should adopt for giving effect to them.

I can only again assure you that her Majesty's Government have been most careful in observing strictly that impartial course which neutrality enjoins.

Mr. Adams, writing to Secretary Seward on the 18th of June, says:

It is not a little strange that this very question appears to have occupied the attention of the two Governments so far back as in the year 1800. My attention has been called to this fact by my under secretary, Mr. Moran, who happened to find the correspondence on the subject in the third volume of the collection of American State papers relating to foreign affairs. It was the British Government which then made the claim on almost the identical grounds taken by me, and the American declined acceding to it, substantially for the same reasons given by Lord Russell.

One of the most important subjects of negotiation during the year was a treaty for the suppression of the slave trade. (*See* PUBLIC DOCUMENTS.) It admits, within certain limits, the search and seizure by British cruisers of vessels under the American flag supposed to be engaged in that traffic. Mr. Seward states, in his despatch to Mr. Perry at Madrid on August 2d: "It was freely offered by this Government to Great Britain, not bought, or solicited by that Government. It is in harmony with the sentiments of the American people. It was ratified by the Senate, unanimously, and afterward distinctly approved with not less unanimity by both Houses of Congress. Not a voice has been raised against it in the country." This treaty granted to Great Britain a privilege which had been inflexibly refused by the American Government since it was organized. Its exercise without permission had heretofore caused more irritated feelings in the United States against Great Britain than any other subject.

The correspondence between the two Governments during the year, amid all the embarrassing circumstances which existed, appears to have been conducted in a most friendly spirit. Her Majesty's Government seem by these papers to be actuated by no other purpose then to maintain a strict and impartial neutrality according to the law of nations between the two contending parties, and although the position assumed, to regard each as belligerents, has been considered by the Federal Government "as unnecessary and tending injuriously to prolong the war," yet her Majesty's Government have justly claimed the right to determine their own position, and have inflexibly maintained it. Apart from this point, each government has been prompt to listen to every complaint from the other, and treated it with the highest respect. Nothing appears in this correspondence to indicate that the Government of Great Britain entertains any other than the most friendly feelings toward the Government and people of the United States, and indulges the sincere desire that the bitter conflict, which is exhausting alike the North and the South, may be speedily so closed as to promote the welfare of the whole country. Still it might be asked, how the building of war steamers, and the shipment of the munitions and supplies from Liverpool to Nassau, and thence to the Confederate States, could be consistent with the existence of such friendly feeling? Such munitions and supplies have been shipped with equal freedom to the United States. These acts are not inconsistent with a position of neutrality, and the freedom of commerce of which the construction of the ship Great Admiral for Russia, and the Hudson and others for Greece, by the United States, are examples.

France.—The correspondence with France represents that country as determined not to interfere with the blockade of the Confederate ports, but as exceedingly anxious for the cessation of the domestic strife. Mr. Dayton writes on the 12th of February:

The Emperor, last night, in a brief conversation held with him while at a private ball at the Tuileries, again expressed his earnest wish that our domestic strife was brought to a close. When I told him that I had sanguine hopes of success at no distant day, he asked me specially about the condition of the roads, and the possibility of turning aside from them into the open country. He referred to the great difficulty of moving wagons, cannon, and the immense materiel essential to a great army over a single road, especially in a wooded country, illustrating it forcibly, as he did, by his own troubles and perplexities in his Italian campaign.

On the 18th of March, Mr. Dayton reports a conference with M. Thouvenel, the Secretary for Foreign Affairs. "He asked again most anxiously when they should have cotton? I referred him to your despatch, and assured him of our earnest desire to afford the earliest facilities to foreign governments for the procurement of it. He said that petitions and memorials were being daily addressed to the Emperor on this subject: that the suffering and destitution in certain portions of France for want of it were constantly on the increase. Do not delay action, I beg of you, a day beyond the time that you can act on this subject with propriety."

On the 25th of March, Mr. Dayton had an interview with the Emperor. He writes, "I was most kindly received, and he said at once that he wished to have a talk with me about cotton, and the prospect of opening our ports. He spoke of the great inconvenience connected with the existing condition of things, and feared it would not speedily come to an end; that the war might yet be a long one." After explanations on these points, Mr. Dayton referred as usual on every occasion to the granting of belligerent rights to the Confederate States, saying: "I told him we honestly believed that if a proclamation by France and England, withdrawing belligerent rights from the insurrectionists, should be made, the insurrection would collapse at once." During the conversation, the Emperor declared he must frankly say when the insurrection broke out, and this concession of belligerent rights was made, he did not suppose the North would succeed; that it was the general belief of statesmen in Europe that the two sections would never come

together again. This belief, he intimated, was a principal reason why this concession of belligerent rights was then granted. The close of this conference is thus reported by Mr. Dayton: "Without expressing any opinion upon these matters, he said he would think of them, but hoped in the meantime that something would be done by us to relieve the difficulties here growing out of the want of cotton."

Mr. Seward, writing to Mr. Dayton on the 26th, says, relative to a former inquiry of the Emperor whether cotton will come: "Upon this point you may safely assure him that all apprehensions are, in our view, groundless." Mr. Seward was mistaken. The cotton did not come to any amount of importance even with the port of New Orleans open. (*See* COMMERCE.) Mr. Dayton writes on March 31st, "That (cotton) is now the great and leading point of interest between them (the French Government) and us." "The French Government has come to the conclusion, I think, that we will get possession of the cotton ports, but they seem now to be troubled with grave doubts whether, in that event, even, cotton will be forthcoming." He then relates a conference with M. Thouvenel, at which he again called his attention to the propriety of his Government's retracing its steps in regard to its concession of belligerent rights to the Confederates.

On the 22d of April, Mr. Dayton writes that M. Thouvenel had returned from a visit to the manufacturing districts, and assured him that it was painful to see the immense establishments not at work and the population unemployed; the distress was great and the demand for cotton most urgent.

On the 16th of May, Mr. Dayton writes: "Without a still further change for the better in the condition of things at home, or some encouraging information from Mr. Adams, I hesitate to urge the point further (revoking the concession of belligerent rights). It might be considered as savoring of importunity, or, at all events, as wanting in that diplomatic forbearance which this Government would have a right to expect." He closes with a postscript, stating that a communication from Mr. Adams had just been received, which, he says, "informs me that the British Government had 'no intention to vary the policy' adopted heretofore; and he states further, 'the answer was that the great ports were not yet in our possession, and the issue appeared yet uncertain.'"

In a despatch dated August 18, Mr. Seward thus states the position of the United States, relative to the war between France and Mexico: "This Government, relying on the explanations which have been made by France, regards the conflict as a war involving claims by France which Mexico has failed to adjust to the satisfaction of her adversary, and it avoids intervention between the belligerents."

The quiet posture of affairs between the two Governments continued undisturbed, notwithstanding numerous rumors relative to mediation or intervention by France in American affairs. On the 6th of November, Mr. Dayton had a conference with M. Drouyn de l'Huys, who, on the 13th of October, succeeded M. Thouvenel, which he has thus related to Secretary Seward:

> I have to-day had a conversation of some length with M. Drouyn de l'Huys in reference to our affairs. I told him that circumstances were such as to induce me to ask him distinctly whether any action was in contemplation by France, or by France conjointly with other powers, in reference to the condition of things in our country. He said no; that everything remained as it had done for some time past. That France, in common with the other powers of Europe, very much regretted the war and its continuance, but they had no purpose to intervene or interfere in any way. I then said to him I had seen it stated that France, England, and Russia were conferring upon the propriety of offering mediation. He said that the wish that the war could be ended, or that something could be done, with the assent of the belligerent parties, had been spoken of, and it was yet spoken of, but nothing had been resolved upon. In further conversation he said that France reserved to herself the right to express this wish to the parties if it should be thought advisable to do so, or that good would grow out of it. I told him that this at once brought us back to the starting point; that the expression of such wish would be, I presumed, but an offer of mediation in another form. He said no; if there were any word which could express less than "mediation," that such word should be used in its place.
>
> To test the character of this offer or suggestion, which he reserved to himself the right to make, I said: suppose your offer or suggestion, if made, shall be refused, what will be the consequences? He said: "nothing;" that we would be friends, as we had been before. I told him that I had just seen it stated in the English press, that some such offer of mediation was to be made by the three Powers, and, in the event of our refusal to accept it, the independence of the South was to be acknowledged. He said that was not so; that no such consequences would follow a refusal upon our part; that things would remain as before. I told him that we should look upon an acknowledgment of the South as but a form of intervention. To this he assented, and said they did not think of intruding into our affairs in any way, or intervening in any form; that their intent would be comprised in the expression of a wish to be useful, if it could be done with the assent of both parties. I told him that the Emperor, at an early day, had expressed such wish, and that he had been willing to act the part of a friend between the two, if they should mutually request it. He said that such was yet his disposition, and nothing more, except that the calamities of this civil war had increased and strengthened the wish on his part.
>
> I may add that I said to M. Drouyn de l'Huys, unofficially, however, as I told him, that such an offer, if it should even be made, would come to nothing.

The correspondence with the Government of France contained in the volume published by the order of Congress, closes on the 6th of November. Subsequently, Congress called for the continuation of the correspondence, and it was published in a separate form. It embraces the action of the respective governments on the subject mentioned in the note of November 6th above.

On the 17th of November, Mr. Dayton writes to M. Drouyn de l'Huys, stating that the occasion of his letter is found in some questions asked by M. Drouyn de l'Huys relative to the population of the Southern States, of the United States,

and to the position of the several divisions of the Federal army, and also in the following statement contained in a despatch from his Majesty's Government to its ministers at London and St. Petersburg. (*See* PUBLIC DOCUMENTS.) In that despatch M. Drouyn de l'Huys said: "There has existed between the belligerents, from the very outset of the war, an equality of strength which has been almost constantly maintained ever since; and after so much bloodshed, they are now, in this respect, very nearly in the same position as at first. Nothing justifies the expectation of any more decided military operations at an early day." In his letter, Mr. Dayton proceeds to describe the result of the army operations, and the ground lost by the Confederate States, respecting which he thus concludes:

In a word, the insurgents do not now hold a foot of ground which they did not hold early in the war, while the flag of the Union has been constantly advanced, and now floats somewhere on the soil or over the fortifications of every slave State (save one). Their armies have in the mean time been driven from an area of country embracing in the aggregate not less than one hundred thousand square miles, and occupied by a population ranging from one million and a half to two millions of people.

He then examines the census returns for the population of the antagonist portions of the Union, and considers the money and other resources, thus intending to show the degree of inequality between the combatants, for the purpose of modifying the opinion of the French minister.

On the 23d, M. Drouyn de l'Huys replied as follows:

It is none the less true that, notwithstanding the inequality of numbers and of financial means, notwithstanding local advantages and partial conquests, the conditions of soil and of climate seem to oppose insuperable obstacles to the progress of the struggle, and that the equal energy of both sides tends to impress upon it a character of indomitable desperation. I am prepared to render homage with you to the courage which the Americans upon the one side and the other have shown thus far; but this courage, even while it excites the admiration of the world, is only calculated to render more uncertain the result of the combats, and to retard the termination of the disasters of this bloody war.

You know, sir, what feelings this sad spectacle has given rise to in us; you know the step which a profound sympathy for America has inspired in the Government of the Emperor, in the hope of opening a way to a reconciliation. This step you know also ought and could take place in the opinion of the Emperor only with the consent and concurrence of the two belligerent parties. At present the reception given to our proposition by the Cabinets of London and St. Petersburg prevents us from thinking of pursuing it further; but I can assure you, sir, that our friendly dispositions have not changed. If some day the Americans, tired of turning their valor against themselves, should wish to have recourse to us in order to seek in concert the means of terminating this conflict, they would find us always ready (be it in associating ourselves with other Powers, or be it separately) to aid them with our coöperation, and to testify, by our good offices, feelings which have not ceased to animate France in regard to them.

A despatch from Mr. Seward to Mr. Dayton, dated Nov. 30th, expresses the views of the Government on the unsuccessful proposition of France to Great Britain and Russia. He says:

An inconclusive conference concerning the United States has been held between these Powers, all of whom avow themselves as friends of the United States, and yet the United States were carefully excluded from the conference. Neither party in the conference proposed any combination to coerce the will or control the policy of the United States.

Under these circumstances the United States are not called upon to say what they would have done if the proposition of France, which was declined by Russia and Great Britain, had been adopted and carried into effect. Nor are we called upon to discuss the propriety of the positions and proceedings respectively of the several parties in the conference. Such a debate upon a subject which has already lost its practical character, or which, to speak more accurately, has not attained such a character, might produce irritations and jealousies which the President desires to avoid.

On the 15th of January, 1863, Mr. Dayton writes to Mr. Seward that a despatch will shortly be sent by M. Drouyn de l'Huys to M. Mercier, the French ambassador at Washington, requesting him to suggest to the Federal Government, the propriety of appointing commissioners to treat with the South for peace, and for union, if possible; if not possible, for such terms of separation as may be mutually agreed upon. The despatch proposed no interference of any kind by a foreign Power, nor required or asked any cessation of hostilities pending the negotiation, but like the negotiation for peace in 1783, between the United States and Great Britain, permitted everything to proceed as if no effort for a settlement were being made.

The despatch thus alluded to was addressed to M. Mercier by M. Drouyn de l'Huys on the 9th of January, and was as follows:

DEPARTMENT OF FOREIGN AFFAIRS,
Political Division, Paris, *January* 9, 1863.

SIR: If, in forming the purpose of assisting, by the proffer of our good offices, to shorten the period of those hostilities which are desolating the American continent, we had not been guided, beyond all, by the friendship which actuates the Government of the Emperor in regard to the United States, the little success of our overtures might chill the interest with which we follow the fluctuations of this contest. But the sentiment to which we have yielded is too sincere for indifference to find a place in our thoughts, and that we would cease to be painfully affected whilst the war continues to rage. We cannot regard without profound regret this war, worse than civil, comparable to the most terrible distractions of the ancient Republics, and whose disasters multiply in proportion to the resources and the valor which each of the belligerent parties develop.

The Government of his Majesty have, therefore, seriously examined the objections which have been made to us, where we have suggested the idea of a friendly mediation, and we have asked ourselves whether they are truly of a nature to set aside as premature every tentative to a reconciliation. On one part has been opposed to us the repugnance of the United States to admit the intervention of foreign influence in the dispute; on the other the hope, which the Federal Government has not abandoned, of attaining its solution by force of arms.

Assuredly, sir, recourse to the good offices of one or more neutral Powers contains nothing incompatible with the pride so legitimate amidst a great nation, and wars purely international are not those alone which

furnish examples of the useful character of mediation. We flatter ourselves, besides, that in proffering to place ourselves at the disposal of the belligerent parties to facilitate between them negotiations, the basis of which we abstain from prejudging, we have manifested to the patriotism of the United States all the considerations to which it is entitled, now perhaps still more than ever, after such a new proof of moral force and energy. We are none the less ready, amid the wishes which we form in favor of peace, to take into account all susceptibilities of national feeling, and we do not at all question the right of the Federal Government to decline the coöperation (*concours*) of the great maritime Powers of Europe.

But this coöperation, is it not the only means which offers itself to the Cabinet of Washington to hasten the close of the war? And if it believes that it ought to repel any foreign intervention, could it not honorably accept the idea of direct informal conferences (*pour parler*) with the authority which may represent the States of the South.

The Federal Government does not despair, we know, of giving a more active impulse to hostilities; its sacrifices have not exhausted its resources, still less its perseverance and its steadfastness. The protraction of the struggle, in a word, has not shaken its confidence in the definite success of its efforts. But the opening of informal conferences between the belligerent parties does not necessarily imply the immediate cessation of hostilities. Negotiations about peace are not always the consequence of a suspension of warfare; they precede, on the contrary, more often the establishment of a truce. How many times have we not seen plenipotentiaries meet, exchange communications, agree upon all the essential provisions of treaties, resolve, in fine, the question even of peace or war, whilst the leaders of armies continued the strife and endeavored even to the latest moment to modify by force of arms the conditions of peace? To recall only one memory, drawn from the history of the United States—the negotiations which consecrated their independence were commenced long before hostilities had ceased in the New World, and the armistice was not established until the act of the 30th November, 1862, which under the name of provisional articles embraced in advance the principal clauses of the definitive treaty of 1783.

Nothing, therefore, would hinder the Government of the United States, without renouncing the advantage which it believes it can attain by the continuation of the war, from entering upon informal conferences with the Confederates of the South, in case they should show themselves disposed thereto. Representatives or commissioners of the two parties could assemble at such point as it should be deemed proper to designate, and which could, for this purpose, be declared neutral. Reciprocal complaints would be examined into at this meeting. In place of the accusations which North and South mutually cast upon each other at this time, would be substituted an argumentative discussion of the interests which divide them. They would seek out by means of well ordered and profound deliberations whether these interests are definitively irreconcilable —whether separation is an extreme which can no longer be avoided, or whether the memories of a common existence, whether the ties of any kind which have made of the North and of the South one sole and whole Federative State, and have borne them on to so high a degree of prosperity, are not more powerful than the causes which have placed arms in the hands of the two populations. A negotiation, the object of which would be thus determinate, would not involve any of the objections raised against the diplomatic intervention of Europe, and, without giving birth to the same hopes as the immediate conclusion of an armistice, would exercise a happy influence on the march of events.

Why, therefore, should not a combination which respects all the relations of the United States obtain the approbation of the Federal Government? Persuaded on our part that it is in conformity with their true interests, we do not hesitate to recommend it to their attention; and, not having sought in the project of a mediation of the maritime Powers of Europe any vain display of influence, we would applaud, with entire freedom from all susceptibility of self-esteem, the opening of a negotiation which would invite the two populations to discuss, without the coöperation of Europe, the solution of their difference.

I request you, sir, to give this assurance to the Cabinet of Washington, while commending to its wisdom counsels dictated by most sincere interest in the prosperity of the United States. You are moreover authorized, if Mr. Seward expresses the wish, to leave with him a copy of this despatch.

Accept, sir, the assurance of my high consideration.

DROUYN DE L'HUYS.

To M. Mercier, Minister of France at Washington.

On the 6th of February, 1863, Mr. Seward addressed a despatch to Mr. Dayton in reply to his note stating that mediation between the combatants was about to be proposed, and expressing the views under which such a proposition would be received by the Government of the United States. This important despatch was as follows:

Department of State, Washington, *Feb.* 6, 1863.

Sir: The intimation given in your despatch of January 15th (No. 255), that I might expect a special visit from M. Mercier has been realized. He called on the 3d instant, and gave me a copy of a despatch which he had just then received from M. Drouyn de l'Huys under the date of the 9th of January.

I have taken the President's instructions, and I now proceed to give you his views upon the subject in question.

It has been considered with seriousness, resulting from the reflection that the people of France are known to be faultless sharers with the American nation in the misfortunes and calamities of our unhappy civil war; nor do we on this, any more than on other occasions, forget the traditional friendship of the two countries, which we unhesitatingly believe has inspired the counsels that M. Drouyn de l'Huys has imparted.

He says, "the Federal Government does not despair, we know, of giving more active impulse to hostilities;" and again he remarks, "the protraction of the struggle, in a word, has not shaken the confidence (of the Federal Government) in the definitive success of its efforts."

These passages seem to me to do unintentional injustice to the language, whether confidential or public, in which this Government has constantly spoken on the subject of the war. It certainly has had and avowed only one purpose—a determination to preserve the integrity of the country. So far from admitting any laxity of effort, or betraying any despondency, the Government has, on the contrary, borne itself cheerfully in all vicissitudes, with unwavering confidence in an early and complete triumph of the national cause. Now, when we are, in a manner, invited by a friendly power to review the twenty-one months' history of the conflict, we find no occasion to abate that confidence. Through such an alternation of victories and defeats as is the appointed incident of every war, the land and naval forces of the United States have steadily advanced, reclaiming from the insurgents the ports, forts, and posts which they had treacherously seized before the strife actually began, and even before it was seriously apprehended. So many of the States and districts which the insurgents included in the field of their projected exclusive slaveholding dominions have already been reëstablished under the flag of the Union, that they now retain only the States of Georgia, Alabama, and Texas, with half of Virginia, half of North Carolina, and two thirds of South Carolina, half of Mississippi, and one third respectively of Arkansas and

Louisiana. The national forces hold even this small territory in close blockade and siege.

This Government, if required, does not hesitate to submit its achievements to the test of comparison; and it maintains that in no part of the world, and in no times, ancient or modern, has a nation, when rendered all unready for combat by the enjoyment of eighty years of almost unbroken peace, so quickly awakened at the alarm of sedition, put forth energies so vigorous, and achieved successes so signal and effective as those which have marked the progress of this contest on the part of the Union.

M. Drouyn de l'Huys, I fear, has taken other light than the correspondence of this Government for his guidance in ascertaining its temper and firmness. He has probably read of divisions of sentiment among those who hold themselves forth as organs of public opinion here, and has given to them an undue importance. It is to be remembered that this is a nation of thirty millions, civilly divided into forty-one States and Territories, which cover an expanse hardly less than Europe; that the people are a pure democracy, exercising everywhere the utmost freedom of speech and suffrage; that a great crisis necessarily produces vehement as well as profound debate, with sharp collisions of individual, local, and sectional interests, sentiments, and ambitions; and that this heat of controversy is increased by the intervention of speculations, interests, prejudices, and passions from every other part of the civilized world. It is, however, through such debates that the agreement of the nation upon any subject is habitually attained, its resolutions formed, and its policy established. While there has been much difference of popular opinion and favor concerning the agents who shall carry on the war, the principles on which it shall be waged, and the means with which it shall be prosecuted, M. Drouyn de l'Huys has only to refer to the statute book of Congress and the Executive ordinances to learn that the national activity has hitherto been and yet is, as efficient as that of any other nation, whatever its form of government, ever was, under circumstances of equally grave import to its peace, safety, and welfare. Not one voice has been raised anywhere, out of the immediate field of the insurrection, in favor of foreign intervention, of mediation, of arbitration, or of compromise, with the relinquishment of one acre of the national domain, or the surrender of even one constitutional franchise. At the same time, it is manifest to the world that our resources are yet abundant, and our credit adequate to the existing emergency.

What M. Drouyn de l'Huys suggests is that this Government shall appoint commissioners to meet, on neutral ground, commissioners of the insurgents. He supposes that in the conferences to be thus held, reciprocal complaints could be discussed, and in place of the accusations which the North and South now mutually cast upon each other, the conferees would be engaged with discussions of the interests which divide them. He assumes, further, that the commissioners would seek, by means of well-ordered and profound deliberation, whether these interests are definitively irreconcilable, whether separation is an extreme that can no longer be avoided, or whether the memories of a common existence, the ties of every kind which have made the North and the South one whole Federative State, and have borne them on to so high a degree of prosperity, are not more powerful than the causes which have placed arms in the hands of the two populations.

The suggestion is not an extraordinary one, and it may well have been thought by the Emperor of the French, in the earnestness of his benevolent desire for the restoration of peace, a feasible one. But when M. Drouyn de l'Huys shall come to review it in the light in which it must necessarily be examined in this country, I think he can hardly fail to perceive that it amounts to nothing less than a proposition that, while this Government is engaged in suppressing an armed insurrection, with the purpose of maintaining the constitutional national authority, and preserving the integrity of the country, it shall enter into diplomatic discussion with the insurgents upon the questions whether that authority shall not be renounced, and whether the country shall not be delivered over to disunion, to be quickly followed by ever increasing anarchy.

If it were possible for the Government of the United States to compromise the national authority so far as to enter into such debates, it is not easy to perceive what good results could be obtained by them.

The commissioners must agree in recommending either that the Union shall stand or that it shall be voluntarily dissolved; or else they must leave the vital question unsettled, to abide at last the fortunes of the war. The Government has not shut out knowledge of the present temper, any more than of the past purposes of the insurgents. There is not the least ground to suppose that the controlling actors would be persuaded at this moment, by any arguments which national commissioners could offer, to forego the ambition that has impelled them to the disloyal position they are occupying. Any commissioners who should be appointed by these actors, or through their dictation or influence, must enter the conference imbued with the spirit and pledged to the personal fortunes of the insurgent chiefs. The loyal people in the insurrectionary States would be unheard, and any offer of peace by this Government, on the condition of the maintenance of the Union, must necessarily be rejected.

On the other hand, as I have already intimated, this Government has not the least thought of relinquishing the trust which has been confided to it by the nation under the most solemn of all political sanctions; and if it had any such thought, it would still have abundant reason to know that peace proposed at the cost of dissolution would be immediately, unreservedly, and indignantly rejected by the American people. It is a great mistake that European statesmen make, if they suppose this people are demoralized. Whatever, in the case of an insurrection, the people of France, or of Great Britain, or of Switzerland, or of the Netherlands would do to save their national existence, no matter how the strife might be regarded by or might affect foreign nations, just so much, and certainly no less, the people of the United States will do, if necessary to save for the common benefit the region which is bounded by the Pacific and the Atlantic coasts, and by the shores of the Gulfs of St. Lawrence and Mexico, together with the free and common navigation of the Rio Grande, Missouri, Arkansas, Mississippi, Ohio, St. Lawrence, Hudson, Delaware, Potomac, and other natural highways by which this land, which to them is at once a land of inheritance and a land of promise, is opened and watered. Even if the agents of the American people now exercising their power should, through fear or faction, fall below this height of the national virtue, they would be speedily, yet constitutionally, replaced by others of sterner character and patriotism.

I must be allowed to say, also, that M. Drouyn de l'Huys errs in his description of the parties to the present conflict. We have here, in the political sense, no North and South, no Northern and Southern States. We have an insurrectionary party, which is located chiefly upon and adjacent to the shore of the Gulf of Mexico; and we have, on the other hand, a loyal people, who constitute not only Northern States, but also Eastern, Middle, Western, and Southern States.

I have on many occasions heretofore submitted to the French Government the President's views of the interests, and the ideas more effective for the time than even interests, which lie at the bottom of the determination of the American Government and people to maintain the Federal Union. The President has done the same thing in his Messages and other public declarations. I refrain, therefore, from reviewing that argument in connection with the existing question.

M. Drouyn de l'Huys draws to his aid the conferences which took place between the Colonies and Great Britain in our Revolutionary War. He will allow us to assume that action in the crisis of a nation

must accord with its necessities, and therefore can seldom be conformed to precedents. Great Britain, when entering on the negotiations, had manifestly come to entertain doubts of her ultimate success; and it is certain that the councils of the Colonies could not fail to take new courage, if not to gain other advantage when the parent State compromised so far as to treat of peace on the terms of conceding their independence.

It is true, indeed, that peace must come at some time, and that conferences must attend, if they are not allowed to precede the pacification. There is, however, a better form for such conferences than the one which M. Drouyn de l'Huys suggests. The latter would be palpably in derogation of the Constitution of the United States, and would carry no weight, because destitute of the sanction necessary to bind either the disloyal or the loyal portions of the people. On the other hand, the Congress of the United States furnishes a constitutional forum for debates between the alienated parties. Senators and representatives from the loyal portion of the people are there already, freely empowered to confer; and seats also are vacant, and inviting senators and representatives of this discontented party who may be constitutionally sent there from the States involved in the insurrection. Moreover, the conferences which can thus be held in Congress have this great advantage over any that could be organized upon the plan of M. Drouyn de l'Huys, namely—that the Congress, if it were thought wise, could call a national convention to adopt its recommendations, and give them all the solemnity and binding force of organic law. Such conferences between the alienated parties may be said to have already begun. Maryland, Virginia, Kentucky, Tennessee, and Missouri—States which are claimed by the insurgents—are already represented in Congress, and submitting with perfect freedom and in a proper spirit their advice upon the course best calculated to bring about, in the shortest time, a firm, lasting, and honorable peace. Representatives have been sent also from Louisiana, and others are understood to be coming from Arkansas.

There is a preponderating argument in favor of the Congressional form of conference over that which is suggested by M. Drouyn de l'Huys, namely, that while an accession to the latter would bring this Government into a concurrence with the insurgents in disregarding and setting aside an important part of the Constitution of the United States, and so would be of pernicious example, the Congressional conference, on the contrary, preserves and gives new strength to that sacred writing which must continue through future ages the sheet anchor of the Republic.

You will be at liberty to read this despatch to M. Drouyn de l'Huys, and to give him a copy if he shall desire it.

To the end that you may be informed of the whole case, I transmit a copy of M. Drouyn de l'Huys's despatch.

I am, sir, your obedient servant,

WILLIAM H. SEWARD.

The correspondence with France during the year 1862 presents only a single instance of a complaint on the part of the United States Government. It is the case of an American citizen injured by some French soldiers at Vera Cruz. Throughout these pages her friendship appears steadfast and sincere. Not an instance of a departure from strict neutrality is found. No armed vessel left her ports, nor contraband articles were shipped by her citizens. Her minister expressly declares that if any suggestions looking to a peaceful close of this bloody American conflict should be made by his government, and refused by the American, nothing would follow. Mr. Dayton writes that he said to him, on October 13: "Suppose your offer, or suggestion, if made, shall be refused, what will be the consequences?" He replied: "Nothing; we would be friends as we had been before."

Russia.—The correspondence with Russia is unimportant, except so far as it indicates the friendly spirit of that government towards this country. In absence of Mr. Simon Cameron, who succeeded Mr. C. M. Clay, the secretary of legation, Mr. Bayard Taylor, reports a conference with Prince Gortchakoff on October 29. "Your situation," said he, "is getting worse and worse. The chances of preserving the Union are growing more and more desperate. Can nothing be done to stop this dreadful war? Can you find no basis of arrangement before your strength is so exhausted that you must lose for many years to come your position in the world?"

Spain.—Only one or two points of interest appear in the correspondence with the government of Spain, conducted, in the absence of General Schurz, through the secretary of legation, Mr. Horatio J. Perry. On the 22d of April, Mr. Seward writes to Mr. Perry: "I think that you may be able to satisfy that eminent minister, Mr. Calderon Collantes, that the largest term which can readily be claimed for this civil war is a period of two years from its date."

Subsequently, General Schurz resigned the mission to Spain, and was succeeded by Mr. Gustavus Koerner, of Illinois.

A protest was made by the government of the United States upon the annexation of Dominica to Spain.

On the 11th of July, in a conversation with Mr. Perry, the Spanish minister for Foreign Affairs, Mr. Collantes, alluded to the treaty recently negotiated with Great Britain for the suppression of the slave trade. The conference is thus stated by Mr. Perry:

At a recent interview with Mr. Calderon Collantes, that minister inquired if I had received a copy of the treaty recently concluded between the United States and England, concerning the mutual right of search, for the suppression of the African slave trade. He was much surprised that, after combating that principle so long, the United States should have yielded now a right so exceedingly liable to be abused in practice, and he was very curious to know what provisions had been stipulated to guard the exercise of the right from such abuse.

I replied, regretting I could give no information other than what Mr. Calderon had himself seen in the newspapers. I understood, however, that the stoppage of the use of the American flag in the slave trade was an object which would naturally commend itself to the favor of the present government of the United States, and I inquired if Spain had not herself conceded the same right.

Mr. Calderon said that she had, at a period of her history which could not be recalled with pleasure, but that ever since he himself had held the portfolio of foreign affairs he had been desirous of an opportunity to revise that whole treaty in which the right of search was thus granted to Great Britain. The exercise of this right was vexatious, and, besides, the English were always talking in Parliament and out, of their having purchased this right of Spain for £40,000 sterling money, always putting their money forward, and

he (Mr. Calderon) would be exceedingly glad of an opportunity to give them their £40,000 and have the treaty back again.

Mr. Calderon asked me if I supposed the recent treaty would be ratified by the American Senate. I replied I had no reasonable doubt that it would be, and remarked that I supposed that England was now taking steps to obtain the same concession from the government of France.

Mr. Calderon said he had little doubt of it, but he wished to see the American treaty, as it might afford a basis for demanding a revision of the Spanish treaty as to the manner in which this right was to be exercised.

The remainder of this voluminous correspondence is occupied with subjects of less interest. The volume is a proof of the vast labors of the Department of State, which has been conducted during the year with great ability and success, in preserving the peaceful and most friendly relations with foreign nations.

DRURY BLUFF is situated seven miles below Richmond on the James river. It is in a commanding position, owing to the curve of the river, and was strongly fortified to prevent the approach of the Federal gunboats to Richmond. An attack was made upon it by the iron clad Galena and several gunboats, which were severely handled and retired. (*See* NAVAL OPERATIONS.)

E

EARTH. Among the scientific deductions and speculations respecting our planet, put forth during the year, are some which would seem likely to lead to very considerable modifications of the views for some time entertained in regard to its constitution and behavior as a physical globe, and more especially in regard to the condition of its interior mass.

Relative Sunshine of Different Zones. Prof. Hennessy, speaking before the British association on this subject, called attention to the fact that by means of transformation of a mathematical formula of Poisson, the area of that portion of the earth's equatorial regions which receives as great an amount of sunshine as all the rest of the surface, is readily ascertained. This area is found to be that which is bounded, at the outer limits of the earth's atmosphere, by parallels distant 23° 44′ 40″ on each side of the equator. Since such parallels lie very slightly without the tropics, it follows that the amount of sunshine falling on the outer limit of the atmosphere, between the tropics, is very nearly equal to that falling upon the atmosphere corresponding to the entire remaining portion of the earth. Now, the researches of Prof. Forbes have shown that the portion of the sun's heat extinguished by the atmosphere during passage through it of a given solar ray, and before it reaches the surface of the globe itself, exceeds one half for all inclinations of the ray to the surface less than 25°; and that for inclinations of 5°, only about $\frac{1}{20}$th part of the heat reaches the ground. The torrid zone, accordingly, must receive the action of by far the greater part of the sun's heat; and it will follow that the distribution of the absorbing and radiating surfaces within such zone must exercise an influence the extent of which is not usually suspected, in modifying the climates of all parts of the earth's surface.

Extent of the Earth's Atmosphere. Prof. Challis, before the same body, argued that the earth's atmosphere could not extend so far as to the moon, since, in case it did so, some portions of it must attach themselves by gravitation to that satellite, and these having connection through friction with the rest, there would result a continual drag upon the earth's surface, retarding its rotation. If, then, the earth's rotation be uniform, its atmosphere cannot extend so far as in any degree to be drawn to the moon. Undoubtedly, as generally supposed, the atmosphere terminates at some height not very great, and abruptly; that is, with a definite boundary or surface, at which it has a small but finite density, and beyond which there are no more atmospheric particles. From considerations drawn from the rate of decrease of density in ascending from and near to the earth's surface, this height is usually placed at about 70 miles.

Thickness of the Earth's Crust. Led chiefly by the phenomena of thermal springs, of earthquakes and volcanoes, together with the observed rise of temperature in descending in mines and the boring of artesian wells, and connecting with these the appearances of the lower or unstratified rocks, and the interpretation given to all the facts by Laplace's nebular hypothesis, geologists have for many years past become pretty generally agreed in regarding our globe as still possessing but a thin solid crust enveloping an intensely hot and molten core; and from calculations of the depths at which the metals and finally the most refractory rock materials must melt, the thickness of such crust has been supposed no greater than 100, 70, and by some even 30 miles. Within a very few years, however, objections to this theory, or at the least to that of such extreme thinness of solid earth, have sprung up in different and unexpected quarters. About three years since, the Rev. J. H. Pratt, residing at Calcutta, and to whom the immense quantity of matter piled up in the long and massive Himalayan chains had become a very patent fact, published his views to the effect that, through differing pressures at near parts of the crust, where the weight of chains like the Himalayas is far under-balanced by the diminished pressure on ocean bottoms, while the

tendency of lava tides within the earth at times of conjunction of the sun and moon must conspire with such differences, the crust of the earth must at such places and times suffer rupture, unless at least 140, and more probably from 300 to 500 miles thick. To this, the Rev. Mr. Haughton replied that Mr. Pratt overlooks the principle of the arch, which serves to increase practically the strength of the strata, and also the very high crushing strength of granite—not less than 24,000 lbs. to the cubic inch.

Prof. William Thomson presented before the Royal Society, May 15, 1862, a paper on the "Rigidity of the earth," considered in its bearings on this question. Premising that he would communicate also, on an early occasion, a mathematical theory of the deformation of elastic spheroids, and which would illustrate his conclusions in respect to the effect of the tide-generating influence of the sun and moon on the mass of the earth, he proceeded to show that unless the solid portions of the earth be on the whole of extremely rigid material—more rigid than steel—it must yield to the attractions of those bodies, in the way of a tide of the solid strata, and to such an extent as very sensibly to diminish the actual oceanic tides, as well as the well known changes in direction of the earth's axis denoted under the terms precession and nutation. A homogeneous and incompressible elastic spheroid, of the same mass and volume with the earth, if it have the rigidity of glass, would yield to the luni-solar tide action to about $\frac{7}{9}$, and if it have the rigidity of steel, to about $\frac{2}{5}$, of the extent to which a perfectly fluid globe of equal density must yield. In the former case, the actual amounts of the water tides, and of the precession and nutation, would be only $\frac{2}{5}$, in the latter $\frac{3}{5}$, of the amounts that would hold true in case of a perfectly rigid spheroid of the like dimensions, figure, and supposed uniform density. But the theory of precession and nutation has always hitherto proceeded upon the supposition that the earth, in respect to its exterior form, is practically a completely rigid body; and the calculations deduced from such theory have closely agreed with observation. It is scarcely possible to admit that there can have been between the theory and facts any such discrepancy as required by the ratio of 3 to 5; and the conclusion then almost necessarily follows, that the earth, as a whole, is much more rigid than steel. The author suggests, as a further test, careful observations on the lunar fortnightly and the solar half-yearly tides, made say at Iceland and Teneriffe, since the agency of either the sun or moon in producing tides at and near the poles is greatest when such body has the greatest declination N. or S. of the equator; and by means of two such stations, the actual diminution of the ocean tide by an earth tide, if there be any, would more likely be ascertained. From data already at command Prof. Thomson regards it as certain that the general globe is far more rigid than glass, probably more so than steel. But in order to such result, the interior must be even more rigid than the superficial parts; and this is just what would be expected, if, the interior being solid, the enormous pressure upon it be taken into account. The actual rigidity, however, appears utterly inconsistent with the hypothesis of many geologists, of the earth as mainly a molten mass, inclosed in a shell 30 to 100 miles thick. These investigations confirm those of Mr. Hopkins, who is led to conclude that the solid crust cannot be at the least less than 800 miles in thickness; and in view of the apparent absence of any interference with ocean tides and precession, the author believes it impossible the solid portion of the earth should have a depth less than 2,000 to 2,500 miles.

Excentrality of the Earth. Mr. W. Ogilby (Brit. Assoc.), uses the term *excentrality* to denote that quality in virtue of which the earth's centre of gravity, as he believes he has proved to be the case, is situated to one side of the axis about which its rotation takes place. He sets out with the principles that, in a freely revolving body like the earth, the axis of figure must, under all circumstances, coincide with the axis of rotation, and the centre of figure with the centre of the generating sphere. This centre is a mathematical point, fixed and immovable, whatever changes of revolution the body may undergo. But the centre of gravity is a physical point, its position dependent on the constitution of the body, and changing with alterations in the density or arrangement of its materials. Since the earth is neither a homogeneous body, nor composed of spherical shells severally homogeneous, its centre of gravity needs not coincide with its centre of figure; and facts lead to the conclusion that it does not, and further, that it does not remain a fixed point. These consequences follow from the irregular density of the globe, and again from the transportation always going on, of millions of tons of solid materials from one part of the earth to another, to say nothing of tides, rivers, ocean currents, or of possible effects of electrical currents within the earth. Reasoning from the known forms, places, and dimensions of the continents, and in like manner of the oceans, with the average depths of the latter, with other circumstances, Mr. Ogilby deduces the place of the earth's centre of gravity as full one statute mile toward the Asiatic side from its centre of figure.

If, as probable, the axis of rotation originally passed through the centre of gravity—*i. e.*, if it was a principal axis—this, provided that the centre of gravity had remained fixed, would have been indefinitely maintained. But with the revolution itself the transport of materials would probably commence; and the alteration of the globe accumulating during a given geological epoch, the gravitative centre would in the lapse of ages come to diverge materially

from that of figure. Either, now, the axis keeping its place will be no longer a principal axis, or following the receding centre of gravity, the figure of the globe must change correspondingly, to allow of rotation about the new direction. The rigid materials of the earth forbid any gradual accommodation of the form; and the axis of rotation remains fixed; but the constraint thus imposed by the earth's rigidity on the axis occasions a pressure tending continually to restore the axis to the position in which it will be a principal axis, so that the materials of the globe may revolve with balanced forces about it. This tendency accumulating, must in the course of ages exceed the force of rigidity, which is a constant quantity, and the axis breaking away suddenly must be restored to the direction through the centre of gravity, becoming anew a principal axis. The accomplishing of such change must be attended with those fearful convulsions, dislocation of strata or bodies of land, and cataclysms, which mark the boundaries of geological epochs: and which, at remote periods, change the face of the continents, alter the distribution of heat and cold, upheave mountain chains, and overwhelm whole tribes of organized beings in a common and general destruction. The author supposes that minuter displacements of the axis may go on, or suddenly occur, at other than these great epochs of change; and that earthquakes are perhaps the disturbances due to convulsive efforts of the revolving globe to throw its actual axis, which is not one of equilibrium, into the place of a principal axis, which would be such. It must be said at this point, that a careful consideration of the actual phenomena attending earthquakes, and of their connection with volcanic eruptions, will suggest many difficulties in regard to this part of the theory. Mr. Ogilby declares, however, that a comparison of the observations of Eratosthenes with those of the present time, after all due allowance for variation of obliquity of the earth's axis to that of the ecliptic and for errors of observation is made, proves that the latitude of Syene has increased within the last 2,100 years to the amount of 17′ 21″.5; and he intimates that the astronomer royal has recently detected a slight annual motion of the pole very nearly corresponding in amount to this.

Mr. Robert Mallet, C. E., whose researches during a few years past into the phenomena of earthquakes have well nigh established the claims of *Seismology* to be regarded as a science, laid before the Royal Society, May 8, 1862, a sequel to his "Reports on Earthquake-Wave Experiments," and in which he gave the results for certain species of rocks, of investigations into the Velocity of Earthquake Waves. He first determined the ratio (*modulus*) of elasticity, separately, of slate and quartz rocks, hard and soft, and in directions both parallel and transverse to the direction in which the laminæ (or the strata) of those rocks are placed: this, of course, involving 8 separate series of experiments, and in which the observations were made at intervals of pressure increasing continually by 1,000 lbs. He finds that generally quartz rock is less compressible than slate; while, on the contrary, the softest quartz is much more compressible than the softest slate, when the pressure occurs in both in the direction parallel to their laminæ. In the like direction, the hardest slate is more than twice as compressible as the hardest quartz. In the direction transverse to the laminæ, slate and quartz, whether soft or hard, have in each condition very nearly the same compressibility; but in this direction, the compressions of the softest are about 4 times those of the hardest of these rocks. The great compressibility parallel to the laminæ appears to arise chiefly from the fact that the mass of the rock is made up of minute wedge-shaped mineral particles, deposited with their largest dimensions lying mainly in the direction of the plane of the laminæ, and so acting upon each other like so many wedges. The wave transmitted transversely to the laminæ will, if the rocks are equally solid and continuous both ways, be the greater; but breaks and discontinuity of any sort must retard its advance. Mr. Mallet deduces mathematically the conclusions that, were the rocks perfectly solid and continuous, the mean velocity of wave transmission for slate and quartz would be—transverse to the laminæ, 13,715 ft. per second; and parallel with the laminæ, 7,659 ft. per second. In nature, however, owing to the greater discontinuity of the rocks in the former direction, the relative velocities of waves in the two directions must be nearly the reverse of these. The results, though apparently disagreeing with those of Helmholtz and others in reference to compressibility and elasticity of wood in the three principal directions of section (see Wood, New Amer. Cyclopædia), do not so disagree in reality. In case of an earthquake in Italy, Dec. 16, 1857, the phenomena of which Mallet has thoroughly investigated, and the primitive shock of which was delivered in an upward line (the *seismic* vertical), piercing the village of Caggiano, in the valley of Salaris, the actual velocity of the wave not far from this point was found to be 700–800 ft. per second; the velocity of any single wave-particle being 13–14 ft. per second. These velocities diminish with increasing distance from the central point of impulsion, until they disappear in parts where the wave ceases to be propagated.

EDUCATION. The diffusion of education in the United States has been greater than in any other country of the world, excepting perhaps the kingdom of Prussia; but the expenditure for educational purposes is at the present time greater than in any other country. The instruction imparted has been chiefly elementary in its character, the larger part of the population being taught to read and write, and acquiring a knowledge of the elements of arithmetic, geography, history, and language. Yet

secondary and higher instruction has not been neglected, and the facilities for it are rapidly increasing. Some statistics of the present extent and magnitude of the educational interest will exhibit more forcibly than can otherwise be done, what has already been accomplished for education in the United States.

1*st*, *Primary Education.*—An estimate of the facilities for common school education in the United States at the close of 1861, carefully prepared by Anson Smyth, late superintendent of schools in Ohio, gives the number of children in attendance upon those schools at that date as 5,211,000, or one in 5½ of the free white population. Of these 4,560,000 were in what are now designated loyal States, with a population of about 18,000,000 whites, or one in four of the population; while in the other States, as a consequence of the extent of the plantations, the scattered and sparse settlements, &c., the number of children attending public schools was only 651,000 in a white population of about nine millions, or nearly one in 14 of the inhabitants. The expenditure for the support of public schools the same year was $23,461,000, or about 87 cents for each white inhabitant. This too was divided very unequally between the two portions, $20,385,000, or $1.13 to each free inhabitant of the former States, and $3,076,000, or 34 cents for each white inhabitant of the latter States. The amount of school funds belonging to the several States is not less than $50,000,000, of which the newer States hold the larger part, and when their school lands are sold, they will have many millions of dollars more. The largest expenditure for school purposes relatively to the population is in Illinois and Massachusetts, in the former State amounting to about $1.58 per head for the entire population, and in the latter to $1.34 per head. In Massachusetts, however, $1.21 per head is raised by taxation, while in Illinois only 76 cts. per head is raised in that way. In most of the Northern States the annual expenditure averages nearly $1 per head for the inhabitants. The wages of teachers average in the Northern States $30 per month for male teachers, and $17.25 for female teachers, inclusive of board in both cases. In the Northern States, schools are taught an average period of 6.5 months in the year. In most of the Southern States the average wages of teachers cannot be ascertained.

Secondary Instruction.—The number of private schools, high schools, academies, and boarding schools, in which a more advanced course of instruction is given (in some instances in connection with the elementary studies) is not to be ascertained exactly, some of the school reports giving no account of them, and the census returns of 1860, on this point, being as yet inaccessible; but from the most careful estimates, and comparisons of States where they are enumerated they cannot be less than 20,000, and are attended by more than 600,000 children. These schools were numerous in the Southern States before the war, and supplemented to some extent the lack of common schools; about 1,200 of them were boarding schools. The expenditure for board and tuition in these 20,000 schools has not been less than $20,000,000 per annum, and probably exceeds that sum, the boarding schools alone receiving over $10,000,000. The number of colleges (aside from agricultural and polytechnic colleges, which belong rather to the rank of professional schools) is about 240, and the number of undergraduates in attendance in any one year is somewhat more than 20,000. The average annual expenditure for board, tuition, room rent, and incidentals, deducted from the comparison of these expenses in about 100 colleges in different States, is $161 per annum, the entire expenditure for collegiate education would therefore be about $3,220,000, though the annual expenditure of these colleges, many of which are largely endowed, is not less that $5,000,000. The college in this country, considered as an institution for undergraduate instruction, is analogous to the gymnasium in Germany, and the lyceum in France.

Higher Education.—The term university, used in so many senses in Europe, is hardly applicable to any of the educational institutions in this country. There are no universities like those of Oxford and Cambridge composed of numerous independent colleges, yet under a common government, and having a corps of university professors without connection with any one of the colleges more than another; nor like the University of London, an examining board, giving no instruction, but holding examinations and conferring degrees on members of thirty or forty colleges, scattered through the country; nor is there anything analogous to the German universities, which have no undergraduate course, but only impart instruction in theology, medicine, law, or philosophy; nor yet to the University of France, the great central controlling power over all education in the country, from the highest range of scientific study to the lowest primary or commercial school of the empire.

The term university is often grossly misapplied in this country; an institution never intended to bestow anything beyond the ordinary classical and mathematical instruction of the undergraduate course in the colleges, and which, in fact, has only an academical or subcollegiate course, assumes very often the high title of university, while, in some cases, institutions like Yale College, which have, in addition to their college faculty, corps of instructors in theology, medicine, law, and physical science, are known only by the humbler title of college.

Of institutions possessing four faculties of higher instruction, there are but two in this country, viz., Harvard University and Yale College. Of those having three there are five, viz., Dartmouth College, the University of the City of New York, the University of Pennsyl-

vania, the University of Virginia, and the University of Michigan; the last named may indeed be said to have four, as although only the professions of law and medicine are taught, it has a department of fine arts, as well as one of physical and mathematical science. None of the five have faculties of theology. Of the number having two faculties of higher instruction, there are eleven or twelve; some of them have faculties of theology and medicine, others of theology and law, others still of law and medicine, and one or two of theology, law, or medicine, and the physical and mathematical sciences.

The number having a single faculty of higher instruction, usually theology or medicine, is 35. In four instances, under university charters, faculties of law or medicine (in two cases both) have been organized without any undergraduate course. These are the University of Albany, the University of Louisville, the University of St. Louis, and the University of the Pacific at San Francisco.

In by far the larger number of cases, however, the professional schools are independent, or at most have a merely nominal connection with the colleges or universities under whose charter their degrees are conferred. There are, according to the latest returns, 92 theological seminaries in the United States, having 4,120 students. As tuition is generally free in these seminaries, the annual expenditure for board, room rent, and incidentals will average about $125 per head, or $515,000 for the whole, while the added expenditure from endowments for the salaries of professors, &c., will increase the aggregate yearly expenditure to more than $1,000,000.

The number of medical schools is 55, having about 7,000 students, whose average annual expenditure for lecture, hospital, and dissection tickets, and board is never less than $200, and the aggregate yearly outlay $1,400,000.

The number of law schools is 18, and the number of students 1,300; the annual expenditure of each is about $200, or $260,000 in the aggregate. The number of normal schools is 16, and of normal students 2,740. Their average annual expenditure is about $120 or $340,800; but, as a portion of the salaries and expenses are defrayed by the States, the entire annual cost of maintenance cannot fall below $500,000.

The number of scientific schools, polytechnic colleges and institutes, and agricultural colleges in operation is 15, with an aggregate attendance of about 1,500 students. The annual expense per capita is not below $200, or $300,000, and the income of the endowments expended will increase the amount to about $400,000.

In addition to these there are 53 institutions for the instruction and training of the deaf and dumb, blind, and idiots, having in all about 7,850 pupils, the average annual cost for whose education is $150, or $1,177,500.

A near approximation to the amount annually expended for education in the United States, therefore, presents the following results:

Primary instruction, in public schools	$23,461,000
Primary and secondary instruction, in private schools, academies, high schools, seminaries, and boarding schools	20,000,000
Secondary instruction: Colleges	5,000,000
Higher education: Theological schools	1,000,000
" " Medical schools	1,400,000
" " Law schools	260,000
" " Normal schools	500,000
" " Scientific schools, &c.	400,000
Special instruction: Blind, deaf mutes, idiots, &c.	1,177,500
Total annual expenditure for education	$53,198,500
To this may be added Government expenditure for the support of the Military Academy at West Point and the Naval Academy, about	400,000
Total expenditure for education annually	$53,598,500

There has been, within a few years past, a commendable advance in the quality and extent of the instruction imparted in the colleges and schools of the country. In most of the colleges of the Eastern and Middle States, and in some of those of the Southern and Western, the instruction in the mathematical and physical sciences will compare favorably with that of the best European colleges and gymnasia. In a few cases the classical instruction is very thorough, but generally the colleges do not impart as complete and satisfactory a knowledge of the Latin and Greek languages as the European schools. Latin is seldom spoken, and not often written, except for salutatory orations or the like. In the academies and public schools there has been a marked advance in the thoroughness and carefulness of the teaching. In the elementary studies excellent manuals have been prepared, and no nation of the world has, probably, better text books for common school education than are found in the United States. The multiplication of normal schools, teachers' associations, teachers' institutes, and educational journals, have also contributed powerfully to the improvement of the schools and the elevation of the profession of teaching.

During the past year there has been a remarkable interest awakened among teachers and friends of education by the effort to introduce into the primary schools a system of instruction known as "object teaching," or "teaching by object lessons." The excitement and enthusiasm in regard to it has equalled, and perhaps exceeded, that by which Joseph Lancaster's monitorial system was received. Now, as then, educated men, occupying high positions in society, urge the general adoption of this new method, "as the best and most efficient system of teaching in primary schools."* There is not now, more than in former times,

* In 1810, De Witt Clinton, in a speech on opening the enlarged free school in New York, said: "I confess that I recognize in Lancaster the benefactor of the human race. I consider his system as creating a new era in education, as a blessing sent down from heaven to redeem the poor and distressed of this world from the power and dominion of ignorance." Again in his message in 1818, Gov. Clinton says: "I can confidently recommend it as an invaluable improvement, which, by wonderful combination in reduction of expense and rapidity of instruction, has created a new era in education." President Nott, in 1811, endorsed in terms almost as strong the new method, and John Adams gave it his hearty approval.

a royal road to learning, and the extravagant encomiums which have been passed upon the method of teaching by object lessons, may possibly, fifty years hence, excite as much amusement among the promoters of education of that time as Governor Clinton's eulogy on honest Joseph Lancaster's system does in our minds at the present day. Still, a notice is due to a system which so many eminent teachers unite in approving.

"Object teaching," though a novelty in its introduction into the primary schools, is by no means a new thing in the history of education. Something of the kind may be traced in Egyptian and Spartan education. In times comparatively modern, however, the system found a nearly complete development in the methods of two eminent teachers and writers on education of the seventeenth century—Wolfgang Ratich (1571–1635) and John Amos Comenius (1592–1671)—and both were indebted, partially at least, to Lord Bacon's "Instauratio Magna" for the first conception of the system. Ratich required the reading over of the lesson to the child by the teacher many times, accompanied each time by explanations and illustrations, in order to fix the phrases and the ideas together in his memory. In practice this proved so wearisome to both teacher and child that it was soon abandoned. Comenius was a man of far more practical character. He had early noticed the advantage of presenting to the mind of the child either the object concerning which he wished to instruct him or some representation of it, and the honor belongs to him of having been the first to prepare for the use of children a pictorial text book. This work (the "Orbis Sensualium Pictus," 1657) was not, like some of the illustrated school books at the present day, filled with pictures of battles or occurrences of history, but was a true cyclopædia of nature, fully illustrating, in a popular way, the natural science of the time, and his "Methodus Novissima," written as a guide to teachers in his new method of instruction, contains so much that is analogous to the "Manuals of Object Teaching" that it is difficult to believe that it was written two centuries ago. The following are a few passages taken from Hoole's translation of the works of Comenius, published in London in 1658:

The ground of this business is that sensual objects may be rightly presented to the senses, for fear they may not be received. I say, and say it again aloud, that this last is the foundation of all the rest. Now, there is nothing in the understanding which was not before in the sense; and, therefore, to exercise the senses well about perceiving the difference of things, will be to lay the grounds for all wisdom and all wise discourse; which, because it is commonly neglected in schools, and the things which are to be learned are offered to scholars without being understood, or being rightly presented to the senses, it cometh to pass that the work of teaching and learning goeth heavily onward, and affordeth little benefit.

Descend to the very bottom of what is taught, and proceed as nature herself doth, in an orderly way, first to exercise the senses well, by representing their objects to them, and then to fasten upon the intellect, by impressing the first notions of things upon it, and linking them one to another by a rational discourse. Missing this way, we do teach children as we do parrots, to speak they know not what.

Since some things cannot be pictured out with ink, for this reason it were to be wished that things rare, and not easy to be met with withal at home might be kept ready in every great school, that they may be showed also as often as any words are to be made of them to the scholars. Thus, at least, this school would indeed become a school of things obvious to the senses, and an entrance to the school intellectual.

Pictures are the representations of all visible things of the whole world. Such a dress may entice witty children that they may not conceit (conceive it) to be a torment to be in the school. For it is apparent that children, even from their infancy almost, are delighted with pictures. And it will be very well worth the pains to have brought to pass that scarecrows may be taken away out of wisdom's gardens.

The good bishop goes on to explain the use and necessity of the blackboard, which he illustrates by a picture of that useful adjunct for illustration, explains the phonic method of teaching children to read, and inculcates the necessity of sympathy with the children, the necessity of evolving rules from illustrations, and, above all, the entire dependence of the teacher upon God's blessing for success in teaching. This "Orbis Sensualium Pictus," revised and modernized occasionally, was largely used as a text book in the schools of Germany till the close of the first third of the present century. In the next century, object teaching was again revived as a method of instruction, through the writings of Jean Jacques Rousseau, and the establishment of the "*Philanthropinum*" by John Bernhard Basedow (1723-1790). Basedow's "Elementary Book of Human Knowledge" (*Elementar Werk*) was in four volumes, with 100 plates, and its plan comprised—1st, elementary instruction in words and things; 2d, a method of teaching children to read without weariness or loss of time (this was essentially a phonic method); 3d, natural knowledge; 4th, knowledge of morals, the mind and reasoning; 5th, natural religion; 6th, a knowledge of social duties, commerce, &c. Basedow himself was a man of small culture, violent temper, and coarse manners, and in the latter part of his life grossly intemperate; but some of his assistants, among whom were Wölke, Campe, and Salzman, taught successfully on his system, and the school at Schnepfenthal, founded by Salzman in 1784, is still in existence.

The advocates of the method of object teaching now in vogue, profess to regard Pestalozzi (1746-1827) as the originator of the system. It seems, however, that most of the principles of their system had been set forth and developed by Comenius, and that Pestalozzi, in so far as he advocated what is to-day known as "object teaching," was but reiterating the system of Comenius. Pestalozzi, though a humane and generous man, had little originality, a meagre and desultory education, and no tact. For a few years past there has been attributed to him the origination of theories and systems of education which he would have been the last to

claim as his own inventions. In the *Elementar Werk* of Basedow, and the *Orbis Pictus* of Comenius, he had at his hand systems of instruction which he did little more than to adapt, and not always with success, to the circumstances of the children of his time. He was possessed of a kindly and affectionate nature, and in his intercourse with children came down to their capacities with great readiness. His principles of education were developed in his "Leonard and Gertrude." "How Gertrude teaches her children," and his "Book for Mothers," though no man ever departed more frequently from his own principles than he. The following statement, prepared by the late William C. Woodbridge, who had made himself most thoroughly master of Pestalozzi's system, will show what were the characteristics of that system:

"He laid down these principles: that education should proceed according to the laws of nature; that it was the duty of the teacher to assist this by exciting the child to self-activity, and rendering him only a limited degree of assistance; that progress should be slow and gradual, but uninterrupted, never passing to a second topic till the first is understood; that the memory and the understanding should not be unduly cultivated, but all the faculties developed in harmony; that the peculiarities of every child and of each sex should be carefully studied, in order to adapt instruction to them; that the elements of all knowledge were Form, Number, and Language, and that these elements should be taught with simplicity and thoroughness; that the art of observing should be acquired, and the perceptive faculties well developed; that every topic of instruction should become an exercise for the reflective powers; that mental arithmetic, geometry, and the arts of drawing and modeling objects of beauty, were all-important exercises for training, strengthening, and disciplining the mind; that the laws of language should be developed from within, and the exercises in it made not only to cultivate the intellect, but to improve the affections; that vocal music should be taught in schools, not by rote, but by a careful study of the elementary principles of music; that the Socratic method, as used by Basedow and others, is objectionable, and that in the early stages of instruction, dictation by the teacher and repetition by the scholar is preferable, and at a more advanced stage, the giving out of problems by the teacher, to be solved by the pupil without assistance; that religious instruction should begin with the mother, that the filial feelings of the child should be first cultivated, and directed toward God, and that formal religious instruction should be reserved to a later period, when the child can understand it; that despotic and cruel government in schools was improper, but that mutual affection between teacher and pupil was a better incitement to intellectual activity than prizes or other stimulants to emulation; and, finally, that the exercise of the senses and the thorough cultivation of the physical powers were of very great importance to the complete development of the child."

Many of these principles were excellent, though not more than two or three of them (that in relation to despotic and cruel government in school being one) were new. There were, however, some practical defects in their application. The intellect was quickened, but very little positive knowledge was imparted, while the child almost inevitably gained the impression that he had made wonderful attainments; too high a place was given to language; mathematical and intuitive studies were given more than their proper share of attention, while other equally important studies were neglected; the process of simplification was carried too far and continued too long; repetitions were continued till they became wearisome; historic truth, and testimony as a source of knowledge, received but little attention, especially in religious matters, and religious knowledge was regarded as innate, rather than revealed.

Some of Pestalozzi's pupils and assistants, especially Neiderer, Schmid, Krüsi, Zeller, and Fellenberg, subsequently established schools in which they improved upon his theories. The Pestalozzian system, as it was called (though but a small portion of it was truly Pestalozzi's), was adopted extensively in the early part of this century in Prussia and the smaller German states, and in a modified form was introduced into France, Great Britain, and the United States. The improved Pestalozzianism introduced into this country mainly by the efforts of William C. Woodbridge, Thomas H. Gallaudet, William Russell, James G. Carter, Lowell Mason, and others, nearly thirty-five years ago, was divested of some of the absurdities of Pestalozzi's own theories, and was in many respects superior to any system of education previously attempted. The experience of Messrs. Gallaudet and Woodbridge in the instruction of deaf mutes had led them to see and avoid the fallacies of Pestalozzi's theory in regard to language, which he had formulated thus:—"Observation is the absolute basis of all knowledge; the first object then in education must be to lead a child to observe with accuracy; the second, to express with correctness the result of his observations." This second conclusion, every logician must see, does not follow from the premises. Pestalozzi subsequently says, that "out of the observation of an object the first thing that arises is the necessity of naming it." This necessity, a closer observation shows does not exist at all. A correct idea of an object can be, and is acquired, daily, where the object has no name, or its name is unknown to the observer; we might instance the position and relations of an unnamed planet, or the habits, locality, &c., of an undescribed plant or animal. The conception of an object by a deaf mute is none the less clear and perfect from the fact that he may not know the name by which it is called.

This zeal for loading the mind of the child with names for every object and for all the attributes of every object which falls under his observation, was deprecated by many of Pestalozzi's assistants and followers; and Fellenberg, Zeller, and Van Raumer, the ablest of them, entirely repudiated it.

In Germany, however, the evil results flowing from this predominance given to language, are, owing to the structure of the German language, far less injurious than they would be elsewhere. From the native roots, compounds and derivatives are formed by accretion of root words in common use, and early understood by the child, so that the attributes or qualities of objects are described in language which suggests its own meaning to the child. Thus where we should speak of the transparency of glass, for instance, the German word would be (literally translated) "through-seenness:" what we should call a hexagon, the German would describe as "six corners," a carnivorous animal in their vernacular would be "flesh-eating." Thus the mind of the child was not taxed, as it would be in English, with names of "learned length and thundering sound" derived from foreign tongues, and forming no part of the language of every day life.

In 1818, Dr. Mayo, of London, visited Pestalozzi's institution at Yverdun, and was so favorably impressed with his system that he resolved to introduce it into Great Britain. Dr. Biber and Mr. Greaves, who had also been at Yverdun, coöperated with him in the effort to accomplish his purpose. They introduced some modifications in order the better to adapt it to the English habits and modes of thought, but unfortunately the theory of language was adopted with all its faults, and with the additional objection, that owing to the idea apparently that the homely and expressive Saxon descriptive words, which would at least have had the merit of being constantly used within the child's hearing were vulgar, the more refined and classical words of Latin or Greek derivation were adopted; thus, if a peppercorn were the subject of the lesson, the child, instead of being told that its taste was biting or stinging, was taught that it was acrid or pungent; birdlime, instead of being sticky, was adhesive; an object without life was inanimate; a sourish apple was acidulous, and so on *ad infinitum*. In 1836, the "Home and Colonial School Society" was organized for the promotion of schools on this system, and a few years later established model and training schools from which about 3,000 teachers, a majority of them females, have been sent out. The apparent results from this method of teaching have been such as to attract attention, and to lead to its extensive introduction in Great Britain. In Toronto, Canada, it has been introduced into the normal and model schools. Dr. Mayo first, and subsequently his daughter, Miss Elizabeth Mayo, have prepared books of introduction for the teachers of the Home and Colonial Training Schools, giving, with great minuteness of detail, the processes of instruction in all branches taught on the Pestalozzian system. The first of these works, published in 1853, was in five 8vo. volumes. A "Manual of Elementary Instruction," in two volumes, prepared by Miss Mayo, was published in 1861. In 1860, attention was called to this system of instruction in the United States by the publication, by Henry Barnard, in his "American Journal of Education," of a sketch of the Home and Colonial School Society's operations, and specimens of their mode of teaching. Several eminent teachers and friends of education, in visiting Toronto, had spent some time in the Toronto model schools, and witnessed the exercises of the primary classes trained under this system. Among them were E. A. Sheldon, superintendent of the city schools of Oswego, N. Y., and N. A. Calkins, of New York city. Mr. Sheldon procured the volume of instruction of the Home and Colonial Society, and very soon commenced training the teachers of his primary schools in the method of object teaching, and, deeming it desirable to have the teachers of the primary schools thoroughly trained by experienced instructors, sent to the Home and Colonial Society for a teacher. Miss M. E. M. Jones, an experienced instructor, was sent by the society, and has conducted for the past year a training school at Oswego. Mr. Calkins, having devoted much attention to the methods of the society, has, for a year and a half past given instruction in object teaching at Teachers' Institutes, &c., on the subject. The system has been introduced into the model schools of the State Normal Schools of New York, New Jersey, and Michigan, and into a portion of the primary schools of Syracuse, N. Y., Paterson, N. J., Chicago, Ill., Toledo and Cincinnati, Ohio, Rochester, N. Y., San Francisco, Cal., and several smaller places. Mr. Sheldon and Mr. Calkins have both published treatises on the subject; Mr. Sheldon's being entitled "A Manual of Elementary Instruction for the Use of Public and Private Schools and Normal Classes, Containing a Graduated Course of Object Lessons, for Training the Senses and Developing the Faculties of Children," New York, 1862; and Mr. Calkins's, "Primary Object Lessons for a Graduated Course of Development: a Manual for Teachers and Parents," New York, 1862. The following works on the subject have also been published: "Object Teaching and Other Methods of Primary Instruction in Great Britain," by Henry Barnard, LL.D., Hartford, 1861; "A Manual of Information and Suggestions for Object Lessons," by Marcius Willson, author of several popular school books, New York, 1862; "Object Lessons Prepared for Teachers of Primary Schools and Primary Classes," by A. S. Welch, Principal of Michigan State Normal School, New York, 1862. "Report of the Committee on the Primary Schools in the City of Oswego, N. Y., 1862." Several school books professedly

based on this system have also appeared in New York and Philadelphia.

Only a limited description of the processes adopted in the new method can be given in these pages, but a brief analysis of them may not be inappropriate, since the system is so actively propagated. The work of Mr. Sheldon must be the guide, as being more complete than any other, and being condensed from the manual of the Home and Colonial Training Schools, and with the assistance of two of the former teachers of those schools (Miss Jones and Professor H. Krüsi, a son of Pestalozzi's associate), is invested with a degree of authority which does not appertain to the other treatises.

The system of object teaching is by these writers and in practice applied to children between the ages of 4 or 5 and 12 years. The subjects on which lessons with objects are given are color, form, number, size, weight, sound, language, reading, dictation, geography, lessons on the human body, lessons on animals, lessons on plants, moral instruction, and drawing. Under form is included the elementary principles of geometry and writing, under number the simpler rules of arithmetic, under language the principles of grammar, and under lessons on the human body, animals, and plants, elementary physiology, zoölogy, and botany. The range of topics is thus sufficiently extensive to comprise the studies of public schools generally.

The rules for the teacher in giving instruction by this method require that the matter which is the subject should be stated, and the properties, nature, qualities and uses of it brought out by examination, the terms given and explained, the ideas developed from it, and illustrations and anecdotes respecting it narrated, and the whole impressed upon the memory by numerous simultaneous repetitions, and by writing and drawing upon the blackboard. Of course, in the different topics there must be considerable variations of detail, and much must necessarily be left to the skill and tact of the teacher, but the general order here indicated must be followed.

Children of the ages above specified are divided into four classes or steps according to age and intellectual capacity. With the youngest, the object of the teacher must be to exercise the perceptive faculties; with the second, a more minute perception is developed and the conceptive faculty called into action; with the third, the reasoning faculties are exercised, especially in the matter of distinctions, differences, and comparisons; while the perceptive faculty is still kept in activity, in the fourth, the imagination and the powers of analogy and generalization are developed.

The Phonic method of teaching reading, as prescribed in the "Object System," is peculiar, and many advantages are claimed for it. The letters are taught by means of cards and the blackboard, in the following order, *a*, *t*, *m*, *c*, *b*, *r*, *h*, *v*, *f*, *s*, *d*, *l*, *p*, *g*, *n*, *j*, *w*, *e*, *i*, *o*, *x*, *u*, *y*, *q*, *z*, and the combinations, *ow*, *oy*, and *th*. The small letters are taught first, and only the short sounds of the vowels; the capitals are next taught, *C*, *K*, *O*, *P*, *S*, *U*, *V*, *N*, *X*, and *Z*, from their analogy to the small letters, and the remainder divided into three classes, *I*, *L*, *T*, *F*, *E*, *H*, *A*, *N*, and *M*, straight-lined letters; *Q* and *G*, curved line letters, and *D*, *B*, *R*, and *J*, straight and curved line letters. These letters are to be rudely imitated by the children with laths, and drawn on the blackboard. Meantime the child is taught to recognize by sight the words *the*, *is*, *his*, *this*, to aid in forming sentences, and combinations of the letters into words of one syllable, having the short sound of the vowels, are made. The children are exercised next, first on the long, double, and short vowel sounds, secondly on the consonant sounds, and third on rhyming sounds. In the second step, the children are introduced to words containing the long sounds of the vowels, and an additional list of words to be learned at sight, containing different sounds of the vowels; to words containing silent letters, and also to the sound of *K*, previously omitted, and the two sounds of *C* and *S*. They are also taught words having more than one initial or terminal consonant, and for the first time learn the names of the letters. Reading is commenced in a simple reading book, prepared by the Home and Colonial Society, and from this the teacher reads first word by word, the children repeating, and then the children read in the same way and the teacher repeats, and this several times; the same process is followed with each clause and finally with each sentence. Words having any peculiarity of spelling are selected and written upon the blackboard, sounds distinguished, and silent letters noticed. Next a single child is called upon to read the sentence or sentences in the same way, and the children are questioned on the meaning of the words, and the idea of the sentence. In the third step, the remaining consonants *g*, *th*, *ph*, *gh*, *ch*, *z*, and *x* are considered and their sounds taught by examples and analogies; diphthongs and other anomalous sounds are also distinguished, and the children exercised in reading as before, though in lessons of longer and more difficult words. It is impossible to concur in the commendations bestowed on this method of teaching to read. It seems faulty in instructing the child vowels before consonants, letters before words, and compound sounds before simple ones.

Those who desire more full descriptions of the system will find them in the treatises above named. It is not surprising that so many prominent teachers should have eagerly seized upon this system. The teaching of very young children, always a matter of difficulty, had never been managed with much method, and with but a moderate degree of success; and routine, fatal here as everywhere else, had deprived the best of the plans in use of much of their vitality. The *Kinder-garten* system, though in many respects admirable, was encumbered with too many and too expensive arrangements

of building grounds and apparatus, and required too long and thorough training of the teachers, to come into general use. Here was a system, requiring, indeed, the possession of considerable talent, tact, education, and imagination on the part of the teacher, but rendering routine impossible, and promising showy and brilliant results.

ELECTRICITY. In connection with the progress of electrical discoveries and theory, the feature of most absorbing interest at the present time, is that of the several propositions and attempts toward establishing certain fixed units of measurement for various electrical quantities, and particularly—1, for the electro-motive force of a galvanic couple or battery, *i. e.*, the total force of current the couple or battery could generate if the resistance opposed to the passage of such current through the conducting wires or circuit be nothing or inappreciably small; 2, for the resistance opposed to the current by the necessarily imperfect conducting power of the wires or material of the circuit; 3, for the actual intensity of the current produced, as a result of the given electro-motive force diminished by the given resistance. The determining of such units, as leading in time to the ability to estimate accurately and compare the electrical quantities of batteries and circuits of all sorts whatever, and those requisite to the various effects which currents are expected to produce, is at once seen to be a problem the solution of which promises results of the highest practical value. In the applications of electricity during the past year, although perhaps no great or striking achievement has been made, some points of interest nevertheless present themselves. (*See* also AURORAS, METEOROLOGY, and TELEGRAPHY.)

I. SCIENTIFIC PROGRESS.—*Measures of Electric Resistance.* To determine comparatively the resistances of different circuits, Mr. Siemens had proposed that the standard or unit should be a filament or minute column of mercury of given length within a tube, and from the two ends of which connections with the two poles of a galvanic element or battery should be made: a needle or other galvanometer introduced in the course of the same circuit would show the intensity of current when the mercury filament is, and when it is not, made part of the circuit, and would thus give the resistance of the given length and diameter of that metal as a conductor. An objection to this plan is, that after a time alloy of the mercury from the ends of the solid metal conductors must occur, thus changing the actual conducting power of the filament, and again, that the contact of the solid wires with the metallic mercury is uncertain or of variable degree. To obviate these difficulties, as well as certain imperfections in Wheatstone's electro-motive balance, Prof. W. Thomson has devised a new electro-motive balance for determining resistances of short bars or wires, and by use of which he considers that no uncertainty in the connections can exist, even though these are not made with extraordinary care. He concludes, however, that in order to arrive at the most accurate possible system of electrical measures, the standards that may be adopted must first have been exchanged between and compared by different experimenters. For the details of the paper, which is long and mainly theoretical, the scientific reader is referred to the proceedings of the Royal Society, or to the "Philos. Magaz.," Aug. 1862.

Matthiessen's Unit of Resistance—is that opposed to perfect conduction of an electric current by a wire composed of 2 parts by weight of gold and 1 of silver, length 1 metre (39.37 in.), diameter 1 millimetre (.03937 in.). The author's experiments lead him to conclude that this alloy conducts electricity with nearly the same facility at all temperatures between 32° and 212° F.; that impurities in small quantity do not sensibly affect its conducting power; and that the annealing of the metal also makes no sensible difference. The wire should be varnished to protect it from action of mercury. (*Pogg. Annalen*, cxii, p. 353). Prof. W. Gibbs suggests that the specific conducting power of such a wire may, as is known to be the case with copper, undergo change from continued or repeated use.

Weber's Proposed Absolute Standard.—The student of mechanics well knows that having the measures of space and time, no specific fundamental measure of velocity is required; since we find or express velocity by the simple ratio, $\frac{\text{space}}{\text{time}}$. Weber calls attention to the fact that, in like manner, if there are measures for electro-motive force and actual intensity of current, no specific fundamental measure of electric resistance is necessary; the resistance that exists in a closed current in which the unit of electro-motive force produces the unit of intensity, being taken as the unit of resistance. Now, in Gauss's treatise on the "Intensity of the Earth's Magnetic Force" (Gottingen, 1833), absolute measures for terrestrial magnetism and for bar magnetism are given. Weber shows that from these an absolute unit of measure of electro-motive force and a like unit of intensity of current can be obtained—these being expressed and known in the three simple elements of space, time, and mass (of the conductor). In some experimental applications of his principle, employing a copper wire 3,946,000 millimetres in length, and of a mass equal to 152,890,000 milligrammes (about 338 lbs. avoird.), Weber calculated the absolute measure of resistance at 190,000,000 units, and the specific resistance of the material at 1,865,600 units. ("Philos. Magaz.," Sept. and Oct., 1861.)

Electro-motive Force of Voltaic Piles.—M. Marie Davy believes that, however carefully the units of resistance and of current may be defined, since these are arbitrarily chosen, it still cannot be hoped that from them we can so estimate the electro-motive force of batteries as directly to furnish the calorific value, or

equivalent in heat, of the chemical actions taking place in those batteries. What is really required is, to determine in numbers some constant unit or coefficient for the force considered, and which could be easily obtained by each chemist. The most simple of batteries is Smee's—the only chemical action normally going on in this being the oxidation and solution of zinc in the acid, with disengagement of hydrogen. The value of the heat corresponding to this action was carefully measured by M. Favre, and expressed by the number 18,444 for ordinary zinc, and 18,791 for zinc amalgamated. In preliminary researches with the battery named, including 125 determinations of its electro-motive force, M. Davy found variations in this force between 16,886 and 20,604, a difference of 2 per cent., where he had been led to expect no more than that of $\frac{1}{1000}$th part. The researches resulted in showing 7 causes of disturbance acting within the cup or battery, and leading to variations in the current force which, independently of all influences outside itself, it can generate. Of these, the most important appeared to be the presence of air in solution in the acidulated water, and the influence of the sulphate dissolved in the liquid during action of the battery; the oxygen of the former acting directly on the zinc, and preventing to a corresponding extent the decomposition of the water, and both causes operating to diminish the electric force of the battery. The third cause of disturbance was the influence of concentration of the acid, the force generated however being constant so long as the acid solution contained more than 25 equivalents of water for 1 of acid. The other influences were, that of purity of the zinc and state of the amalgam—the electric force from amalgamated zinc being generally stronger; that of purity of the acid —the nitrogen compounds often present in it increasing the strength of the current; that of the water—distilled water being preferable; and that of temperature, which causes considerable variation in the current generated.

Finally, in order to secure results under uniform conditions, M. Davy works a Smee's battery consisting of a plate of platinized platinum immersed vertically in a mixture of sulphuric acid with 8 to 10 times its weight of distilled water, boiled to free it of air, this solution being placed in a vertical glass tube, at bottom of which is a liquid amalgam of pure zinc in pure mercury. A platinum wire traversing the bottom of the tube forms the negative pole of the element, the glass tube containing the arrangement is immersed in a large vessel full of water, which keeps the temperature constant, the liquid of the cell being also frequently changed. Fixed resistances in platinum of known temperatures being introduced into the circuit, serve to show the corresponding variations in intensity of the current. M. Davy takes for the electro-motive force of this pile the number 18,510. ("Philos. Magaz.," July, 1862.)

Measures of Electrical Quantities.—Mr. Latimer Clark and Sir Charles Bright presented before the British Association, 1861, a paper on the principles which should be observed in measuring electrical quantities and resistance. They believe that four standards or units are in reality required, these being mutually dependent on each other; and that by the aid of these every conceivable form of electrical manifestation, whether static or dynamic, can be precisely expressed. These are:

A. A unit of electrical tension, potential, or electro-motive force.

B. A unit of electrical quantity, as applied to static electricity.

C. A unit of electric current, or quantity in dynamic electricity.

D. A unit of electrical resistance.

As the unit of tension they propose that of one Daniell's element or cell, to be named 1 *Ohma.* As the unit of quantity of static electricity, they propose that corresponding to a tension of 1 Daniell's element existing between two coatings oppositely charged, the coatings being 1 millimetre apart, of 1 square metre surface, and separated by dry air; this quantity to be termed 1 *Farad.* As the unit of current, they propose that of one unit of quantity per second delivered along a conductor, as determined by the galvanometer; this to be known as 1 *Galvat.* But the wire that will conduct 1 unit of electricity in 1 second becomes conversely the standard or unit of resistance, this to be known as 1 *Volt.* Of these units, the first three will in practice require to be measured in multiples of 1,000 and 1,000,000 times the unit—indicated by the prefixes *kilo-* and *millio-;* the fourth, as too large for defining the resistance of telegraph conductors, will require to be measured in fractions of the unit—indicated again by the prefixes *kilo-*, *millio-*, and *billio-*. A synopsis of the paper at greater length is given in the "Journal of the Franklin Institute," February, 1862.

Report on a proposed Standard of Electrical Resistance.—Mr. F. Jenkin, on behalf of a committee appointed by the British Association to consider this subject, reported at its last meeting. In such a standard five qualities are desirable; it should be of convenient magnitude; should form part of a general and coherent system of electrical measures; should bear a definite relation to the unit of work; should be unalterable; and should be reproducible, if accidentally destroyed. Of the units hitherto proposed, the committee conclude that none fulfil all these conditions. Those based on an arbitrary length and section, or weight of some material arbitrarily taken, lacked the first and second qualifications; the absolute system possessed these, but failed in the third and fourth; and the system of Messrs Bright and Clark also failed in the third particular. Not being able to advise the unqualified adoption of any of the previously proposed standards, the committee recommend that a material

standard be prepared, and of such substance and form as to insure the most absolute permanency. The aim should be to make this standard correspond to a current force equal to 10,000,000,000 times the value given by the quotient of 1 metre by 1 second of time, that is, $10^{10}\frac{\text{mètre}}{\text{seconds}}$; and to this it should approximate as nearly as possible. Such a unit would not differ more than .03 for Dr. Siemens' mercury unit. It should not be called an absolute unit, but simply the "unit of 1862;" and it should not be constructed at all until a very close approximation to the absolute value was supposed to have been attained, and great permanency in the material standard secured. Then, as the advance of science showed more and more truly the actual deviation of this from the true unit intended, corrections could be made by experimenters in their results when required. The material standard itself, however, should under no circumstances be altered in substance or definition.

Influence of Temperature on the Conducting Power of Metals.—Matthiessen and Van Bose presented before the Royal Society a paper on this subject, Jan. 16, 1862. They find that, contrary to what has been stated by Becquerel, Siemens, and others, the conducting power or the resistance of a metal for an electric current, does not increase or decrease in a direct ratio to the temperature, but in a ratio much more complex. All pure metals in the solid state, however, vary in conducting power to the same extent between the temperatures of 32° and 212° F. Wires of the same metal behave differently after being kept for some days heated to the same degree. Metalloids generally conduct better when heated than when cold; this is true of selenium, gas coke, graphite, and the gases.

Mechanical Effects of Powerful Tension.—M. Faye exhibited before the Academy of Sciences, Paris, an experiment in which two plates of crown glass, respectively nearly $1\frac{1}{2}$ and $2\frac{1}{2}$ inches thick, were completely pierced through by the electric spark of the great induction machine recently constructed by M. Ruhmkorff. The path left by the spark is seen to consist of a white and opaque fillet, extremely slender, its whole length presenting bright places at slight distances, and taking different directions in the manner of the parts of a spiral. It shows no metallic deposit. In the thicker plate, at a depth of about $\frac{1}{3}$, the track bifurcates; and near to the opposite face, it subdivides into many and more direct fillets. During the experiment, Ruhmkorff demonstrated by the appearance of Haidinger's colored rings, that the passage of the spark was accompanied by an energetic compression of the substance of the glass; but no trace of fusion appeared about the course taken by it. M. Faye thought nevertheless that, by passing the spark of this machine through some pulverulent substance somewhat more fusible than crown glass, true fulgurites could be produced.

Study of the Electric Spark by Aid of Photography.—Prof. O. N. Rood, of Troy University, N. Y., has been, by aid of a new and very neat method devised by him, studying the form and characteristics of the electrical spark. The photographic images of the electric spark hitherto obtained by Prof. B. Silliman, jr., Prof. W. B. Rogers, Feddersen and others, have been taken from a position at right angles to the course of the spark, thus furnishing a side view of it; and they have usually required a prolonged exposure of the sensitive surface to the light, in some instances from 3 to 6 minutes. Prof. Rood's method is that of receiving the spark directly upon a sensitive or properly prepared surface, and subsequently developing the figure produced, in the manner of photography. In this way he secures the figure corresponding to a single discharge of ordinary or frictional electricity, the brief duration of which has forbidden its being photographed by previous methods. His plan is an application, first, of Becquerel's discovery that paper coated with bromide of silver is sensitive to the electric spark; and, secondly, of his own observation that, in instantaneous photography, the portions of the sensitive surface immediately contiguous to those acted on by the strong lights, still remained quite unaffected by the exposure. Upon testing the fact in case of a single electric spark, he found that an intense and sharply defined image, full of delicate details, was here also the result. The question whether these images were due to direct action of the electricity itself, or to the agency of the light evolved, appeared to be settled by certain experiments, especially by the fact that when the spark was received on a thin glass plate, placed over another coated with sensitive collodion, the electric image could be developed, though less sharply defined, on the second plate; but when the first or thin glass was blackened, no image on the second resulted, from one or a number of discharges. The form of apparatus given for these experiments is simple; the collodion recommended is that suitable for ambrotyping, and when freshly prepared.

The general form of the positive electrical spark ascertained, is a combination of two figures: a star and one or more rings, all having nearly a common centre. The rings are usually quite within the limits of the star, sometimes one of them without it; and when two or more rings appear, they are successively darker toward the centre. The marked differences in form of the two components, and the fact that the annular form is characteristic of the electric brush, seem to indicate that each simple spark consists of two or more successive discharges of varying intensity. When, owing to distance, or to the use of a pointed wire, the partial sparks become more uniformly blended, the electrical "brush" is the result; and the figures confirm the general view of electricians on this point, by showing how the former passes

by insensible gradations into the latter. The form of the negative spark differed greatly from that of the positive, being destitute of rays, generally circular in shape, and often made up of a number of minute circles placed without symmetry. For like distances it was also larger than the positive, and never nearly so well defined. Moreover, there is a general resemblance between the positive and negative figures as thus obtained, and the figures of the corresponding sorts obtained by Lichtenberg and Riess by passing the sparks to a surface sprinkled with powdered sulphur and red lead, and known as "Lichtenberg's figures."—"Amer. Jour. of Science," March, 1862.

Production of Vibrations and Musical Sounds by Electrolysis.—If a large quantity of electricity be made to pass through a suitable good conducting electrolyte into a small surface of pure mercury, especially when the latter is disposed in a narrow band or ring, strong vibrations will occur, the surface of the mercury being thrown up into numerous crispations or minute ridges running in a radial direction, this appearance being often accompanied with definite musical sounds, and which can sometimes be heard to a distance of 50 feet. The best electrolyte or liquid employed to conduct the current (while undergoing decomposition by its action), is formed by dissolving 10 grs. of cyanide of mercury and 100 grs. of hydrate of potash, in 2¾ oz. of aqueous hydrocyanic acid, containing .05 of the anhydrous acid. The vibrations and sounds occur only at the surface of the mercury, which serves as the electrode. The only liquids giving the phonetic vibrations were solutions of alkaline cyanides, containing dissolved mercury (in combination), and these only when the electrodes, or at least the cathode (positive pole) was of mercury. The vibrations and sounds vary considerably according to the size and number of the voltaic elements. With a few cups only in the battery and the plates of large size, the vibrations were rapid and the tone high; with many pairs of small plates, the vibrations were less frequent and the tone low. The most suitable number of elements appeared to be 2 of Grove's, or 5 of Smee's battery. By interposing in the circuit made a coil of stout copper wire, the sounds became more bass, still more so upon thrusting an iron coil suddenly within this; but if, in either case, a secondary coil with its ends united were made to surround the former, the sound returned to the higher pitch and preserved it so long as the outermost coil remained in place. A strong electro-magnet placed in various positions in the neighborhood of the vibrations had no influence in the way of changing or arresting them. The phenomena were readily produced by connecting with the positive pole of the battery a circular pool of mercury 1 to 3 inches in diameter, and surrounding this with a ring of the same metal about ⅛ in. wide, connected with the negative pole; the liquid metal being contained in suitable glass or gutta percha vessels, and covered with the solution to the depth of half an inch. Mr. G. Gore, by whom these investigations have been conducted, regards the vibrations as having an electro-chemical origin, and as resulting from an attraction between the mercury of the negative electrode and the mercury of the electrolyte.

New Experiments in Electro-Magnetism.—M. Leroux, of the Polytechnic School, Paris, having a platinum wire about $\frac{1}{375}$ of an inch in diameter, and 7 inches or more in length, rendered incandescent by being made part of an electrical circuit, presented the wire in this state and properly flexible to the poles of a powerful magnet or electro-magnet: the wire assumed a series of configurations, depending on the direction of the current and whether the line joining its extremities has a position axial or equatorial with reference to the magnet. Such a wire was attracted by a mass of iron, especially if the latter presented a large surface, a counterpart of Arago's experiment that a wire traversed by a current attracts iron filings. Leroux also showed how a fine conjunctive wire could be made to coil itself spontaneously around the pole of a magnet. Having fixed upon one of the poles of a horse-shoe magnet an armature of soft iron, about 4 inches in length, turned and polished, he attached to this armature the extremity of a silver wire, holding the other extremity in his hand, but so loosely that the wire could constantly obey the forces which solicited it. When this wire was then traversed by a current, it coiled itself around the armature, and there formed a helix wound in a direction opposite to that which would be required to give to the armature the same magnetism it already possessed. This experiment is more conveniently performed by having the wire at first coiled on a small metallic bobbin suspended above the magnet; and the more constant the length of wire traversed by the current, the less is the risk of burning it. Thus is found a new kind of motion obtained by the action of the pile. To prevent the undue acceleration of this motion, a smaller cylinder may be fixed on the axis of the bobbin, from which a small weight at the end of a silk thread draws in the direction opposite to that given to the bobbin by the uncoiling wire. For these experiments a current of about 10 Bunsen's elements was employed.

Electricity Developed during Evaporation and Effervescence.—Prof. Tait and Mr. Wanklyn have, by use of the extremely sensitive and accurate divided ring electrometer of Prof. Thomson, investigated the phenomenon of development of electricity by evaporation of certain liquids, during the few moments in which on quitting the "spheroidal state" in a heated capsule or dish, and coming again in contact with its surface, they emit the well-known "fizzing" sound attending their rapid evaporation at that period. By conducting wires suitably arranged, in course of which the electrometer was placed,

the strength of the charge generated could be estimated, and this is numerically expressed for the various liquids so examined, 5.8 being taken to represent the electro-motive force of a single Grove's element. The generated charges in case of some of the substances examined were as follows: Bromine, +400; iodine, +90; ammonia, −200; alcohol, −10; mercury, −75; water, −80; strong solution of common salt, −400; caustic potash, +150; strong nitric acid, +7.5; benzole and valerianic ether, no effect. From a like series of experiments on the development of electricity during brisk effervescence of different liquids, the following results were obtained: with solution of zinc in hydrochloric acid, −750; solution of binoxide of manganese in hydrochloric acid, −150; solution of common salt in sulphuric acid, +10. ("Proc. Roy. Soc. Edinb.," Feb. 1862.)

Experiment with the Crural Nerve of Frog.—In this experiment, one of the first by which Galvani was enabled to lay the foundation of that branch of electrical science now very commonly bearing his name, of the two metals employed one was made to touch the nerve of the frog's leg, the other at the same time the muscle; and in the directions for repeating the experiment, this is the arrangement usually laid down as requisite. If, however, the upper end of the nerve be dissected out from the thigh, and the metals be so placed that both shall be in contact at one of their extremities with this part, so that the current shall pass through the nerve alone, the muscular contraction and movement of the leg are equally great. The experiment in this form is conveniently performed by winding the separated or free end of the nerve around one wire of a galvanic cell or element, and then touching with the other wire any other point in the exposed nerve, so as to pass the current through the intervening portion. If the second wire touch the muscle, this serves as a conductor, and the contractions follow of course; but the preceding experiment appears to show that the effect is due in reality to passage of the current along a portion of the nerve.

Electrical Phenomena of Vesuvius.—M. L. Palmieri first observed at the distance of a few hundred yards the flashes of volcanic lightning from a new crater of Vesuvius, at Torre del Greco. These flashes appeared always to originate in large globes of smoke, and they were followed by explosions not louder than the reports of pistols. Afterward, from the observatory he noticed similar flashes between smoke and cinder masses below and bodies of aqueous vapor above these; but very seldom between the smoke masses and the earth beneath. At each violent projection of smoke, his instruments indicated a strong tension of positive electricity; and when this reached a certain force, lightning and thunder occurred. If the electric discharge occurred in the direction of the zenith of the place, a sudden increase of positive electric tension was the result; while, if the discharge was directed toward the earth, or to a distant region of the air, the tension became negative. The vapor which moved toward the observatory, if free from cinders, was strongly positive; but the cinders which fell when the smoke of a superior current deviated from the zenith were negative.

II. Applications.—*Ritchie's Electrical Machines.*—The principle of induction holds true for current as well as for common electricity; illustrations being found in the facts that if a wire or coil be made to transmit a galvanic current while another wire or coil is situated in immediate relation with this, but not so as directly to receive the electricity from it, and if along the first wire or coil an interrupted or periodically reversed current be transmitted, then at every such interruption and recommencement, or reversal, of the primary current, a secondary or induced current will be developed in the second wire or coil; and this induced current will partake in a large degree of the properties of common electricity, having great intensity, and being capable of discharging itself to a corresponding distance through dry air or other non-conductor—a power of which the primary or inducing current is wholly destitute. If, further, the electrical condenser be added at the extremity of the second wire, so as to intensify the charge arising in it at the moments of interruption, the intensity and mechanical effect of the induced current are still further increased. These principles were determined by the researches of Faraday, Henry, De la Rive, Fizeau, and others.

M. Ruhmkorff, of Paris, was the first to produce an actual combination or machine representing and taking advantage of these principles. This machine, known as Ruhmkorff's induction coil, consisted essentially of an inner helix of shorter and larger copper wire transmitting a current from a galvanic battery, with the addition of an interruptor to break the current at regular intervals, this helix being surrounded by and insulated from a second of finer wire and much longer, having at one end the condensing plates, and the extremities of which constituted the poles of the secondary current. With his arrangement the longest spark obtained did not quite equal one inch in length. Mr. Hearder, in 1857, improved the apparatus by more carefully insulating the helices, and obtained sparks of 3, and subsequently of 6 or 7 inches.

Mr. E. S. Ritchie, of Boston, Mass., desiring in the same year to produce the induction coil and of increased power, found it impossible to construct it in the ordinary manner and yet free from liability of the breaking through of the spark from one coil to the other—a casualty that at once destroyed the action of the machine. His experiments led him to adopt an entirely new plan of winding the exterior coil, consisting finally in winding this wire in planes

perpendicular to the axis of the helices, alternately running from the inner to the outer and from the outer to the inner diameters of the outer helix, and very carefully insulating not only between these strata but also between the inner and the outer helix. By these means he had in July of the year named produced an instrument giving sparks of 9 to 12 inches in length. Meanwhile, M. Ruhmkorff's best improved instruments had failed to give sparks of more than 3 or 4 inches in length. In the summer of 1858, Prof. R. S. MacCulloh, of Columbia College, N. Y., having secured for that institution one of these coils which, with a battery of only 4 Bunsen's cells, gave a spark 12 inches in length, ordered also one of Ruhmkorff's for which the French Academy had just awarded him a prize, and informed him of the power of Ritchie's machine, as also of the readiness professed by the latter maker to surpass the power of any instrument that might be so furnished. Receiving in the mean time no instrument from Paris, Prof. MacCulloh, in May, 1859, while on a tour in Europe, visited M. Ruhmkorff, who expressed an unwillingness to produce an instrument upon the conditions named, but showed one which he had attempted, and which had destroyed itself by the breaking of the spark through the insulation. Prof. MacCulloh, supposing that Ruhmkorff would be glad to compare Ritchie's instruments with his own and those of Hearder, and that he would of course accord due credit for what was original in the first named, presented him with one of these giving sparks of 7 inches. This M. Ruhmkorff dissected, for the purpose of examining its construction. About the same time, Prof. MacCulloh ordered of Ritchie the most powerful coil he could make, to be sent to Paris. Being received in November, this instrument and its performance were by him exhibited before Jacobi, Foucault, Duboscq, Jamin, Désains, Froment, and others distinguished in electrical or general physical science, as well as before the students of the École de Médecine, and several professors of the Polytechnic School. M. Ruhmkorff, meantime, had a long-unfulfilled contract for a powerful coil for the last named school; and M. Jamin expressed himself in favor, in case such instrument should not be delivered by the close of the term of contract (March, 1860), of procuring one of Mr. Ritchie's instruments. In March, however, Ruhmkorff delivered to the school an instrument of his construction; and Prof. MacCulloh, on seeing this coil in May, was informed by M. Jamin that it was wound in portions perpendicular to the axis (Ritchie's system), and that it gave sparks of about the same length as the most powerful instrument of the latter, namely, 13 to 16 inches. M. Ruhmkorff showed to Prof. MacCulloh in June another instrument of like power, and of which he declared the construction to be similar. These facts are chiefly drawn from an account furnished to Mr. Ritchie for publication, by Prof. MacCulloh, since his return. The French scientific writers and journals, however, seem uniformly to ignore Ruhmkorff's indebtedness to Mr. Ritchie for an improvement which has fully tripled the power of the machine over that of any constructed by the previous methods; and they unite in awarding to the Parisian maker the entire credit of the invention of another. The Abbé Moigno, editor of the *Cosmos*, relates witnessing about the beginning of 1862 an experiment with one of Ruhmkorff's coils, which gave a spark 18 inches long, and pierced glass of two inches thickness. (See *Mechan. Effects*, &c., previous.)

Conducting Power of Pure and Alloyed Copper.—Matthiessen and Holtzmann have presented before the Royal Society a paper on the effect of the presence of metals and metalloids upon the electric conducting power of pure copper. The variations in conductivity of copper wires as found by different experimenters, must depend in part on differences of quality and purity of the wires experimented with, and in part, at least, also on differences in temperature. Thus, taking the conducting power of pure silver as =100, the following are the measures for copper as found by the physicists named:

Becquerel	95.3	Harris	100.0
Riess	67.2	Buff	95.4
Lenz	73.4	Pouillet	73.0
Davy	91.2	Arndtsen	98.7
Christie	66.0		

The temperatures at which the determinations were made are given only in the cases of Becquerel, Lenz, and Arndtsen, namely, 32°F. Matthiessen and Holzmann prepared pure copper, both by a method involving precipitation with sulphuretted hydrogen from the purest commercial sulphate of copper, and also by precipitating the metal galvano-plastically by a very weak current from the same compound. The conductivity of a hard-drawn silver wire being taken as = 100, the mean of 12 determinations of hard-drawn wires from the copper so obtained gave for this metal 93.08, at 18.9° C. With similar wires annealed, there was a gain of 2.5 per cent., the mean in this case being 95.58. Copper fused in the air is probably always contaminated in degree with oxygen which it absorbs, producing some quantity of the suboxide; and the presence of this impurity was found always to reduce the conducting power, and in some cases to as low as from 69 to 73 in the scale. The experimenters could not induce the taking up by copper of more than .05 per cent. of carbon; but even this reduced the conduction to 74.91, at 18.3° C. Phosphorus, sulphur, selenium, and tellurium all very considerably reduced the conducting power of copper into which they entered as impurities; and arsenic in a still more remarkable degree—5.4 per cent. of arsenic giving a mean conducting power of only 6.18, at 16.8° C.; and 2.8 per cent., of 13.14, at 19.1° C. Of all the metallic impurities tin and iron most sensibly lowered the conducting power, the former, in amount

of 4.9 per cent., to 19.47 in the scale. In conclusion, the authors state that they find no alloy of copper which conducts electricity better than pure copper; and they call the attention of experimenters to the importance of stating in future determinations whether the wires they employ are hard drawn or annealed, and at what temperature the observations are made. A more full abstract of the paper appears in the "Jour. of the Franklin Inst.," for May, 1862.

Electric Lights for Lighthouses.—Mr. J. K. Whilldin, C. E., communicates to the journal just quoted (April, 1862), an article relative to Prof. Way's electric light, with mercury, and to the arrangements for projecting lights generally. Before entering upon the topics treated of by him, it may be remarked that the introduction of the electric light for lighthouse purposes appears to have been directly owing to the demonstrations by Prof. Faraday, in connection with Prof. F. H. Holmes, of the practicability of its use, and especially to the experimental exhibition of its capabilities in the South Foreland lighthouse, near Dover. The electric light is obtained by heating to incandescence, by means of the passage of an electric current between or through the bodies so employed, carbon points, which are made to terminate the positive and negative conducting wires of a battery, or a slender filament of some metal introduced between the ends of the wires. In the former case incandescence of the points can be produced only when these are brought very close together, but usually not into positive contact; in the latter, the light is the result of the intense heating of the fine wire owing to the low conducting power it possesses for the current. In either case, a current of very high intensity is usually required; and this may be obtained either from a galvanic battery of many cells, say from 40 to 100, or from the magneto-electric machine. The suffocating nitrous fumes generated during action of a Bunsen's battery, and indeed, the expense of materials and the attention required in order with any form of battery to maintain a regular and intense current, constitute serious objections to their employment. Prof. Faraday gave preference to the electro-magnetic machine, as being both a less troublesome and a more economical source of electricity than any galvanic battery. At the present time both are, in different places, in use. The current of the electro-magnetic machine is instantly produced upon giving a rotary movement to the mechanism, regular while the movement is kept up, and at once discontinued, without waste, when it ceases. Its use thus involves the addition of some motive power; so that where a steam engine is required for other purposes, this mode of producing the current is readily and inexpensively resorted to. Where such an engine is not present, Mr. Whilldin suggests the economy and advantage of Ericsson's hot-air engine.

Mr. Whilldin calls attention to the great cost of the Fresnel lenses now generally employed for projecting the lights, of whatever kind; those of the first order, as at Cape May, Hatteras, &c., 6 ft. diameter by 9 ft. high, costing from $5,000 to $11,000. By employment of the electric light he judges that for these an apparatus not costing more than $400 to $500 can be substituted. Faraday, indeed, states that all the light from an electric lamp could be utilized within a space not exceeding the size of an ordinary hat, a result that, if practicable, would reduce the cost yet more. The difference and saving arise mainly from the diminution allowed in the size of the very costly lens arrangements, as the electric light is produced almost at a point; while to augment the intensity and penetrating power of the common oil lights, the number of the burners and the space occupied by the flame must be very greatly increased. With the electric light, increase of brilliancy involves increase of battery power, and so of expense in this way, but with no enlargement or inconvenience in respect to the lenses.

The electric light hitherto most commonly employed for lighthouses, has been that of the carbon points. In this system the difficulties practically encountered have been chiefly those of obtaining the carbons sufficiently free from impurities and variations of compactness to preserve a uniform current and brightness, and so to maintain the proximity of the points by clockwork or other automatic mechanism during their slow but continued waste, as to prevent interruptions of the current from this source, either through too great distance or absolute continuity of the carbon electrodes. Prof. Holmes' magneto-electric light, however, with carbon points, appears from evidence in a late parliamentary report to have been successfully used in the South Foreland lighthouse, England, during a period of 6 consecutive months. In France, also, magneto-electric lights are in successful use; and though there the system is peculiar in the respect of continually reversing the current, no important difference in the two lights has been detected.

By means of dark glass, Prof. Faraday compared the electric light with that of the sun: the latter was not at the time at its brightest, but the intensities of the two lights were about equal. He says that the eyes of the keepers of the South Foreland light are not affected, though protected by blue glasses of very pale color; but that they judge better of the light by observing the place and intensity of the rays within the lantern, than by looking at the light itself. In some experiments on lights in France, the intensities of an argand burner and of the electric light were found with approximate correctness to be as 1 and 94; and that of the "first-order flash" of the former being 80 to 90, that of the "cast-glass flash" of the latter was placed at 55,000, and of the "first-order flash" at 220,000. The electric light is particularly valuable for its power to penetrate a thick,

hazy atmosphere; and sailors on board steamers have declared that in such weather Prof. Holmes' light is seen 7 miles farther than any of the ordinary sorts. A practical difficulty at the same time growing out of the great intensity of the light, is said to be that navigators cannot readily judge of the distance of the shore or point from which the light proceeds.

Prof. Potter, of London, is led by extensive photometric experiments to question the superiority of the dioptric system over reflectors; in other words, to doubt the advantages claimed for the Fresnel lenses. He finds that in passing through 2 inches of clear flint glass with highly polished surfaces, about $\frac{1}{4}$ of the light is still lost by reflection and absorption; while ordinary good looking-glass reflects from $\frac{6}{10}$ to $\frac{2}{3}$ of the incident light, and highly polished speculum metal still more. Faraday considers that the dioptric apparatus absorbs not less than 50 per cent., while pure polished silver reflects .95 of the total incident light. Sir J. F. W. Herschel has recently proposed an improved reflector, which is expected to prove a great economizer of light. In this, he would render available Liebig's recent discovery of the means of precipitating pure silver from its solution, contained in a thin shell of glass: the silver, protected from all agencies that would tarnish it, is said to reflect .91 of the light impinging on it. It is proposed to use mirrors of this sort, and in forms intended to prevent the partial dispersion and waste of light which occur with the parabolic reflector; namely, by placing a hollow hemispherical reflector above the light, and a peculiar conoidal (convex) reflector below it, the arrangement being such that all the light reflected above the level of the source is thrown back, and with that falling below the horizon, also, is then thrown off from the lower reflector in horizontal beams. With this arrangement, as with the dioptric, the entire horizon can, if desirable, be illuminated. Cuts of the arrangement for the mercury light and the form of the proposed new reflector accompany the article from which the facts detailed in this section are in good part taken.

Way's Electric Light, with Mercury.—In the autumn of 1861, Prof. Way visited this country and made several exhibitions of his electric light, one of these being (by aid of a Fresnel lens of the 4th order, loaned for the occasion) from Fort Washington, near Washington, D. C., the signals being witnessed by the President and others from the "White House," a distance of 13 miles.

This light is produced by means of a fine thread of mercury kept flowing in the position answering to the focal point of a suitable reflector or Fresnel lens, this mercury being at the same time rendered intensely luminous by the continual passage through it as a conductor of a strong current of electricity. The mercury flows from an upper reservoir, through a tube with a very fine opening, into a lower one. The positive and negative wires communicate with the mercury in the respective reservoirs; and the circuit is complete only so long as, by the opening of a stopcock, the mercury is allowed to flow. The current is usually generated by a battery of about 45 Bunsen's elements.

In the production of the recent and somewhat famed *magnesium* light, a continual consumption of the fine thread of the metal goes on; in other words, it is rapidly burned, as a taper; and the cost of the metal is one of the objections to the method. In Way's light, however, the mercury is not consumed, but can be used repeatedly, and without apparent deterioration or loss. True, the electricity dashes the metal to some extent against the glass tube which includes the filament of mercury, thus in time coating this tube with patches of the metal that interfere with the transmission of the light; this effect, however, is but slowly produced, and the tubes are readily changed and cleansed.

Two other, and, it would appear, yet more objectionable features of the mercury light, require mention. In the first place, this metal, like most or all others (*see* SPECTRUM OBSERVATIONS), does not when rendered incandescent shine, as do the ignited carbon points, with light of all the colors found in the sunbeam. In fact, it gives out rays of a limited and very small number only of the sorts going to make up the entire spectrum; since, on prismatic analysis, it is said to yield six narrow and definite bands of color only: viz., a brick red, a yellowish orange, two emerald greens near together, a rich blue, and a violet; it is in addition, however, very rich in actinic rays, or those effective in producing the photographic impression. Employed to illuminate dwellings, halls, or natural scenery by night, this light would accordingly show as black or gray all objects having colors other than those of the rays composing it. In the second place, though the mercury used in producing the light is not oxidized, yet the intense heat arising in the filament which is rendered luminous also serves to volatilize the mercury at certain points, so that minute breaks in the thread of the metal occur, and the light is hence a flickering, and not a steady one—a difficulty for which perhaps no remedy can be found.

Improvement in Holmes' Magneto-Electric Light.—Prof. F. H. Holmes has a letter in the "Athenæum" of Jan. 3, 1863, in which he states that such improvements have lately been made in the lamp employed in his system, that the movement of the carbon points is no longer effected through a delicate and complicated clockwork, but by means of a single wheel and pinion. The lamps in use at Dungeness and at Northfleet, the former 7 months, the latter still longer, have not in all that time been opened, even to be oiled. In the new arrangement, if the light be arbitrarily extinguished, it immediately relights itself, and it is no longer liable to spontaneous extinction. The only

remaining source of interruption is the presence of silica or metallic residua as impurities in the carbons. Thus, when these have wasted to a point at which iron or antimony occurs, there is a slight change of color and momentary flicker, but which are of no practical consequence. In the new arrangement, the attendant of the steam engine can learn in a few hours all that requires to be looked after. The electric light does not, like the oil lights, necessitate an interruption for trimming, a process that with the latter must be performed at least as often as once during each night. The actual expense of the former still remains somewhat the greater; but if its increased intensity and penetrative power be taken into the account, it is really the cheaper; and the qualities just named can be greatly augmented at a slightly increased ratio of expense.

Serrin's Electric Light Regulator.—Those specially interested in the subject of electric lights may be referred to an account of the principle of operation of the regulator for such lights devised by M. Serrin, originally appearing in the *Comptes Rendus*, and quoted in the "Journal of the Franklin Institute," Dec. 1862. Briefly, the method is that of holding the carbon points very near to each other by means of springs, but preventing the bringing of the points into positive contact so as possibly to interrupt the light, by so disposing in the apparatus or regulator containing the points an electro-magnet, the armature of which falls as often as the circuit is in such manner completed, that the weight of this armature just overbalances the tension of the lower springs sufficiently to depress the lower carbon to a very slight extent.

Baker's Apparatus for Electric Lights.—Mr. A. L. Fleury exhibited at a meeting of the Franklin Institute, April 17, 1862, a magneto-electric machine, and also a mechanism for electric lights, the inventions of Mr. H. N. Baker, and constructed by Messrs. Collier and Co., of Binghampton, N. Y. The mechanism for controlling the relative positions of the carbon points is extremely simple. The carbons are in form of long cones or pencils, and placed vertically, one over the other. A hole in an upper metallic strap or bridge, is of such size that the carbon pencil sinks only to a certain depth in it; while a hole in a lower strap is large enough to allow the lower pencil to rise freely through it. While the current is passing, as is usual, particles are carried off from the positive carbon electrode and deposited on the negative one. Thus, the former wastes, and the latter may be injured by becoming blunt or coated with irregular deposit. To prevent the unlike effect on the two pencils, Mr. Baker resorts to the French system of continually reversing the current; and the waste of both pencils thus becomes similar. Now, the lower pencil being placed as a float (though on what liquid the account does not state), it results that, as the gradual waste goes on, the upper pencil is simply fed downward continually by its gravity, while the lower one is just as regularly fed upward by its buoyancy. This is the arrangement when a current of large "quantity" and low intensity is employed, the electrodes being in such case satisfactorily ignited although they continue in actual contact. When, however, a current of high intensity is employed, the pencils are allowed only to approach very close, but without touching; and to accomplish this, the hole in the lower strap is also made so small as to admit a certain length only of the pencil. It would appear that the apparatus operates successfully on the scale on which it has been tried, or as an electric lamp; and it is said to be extremely cheap. ("Jour. Fr. Inst.," May, 1862.)

The Present Desideratum in Electric Lights.—The magneto-electric light, which is probably the most economical in use, has still the disadvantage of the great waste of power necessarily attending the successive transformations of a given amount of force. In producing this light, the heat developed by the combustion of coal is converted, first, into mechanical power; the mechanical power must then be transformed into electricity, and this finally into a heat which shall result in light. Now, M. Joule has shown that in the first of these transformations, even when effected under favorable circumstances, no more than $\frac{1}{10}$ part of the heat is actually realized in mechanical power, $\frac{9}{10}$ of the force developed from the coal being lost. This loss of power, and of useful effect, is strikingly illustrated in the case of the English and the French ice-making machines in the Exhibition of 1862. These machines alike derive their capacity of producing ice from the combustion of coal. But while, in the English machine, the heat of the coal is first converted into the mechanical power of a steam engine, and the product is but two tons of ice per ton of coal consumed, in the French machine this preliminary transformation of the heat through the driving of an engine is dispensed with, and the product is declared to be from 10 to 13 tons of ice for each ton of coal burned in the furnace of the apparatus. These considerations indicate the direction in which the improvement (in economy) of the electric light should be sought. The object aimed at should be that of transforming, as directly as possible, the heat generated by combustion of coal into electric current-force. It is remarked by Dr. Frankland, from whose account of "Illumination" in the "Record of the Great Exhibition, 1862," these thoughts are drawn, that the researches of Dr. Matthiessen on the thermo-electric properties of tellurium promise important results in the direction here indicated.

Electric Light Signals.—The electric light, in whatever mode produced, admits of being instantaneously extinguished and as quickly relighted. Hence, it can be made at will to shine or disappear; and a system of signals with

such a light, by timing successive flashes according to a prearranged order of long or short flashes and repetitions, thus becomes practicable. Such a system of flashing lights with the Fresnel lenses is already to some extent in use; and for field operations, as well as in some cases for lighthouses, it may be rendered of great value. For a system of this sort, the name of *Photo-Telegraphy* has been proposed. Another mode of this telegraphing by light, is that of successive flashes of different colors. Mr. Wm. C. Bridges, of Philadelphia, has invented an apparatus for this form of light signals, consisting of a tube and lens, with adjustable mirrors as may be required, and differently colored and also opaque glass slides, to be moved at will in front of the lens. The electric or other light shining continually into the tube, the slides determine by color and intervals of the flashes the character of the signals made. In any mode, the light signals could be, by a customary system, or by systems, secret to all but initiated parties.

Application of the Electric Light to Mining Purposes.—MM. Dumas and Benoit have devised a compact and highly portable apparatus, its entire bulk not exceeding that of a small carpet bag, including a battery, a Ruhmkorff coil, and a Geissler's tube, within which the light is generated; the arrangement producing sufficient illumination to enable a miner to work by it, as by a Davy's safety-lamp. This light serves equally well in an atmosphere in which all others fail; while, the light being cold, and its production wholly within a confined tube into which gases have no access, it is perfectly safe against explosion under all circumstances. The arrangement will give light for 12 consecutive hours with no attention save that the workman must occasionally agitate the carbons by means of a rod; and it is instantaneously lighted or extinguished at will, while no injurious emanation arises from it. From results obtained with the use of Becquerel's fluorescence-tubes, it is supposed that the luminous effects are susceptible of further great improvement, both in respect to duration and intensity.

This light, or some other similar in principle, is certain to possess value for other purposes besides mining. Thus, in coal oil factories the best safety lamps are said to fail, since the subtile benzole vapors may take fire through the finest wire gauze. Here, the electric light, within a closed tube, would be entirely safe; and it would also prove peculiarly appropriate where danger from the dashing of water may exist, as in the interior of gunboats and steam rams, and even in diving bells.

Engraving by Electricity.—The cylinders of copper brass employed in the printing of woven fabrics and paper-hangings are by a recent invention engraved by means of electricity—the voltaic current being so applied as to communicate the necessary movements to certain portions of the apparatus. The cylinders to be engraved are first coated on their outer surface with a thin film of varnish, of such nature as to be capable of resisting the continuous action of the strongest acids. The requisite number of copies of the original design are then traced or scratched simultaneously by a series of diamond points, which are arranged on the machine parallel with the axes of several cylinders operated on at the same time. Each diamond point is in correspondence with a small temporary magnet; and the original design having been previously etched on a metal cylinder fitted in with a non-conducting substance, and this cylinder being made to revolve in contact with a tracing point, it results that the current passes, or is interrupted, through the entire series of coils of the electro-magnets, securing the contact of each diamond point with its corresponding cylinder, or the reverse, according as the point rubbing on the first cylinder touches a conducting or a non-conducting portion of its surface: in this way, while the cylinders all revolve at the same rate, the diamond points are made to cut upon all but the first, or are raised from them, and at the same moments. The metallic surface is hence exposed in like parts on all the cylinders operated on; and a bath of nitric or other acid being afterward used to etch or deepen the engraved portion, the operation is completed. By interposing suitable connections, the engravings can be enlarged or diminished to any necessary extent from the same original.

Electric Despatch.—The experiment in which a bobbin or coil of wire conducting a current of electricity draws within itself an iron rod of the length of such bobbin, or even sustains the rod, when the arrangement is vertical and the power of the current sufficient, against the force of gravity, is now familiarly known. Availing himself of the converse of this principle, Mr. Henry Cook, of Manchester, England, has constructed and patented an electric propeller for transporting despatches, letters, and other small articles. A line of miniature railway is laid within a tube or pipe extending between the points of communication, and formed of a series of hollow electric coils or electro-magnets. The carriage on which the despatches or other small parcels are transmitted, has mounted upon it a small battery; and the ends of the coils are so adjusted that, by means of the wheels and rails, the battery connection is made successively with each of the coils, just as the wagon is about to enter it. The wagon itself being of sheet iron, it will be attracted toward the middle part of each coil, as the latter is thus made for the time to transmit the current generated by the battery upon it; and the momentum thus acquired by the wagon in entering each of the coils is expected to carry it far enough to make the connection with the next coil, when the impulse and effect are renewed. The suggestion of this device appears to have been made by M. Bonelli.

Electric Sounding Apparatus.—This appa-

ratus, the invention of M. Schneider, was successfully employed in soundings on Lake Ladoga in June, 1862. The sounding line was of gutta percha, 2 lines in thickness, 1,800 feet in length, and covered. It contained two wires, one inside the gutta percha, the other within the outer covering. Bruck's sounding apparatus was used, the weight of the leaden plummet being 12 lbs., but with the modification that no part was detached by contact with the bottom. The wires of the line communicated with a battery on board, of 6 elements; and at the moment of the plummet's touching bottom, the current through the wires being established by contact with the earth, an alarm clock attached to the apparatus was sounded. This result was tested by using the electric sounding apparatus at the same time with Bruck's, which operates upon a more usual system; and it was found that even if the bottom were soft and muddy the alarm was still given at the moment of contact. The steamer on board which the trial was made being of iron, M. Schneider experimented to some extent in the way of making the vessel serve as the upper metallic plate, the sounding apparatus serving as the lower, and so employing in the soundings only one of the wires: the result of these experiments also was entirely satisfactory. The apparatus is stated to be cheap and easily managed, and likely to be serviceable for deep-sea soundings.

ELLET, Charles, jr., an American engineer, born at Penn's Manor, Buck's Co., Pa., Jan. 1st, 1810, died at Cairo, Ill., June 21, 1862. He was a thorough master of his profession, and his name is identified with several of the most important works in the country. He designed and built the wire suspension bridge across the Schuylkill at Fairmount, Philadelphia, the first in the United States, and subsequently the suspension bridge across the Niagara river below the falls, and one at Wheeling, Va. He constructed the temporary track of the Virginia central railroad across the Blue Ridge, and contributed largely to the improvement of the navigation of the Kanawha river. He aided also in laying out the Baltimore and Ohio railroad, and there are indeed hardly any of the Western or Middle States which do not furnish some lasting evidence of his professional skill. In 1846-7, he was president of the Schuylkill Navigation Company. At the outbreak of the war, in 1861, he was residing at Washington, where he became deeply interested in the conduct of military matters, and devoted much attention to the use of rams in naval warfare. He projected a plan for cutting off the Confederate army at Manassas, which being rejected by Gen. McClellan, he wrote two pamphlets severely censuring his mode of conducting the campaign. The navy department having rejected his plan for the construction of rams for service on the Mississippi, he applied to the secretary of war, and was successful. He was commissioned as colonel of engineers, and converted several powerful steamers into rams which did effective service in the naval battle off Memphis, in which engagemcnt he received the wound whereby he lost his life. He was the author of an "Essay on the Laws of Trade, in reference to the Works of Internal Improvement in the United States;" a paper "On the Physical Geography of the Mississippi Valley, with suggestions as to the Improvement of the Navigation of the Ohio and other Rivers," published in "Transactions of the Smithsonian Institution;" a pamphlet on "Coast and Harbor Defences, or the Substitution of Steam Battering Rams for Ships of War," and several other important and valuable scientific papers.

EXHIBITION, British Industrial. The first International Exhibition was opened by her Majesty, Thursday, May 1, 1851. The exhibition remained open 141 days; its foreign exhibitors were 6,556, and the exhibitors of the United Kingdom and dependencies, 7,382 (exclusive of India), forming a grand total of 13,938. The whole daily admissions by payment amounted to £5,265,429; by season tickets, £773,766; together, £6,039,195. Average visitors on each day, 42,831; greatest number present, on October 7, 109,915; greatest number at one time in the building, October 7, 93,-224. Commissioners' receipts from all sources, to Feb. 29, 1852, including subscriptions, £506,-100 6*s.* 11*d.* Expenditure, £292,794 11*s.* 3*d.* Balance, £213,305 15*s.* 8*d.* To enable the royal commissioners to apply this surplus and keep faith with the subscribers to the original fund, they were empowered by a supplemental charter to purchase and hold lands in any part of her Majesty's dominions and dispose of them as they thought fit. They first proposed to provide a house for the Trade Museum, a collection of articles valued at £9,000, presented to them by exhibitors in 1851. For this purpose, they purchased the "Gore House estate," at one time owned by Mr. Wilberforce, and subsequently by the Countess of Blessington. The whole estate comprised about 21 acres, added to which were Gray's nursery grounds, Park house, and Grove house, and various market gardens, the grounds of Cromwell House, and other lands belonging to the Earl of Harrington and the Baron de Villars. Additional funds for these purchases were provided by the Government, who entered into a sort of partnership with the commissioners, and purchased, in all, 86 acres, for £280,000, at an average of £3,250 an acre. The object of these purchases of land was to secure a large space to which some of the national exhibitions might be removed, and on which a great art-educational institution might be erected. Early in 1858, the commissioners dissolved partnership with the state; the sums advanced by Government were repaid by the commissioners, subject to a deduction for the ground and buildings of the South Kensington Museum, now become a government institution, as a branch of the department of science and art. The commissioners now be-

came trustees for buying and selling the land, about 12 acres of which they have disposed of very profitably in building leases. Nearly doubling their original capital by the above speculation, they next let the upper part of the great centre square, about 22 acres, to the Horticultural Society. The commissioners have expended about £50,000 in building arcades in the new gardens; and the society have expended an equal amount in terraces, fountains, conservatories, and in laying out the grounds.

The Society of Arts, impressed with the importance of international exhibitions, proposed to repeat the great exhibition of 1851, but the commissioners had not sufficient funds for the undertaking, nor did they think that the scheme would be profitable. But a new commission was organized, and a plan was submitted by Capt. Fowke, R. E., and adopted.

The commissioners informed the Society of Arts that they would grant, rent free, until the 31st of December, 1862, for the purposes of the exhibition of 1862, the use of the whole of the land on the main square of their estate lying on the south side of the Horticultural Society's gardens, estimated at 16 acres, on the understanding that all the buildings to be erected for the exhibition, whether permanent or temporary in their character, should be subject to their approval, and that all the temporary buildings should be removed within six months after the close of the exhibition, if required; the trustees of the exhibition being at liberty, on the other hand, to remove the buildings termed permanent if the exhibition should be attended with pecuniary loss. They further expressed their readiness to grant to the society a lease for 99 years at a moderate ground rent of those permanent buildings if retained, on condition of not less than the sum of £50,000 being expended on them by the trustees, and of their not covering more than one acre of ground; and also on condition of their being used solely for holding exhibitions and for purposes connected with the promotion of arts and manufactures. They said "we would undertake, in the event of the payment to us of the sum of £10,000 out of the profits (if any) of the exhibition of 1862, to reserve for the purposes of another international exhibition in 1872, to be conducted by such body as might be approved by us, the remainder of the land now proposed to be lent by us for the exhibition of 1862 that was not covered by the permanent buildings already referred to, such reservation not interfering in any way with the free use by us of that land in the intervening period." The Society of Arts accepted these terms.

Of the tenders sent in, that furnished by Mr. Kelk and the Brothers Lucas, being the lowest, was accepted. For the rent of the building a sum of £200,000 was absolutely guaranteed; if the receipts exceeded £400,000, the contractors were to be paid £100,000 more for rent; and they were bound, if required, to sell the whole for a further sum of £130,000, thus making the whole cost £430,000. The commissioners for 1851 are the legal proprietors of the site, but have agreed to reserve about 16 acres of it for the 1872 exhibition, receiving £10,000 as a sort of ground rent. It is already agreed that the Society of Arts, Adelphi, will be granted the lease of the central portion of the picture gallery, one acre in extent, along the Cromwell road, for 99 years, on payment of a ground rent, and that it be given up unreservedly for the use of the 1872 exhibition.

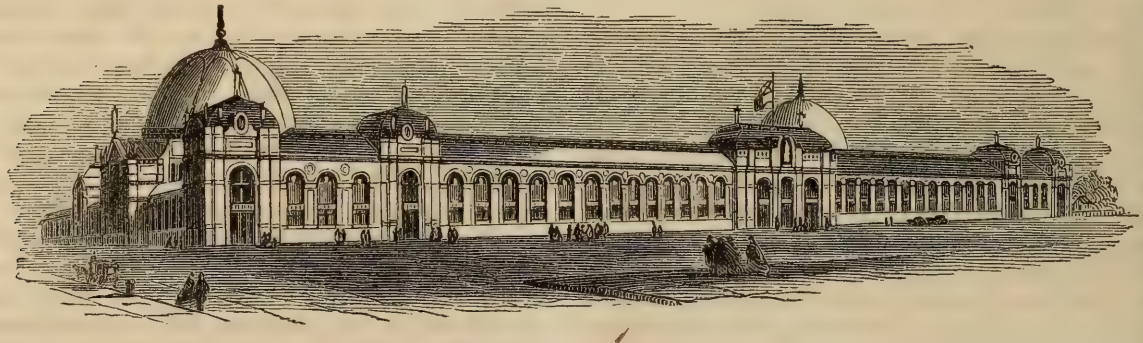
Laying out of the Works.—The laying out of the works was commenced on 9th March, 1861, by three independent agencies—Mr. Marshall on the part of the contractors, while Mr. Wakeford and Sergeant Harkin, R. E., acted for the commissioners. About two weeks were occupied in making the measurements, so that the building may be said to have been actually commenced in the beginning of April, 1861, and to have been practically finished about the beginning of April, 1862. There were 7,000,000 bricks used; of cast iron there are upward of 4,000 tons in the building; and to show what care had been taken with the castings, only four girders proved defective, by breaking in the proof. There are upward of 820 columns, of 25 feet, equal in length to 4 miles; and if the 1,266 girders used were placed end to end, they would reach a distance of 6 miles. The total quantity of wrought iron used was 12,000 tons. Upward of 1,000,000 superficial feet of floor was laid. To cover the roofs 486,386 square feet of felt were used, equal to 11 acres; and to complete the whole of the glazing required 353,000 superficial feet of glass, which weighed 247 tons, and would cover 12¾ acres.

Progress of the Building.—On the completion of the building the floors and staircases were submitted to the following tests: A large body of men, about 400 in number, were closely packed upon a space 25 feet by 25 feet on one lay of flooring; they were then moved in step, and afterward made to run over the different galleries, and down each staircase; at the same time the deflections of the girders carrying these floors were carefully noted at several places, and in each case the deflections were very nearly the same. The cast iron girders, with 25 feet bearings, deflected only one eighth of an inch at the centre, and the timber-trussed beams of the same bearing placed between these girders deflected half an inch at the centre. In every instance the girders and trusses recovered their original position immediately on the removal of the load.

The Exhibition Building.—The internal space is entirely covered in by roofs of various heights, and is divided into nave, transepts, aisles, and open courts; the latter are roofed with glass, as in 1851, but the other parts have windows. The South Front, in Cromwell road, 1,150 feet long and 55 feet high in the brickwork, has two projecting towers at each end, rising 16 feet above the general outline, and a larger tower

in the centre, in which latter is the main entrance to the Picture Galleries; being about as long as the gallery of the Louvre, in Paris. The exterior is chiefly brickwork, relieved with semicircular-headed panels, separated by pilasters, and between the arches are circular niches; in the lower portion of each panel being a window, to admit light and air to the ground floor, and to ventilate the Picture Gallery above. The panels are plastered in cement, and it is proposed to ornament them with English mosaics, dependent on the funds. The East and West Fronts, though differing from the South, are not less imposing. They are, in all respects, similar to each other in their general aspect. Here the huge domes, rising to a height of 260 feet, show to most advantage, and the transept roof, with its lofty clerestory windows, is in full view. To the observer below, the form of each dome appears nearly that of a semicircle; this effect is obtained by making its height 11 feet more than its semi-diameter, which fully allows for the loss by prospective diminution.

From the crown of each dome rises the pinnacle to the height of 55 feet. Each dome is in the middle of each façade; its centre is the point formed by the intersection of the centre lines of the nave and transept, and the front of the building is advanced from it 108 feet. Under each noble arched recess is the main entrance to the Industrial Courts, the effect of which forms one of the most pleasing exterior parts of the building.



Each of the porches contains a deep semicircular arched recess, 68 feet span and 80 feet high, in the tympan of which is the great rose-window, visible from end to end within. The window is one closing the vista as the spectator looks from a standing point beneath the other.

At the extreme north and south are two auxiliary picture galleries, each 247 feet long. The main and auxiliary picture galleries afford available wall space covered by pictures, equal to 7,600 square yards, or about one and a half acres.

The two duodecagonal domes are of glass, with an outer and inner gallery, 160 feet in diameter, and 250 feet high.* The dome of the Pantheon is 142 feet in diameter and 70 feet high; the dome in the Baths of Caracalla was 111 feet; Brunelleschi's, at Florence, is 139 feet in diameter and 133 feet high; the dome of St. Peter's is 158 feet in diameter, and 263 feet high from the external plinth; the dome of St. Paul's Cathedral is 112 feet in diameter, and 215 feet high.

The *Annexes* are engineering works of great merit.

The western Annexe is 975 feet long, and 200 feet and 150 feet wide. The east side is enclosed by the back wall of the west arcade of the Gardens, and the west side, which adjoins the road, has a plain lath-and-plaster front. It is covered by a ridge-and-valley roof, supported on light wooden ribs, similar in construction to those of the nave; that is, they are formed of planks nailed together. The circular portion springs at ten feet above the ground line. Its elevation is nearly half of a regular polygon, described about a semicircle whose diameter is 50 feet; it consists of three planks nailed together. The principal rafters, which are composed of two $\frac{3}{4}$ inch planks, rise from a point 28 feet above the ground, and meet above the curved ribs, so as to make the ridge five feet above the crown of the arch. The upright, which has its foot mortised into a sleeper resting on piles, is formed of $1\frac{1}{4}$ inch centre plank, with a $\frac{3}{4}$ inch plank on each side, having a strengthening piece four inches by three inches spiked to it on either side to prevent its bending. The principal rafter and upright are connected with the curved rib by radial pieces of $1\frac{1}{4}$ inch plank, which are brought rather below the inner line of the curve, and finished off, for the sake of ornament, by a spear head. The roof frames are therefore merely planks nailed together, and so disposed that the weight comes on their edge. One half of the roof is covered with boards and felt; and the other half has a glazed skylight, with louvres for ventilation throughout the whole length.

The western Annexe, is devoted to the exhibition of machinery in motion, for which purpose steam pipes, water pipes, and shafting are led through it. Its superficial extent is about four and a half acres. The entrance is through the north end of the west transept, from which

* The dome of the old Halle au Blé, at Paris, of timber, was 200 feet diameter; and after its destruction by fire was replaced by the wrought iron and zinc dome, still in existence, of the same dimensions.

point the ribs of the roof are seen from end to end in fine perspective.

The eastern Annexe is exactly similar to the western in its construction; but it is 200 feet shorter..

The Interior. Entering east or west, the ascent is by two steps until the level of the daïs under each dome is reached. From either point the interior of the whole building may be seen in one view, at 6 feet above the rest of the floor. Thence three flights of steps, 80 feet wide, lead into the nave and transept on either side.

The supports on either side of the nave (800 feet long and 100 feet high) consist of square and round cast iron columns, coupled together; the former carry the gallery floor, and the latter, advancing into the nave, receive the principals of the roof. From the capitals of the columns spring the roof frames, which consist of three thicknesses of plank, from 18 inches to 2 feet 6 inches deep, firmly nailed and bolted together, and so arranged that their ends break joint. The centre plank is 4 inches thick, and each of the outer ones is 3 inches; the lower edges are tangents to an imaginary semicircle, round which they form half of a nearly regular polygon. From the springing rise the posts of the clerestory windows, 25 feet high. The principal rafters of the roof frames rise from the top of these posts, and are carried up, after passing a tangent, to the back of the arch, to meet at the ridge in a point 25 feet above the top of the clerestory. The angles over the haunches and crown of the arch are firmly braced together, so as to reduce the thrust as much as possible.

The rib is repeated thirty times in the length of the nave, and from its graceful curve and lightness it produces a fine effect. Between every roof principal is a clerestory light 25 feet high, consisting of three arches springing from intermediate mullions. The roof is covered with felt and zinc on 1½-inch planks. The transepts run from each end of the nave, at right angles to it, and extend north and south 650 feet; they are the same width and height as the nave, and the ribs of its roof are of the same construction.

Construction.—The principals were placed in the nave roof. This was done by a huge moveable scaffold. One half of a rib was first hoisted to its place; when in position, the other half was raised; and as soon as both were fixed true, they were joined together by completing the arch and bracing over its crown.

The hoisting was all done by a hoist, connected with a portable steam engine.

The galleries form an abutment to the nave and transept roof. As the roof thrusting outward tends to throw the columns out of the perpendicular, this is counteracted by strong iron braces anchored to the foundation of the inner column, and carried up to the top of the opposite outer column. Another bracing, anchored to the footing of the outer column, is carried up to the top of the inner column, to secure it from being acted on by the force of the wind. This vertical cross-bracing is repeated at every hundred feet, or every fourth bay, and by introducing horizontal diagonal bracing under the roof flats, they are turned as it were into a deep horizontal girder, supported at two ends by the columns vertically braced as just described. This horizontal girder therefore takes the thrust of the three intervening ribs.

The whole structure may be separated into three classes of work—that which is meant to be permanent, viz., the front façade and the narrow strips of brick buildings at both wings running north and south; that which is *quasi* permanent, viz., the naves, transepts, domes, and covered courts and galleries; and that which is absolutely ephemeral, in the Annexes, and the refreshment rooms over the arcades at the south end of the Horticultural Garden. Standing at the centre of the front in Cromwell road, we have the front building of 1150 feet 9 inches extreme length stretching right and left, with a general width of 50 feet, and two stories in height. At the centre are the grand entrance hall, vestibule, and within these, to the right and left, the grand staircases leading to the higher floor; returning southward we enter a hall of 150 feet in length, for sculpture chiefly, and as a vestibule to the great ranges of picture galleries to the east and west, and extending on into the wing tower buildings to a total length of about 500 feet each way.

The appropriation of the several portions of the building is briefly thus:—the nave, transepts, galleries, and courts for the display of general industrial productions; the brick building on the north, inclosing the narrower courts, for refreshments; the grand picture gallery extends along the south, and has auxiliary wings in front of the east and west transepts extending their whole length; these picture galleries requiring to be lighted from the top, are placed above the entrances, which on the south side stretch to either hand for the display of carriages, &c.

Decoration of the Building. This cannot be better described than by Mr. Crace, who, in April, 1862, read before the Society of Arts a paper in which he informs us that it was the 23d January last when he received his authority to proceed with the decoration, and it was to be all completed by March; that is to say—some twenty acres decoratively painted in about eight weeks.

"After careful consideration I decided that the general tone of the roof must be light, and that the best color would be a warm pale gray; that the arched principals must be made to stand out clear from the roof; that they must look well in a perspective of 800 feet; and that they must not look heavy or confused as they approached each other in the distance. The form of these is polygonal, and in three thick-

nesses, the centres of the outer planks covering the joints of the inner ones.

"I therefore decided on following the form of the construction, and adopted panellings of blue and red alternately, relieved by colored lines, intersected at the joints by circles of black on which are gold stars, and from these spring ornaments in vellum color with green in the filling, to make the construction evident, and I therefore colored the two outer edges in chequers of black and vellum color, and the centre edge full red. As to the bracings above the polygonal arches I colored them the warm-wood color, with red or blue colored lines on the face, and the under thicknesses red.

"I decided on warm gray for the roof of the nave to give space and lightness; and on its surface I introduced an upright scroll ornament in red, with gold, star-like rosettes, sparingly introduced. My object in this ornament was to raise the apparent pitch of the roof, and to relieve and warm the effect of the gray. The horizontal purlins, on the contrary, I kept purposely light, so as not to depress the rise of the roof, or interfere with or confuse the effect of the principals. The ridge piece of the roof, in itself comparatively small, I marked as strongly as possible, as the apex, in black and vellum white, *en chevronné;* on each side I colored a margin of maroon red, and a little below that a bordering of very warm green, shaped to accord with the top scrolls of the red vertical ornament, the green being relieved with rosettes of gold color. At the base of the slope of roof this green is again introduced in much the same way, and the band of maroon also. Below this are the clerestory windows.

"The next important features in the nave are the iron columns, supporting the principals as well as the galleries, painted pale bronze color, relieved with gold color vertical lines. The capitals are gilt; the grounds of the ornaments being picked in rich red or blue alternately; the centre blocks of the columns are also colored red, with bands of blue, or, *vice versa*, the mouldings being gilt, and the same style of color is continued to the bases. The top plate above the columns is painted bronze color, relieved with light gold color ornament on the upper part, and a Vitruvian scroll in gold color, with a maroon red base on the lower part.

"The gallery railings are light bronze color, the rose, shamrock, and thistle ornaments being partly gilt, and the whole backed with deep red cloth. The plate under the gallery is painted oak color, relieved with deep brown interlaced ornaments.

"I have kept the part below the line of arches purposely quiet in color, in order that the brilliancy and richness of the various articles exhibited may not be interfered with. The roof, on the contrary, is rather vivid in color, to carry up, as it were, in some degree, the gayety of the scene below; and this will be still further sustained by a series of banners of the various countries whose products are assembled in this International Exhibition.

"In the roof of the Upper church of Assisi, in the chapel of St. Corporale, of Orvieto, in the choir of Santa Croce at Florence, and in the Palazzo Spinola, examples are to be found of counterchanging of coloring, and in the roof of the cathedral of Lucca, of the chevroneze of black and gold.

"Those decorations, so beautiful, so interesting, rich, glowing in color, full of fancy and taste in the ornament, the masses well arranged, show the most perfect harmony everywhere, and are dignified by often acting as the framework of the highest gems of art.

"My principal difficulty in carrying out the decoration of the domes was, that I could see nothing of them. The scaffold formed a series of solid stages or floors, through which it was impossible to view anything; and I confess I never could mount the ladders above one hundred feet; but even there the scaffolding was so thick that I could see nothing of the top, and very little of the cornice, facia, and walls.

"At last, Mr. Ashton, the engineer, contrived to get for me an open square box, into which I got, and I was drawn up by means of his beautiful little engine very pleasantly to the top; yet when I got there the ceiling almost touched my head, so that I had no opportunity of judging beforehand of the effect of distance and light upon my coloring, and I knew well that they were very formidable elements for consideration. The knowledge that the scaffold would be taken down before I could possibly judge of the effect, and that when once down, I could never hope to touch my decoration again, caused me many an anxious thought.

"In coloring the top of the domes, the main ribs are painted bright red, with spaced black and white at the edges, and a fine gold line up the centre spreads at intervals of about four feet into lozenges and circles containing gilt stars on a blue ground; where the main rings reach the ring plate I carry round the red, marking the points of intersection with black and white; thence the eight main ribs are painted deep blue, relieved with red, gold, and black, until they meet in the centre pipe or pendant, which is gilt bordered with red. The shaped covering, or umbrella, as I am accustomed to call it, is painted light blue; gold color and gilt rays diverging from the centre and streaming a considerable way down the blue, the shaped outline of which is bordered with red and gold ornament.

"In decorating the walls of the domes, the solid parts between the arches, and the springing of the roof, it was necessary to consider the probable effect of the great mass of light above. On the one hand it was desirable to sustain it with sufficient strength of color, on the other it would be dangerous to make it too heavy.

"The moulding of the cornice and facia are

painted vellum color, very slightly relieved by gilding; the trusses are gold color; the facia between them is red, with a vellum patera; the soffit is green. The broad facia below is painted blue, and on it is inscribed in gold letters, three feet high, the exordium of David in the 29th chapter of the first Book of Chronicles, 'Thine, O Lord, is the greatness, and the glory, and the victory, and the majesty: for all that is in the heaven and the earth is thine;' and, 'O Lord, both riches and honor come of thee, and thou reignest over all; and in thine hand is power and might, and in thine hand it is to make great.'

"The large iron columns, which rise nearly one hundred feet high, are painted dark maroon color, their capitals being richly gilt. The panelling between the arches and the frieze is painted in shades of red, relieved by colored lines; in the four broad compartments are inscribed, on dark green panels, Europe, Asia, Africa, and America; below, on a circle, are the initials of those so beloved by us all, Victoria and Albert. On the eight spandrils to the four main arches, are medallions, eight feet diameter, by Mr. Burchett, of the Kensington school of art, emblematic of manufactures, commerce, and the various arts and sciences which lend their aid. Around the red panelling is a broad margin of sage green, on which are stencilled pateras. The moulding of the arches is painted vellum color, the top fillet being gilt; and the face of them ornamented with Vitruvian scroll in dark color.

"The walls at the gable end of the nave and transept are treated so as to recall the arched form of the principals. Under these a semicircular panel is formed of warm brown color, bordered by a broad blue margin, on which are gold stars. Inside the panels are written the following sentences:

"On the east end of nave—

"'The wise and their works are in the hands of God.'
—Ecclesiastes, ix, 1.

"On the east end of transept—

"'Alternately the Nations learn and teach.'—*Cowper.*

"On the southeast end of transept—

"'Each climate needs what other climes produce.'—*Cowper.*

"On the west end of the building the sentences are in Latin, being the part occupied by foreign exhibitors. At the end of nave is written:

"'Gloria in excelsis Deo, et in terra pax.'

"At the northwest end of the transept—

"'Domini est terra, et plenitudo ejus.'

"At the southwest end of transept—

"'Deus in terram respexit, et implevit illam bonis suis.'

"Inside these semicircular panels are a series of radiating panels, painted maroon, and bearing the names of the various sciences and arts which have affinity with the objects exhibited."

The Exhibition Opened. By a wonderful effort of labor, the executive staff of the International Exhibition were enabled to keep their promise to the public, and open the grand display, with all befitting ceremony, and even with more than hoped-for success, on Monday, May 1, 1862. The day, indeed, had one dark shadow. Of the hundreds of thousands who lined the streets and thronged the building, few forgot the Prince by whom the great work of the day was encouraged and helped on. The absence of the Queen, and the cause of that absence, marred the state pageant, and produced a partial gloom which an impressive and imposing ceremonial could not wholly dispel.

The Duke of Cambridge represented her Majesty and received the address of the Commissioners, to which he made a reply.

Earl Granville then, on the part of the Commissioners of the Exhibition, presented to his Royal Highness the "key," technically so called, of the Exhibition. This is, in fact, a master key (manufactured by Messrs. Chubb), and which opens the entire number of the different suites of locks on all the doors of the buildings. It is beautifully wrought entirely by hand out of a solid piece of steel, and was inclosed in a crimson velvet bag.

This concluded that part of the ceremonial which took place under the western dome, and before the throne; and the procession, being re-formed, proceeded in the same order along the north side of the nave to a large platform under the eastern dome, immediately in front of the gigantic orchestra, consisting of two thousand voices and four hundred instrumentalists. It commenced with a grand overture by Meyerbeer, comprising a triumphal march, a sacred march, and a quick march, and an embodiment of "Rule Britannia;" then Dr. Sterndale Bennett's chorale, which had been composed for the words of the ode written by the Poet Laureate Tennyson, as follows:

Uplift a thousand voices full and sweet,
In this wide hall with Earth's invention stored,
And praise th' invisible universal Lord,
Who lets once more in peace the nations meet,
Where science, art, and labor have outpour'd
Their myriad horns of plenty at our feet.

O silent father of our Kings to be,
Mourn'd in this golden hour of jubilee,
For this, for all, we weep our thanks to thee!

The world-compelling plan was thine,
And lo! the long laborious miles
Of Palace; lo! the giant aisles,
Rich in model and design;
Harvest-tool and husbandry,
Loom and wheel and engin'ry,
Secrets of the sullen mine,
Steel and gold, corn and wine,
Fabric rough, or fairy fine,
Sunny tokens of the Line,
Polar marvels, and a feast
Of Wonder, out of West and East,
And shapes and hues of Art divine!
All of beauty, or of use,
That our planet can produce,
Brought from under every star,
Blown from over every main,
And mixed, as life is mixed with pain,
The works of peace with works of war;
War himself must make alliance,
With rough labor and fine science,
Else he would but strike in vain.—
Ah, the goal is far away,
How far is it? who can say,
Let us have our dream to-day.—

Oh ye, the wise who think, the wise who reign,
From growing commerce loose her latest chain,
And let the fair white-winged peacemaker fly
To happy havens under all the sky,
And mix the seasons and the golden hours,
Till each man find his own in all men's good,
And all men work in noble brotherhood,
Breaking their mailed fleets and armed towers,
And ruling by obeying Nature's powers,
And gathering all the fruits of peace and crown'd with all her flowers.

Auber's "Grand March" followed.

After the conclusion of the special music, the bishop of London, with much fervency of manner, read an impressive prayer.

Handel's mighty choral hymns—the "Hallelujah" and "Amen," from the *Messiah*—followed.

After the "Amen" the National Anthem was again sung, and with this the music to the religious part of the ceremony came to a conclusion.

The Duke of Cambridge then rose, and in a loud voice said: "By command of the Queen, I now declare the Exhibition open."

The trumpets of the Life Guards saluted the announcement with a prolonged *fanfare*, and the crowd echoed it back with a cheer, which was taken up and speedily spread from one end of the building to the other. This ended the official ceremonial.

Objects and Articles Exhibited.—*Mining, Quarrying, and Metallurgy.*—A case devoted to aluminium, showed the progress already made in the application of that valuable metal and of its alloys. The metal is obtained from the double chloride of aluminium and sodium by fusion with sodium. Amongst its advantages, besides non-liability to tarnishing, is the lightness. By its use, a sextant which in brass would weigh 3 lb. may be made to weigh 1 lb. 9 oz. It costs 40s. per lb. troy. The alloy of the metal with copper, called aluminium-bronze, contains five per cent. of aluminium, and costs 4s. 6d. per lb. avoirdupois. This alloy resembles gold in appearance; whilst it is stronger than iron. Keys are made of aluminium alloyed with two per cent. of nickel to increase hardness.

Of copper, in the Exhibition, there were specimens of ores from nearly every part of the world. The Connoree Mining Company, Ireland, exhibited calamine, the ore of zinc, from a new locality. Ores of zinc were also shown in the Belgian, Zollverein, Austrian, Swedish, Spanish, Portuguese, and United States departments. In the Belgian department, Muller and Co. exhibited spelter produced in a blast furnace; a process long attempted in vain.

Cadmium, generally found in zinc ores, was shown in the Polish and Zollverein departments, in foil and cylindrical sticks. Cadmium, combined with sulphur, forms a fine yellow, opaque, durable pigment, much prized by artists. It is much in request for Wood's newly-discovered fusible alloy, which melts at a temperature far below boiling water.

Of tin, the Exhibition presented nothing remarkable or novel.

Lead (galena) was shown in nearly all the departments, the Italian and Portuguese being especially interesting. There was, however, nothing in the Exhibition to indicate that progress has been made toward the solution of the great problem of condensing lead fume. In one year a large smelting establishment in the north of England obtained 800 tons of lead from the dust accumulated in their long flues.

Arsenic was sufficiently represented. Nickel is now much used for electro-plated articles, and the nickel manufacture was first brought to its present perfection in Birmingham. Nickel is now employed in the coinage of Switzerland, Belgium, and the United States. Ores of nickel were exhibited by several manufacturers of German silver.

Cobalt, valuable for its forming blue color, was found in the Zollverein department, and the United States. Oxide of Cobalt is now largely employed by the potter and glass-maker in Birmingham: the fine "flowing blue" on our china was the result of the first application of this oxide.

Antimony was well represented in the Exhibition. Its chief ore is sulphide, which has during many years been regularly and largely imported into this country from Borneo.

The Exhibition contained several interesting and important illustrations of mercury or quicksilver. It chiefly occurs in nature in combination with sulphur, constituting the well-known mineral, native cinnabar. Magnificent specimens of this mineral from the Almaden mines were found in the Spanish department in the nave.

All galena contains silver, though not always in sufficient proportion to allow of its profitable extraction. It is generally admitted that only lead containing more than two ounces of silver to the ton can be subjected to Pattinson's well-known process of desilverization with advantage. By this simple and important invention an enormous amount of silver has been saved to the world.

Rich sulphide of silver has recently been discovered in Cornwall, but hitherto it has not been possible to procure even a specimen, as the adventurers are desirous of attracting the notice of the crown as little as possible; for a mine of which the ore is sulphide of silver would undoubtedly be a mine royal, and belong to the Crown.

Gold was displayed in marvellous profusion in various departments. All native gold contains silver, which varies much in proportion, and tends to render the gold pale in color. All lead contains gold in addition to silver, but in quantity generally so minute as to be valueless. But there it is, and it may invariably be extracted from lead, so as to be distinctly visible.

A series illustrative of the extraction of gold by chlorine water from the residua obtained at the arsenic works at Reichenstein, in Silesia, was exhibited in the Zollverein department.

Clay and terra-cotta manufactures were rep-

resented chiefly by fire bricks and retorts for various purposes.

Building stones were exhibited in great variety.

Slate was shown in plain slabs, roofing forms, and decorated, that is, enamelled. The Llangollen Slab and Slate Company exhibited slabs of great size and good quality, 16 feet and 20 feet in length. The Rhiwbryfdir Slate Company showed that a block (18 inches by 10 inches) which is an inch and a half thick, may be split and dressed into 39 slates; and that out of a block (20 inches by 10 inches) half an inch thick, 8 slates can be sawn, the waste in such case being hardly perceptible. A model of a slate-dressing machine, consisting of knife-edges placed obliquely on a revolving drum, so as to work like the down-cut of a carpenter's saw, was exhibited by one of the Port-Madoc contributors, Mr. J. W. Greaves; and the company there, above named, seem to have a machine that will dress 12,000 to 15,000 slates *per diem*, accurately and completely.

M. Alibert exhibited in the Russian portion of the nave blocks of graphite or plumbago, from an extensive bed recently discovered in Siberia. It takes so high a polish as to be mistaken for steel. In travelling through Eastern Siberia M. Alibert found some traces of this mineral in a remarkably pure state, and knowing its value and importance, he set himself to work to search for the vein, which he felt satisfied must be in the neighborhood. For fifteen years, at considerable expense, he persevered, and was at last rewarded by arriving at a bed of graphite.

The French geological maps of France were numerous and important. Among the more remarkable was an atlas of twelve sheets, forming a map of the ancient principality of Dombes in the department of the Ain, a curious district of about 100,000 hectares, of which area more than one sixth has been converted into fish-ponds, which are in number about 1,600, and are emptied every two years to obtain the fish, and to be planted for cereals, and afterward again filled with water and stocked with young fish. The insufficiency of the population and other causes led to the method of cultivation. The method has, however, been most injurious to health in the district. An instalment was shown of a great work, that of ascertaining the levels of principal spots over the whole of France continental, suggested in 1857, by Mr. Bourdaloue, who had already completed a similar work for the department of the Cher. The object is to render more easy and certain the operations having relations to new routes, watercourses, drainage, and irrigation. Great detail and exactness therefore were required, which would involve much expense. The first part of the undertaking, comprising the fixing the principal points, was commenced at the end of September, 1857, and will be finished before the end of the present year.

Chemical Substances and Pharmaceutical Processes.—The display of chemicals in the Exhibition was the finest yet collected together. Not only were the exhibitors more numerous than in 1851, but there were more first-class names on the list, hardly one manufacturer of eminence being absent. In the leading branches of chemical manufactures the show was wonderfully good. The specimens of alkalies, alum, and the coal tar dyes generally, constituted the great bulk of the Exhibition.

One of the great features in the class was the splendid collection of drugs formed by the Pharmaceutical Society, which filled one of the finest cases in the whole building.

A new product, for the first time, was exhibited—the silicate of alumina—a beautiful crystalline substance resembling glass. It is formed by mixing two alkaline solutions of silica and alumina; from the great affinity of the alumina for the silica a union is formed between them of a most permanent character. The bases in the mixed solutions, however, showing a most energetic action in strong solutions, when diluted with water have that action so retarded that they remain in the form of a liquid for some hours, admitting of many useful applications, such as the preserving of stone by induration, and the manufacture of artificial stones, which processes were exemplified.

White wine vinegar is obtained, in the form of acetic acid, from the smaller branches of the oak and other hard woods, and it is now also obtained from—sawdust. This dust now finds itself entering the mouth of a long retort through a hopper, is coaxed forward by an endless screw occupying the whole diameter of the retort, and brought under a heat that implies destructive distillation, thus parting with its volatile products.

Cundy, of Battersea, exhibited the permanganate of potash, a most powerful and innocuous deodorizer and disinfectant: its oxidizing powers are beautifully shown by treating pure and impure water; with a small quantity of the fluid, each water may be perfectly pellucid or clear; but if organic matter be in solution, it will instantaneously be oxidized and precipitated as a powder to the bottom, leaving the water colorless; but if nothing of the kind exists in the water, it remains tinged with the pink color of the fluid.

Paraffine was well illustrated. In the Great Exhibition of 1851 Mr. James Young exhibited specimens of paraffine and paraffine oil, and one candle, the product of the distillation of coal. Mr. Young has been fortunate enough to make what Liebig some years ago said would be one of the greatest discoveries of the age—viz., the condensation of coal gas into a white, hard, dry, solid, colorless, odorless substance, portable, and capable of being placed upon a candlestick or burnt on a lamp.

Among the substances shown was a new material, called "Parksine," from the name of its discoverer—the product of a mixture of

chloroform and castor oil, which produces a substance as hard as horn, but as flexible as leather—capable of being cast or stamped, painted, dyed, or carved, and which, above all, can be produced, in any quantity, at a lower price than gutta percha.

Here may be mentioned the principal improvements during the past ten years in France, in chemicals and pharmaceutical products and perfumery, including colors. Such improvements are, the use of pyrites in place of sulphur, which has caused reduction in the price of sulphuric acid; the extension of the indigenous production of potash by the calcination of the residues of the distillation of beet-root juice; and the preparation of *potasse du suint;* the development, in the process of extraction from the waters of saltmarshes, of the sulphate of soda and the salts of manganese which are contained in them; the improvements in the production of ammonia, and its salts, from the condensed fluid collected during distillation of coal; the development of the industries of the distillation of coal tar, and the preparation of Benzine and certain acids; the application, more and more frequent, of the silicates of soda and potash, to the conservation of monuments and sculpture; the new industry of the salts of alumina with a soda base, and of pure alumina; the experiments for the industrial production of the prussiates and ammoniacal salts by ammonia and carbonate of barytes; increase of the production of pyroligneous acid and its compounds; development given to the fabrication of the vegetable alkaloids; extension in the manufacture of white lead, and artificial ultramarine; introduction of the yellow, red, violet, and blue coloring matters, resulting from the transformations of aniline; and the use of sulphuret of carbon for the extraction of fatty substances and perfumes.

Coal Tar and Lichen Dyes.—Strange and curious were the illustrations exhibited of the coal tar dyes, and their wonderful effects already mentioned. Coal tar is the basis of all the new colors we have lately got, such as mauve and magenta, and this field of chemical research seems boundless in extent. Thus, coal tar is gradually refined upon and improved till the dirty mass becomes a liquid of glowing tints, the dye of which is shown by exquisite silks, feathers, and moiré antiques, tinted of the now so fashionable colors. The way in which the color is produced may be told in a few words. Coal tar, when distilled, yields a colorless fluid called benzole, much used for removing grease stains from silk or cloth. This when mixed with nitric acid forms nitro-benzole, which when again distilled with acetic acid and iron filings forms those exquisite green crystalizations called aniline. This when distilled again with different salts, produces dyes of different colors, such as mauve and magenta; and thus the coal tar, which was of such little value that it almost puzzled gas-factories to get rid of it, has become the basis of a most important manufacture. Aniline was but a few years ago so rare as to be known among chemists almost only by name. Now it is an article of commerce. A few grains of it suffice to dye many yards of fabric, and it is well that it has this power, for two gallons of coal tar only yield ten grains of aniline. One circular block of aniline about twenty inches high by nine inches wide was shown, which was the whole product of no less than 2,000 tons of coal. This specimen is sufficient to dye 300 miles of silk fabric. Where two quantities are given it is easy to find a third. With the *data* which we have stated, therefore, as to two gallons of coal tar yielding ten grains of aniline, and the product of 2,000 tons of coal being capable of dyeing 300 miles of silk, any lady of a calculating turn of mind can reckon to a bushel the precise amount of coal consumed to color the mauve dress in which she is attired. A grain of the aniline dissolved in water tinges it at once of that reddish violet, the delicate color of which can only be compared to the brightness of a flash of electricity.

Near these were shown the products of the lichen dyes, the beautiful blues and purples which are made from the common mosses and lichens. This was accidentally discovered, for the mosses have to undergo a particularly offensive course of treatment before they yield their tints. Where the specimens of the mosses used were shown, the fabrics dyed with their colors were displayed above them, so that, except in witnessing the actual process, the whole *modus operandi* was told to the visitor clearly enough. Near these were shown some specimens of indigo and indigo dyes; while round about were displayed all the wonderful forms of crystallization, from masses of alum as big as grottos, down to groups of crystals of soda, of salt, and saltpetre. Some of the single block crystals of alum weighed from five to seven tons.

Substances used for Food.—The collection of these articles was numerous and interesting. Sugar, long considered a neutral substance without congeners, has, in consequence of chemical research, become the parent of a numerous and increasing family. Fourteen specimens were exhibited by Derby and Gosden, including not only beautiful forms of cane and grape sugar, but also sugars derived from acorns, &c., muscular fibre, beets, and other animal and vegetable substances.

Mr. Hallett exhibited his wonderful examples of "pedigree wheat." He has applied to the growth of wheat the rules which every stock-breeder in the country knows—namely, that from the largest and best animals the largest and best progeny may be expected, and that, therefore, the agriculturist should proceed to develop the productive powers of wheat as if it were altogether a new species of cereal which he was trying to bring to perfection for the first time. Mr. Hallett, in 1857, planted only from ears 4½ inches long, containing 47 grains. In 1858 his finest ear was 6¼ inches long, con-

taining 79 grains, and there were 10 ears from the finest plant. In 1860 the ears were imperfect, from the wet season, but they appear only to have reserved and husbanded their productiveness for a more auspicious occasion, as in 1861 the finest ear was no less than 8¾ inches long, containing 123 grains, and the number of ears in the finest single plant had risen from the starting number of 10 in 1857 to 52 in 1861. The various ears and their dates of sowing were shown.

Mr. Spence, of Manchester, has devised a process whereby he is able to produce sixty-five tons of ammonia alum from fifty tons of coal shale.

Valuable improvements have been made in the preservation of meat and other articles of diet. Jones and Trevithick exhibited a raw leg of mutton and other meats, which appeared perfectly fresh after a long interval of time. In their process the meat is introduced into a tin vessel, the air is exhausted, and a small quantity of sulphurous acid gas is introduced, which is quickly absorbed by the juice of the meat. Nitrogen (or azote), which is incapable of exerting any putrefactive action on it, is then permitted to enter the vacuum, and the can is sealed. Should this process prove successful a great step will be gained. Mr. M'Call exhibited meats preserved in the old method—viz., expulsion of the air by boiling. The speciality of his process consists in a plan for the absorption of any oxygen remaining in the case. In the top of his can is a small capsule in which he places a button of fused hypo-sulphite of soda; this, when exposed, as the can is soldered, is supposed to take up the oxygen left in the vessel. The opened case of beef appeared quite fresh.

The increasing demand for agricultural produce necessitates the application of manure to restore to the ground the elements taken from it. Mr. Whitworth, of Bermondsey, has endeavored to make still further use of fish for the purpose, and exhibited specimens of his concentrated fish manure for cereal crops.

Indian Products.—Three hundred samples of tea were shown, and more than one hundred of cotton, with some tobacco; and of starchy products were two or three novelties. The elastic gums contained some novelties obtained from the Mudar plant (*Calotropis gigantea*), and also from the milk-hedge (*Euphorbia antiquorum*), and other species of Euphorbia (*E. tortilis*). Of woods there were from twelve to fifteen hundred specimens. Amongst the curiosities of food, we had, in addition to the usual contribution of sharks' fins. birds' nests, trepang, agaragar, &c., some potted fish gnapie, dried mushrooms from China, dried fungi, and other delicacies.

The most suggestive, but least attractive, portion of the Indian display was at its entrance, where one of the great tests of a country's value was shown by a collection of its raw materials and natural products. Beyond these came its manufactures—native locks that would puzzle Hobbs to pick; cutlery from Salem that should astonish Sheffield. Beyond these were weapons damascened in gold, and then gold and silver work, and enammelled jewelry. Among a curious collection of articles from Darjeeling and Thibet are the prayer cylinders—a common brass cylinder, filled with printed prayers, which the natives spin and turn round, and every revolution counts as so many prayers said. In some parts near Thibet, where the strictest Buddhism prevails, these prayer cylinders are made of great size, and turned by water power, so as to do the praying of the whole village in which it works without a moment's cessation. This easy method of invocation is so extensively practised by all the natives, that printing in Thibet is confined almost exclusively to the production of the innumerable prayers that are required by the people. The printing blocks used for this purpose in Thibet and Darjeeling were shown in one of the cases. They are cut in coarse wooden blocks, and in workmanship are apparently on a par with what Caxton's first failures must have been.

Machinery.—Of locomotive engines there was a magnificent rank, eight or nine at least, with tenders attached, in complete working order. Mr. Ramsbottom exhibited an admirable invention for watering tenders of trains while at full speed. This was originally invented to facilitate still further the rapid progress of the Irish express train between Holyhead and London. The plan simply consists of a sunk trough filled with water, laid at certain stations between the rails, and into which, as the engine approaches, a slanting, trumpet-shaped shoot is lowered, up which the velocity of the engine forces the water with such power as to fill the tender tanks in a single minute. The Great Northern (of France) Railway Company sent a monster locomotive engine, which has its boilers, cylinders, water tank, and coal bunk built up one above another to such a height that the wonder is how it can pass under an ordinary bridge. Its chimney, instead of standing straight upright, as is the manner with ordinary locomotives, has to be curled over its back like an elephant's trunk. It is intended for heavy traffic only. Among other improvements it is fitted with a superheating apparatus.

Traction Engines.—Bray's traction engine, considering its great capabilities, is a remarkably compact and simple piece of locomotive machinery. A specimen exhibited was built for Woolwich Dockyard. It combines many improvements upon the earlier contrivances for the purpose of transporting heavy weights by steam power; but the feathering principle of the wheels, as originally introduced by Mr. Bray, is retained. This principle consists in the circumference of the wheel having a number of small apertures through it. These apertures are the media which allow of the protrusion and withdrawal, by means of an eccentric,

of a series of blades, or teeth. The teeth may be adjusted to the nature of the soil, or paving, over which the engine has for the time to travel: that is, they may be lengthened or shortened, so to speak, at the will of the attendant. In many cases the teeth are not required to be protruded at all, the friction of the periphery of the wheel being sufficient for the purpose of traction. In such cases the blades may be thrown out at the top, or on that part of the wheel not coming in contact with the road. On the contrary, in the event of the ground being soft and slippery, or of the engine having to ascend a steep incline, the powerful auxiliary aid of the teeth can be brought into action, and the requisite amount of biting insured. A powerful engine of this kind was employed in the conveyance of ordinary locomotive engines, heavy castings, and machinery of various kinds, from the docks, railway stations and manufactories to their destinations at South Kensington: it was thus a potent contributor to the magnificent display of machinery in the western Annexe. The load conveyed, at one time, by this engine, occasionally amounted to 45 tons. A large portion of the western Annexe was devoted to the display of engineers' tools, of every form and size, and for every description of work—either incision, excision, or circumcision. The principal machine in Whitworth's group was a large recently-introduced machine called a self-acting radial drilling and boring machine: the radial arm carrying the drill spindle is movable through an arc of 200 degrees; it is attached to a vertical slide worked by a rack and pinion, with worm and wheel on the main frame; the drill spindle works through a tube, and is adjustable horizontally by a screw and nut from one radius to another; it has a variable self-acting down motion, and retains its connection with the driving motion in every position. Shanks and Co. exhibited two drills of novel construction: the multiple drill and the turnstile drill. They had here also one of their large double slotting drills, with two tools working toward each other: it is capable of making a slot eighteen inches long. Here were shown the file cutting machines of the Manchester File Making Company. The name of Nasmyth is inseparably connected with the steam hammer; and Nasmyth and Co. were represented extensively in the Exhibition. Of the modifications, Robert Morrison and Co. displayed their double-acting steam forge hammer. The main point of improvement in this apparatus is comprised in the fact that the hammer bar and the piston are forged solid together. In other cases, where a different mode of attachment is adopted, the piston and piston rod have sometimes, from the violence of repeated strokes, parted company. In this instance such a catastrophe is next to impossible. The steam cylinder is firmly bolted to the single frame which supports the whole. This frame also contains the steam chest steam passages, and the steam and exhaust pipes. The ammer bar is furnished at its lower end with a claw for holding in the different faces or dies required for various kinds of work. The piston is simple in its construction, and two small steel rings fitting into grooves on its circumference make it steam tight. Above the piston the bar is planed flat on one side, a corresponding flat being left in the cylinder cover. This arrangement has the effect of keeping the bar and the hammer face constantly in the same relative position to the anvil. On the top of the hammer bar there is a small roller which works in the slot of the lever. The lever, with the aid of a pair of links and a slide-rod, gives motion to an ordinary box slide, which admits steam alternately above and below the piston.

The principle on which Siebe's ice-making machine is constructed is the removal of caloric by evaporating a volatile fluid in vacuo, and the condensation of the vapor by pressure. A strong solution of brine is employed as a carrying agent, which, after having been passed through the evaporating vessel, flows along the refrigerating trough, in which are placed vessels full of pure water, which becomes ice by the absorption of caloric.

The patent Hoist Company exhibited a safety cage in which Watt's governor regulates the velocity of the cage in transit. The advantage obtained by this mode is that when a chain breaks, the cage gradually descends. Mr. Clarke's improved fire escape reaches eighty feet high. The underneath part of the centre ladder of this fire escape is encircled by canvas rendered incombustible by being saturated in alum and chloride. A wire gauze further protects the canvas from the effects of flames. Into the wooden steps of the ladder are inlaid wire rope, sufficiently strong to bear the weight of several men. The improvement in Clarke's fire escape is in the lever-bars for raising the second ladder, which works on quadrants: this fire escape is so light that one man can wheel it easily.

Manlove, Allnutt, and Co. exhibited some complete and ingenious machinery for completing the manufacture of sugar. The effect is produced by centrifugal force; the pans containing the sugar being caused to revolve at the rate of 1,000 revolutions per minute, by which means the treacle and molasses are perfectly separated.

The display of machinery for making paper was very large. One of the most complete and beautifully-executed machines was constructed by Bryan, Donkin and Co., of Bermondsey, and intended to manufacture an endless sheet of paper of any width under seven feet. The above machine is capable of making an endless sheet of paper twenty miles long in about twenty-four hours: the actual superficial area of this sheet of paper would be about seventeen acres. The combination of machinery exhibited by Donkin not only makes the paper complete from the pulp, but also gives to it the necessary water-mark, and cuts it into sheets of any desired size and form

Young's Type-Composing Machine.—The inventor describes that this type machine is provided with separate compartments called "reservoirs," for all the letters of a font; each reservoir being provided with a small lever, which, by means of a rod, is connected to a key like those used in a pianoforte. When a key is struck by the player, it pushes a type out of the reservoir by means of the lever mentioned above, and the type is thus caused to slide down an inclined plane, and thence into a receiver, where it is set up side by side with other types, by means of a beater. Thus, each type or letter can be set up by a player in the order required by a compositor's copy. This is now done with a speed of from 12,000 to 15,000 types set up in an hour's time. The justifying apparatus is intended to replace the compositor's stick. The compositor places the galley filled with the long lines of type set up by the composing machine, slides one of them into the apparatus, divides it into the proper width of the page, and having justified it, moves a handle which depresses the completed line, and thus makes room for a succeeding one. It is found that a compositor can by this means justify at the rate of 4,000 to 6,000 types per hour.

The distributing machine separates all the different letters of a font that may have been used for printing, into different channels ready for use in the composing machine. This is effected by one or more pairs of nippers, which takes every type singly from the reservoir in which all the types have been placed, and allows it to slide down an inclined plane, the upper part of which moves on a hinge. The thin or lower-case types slide down to the bottom of the fixed inclined plane, but the thicker or upper-case letters are retained on the movable incline, which, on being raised, drops them into an appropriate receptacle, whence they are then taken and redistributed by passing down a separate channel of the inclined plane. The thin, or lower-case letters, that have arrived at the bottom of the inclined plane, are pushed into the grooves of a revolving chain. This chain in moving passes underneath plates which are made of different widths in order to cover only certain nicks cut or cast on the edge of the types, and situated in different parts of their length, from 1-16th to 12-16ths of an inch from the tail of each type. When, therefore, a type passes underneath a plate, which allows its nick to be exposed, it is pushed from off the chain by means of a scraper which passes over the plate on to a tilting inclined plane. This plane in its descent allows the type to slide down, by means of an inclined channel, into a receiver, where it is set up by means of a beater, as in the composing machine. The distinguishing nicks are somewhat like those used by typefounders; 71 per cent. of the types require only one nick, 20 per cent. only two nicks, and the remainder have three nicks. One distributing machine, attended by two boys, will distribute and prepare for the composing machine from 14,000 to 18,000 types per hour.

Mitchell's composing and distributing machine was also exhibited. This machine has been for many years in practical operation in this country, and the description of it can be found in Appleton's "Dictionary of Mechanics."

Folding, Pressing, and Stitching Machine.—This compact little folding machine, a Swiss invention, is constructed to make a perfect register, and to fold printed or white sheets of paper with far greater precision than the most experienced hands can do it, at the rate of 1,400 to 1,500 sheets of any size per hour; and it presses and stitches the sheets at the same time.

The machine works as follows: The sheets are put singly by a boy under the points of the machine, in the same manner as with the printing machine. A knife moving nearly vertically up and down takes hold of the sheet lengthwise in the centre, draws it through a slip in the table, and the first fold is made. The knife returns instantly, and the sheet is taken by a second vertical knife, moving from the left to the right, folding it at a right angle to the first fold. The double-folded sheet is now opposite a pair of ribbed rollers (cylinders). Before the third fold is made, the stitching commences as follows: Two needles, provided with hooks, pass through the middle of the sheet, at about an inch distance from each other, drawing the cotton through, which is unwound from a bobbin, and cut to the required length by a peculiarly constructed pair of shears; the sheet is then folded a third time—viz., a knife in the shape of a T, acting horizontally, and consequently, at a right angle with the second knife, takes hold of the middle of the sheet, and pushes it between the above-mentioned ribbed rollers, whence it is passed directly to another pair of polished rollers, from which it comes glazed and pressed on to the table. The machine works very correctly, and folds the largest as well as the smallest sheets, and both the stitching and pressing apparatus, or each singly, may be detached by loosening a single screw. It can be worked either by steam or hand, a boy being sufficient for that purpose. The same exhibitor showed a second folding machine, which feeds itself by an air or sucking apparatus that takes the sheets one by one from off a pile, under the horizontal folding knife, thus enabling it to fold 3,000 sheets per hour.

Agricultural Machines and Implements.—Cultivation by the steam engine was the paramount feature of this department; one gallery and part of another being occupied by two rival systems of steam-ploughing mechanism. Fowler contributed the steam engines, with their wire ropes, ploughs, and grubbers, of which about 150 sets are now at work in this and other countries. Here, too, were the engine, windlass, grubbers, and new balance ploughs of the Howards, of Bedford; their steam cultivator and new implements for the hay harvest.

America has produced a greater variety of reaping and mowing machines than we English have done; most of our new notions in knife, or gearing, or delivery, having come a voyage across the Atlantic. In the United States Court we accordingly found several ingenuities of this order.

A striking object among these inventions was the reaper of Mr. M'Cormick, which advertises itself as one of 40,000 made and sold in one shop. The platform is of a quadrant figure; the reel has but three, instead of four blades, the place of the fourth being occupied by a rake, which by a very peculiar but really simple and easy movement is made to sweep over the platform, delivering the cut corn at one side. Mr. Aveling, of Rochester, showed his simply-contrived and practically-successful locomotive for common roads, of which, it is said, forty are already in constant use.

Denmark contributed a novelty in the shape of long shallow iron pans for holding milk in large dairies. A screw at the farther end enables the pan to be slightly raised for emptying, and a broad blade of thin wood reaching across the pan and supported by rollers running along the edges of the pan, is drawn from end to end when the cream is to be skimmed off the milk.

In the Australian Court was a Victorian reaper from Melbourne, in South Australia. The machine exhibited resembled the ancient Roman reaper. A box, upon a pair of wheels, is propelled by horses and a pole at the side; the forward end is armed with an iron comb, which does not, however, snap off the ears of the standing crop, but holds them, while the rapidly revolving beaters of a drum, like that of a threshing machine, strip out the kernels of ripe grain. The box receives the corn; sometimes a fan (driven like the drum, by wheels and a strap, by the rotation of the carriage wheels) winnows away the chaff, and the produce is thus collected ready for the market.

Civil Engineering, Architecture, and Building Contrivances.—The great number of the contributions by engineers were models of iron bridges and viaducts, of which the principle of construction is remarkable for that subserviency of other considerations to one of rapid completion, which is generally of importance to shareholders. In most of these models, one of the forms of the lattice-girder is used, with piers likewise of iron construction. The Beelah Viaduct, Westmoreland, was illustrated in a model. It was designed by Mr. T. Bouch, of Edinburgh. It is 1,000 feet long and 200 feet high in the deepest part of the valley, and was erected in four months. Three years, say the exhibitors, would have been required for the erection of a viaduct of brick or stone.

Several models and photographs of suspension bridges were shown. The chief work was a railway bridge, that of the Niagara—still not sufficiently appreciated, we think, by British engineers.

An admirable series of models contributed by the French Minister of Public Works, comprised representations of the sea walls of Cherbourg and the harbor of Marseilles. The system of construction in both cases, if not identical, is closely analogous. In the greatest depths where the disturbing action of the wave ceases, the smaller stones are placed, or, more properly speaking, sunk, being allowed to assume their natural inclination. Above these again the larger material comes, increasing in bulk in proportion to the action of the waters; the largest masses of natural stone being surmounted, and the outer surface faced by enormous blocks of concrete, of which also the superimposed masonry is principally formed. This artificial stone is composed of the débris from the quarries mixed with hydraulic lime.

In the instance of the creosoted woods shown by Mr. J. Bethell, however, the evidence is clear that piles, fourteen inches square, used at Grimsby, half the substance is found to be eaten away by the seaworms, in ten years or less, where the pile had not been creosoted; whilst the creosoted pile, after exposure for the same time, is shown to be in the original state. The collection of specimens included sections from railway sleepers after twenty-one years' constant use; the wood being scarcely injured.

Clay-ware pipes, by Zeller, of Ollwiller (Haut-Rhin), enamelled, and bituminized paper pipes, by Jaloureau, of Paris, of good manufacture, for the conveyance of water and gas, were exhibited. The bituminized pipes are favorably reported on in Paris, as regards durability, after four years' trial; and elasticity is one of their advantages.

Models, Weapons, &c.—In the court devoted to these articles the visitor could study, almost in a glance, the progress of naval architecture for nearly three centuries past. All kinds of these models were here, from that of the Great Harry down to our last and greatest ship, the Warrior, with lines as fine as a Dover packet.

An important American invention was shown—a series of beautiful little working models of the various machines used in Thompson's patent for making boats by steam, which do all, even to curving and bevelling the edges; so that a rough board passing in at one end of a machine comes out at the other, not only curved, but bevelled and planed.

The new gun, invented by Sir William Armstrong, is a rifled breech-loading 70-pounder, but one in which the chamber ventpiece and screw are entirely dispensed with. The gun is built up of wrought iron coils and rifled in the usual manner; but in the breech on both sides two narrow openings are cut, into which are fitted two wedge-shaped masses of iron with handles. These, when drawn aside, have openings in them corresponding to the bore of the gun, which can then be seen through from end to end, a hollow rifled tube. The shot and powder are then inserted in the ordinary

way at the breech, and the foremost of the sliding iron wedges we have mentioned drawn across so as to close the tube. The second and most massive wedge is then drawn into its position so as to jam both tight, and the gun is ready for firing. By a simple contrivance connected with the lock of the gun, which slides down a powerful steel bolt that keys the two wedges together, the piece cannot be fired till both wedges are in their place, nor can they be withdrawn until this again is lifted.

Near the Armstrong gun were shown sections of shells of all sizes, both time and percussion. The time shell is adjusted by distance —that is, the fuse is cut short to burst the charge so many seconds after it leaves the gun, every second representing a space of four hundred yards traversed. Thus, after one or two shots for "range," the shell can be burst to a nicety of fifty feet. The percussion shell, as its name implies, explodes instantaneously on touching any obstacles after it leaves the gun.

Near to this were exhibited the guns of Armstrong's great competitor—Mr. Whitworth, whose gun is still that which has attained the longest range and greatest accuracy, and is still the only piece that has sent as light a shot as 70 lb. through $4\frac{1}{2}$ inches of solid iron plate. The Blakeley gun, also in this court, is a very good piece of rifled muzzle-loading ordnance, very similar in principle to the *canon rayé* of the French. Even, however, as a rifled muzzle-loader it is inferior to Whitworth's, which has the advantage of being a breech-loader as well. A large wrought iron gun was exhibited from the Mersey works, which, as a perfect triumph of forging, should have been shown side by side with the double-throw crank of the same firm. The shells of the monster mortar—shells which, when loaded, weigh as much as 25 cwt.—are another instance of extravagant invention of which this court offers as many samples as any other in the building. Every kind of breech-loading small arm was, of course, to be found here. And here, by comparison, might be seen the superiority of the American invention of Mr. Storm over others. In this piece there is nothing special in either the lock, or stock, or barrel; the only invention, in fact, being the breech-loading apparatus, which is applicable to any and every barrel, at a cost, it is stated, as low as some 16*s.* each. The breech, about an inch, or an inch and a half in length, is fitted to the barrel by an ordinary hinge, which is thrown up or open by a movement of the finger or thumb, the charge inserted, and the breech closed. It has been tried by some of the highest professional authorities on musketry, and has been pronounced perfect.

Mr. Lancaster exhibited his oval-bore cannon, with shot and shell for its service. The system of construction is briefly described thus: "The inside of the barrel is cut by proper machinery in spiral form, the difference between major and minor axis being .012 of an inch."

A very interesting collection of guns and projectiles was contributed by the Whitworth Ordnance Company. The guns ranged in size from the 1-pounder to the 70-pounder, and comprised examples of both breech and muzzle loaders. In every case the bore is hexagonal in its cross section, and in the rifling the pitch is equal to twenty times the diameter of the bore. Messrs. Whitworth state the range of their 12-pounder rifled canon, with a 12 lb. shot, and $1\frac{3}{4}$ lb. of powder, as follows: At point blank, 380 yards; at 1° of elevation, 900 yards; at 5°, 2,600 yards; at 10°, 4,500 yards; at 20°, 7,000 yards; at 35°, 10,000 yards, or about $5\frac{3}{4}$ English miles!

A very beautiful gun of small calibre, and constructed of cast steel, was forwarded from Russia. A label attached to it informed us that it has withstood a test equivalent to 4,000 charges. This argues a degree of tenacity in the metal of which it is composed, second only —if second, indeed, it be—to that of which the Prussian cannon are made.

Prussia contributed an interesting collection of gun barrels of the famous steel of Messrs. Krupp, of Ensen. They were shown, together with various specimens of the metal, including one ingot of thirty tons weight, in the western Annexe. "When we examine the illustrations here offered of the texture (so to speak) of this steel, we cease to be surprised that the guns made from it have borne with impunity the rigid test that has been applied to some of them. This consists of sealing securely the muzzle of the gun, after having previously filled the barrel with powder; when, on application of the fuse, the whole charge burns away harmlessly through the touchhole, leaving the barrel perfect and flawless."

New Cartridge.—A new seamless skin cartridge, the invention of Capt. M. Hayes, excited much interest. The advantages which it possesses over ordinary cartridges are its waterproof qualities, greatly increased facilities of loading, cleanliness, and cheapness. In addition to the natural damp-resisting properties of the skin used in the manufacture, it is chemically prepared, so as to be impervious to wet. The ordinary paper cartridge cannot resist water, and naturally absorbs moisture. The facilities in loading gained by this invention are extraordinary. The cartridge requires neither biting, tearing, nor puncturing; but by one action is passed entire, viz., powder and ball in one complete whole, into the muzzle of the arm used, and goes clean down to the point of ignition. The spark from the percussion cap penetrates the skin, and the charge is exploded without the chance of hang or misfire.

Marine Engines.—As might naturally be expected, the most important part of the exhibition of machinery was that where the object was marine propulsion. There were no less than seven pairs of marine engines fitted up complete for work, the aggregate power of which could not be less than 2,000 horses. But

in their construction they presented nothing of novelty, being but examples from the best makers which may be found described in Tredgold and Bourne on the steam engine.

Gas Engineering.—One of the best illustrations of the progress effected since 1851 was in the number of exhibitors of fireclay gas retorts at the Exhibition. This has been caused through iron gas retorts being superseded by earthenware retorts in almost every town exceeding 10,000 inhabitants.

Mr. G. Glover, of Pimlico, exhibited a meter, by which quantities of gas so minute as from $\frac{1}{100}$ to $\frac{1}{2000}$ part of a cubic foot can be measured with precision each second.

Mr. Prossex exhibited his oxyhydrogen lime lamp, the identical one used for three months at the South Foreland lighthouse.

In 1851 the only paraffine candle exhibited was made from turf. The considerable display made by Mr. Young, and Messrs. Field, and many others, of blocks of paraffine and candles, proves the manufacture of this article to have arisen during the past ten years.

Mr. Shepard's magneto-electric light was shown. This remarkable light has been two winters in use at the South Foreland lighthouse, and is now fitted up by the Trinity Board at Dungeness. The light produced is intense—sufficient, it is stated, in a revolving lens giving off six rays, to enable any person with average sight to read at a distance of ten miles.

Philosophical Instruments.—Amongst the general instruments exhibited were cloud mirrors, sunshine recorders; and a galactoscope for measuring the transparency of milk. The Right Hon. Robert Lowe showed spectacles which magnify without glass or any other refracting medium; and Dr. Lankester exhibited an ozonometer for registering the hourly variations of ozone.

The improvements Mr. Wenham has effected for microscopic objects deserve mention. No longer a mere flat image is produced; the binocular microscrope, by a contrivance for the use of both eyes, gives perfect stereoscopic relief, and at the same time saves much labor to the eyes of the spectator.

A machine was exhibited by Mr. Peters for microscopic writing. The words to be written microscopically are written in pencil, in ordinary characters, on a sheet of paper at the bottom of the instrument. But the pencil with which this is done communicating by a series of levers and gimbals with another minute pencil and tablet at the top, is so graduated that a stroke of a quarter of an inch at the bottom is only a stroke of a quarter of a millionth of an inch at the top, the shape and character of both marks being nevertheless precisely alike in outline. The object of the machine is chiefly to mark banknotes with certain minute signatures for the prevention of forgery. Close by this curious instrument was Mr. Babbage's calculating machine, which will work quadrations and calculate logarithms up to seven places of figures. Messrs. Scheutz, of Stockholm, have improved upon it to such an extent as not only enabled the machine to calculate its tables, but to print its results. This improvement was at once bought up by the English Government, but it is not now shown at the Exhibition.

Negretti and Zambra showed instruments entirely new, and most of the important ones. Among these was a thermometer so exquisitely sensitive as to rise at once upon the approach of the hand within two or three inches; this was made specially to test the temperature of the body and coils of the python during her attempted incubation at the Zoological Gardens.

M. Kœnig showed a wonderful collection of instruments applied to the illustration of the theory of the conduction, undulation, and vibration of sound. By a most ingenious but simple instrument—a common glass cylinder, coated with fine lampblack, and applied, turning, to a tuning key when vibrating—M. Kœnig makes sound its own printer. From the impressions left on this cylinder all the different vibrations and undulations of sound between A and G are here recorded from their outset to their latest tone, have been made to register themselves, and from the records thus left a most beautiful series of acoustic charts has been drawn out.

M. Perreaux exhibited a spherometer for measuring the curves of object glasses. This instrument is of such extreme delicacy, that when adjusted to zero, even placing the hand on the ground glass plane beneath, from which the slender index works, is sufficient to deflect it instantly. None in the foreign department showed good photographic negatives of microscopic objects but Roncoli, of Bergamo, in the Italian section. Some of these instantaneous photographs of the magnified blood and anatomy of the most minute insects were among the most wonderful *tours de force* that this chemical art showed in the building. In the French department was the calculating machine of M. Thomas—the Babbage of France. It is so small as to fit in a compass not greater than that of a good musical snuff box. Yet, by simply winding a handle, 18 seconds suffice to multiply 8 figures by 8; to divide 16 figures by 8 figures only 24 seconds are required, and a square root of 16 figures is obtained within a minute! And all this is done by turning a handle rapidly, and the price of the whole apparatus is within the reach of most buyers.

Photography and Photographic Apparatus.—Mr. Warren de la Rue exhibited his most interesting series of photographs, showing the progress of the late total eclipse of the sun as seen in Spain.

Col. Sir Henry James, director of the ordnance survey, showed specimens of "photozincography," for the reduction, enlarging, and printing of maps and plans. Sir Henry showed adaptations of it to the production of facsimiles

of ancient MS., and one of a page of Domesday Book. The photograph, by a simple and cheap process, is transferred to a zinc plate, whence any number of copies can be taken off by the ordinary plate printing process.

F. Joubert exhibited a series of very beautiful pictures burnt in on glass, a marvellous adaptation of the photographic art in an absolutely new direction. By a pure photographic process he produces on the glass, in ceramic colors, a picture, which, by exposure to heat in the furnace becomes burnt in like any other picture on glass or china. By a careful and artistic manipulation he has been able to produce effects in several colors. The process has been perfected, and a cheap and artistic ornamentation of our windows is brought within the means of the many.

Clocks and Watches.—The great dial around the stained glass window at the eastern end of the nave, measuring nearly 40 feet in diameter, was the first lion of this class. It was worked by a clock made by Dent.

Another gigantic work, termed *par excellence* "The Great Exhibition Clock," was placed in the central tower of the south side of the exhibition building. The maker is M. Benson, of Ludgate hill. Its special peculiarity is a new double lever rémontoire, the application of which diminishes the friction or retarding force, and allows of great motive power, even to the extent of 20 tons, being used without disturbing the time-keeping qualities. In all cases where the works of a clock are at a great distance from the dial, as in this case, the outer dial being 300 feet from the works, a great motive power is requisite.

The great watch and clock makers of Clerkenwell exhibited in full strength. After Clerkenwell, but at some distance, came the watches of Coventry; and last of all, the prettiest and cheapest, but much inferior, watches of Switzerland. In this class all the great watch and clock manufacturers of England showed their masterpieces of workmanship. There were reversible chronometers, steam clocks, marine chronometers, astronomical clocks, geographical clocks, silent clocks, skeleton clocks, Liliputian alarm clocks, electro-magnetic clocks, keyless watches, electric clocks, mercurial timepieces, clocks showing mean time and longitude at important places, and galvano-magnetic clocks; and gold and silver watches of every description.

Electric Telegraphs and Electrical Apparatus.—It has been aptly observed that the practical influence of electrical inventions met the visitor at the very threshold of the Exhibition Building, where the "Magnetic Tell-Tale" of Prof. Wheatstone was attached to some of the turnstiles, and this, in a measure, controlled the financial department. This instrument was worked without battery power of any kind. The electricity was generated by a peculiarly constructed magnetic machine, so connected with the axis of the turnstile as to discharge a current of its force at each revolution of the stile. Thus, each visitor, on passing through it, unconsciously and telegraphically announced his or her arrival to the financial officers in whose rooms were fixed the instruments for receiving and recording the liberated current, which latter was conducted thither by a line of copper wire laid along the building between those instruments and the turnstiles, and metallically connected to each. The registers thus obtained formed a complete check upon the money taken at the doors.

The great improvements and numerous inventions in electric telegraphy during the past ten years were strikingly shown by the various new instruments exhibited by the Universal Private Telegraph, the British and Irish, the Submarine, and other telegraphic companies. Prof. Wheatstone's ingenious and beautiful Domestic telegraphs were shown in working order, and many inventions and contrivances to utilize this valuable discovery. Mr. Tyer exhibited his patent Train Telegraph. The apparatus for the use of the signalmen comprise a telegraphic needle for each line of rails in each direction, and a bell and gong, having different sounds, the one for the up and the other for the down line of rails in each direction. The bell or gong is used to draw attention to the approach or passage of a train, and by the number of beats employed, to describe the train: while the needles are used solely to denote either "line blocked," or "line clear;" and no signalman can alter his own instrument, it being the duty of each signalman to work the needles of the signalmen on each side of him.

The most interesting and advanced of these instruments were those which worked more or less automatically. The automatic system of Mr. Allan consists of three machines; the punching machine is the first of these, and by this the ribbon paper to be passed through the sending machine is perforated with holes, representing dots and strokes of the Morse alphabet, at those points only where the current is required to mark on the unperforated ribbon at the receiving station; next is the sending machine, into which the perforated paper is introduced. This machine winds up its own clockwork, whereby the paper is drawn forward, and stops of its own accord when the message is completed; and lastly, the receiving instrument at the distant station, which is also so arranged as to start its own machinery on receiving the electric impulse, and stop it when the perforated paper at the other end has passed through the sending apparatus.

The British and Irish Magnetic Telegraph Company exhibited a system of controlling turret and other clocks, the clocks being controlled only, and not moved either in whole or part, by electricity. The three clocks shown were in all respects, excepting the pendulum, of ordinary construction, and would go without the electric current, keeping their own time. The pendulum is a hollow electro-magnet, oscillat-

ing over or around permanent magnets. When a current is sent, second by second, from a controlling clock, the temporary attraction between the electro-magnet and the permanent magnet compels the controlled pendulum to copy the vibrations of the controller, even though there may be a discrepancy of several minutes in their daily independent rates. The above company also sent the Acoustic Telegraph, the signals being produced by strokes on a pair of bells of different tones.

Mr. C. F. Walker, the telegraph engineer, exhibited a pair of the bells, of which some hundreds are erected on the South-Eastern Railway, for signalling trains. There is but one movable piece, the hammer which strikes the bell. The battery employed is a one-fluid-battery, the negative plate being platinized graphite. A counting index is attached to some bells to count if the signalman is absent or distracted. Two instruments record the signals. One of these drops black and white balls into a groove for the signals, and spotted and blue for the hours and quarters. The other imprints red and black marks on cotton thread for the signals, and the two combined for time marks. Mr. Walker also exhibited a Graphite Battery in work; an audible system of Train Signals; an index for counting, and an apparatus for recording them.

Messrs. C. and S. A. Varley exhibited a large ebonite Electrical Machine: the disc is three feet in diameter, and is excited by a soft amalgam composed of zinc, tin, mercury, and lead, to give out sparks from 16 to 20 inches in length.

Surgical Instruments and Appliances.—All the well-known manufacturers of Great Britain were represented in the Exhibition. Weiss and Son exhibited among the novelties a modification of the Ecraseur, an instrument by means of which the tissues of the body can be divided by a wire or chain saw, worked by a sort of windlass action. The power here is obtained by an endless screw, and is so great that no part of the frame except the bones is capable of withstanding its force. As it cuts in a slightly uneven manner, and the constriction is necessarily very great before incision commences, there is little chance of important hæmorrhage happening after its employment.

The Artificial Limbs shown by Masters were of exquisite workmanship. One of the artificial legs was of wonderfully small weight—viz., 2 lb. 7 oz., constructed of willow wood coated with leather, and furnished with strong though light articulations.

Among the French exhibitors, Charrière invented for M. Roger, the celebrated tenor of the Opéra Comique, an Arm. The novelty in its construction consists of an extra joint made in the centre of the forearm, to which a spring, with cords, is attached; and the cords, passing over the opposite shoulder, give the wearer the power of turning the hand and pointing the finger. In the French gallery we also noticed the apparatus of Dr. Sales-Girons for the Pulverization of Liquids: by means of compressed air a small stream of mineral or medicated water is driven against a metal plate with such rapidity, that on striking it, it breaks into a finely-divided state, or, in other words, into a mist which the patient can easily inhale. An instrument was invented by Dr. Marey, that not only shows the pulsation of an artery by the oscillation of a lever, but also draws on paper the curve defined by it at each beat of the heart.

Leiter, of Vienna, had tubes used after the operation of tracheotomy; they have a valve which allows the patient to speak, notwithstanding the opening in his windpipe. Dr. Hebra's Bath, in which he keeps patients for such a period as eight weeks, is a curiosity in its way. He was first led to adopt this in a case of extensive superficial burn; and devised immersion in tepid water, constantly changing—and was quite successful in his treatment.

Sanitary Appliances.—Mr. Thomas Spencer exhibited the Magnetic Purifying Filter—the discovery is, that magnetic oxide of iron, loadstone, is nature's chief agent of purification, and that any stratum containing iron also contains a small percentage of this oxide; and that where the oxide most abounds,—water is purest. The oxide attracts oxygen; the molecules of that gas become polarized, or ozone; the latter attracts the carbon of moist organic matter; and carbonic acid results.

Dahlke's patent Silicated Carbon Filter, is formed of a combination of carbon with silica, as existing in the Torbane Hill mineral, which is represented as immensely more effective than mere carbon, both as an oxidizer and a promoter of chemical combination generally: carbon, indeed, acting mainly by absorption, or not chemically, being subject to saturation, and absorbing the carbonic acid. Instead of taking away the gas, the silicated carbon causes production of it, whilst nitrogenous products become changed. These filters have been adopted by the Metropolitan Free Drinking Fountains Association.

Musical Instruments.—The Pianoforte is given to outside decoration. This Exhibition shows, in its ample display of woods hitherto unknown from every quarter of the globe, what exquisite varieties of color and grain lie at the service of every cabinetmaker, though he be bent on no such fine fancies. Meanwhile, the general quality of instruments is improved.

An American improvement merits special mention. Mr. Hulskamp exhibited a modification of the instrument, founded on the observation that tension was an important element in the vibratory action of bodies. Accordingly, applying, by the use of screws, a straining power to the sounding board of a pianoforte, he is enabled to increase his vibration so materially, that a horizontal pianoforte exhibited by him, two feet shorter than the ordinary grand, has all the power of the larger instru-

ment. The whole result thus produced, however, is not solely due to the tension applied to the sounding board, but is in part referable to the oblique braces which transmit the vibrations from the frame on which the strings are stretched to the centre of the sounding board. Mr. Hulskamp has applied the same principle of construction to the violin, increasing in a remarkable degree the volume of tone.

In organs again, while there remains much to be done, there have been great improvements both in point of combination and to facilitate the manual and pedal execution. M. Sax had his usual case of carefully made brass instruments. England, we fancy, carries off the palm in flutes.

The Musical Boxes from Geneva attracted great attention in the Swiss Court; and Auber and Linton showed here a beautiful piece of mechanism which, though no novelty, drew a crowd of admirers. It was in the shape of a small musical box, just large enough for the waistcoat pocket, out of which, when the lid was opened, popped up a pretty little bullfinch, who piped a song, fluttering his wings in the most natural manner possible. The plumage, the action, and the peculiar note of the bird, were imitated with wonderful exactness. It was a benevolent idea of the proprietors to make this mechanical wonder subserve "all mankind's concern," charity, by announcing that whenever the sum of five shillings was raised among the visitors, the bird should perform, and the fund so collected be appropriated to the benefit of the distressed cotton districts. He seldom continued long without an audience, and sometimes realized from 10*l.* to 12*l.* a day toward the Cotton Districts Fund.

Miscellaneous Machinery. — *Cotton-Spinning Machinery.*—This important branch of machinery was largely represented; and Dobson and Barlow, of Bolton, contributed a fair quota of the whole. They exhibited, in fact, a series of machines for opening and cleansing, preparing and spinning cotton. The first is named a Cotton Spinner, and it is adapted for spinning and cleaning, long or short stapled cotton. The feeding parts and the inside gratings, are of a novel construction, the object in view being to open out and clean the cotton without injuring the staple. The second is called the Single Scutcher, and it is supplied with feeding rolls: the merit of the rolls consists in their holding the cotton sufficiently firm without breaking the seeds or shells. Then follows the Breaker Carding Engine, which is a combined patent machine: Wallman, of the United States of America, and Dobson and Barlow, each having a share in it. Its chief merits are that the cotton is well opened and cleaned by the working rollers, before the upper rollers will allow it to pass the self-slipping top-flats: these flats can be taken out at pleasure by the attendant, and readjusted without the use of a screw key. A Finisher Carding Engine stands next, and it works automatically—an improvement on the plan of stripping flats by hand, as is usually done. Ashworth's patent Lap Machine is used for making laps for the finisher carding engine, and combing machine; and a grinding apparatus is so contrived as to grind two rollers and a flat at the same time.

There was an extensive collection of Carpet weaving Machinery exhibited. The Power Loom by Tuer and Hall, of Bury, near Manchester, for the weaving of pile, velvet, patent tapestry, or ordinary Brussels carpet, any width required, either with or without jacquard, was shown in operation. All the working motions are outside the loom, except the crank from which it is driven; by this means free access to the working parts is obtained, and a hitherto much complained of inconvenience removed. It will admit larger yarn beams in the same space than any other loom we know of. The wire motion inserts forty-five wires per minute, at two picks per wire; it recommends itself by the facility with which it inserts the wires on which the loops or pile is raised, and by its simple arrangement for holding the wires when inserted, withdrawing and transferring the point of the wire for reinsertion. The whole of the motion is governed in its action by one cam. It produces six yards of carpet per hour, much more than ordinary looms, and requires less space than most of them with the same width in the reed; six such machines may be driven by one horse's power. This loom is also applicable to the weaving of Utrecht velvet, for the lining of carriages, omnibuses, &c.

From Switzerland two Looms were both exhibited at work, in weaving broad ribbon. In one the pattern was a portrait of her Majesty (black lines on a white ground); the other produced the royal arms in beautiful colors, also on a white ground. This latter machine weaves several ribbons at one time. It is a beautiful piece of workmanship, but so elaborate and apparently complicated that it is perfectly bewildering to a stranger to endeavor to trace out the meaning of its parts—such piles of perforated cards, such masses of threads in the gears, and such innumerable little bobbins and shuttles. It is in machines of this kind that we see the real genius of the French or Swiss mechanic develop itself.

American Machinery.—Among the machines was Conroy's Cork Cutter: the man in charge simply puts down a square of cork on a small ledge, and as the machine works, two fingers are pushed out, which grasp it, and fix it on a rapidly rotating pin, where it is applied to the edge of a circular knife, revolving horizontally: in a couple of seconds the square assumes the desired shape and size, and immediately drops into a reservoir beneath to make room for another. A man and a couple of boys can cut 150 gross of corks with this machine in a day. The Rope-making Machine, which stood next, compresses a ropewalk of some 800 or 900 yards into about

8 feet, and it spins a 12-strand rope quite as stout and in much less time than it could be done by hand. Close by the rope spinner was a Machine for Shifting and Securing Machinery Belts, by which, no doubt, many accidents may be prevented. By pulling a cord the belt is moved either on or off the drums; and as the guides move they are secured in their place by a self-acting lock, so that the belt cannot slip either one way or the other. Eckell, of New York, sent one of his new Presses, by which 1,000 lbs. of cotton may be pressed into 18 cubic feet, or 800 lbs. of hay into a truss of 5 feet by 2 feet, with a height of 32 inches, in a space of four minutes, and with a less expenditure of labor than by any other press yet invented. They are capable of exerting from 100 to 1,000 tons pressure, and one man working alone can bring 100 tons to bear. The machinery is very simple, and may be applied with equal advantage to presses for extracting oils. Hansbrow's California Pump was chiefly distinguished for the ingenious adaptation of the leverage, so that a child might work it. The stream rises on the slightest movement of the handle, and when full power is put on, it will throw a stream from a depth of 30 feet to a height of 85 feet through 50 feet of hose.

Among the most important machinery was a power loom for weaving tufted carpets. In a practical point of view it was perhaps one of the valuable novelties in the department. By a single throw of the shuttle, it will insert, weave in, cut off, and complete one whole range of figuring tufts across the width of the fabric in less time than is required for the making of a single tuft by the hand loom. Any medallion design can be woven in parts, which may easily be united so as to have the appearance of being woven in one piece, as the selvage produced is such that when sewed the seams are not visible. The strain on the material is so slight that common worsted or woollen yarns of any quality may be used, so that the cheapest kinds of carpets may be produced in it. The Earl Granville has publicly stated that it is destined to achieve greater results than any other machine in the building.

Besides these there were various other contrivances of minor importance, but all displaying wonderful ingenuity.

The Pianofortes were highly praised by experts.

Mr. L. A. Bigelow, Boston, Mass., exhibited several machines connected with bootmaking. First was a machine for splitting the leather, or rather, as we would describe it, for paring the leather intended for soles to a uniform or required thickness. This is effected by passing the leather between two rollers, one grooved and the other smooth, behind which is a knife that may be adjusted in relation to the frame according to the thickness of the leather required. The cutting is accomplished rapidly, and with more precision than can be done by the hand and knife. Then we had a machine for cutting up the leather into soles, which it does at the rate of twenty pair a minute, all fitted exactly to the last, without the use of a hand knife, and the edges sufficiently smooth to finish. Further, there was a "Heel Trimmer," that is, a machine which, carrying the boot or shoe on a pivot, subjects it under a circular motion to the action of a cutter, which in a minute pares the rough edges to the form of heel, whatever the thickness may be. At last came the Sole Sewing Machine, much on the same principle as the sewing machines for lighter material, with which the public are now familiar. Of course it is more ponderous and powerful, having a force to penetrate the thickest leather, or even a board half an inch thick. It uses a heavy waxed thread, drawing the thread more tightly than can be done by hand, and making the work both strong and solid. This machine will sew on the soles of one hundred and fifty pairs of boots or shoes per day.

Another very simple contrivance of great use was a machine for addressing newspapers, exhibited by Mr. Sweet, of New York. A wooden disc, from the edge of which project all the letters of the alphabet, is made to revolve by a treddle; a small wooden block is pressed against the letter required, till the address is cut out on the face of the block. It is then placed along with hundreds of others similarly cut upon an endless band, and having been inked, the band carries them round; and as one by one they descend on a small table, the newspaper, or whatever is to be addressed, is pressed against them by a pressure of the foot, and a thousand addresses are copied in a few minutes.

Scholl's Life Boat was constructed on a novel principle. It looks like a great green porpoise, with a lid opening into his back. Look into the interior, however, through the lid, and you discover the arrangements for the accommodation of a crew and passengers—for the saved and the rescuers, as the case may be. The object of the boat is to pass through a heavy surf with safety. The internal fittings of the boat are below the centre of gravity and of flotation. They are hung in the manner of a binnacle compass, that is, be the motion of the external shell or hull of the boat what it may, the persons within are always maintained in a horizontal position. Indeed, let the boat turn round and round like a spindle, which is hardly possible, its passengers are nevertheless unmoved. The steering apparatus is within, and so are all the arrangements for a screw propeller.

Some ingenious small hand-labor saving machines were the most looked after. One of the most curious of these was the machine for milking the four teats of a cow at the same time, and in a manner precisely similar to the action of the calf's mouth upon the teat. Also a very ingenious machine for making paper bags, which turns them out folded, packed, dried, and finished, at the rate of 46 a minute.

A Wringing Machine, of great efficiency and

economy, was shown. Its principle consists simply of two rollers of India rubber, kept at a tight pressure by means of screws, and on turning a handle the articles of clothing, when washed, are drawn between the rollers and pressed dry without the slightest injury to the fabric.

A Caloric Engine, by Wilcox, was shown. It is an engine of low power, quick in its revolutions, not liable to derangement or explosion, and of which the consumption of coal is as low as 100 lbs. per day of 10 hours. Some good folding and revolving drying machines were shown in the American department, the prices of which were as low as 30s., of which 10s. is sent to the Lancashire relief fund. They had a good sale, and the 10s. charitable deodand was regularly acknowledged by the relief committee.

Sewing Machines.—It is "now clearly established, that, whatever a needle can accomplish, the machine can do, from the finest and most delicate fabric for female adornment to the heaviest and coarsest habiliments of the sturdy laborer."

There were about thirty different sewing machines in the exhibition, each having, or professing to have, some distinctive peculiarity: in the American court, the Processes court, and in the French court.

Howe's sewing machine is the basis of all successful machines.

MANUFACTURES.—*Cotton Fabrics.*—It is greatly to be regretted that the illustration of the cotton manufactures of Great Britain is not more complete. In 1851 it was very indifferent. On this occasion, if not worse in itself, the defect in the exposition is aggravated by a much smaller display in a dependent industry —that of calico printing.

The most extensive series of exhibits in the Cotton Class was that comprised under the head of Sewing Threads.

In the Great Exhibition of 1851 the Turkish bath towel made its first appearance, and in a short time, owing partly to its quick adoption in the royal nursery, the article got into great favor. W. M. Christy and Son, of Fairfield, near Manchester, had an excellent exhibit of these useful adjuncts to the bath. The make is perfect, and the blankets specially noticeable as supplying a great want.

The contributions from Glasgow consisted almost entirely of harness and other muslins, and exhibited a great general advance alike in taste and perfection of manufacture. In cottons, Glasgow keeps as high a place as Paisley does in shawls. Some of the printed cottons were beautiful specimens of printing. The hardness of effect of cotton prints is overcome, or at least diminished, by a very skilful combination of colors, which blend with each other with as much ease and softness of outline as woven fabrics.

R. Owtram and Co., of Watling street, made an admirable display of figured muslins of a very high quality as regards weaving, design, and finish. The imitation French cambric, and the jaconots and nainsooks were excellent.

France exhibited largely in this class, and did justice to the power of production, alike in tasteful design, beauty of mechanical result, and brilliancy of color. The finest yarns, and in its way the most complete exhibit, were certainly those of Mallet Brothers, Lille.

The sewing threads exhibited were of first class quality and finish, and the specimens of muslin and lace showed the yarns in their application to these fabrics to great advantage.

M. Thivel-Michon, Tarare, brought together specimens of muslins manufactured from yarn spun by the leading spinners both of the Continent and England. The finest were by the latter, and fabrics were shown made of 220s and 300s spun by Murray and Co.; of 250s by M'Connel and Co.; and of 300s and 440s by T. Houldsworth and Co., all of Manchester. The specimens of muslins made from cotton grown in Algeria were very suggestive, but none seemed to go beyond 180s.

In the French court was a most elegant exposition of tamboured work in net and muslin. M. V. Dubois, Paris, showed some admirably tamboured muslin curtains. The work is done with great ability. The foliation in one example was based on tropical plants, and the effect of some portions was very superb.

The contributions of cotton goods from Switzerland of goods manufactured for exportation say much for the ability and enterprise of the people.

The Belgian contributions in this class were of a very practical character.

Probably the most remarkable exhibit of cotton goods in the Austrian Department, consisted of shawls and other articles of ladies' dress, with neck overties for gentlemen, made of chenille and cotton.

The cotton goods of the Zollverein were cheap and strong clothing for working men. Some of these goods were made with a plush-like face, soft and downy, and, whilst the patterns and dyes are well selected and in excellent taste, the finish is equal to woollens of the same character.

Saxony had some useful exhibits of cotton.

The Milan Chamber of Commerce exhibited a series of useful fabrics in cotton. There was also a curious, but we fear not a very practical illustration of the produce of Italy in raw cotton.

The only exhibitors of cotton goods from the United States were Gardner, Brewer, and Co., of Boston, Mass.

Three prize medals were awarded to exhibitors of raw cotton grown in New South Wales, and the same number to the exhibitors of the same material grown in Queensland.

Flax and Hemp.—This important section of textile industry presented few novelties. On the whole, the flax and hemp manufacture proper may be said to have been stationary

since 1851. The manufacture of jute has, however, progressed enormously, and it is stated that 40,000 tons of this material are now worked up annually in Scotland.

The foreign productions in flax and hemp were pretty much on a par with those of 1851.

Among the flax machines exhibited was an improved Power Loom, by Harrison and Sons, Blackburn. It is supplied with a self-acting positive letting-off motion, which delivers the warp as required by the taking-up motion for the cloth, which motion is also positive. These two motions work in concert, and with such precision that the warp is delivered from the yarn beam with the same regularity when the beam is almost empty as when it is full. The taking-up roller of the loom is covered with a patented surfacing material instead of that in ordinary use, made of emery. It is also supplied with the weft-stopping motion, and other important appliances. A loom of this description is capable of weaving upward of 180 yards of linen per week.

Silk and Velvet.—The English silks made a great show in themselves, and there has been nothing yet displayed by foreigners which equals our best specimens of loom manufacture. Grant and Gask sent some gorgeous specimens of English made silk curtains, where the brocade fabric is interwoven with designs in spun glass, as fine as silk. These *tissues-de-verre* are of a similar manufacture to the hangings that are now in the throne room at St. James's, and which have been some thirty years in use, though still as bright as ever. Fry and Co., and Pim Brothers, exhibited every kind of poplin, either watered, embroidered, or figured. One of the best examples was a copy in white silk of the various forms of snow crystals worked on a blue ground, by which, of course, an almost endless diversity of beautiful little stars is obtained. Of silk, the most important manufacture of France, the finest specimens were from Lyons. In elaborately figured silks, France is unrivalled in the manufacture. MM. Schulz set out two pieces of white silk—the one embroidered with orchids, and the other with birds of paradise. The work was a perfect marvel; it was the most astonishing piece of silk in the whole exhibition; and along with it were shown 300 reels of thread of various tints, which had been required for the production of the figures.

The show of ribbons sent by Coventry was magnificent. There are apparently very few ribbons made anywhere in England but at Coventry—certainly none which can compare with them, either for fabric or design.

The most beautiful silk fabric which the French now make, and which is in common use, goes by the name of chiné. They excel all the world in this. The peculiarity of it is, that the pattern, which may display any amount of coloring, is printed on the warp and on the warp alone, and that as a consequence it appears, after the weaving has been completed, with a vague and misty outline; to produce a good pattern by such means requires the nicest care.

Woollen and Worsted and Mixed Fabrics.—In these great and important industries a most decided improvement is manifested in the general taste of the goods and perfection of dye and finish.

On the foreign side, France, Belgium, Austria, Prussia, and Saxony (the two latter as States of the Zollverein) exhibited largely and effectively alike in woollens and mixed fabrics; and marked improvements have taken place in certain directions. France has probably made the most decided improvement in the greater substantiality of her woollen cloths; in shawls and the more ornate mixed fabrics, her pre-eminence in certain points remained much the same.

Carpet Manufacture.—In carpets the exhibition is well represented, but there is but little novelty either in design or manufacture.

Tapestries of Gobelins and Beauvais.—The tapestries of the imperial manufactory of Gobelins and of the sister institution of Beauvais at this very day are as highly prized as when the royal works were first established two centuries since. Their exhibit consisted of four tapestries and two carpets—the large central tapestry containing a full-length portrait figure, and the two carpets are from the parent institution (Gobelins), and the fruit pieces to the right and left from Beauvais.

The tapestries from Beauvais were in no way inferior to those of Gobelins; yet they differ so widely in character that a mere glance will suffice for the distinguishing between the works of the two manufactories. Those from Beauvais are of still life and fruit, while those from Gobelins are of an historical character.

Kamptulicon was exhibited by Taylor & Co., and is a floor cloth made of cork and India rubber. It is admirably adapted for all situations where the floor is damp, being exceedingly durable.

Printed and Dyed Fabrics.—Probably in no department of the whole exhibition has there been so thorough a change since 1851 as in that of printed fabrics: mousselines-de-laine, barèges, and other printed fabrics of kindred make having been superseded by alpacas, mohairs, and various light and elegant mixed fabrics. Nevertheless, the leading printers, both of Manchester and Glasgow, contributed little to the display. In the matter of design the great body of English and Scotch calico printers are pretty much where they were fifteen years ago.

The French printers made a great effort to completely illustrate everything they were doing, especially in the way of improvements in printed fabrics: the result was, they made a valuable display, and deservedly carried off the largest portion of the honors.

A systematic illustration of the various improvements in the chemistry of calico printing and dyeing since 1851 was given by Mr. Rum-

ney. All the new dyes and chemicals of any importance introduced into the trade during the last eleven years were here shown, as illustrating "the latest chapter in the history of calico printing." The various dyes and chemicals were exhibited in bottles; and the examples in cotton, silk, wool, and mixed fabrics were also shown. Amongst them was the application of Mr. Perkin's discovery of coal tar and its remarkable product aniline as a coloring agent. Aniline colors were shown in their varied forms of dyeing and printing as applied to cottons, cotton velvets, silk, and woollen, in shades of purple, reds, and blues, known as mauve, magenta, &c. The colors in silk were especially brilliant. There were also illustrations of murexide colors on cotton and woollens. Murexide, generally called Roman purple, was in great vogue amongst printers and dyers about 1856. This is a guano color, as the uric, and is found in sufficient quantities in that substance, which is first treated with hydrochloric acid, and subsequently with nitric acid. The final result was seen in the specimens exhibited. To these were added pigment colors fixed with glue and mercury, under Lightfoot's patent; also aniline and pigment colors. Pigment colors fixed by albumen and substitutes for albumen, such as lacterine, gluten, &c., were shown; and coal-tar colors in combination at one operation with dyeing and printing. Specimens of emeraldine, a new green, and azurine, a new blue, were contributed by Mr. Crace Calvert, F.R.S., of Manchester. Emeraldine is produced by preparing cotton with chlorate of potash; then printing with an acid chloride of aniline, in a given period a bright green appears; next the green is subjected to the action of a solution of bichromate of potash, and the tint is changed to a deep blue, which has been called azurine.

Furniture chintz printing, represented by two exhibitors, stood where it did in 1851; the printed table covers were as stationary. Of printed felts there were better specimens.

In dyeing, pure and simple, a great triumph has been achieved by English dyers on this occasion.

France exhibited largely, and did justice to the power of production alike in tasteful design, beauty of mechanical result, and brilliancy of color. Austria made a great advance; but the most remarkable progress was that of Russia, for, notwithstanding the disastrous war and political distractions since 1851, Russia produced in this Exhibition most remarkable specimens, probably the best of the kind shown, considering that eleven years ago the industry may be said not to have existed.

A beautiful combination of science and mechanics as applied to the art of engraving was shown in the electrograph engraving machine of Mr. Henry Garside, of Manchester. This is intended for the engraving of copper cylinders used in calico printing, and may be described here. The distinctive feature of this apparatus, apart from its mechanical arrangement, consists in the application of voltaic electricity in communicating movement to important and delicate portions of the machine. The cylinder to be engraved is first coated with a thin film of varnish, sufficiently resistent to the continuous action of the strongest acids. The required number of copies of the original design are then traced on the cylinder by means of a series of diamond points arranged on the machine, in a line parallel to the cylinder. The metallic surface of the latter thus becomes exposed at the parts required to be engraved. A bath of nitric or some other potent acid is afterward used to deepen the exposed portions to the extent required, and thus the operation is completed. The diamond points are all in connection with as many small magnets, and these are so arranged that intermittent voltaic currents are established in unison with the original design. The results are that the diamonds are withdrawn or advanced at the proper moment, and the tracery forms an exact counterpart of the copy. There are, also, adjustments, which enable the operator to enlarge or diminish at will the size of the patterns to be engraved.

Lace Making.—The respective positions of the countries which may be said to compete in the lace manufacture have, we think, continued unchanged since the last Exhibition. England has made a wonderful advance. France well supports its ancient reputation; but, undeniably, Belgium has contributed the most exquisite specimens.

In the Belgian Department M. Hoorickx exhibited a beautiful novelty—a handkerchief which presents every variety of point stitch, and several styles of design. At the extreme edge of the lace border is a wreath of convolvulus leaves and flowers; within that is a kind of arabesque pattern enriched with *plumetis* or satin-stitch, which is quite a new feature of the Belgian laces; and then comes the triumph of art in a border of exquisite little bouquets; the miniature flowers are all in relief, the rose showing its circling petals, and other blossoms their natural forms. The small centre of cambric is enclosed within a mechanical design of heavier substance. The price is about £200. A section of flounce, half a yard wide, with flowers in the same style of relief, was also displayed: the value of the set of two, £800; that of a tunic with berthe and handkerchief, about the same. Van Rossum showed point sets of handkerchief, lappet, collar, and sleeves: each set is worth £240, and occupied four years in making.

The French have much improved the "guipure," called by them "Maltese." Among various shawls and flounces of Chantilly was M. Seguin's half shawl, valued at £140, pattern, a Chinese garden. The Compagne des Indes showed a point d'Alençon flounce, priced at £1,000.

The exhibition of British lace was admirable, not only for its beauty and richness, but for the

variety of object in which Honiton, Ireland, and Nottingham compete for supremacy. The larger kinds of lacework, as curtains, &c., came almost entirely from Nottingham: the honors were carried off by the exquisite designs of Copestake and Moore. The Nottingham imitations included Spanish shawls and mantillas, and black Chantilly, remarkably improved. Reckless and Hickling, of Nottingham, exhibited laces, flounces, tunics, mantles, shawls, coiffures, and barbes in one piece, all made by the pusher machine, with the application of the jacquard; all the fabric pattern being made by the machine, and the outline being entirely needlework. These goods nearly rival the hand-made laces of Cambray, Chantilly, and Bayeux.

A case of Spanish blondes contained articles richly embroidered in colors and gold thread; the real gem of the collection, however, was a white mantilla—the pattern, wreaths of flowers supported by flying cupids, of solid texture; the ground light guipure. Saxony is remarkable rather for the low price than the quality of its laces; but Berlin added to the attractions of the Exhibition a very creditable suit of Brussels point on real ground.

Furs, Feathers, and Hair.—The finest specimens of this class were grouped or displayed in trophies. Messrs. George Smith & Son, Watling street, displayed, in this form, various descriptions of sable, and eight varieties of fox; and beneath these, magnificent paletots, with smaller articles intermixed. The most striking feature of the group was a mantle of pure white ermine, without the usual intermixture of tails, but trimmed with a broad border of delicately-marked chinchilla. The handsome trophy of Mr. Nicholay, the court furrier, formed one of the most attractive ornaments of the nave. Here the Russian sable was to be seen in perfection: a complete set of it, including trimmed velvet mantle, is valued at £500. Among the treasures of the collection was a sea-otter skin, worth £50.

De Costa, Andrade, & Co. displayed an ostrich feather trophy, in which as many as ten different colors of tints were presented in one single feather. The white plumes were examples of purity of color and excellence of finish; they were selected from 5,000.

Among other curiosities exhibited was a case containing specimens of human hair of great length, shorn from the heads of English, German, French, and Italian ladies—hair of every hue, from pale auburn to jet black, and of every degree of fineness and silky gloss. The honors in this class, however, were carried off by some fair unknown of Great Britain, from whose head had been severed a lock of jet-black hair, no less than 74 inches in length!

India Rubber Manufactures.—There were upward of twenty exhibitors of various manufactures in this material, besides those of gutta-percha, and other analogous substances.

Prominent amongst these were the original patentees in England, C. Mackintosh & Co., of Manchester, who exhibited beautiful specimens of the raw material, showing the process of manufacture, from the masticated lump to the finished sheet. In soft vulcanized India rubber was shown a door mat, produced by making incisions with a sharp knife at regular intervals, which being kept open, during vulcanization, a mat is produced, firm to the foot.

Warne & Co. showed their novel junction rubber for piston rings and pump buckets, made of soft and hard rubber combined; and their screw-shaft water-stop for ocean steamers, which prevents the necessity of stoppage for repacking when at sea. This is effected by the inflation of two rings so arranged as to answer the end required whilst the stuffing box is being repacked. They also showed an elastic bath towel, having a rubber warp alternate with cotton.

The North British Company, of Edinburgh, excelled particularly in their overshoes. They showed, let into the floor, the largest valve which has ever been made, being six feet by four inches in diameter, and one and a half inches thick, made of pure rubber, in the manufacture of which no solvent had been used.

Walton & Co., of Chiswick, showed samples of their "campticon, or India-rubber substitute," made from oxidized oil, freed of unctuous matter, and formed into semielastic resin, which, for steam packing, driving bands, and hose, answers as well as India rubber, and at a considerably less cost.

Perreaux's method of constructing pump valves, is copied from the valves contained in the human heart. The valves are made of India rubber vulcanized for the purpose; they are of the form of a tube flattened at one extremity, similar to the mouthpiece of a hautboy. The thickness of the sides of the upper part diminishes gradually to the top, where the two sides meet and form two lips, which, when the valve is in a state of rest, are in close contact, and prevent the downward passage of the fluid. With any upward pressure the lips freely separate, and allow of the upward passage of the fluid; the gradual diminution in the thickness or tapering of the sides forming the lips of the passage enables the valve to open and close with the slightest variation of pressure. The passage for the fluid through these valves is larger than in any others of the same dimensions; they also possess the advantage of having a "clearway," there being nothing whatever to retard the flow of water; and, owing to the self-acting principle imparted by the elasticity of the material, they close perfectly and instantaneously the moment the pressure from below ceases. The lips of the valves being flexible and elastic, any foreign substance which may enter the suction pipe, such as sand, gravel, coal dust, cinders, grain, cotton, tow, rags, chips of wood, &c., passes freely through, without in the least interfering with or deranging the action of the

valve; semifluid material, as tar, passes freely through. Should a pump of this description remain dry for any length of time it requires no priming by pouring water into it, as other pumps do, but is always ready for immediate use. In practice these valves answer exceedingly well; they are extensively used in soap and alkali factories, and by paper makers, tanners, bleachers, and dyers, in pumping paper stuff, chemicals, tan liquor, &c., The pumps exhibited had glass cylinders or barrels, so that the action of the valves might be seen. It is found advantageous to use glass barrels, as they are free from corrosion, and lubricate themselves with the material which is pumped through them.

Leather, Including Saddlery and Harness.—Additional warranty was given to the old fable of "nothing like leather" by the contents of a small court of British specimens, remarkable both for material and manufacture.

From the headquarters, Bermondsey, Hepburn & Son sent an enormous butt-hide of black enamelled leather, 11 feet long by 10 feet 3; and a large number of tanned English sole butts, the average weight being 43 lbs.; the thickness and texture being very remarkable. Samples of all the tanning materials used in England were shown in front of these butt-hides—English oak bark, valonia, gambier, shumac, mimosa, hemlock, oak bark, and others. Leather for boot tops, thin and light in texture as a lady's glove, for jockey boots, contrasted strongly with the enormous thickness of the leather made from the walrus hide. There was also buff leather for soldiers' accoutrements. In saddlery and harness, Mr. Cuff showed a magnificently embroidered military state saddle, the property of the Duke of Buccleuch; it is covered with blue velvet, richly worked in silver and gold, and is a gorgeous piece of work, rivalling some of the state trappings of India. Merry, of St. James's street, sent a beautiful saddle and suite of harness, made to the order of the Prince of Wales. The whips, by Swaine & Adeney, formed a brilliant and tasteful display, a case of theirs being valued at more than a thousand pounds. Among other applications of leather were specimens of that once fashionable accomplishment for ladies, potichomanie, snuff boxes, and embossed leather for walls, screens, and covering furniture.

Paper Making and Stationery.—The French paper makers made a far more satisfactory appearance than the British; and any one, after a stroll through their court, could form a very fair judgment concerning the peculiarities and excellences of French paper. In France linen rags appear to take the place of cotton in England, and the average quality of the papers is, therefore, higher. In the commoner kinds of printing papers, such as are used for our newspapers, France cannot compete with England. Very cheap French papers seem to be produced by a free admixture of clay, and they drop apart under tension, like tinder. These printing papers are generally unsized, one advantage of which is, that the paper takes the impress of the type with greater perfection. In their writing papers they mix their size with the pulp, whilst we commonly spread it on the surface, and often by this skilful glaze a poor paper is passed off for a good. In fancy writing papers we know nothing in England to compare with the French delicacy of tint and finish; and there were colored note papers with a variety of ornamental water marks. French writing paper, if sufficiently known, would, like French gloves, have many purchasers. It is easily written on, is light, and finely finished. For foreign letters there is nothing to compare with the thin French paper. We noticed some foolscap, light as tissue paper, weighing only six pounds to the ream, and which can be written on both sides.

There was also some paper made from the hop bine, by Barling, amidst the hop grounds of Kent; and some board made of paper, of which the exhibitor, Mr. Towle, more than twenty years ago, built himself a house, which has once, at least, successfully resisted a fire, that burned to the ground the adjoining substantially brick-built residence. The application of silicate of zopissa, a description of Arabian gum, to paper, by Mr. F. Szerelemy, has been found to give it so much strength that the material may be used for rocket tubes, planking for ships' sides, water pipes, and, it is even said, for heavy artillery.

Burgess & Ward, of Mendip Paper Mills, near Wells, showed excellent specimens of straw paper, with samples illustrating the various processes of its manufacture and application. These makers claim for their paper superiority over that made of common rags, and to prove its capabilities showed its adaptibility for newspapers, railway time tables, placards, &c. They also exhibited book work, music, fine engravings, and lithographs, printed on their papers; also paper hangings, enamelled papers in various hues, fancy box papers, in gold colors; and a delicate polychromic printing, executed on their paper by Day & Son. All these specimens showed good surface and texture; proving that the richest work tells upon straw paper as well as on the finest rags; and Ward's paper has less of the objectionable brittleness than any other straw paper.

A very interesting collection of the products made from the leaves of the maize plant was shown; they included a nutritive bread stuff; a fibrous material to be spun or woven like flax; and a pulp from which a most beautiful paper can be made. The latter process, as carried on in the Imperial Paper Manufactory at Schloegelmuehle, Lower Austria, gives a produce of 100 lbs. of paper from 300 lbs. to 350 lbs. of head leaves, irrespective of the other materials. And, what is important in this new material, it is very abundant; for, according to official accounts, the maize planted in Austria yields, annually, head leaves estimated at 2,750,000

cwt., which, worked up into paper, would exceed 1,500,000 lbs. So strong and durable is maize paper that, if ground short, it can be used as an excellent substitute for glass, so great is its natural transparency and firmness.

Printing.—Plate, lithograph, and other modes of printing were well illustrated. In this class were exhibited specimens of printing type. For good, clear-cast, and durable type England has a high reputation; but, in the decorative parts of the art, ranks low in the cultivated judgment of her Continental neighbors. None of our printers' ornaments will stand comparison with those put forth in the exquisite pattern books of Paris and Vienna.

Probably the most curious feature of this department was the collection of Trübner & Co., of Paternoster-row, consisting of their Russian publications. From information supplied, it appears that the Russian press, the first ever introduced into that country, was established in 1853; and so signal seems to have been its success that it boasts now of more than fifty original works, which have exercised an enormous influence on the development of Russian affairs. The works hitherto produced are of a political, historical, literary, and theological character. We remark among them the first volume of a Russian Bible, containing the complete Pentateuch. It should be remembered that the Russian church never allowed the Bible to be translated into the vernacular, and all honor is, therefore, due to Mr. Trübner for having been the first to do what one would have thought to be the peculiar province of the British and Foreign Bible Society. The books are all very creditably got up, paper and printing being very excellent,—indeed, it is reported that London Russian type has become the model from which modern native Russian fonts are being cast.

Among the writing inks was Blackwood's Jesoline, the color of which, being held in solution, never deposits, and the ink, therefore, does not get thick.

Black-lead and Colored Pencils were exhibited. Melville's solid Red Ink deserves notice, so also Messrs. Wolff's Colored Crayons in cedar; and in the foreign courts were to be seen how far the pencil manufacture can be carried, and at what prices the pencils may be obtained. Grossberger & Kurz, of Nuremberg, manufacture pencils the full length, which they sell at the very low rate of 1s. 1d. the gross.

In Steel Pens English manufacturers reigned supreme.

Reynolds & Sons, Vere-street, have contrived some Playing Cards for the use of the blind; the pips being cut out and mounted on ordinary cards, so as to stand out in relief.

To the assemblage of choice examples of color printing, Leighton Brothers, of Milford house, Strand, contributed a collection of their Chromatic Prints, such as are occasionally given away with the numbers of the "Illustrated London News." Of some of these prints as many as 230,000 copies have been printed.

In printing surfaces the Electro-Block Company showed their most ingenious process of enlarging and reducing blocks. This, with Mr. W. J. Linton's kerographic process and Mr. Wallis's new art of auto-typography, illustrated one among the very many attempts to effect that long-sought desideratum—an effective metallic relief produced without engraving. Bradbury & Wilkinson exhibited minute engravings for the prevention of forgeries in notes; and the exquisite specimens of the nature-printed books produced by the late Henry Bradbury were also shown—an honor to any country.

The specimens of lithographs and chromolithographs shown by Day & Sons, Rowney, Vincent, & Hanhart were among the finest that have ever been displayed. It is difficult even for the most practised eye to detect the difference between some of the best specimens of these and carefully finished water colors.

Bookbinding.—Leighton, Son, and Hodge's work displayed most artistic skill combined with some special excellences: amongst the items most noteworthy, were "The Sermon on the Mount," the largest block ever engraved or worked in gold in one piece. The arming press by which the impression was made, is the most powerful in the world: it weighs upward of ten tons. This firm was the first to introduce for the ornamentation and lettering of books, aluminium.

In matters of taste and delicacy of manipulation, the French are in advance of us; as exemplified in M. Engelmann's large volume bound in red morocco, inlaid with dark green; and a square volume in green morocco, inlaid with small dice of orange and yellow. In clasping, the French likewise excel. MM. Maine and Son, of Tours, showed a copy of "La Touraine," unique, and one of the most beautiful vellum books in the world; the plates are like sheets of ivory; binding, morocco, inlaid.

Educational Works and Appliances.—It was judiciously intended by the Committee to whom the Educational Department of the Exhibition was intrusted that the contributions to it sent by the various countries should be in juxtaposition; to insure their being seen and compared with greater facility. But the Foreign Commissioners determined upon keeping each educational collection separate; nevertheless, we shall describe the more noteworthy objects of the several collections in one group.

The British Educational Collection was not very extensive; the books exhibited were numerous and well chosen; some eminent publishers sent their most approved Educational Works. The various well-known educational institutions showed what they have done in providing books and requisites of a useful and convenient description. There were books for the blind, and untearable books for children; excellent maps, and a projection of the two hemispheres, representing the globular form

of the earth in such a way as to prevent or remove the usual crude ideas of young persons on the point. Of the many good globes which were exhibited, that of Macintosh, made of India rubber, seemed to be the most convenient; when not inflated it occupies very little space.

The Austrian Educational Collection was attractive; the Government priding itself on having directed education, in a special manner, to practical purposes, the country being well provided with schools of every kind and for every class. Among the requisites for teaching shown by Austria was means of instruction in shorthand, a branch not often considered as belonging to ordinary education. We found maps printed, not on paper, but on woven fabrics, and hence more convenient and durable than the ordinary kind; also aids in the way of rendering formal lessons unnecessary; Pictures and other objects for the instructive occupation of youth; Models of Schools, &c. A variety of Mechanical and other Toys was shown.* The models and apparatus connected with realistic schools, or those affording, in addition to ordinary instruction, facilities for acquiring special branches of knowledge relating to manufacturing and trading pursuits, were very interesting. Philosophical apparatus used in the higher grades of instruction was also shown; and illustrations to anatomy and comparative anatomy.

Belgium had objects devoted to the school of industry, besides ordinary apparatus, such as books, models of school desks, &c.; a collection of substances used for domestic purposes; historical and mechanical diagrams; designs for shawls, &c., some of them extremely beautiful; and specimens of the work done by the pupils. In a Belgian school museum were diagrams and other illustrations of natural history; collections of minerals and philosophical instruments; specimens of the works of the blind, and of deaf mutes, &c.

France had arranged her educational contributions in a very pleasing and convenient way, in two compartments: the first devoted to the means and appliances for instruction; the second, to the results obtained from them in the shape of works executed by the pupils. In the former, besides an excellent collection of books connected with pedagogy, globes, maps, &c., was an Orrery, placed within a sphere of glass, having the fixed stars depicted upon it. There were also models of solids and curves, photographic copies from antique busts, anatomical and mechanical diagrams, natural history and botanical collections, &c. In the compartment which contained the works of the pupils, was a painting on porcelain, by a young workman only eighteen years old; and some beautiful specimens of flower painting, sent by the School of Design of the city of Paris. The work executed by the blind, and by deaf mutes, was very striking.

The Educational Collection of Italy included some good diagrams; models of crystals and solids; a collection of chemical substances; a small museum of economic botany, containing the various agricultural products of the country, mineralogical and natural history specimens, &c.

Prussia, long distinguished for her exertions in the cause of education, among her educational apparatus exhibited some good Maps and Globes, both plain and in relief; apparatus for teaching the rudiments of geometry by superposition of the surfaces, or parts of surfaces, which are to be proved equal; some very excellent elementary collections of minerals, &c.

The Educational contributions of Russia included models of animals and fruits, and representations of the different varieties of the human race. Switzerland had done little to show the progress which she has really made in education. Her contribution was nearly confined to a few neat mechanical diagrams, collections of common substances, objects relating to natural history, and herbaria.

Furniture and Upholstery.—There was a large show of excellent furniture, which not only impressed one with its sumptuousness and magnificence, but also with its bold and elaborate beauty of design, its art-workmanship and high finish. And in no class of the Exhibition were there better proofs of the advancement of the national taste since 1851 than in the furniture display. Some of the fine forms reminded one of the furniture artists of last century, when the cabinetmaker was an artist as well as an artisan. Our success in this branch assures us that we need no longer ransack old mansions, or curiosity shops, for furniture of beautiful design as well as craft, when it is so readily produced by the workers of our own day.

All our great firms competed here, and the result of their combined efforts was an exhibition which defied comparison with that put forward by any other country. The Sideboard Bookcase, inlaid with Wedgwood plaques, and the Robinson Crusoe Sideboard—the former for exquisite and most harmonious decoration, and the latter for its spirited carved work, were among the most successful specimens in this court.

There were shown here some clever illustrations of how far machinery can be employed instead of hand work in carving; in this subdivision of labor, the mechanical stage is likely to be carried so far as to reduce to the minimum the life, feeling, and finish of hand labor.

Iron Manufactures.—*Yield of Cast Iron.*—Great progress has of late been made in this respect. In the Great Exhibition of 1851 there was a model of a blast furnace from the Cwm Celyn Works, Monmouthshire, which yielded a weekly average of 209 tons of white pig iron during twelve consecutive months. This was

* The trade in toys in Austria is very great. The Gröden Valley, in the Tyrol, exports annually three hundred tons of wooden toys, that reach every quarter of the globe.

regarded as a very large amount. The gradual increase in yield in different districts is certainly one of the most interesting points connected with the development of the iron trade in modern times. Not many years ago, a weekly return of 70 tons was considered good, but now a single furnace has yielded the enormous amount of 600 tons in a single week. Some of the Aberdare furnaces are reported to have done excellent work, and to have yielded a weekly average of 400 tons. This has been effected by what is called "driving hard"—*i.e.*, sending a large quantity of blast through the furnace in a given time. Great yields have recently been obtained at the Barrow-in-Furness works, Cumberland. These works are quite of recent construction, and were represented by a costly mahogany model, occupying a very large superficial area. There was also a single model, made to open, of one of the furnaces. The average yield in one of these furnaces per day during the fortnight ending the 16th of April, 1862, was 91 tons 7 cwt. 3 qrs., or the enormous amount of about 640 tons (short weight) in a week of seven days. In one week this furnace yielded not less than 684 tons (short weight)! The qualities of the pig iron were 3.5 between Nos. 1 and 4, and 2.5 between Nos. 5 and 6, inclusive of 35 tons of mottled pig. It is exclusively rich red ore that is smelted at these furnaces, and the fuel is Durham coke. Gases are economized in raising steam, and their propulsion to a distance is aided by the exhaustion of a fan.

In the Austrian Department Charcoal Pig iron was shown; it is produced with a consumption of less charcoal than is known in any other locality. The ore is brown decomposed spathose ore, containing, when roasted, 52 per cent. of iron, and the products are gray iron and spiegeleisen. Only 60 parts by weight of charcoal are required to produce 100 of pig iron. Models of furnaces for smelting iron and copper were found in the Russian Department. They are long and rectangular in horizontal section, and are provided with numerous twyers. One of those furnaces is reported to have been in operation for smelting iron during a year and a half. A large yield and reduction in the amount of fuel are stated to be the advantages of this kind of furnace.

Forged Iron.—Some of these specimens were interesting as illustrations of remarkable malleability, others as displaying skilful workmanship, and others on account of their large dimensions. With regard to forgings remarkable on account of their large dimensions, the two objects which stood out preëminently were the enormous Crank Shaft and the large Armor Plate manufactured by the Mersey Steel and Iron Company. The monster shaft weighs about 25 tons, and is destined for one of her Majesty's ships. During the process of forging, this heavy mass was moved by powerful and skilful mechanical appliances, with ease and rapidity, just as a blacksmith handles his iron. The plate bears the following inscription:—"This Armor Plate, 21ft. 3in. long, 6 ft. 3 in. wide, $5\frac{1}{2}$ in. thick, having a superficial area of 133 feet, weighing upward of 13 tons, was forged at the Mersey Steel and Iron Works, Liverpool, and has been neither smithed nor tooled since it left the steam hammer. This plate would have been made 15 ft. to 20 ft. longer if space could have been obtained." It is an admirable specimen of forging. The great Horsfall Gun, of which every one has heard, is another testimony to Mr. Clay's (the manager of the company) skill in forging large masses of iron. This gun was made several years ago: it is 10 in. in the bore, and has stood charges of 80 lb. of powder.

Welding.—The Exhibition contained many very interesting illustrations of Welding under difficult conditions. The Butterley Company's large girders, of which one was in the form of a double T, 12 in. across each end and 3 ft. deep, was welded longitudinally. In the English Department was shown a stamped, solid, wrought-iron wheel, made by an ingenious process invented by M. Arbel, a Frenchman: it was forged under the steam hammer, and combines strength and cheapness. In illustration of the successful welding of steel and iron in railway tire bars, we may refer to the specimens of the Monkbridge Company's collection. The iron tire being heated to whiteness, and dusted over with borax powder, the melted steel is cast round it: the union seems to be perfect, and we have examined specimens which have been hammered out into thin plate without presenting any sign of separation. This process is also the invention of a Frenchman, and promises well.

The French appear to have made great progress in the manufacture of iron, and we are indebted to them for many ingenious mechanical contrivances. Two instances in the case of railway wheels have just been mentioned, and to these might be added a third—the process of Pétin, Gaudet, and Co., of making "weldless tires," of which the Blaenavon Company exhibited specimens manufactured by themselves.

Rolled Iron.—Specimens of Boiler Plate were shown, doubled hot and doubled cold, and punched under various trying conditions. The Butterley Company exhibited a Rolled Boiler Plate, 12 ft. 9 in. long, 7 ft. 6 in. wide, and $1\frac{1}{4}$ in. thick. The solid-rolled Engine Beam Slab well deserved attention: it is 31 ft. 6 in. long, 7 ft. wide in the middle, $2\frac{3}{8}$ in. thick, has a superficial area of 163 square feet, and weighs 7 tons.

Sheet Iron.—Of sheet iron there were numerous fine illustrations. The Belgian sheets were, of their kind, unrivalled, and were specially characterized by their smooth and dark bluish gray glossy surface. The color is obviously due to a thin and firmly adherent skin of oxide of iron, which has been detached here and there near the edges of several of the

sheets, clearly revealing the color of the subjacent iron. Russia still continues without a competitor in the production of a peculiar description of sheet iron, which has long been highly esteemed in commerce. The quality of the iron, which is both smelted and worked with charcoal throughout, is excellent, and the dark polish on the surface is remarkable. Austria exhibited excellent sheet iron, and so did the Zollverein, except the specimens of the so-called transparent iron, which are a sham. This iron is not transparent at all, but is perforated with innumerable small holes through which light passes, thus showing how inferior in malleability iron is to gold.

Bars, Rails, and Girders.—This display was magnificent; and in no branch of the metallurgy of iron has greater progress been made since the first Exhibition of 1851. The mill power required to produce some of these articles is enormous, but we are probably far from having reached the maximum limit. There were gigantic rails exceeding 100 ft. in length, but these were to be regarded as curiosities, interesting as exhibitions of power and effective mechanical appliances, showing what might be done if required. In general they were admirable specimens of rolling. The Butterley Company sent a Rail 117 ft. long, and 5¼ in. deep, and a Tension Bar for Girders, 83 ft. long, 1 ft. wide, and 1 in. thick. The Dowlais Company exhibited two rails of the following dimensions: one 53 ft. 6 in. long, 4¾ in. across the head, and 10 in. deep, the other 31 ft. 6 in. long, 5½ in. across the head, and 15 in. deep. In the Zollverein was a section of rolled rail 5⅞ in. across the head, and 18⅝ in. deep. Belgium made a very creditable show of rails and rail sections; and it is declared that in certain foreign markets she has beaten the English producer of rails, both with respect to quality and price. The Austrian Society of State Railways exhibited specimens of rails—some with the head of granular and the foot of fibrous iron, and others of puddled steel.

Dupont and Dreyfus (France) exhibited a fine and extensive collection of objects of interest, especially with reference to building constructions. There were flat bars and girders in great variety and profusion, indicating excellent workmanship. In France iron is extensively used for building purposes, and is applied with much science.

The Bridge-links for Suspension Bridges manufactured by Howard, Ravenhill and Co., Rotherhithe, were interesting as having been made by rolling. One of the links exhibited weighed 6½ cwt. From the time the slab left the furnace to the complete formation of a large link about four minutes elapsed.

Armor Plates.—There were no metallurgical illustrations in the Exhibition of more interest than the rolled Armor Plates for ships. Of these two were sent by John Brown and Co., Atlas Works, Sheffield. The immediate dimensions are as follows:—(No. 1) length 21 ft. 8 in., width 4 ft. 2 in., thickness 6½ in., weight 10 tons 12 cwt.; (No. 2) length 24 ft., width 3 ft. 8 in., thickness 5 in., weight 7 tons 17 cwt. A few years ago the rolling of such enormous masses of iron would have seemed incredible. Brown and Co. also exhibited large, but much thinner plates outside the building in Exhibition-road; one was intended for gunboats, and is 22 ft. long, 7 ft. 2 in. wide, and 2 in. thick; and the other for engine beams. These two plates were thus manufactured. The metal consisted of "best new scrap," obtained from a mixture of Swedish, Shropshire, and Derbyshire refined iron. It was balled under a 4-ton steam hammer, piled under a 6-ton helve, and rolled into bar, re-rolled into slabs, all crossed, then rolled into "moulds," and lastly, rolled into the finished plates. There are 360 layers in the 6½-inch plate.

The Butterley Company sent two Armor Plates, each 14 ft. long, 5 ft. wide, and 4½ in. thick, and weighing when finished six tons. The expense of manipulating such enormous masses of iron as these armor plates is necessarily very great; and the present cost of them to the nation ranges between £35 and £45 per ton!

Canadian Iron.—Enormous deposits of magnetic iron ore—which, when pure, is the richest of all the ores of iron—have been discovered by Sir William Logan in the Laurentian rocks, which present no traces of organic remains, and are the oldest sedimentary series in the world. The ore occurs interstratified with the rocks containing it. The accumulation of this ore in some localities is so great as to appear incredible. Thus, one bed is not less than 500 feet thick! On the Rideau Canal there is another bed 200 feet thick, which is now worked at Newborough, and from which the ore is conveyed to Kingston on Lake Ontario. Canada also possesses extensive tracts of bog-iron ore on the north side of the St. Lawrence. Cast iron from ordinary bog-iron ore is about the last kind of metal many founders would dream of employing for such a purpose; yet in the Canadian Department was exhibited a pair of Railway Wheels which have travelled, without showing much evidence of wear, not less than 150,000 miles, or about six times round the earth. And it should be remembered that in Canada there are great alternations of temperature, the heat of summer being intense, and the cold of winter extremely bitter.

Iron in India.—There was an interesting series of specimens shown in the Indian department. Iron ores, chiefly earthy-brown hæmatite and magnetic ironsand, occur abundantly in several parts of India, and have been smelted, from time immemorial, by the natives in small furnaces. The East Indian Iron Company sent an instructive collection of Iron Ores and the various products which they yield. There are several blast furnaces in India on the European model, using charcoal as fuel. It is a remarkable fact, that in one locality in the

Nerbudda Valley, good Bar iron, but only in small pieces, can be made and sold by the native smelters under 5*l.* per ton.

Swedish Boat Plates.—Sweden's chief ore is magnetic oxide, of which fine and characteristic specimens from various localities were exhibited. An instructive series of the far-famed Dannemora ores and the associated rocks specially deserved attention. The ores from this locality are among the finest in the world: and the iron which they yield always commands a high price, on account of its producing good steel. The Swedish iron ores differ much in quality, even when in appearance they closely resemble each other.

One of the remarkable objects shown was the fore part of an iron paddle steamer, 200 feet long and of 120 horse power, which, during a fog in September, 1860, and while going at the rate of eight or nine knots an hour, struck on a rock. The iron was "crumpled up like a piece of brown paper," and yet the vessel got off and proceeded without difficulty to Stockholm, about 100 miles distant. The plates were made and the vessel was built at the Motala Iron Works.

Galvanized Metals.—Amongst the exhibitors of Galvanized Metals were Morewood and Co., who say that their materials are more durable than zinc. They may be applied in the form of tiles, which are 3 feet by 2 feet, and are curled at the edges to finish as rolls, and are stiffened by transverse grooves. They are also made in sheets of 500 feet and upward in length: thus they can be laid with great expedition by any laborer who can use a hammer; whilst considering that boarding is not required, the cost, say the patentees, is less than asphalted felt. Amongst the other productions of the same manufacturers, were welded-iron water and gas tubes.

With galvanized corrugated iron Morton and Co. can cover an area of 100 feet square (plates and uprights only, furnished them) in five spans, for £370. They can provide and erect an iron cottage with five rooms and entrance porch for £120.

For Zinc Roofing, the Vieille Montagne Company, and their manufacturing agents, F. Braby & Co., were exhibitors. Zinc is now constantly employed in Paris, for buildings much larger in scale, and more substantial in construction, than the London houses.

Wolston's Torbay Iron Paints for coating materials which are to be under water, or in a position to be affected by damp, are manufactured at Brixham, Davenport, and are successfully used in dockyards and public works. A caisson in Woolwich Dockyard, painted nine years since, is in a perfectly sound condition, both under water and between wind and water. It is is also said that the Torbay paints have been found to stop corrosion that has set in.

Webster and Horsfall exhibited a case of Iron Wires, including music, needles, and flat spring wires, the latter manufactured from the patent steel wire, which was also shown; with samples of submarine telegraph cables, coal-pit ropes, and ropes for ships' rigging. There were shown two coils of Steel Wire without a weld, of the extraordinary weight of 1 cwt., said to be the heaviest coil ever manufactured. The whole power of a 100-horse engine was required to roll it, and Webster and Horsfall's mill is the only mill in the country at which it could be made. This wire is to be used for pit-guides, in lieu of the ordinary iron guides, liable to frequent breakage at the welds.

Smith and Co. sent from Halifax a bloom, or piece of the best Swedish iron, and specimens of all the stages of manufacture from it down to the smallest sizes of wire. The first stages down to the rod gauging No. 2 or 4, are manufactured while the iron is hot; after that the iron is drawn cold through steel plates similar to the small model exhibited, with some sizes of wire in it; and as the process of drawing hardens the wire, it has to be annealed or softened at various stages, and then drawn again. The above piece of bloom, measuring only 8½ inches long and 3 inches square, and weighing 20 lbs., would, if drawn as small as the finest wires exhibited in the same case, measure 110 miles in length. They will give you 1,000 feet of wire out of a brass farthing; 70,000 feet of wire, or a sheet of brass, 12 feet square, that will not exceed one pound in weight.

The Hereford Screen, made by the Skidmore Art Company, at Coventry, for Hereford Cathedral, is probably the finest piece of modern metal work in existence. It has been executed from Mr. Scott's designs since January, 1862; it is much larger in its dimensions than its companion at Lichfield, and, indeed, is the largest piece of architectural metal work ever executed. Iron is of course the principal material used, though in the decorative details copper and brass are largely introduced. In these combinations the fine examples which the early metal workers have transmitted to our time are studied with conscientious care, so as to adhere to the lessons of the past in a work that in itself is perfectly original. Thus, in the Hereford screen we find the iron wrought both into true grilles, and also elaborated after the manner of the early chasers into the richest iron filigree. The brass and copper work has been dealt with in the same spirit, and the capitals supporting the screen are most happily adjusted to the requirements of architectural conventionalism. The copper flowers by which these are enriched have the softness and beauty of nature, though all, after the old style, are worked out with the point of the hammer from sheets of copper. The copper is throughout left of its own natural color, but the brass work is intermixed with broad masses of vitreous mosaic. Where paint is used upon the iron, all the colors employed, with the exception only of the green, have been obtained from oxides of the metal itself; though the coloring and gilding have been applied only with a view to

the effect of the whole piece when shown in the subdued light of a cathedral nave.

The whole composition consists of a double arcade of five primary and ten secondary arches, blended in a single group, though each retains its own individuality. The centre arch, forming the passage, is very lofty, and is enriched with the most exquisite scrolls of flower and foliage. The shafts for the arches are of mixed brass and iron; and, as at Lichfield, the whole is adorned with examples of architectural sculpture, figures of angels, &c. These figures are perfect studies in themselves.

In the Hardware Court were several descriptions of Cooking Apparatus, of which one showed great novelty of arrangement, namely, the patent Duplex Range, by Edward Deane & Co. It has two fires of different sizes, separated and backed by a T boiler. Each fire has a separate oven of proportionate size, flue, and hot-plate. In combination with the patent Revolving Roasting Apparatus—as many as nine joints can be roasted at one fire—120 pounds of meat may be roasted; the same quantity baked in the ovens; and the same quantity again stewed on the top of the stove; while the steam boiler at the back will boil 3 cwt. of potatoes, and the circulating boilers will keep 60 gallons of water constantly hot, the whole cost of the fuel per day being one shilling. The roasting apparatus consists of a cylindrical meat-screen, within which three sets of joints, one above the other, revolve first round a general centre, and secondly round their own axis, each joint having a separate dripping-pan.

Brown and Green, of Bishopsgate-street Within, obtained the prize medal for a large Kitchen Range, fourteen feet in length, containing four roasters, or ovens, and three boilers. It is stated that the range is capable of doing all the plain cooking for more than 2,000 persons with a consumption of less than one ounce of coal per head per day, this being one of the results of a practical trial of this range before it was placed in the Exhibition: these results are certified by the inspector of cookery for the army, who conducted the trial by command of the War Office. This large Kitchener also provided for the certain cure of smoky chimneys; the ventilation of the kitchen through the upper part of the range, whereby are prevented oppressive heat in the kitchen, and close smell of cooking; and the facility of roasting meat in front of the fire at the same time that the whole of the apparatus is kept going.

Chandeliers, Gaseliers, and Lamps.—Some of these tasteful works were designed by Mr. Digby Wyatt, and range in price from 50s to 100 guineas. Hinks and Son sent a case of new patent Lamps for the complete combustion of the commonest oils, without glass chimneys: some were glass elaborately gilt, and others of opal and bronze.

Harrow and Son, Portland-place, exhibited an Eight-light Gaselier, cast in brass, constructed in form of an ancient grillier, or fire-pot, the upper bar consisting of eight inverted friezes, richly wrought and divided by heads of dragons, from whose mouths issue fire, and lightly-poised gas-jets. At the bottom is a very bold boss, composed of two large salamanders, intertwined in fierce struggle, their feet grasping the lower ring or bar of the suspended fire-pot, and thus forming its base.

The famous Birmingham Buttons, of gold and steel, and fanciful descriptions, were also tastefully shown. So perfect is the machinery for making buttons, that the manufacture is completely effected by the single revolution of a wheel.

Brass Tubing, some of it nine inches in diameter, a case of Bookbinding, in metallic covers; Brass Hinges, Door-knobs, and Handles, in endless array. The Cornice Poles and Brackets, by which small houses are most economically fitted, were exhibited here, made by the stamping process of Mr. Hill.

Locks and Safes.—Mr. Harley, of Wolverhampton, contributed a case of locks, remarkable for their mechanism and elaborate and artistic finish. Some of the padlocks were as small as the stone of a ring, and others as large as a cheese-plate; and some of the folio locks are also so minute that a dozen of them might be sent by post for two stamps.

Messrs. Bramah maintained their old reputation by exhibiting models and specimens of the well-known locks, as manufactured in their ordinary business. Hamilton and Co., Royal Exchange, showed a lock to be locked without a key, by merely turning a brass knob, but which is opened by a very small key.

Hobbs & Co. showed every part of a lock and key in course of manufacture by their machinery: they also exhibited a series of twenty-six locks, varying in size from that suited to the smallest cabinet to a large cupboard, so constructed as to be open with one and the same key. One of their larger locks, the "Protector," by a peculiar arrangement of certain parts behind the bolts and levers, is stated to be unreachable by any lock-picking instrument whatever. When any tampering is attempted on the lock by pressure on the bolt through the key-hole, to discover the opening position of each lever, the bolt-protector comes into action, preventing the pressure affecting the levers in any way.

Chubb and Son showed a splendid and unique collection of Locks and Keys. There were about 300 locks exhibited, varying between a gigantic rim lock weighing more than 2 cwt., and as finely finished as a lady's watch; and an elegant little gold lock, with four tumblers, set in a finger ring, and weighing 16 grains! Some fifty keys were shown with elaborate bows, three so much so, that, although small, they are valued at upwards of a hundred guineas; the bow of each being composed of minute particles of steel, all separately riveted, and resembling so many brilliants.

Steel Manufactures.—The manufacture of steel and steel articles, on anything like a large scale, is confined to very few countries. In 1851 it was ascertained that while we produced annually about 45,000 tons of steel, Austria, which came next to us, produced only 13,000, and all the states of the Zollverein taken together, but 8,000. Perhaps nothing indicates the progress which has been made during the past few years, so clearly as a comparison between the steel found at the Exhibitions of 1851 and 1862.

The so-called homogeneous metal, which has excited much attention of late, is extremely malleable and tough, and may be placed midway between wrought iron and ordinary steel; it may be regarded as steel containing a low percentage of carbon. This is the metal of which Mr. Whitworth has formed so high an opinion. Examples of it were exhibited by Shortridge, Howell, & Co. Pieces of tubing formed of this metal were shown flattened down vertically, which might readily be mistaken for caoutchouc. It is stated to have been produced by melting pieces of Swedish iron and carbonaceous matter.

In the French Department, Jackson, Son, & Co. exhibited steel objects made by the Bessemer process. The Swedes sent both iron and steel made by this process. Bessemer steel was sent from Kloster Works, Dalecarlia.

The process of Uchatius excited some attention a few years ago, especially in London. Samples were exhibited in the Swedish department. This steel, strange to say, finds a ready sale at prices ranging from £50 to £60 per ton, which are higher than can be obtained for Bessemer steel in Sweden. It is said to be especially good for sword blades. It is made by melting Bispberg iron ore, mixed with charcoal, in Belgian crucibles. This ore is remarkable for its purity.

Cast steel, made by melting together wrought iron and charcoal pig iron, was shown in the Swedish department, by Rettig, Geffe. Cast steel, made by melting together wrought iron and *refined* pig iron, was exhibited by Dr. Price, in the British Department.

In the Austrian Collection were specimens of the so-called wolfram steel, made by melting together cast steel and the mineral wolfram. It breaks with a very fine grain, and is hard and tough.

In the Austrian Department were drawings of Mayr's furnaces for casting steel on Siemens's principle by his "regenerative furnaces." Lignite is the fuel used, of which three parts by weight are required to melt one of cast steel. In six days between five and six tons are melted in one of these furnaces.

Krupp's Cast Steel.—Krupp affects considerable mystery in his processes. His works in Essen are reported to occupy 180 acres of ground. It is stated that he employs puddled steel, which is broken up, assorted, and remelted in crucibles. This variety of steel does not appear to be adapted for cutlery. He consumes all the spiegeleisen produced by Müsener & Co. It is affirmed that there is a great consumption of plumbago and leather parings at the Essen Works. Each crucible is said to contain 70 lbs. of steel, and the furnaces in which they are heated vary much in dimensions, the smallest holding two and the larger twenty-four crucibles. When a large casting is required, the organization has been carried to such a remarkable degree of perfection that, at a given signal, all the crucibles needed are ready to be taken out of the furnace at the same time. Their contents are poured with the utmost rapidity into a large reservoir, and from this the metal is cast. By this means, as in bronze founding, on the large scale, homogeneity is attained. The apparatus for working the steel is the most gigantic yet constructed. There is a steam hammer weighing 50 tons. The anvil face weighs 185 tons, and cupola furnaces were built expressly to melt this large quantity of metal. The largest casting in the world is the great bell at Moscow, reported to weigh 192 tons; but it cracked in cooling, and was never removed from its birthplace. Krupp's anvil rests on eight blocks of cast-iron, weighing from 125 to 135 tons each, and making a total weight of 1,250 tons of cast iron! This solid structure of iron is supported on a wooden foundation, 40 feet square. The largest casting exhibited by Krupp in 1851 weighed 2¼ tons, and the largest in the recent exhibition weighed 21 tons. It is in the form of a solid cylinder, about 9 feet high, and 3 feet 8 inches in diameter. It has been broken across to show fracture. The largest casting Krupp ever made weighed 25 tons. Now, when we reflect that this enormous mass of metal is melted in comparatively small crucibles we get an idea of the perfect organization requisite to have every crucible ready and the pouring effected at almost the same moment of time; and it is in this organization that we are disposed to think one great merit of Krupp consists. Krupp exhibited shafts, rolls, railway tires and wheels, locomotive axles, and guns. There was a good catalogue in German, also a price list of the cast steel guns. A finished gun of eight inches calibre, turned, bored and rifled, without breech closing apparatus, is advertised at £975. Krupp has supplied locomotive axles to some of our largest railway companies, and crank axles of marine engines to some of our most celebrated marine engine makers.

Bessemer's Steel.—Bessemer made an admirable display both of iron and steel produced by this process; with specimens illustrative of the quality of the metal, as shown by hammering, punching, bending, twisting, stamping, rolling, drawing into tube and fine wire, turning, polishing, &c. A rail was shown 84 lbs. to the yard, which may be supplied at £13 per ton.

There were a crank shaft of a 50-horse engine in one piece; piston rods for engines of from 50 to 260 horse power; the powerful screw of

a fly press used in the mint; and a circular saw made from one disc of steel over 7 feet in diameter, with teeth of 10 inches in length. There was, however, a larger saw than this shown in another part of the building, made from steel by the old process; and either of them, turning at the rate of 500 revolutions a minute, would cut through the thickest timber as fast as a man could walk. With these massive examples were shown smaller ones, such as plates used in boilers, ships, and bridges, rising in regular gradations from 1-50th of an inch to nearly 4½ inches thick. Specimens of steel were also shown, from a thickness too great for a strong man to bend down to the 250th part of an inch in diameter.

Among the applications of steel wire were exhibited several specimens of cotton cards, used in the best carding engines, with steel in round, flat, and square bars of every size. Two important examples of steel ordnance were shown—one illustrating a mode of mounting guns without trunnions, the elevation being effected by a screw, and the axles of the wheels admitting of adjustment; the other a 24-pounder, with trunnions forged on it out of one solid ingot of steel. Mr. Bessemer also showed samples of railway bars made of his steel, some few hundred tons of which have already been laid on various new lines for trial. Naylor and Vickers showed a peal of beautifully sounding steel bells.

Works in the Precious Metals.—The workers in gold and silver have made great progress in their cunning art since the exhibition of 1851. In this age of gold, and nobler enterprise than that of gold seeking, and nobler successes than those of gold finding, it was natural to expect a large increase in costly works of art, and luxurious ministrations to the vanity which are too often showered upon individual success. But the advancement of art has not gone, *pari passu*, with this increment of the precious metals, and this liberal employment of those who fashion them. Art has been beaten, in common phrase, "by the weight of metal;" and though the quantity has been superabundantly increased, the quality of the workmanship has suffered in this plethora of the earth's wealth.

Aluminium Articles.—Aluminium alloys well with copper, forming what is now called aluminium bronze. When alloy of this kind, containing from three to five per cent. of aluminium, is "dipped" in aquafortis, it acquires a tint so like that of gold that it is impossible to distinguish one from the other, even when seen side by side. It is susceptible of a fine polish, and may be cast, rolled, hammered, and drawn out into fine wire. The bronze usually made contains 10 per cent. of aluminium. It possesses great tenacity, but tarnishes by exposure to the air.

M. Morin and Deville, in the French Department of the Exhibition, had an admirable display of aluminium, exemplifying every important quality of the metal. There were statuettes and various cast objects, including latch keys, which combined lightness with strength; there was the metal rolled into large sheets, beaten into leaves, drawn into fine wire and woven into lace, coined into medals, plated upon copper; and aluminium bronze was shown in profusion, wrought as well as unwrought. The eagles on the standards of the French army are of aluminium; and examples of these were exhibited.

Leaf aluminium has lately been used for lettering in bookbinding.

Jewelry.—The large diamond, "the Star of the South," was shown in the foreign nave, as a contribution from Amsterdam, by M. E. Coster; this diamond is of immense size, weighing no less than 125 carats. It is set in the centre of a magnificent star of brilliants.

A large brilliant drop, the property of Mr. Dresden, and the largest now for sale in Europe, was also exhibited; it weighed 76½ carats, or 306 grains; price £50,000.

Mr. Hancock exhibited, in his well-appointed display, a Diamond Necklace, the price of which was 85,000 guineas.

In Mr. Hancock's case was also exhibited the Devonshire Emerald (the largest in the world), and the Devonshire Jewels, one of the rarest and most artistic collections of antique gems in existence. These were shown amid a perfect galaxy of pearls, opals, rubies, brilliants, and topazes; in this case were exhibited jewels to the value of £300,000.

London and Ryder exhibited a wonderful specimen of diamond-setting, with a miniature portrait of the Queen, composed of distinct brilliants almost as fine as diamond dust, and of which more than 2,000 were required to complete the portrait.

Hunt and Roskell exhibited the Nassuck and Arcot diamonds, the property of the Marquis of Westminster. The Arcot consists of three gems, a round one, 125 grains, and two drops, 223½ grains; of the very finest quality and water. The Nassuck weighs 340 grains: it was bought by the late Marquis of Westminster for £7,000, and was once worn by his lordship on the hilt of his Court sword. Hunt and Roskell also showed a string of 32 remarkably fine pearls, each 39 grains, and the whole valued at £8,000. Widowson and Veale exhibited two strings of fine pearls, with two pendants, valued at £2,800.

Mr. Emanuel, in an ebony and bronze trophy in the nave, exhibited some costly articles; as an emerald brooch, mounted in diamonds, valued at £10,000.

Mr. Lambert's greatest novelty was some crystal intaglios engraved by Mr. Charles Cook, and afterward colored to the life; pretty objects of jewelry, either as lockets, brooches, or solitaires.

In Imitative Jewelry, Mr. Emanuel exhibited some ornaments made in ivory and gold inlaid with various gems—a process which he has patented—which certainly produce a good

effect; combining cheapness, softness, and a certain adaptability of color to almost any complexion or dress.

In the French Court were shown some imitations made by M. Savary, including a tiara of mock diamonds and some rings and other ornaments set with paste, rubies and emeralds, exceedingly close imitations of the real, which might be worn at a party without any risk of detection.

M. Vales showed some real and imitation pearls strung alternately on the same string; and so well made are the false that unless a jeweller had them in his hand and tested them by the weight and size of the bore, he would be unable to distinguish the imitation from the real. M. Topart had also four strings of pearls, two of them real and two false, which the uninitiated could not distinguish; yet one may be set down as costing about 8 francs, and the other about £800.

A fine specimen of Cameo-cutting was exhibited,—a head of the Emperor of the French —an admirable portrait—set in diamonds, which was bespoken by the Empress, at the price of £250.

Glass.—*Stained Glass.*—The display of painted windows in the Exhibition was a very large one, and the first of the kind that has been seen in this country. It was, however, fuller of promise than performance,—in the original treatment of subjects, in place of copying epochal styles and methods of execution.

Household and Fancy Glass.—The manufactures of works of art in glass proved as attractive as any class of the Exhibition; the Austrian glass was good in color, and in their chandeliers was most effectively and artistically arranged; the Bohemian and Hungarian glass are special manufactures which were also admirably represented in the building; but the pure cut crystal glass, for exquisite forms, whether cut, blown, or moulded, and, above all, for the very highest effects of the engraver's art, the visitor found in the English Court. The display was really wonderful. Here were such triumphs of the engraver's art as Venice never knew; even wine-glasses fetched £6 and £7 apiece. There were lustres and chandeliers, too, of all descriptions and almost every grade of excellence—from the simple classic design of Dobson and Pearce, worth £12, up to the gorgeous crystal temple of Defries, which cost over £3000 to manufacture.

First, for fine art work, both in form and marvellous perfection of engraving, was the collection shown by Dobson and Pearce. One of the great gems in this collection—an engraved glass tazza, 12 inches high, was purchased almost the first day it was shown for 250 guineas, incomparably the largest sum ever paid for a single and very small piece of modern glass work. The panels in the cup, with their fine cup designs, are as delicately marked as steel engravings and as deep as intaglios, all cut with the wheel, even to the minutest chasing of its flower scroll-work. A very small engraved Cup, not much larger than an ordinary tumbler, exquisitely engraved, was bought for 50 guineas the first hour it was seen. No piece of Venetian glass of the same size ever fetched so high a price.

A claret jug sold for 50 guineas, one side of which is deeply cut with a grotesque Raffaelesque design, of surpassing excellence; the foliage scroll-work—apes, dragons, and other monsters —being a perfect chapter, on the weird combinations of Raffaelesque ornament. The birds in this piece seem to have an actual plumage, so exquisitely is every feather worked out in the cutting. In a somewhat similar work, the centre ornament is a group of water-lilies floating in a lake, produced with an effect almost equal to an optical delusion. So also with fountains on another class of works—they are not so much engraved as they seem to flow and ripple from the very body of the vase. Above Messrs. Dobson's collection was hung a wonderful Venetian chandelier, of their modern manufacture, which in design and drooping of festoons was equal to the rarest old Venice types, only much more brilliant in its metal. In this collection were also shown the cheapest, simplest, and most beautiful designs of Mr. Marsh, of the Lord Chamberlain's office, for table decoration, which took the first prize at the Horticultural Society's fête last year. Messrs. Phillips exhibited in the form of a Crystal Table, the most brilliant piece of cut glass in the building. Behind it was placed a kind of épergne, or centre-piece for fruit and flowers, representing a pool with weeds and bulrushes in glass, and surrounded with nautilus-shells at the base, which altogether made up the most original and effective piece of this class in the display. Both these were manufactured by Messrs. Webb, of Stourbridge. Messrs. Pellatt's engraved glass also attracted such admiration that the firm received orders to make large dessert services of the same kind for the Prince of Wales and the Viceroy of Egypt: each service is to be so elaborate in design that many months will be required to complete them. The same firm showed cups, tumblers, and jugs of the most beautiful forms, covered with a perfect embroidery of exquisitely engraved designs: their copies of the Koh-i-noor in crystal glass, cut in the form in which this great diamond was first exhibited in 1851, were infinitely more brilliant than the renowned gem on its first début.

But in the general average of his exhibition of Cut Glass, Alderman Copeland had no superior. The jewelled dessert service of the brightest crystal, was a signal triumph of manufacturing skill: each piece has a lustre of its own that is brilliant beyond description.

One of the newest and most effective objects in Decorative Glass was shown by Powell and Co. These were vases of double glass, the outer one of pure flint, the inner colored to resemble dark serpentine marble. Between

the two are placed lightly printed photographs of statues, designs, flowers, &c., which show out as if finely engraved upon the marble: and these artistic effects are produced at the lowest possible cost.

Naylor exhibited some exquisite chalice-shaped cups, on which were engraved copies of the celebrated picture of the "Last Supper," equal to anything shown in the whole class.

One of the eight Prismatic Mirrors, which Messrs. Defries made for the late Sultan's new palace on the Bosphorus, was exhibited. This mirror is 15 feet high and 8 feet broad, and contains 1000 prisms. All the prisms join each other at the sides, so as to form one piece, and at the ends are dovelocked together and held into their place by a peculiar arrangement of copper rods. The weight of pure crystal is one ton, and the metal back one ton more.

Pottery.—The largest work of this class in the building was the Majolica Fountain, placed under the eastern dome. In its variety of form and color it harmonizes with the internal arrangement and decoration of the building: it was designed and modelled by Mr. John Thomas, the sculptor, and executed under his superintendence for the display of Minton's modern majolica. The design, while very elegant and symmetrical as a whole, has that bold distribution of parts which is essential in a fountain to be in keeping with the wild play of water, especially in the open air. The mass of the fountain is in stone; the figures and ornaments, which are for the most part emblematical, being added in majolica. This is the finest work of the kind ever executed in this country, and proves that majolica may be made a most important department of industrial and decorative art.

The Wedgwood Collection, exhibited by the descendants of Josiah Wedgwood, nobly represented his famous ware in Etruscan vases, Nevers blue vases, and classic forms, painted with pastoral and other subjects.

A costly dessert-service, manufactured for Her Majesty at the Royal Porcelain Works, Worcester, by W. H. Kerr and Co., is unique in its application of color to enamels, enamel decoration to a service, and the general treatment of the design; its cost and difficulty of production being immensely increased by no device being repeated: while each plate contains five subjects, and for the plates alone upward of four hundred designs were made.

At the head of the French collection stood the magnificent manufactures of Sèvres. Here it was at once shown that the character of Sèvres is changed. It produces little of the old sort. Its royal blue is nearly as good as of yore; but its turquoise blue is dull, its *Rose de Barry* is very far from the mark, and its gilding wants lustre. Instead of these, however, we were presented with many other hues. Here were vases and cups of every form, and of many tints. Perhaps the most interesting part of the collection was a small case containing three or four dozen cups; every cup almost was different—not merely in pattern, but in more essential qualities. There was not one which had not called forth the highest skill of the French artist, and would not fetch a fabulous price. The production of a sort of a sea-green ware—they call it "*céladon*," and a variety of it "*céladon changeant*"—which first appeared in the Paris Exhibition in 1855, may be regarded as the leading feature of the Sèvres display: The color is characteristic of modern Sèvres in this respect, that it is of a low tone. The primary colors are for the most part eschewed; so also the secondary ones; and those which are sought are the tertiary and still more complex combinations. What is here called *céladon* is most feebly translated in the epithet seagreen. It is a gray, dull seagreen of many shades, more or less allied to some old oriental ware, which it is more easy to recognise than to describe. This *céladon* is a body-color, it pervades the paste, and on it the French artists have succeeded in pencilling with a similar but white paste various designs, chiefly leaves and flowers, which stand out in gentle relief upon the vase or cup, white upon the *céladon* ground. The effect is very beautiful, especially in a variety of the *céladon* which is called *changeant*, because of the singular ease with which it reflects local color. By gas-light this *céladon* looks pink.

A small case bearing the name of Avisseau, of Tours, contained two pieces in imitation of Palissy ware—one a dish with a pike and other fish on it, the other a plateau, on which a heron is contending with a snake. It was extraordinary work. The glancing light on the skin of the pike and the eel in the one case, and of the snake in the other, was quite marvellous. In drawing, in action, in color, everything was perfect.

Substances used in Manufactures.—This class included not only raw materials, or substances, but the manufactures themselves. It was very miscellaneous, and presented comparatively few striking novelties.

The British Colonies.—*Jamaica.*—There was an abundant display of specimens of the products of this colony, such as sugar, rum, indigo, cotton, Indian corn, rice, bread-fruit, and bananas.

First were not less than 144 specimens of rum of the highest proof, in bottles; of all shades, from the pale pine apple color to the dark purple of port wine. Near the rums was a fine collection of the liqueurs and choice wines of the island, most exquisite in flavor, such as the pimento, the orange, the jamboline —a delicious liqueur; and the delicious Santa wine.

The vegetable oils of the country were represented by forty-eight specimens, some of great value in the arts, manufactures, and medicine. There was the wonderful croton oil, the sand box oil, and an oil called the "French physic-

nut," which is not so well known as its merits deserve; for a dozen drops will be as efficacious as an ounce of castor-oil, and its effects may be neutralized by a glass of white wine. In a glass case was shown a dry branch of a shrub, the "burwood," a specific against cholera.

Trinidad.—The produce sent from this island consisted of specimens of its minerals; asphalte, from the famous "Pitch Lake;" glance, tertiary coal, and lignite; the latter, it is said, will bear comparison with the best lignites from any other part of the world. The food substances included rice, ground nuts, seramum, cocoas, coffee, nutmegs, Brazil nuts, flower of bread fruit, plantains, yams, tania, sweet potatoes, curl-curl, bitter and sweet Canada arrow-roots, cloves, and black pepper. There were also vegetable oils and ivory, skins of sharks, sponges, seeds, &c.; textile materials, wild and cultivated cottons; cork, and fibres of wild cane; native woods, plain and ornamental calabashes, fancy baskets, Indian wickerwork, &c.

The mineral wealth of the island was represented by fine specimens of copper, manganese, zinc, cobalt, ironstones, barytes, arragonite, iron pyrites, sands, clays, and other matters.

The productions of British Dominica, and of British Guiana, had much in common with those shown from Jamaica.

Natal.—Sugar, in particular, within the last ten years has become one of the staple products of the country. Twelve years ago a sample manufactured from Natal canes was handed about the colony as a curiosity; but within the last two years 2,000 tons, exceeding £50,000 in value, have been exported.

Natal is trying her hand at producing cotton, and some specimens were shown of fair quality.

The greatest ingenuity is shown in their musical instruments. The Caffre lyre is a bent bow strung with twisted hair, which beaten with a stick will give out some four or five distinct tones; while the Macabere piano, which is a series of strips of wood, each backed by a sounding chamber formed of the rind of some dried and hardened fruit, has one or two notes very nearly approaching to the music of a cracked bell.

St. Helena, and one or two other African settlements, sent small contributions.

The Bahamas offered cotton, the pine apple fibre, the palmetto, the banana, and other plants containing fibres useful for the manufacturer; sponges and liquorice berries, and shell work, of various kinds.

Ceylon sent a fine collection of produce, natural and artificial. There were bows and arrows, and peacock's feather fans; rude ploughs and yokes; carved cocoa nut shells; native lace and gold embroidery, and musical instruments; and more especially interesting was a Davenport carved in ebony, in the English style, by a pupil in one of the industrial schools recently established in the island by the local government.

Mauritius sent some fine specimens of sugar, fruits, and vegetable substances.

Hong-Kong showed some choice examples of Chinese industry, in silk, rich velvets, silk and gold embroidered carpets; china and enamels; and articles of raw produce.

Malta came out very strong in her three great specialities, lace, silver filigree, and stone-work. The beautiful black lace is made principally by women in the small island of Gozo. In the patterns there is scarcely any departure from ancient ideas—though the schools of design which have been established in Malta are beginning to tell both on this and other branches of manufactures—but the workmanship is so excellent that for wear the lace is unsurpassable. One of its distinguishing and most valuable characteristics is that it is impossible to crease it. The black lace is all of silk, obtained from Naples. There were also very beautiful specimens of white thread lace, mostly made in the charitable institutions of the island. In the silver filigree work, the delicate tracery is executed with quite as fine a finish as the best samples of the Genoese ware.

The chief articles which the Ionian Islands offered to commercial enterprise were their wines. The islands produce cotton in considerable quantities.

India.—The products of the soil were oil-seeds, oils, gums, resins, medicinal substances, fibres, timbers, and tea.

Rich samples of raw, manufactured, and dyed silks, were forwarded; while most of the contributing places furnished specimens of mixed silks and cotton fabrics.

The embroideries generally on velvet, silk, leather, and cloth, were excellent both in design and execution.

In works of art or skill, were the elaborate carvings in black wood, sandal wood, and ivory; and in a material termed "Ratanglee," from Malabar; inlaid ivory, and enamelling in the precious metals.

There were samples of cutlery, jewellery, lac ware, &c., from Bombay and Scinde; and of mineral products and works in stone, &c.; alum, saltpetre, subcarbonate of soda, from Scinde; indigo from Jacobabad; sulphur, lead, copper ores, and galena, from Beloochistan; agates and carnelians from the Ruttinpoor mines in Rewa Kanta.

The collection from Madras under the head of raw products, included timbers, oils, seeds, gums, dyes, &c.

The rich feather ornaments from Kurnool and Vizagapatam, the large straw mattings from Pulghaut and North Arcot, the writing paper from Madras and Salem, and the carvings and constructions in ivory, sandal wood, buffalo horn, and porcupine quills, were attractive.

Hydrabad and Burmah contributed specimens of lac ware.

The fine arts in Madras were represented by a collection of engravings, photographs, and drawings. Some miniatures on ivory especially

illustrated the delicacy of finish, minute detail, and brilliancy of color, ever remarkable in native drawings.

The most remarkable portion of the *Canadian* display was that of her timber, of which there was a gigantic trophy in the north transept. It was three stories or stages in height. Some of the logs of which this trophy was formed were of enormous dimensions. On one side was a log of black walnut five yards in circumference; it was cut from a tree 120 feet high, the first limb being 70 feet from the ground, and 350 years old. On the opposite side was a large block of white oak, more than four yards in girth, and 380 years old.

The collection of woods of Lower Canada comprised the linden, the maples of various kinds, but especially the bird's eye maple; the moose wood, and the curled maple; the dogwood, the willow, and the birch. In commercial value the most notable were the thirteen varieties of *coniferæ*, including pine, spruce, and cedar, the oaks and beeches, the hickory and the maples. These woods were, however, surpassed by those of Upper Canada, the most remarkable being the white oak, a plank of which is four feet wide; the black walnut, a beautiful wood for cabinet furniture; the sugar and soft maples, from three to four feet in width; and the pine, one plank of which is, we are told, "12 feet long (it could have been cut 50 feet long) and 50 inches wide, without a knot, sawn from a tree 22 feet in circumference, and 120 feet to the first limb.

There were also shown earths and ores for paints; stones adapted for lithographers; mineral manures, as gypsum, phosphate of lime, shell marl, &c.; trap rock for grinding stones; talcose slate for whetstones, flagstones, and marbles.

New Brunswick.—Among the minerals were specimens of the Albert coal, black and glittering as jet, which will burn like a candle; and from which Albertine oil is distilled in large quantities. The mine is worked extensively by a company in New Brunswick, who have sunk one shaft to the depth of 750 feet, and are now sinking another, which it is expected will be continued to the enormous depth of 1,500 feet. One ton produces from 16,000 to 18,000 cubic feet of gas, or about eighty gallons of Albertine or paraffine oil. Some specimens of shale found a short distance from these works yield about sixty gallons of oil to the ton.

Vancouver's Island.—A spar of Douglas fir, of which specimens were exhibited, was brought from the island; it is 220 feet long, and now reared as a flagstaff in the Horticultural Society's Gardens.

Prince Edward's Island.—From this smallest of the group of North American colonies were sent a mowing machine; a variety of agricultural implements and products; and an ingenious running block, promises to create a revolution in ship's rigging.

Nova Scotia.—The zoological specimens of this colony were prominent in the collection: a moose deer, grouse and partridges, ducks and waterfowl; fish, obtained in such large quantities in the neighboring waters; mackerel, salmon, pollock, haddock, hake, and cod; alewife and Digby chicken fish.

The Australian Colonies.—Of the almost unlimited natural wealth of the colonies of Great Britain, displayed in the Exhibition, Australia attracted the most attention; as well from the unprecedented rapidity with which her resources have been developed, as from the fine quality of some of the objects displayed.

New South Wales, the parent colony of the Australian group, takes the lead in pastoral industry. The colony owes its prominence in the production of wools to the enterprise of Capt. Macarthur, of Camden, who, noting the effect of the natural grasses on the fleeces of ordinary sheep, imported at his own expense three rams and five ewes of pure Spanish breed, with which he crossed all coarse-wooled sheep. The result of this patriotic enterprise was that in 1860 the export of wool from Sydney was 12,809,362 lbs., and its estimated value £1,123,699.

The samples of wools, fleece and scoured, were of admirable quality; and there were two or three fine Merino fleeces, one of which, the produce of an imported French merino lamb, weighed 7¼ lbs. Mr. Ledger exhibited a beautiful sample of wool from the Alpacas, which he introduced into the colony from Peru with great success; the natural grasses suit them admirably, and Mr. Ledger is said to be confident that they will attain to maturity at an earlier age than in South America, with a larger form and a heavier fleece. In a large case were shown seven stuffed specimens—a pure lama, a pure alpaca, and five crosses between them.

The finest cotton exhibited in the building was to be found in the New South Wales Court, and some of the samples have been priced as high as 4s. per lb.; a sample which attracted much attention was grown 50 miles from the seacoast, in south latitude 33°.

In cereals, too, the colony took a high rank. The best sample was grown at Bathurst, and the three samples of white wheat, which run from 64 lb. to 68 lb. per bushel, grown at Camden park, were much admired. As a flour making wheat it is said to be of first rate quality. Maize seems to be a crop with which the soil and climate of New South Wales agree capitally, and some splendid cobs, both for size and close packing, of the grain were shown here. A sample of a most productive kind yields as much as 100 bushels to the acre; the large pure yellow sorts weigh 65 lbs. to the bushel, and the smaller yellow 66 lbs. There were numerous specimens of the products of the vines of New South Wales, including all the varieties grown there—Hungarian light wines, tokay—to which the muscat has a great affinity—Hermitage, Madeira, Bordeaux, and Burgundy. Since the Paris exhibition, when

the jurors reported strongly in their favor, the market for Australian wines has very much increased. Among the other products exhibited were Cayenne pepper, preserved fruits, tobacco, sponges, and sugar canes, for which some parts of the colony are said to be admirably fitted.

The portions of the show, however, both here and in the Victoria Court, which were looked at with the deepest interest by most people, were the specimens from the gold-fields.

Queensland made an excellent display. First, of cotton there were numerous samples. The quality of the sea island cotton is remarkably fine, and has been priced by authorities at 3s. 3d. and 3s. 6d. per pound. One sample, grown 200 miles from the sea-board, rivalled in quality that grown on the sea-coast. The principal export of the colony at present is wool, of which upwards of 5,000,000 bales, the produce of 3,500,000 sheep, are annually exported.

South Australia is unusually rich in copper, and the Burra-Burra, Kapunda, and the Wallaroo mines—from all of which, and other mines, there were ample specimens in the Exhibition—are reckoned among the most productive in the world. The Burra-Burra has been at work since September, 1845, and the annual yield for many years past has averaged from 10,000 to 13,00 tons of from 22 to 23 per cent. of copper. The specimens exhibited from the mine included sulphuret of copper in matrix of limestone; red oxide in silicious matrix; green carbonate with manganese; sulphuret associated with iron, from the lowest depth of the workings, yielding 50 per cent. of copper; and a number of beautiful pieces of the green carbonate or malachite. The specimens of Burra-Burra malachite completely eclipsed the famous Russian doors which attracted so much attention at the exhibition of 1851.

The samples of corn exhibited were of first-rate quality, superior to anything shown from the Old World, and only missing by an ounce or two the honor of being the heaviest in the building. About 3,500 acres are under cultivation as vineyard, and their produce amounts to 300,000 gallons of wine, besides 1,000 tons of table grapes, which are exported by steamer to Melbourne.

Western Australia.—The chief resources at present developed appeared to be timber and minerals.

Victoria.—The colonists had evidently taken great pains in this collection to illustrate the unexampled prosperity and almost boundless resources of their favored country. In 1851, the colonies of Victoria, Queensland, British Columbia, and Tasmania had no existence. In the short ten years that have intervened since then, they have grown into what may be termed distinct States, and one of them at least—Victoria—contains such elements of wealth, such boundless mineral and agricultural resources within itself, as must in a few years make her the foremost and most powerful of the great cluster of our young southern empires. The rise and suddenly acquired and vast material prosperity of this colony transcend all that has yet been told of colonial enterprise. When the exhibition of 1851 was opened, the only habitation on the site of the present town of Ballarat was a shepherd's hut, built of slabs of wood, and roofed with bark. In a circle, having Ballarat as a centre, with a radius of 40 miles, the population then did not exceed 500 persons. The population of the same area in 1861 was 105,996 persons, the town of Ballar at 22,111.

At the East end of the building, in a beautifully carved wood case, was £50,000 worth of gold in every form in which it has been known or supposed to exist. There was a suggestive model illustration of this vast amount of Victoria gold.

The tall pyramid under the eastern dome, 44 feet 9½ inches in height and 10 feet square at the base, represented the bulk of the gold exported from Victoria from the 1st of October, 1851, to the 1st of October, 1861—the period from the close of the exhibition of 1851 to the date when it was necessary to send the goods from Victoria to the recent exhibition. The quantity of gold which it represents is 26,162,432 ounces troy; 1,793,995 lbs. avoirdupois; or 800 tons, 17 cwt., 3 qrs., 7 lbs. It is equal in solid measurement to 1422½ cubic feet; while the value of the gold thus represented, all of which has been exported to England, is 104,649,728*l.*, or more than one-eighth of our national debt. On the surface of the pyramid were represented models of some of the larger nuggets which have been found, with reference to the names of their fortunate discoverers. On other portions of the surface there were representations of the ingots into which the gold was formed previous to exportation.

Here was gold in nuggets worth £10,000; gold in bars and massive ingots; gold almost black, red, yellow, and brown; rough masses crystallized into the most beautiful forms; gold mixed with crystals of iron spotted over the milk-white quartz-like rare gems, or cased in an impalpable powder got from the blankets or the crushing-machines, and so fine that it floats in water like a metallic lustre.

Specimens (weighing nearly 1 cwt.) of what may almost be termed native iron, so pure is the ore, were exhibited, containing between 80 and 90 per cent. of metal: they are found strewed over the surface of the earth in some parts of the colony like boulders.

Among other curious objects shown in this collection was a meteorite found near Ballarat, and weighing 30 cwt. A section of it shows graphite and magnetic pyrite in nests or patches through the mass, with chloride of iron exuding from the interstices. This most wonderful specimen of meteoric iron is, however, only a quarter the size of one found in the same colony. Among the natural produce exhibited were some samples of very fine tobacco.

Some exquisite French shawls and merino fabrics were shown, made entirely from Victoria wools: the former the most perfect specimens of the kind in the building, and the latter

equal to any of the best real Spanish merino manufactured in France. Some specimens of wheat weighed as much as 68 lbs. 8 oz. per bushel. Another fine collection, which weighed 67 lbs. 14 oz. a bushel, was stated to be the produce of the *sixth* crop reared in succession on the same land. The indigenous and acclimatized fruits were shown in a fine collection of wax models, cast from originals in Victoria for the purpose of being sent to this exhibition. Some of them, especially the pears, were wonderfully fine, the pears attaining sometimes to a weight of 3 lbs. There was also exhibited a fine and numerous display of highly scented essential oils from various native trees and plants. True kaolin, or the best porcelain clay, which enters largely into the production of soap wherever it is cheap enough, is found in abundance in Victoria. The manufacturers are utilizing the tallow by the production of candles, called "sperm," though made from stearic acid: some remarkable good specimens of these candles were displayed. There was shown dried meat called "charqui," which is almost peculiar to Victoria: it keeps fresh in the hottest climates during almost any length of time.

A Victoria street cab was shown. It is a kind of very broad dog cart, with high wheels like those of a Hansom; well balanced on its axle; it has three front and three back seats, sheltered by a large hood. A very good collection was shown of the principal fishes of Victoria, dried and stuffed, including among others, a specimen of the celebrated Murray cod: it is probably the largest fresh-water fish known, 150 lbs. being not a very unusual weight for it.

Tasmania.—This colony (formerly Van Diemen's Land, and one of our penal settlements) made a good display of its products, of which useful and ornamental timber was most prominent.

French Colonies.—*Algeria.*—The French Government had evidently been at particular pains to present to the world an adequate idea of the resources and natural capabilities of its great colony; Algeria, in fact, occupying as much space as all the rest of the French colonies put together. The soil of Algeria still retains that wonderful fertility which made it in ancient times one of the granaries of Rome; and by far the most important part of the show was the long array of cereals, provender of various kinds, and vegetables. Natives as well as colonists exhibited here, and some of the finest specimens of barley were grown by indigenous cultivators. Of wheats there was an immense variety. The best sample shown was by M. Declonflé, of Constantine. Maize, too, white and yellow, is extensively grown both in the Oasis of the Sahara and the Tell. The exhibitors of barley, oats, and rye were numerous; and at the entrance there was a sheaf of each crop of the year's reaping. The Acclimatization Society exhibited a collection, in which there were not less than 58 varieties. Potatoes, however, cabbages, and such vegetables as were classed under the head of tubercules, flourished in great abundance, and there was a large export.

The results of the cotton cultivation in Algeria were very interesting.

The cotton tree was shown in leaf and nut, with here and there the beautiful white cotton bursting from the pod. Mr. Hardy exhibited samples produced from seeds from all parts of the world which are in process of naturalization in the Jardin d'Acclimation at Algiers.

The production of silk in Algeria may be said almost to be one of the results of the French occupation of the country.

There was a considerable display of wines, both red and white; one special wine called vermouth, from Oran, has been described as an imitation of the famous Hungarian vermuth. The specimens of spirits and liqueurs included the renowned and familiar "absinthe," and the more recondite and almost unattainable "chartreuse;" both the result of French industry and manufacture in the colony.

The appearance of tobacco grown in Algeria, in its raw state, and manufactured, in the shape of cigars and snuffs, was good. Here may be mentioned a very curious plant, like our common thistle, and from the pod of which is extracted a beautiful and delicate material which is woven into as beautiful and delicate silk, which is, besides, stout in substance, and the artificial colors of which are at once tasteful and rich.

Of the Thuya, the olive, and the other beautiful Algerian woods which are in such request among Parisian cabinet-makers for *meubles de luxe*, there were numerous specimens.

Peru, Costa Rica, and Uruguay.—The South American States contributed various articles of produce and manufacture. Peru sent silver, silver and plated articles, and mercury; wools, including alpacas; and cotton and wine. From Costa Rica, mining and chemical substances; skins and furs. Uruguay, specimens of wool, roots, and skins, timber and wheat; lead, iron, copper, and coals.

Brazil sent twenty-four varieties of tea, including "Matti," coffee and sugar, wheat of good quality, and very heavy; tapioca, starch, arrow root, flour from various descriptions of grain; tobacco.

Brazilian manufactures: oils, including oil from the alligator, a black, thick, pitchy looking material; stearine candles; furs and skins tanned and dressed, the skin of an immense boa constrictor; boots and shoes of excellent shape and finish; cloths of various kinds; and felt hats of extraordinary lightness and fineness of texture. Excellent rum and native wines; and with those of beeswax and honey was shown a case containing twenty-four kinds of bees. There were creditable specimens of iron-casting, paper-hangings, wood-carving, and decorations of various kinds. The manufacture and cutting of glass was exemplified in some good specimens of design and engraving. Self-

feeding pistols and a variety of firearms and weapons were also exhibited.

Photographs were exhibited of the Emperor and Empress of Brazil and the imperial family; also of Brazilian scenery.

Japan.—Among the works was a collection of little metal buckles for fastening the dress; the designs of these buckles were irresistibly grotesque—not mere sketches, but solid little pieces of metal work, the background being of bronze and the raised figures in relief being either gold, silver, steel, or platinum, or of all four metals intermixed. It is evident from the platinum being so freely used that the secret of melting it, to which our chemical knowledge has only of late attained, has long been known to them. A small window-blind was shown, made apparently of rods of twisted glass strung together; the rods were as hard, as clear, and as sharp as glass; yet it was made from a gelatine of rice. In a collection of Ivory Carvings, a comic scene was distinctly represented—yet they were so small that they might be worn as brooches. In a collection of Porcelain, a large plate represented two Japanese ladies wearing French bonnets and shawls, with deeply flounced silk dresses spread out by an amplitude of crinoline. One had a telescope with which she was pointing to the sea with an air of fashionable nonchalance, while the other figure had her gloved hand filled with green apples. In the background were two other Japanese ladies dressed in the costume of the country, and who were shrinking with horror and astonishment from their strangely attired sisters. It is a curious illustration of manufacturing skill that a passing joke like this should be represented in such a costly medium as this beautifully finished porcelain.

There was a large collection of the different kinds of paper used for paper hangings, for writing, printing, and for wrapping up parcels; paper waterproof coats, paper leathers, paper parasols, and paper pocket handkerchiefs. Some of the paper leathers were as strong apparently as any hides that ever left a tanyard.

China.—The Chinese exhibition, from the similarity of the peoples, much resembled that of the Japanese in its lacquered ware, its porcelain, its carvings, and its metal work in bronze. There was also a fine collection of medical drugs; with complete sets of Chinese types, rare ornaments in jade, and an exquisite wood carving, which formed the back of the Emperor's throne in his Palace of Yuen-Min-Yuen. Another of the spoils exhibited was a skull set in gold in the form of a drinking cup, looted from the Summer Palace by one of our private soldiers, and sold for a very small price, though the value of the setting is over £1000.

Africa, Central and Western.—The articles consisted mostly of tobes and native wrappers; grass cloths and mats; cotton clothes and sundry native manufactures, and specimens of cotton, in various states.

Madagascar sent ores, clothes, and other native manufactures: the scarfs in silk were very showy.

Hayti, was represented by some Iron ores, Saddlery and Harness, and a few rude specimens of Pottery.

The Egyptian Collection, consisted of the products of modern Egypt, of the Soudan, and the relics of ancient Egypt. The looms of Cairo contributed the largest proportion of the first division—and the silks were remarkable for the strength of their texture. In the patterns there was hardly any departure from the traditional stripes, but the lustre of the colors, even in the ordinary fabrics used by the fellahs for their fête dresses, was unusually splendid. The woollen and the cotton goods, too, were well represented.

From the arsenals of Cairo there was exhibited a stand of admirably finished Rifles, Bayonets, and other arms, used by the Egyptian army, and produced by Arab workmen, under the direction of M. Minié.

Fine Arts.—"The English Gallery," says an able critic, "affords an admirable opportunity of gaining an acquaintance with the most of what is worth knowing and studying in the history of Painting in England. The limits of time assigned to the exhibition of English pictures include all that there has been of painting in the country, while almost all, if not quite all, of those painters who ought to have a place in such a gallery are represented here. It is a collection as instructive as it is interesting. It is a condensation of all that we most wish to know, and most love to see in English art."

Architecture.—Designs and Models, included drawings and edifices already built, and of many, in all probability, never to be built, but still useful as architectural examples and studies.

Art Designs for Manufactures.—The whole number did not much exceed three hundred, scarcely one third of them being the productions of the deceased artists—about twenty names in all of the latter. Each section contained some designs which either were of great merit, or had a certain interest historically.

Sculpture held a prominent and recognized position side by side with painting.

The majority of our modern sculptors exhibited, and the result was, a fine collection of about 120 statues, 40 or 50 busts, and 20 or 30 bas-reliefs.

A small collection of Intaglios, Cameos, and Medals—the latter containing many fine works of the Wyons, father and son—completed the general feature of this important Department.

Etchings and Engravings.—The Committee divided the specimens which the liberality of collectors had principally enabled them to exhibit, into five principal classes—etching, line-engraving, mezzotint, stipple, and wood engraving; and these were subdived into works of deceased and into works of living engravers.

Foreign Painting and Sculpture.—The Foreign display of Paintings, Drawings, Engravings, Sculpture, and Intaglios, was numerically as strong as the British exhibition.

France led off with about two hundred oil-paintings—specimens of the great French School; nearly 40 water-color pictures; 50 groups of sculpture; and about 130 engravings, lithographs, and architectural drawings. The pictures selected by the Imperial Commission were those painted by living artists since 1850, or those painted since 1840 by deceased masters born after 1790. The greatest novelties represented were the recent school of natural landscape, and domestic subjects. There were six specimens of Paul Delaroche.

The Great German School of Painting was well represented by the Zollverein, and other German States. Prussia sent nearly 200 works of arts, in architectural designs, oil paintings, sculpture, and engravings. Berlin and Düsseldorf each sent a fine collection of paintings; and the engravings from the former city were choice and numerous.

Bavaria sent about 40 works of art, chiefly oil paintings.

The Austrian School was represented by about 80 oil paintings, 16 water-color pictures, 19 pieces of sculpture, and a few engravings and architectural sketches.

Holland exhibited about 120 oil paintings, and two engravings.

Sweden was represented by about 40 works in oil paintings and sculpture.

Norway sent some 50 oil paintings.

Denmark sent about 110 works, including six groups of sculpture by Thorwaldsen, and five by J. A. Jerichau.

Russia sent more than 100 works of art; 80 oil paintings, five groups of sculpture and medals, three architectural sketches, and seventeen engravings. The other pictures were remarkable for the insight they afforded into the Russian manners and ways of life, its humor and character.

Belgium contributed the most complete display: about 113 oil paintings, about 26 groups of sculpture and two engravings.

Switzerland sent more than 100 oil pictures,

Spain was represented by 30 works, in oil-painting, sculpture, and engraving.

Portugal sent only two oil paintings, five photographs, and a few woodcuts.

Italy was characteristically represented by about 40 architectural designs and 80 oil paintings and drawings; about 70 groups of statuary and busts.

Rome sent 57 pieces of sculpture; valuable cameos; a few fine drawings; many engravings; a collection of medals; and a large assemblage of mosaics, including a contribution from the Vatican.

Turkey, for the first time in the history of all Exhibition, filled a place as an exhibitor of pictures.

Greece sent two oil paintings, five groups of sculpture, and engravings.

Brazil contributed a few paintings, and a pen-and-ink portrait of the Empress; two carvings in wood; and medals and coins.

United States.—The American fine-art numbered only about a dozen pictures and engravings, the chief of which was Mr. Cropsey's Autumn on the Hudson.

The foregoing summary has been compiled entirely from English sources, and on that account more prominence may have been given to the exhibits of England and its colonies. As an Exhibition, its success has not been equal to that of 1851 in fitness of the edifice, in the novelty of articles exhibited, nor in its financial results. The structure itself, criticized by rules of architectural art, or judged by its general effects on all beholders, has almost universally been regarded as a failure. In its constructive details, there has been much of credit to the engineer, but little to the architect. In the articles exhibited, there has been little of novelty or invention, but much to show the progress of art, and the improvement, especially in chemistry, in machinery, in processes already known, and of tools long in use. Since 1851, the production of coal-tar colors has become an industry, and the necessity of iron plating for war service has called for a class of tools of a size never before attempted. No new principles have been evolved, but the material and excellence of workmanship is in advance of anything before exhibited. The immense rolled and hammered iron plates, and the huge shafts of steel, are products which in 1851 could not have been produced, nor would have been attempted. The result of the Exhibition in building and in articles shown, may be summed up as an exhibit of what may be done by industry rather than by genius, and if it failed in its financial results, part was perhaps due to the war in our own country, part to the managers themselves, but more perhaps to the frequency of such exhibitions. Once in a quarter of a century should have been lapse of time brief enough to reproduce in any one country the Exhibition of 1851.

F

FAYETTEVILLE, the capital of Washington county, Arkansas, has an elevated and picturesque situation in the northwestern part of the State, about 200 miles from Little Rock. It was the centre of an active trade, and had flourishing schools, an institute for youth, three churches, a court house, and a United States land office. The population was about 1,500. The town was occupied by Federal troops of the division of Gen. Curtis, on Feb. 18, and

thus continued until they were withdrawn to the battle field of Pea Ridge, a few miles distant.

FELTON, Cornelius Conway, LL.D., an American author, born at West Newbury, Mass., Nov. 6, 1807, died at Chester, Pennsylvania, Feb. 26, 1862. He attended a private school at North Andover, from whence, after a thorough course of study, he entered Harvard College in 1827, where he was distinguished for his literary tastes and his fondness for Greek and Hebrew and the modern languages. During a portion of his junior year he aided in his own support by teaching mathematics in the Roundhill school at Northampton, under Messrs. Cogswell and Bancroft. After his graduation he was engaged for two years as principal of the Livingston high school in Genesee, N. Y. In 1829 he was called back to his Alma Mater to fill the office of Latin tutor, from which department he was transferred, the next year, to the Greek tutorship. In 1832 he was elected college professor of Greek, and in 1834 was appointed Eliot Professor of Greek literature, which position he continued to fill until his elevation to the presidency in 1860. In 1853 he visited Europe, travelling through the principal countries and devoting five months to Greece, ancient and modern, and again in 1858 he spent a portion of another summer in the same land. He examined the workings of her political institutions, visited the halls of legislation at the capital, and formed an acquaintance with the eminent scholars who adorn the university of Athens. Not long after his return from his first journey he published selections from modern Greek writers, and revised for publication Smith's "History of Greece," with notes, and a continuation from the Roman conquest to the present time. As a Greek scholar he was unsurpassed by any other in the country. He had a love of art which was cultivated by his devotion to a language and literature so calculated to improve and perfect the taste. He was deeply interested in everything that concerned Greece, her poets, orators, historians, and philosophers, but especially her monuments of art, and whatever reminded him of her ancient glory, or enabled him to understand more fully the meaning of her ancient writers. His works are numerous and of great value, perhaps the most important are: an edition of Homer, with English notes and Flaxman's illustrations, 1833; a translation of Menzel's "German Literature," and a "Greek Reader," 1840; an edition of the "Clouds of Aristophanes," 1841, republished in England. In 1843, in conjunction with Prof. Sears and Prof. Edwards, he prepared a work, entitled "Classical Studies." In 1847 appeared his editions of the "Panegyricus of Isocrates" and the "Agamemnum of Æschylus;" in 1849, the "Birds of Aristophanes;" and in 1852, "Selections from Greek Historians," and "Selections from the Writings of Dr. Popkin, with a Biographical Sketch." Among his original works are his life of Gen. Eaton, in "Sparks' American Biography," upward of fifty articles in the "North American Review" and a large number in the "Christian Examiner" and the "New American Cyclopædia;" among the latter, are Agassiz, Athens, Attica, Demosthenes, Euripides, and Homer. Prof. Felton was a member of the Massachusetts Board of Education, a Regent of the Smithsonian Institute, and for many years a Regent of Harvard University. He died of disease of the heart at the house of his brother, while upon his way to attend a meeting of the Regents of the Smithsonian Institution, at Washington.

FERNANDINA is at the north end of Amelia island, on the east coast of Florida, 185 miles east by north of Tallahassee, the capital of the State. It is the terminus of the railroad from Cedar Keys, on the Gulf of Mexico. The entrance to the harbor is defended by Fort Clinch, which was evacuated on the approach of the naval expedition from Port Royal on the 3d day of March.

FINANCES OF THE UNITED STATES. The national finances at the close of 1861 were in a very unsatisfactory condition. With large and increasing expenditures forced by circumstances upon the Government, the revenue had declined to a nominal amount, and the public credit, as marked by the prices of the stock exchange, was rapidly sinking. Distrust had seized upon the public mind, and the banks suspended specie payments on the last day of the year amid fears of a foreign war, which would largely increase the expenses of the Government. In this position the Secretary was compelled to come before Congress for loans of a magnitude very much in excess of those required at any former period. The misfortune had been that the war was from its inception regarded as of short duration. It was repeatedly urged at home and abroad that 60 or 90 days would finish it, and although its magnitude constantly increased and greater efforts in men and money were required, both were raised as temporary expedients. The public at first freely loaned its capital, but a very large proportion of what was then advanced was soon wasted while Congress refused to assume any responsibility in voting taxes. The first three months of the war had been conducted on voluntary offers from the people, and in the last six months of the year there were continued efforts to borrow. Congress had authorized loans of $250,000,000. Of this amount $100,000,000 had been borrowed in 3 year bonds at $7\frac{3}{10}$ interest; $50,000,000 in stocks 20 years to run, at $6\frac{1}{2}$; $50,000,000 in notes payable on demand to be used as a currency. From all these loans the Secretary had realized $185,817,863, and there remained for the service of the six months that would close the fiscal year July 30, 1862, $16,000,000 of demand notes, $50,000,000 of 3 year bonds, $7\frac{3}{10}$ interest, and $25,705,871 yet undrawn of the $50,000,000 not taken by the banks. These sums gave $91,000,000 authorized, yet to be raised, to meet expenses estimated

at $300,166,565.35 for the six months. If the 91 millions authorized should be obtained, there would remain a further sum of over 200 millions to be raised in six months, and the mode of doing this required to be promptly decided on, since the expenditure progressed at the rate of $1\frac{1}{4}$ millions per day, with large arrearages to troops and contractors, which were pressing upon the Treasury with increasing severity. There were evidently but two ways in which the money could properly be raised. These were to borrow of those who had the capital to lend at the market rate, whatever that might be, and to levy promptly such taxes as would place the repayment of the loans beyond all manner of doubt. Unfortunately the Secretary and the committees of Congress entertained the idea that paper promises were capital, and that for the Treasury to borrow, it was first necessary to supply the paper to be borrowed, in the form of money. The Secretary said that he could not borrow in coin at better than 80 per cent., and would be required to pay nearly as much for bank notes, but that he could get better terms if Congress "furnished the currency." This idea, that it is the quantity of paper money afloat which determines how much capital the Government can borrow, seems entirely to have engrossed the mind of the Secretary and the views of the committees. He reproduces it on every occasion and in different forms. Thus—

> The Government can resort to borrowing only when the issue of notes has become sufficiently large to warrant a just expectation that loans of the notes can be had from those who hold or can obtain them at rates not less advantageous than those of coin loans before suspension. * * * * * *
>
> The extension of the United States note circulation, until sufficient in amount to enable the Secretary to obtain it from holders by way of loans, was equally inevitable. * * * * * * *
>
> Wherever the volume of notes reaches a point where a loan can be effected at rates fair to the country and desirable to takers, loans will, of course, be made, and ample opportunities for conversion offered.

This idea seems to have influenced the entire financial scheme of the Secretary. The fact that it is not paper promises that the Government seeks to borrow, but capital, is overlooked. The circulating medium, by the agency of which capital changes hands, is apparently confounded with capital itself. This is to suppose that if a limited amount of surplus capital exists in the country, that capital may be increased by the issues of paper money, and therefore a large issue of paper must precede the negotiation of a loan. When business and production were interrupted by the war, a large amount of capital thrown out of its usual employments was comparatively idle, and this sought temporary investment with the Government. The amount that could be so applied soon reached its limit. Long loans were not desirable, and for a reason similar to that which induced the Government to make short loans at the beginning of the war, namely, that peace might come in "60 or 90 days," when the capital would be wanted for the usual occupations of commerce and industry. The Secretary therefore encountered an indisposition to take long loans, while the temporary capital was absorbed. He then supposed that he could increase the available capital by paper issues, and to make those issues float he decided upon a measure of doubtful constitutionality, in making them a legal tender. A bill to this effect encountered great opposition in Congress. The first effect of paper money is doubtless to cause an apparent increase of means; since, as in the present case, the possessors of capital had already parted with it to the Government, and now received pay in paper promises which they wished to employ temporarily. The circulation of the paper soon caused a rise in prices of all commodities, and that in proportion to its abundance, for the reason that all parties wished to avail themselves of the rise that they foresaw. With this rise more paper is required for the transaction of business. Hence, no matter how much may be issued, there will be no greater supply for the wants of the Government. The only capital which can be loaned to the Government, is derived from the profits of industry and commerce. When these profits are absorbed, the power to borrow ceases, no matter how much paper may be floating. Hence the idea that paper money will, when abundant, be readily converted into long stock is a fallacy. If, as measured in paper, a manufacturer gets for 10,000 yards of cloth, double price or $20,000, he receives double the usual amount of money; but as he must pay in the same proportion for wool, labor, and other supplies, he can spare none of it for investment. He may indeed have suffered loss in the transaction. In this manner business absorbs inconvertible paper as fast as it is put out, and the Secretary was surprised to find, after he had issued $250,000,000 of paper money, that the notes were more difficult to borrow than ever.

While the legal tender bill was before Congress, the Secretary had continued to draw from the banks the instalments due on the $50,000,000 of that taken Dec. 1, and on Feb. 5 the last instalment, $3,500,000, of the loan was paid up in the demand notes. The banks having suspended, and gold no longer in circulation, the Government had also suspended on those notes. The 19th of February was at hand, when $1,875,000 interest was due in gold on the $50,000,000 of $7\frac{3}{10}$ notes that had been negotiated August 19.

The Secretary of the Treasury issued the annexed notice:

> TREASURY DEPARTMENT, *Feb.* 4, 1862.
>
> Holders of bonds of the United States, dated Aug. 19, 1861, and payable three years from date, are hereby notified that provision is made for the payment of the coupons of semiannual interest, which becomes due on the 19th inst., in coin, agreeable to their tenor, by the Treasurer of the United States at Washington, or by either of the Assistant Treasurers at New York, Boston, and Philadelphia.
>
> All such coupons, together with schedules, showing the number and amount of each coupon and the aggregate sum of each parcel, must be presented for ex-

amination and verification at least three full business days before payment.

S. P. CHASE. Secretary of the Treasury.

The bonds were 1 per cent. discount for bank money, which still continued to be the currency, although it was depreciated 2 per cent. as compared with gold. A portion of the last instalment paid in by the banks on the stock was appropriated to the payment of the interest.

The currency was now in a peculiar position. The banks had ceased to pay specie, and the channels of circulation were filled with Government notes that the banks declined to receive on deposit, for the reason that they accumulated with them to an embarrassing extent. The notes were indeed receivable for customs, but the amounts required for that purpose were small, and if they accumulated with the banks it was the same as a loan to the Government without interest, and as the banks had already $100,000,000 of Government stock it became burdensome. In this position of affairs the following notice was issued by the department:

OFFICE OF THE ASSISTANT TREASURER OF THE UNITED STATES, NEW YORK, *Feb.* 8, 1862.

The undersigned is authorized by the Secretary of the Treasury to receive on deposit United States notes as a temporary loan, for which interest at the rate of five (5) per cent. per annum will be paid, together with the principal, in like currency, on demand after ten days' notice.

JOHN J. CISCO, Ass't Treas'r U. S.

The following is a copy of the certificate which the Assistant Treasurer issued to depositors:

OFFICE OF THE ASSISTANT TREASURER OF THE UNITED STATES, NEW YORK, ——, 186 .

I certify that ——— ——— this day deposited to the credit of the Treasurer of the United States —— —— dollars, in United States notes, as a temporary loan, for which interest at the rate of five per cent. per annum will be paid, together with the principal, in like currency, on demand after ten days' notice, for which I have signed duplicated receipts.

$——— ——. ——— ———, Ass't Trea'r.

The effect of this was to induce the banks to receive the notes from the public on deposit, and to place them to a certain extent with the Government for these certificates, which certificates were subsequently used for the settlement of balances at the bank clearing house. The deposits then made by the banks supplied some of the pressing wants of the Treasury. The money so received on being paid out to the contractors and other creditors, was by them redeposited in bank or used in the discharge of loans previously made. Thus the notes moved in a circle between the Treasury and the banks. The institutions, however, objected to allowing the public to make deposits with the Treasury on the ground that it would cause a withdrawal of deposits from the banks, when they were earning nothing, to the Treasury. This objection was, however, overruled, and deposits were received from the public at 4 per cent. Meanwhile the hesitation of Congress to pass the bill authorizing a new issue of notes, and making them a legal tender, had induced action on the part of public bodies to urge its passage. The Chamber of Commerce, under the influence of the Secretary of Treasury, Feb. 8, passed resolutions, with very few dissentient voices, indorsing the legal tender clause of the currency bill, and urging immediate action. Some action was indeed imperatively necessary. The public creditors were clamorous and in great distress. In addition to creditors for small amounts, who were embarrassed by the exhaustion of the Treasury, one firm claimed two million one hundred thousand dollars for clothing, cloths, &c. Another five hundred thousand dollars for tent duck, and still others to almost an equal extent. There were, nevertheless, great difficulties to contend with. A great number of the members were unprepared to enter upon the perilous course of paper money, which was essentially revolutionary. A resolution to strike out a clause making notes a legal tender was, however, on the 8th of February defeated, 93 to 53. While this bill was pending Congress, on the 12th of February, authorized an additional issue of $10,000,000 of notes similar to the $50,000,000 authorized by the act of August. This amount, with the sums received on deposits, and the 3 year $7\frac{3}{10}$ bonds, which were paid out to creditors, although selling at 1 per cent. discount, enabled the Secretary to meet the most pressing demands upon the Treasury until the 25th of February, when the currency bill finally passed in the following shape:

An Act to authorize the issue of United States notes and for the redemption or funding thereof, and for funding the floating debt of the United States.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that the Secretary of the Treasury is hereby authorized to issue on the credit of the United States one hundred and fifty millions of dollars of the United States notes, not bearing interest, payable to bearer, at the Treasury of the United States, and of such denominations as he may deem expedient, not less than five dollars each.

Provided, however, that fifty millions of said notes shall be in lieu of the Demand Treasury Notes authorized to be issued by the act of July 17, 1861, which said Demand Notes shall be taken up as rapidly as practicable, and the notes herein provided for substituted for them: and *provided* further, that the amount of the two thirds of notes together shall at no time exceed the sum of one hundred and fifty million dollars; and such notes herein authorized, shall be receivable in payment of all taxes, internal duties, excises, debts, except duties on imports, and demands of every kind due to the United States, and of all claims and demands against the United States of every kind whatsoever, except for interest upon bonds and notes, which shall be paid in coin, and shall also be lawful money and a legal tender in payment of all debts, public and private within the United States, except duties on imports and interest as aforesaid; and any holders of said United States Notes depositing any sum not less than fifty dollars, or some multiple of fifty dollars, with the Treasurer of the United States or either of the Assistant Treasurers, shall receive in exchange therefor duplicate certificates of deposit, one of which may be transmitted to the Secre-

tary of the Treasury, who shall thereupon issue to the holders an equal amount of bonds of the United States, coupons or registered, as may by said holders be desired, bearing interest at the rate of six per centum per annum, payable semiannually, and redeemable at the pleasure of the United States after five years, and payable twenty years from the date thereof; and such United States Notes shall be received the same as coin at their par value, in payment of any loans that may be hereafter sold or negotiated by the Secretary of the Treasury, and may be reissued from time to time as the exigency of the public interests may require.

Sec. 2. *And be it further enacted,* That to enable the Secretary of the Treasury to fund the treasury notes and the floating debt of the United States, he is hereby authorized to issue on the credit of the United States, coupon bonds or registered bonds, to an amount not exceeding $500,000,000, and redeemable at the pleasure of the United States after five years, and payable twenty years from date, and bearing interest at the rate of six per centum per annum, payable semiannually. And the bonds herein authorized shall be of such denominations, not less than $50, as may be determined upon by the Secretary of the Treasury. And the Secretary of the Treasury may dispose of such bonds at any time, at the *market value* thereof, for (lawful money) the coin of the United States, or for any of the treasury notes that have been, or may hereafter be, issued under any former act of Congress, or for the United States notes that may be issued under the provisions of this act; and all stocks, bonds, and other securities of the United States held by individuals, corporations, or associations within the United States, shall be exempt from taxation by order or under State authority.

Sec. 3. *And be it further enacted,* That the United States notes and the coupon or registered bonds authorized by this act shall be in such form as the Secretary of the Treasury shall direct, and shall bear the written or engraved signatures of the Treasurer of the United States and the Register of the Treasury, and also, as evidence of lawful issue, the imprint of a copy of the seal of the Treasury Department, which imprint shall be made under the direction of the Secretary, after the said notes or bonds shall be received from the engravers, and before they issue; or the said notes and bonds shall be signed by the Treasurer of the United States, or for the Treasurer by such persons as may be specially appointed by the Secretary of the Treasury for that purpose, and shall be countersigned by the Register of the Treasury, or for the Register, by such persons as the Secretary of the Treasury may specially appoint for that purpose; and all the provisions of the act entitled "An act to authorize the issue of treasury notes," approved the 23d day of Dec., 1857, so far as they can be applied to this act, and not inconsistent therewith, are hereby revived and reënacted; and the sum of $300,000 is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to enable the Secretary of the Treasury to carry this act into effect.

Sec. 4. *And be it further enacted,* That the Secretary of the Treasury may receive from any person or persons, or any corporation, United States notes on deposit for not less than thirty days, in sums of not less than one hundred dollars, with any of the assistant treasurers or designated depositaries of the United States authorized by the Secretary of the Treasury to receive them, who shall issue therefor certificates of deposit, made in such form as the Secretary of the Treasury shall prescribe, and said certificates of deposit shall bear interest at the rate of five per centum per annum; and any amount of United States notes so deposited may be withdrawn from deposit at any time after ten days' notice on the return of said certificates: *Provided,* that the interest on all such deposits shall cease and determine at the pleasure of the Secretary of the Treasury; and *provided* further, that the aggregate of such deposits shall at no time exceed the amount of twenty-five million dollars.

Sec. 5. *And be it further enacted,* That all duties on imported goods which shall be paid in coin, or in notes payable, or in demand notes, heretofore authorized to be received and by law receivable in payment of public dues, and the coin so paid shall be set apart as a special fund, and applied as follows:

First. To the payment in coin of the interest on the bonds and notes of the United States.

Second. To the purchase or payment of one per centum of the entire debt of the United States, to be made within each fiscal year after the first day of July, 1862, which is to be set apart as a sinking fund; and the interest of which shall in like manner be applied to the purchase or payment of the public debt as the Secretary of the Treasury shall, from time to time, direct.

Third. The residue thereof to be paid into the Treasury of the United States.

This very important law produced an entire change in the currency. It provided for 150 millions of legal tender paper money, which was available for all purposes of currency except custom duties and interest on stock, both of which were to be paid in coin. The outstanding $60,000,000 of demand notes, by the acts of August and February 12th, were receivable for customs. Hence gold could not be realized for duties until those notes should be absorbed. They were by the law endowed with a specific specie value, since they were alone a substitute for specie at the custom house. The new issues of demand notes being a legal tender, at once took the place of gold as a means of redemption for bank notes, and thus relieved the banks from the dilemma in which under the State laws they had been placed by the act of suspension. When compelled to forego specie payments they contracted their obligations, and made efforts to place themselves in a position speedily to resume. The contraction of the currency thus brought about added to the difficulties of the moment. As soon, however, as a flood of Government paper was authorized as a tender in lieu of specie, the banks renewed their expansive movement, and began to increase their circulation. The 60 millions of old notes which they had at first refused to receive at all, and then tolerated when they could be deposited with the Government, now became in active demand.

The banks would no longer deposit them with the Treasury without a stipulation that they should receive back the same kind of notes, and as some time must necessarily elapse before the new notes could be got ready, this stipulation was agreed to. When the banks suspended and specie rose to a premium, it immediately ceased to circulate, and began to disappear altogether. This fact caused great inconvenience, since, there being no Government notes less than $5, and the banks not disposed to increase their issues, the want of small circulation was urgently felt. As soon, however, as, by the law of Feb. 25th, the banks were allowed to redeem their circulation in the Government notes, they began eagerly to supply small currency.

The wants of the Treasury for the moment continued very pressing, notwithstanding the large supplies granted by the law of Feb. 25th, because some weeks must elapse before adequate

amounts could be prepared by the engravers. The current expenses were one million two hundred and fifty thousand dollars per day, partly met by the receipts on deposit; but there were also large arrearages, amounting to $50,000,000 and more, due to creditors, who were pressing for pay. These persons had constituted a class of urgent borrowers in the market, and as capitalists hesitated to lend freely on simply approved claims, the public creditors were compelled to submit to heavy loss to realize money. To relieve these classes, Congress, at the request of the Secretary, passed March 1st the following law:

An Act to authorize certificates of indebtedness to the public creditors.

Be it enacted, &c., That the Secretary of the Treasury be and he is hereby authorized to cause to be issued to any further creditor who may be desirous to receive the same, upon requisition of the head of the proper department, in satisfaction of audited and settled demands against the United States, certificates for the whole amount due, or parts thereof, not less than one thousand dollars, signed by the Treasurer of the United States, and countersigned as may be directed by the Secretary of the Treasury, which certificates shall be payable in one year from date, or earlier, at the option of the Government, and shall bear interest at the rate of six per centum.

This important measure gave the Secretary unlimited authority to borrow on twelve months. This is the first instance where the Secretary of the Treasury was allowed to use the credit of the Government without limit. It operated in fact, as far as the certificates were accepted by the creditors, as an extension of twelve months on the floating debt of the Government, and bridged over the period required for the negotiation of the 6 per cent. bonds authorized by the act. Any creditor of the Government, whose claim had been approved, could now at once obtain a 6 per cent. interest-bearing obligation of the Government, which he could sell or use as first-class collateral for loans.

The following rules and regulations were issued by the Secretary of the Treasury:

Congress having authorized the issue of certificates of indebtedness by the Secretary of the Treasury, in payment of audited and settled demands against the Government, as well as in payment of checks, drafts drawn by disbursing officers upon amounts placed to their credit with the Treasurer of the United States, in favor of creditors who have furnished supplies, &c., and who are willing to receive such certificates in satisfaction of their demands, the following regulations are presented, and will be strictly observed in the execution of the act:

The certificates of indebtedness will be payable to the claimant or creditor of the Government, or his order, and in the denominations of $1,000 and $5,000. Certificates of the larger denominations will be issued in all cases where the nature of the claim will admit of it. A book will be opened by the Treasurer of the United States, in which shall be kept a record of each certificate issued under authority of the act; the name of the person to whom issued; the date, number, and amount thereof; on what account; if on Treasury warrant, the number thereof, and if on draft or check of a disbursing officer, the name of the officer by whom drawn, the date and amount of such check or draft, &c.

The certificates shall be signed by the Treasurer, and countersigned by the Register of the Treasury, who shall also keep a complete record of said certificates, as required of the Treasurer. If issued upon a warrant, they will bear even date therewith; or if to a disbursing officer, then with the date of the presentation of his deed or draft on the Treasurer of the United States.

When the Secretary of War or Navy may desire to leave a credit on the books of the Treasury in favor of a disbursing officer of his Department, he will draw his requisition on the Secretary of the Treasury in the usual form for the amount desired to be placed to the credit of such disbursing officer, and specify the appropriation properly chargeable.

Upon such requisition being received at the Treasury Department, a warrant will issue to the Treasurer, and he will accordingly place the amounts to the credit of the disbursing officers named, who will then be authorized to draw checks or drafts thereon, to the amount of such requisition, in favor of such creditors entitled to payment by him as may desire to receive such certificates in satisfaction of their respective demands.

The checks or drafts of disbursing officers will be in the following form:

$—— —— 1862.

The Treasurer of the United States will pay to ——— or order, on certificates of indebtedness ——— dollars, being amount due for ———, as will appear by bill and receipt therefor, in my possession, and which will be rendered as a voucher in my accounts for the ——— quarter of this year.

(Signed) ——— ———

To F. E. Spinner, Treasurer of the United States.

As the certificates of indebtedness are only to be issued in payment of creditors, and for amounts liquidated and actually due them, the disbursing officer, before drawing his check or draft on the Treasurer, will take the same voucher from the creditor, and will, in all respects, be subject to the same responsibilities as if making payment in coin or United States notes.

The requisition in favor of the officer will be charged on the books of the accounting officer as other requisitions, and vouchers will go into the general accounts of the disbursing officer, and be settled with his other accounts.

The issue of these certificates gave great relief by causing capital to circulate more freely, and the department was less dependent on the money received from deposits to meet current expenses, as those deposits were made in demand notes, which were receivable for duties, and which it was important to get up as soon as possible, in order that the Government might be in receipt of gold through the custom house, and thus be enabled to pay the interest on the Government stock without purchasing gold. The department therefore ordered as follows:

Office of the Assistant Treasurer of the United States, New York, *March* 14, 1862.

Under instructions from the Secretary of the Treasury, I hereby give notice that all certificates bearing five (5) per cent. interest, hereafter issued for deposits of United States notes, will be payable in whatever notes may have been made a legal tender by act of Congress, and may be, at the time when repayment shall be called for, paid out usually to public creditors.

JOHN J. CISCO, Assistant Treasurer U. S.

The effect of the notice was to check the temporary deposit of demand notes for 5 per cent certificates.

It was now apparent that although the law of Feb. 25th had intended to make the first issue of $60,000,000 a legal tender, like the new

one authorized, it had not really done so, and the banks would not use them as a basis for issues. A new act was therefore necessary, and it was passed March 16th, as follows:

An act supplemental to the Treasury act of March 1, *adopted by Congress, and approved by the President on the* 16*th of March*, 1862.

Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, That the Secretary of the Treasury may purchase coin with any of the bonds or notes of the United States, authorized by law, at such rates and upon such terms as he may deem most advantageous to the public interest; and may issue, under such rules and regulations as he may prescribe, certificates of indebtedness, such as are authorized by an act entitled "An act to authorize the Secretary of the Treasury to issue certificates of indebtedness to public creditors," approved March 1, 1862, to such creditors as may desire to receive the same, in discharge of checks drawn by disbursing officers upon sums placed to their credit on the books of the Treasurer, upon requisitions of the proper departments, as well as in discharge of audited and settled accounts, as provided by same act.

Sec. 2. *And be it further enacted*, That the demand notes authorized by the act of July 17, 1861, and by the act of February 12, 1862, shall, in addition to being receivable in payment of duties on imports, be receivable, and shall be lawful money and a legal tender, in like manner, and for the same purpose, and to the same extent, as the notes authorized by the act entitled "An act to authorize the issue of United States notes, and for the redemption or funding thereof, and for funding the floating debt of the United States," approved February 25, 1862.

Sec. 3. *And be it further enacted*, That the limitation upon temporary deposits of the United States notes with any Assistant Treasurers or designated depositaries, authorized by the Secretary of the Treasury to receive such deposits, at five per cent. interest, to twenty-five millions of dollars, shall be so far modified as to authorize the Secretary of the Treasury to receive such deposits to an amount not exceeding fifty millions of dollars, and that the rates of interest shall be prescribed by the Secretary of the Treasury, not exceeding the annual rate of five per centum.

Sec. 4. *And be it further enacted*, That in all cases where the Secretary of the Treasury is authorized by law to reissue notes, he may replace such as are so mutilated or otherwise injured as to be unfit for use, with others of the same character and amount; such mutilated notes, and all others which by law are required to be taken up and not reissued, shall, when so replaced or taken up, be destroyed in such a manner and under such regulations as the Secretary of the Treasury may prescribe.

By this act the Secretary was authorized to purchase coin for the payment of the interest on the public debt. He was also authorized to extend the issue of 1 year certificates to the discharge of checks of disbursing officers, also without limit as to amount. The old or "gold notes" as they were called, because they were substitutes for gold at the custom house, were made a legal tender, and the limit of deposits raised to $50,000,000. All these acts placed ample means apparently at the service of the department. It had 100 millions of notes to issue, an unlimited amount of 1 year certificates; $500,000,000 of 6 per cent. stock; 50,000,000 of deposit certificates, and about 37,000,000 of three year $7\frac{3}{10}$ bonds still on hand to issue. These had indeed been paid out until the price fell to 3 per cent. discount in the market. The certificates of indebtedness were then substituted until they fell to $95\frac{1}{2}$, or $4\frac{1}{2}$ per cent. discount, at which rate they would afford the buyer $10\frac{1}{2}$ per cent. interest in gold for money payable in a year. The leading creditors of the Government then declined to take the certificates any longer, and the checks of disbursing officers were sold at $4\frac{1}{2}$ per cent. discount. In order to stay this depreciation the Secretary issued a notice that he would pay in cash 20 per cent. of the amount of certificates in the hands of original holders. Thus if a person held $100,000 of certificates, the Secretary would redeem $20,000 in cash. This, by diminishing the amount on the market, caused a little recovery in the price, and they rose to $97\frac{1}{2}$. The 1st of April was now approaching, when the interest, $1,875,000, was due on the $50,000,000 of 3 year bonds issued Oct. 1st. The Government purchased a portion of the requisite specie, concentrated all held at the Government deposits, and effected the payment. On the 24th of March the Treasurer sold $3,000,000 of the $7\frac{3}{10}$ bonds for demand notes at par and interest. The proceeds were sent west for army purposes.

It is now to be observed that in all these movements there had as yet been no expansion of the currency. On the contrary, there had been a contraction. The circulation of the banks of the Northern States had, at the close of 1861, been nearly $140,000,000, and the Government had issued $30,000,000 of demand notes, making $170,000,000 of paper, in addition to the specie in circulation. On the last day of the year the banks suspended specie payments. Gold and silver gradually ceased to circulate, and the banks in the uncertainty which involved the future began to curtail their obligations. This was followed, on the passage of the act authorizing legal tender notes, by the withdrawal of the Government demand notes from circulation. Hence, while the Government was issuing 3 year bonds and 1 year certificates, the circulating medium was greatly contracted, as was proved by the fact that gold, which was 5 per cent. premium January 1st, was $1\frac{1}{4}$ to $1\frac{1}{2}$ per cent. April 1st, when the new legal tender notes were ready for circulation. The Government finances had at the same time received support from the success of the Western armies, which had apparently broken the strength of the Confederates and given rise to hopes of peace. This circumstance, together with the prospect of the passage of some adequate tax law, had caused a recovery in the prices of some descriptions of stocks. The banks held, when they suspended, at the close of December, over seventy millions of Government securities, mostly 6 per cent. and 3 year $7\frac{3}{10}$ per cent. treasury bonds. They had taken the former at a rate equal to 89.32, and the latter at par. January 1st, the former were at 88, and the latter at 2 to 3 per cent. discount, and gold at 5 per cent. premium. In other words, the stock for which the banks had paid

89.32 in gold was worth only 86 in gold. Gradually the price rose to 94 for stock and par for the bonds, while gold, after rising to 5 per cent. premium, fell back to 1¼ and 1½. Hence the banks could make a profit by selling their stock for gold, and they could discount paper by paying out the 3 year bonds to be sold by the borrower. The securities disposed of by the banks were, to some extent, purchased by the public. The Government which had obtained such large supplies of capital from the public in various shapes, ships, steamboats, clothing, food, munition, &c., was now ready to pay out the paper for them, and the payments took place as fast as the printers could deliver the money. The paper so poured upon the market began at once to inflate the currency. The creditors who received it discharged their debts with it, and it accumulated with the banks, which freely offered to loan it, at lower rates of interest. The Treasury was the reservoir that received it from the public at 5 per cent. interest, and this fact made 5 per cent. the minimum price of money, since no one would take less than he could get from the Government. The legal limit of $50,000,000 was thus rapidly filling up, and on the 26th of April the Secretary ordered the rate of interest to be reduced to 4 per cent., except for banks, which were still allowed 5 per cent. interest. The limit of $50,000,000 was completed by the close of April, and the Assistant Treasurer determined on paying off all 5 per cent. deposit certificates, and allowing only 4 per cent. for new deposits. He refrained from this, however, and only received deposits at 4 per cent., as the old ones were voluntarily withdrawn.

The issues of these various descriptions of government paper continued, and at the close of May an official report of the public debt was made by the Secretary, showing the following results as compared with Dec. 1st:

UNITED STATES DEBT.

	December, 1861.	May 28, 1862.	Decrease.	Increase.
Old debt	$70,104,955 91	$70,104,955 91	....	....
Oregon war debt	307,900 00	878,450 00	....	$570,550 00
Treasury notes, old	105,111 64	105,111 64	....	....
" " 1857	664,200 00	175,900 00	$488,300 00	....
" " 1860	9,933,950 00	221,650 00	9,712,300 00	....
" " 2 years	7,767,600 00	2,767,900 00	4,999,700 00	....
" " 60 days	3,993,900 00	111,600 00	3,882,300 00	....
3 years' bonds, 7 3/10 per cent	100,000,000 00	120,523,450 00	....	20,523,450 00
20 years' stocks, 6 per cent	50,000,000 00	50,000,000 00	....	....
Demand notes	27,940,000 00	145,880,000 00	....	117,940,000 00
1 year certificates, 6 per cent	....	47,199,000 00	....	47,199,000 00
5–20 years' bonds, 6 per cent	....	2,699,400 00	....	2,699,400 00
Deposits' certificates, 5 per cent	....	50,778,566 56	....	50,778,566 56
Total	$270,817,617 55	$491,445,984 11	$19,082,600 00	$239,710,966 56

Thus in six months the debt had been actually increased $220,628,366.56, and there had in addition been converted $19,082,600 treasury notes into paper payable on demand. The whole amount raised was in demand loans, of which $117,000,000 was in paper money, $47,000,000 in one year certificates, and nearly $51,000,000 in deposits. The appeal of the Secretary for conversion into the 5–20 bonds had been productive of only $2,699,400. It might therefore be said that there were during that period absolutely no loans of capital to the Government. The 3 year bonds had been paid out to creditors, with the exception of the $3,000,000 negotiated at par at the close of March. The Secretary had extended the note circulation by $57,000,000, and the amount outstanding was now equal to the whole circulation of the banks. The whole paper currency had therefore been doubled, but there was no manifestation of any desire on the part of the public to convert notes into stock. It is true that the old notes making one half the amount of Government notes outstanding were withdrawn from circulation, and held for the use of importers in their payments to the custom house, at continually rising prices, marked by the depreciation of the Government currency, which was now 7½ per cent. discount for gold. The point of "extended circulation" which the Secretary supposed would bring with it "increased facilities to contract loans," was not yet reached. The public did not take the 5–20 stock. The Secretary ascribed the failure of the loan to the terms of the law, which make the bonds convertible at par, and permit the Secretary to sell them at the market value. He objected to the first provision that while the bonds were convertible at par to all the world, the brokers and speculators, who might otherwise "take considerable amounts," could make no profit, since the price could not rise above par, when everybody had a right to take them at par from the Treasury. The provision to sell only at "market value" was objectionable in his view for the same reason, since it gave no advantage to large operators. He therefore desired the repeal of those provisions, and the granting of a "discretionary power" to the Secretary in the making of these loans. Meantime he was again destitute of resources. The deposits and 1 year certificates did not suffice to meet current expenditures, and he again appealed to Congress for an issue of paper money.

The approach of the month of July, when more than $4,000,000 of specie were due the holders of United States stocks for interest, rendered some effort necessary to obtain it without coming into the market as a purchaser, as that would act upon the premium on gold in

the market; an exchange was made of 3 year $7\frac{3}{10}$ bonds for the gold, both gold and bonds bearing the same price in the market. This operation was the same as compounding the interest at 7.30 per cent.

A considerable portion of the $50,000,000 deposits on hand, and for which 5 per cent. certificates were outstanding, was payable in the old issue of demand notes, which bore a premium in the market proportionate to that of gold, for which they were substitutes at the custom house. Thus there were two kinds of certificates out: one payable in legal tender notes not receivable for customs, and one payable in the old or "gold notes." On the 5th of May the Sub-Treasurer issued the annexed circular:

UNITED STATES TREASURY, NEW YORK, *May* 5, 1862.

Under instructions from the Secretary of the Treasury, I hereby give notice to all holders of certificates of deposit bearing interest, issued prior to the 14th day of March ultimo, and payable in "United States notes issued under acts prior to February 25, 1862," that they are required to present such certificates within ten days from the date hereof for payment of principal and interest, or for exchange for certificates payable in "lawful money of the United States." Any such certificates not so presented, will, after said ten days, be payable in such lawful money as the Government may be usually paying out to the public creditors.

JOHN J. CISCO, Assist. Treas. United States.

This had a twofold operation; it cleared the Treasury of the obligation of paying out the gold notes, and it enabled it to take new deposits payable in "lawful currency" at 4 per cent. instead of 5 per cent. The notes were withdrawn, and by the 22d of May the limit of deposits was again full. A new difficulty now presented itself. On the entry of goods at the custom house the complications of the new tariff had made it requisite that the merchant should deposit an estimate of "gold notes" to cover the duties. When these were accurately adjusted the amount, if any, overpaid, was returned to him. The Secretary directed that these amounts should be returned in new notes, which were less valuable than those which had been deposited. The merchants demurred to this, claiming that they had a right to receive back the same kind of money that they deposited, since that money was not currency but a special medium, which they were obliged to buy at a premium for custom house purposes. In answer to these complaints the Secretary issued the following order:

TREASURY DEPARTMENT, *May* 21, 1862.

SIR: I am in receipt of your letter of the 19th instant, inclosing a petition from the prominent importing merchants of the city of New York, asking that your instructions relative to the payment of all dues except interest and duties be so far modified as to permit the payment of all checks drawn by the Collector of Customs for "excess of unascertained duties" in notes of the first issue or coin.

Their request is deemed reasonable and just, and you are hereby authorized to pay all checks drawn by the Collector which shall contain the words "for excess of deposits for unascertained duties" in such money as is receivable for duties at the custom-house.

I am very respectfully,

S. P. CHASE, Sec. of the Treasury.

JOHN J. CISCO, Esq., Assistant Treasurer, New York.

The trouble of paper money seemed to multiply at every turn. It was discovered that a very ingenious fraud was perpetrated to a considerable extent on the Government notes. It was found that nine $10 notes might be so mutilated and rejoined that 10 complete notes could be formed to the great profit of the operator. As a consequence of the discovery, all mutilated notes, and they had become very numerous, were refused; but the evil was very great, subjecting innocent holders to loss, and the following circular was issued as a corrective:

TREASURY DEPARTMENT, WASHINGTON, *May* 18, 1862.

To guard against frauds upon the Government, and to secure the just rights of holders, the following rules, for the redemption of mutilated United States, are hereby established:

RULES.

First. Mutilated notes, which have been torn, no matter how much, but of which it is evident that all the fragments are returned; or defaced, no matter how badly, but certainly satisfactorily genuine, will be redeemed at their full face value on presentation.

Second. Fragments of notes will be redeemed in full only when accompanied by an affidavit, stating the cause and manner of the mutilation, and that the missing part of the note is totally destroyed. The good character of the affiant must also be fully vouched by the officer before whom the affidavit is taken.

Third. In the absence of such affidavit, fragments of notes will not be paid in full, but the parts represented will be redeemed in their proportion to the whole note; reckoning, as a general rule, by twentieths.

Fourth. Less than half of a note will not be redeemed, except by payment of the full value of the note under the second rule; or by payment of the proportional value of the missing part, when presented under the fifth rule.

Fifth. Fragments of notes, for which less than the full face value has been paid, will be retained for a year, to the end that the owners, who have received less than the value of a full note, may have opportunity to return the missing part, and receive the amount previously withheld.

Sixth. Until further order, mutilated notes and fragments will be redeemed only at the Treasury of the United States, at Washington; whither they can be sent, addressed to the "Treasurer of the United States," by mail, free of postage. A draft on the Assistant Treasurer, at New York, for the amount allowed, will be returned in the same way, to the address of the person remitting the same.

S. P. CHASE,
Secretary of the Treasury.

An extraordinary negotiation was now entered into by the Secretary of the Treasury, and one which produced much feeling among capitalists. The limit of demand notes, old and new, that might be issued under the loan was $150,000,000. Of these $60,000,000 were the old notes, receivable for customs, and which could not be reissued. There remained then authority to issue $90,000,000 of new legal tender notes. As fast, however, as the old notes were paid in for customs, new ones might be issued in their place, and when the old notes should all be paid in the customs would be paid in gold only. These custom house notes were at $1\frac{1}{2}$ per cent. premium, and the 3 year bonds, of which there remained $29,000,000 still to issue, were at 3 per cent. premium. Under

these circumstances the Secretary, June 9th, being pressed for money, exchanged $3,000,000 3 year bonds for $3,000,000 old demand notes at 3 per cent. premium. In other words, he funded the old notes in $7\frac{3}{10}$ 3 year bonds. This transaction was a private one, and it was asserted that had it been public the Secretary could have obtained a much better bargain.

While these issues of paper had been pushed to such an extent in the service of the Government, the utmost reluctance existed on the part of Congress to impose necessary taxes, on the ground of such impositions being injurious to the political party making them. The tax law that had been levied, August 5th, 1861, and which was estimated to yield $20,000,000, was repealed July 1st, 1862, in the following terms: "*And be it further enacted*, That so much of an act entitled 'an act to provide increased revenue from imports to pay interest on the public debt, and for other purposes,' approved August 5, 1861, as imposes a direct tax of twenty million dollars on the United States, shall be held to authorize the levy and collection of one tax to that amount; and no other tax shall be levied under and by virtue thereof until the 1st day of April, 1865, when the same shall be in full force and effect."

The objections to the tax were, that it would weigh heavily upon the western farmers. It was, however, evident that some tax must be imposed in order to maintain the credit of the Federal Government, and that tax was devised so as to give an apparent revenue to sustain the credit of the Government, while really it exacted nothing directly from agriculturists. The bill that with this object was introduced into the House, provided for taxes upon the profits of trade and industry, and upon the incomes of individuals. The profits are reached by stamps upon each transaction as expressed in any description of paper used in the transfer, and by a tax of 3 per cent. on all manufactures. The act imposing the taxes was very long and minute in its details. It was carefully reviewed and amended by the House in Committee of the Whole after it had been reported from the Committee of Ways and Means, and was first passed by that body on Friday, April 4th, 1862. It was then sent to the Senate, where it was referred to the Finance Committee, by whom it was in due time reported, with many amendments. The Senate, after long consideration, passed the act on Friday, June 6th, 1862, after having rejected two substitutes, offered respectively by Senators Simmons and McDougall. The act was then returned to the House for concurrence in the amendments made by the Senate, and referred to a conference committee of both houses. On their report it was finally passed June 23d, and received the signature of the President, July 1st, 1862.

The law by its terms was to go into operation on the 1st of September, but in consequence of the unavoidable delay in preparing stamps, and the details of the inspectors, it did not go fully into operation until toward the close of the year. As a consequence, the penalties in respect to legal and other documents were remitted until after a suitable time. On the 17th of November the Commissioner issued the following notice:

TREASURY DEPARTMENT, OFFICE OF INTERNAL REVENUE,
WASHINGTON, D. C., *Nov.* 17, 1862.

The Commissioner of Internal Revenue is prepared to supply the following stamps in quantities sufficient for the use of the people of the District of Columbia, and of the States east of the Rocky Mountains, viz.: "Playing Cards," "proprietary", "express," "telegraph," "insurance," "life insurance," "fire and marine," "passage tickets," and "protest."

The use of the stamps herein specified is hereby required in the District and States above described, on and after the first day of December next; and persons guilty of wilfully neglecting to use said stamps will be subject to the penalty provided in the law.

GEO. S. BOUTWELL,
Commissioner of Internal Revenue.

The following table shows the number and value of revenue stamps sold during the week ending Nov. 21st, by the Commissioner of Internal Revenue:

1 Cent Proprietary	3,139,500	$31,395 00
1 Cent Express	1,680,000	16,800 00
1 Cent Playing Card	661,500	6,615 00
2 Cent Playing Card	798,000	15,960 00
2 Cent Bank Check	3,402,000	68,040 00
2 Cent Proprietary	2,751,000	55,020 00
3 Cent Telegraph	578,000	17,340 00
4 Cent Proprietary	539,750	21,590 00
5 Cent Express	221,000	11,050 00
10 Cent Contract	51,000	5,100 00
10 Cent Power of Attorney	518,500	51,850 00
15 Cent Bill of Lading	510,000	51,000 00
15 Cent Inland Exchange	229,500	34,425 00
20 Cent Inland Exchange	234,600	46,920 00
25 Cent Life Insurance	102,000	25,500 00
25 Cent Bond	328,950	82,337 50
25 Cent Insurance	321,300	80,325 00
25 Cent Certificate	469,200	117,300 00
50 Cent Life Insurance	55,250	27,625 00
50 Cent Mortgage	267,750	133,875 00
50 Cent Original Process	34,000	17,000 00
50 Cent Probate of Will	255,000	127,500 00
50 Cent Conveyance	144,500	72,250 00
50 Cent Entry of Goods	131,750	65,875 00
50 Cent Passenger Ticket	180,625	90,312 50
50 Cent Bond	144,500	72,250 00
$1 00 Conveyance	207,000	207,000 00
1 00 Power of Attorney	279,000	279,000 00
1 50 Inland Exchange	324,000	486,000 00
Herrick's Die	1,870	18 70
Total	18,561,045	$2,317,178 70

These of course do not represent the number used in the week, but the supplies purchased for distribution and future use. The Assistant Treasurer of New York reported for the three last months of 1862 the receipts from internal revenues at that port. These were for October $435,101, for November $751,286, for December $1,539,525; together $2,725,912. These payments embraced the taxes, licenses, &c., payable under the law by dealers and professions in New York.

The principle of the law seems to be to tax capitalists, traders, and manufacturers, and as far as possible exempt agriculturists. This is, however, fallacious, since all the taxes, no matter by whom paid, fall ultimately fully upon the producers. The heads of taxation under the law are: stamps upon every species of paper

used to represent or transfer property; licenses for the practice of professions and commerce; taxes on dividends and profits; on incomes over $600; on manufactures an ad valorem duty of 3 per cent., and a specific duty on others. In the imposition of this duty many exceptions in favor of agriculture are made. Thus cheese is not considered a manufacture; sugar from sorghum is not taxed, while sugar from cane is taxed. Under these various forms many persons are required to pay several taxes. Raw material, after leaving the hands of the farmer, is taxed at every new form it assumes until it gets back to him manufactured for consumption, charged with all the taxes with which it has been loaded on the way. Thus a cattle broker pays $10 license and a stamp upon the receipt of sales. A calf slaughtered is taxed 5 cents, the skin is taxed 6 cents. The tanner pays 3 per cent. tax, and a stamp upon receipt of payment and upon check paid for skins. The leather dealer pays $50 license, and for stamps upon receipts and checks. The shoemaker pays 3 per cent. tax, and for stamps upon receipts and checks. The wholesale shoe-dealer $50 license and for stamps. The retail dealer $10 license and for stamps, and the skins have come back to the farmer in the shape of a pair of boots loaded with 20 taxes besides his own income tax and those of the seven leading persons concerned in transforming the calf skin into boots, and returning it to the producer. All articles produced are loaded in the same way as they pass from hand to hand, and it results that the consumers of all products pay the whole of the tax accumulated upon them. The majority of consumers are agriculturists, and their productions are far in advance of the consumption of the Northern States. As a consequence they cannot charge upon their productions the weight of the taxes. The value of their crops, as a general thing, is governed by the markets abroad. The weight of the taxes has therefore a continued tendency to discourage consumption, and consequently production. This tendency is increased by the mode of levying; for example, some manufacturers are sworn 48 times in a month in relation to this operation. The whole amount of taxes advanced to the Government by employing manufacturers, is so much money directly abstracted from the capital required to prosecute industry. The census for 1860 states that in the Northern States the capital so employed is in round numbers $900,000,000, and that it produces a value of $1,700,000,000 per annum. The three per cent. charged upon this is $51,000,000 per annum; but the stamps, licenses, income tax, &c., it is estimated, will raise the tax to be paid by those employers to 6 per cent., or over 100 million dollars—a sum drawn directly from their cash capital, which in this country has always been inadequate to the demand. The sum so withdrawn from the employment of industry is used by the Government in supporting troops who no longer produce, but waste and destroy. The income tax is imposed for the year ending December 31st, 1862, and is charged upon all profits of business less $600. Many sources of income, such as insurance, bank, and railroad stocks, bonds, &c., that pay the tax otherwise, are not included in the income charge. The tax is assessed May 1st in each year, ending December 31st previous, and is due and payable June 30th in each year until 1866, that is, for 5 years. This tax, it will be observed, is on profits of business, while the manufacturing tax of 3 per cent. is on gross production, irrespective of profits. The profits are deemed to be the actual net profits of the business, irrespective of individual or family expenses; but it does not necessarily follow that all business is conducted at a profit, and the means of evading this law are numerous. Nevertheless the Secretary estimated that it would yield $150,000,000 per annum, and that with customs the amount would reach a sum equal to the ordinary expenditure, the interest on the debt, and a surplus for a sinking fund. The actual receipts from the taxes, except from corporations, salaries, and stamps, was, to January 3d, 1863, or five months, $9,067,000 from twenty-four States.

The tariff was also deemed capable, notwithstanding the three revisions that it underwent in 1861, of yielding a larger revenue by raising the rates upon some articles; and it underwent such a modification as, it was estimated, would give $100,000,000, which, added to the estimated $150,000,000 to be derived from the internal taxes, would afford a sum sufficient to meet the ordinary expenses of the Government, the interest on the national debt, and afford a sinking fund for the ultimate redemption of the principal. This bill was passed and approved July 11th, 1862.

The expansion of the irredeemable paper currency produced its usual effect in causing coin to disappear altogether from circulation. The rise in the value of gold was followed by that of silver in proportion to its relative value as established by the law of 1852. That law grew out of the effects of the gold discoveries in California, which, at that time, it was apprehended would cause a depreciation of gold as compared with silver, and that as a consequence, in order to preserve the uniformity of values, and retain silver in the country, gold alone should be the legal standard, and the quantity of silver in the coins should be reduced. Accordingly the quantity of pure silver in the half and smaller fractions of the dollar was reduced nearly 10 per cent. below the standard, and silver was made a legal tender only to the extent of $5. Under the operation of this law the Spanish fractions, which had formed the small currency since the settlement of the country, disappeared almost altogether, and the American coins became very abundant. Of these there had been coined nearly $50,000,000 worth since 1852, and this amount circulated as well South and in California as North.

When the Government paper began to depreciate as compared with gold, silver also deteriorated, but in a lesser degree. The apparent premium on silver caused it to flow into the hands of the brokers, who were the reservoirs whence the exporters drew it to send out of the country. The express companies alone carried to Canada nearly $4,000,000 within the year, and the people of Canada were sorely oppressed with the superabundance of this coin. The banks would not take it on deposit, nor would dealers receive it except at a discount of 2½ to 3 per cent. Thus south of the St. Lawrence a dollar bill was 20 per cent. discount for silver, and north of it a paper dollar bore 3 per cent. premium for silver. The swelling flood of paper in the States gave an increased impulse to the premium on silver. The profit so produced at once stopped the circulation of the coin. No one that received it paid it away, but hoarded it until a sufficient sum was accumulated to sell for the profit. The inconvenience was very great, and induced numbers of persons to buy change as high as 12 to 16 per cent. to pay out. This for a time retarded the depreciation of paper. Very many persons, however, availed themselves of the opportunity to issue small notes or "shinplasters," as they were popularly called. This custom had been very prevalent during the bank suspension of the years 1837–'8, when the same cause depreciated paper and drove out the specie. The manifold evils that flowed from that custom had caused in New York an enactment of which the following are sections, page 118, Revised Statutes, fourth edition, volume 2:

SEC. 6. No person, association of persons, or body corporate, except such bodies corporate as are expressly authorized by law, shall keep any office for the purpose of issuing any evidences of debt to be loaned or put in circulation as money; nor shall they issue any bills or promissory notes, or other evidences of debt as private bankers, for the purpose of loaning them or putting them in circulation as money, unless thereto specially authorized by law.

SEC. 7. Every person, and every corporation, and every member of a corporation, who shall contravene either of the provisions in the last section, or directly or indirectly assent to such violation, shall forfeit $1,000.

Section 11, on page 119 of the same volume, forbids any person to pay, give, or receive in payment any bank notes issued by any banking company in this State of a less denomination than one dollar; and section 12 provides that the penalty for the violation of this provision shall be the forfeiture of the nominal amount of the note so received or paid.

This law being called to mind stopped the new issues of individual fractional notes, and there was a prospect that silver would be recalled.

In an evil hour, however, it was suggested that postage stamps might be used as a currency. The suggestion was promptly acted upon to the extent of many millions, and silver entirely disappeared. Those who had occasion purchased the stamps of the Post Office department, and paid them out as change. An effort was made to restrain the use of them by selling only limited amounts to each individual. Congress then passed a law, in which stamps were prescribed as a medium of exchange in a great variety of transactions.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury be, and he is hereby directed to furnish to the Assistant Treasurers, and such designated depositories of the United States as may be by him selected, in such sums as he may deem expedient, the postage and other stamps of the United States, to be exchanged by them, on application, for United States notes; and from and after the first day of August next, such stamps shall be receivable in payment of all dues to the United States less than five dollars, and shall be received in exchange for United States notes when presented to any Assistant Treasurer or any designated depository selected as aforesaid, in sums not less than five dollars.

SEC. 2. *And be it further enacted*, That from and after the first day of August, eighteen hundred and sixty-two, no private corporation, banking association, firm or individual, shall make, issue, circulate, or pay any note, check, memoradum, token, or other obligation, for a less sum than one dollar, intended to circulate as money, or to receive or use in lieu of lawful money of the United States; and every person so offending shall, on conviction thereof in any district or circuit court of the United States, be punished by fine not exceeding five hundred dollars, or by imprisonment not exceeding six months, or by both, at the option of the court.

Approved July 17, 1862.

In order to extend the small currency, which was popular for the moment, on the passage of this act, the following notice was issued:

The undersigned respectfully inform the public that after the 1st of August, motives of commercial expediency, as well as of official duty, will compel prompt prosecutions for any issue of paper commonly called "Shinplasters"—should such an issue exist, after the recent Act of Congress shall have afforded an uniform substitute for "small change."

The collection of the State penalties or the Federal fines can be rigidly enforced by due process of arrest.

E. DELAFIELD SMITH,
United States District Attorney.
A. OAKEY HALL,
District Attorney City and County of New York.

The Supreme Court of the State of New York, however, in the month of October, pronounced this law of Congress in relation to "shinplasters," unconstitutional.

This act of Congress simply allowed the stamps, both internal tax and those for postage, to be used as a currency, directing the Secretary of the Treasury to furnish them for that purpose, and directing the "Assistant Treasurer," irrespective of the Secretary, to redeem them in sums of $5 when presented, after August 1, 1862. The stamp currency is not a legal tender between individuals, but only for Government-dues, and is convertible into legal tender money. On the 1st of December $3,884,800 of this new currency had been issued. Instead of following the law, the Secretary of the Treasury caused to be prepared a new small currency, in no way like the stamps authorized, and caused them to be issued without any limit as to amount, at the same time directing the

Assistant Treasurers to disregard the law directing them to redeem the postage stamps used as a currency. This order did not absolve the Assistant Treasurers from obedience to the law which they violated. They not only refused to redeem the stamps, but the Postmaster repudiated them also. This inflicted a grievous wrong upon the people, who held millions of the worn and dilapidated stamps. The popular will ultimately compelled the Postmaster to issue a notice that they would be redeemed under certain regulations. Under this notice large amounts were redeemed.

The amount of small currency issued by the Treasury department to December 1st, was $3,884,800, and the Secretary proposed to push it to $40,000,000.

Meanwhile the resources of the Treasury were exhausted, and however fully these tax bills might come up to the estimates, it was evident that they could afford no immediate supply. Hence a new loan bill was matured in Congress. It provided that the limit on the amount of deposits that might be received at the Treasury should be raised from 50 to 100 millions, and that $150,000,000 more of legal tender notes might be issued. Of these $35,000,000 might be of a denomination less than $5, but not less than $1. Of the whole amount $50,000,000 should be reserved to pay the deposits when demanded. This was inserted in the Senate on the passage of the bill at $75,000,000, but was finally fixed at $50,000,000 by a committee of conference. This singular provision was in effect paying 4 per cent. for money to keep on hand idle. Since the demand notes being created and only applicable to the payment of that amount of deposits held by the Government, the mere act of paying them out would not only save $2,000,000 paid for interest on those deposits, but would so increase the supply of money in the market as to promote the general rise of values. The act also permitted the deposits to be funded in 5–20 year bonds. The following is a synopsis of the act passed July 11th, 1862:

1. That the Secretary may issue, in addition to amounts before authorized, notes to the value of $150,000,000.

2. That no notes for a fractional part of a dollar shall be issued, but that of the above named sum $35,000,000 shall be of lower dominations than $5.

3. That such notes shall be receivable for all debts due to or from the United States, with the exception of duties on imports and interest on bonds, notes, &c., and shall be a legal tender.

4. That certificates of deposit may be issued, bearing interest at the rate of six per cent. payable semiannually.

5. The Secretary may exchange for such notes, on terms deemed by him most beneficial, United States bonds bearing six per cent. interest, redeemable after five and payable in twenty years; may issue notes so received in exchange; may receive and cancel notes issued under former acts, issuing in lieu thereof an equal amount in notes authorized by this act, and may purchase, at rates not exceeding that of the current market, and cost of purchase not exceeding one eighth of one per centum, any bonds or certificates of debt of the United States he may deem desirable.

6. That the engraving, &c., may be executed at the Treasury Department.

7. That the limit of receipts of temporary deposits be extended from $50,000,000 to $100,000,000, the interest, as heretofore, not to exceed five per cent.

8. That no less than $50,000,000 of the notes to be issued shall be reserved for payment of such deposits.

9. That certificates of deposit and indebtedness may be received on the same terms as United States notes for bonds redeemable after five and payable in twenty years.

10. That the Secretary may, until otherwise ordered by Congress, borrow such part of the sum of $250,000,000 (which he was authorized to borrow by the "Act to authorize a national loan, and for other purposes") as may not have been borrowed within twelve months of the time of its passage,

Under these various laws the resources of the Secretary were now apparently as follows: additional deposits, 50 millions; notes, 100 millions; 1 year 6 per cent. certificates, unlimited probable issue, 50 millions; small currency, no limit, probable issue, 30 millions; $7\frac{3}{10}$ three year bonds still on hand, 30 millions; 5–20 year 6 per cent. bonds, 500 millions, probable issue 30 millions. These together gave a round sum of $290,000,000, which added to the estimate of the taxes, 210 millions, made $500,000,000 for the resources of the Treasury until Congress should again meet. These resources were voted, however, on the estimate of expenditure, based upon the then state of military affairs, which soon changed in a manner to compel the Government to call out 600,000 new troops at a heavy cost of bounty, equipments, transportation, &c., in addition to the vast supplies lost to the enemy, and which required to be promptly replaced. In other words, the expenses were increased 150 per cent., and the pressure for money to move the troops greater than ever. The time required to print the new notes caused much delay, and the Secretary could serve himself only with deposits, the 1 year certificates and the $7\frac{3}{10}$ bonds, while the pay of the army and contractors went heavily in arrears. He was compelled to economize the legal tender notes as much as possible, since the small balance on hand, and those which came in through deposits, were the only money means at his disposal. He, therefore, paid out $7\frac{3}{10}$ bonds and 1 year certificates to creditors, giving them a proportion in notes. Generally disbursing officers' checks were paid 25 per cent. in notes, and 75 per cent. in 1 year certificates. The latter being put upon the market by those who received them, sank below par. When they were originally issued the interest was intended to be paid on them at the end of the year. As they fell in price, however, under the amounts put in the market by the Government creditors, it was necessary to do something to sustain them, and notice was issued that the interest would be paid at the end of six months in gold. This for a while supported the price, but the Secretary was compelled soon to cease paying out notes altogether. They became then the only medium for the discharge of claims, and fell in price. Meantime there was some disposition on the part of the public

to convert notes into 5–20 year bonds. The general idea prevailing that the Government had embarked on a system of paper money, which would lead to its discredit, and be represented by a general rise in every description of property, naturally produced a disposition to purchase and hold property to avail of that inevitable rise. This speculative feeling at first attached to such articles as could most readily be held and disposed of, and such as were not in superabundant supply. Gold, stocks, all metals, and many articles of merchandise, became the objects of speculation, which aided the rise in prices caused by the excess of paper. It was charged on one side that the whole rise was caused by the speculation, and on the other that it was all caused by the depreciation of paper. The fact seems to have been between those opinions. The paper caused the rise, and the knowledge that such would be the inevitable tendency of the Government money, induced speculators to avail of the knowledge and purchase. Their operations caused prices to rise much higher than they otherwise would have done. Gold particularly was a favorite investment. It was very easily purchased, required no handling, was readily loaned upon by the banks, and could be converted at a moment's motice. Moreover, it was known that the foreign demand was equal to 1¼ millions per week, which was rapidly reducing the quantity at command. The existing laws also required the Government to pay interest in coin, and also required merchants to pay customs in gold. If the customs under the new tariff should reach the estimates of the Secretary, 100 millions per annum, the importers would, after the outstanding old demand notes were absorbed, be required to buy two millions of gold per week. This joint demand would require to supply it at least three millions per week, and the active continued demand would necessarily raise it to an exorbitant price. It was argued that the Government would pay out the gold received from the customs, and, therefore, resupply the market; but a little reflection showed that those who received it would not give it away, but would reserve it for the higher premium that the continued issue of paper on one hand, and the demand for gold on the other would inevitably bring about. The banks found a safe and profitable investment in lending on the gold, but the holders of gold or of other articles could draw no interest on the funds thus employed. They would depend on the rise in price for their profits. At this juncture the Government being in want of gold, which was 20 per cent. premium, to pay the $1,875,000 interest maturing on the 50 millions of $7\frac{3}{10}$ notes August 19th, came forward and proposed to take gold on deposit, returnable in kind at 10 days' notice, and allow 4 per cent. interest. This at once drove speculation into gold. It was a premium of 4 per cent. interest to hold gold instead of copper or tin, or pork, or other articles for a rise. The price immediately rose, and ran up to 39 premium at the close of October. Inasmuch as gold governs the price of exchange, bills ran up in the same proportion, and sterling bills which are par at 109½ touched 152. The effect of this was to add 40 per cent. to all remittances out of the country. It added 40 per cent. to the cost of importations, which caused them to decline, and with them the customs revenue of the Government, which found 40 per cent. added to all that it had to pay abroad. The salaries of ministers, navy expenses, &c., were all increased 40 per cent. The Secretary, alarmed, sought to stop the speculation in gold, which he deemed to be the cause of the evil, and to that end sent on an agent to New York to solicit the banks not to lend on gold, and the Board of Brokers not to deal in it. Some of the banks complied, and the result was that their depositors drew the money and lent it individually upon gold. They thus lost the business without reaching the end desired. The Board of Brokers had the weakness to do the same thing, and struck gold from the list of articles dealt in. The effect was that gold was dealt in outside the board, and while the amount of transaction was no less, the brokers lost their commissions. They endured this nearly three weeks, and then, Nov. 16th, not only restored gold to the list, but permitted time operations in it. An effort was then made by free sales for future delivery at lower rates, to break the supposed speculation, and reduce the price. The sales so made were freely taken for export at the expense of the operators for the fall, and prices rose.

Following the rise in gold, the prices of stocks also advanced, and reached very high figures, and these developed some disposition to convert notes into the 6 per cent. 5–20 stock at par. At that juncture, however, October 27th, the Secretary thought proper to make inquiries in relation to the terms on which he could negotiate that stock in the market. As by the terms of the law the notes may at all times be converted into the stock at par, it follows that the stock would never sell higher than that. Any terms proposed must, therefore, necessarily be below par, and the limit of such an operation at once stopped conversions. Meantime the Secretary had since June 1st paid out about $17,000,000 $7\frac{3}{10}$ bonds to creditors and others, and there remained on hand $13,420,550. On the 10th of November he issued a notice for proposals to be opened in 6 days for these bonds, the bidder to deposit 10 per cent. of the amount with the Assistant Treasurer—the bonds to date from the day of deposit. This notice appeared Monday, November 10th; on the next day Mr. Chase asked the banks for a temporary loan of 12 millions, at 5 per cent., in anticipation of the proceeds of the loan thus advertised. The money was promptly advanced to him, but to do so money was called in, causing stocks to fall about 2 per cent., and the rate of money to rise 1 per cent. This most

extraordinary operation produced the greatest surprise. It will be borne in mind that the Secretary had these notes on hand more than one year, and then suddenly offered them at 6 days' notice, and then not being able to wait even that six days for his money, borrowed it in a manner to raise the rate of money in the market against his own operation. The loan sold for less than it would have done had not the Secretary thus wantonly disturbed the market. Of the 12 millions asked for 10 were taken in New York, one in Boston, and one in Philadelphia. It now appeared that the Secretary was alarmed; he had borrowed the money of the banks to pay back in 6 days, and he was dependent upon the loan to enable him to keep his contract. If now the parties to the loan took advantage of the position, they might dictate such terms for the loan as they thought proper. To avoid this danger, the Secretary put all the printing presses in his employ to running upon large denominations of demand notes, by which he might be able to manufacture enough to meet the temporary loan if the $7\frac{3}{10}$ should not be taken. The bids were however opened on the 17th of November, and it was found that in all $29,994,350 had been offered at rates varying from par to $4\frac{1}{8}$ premium. The lowest offers came in from Massachusetts. It resulted that $350,000 were allowed to Boston at $3\frac{1}{8}$ to 4 per cent. About $1,000,000 to Philadelphia at 3.10 to $4\frac{1}{8}$ per cent.; $1,200,000 to Washington, at 3.05 to 4 per cent., and the remainder to New York, at 3.05 to 4.05 per cent. All bids above 3.05 amounted to $9,505,050, and were accepted, and those who bid 3.05 got $59\frac{1}{2}$ per cent. of this offer. The Secretary, in alluding to this transaction in his annual report, stated that the takers of the loan found difficulty in obtaining United States notes to make the payments to the Treasury, and inferred from this that there was not currency enough. The fact seems to have been otherwise. The banks had deposited $35,000,000 of legal tender notes at the sub-Treasury for 5 per cent. certificates. These certificates were at first used to settle balances at the clearing house, but as legal tender notes accumulated in the banks, they preferred to pay balances in those notes rather than in certificates bearing interest. For this purpose some 12 millions were in use, making 45 millions of notes held by the banks. When the Secretary came forward for his 12 millions advance at 24 hours' notice, a further demand was created, and when the loan was taken on the 6th day, $13,613,340 more of notes were required to be paid in before the 12 millions lent could be returned. The transaction therefore required $25,613,340 to perfect it in addition to 12 millions used for balance, and $35,000,000 on deposit with the department. Thus the banks were called upon for 72 millions of the notes, and at the same time some of he banks that, by reason of their expanded condition, were short in their balances at the clearing house, were borrowers of the other banks. Yet the whole transaction would have passed off without disturbing the markets, had the Secretary not in effect demanded two loans when only one was wanted. The whole amount of notes outstanding was about 200 millions, and the New York banks manipulated one third of the whole amount.

The annual report of the Secretary at the opening of Congress gave the following statement of the revenues and expenditures of the Government for the fiscal year ending June 30th, 1862:

Receipts and Expenditures for the fiscal year ending June 30, 1862.

RECEIPTS.

The total receipts, including a balance on hand July 1, 1861, of $2,257,065 80 were $583,885,247 06, as follows:		
From customs	$49,056,397 62	
From lands	152,203 77	
From miscellaneous sources	931,787 64	
From direct tax	1,795,331 73—	$51,935,720 76
From loans:		
Bonds, 3 years, 7.30 per cent.	122,037,585 34	
5-20 years, 6 per cent.	13,990,600 00	
Oregon war	1,000,700 00	
20 years' 6 per cent. at par, for $50,000,000, 7 per cent.	46,303,129 17	
Treasury notes, 2 years, act of June 22, 1860, and March 2, 1861	14,019,034 66	
60 days, act of March 2, 1861	12,896,350 00	
Acts of Feb. 8 and March 2, 1861	3,500 00	
Act of Feb. 8, 1861	55,257 50	
Currency notes, acts of July 17 and Aug. 5, 1861, and Feb. 12, 1862	60,030,000 00	
Act of Feb. 25, 1862	98,620,000 00	
Temporary loan, act of Feb. 25, 1862	66,479,324 10	
Certificates of indebtedness, 1 year, acts of March 1 and 17, 1862	49,881,979 73	
Temporary loan, in anticipation of popular subscription	44,375,000 00—	529,692,460 50
Aggregate receipts		$581,628,181 26
Balance in treasury		2,257,065 80
Total resources		$583,885,247 06

EXPENDITURES.

Civil and foreign intercourse	$21,408,491 16	
Pensions and Indians	3,102,985 50	
War department	394,368,407 36	
Navy department	42,674,569 69	
Interest on public debt	13,190,324 45	
Total current expenditure		$474,744,778 16
Redeemed old debt	104 56	
Redeemed treasury notes of 1857, 1860, 1861	43,110,000 00	
Redeemed temporary loans	44,375,000 00	
Redeemed temporary loans, Feb. and March, 1862	553,207 53	
Redeemed notes, July 17, '61	58,610 00—	96,096,922 09
Total expenditure		$570,841,700 25
Balance in treasury, July 1, 1862		13,043,546 81
Total		$583,885,247 06

This represented the actual expenditure of the first year of the war, but did not embrace all the cost, since very large claims remained unpaid. The money paid out, irrespective of the debt repaid, was $1,300,000 per day average. With the close of that year, however, the number of troops in the field and the operations of the Government assumed greater scope, causing the estimates for 1863 to be more than double the expenditures of 1862, as follows:

	Actual, 1862.	Estimates, 1863.
RECEIPTS.		
Customs, &c.	$50,140,389 03	$70,374,777 07

These estimates for the new year do not embrace contingences that may arise from unforeseen disaster nor any payments on account of the principal of the public debt, of which a large amount falls due and must necessarily be provided for in other loans.

The debt of the United States, as expressed in the evidences outstanding at the close of the year as compared with that of the corresponding period of the two previous years, was as follows:

DEBT OF THE UNITED STATES ON JANUARY 1, 1861, 1862, AND 1863.

Class.	Rate.	1861.	1862.	1863.
Loan of 1842	6	$2,883,364 11	$2,883,364 11	Paid.

Add army arrears				59,117,597 46
Total				$780,786,325 05

The debt at the close of 1860 expressed the remains of former loans growing out of the Mexican war and the emission of treasury notes caused by the financial revulsion of 1857, which diminished the customs' revenue. The 10 millions of treasury notes issued in December, 1860, were to meet the deficit at that time, and were negotiated at 10-12 per cent. interest. Those notes have been mostly paid off in paper money in order to stop that high rate of interest. The various denominations of issues made during the war are expressed under each head, and the result is an amount of, in round numbers, 750 millions of outstanding paper on January 1st, 1863. This does not express the whole debt, however. There were then many months in arrears of pay for the whole army, and claims of contractors and others were for several large sums. The issues for the year 1862 were nearly altogether paper money and temporary loans. There was paid off January 1st, 1863, the remains of the old 20 years' 6 per cent. stocks of 1862 under peculiar circumstances. The high rate of gold made it probable that the principal would be paid in Government paper, but there were some intimations that it would be paid in gold; the stocks were therefore of a highly speculative value. If paid in paper the amount of the debt paid was $2,833,364.11; if paid in gold at 33 per cent. premium, the holders would realize $3,768,374.26, an apparent profit of $935,010. There was no authority to buy the gold with which to pay the debt. It was, however, obvious that unless the Government that had received gold should pay in gold, its credit would be seriously damaged. To support the Government credit, therefore, certain of the banks agreed to lend to the Treasury at 4 per cent. sufficient gold to pay the debt, the gold to be returned to the banks when the Government should be in receipt of the gold through the customs. By this means the banks obtained 4 per cent. interest on gold otherwise idle, and would receive it back when its value would be much enhanced by the operations of the importers.

In relation to the loans in his annual report, the Secretary remarked as follows:

It has been the care of the Secretary to reduce the cost of the debt, in the form of interest, to the lowest possible amount, and it is a source of real satisfaction to him that he has been able, thus far, to confine it within very moderate limits. The first loans, being of a magnitude hitherto undreamed of in our market, were necessarily made at an interest which he regarded as high, though lenders strenuously insisted on higher; but large amounts are now obtained at five and four per cent., while the circulation of United

States notes constitutes practically a loan from the people to their Government without interest. The average rate on the whole loan is thus reduced to 4⅗ per cent.

These statements were very extraordinary under the circumstances since, although the amount to be paid out by the department as interest was small, yet the people paid the most ruinous rates of interest. The first loans contracted by the Secretary were in 6 per cent. stocks at 85, or 7½ per cent. nearly. The next loans were in $7\frac{3}{10}$ per cent. bonds, and the interest began to run long before he drew the money, giving an advantage equal to 10 per cent. to the lenders. The next loan was at 7 per cent. on the same terms, viz.: to pay interest before he received the money. Loans were then no longer possible, but creditors were compelled to take $7\frac{3}{10}$ per cent. bonds for their claims, and they sold as low as 96, losing 4 per cent. and the buyer getting 8½ per cent. for his money. One year's 6 per cent. certificates were then paid out and sold as low as 95, giving 11 per cent. for the investment in a year. The legal tender currency was then paid out at par and depreciated gradually until it reached at one time nearly 40 per cent. This depreciation represented the tax to which the public is subjected through the use of that paper. The Government itself paid in the enhanced rate of exchange a large sum. The payments abroad for diplomatic salaries and the use of the Navy are nearly $10,000,000 per annum. To make these remittances the Government was at one time compelled to pay 152 per cent., or 42 per cent. above par, which on the remittances amounted to $4,200,000 actually paid out in consequence of the paper depreciation. In like manner the price of all supplies and munitions is enhanced by the depreciation. If of the whole expenditure of the army $120,000,000 is for pay of the troops, being $13 per month for 800,000 men, there remain $630,000,000 for supplies, transportation, &c., the rates of which are enhanced with the price of gold, and at the present rate, 30 per cent., the extra cost to the Government by the use of paper is $180,000,000 per annum, a sum nearly equal to the amount of notes outstanding. So fearful an expense is hardly matter of congratulation that the Secretary borrows "without interest." The pay of the soldiers is diminished in the same proportion, since through the rise in prices, $13 will this year purchase no more than would $10 last year; hence a motion was made in Congress to raise the pay of the troops to $15 per month. The fact was apparent that in the 18 months ending July, 1864, the Government would require $1,000,000,000 in addition to $300,000,000 of existing loans that would fall due, and not taking into account reclamations, damages, and disasters that must arise, and allowing for the extra allowances that must necessarily follow the use of paper money. The $100,000,000 of 3 years' bonds would fall due, as much one year's certificates, or a like sum in deposits, and a sum not less than $1,500,000,000 would be required.

The amount of capital which can be permanently loaned to the Government consists only in a portion of the surplus profits earned each year by the pursuits of industry, and which each man can spare out of the operations of his business. It is only within the last twenty years that surplus capital has very rapidly accumulated, but it has been in active demand for investment in the many enterprises that have been undertaken of a permanent character. Of these railroads are the most conspicuous, and they have absorbed nearly $1,000,000,000 since 1850. The real amount of surplus capital that accumulates each year is difficult to determine, but the late census affords some data on which to approximate a result. It is there stated that the annual productions of industry are in value $1,900,000,000 per annum, or, in round numbers, $2,000,000,000. This sum expresses the labor and capital expended in producing all those articles which enter into commerce and the maintenance of the people. If this value is produced, nearly as much is expended or consumed in the operation—in some years quite as much; as in years of bad harvest there is probably no more capital in existence at the end of the year than when it commenced. Taking one year with another, however, the actual income may be 10 per cent. or $200,000,000; of this a large portion goes to extending business, improving land, constructing houses, &c., and there may remain $100,000,000 which may be invested permanently by the owners to draw interest. These investments have greatly increased of late years, and may be approximated as follows:

State, city, and county stocks	$250,000,000
Railroad capital	300,000,000
" bonds	700,000,000
Bank capital	421,880,000
Insurance, mines, &c., &c	250,000,000
Savings bank deposits	200,000,000
Bonds and mortgages	150,000,000
Total invested capital	$2,271,880,000
Capital per census employed in industry	1,000,000,000
Total	$3,271,880,000

The vast undeveloped resources of this country, with the supply of labor by immigration, and the immense wealth in new lands, cause the demand for capital constantly to outrun supply. Hence all active men are borrowers of capital; but if a number of persons engaged in business enterprises were to realize this capital, and invest it in the Government stocks, the productive industry of the country would to the extent of such transactions be stopped, and the source of national wealth be dried up. This is a course of proceeding, which all prudent statesmen carefully avoid. It is to be remarked that the accumulation of capital in this country has heretofore been rapid, for the reason, among others, that the taxes have been very light. There have been no vast sums expended upon military idlers. This is now changed, and under the existing laws it is es-

timated that the taxes will reach $250,000,000 per annum—a sum more than equal to the whole supposed annual surplus profits of the national industry heretofore. This at once checks accumulation. In addition to this 1,000,000 men, before producers, have been taken from productive industry, and have become consumers and destroyers. The effects of these two circumstances are making themselves felt in the diminished profits of investments, or, in other words, falling values. It is apparent that the huge sums demanded by the Secretary cannot be obtained on loans without stopping the industry of the country, on one hand, or destroying values on the other. To obtain means by the issue of paper money has a still more disastrous effect, since it takes from every man a portion of his earnings and values. The munitions and supplies that the Government obtains in return for paper issues are at continually higher prices. In other words, more paper must be given for the same quantities at each succeeding purchase, and this in the double ratio of greater supplies of paper and diminished production of the commodities. Very speedily the purchasing power of the paper ceases, and although by virtue of its power of legal tender holders of maturing obligations may be ruined, it will no longer command any of the necessaries of life.

The number of those who can spare capital out of their regular business to place at interest is small. The estates of minors and others increase to some extent, and those funds seek investments. If the whole 2,100 millions, exclusive of savings deposited, draw 5 per cent. interest, the result is 100 millions of interest paid annually by industry. The capital invested in productive industry may pay 10 per cent. or 100 millions more. These two items absorbed nearly all the capital there is in the country, since no one allows any considerable sum to lie idle or unproductive. The Government now steps forward and for war purposes demands in two years, ending January, 1864, $1,500,000,000, or more than one half of all the capital invested in industry and in securities. This is a serious demand, and it is at once evident that it cannot be complied with except by drawing the amount out of other occupations. If its credit remains unshaken, and the public consider its promise as good as the best security, then it must offer such terms to lenders as will induce them to change their investments. To invest largely in Government they must sell New York or Ohio, or bank stock, or railroad bonds, or such as they hold, in order to make the purchase. But it is obvious that extensive sales cannot be made for want of buyers. If the holders of the above named 2,000 millions of securities all wanted to sell, it is clear there would be no buyers. If a large proportion wished to sell they could find buyers only at low prices, and the general level of prices would be proportioned to the extent of the conversions. Hence it is evident that the Government could obtain its loan only at such rates as would outbid all the borrowers. If all the surplus capital is now equal to 2,000 millions, represented by the amount of stocks at par, then to add 1,700 millions to the quantity of stock, would cause the whole mass of stock to fall to 55 per cent. to represent the same capital, 2,000 millions. This is under the supposition that the Federal credit would remain equal to the other stocks. It is, however, not equal to them, but is now much below that of the individual Northern States.

The state of affairs now produced the greatest anxieties in the public. It became evident that to pursue this paper system was to invite bankruptcy and repudiation, and numerous representations were forwarded to Washington to remonstrate against the further issue of paper. On the other hand there were those who equally dreaded the collapse in value which must result from the placing of large loans upon the market. The Government stocks were nearly at par for paper, but were far below par as measured with specie, which would become the measure of value on abandoning paper. The following table represents the effect of the currency measures of the Government during the year upon stocks, the metals, and trade:

Months.	Imports.	Exports.		Silver to Canada.	Sterling.	Gold.	Silver.	Notes.	20 years 6 per cent.	3 years 7 3-10 per ct.	1 year 6 per cent.
		Goods.	Gold.

1862	$174,652,317		$59,437,021								
1861	162,768,790		4,236,250								

The first column represents the value of goods imported into the port of New York, the second column the value of merchandise exported, the third column the amount of gold exported from New York, and the fourth the quantity of silver carried to Canada monthly by one

express company. Then follow in order the prices of sterling exchange, the price of gold in paper, the price of silver, United States notes receivable for duties, and of the Government stock. The year opened with a reaction in respect to the "balance of trade," on the large imports of specie that were made in 1861, as a consequence of the sudden stoppage of importations of goods in that year, and exchange was nearly par at that time; the currency was then nearly on a specie basis. A suspension of specie payments had indeed taken place, but the banks were thus put within the penalties of the law, and had reduced their circulation, in the effort to resume as soon as possible. Specie did not therefore rise in value, and the Government 6 per cent. stocks were at about par for a 7 per cent. stock, and money in the open market was not abundant, and specie did not rise in price. The moderate importations of goods in the previous year had caused a diminution of stocks on hand, and the progress of the armies of the West had encouraged the hope of larger sales, while there were fears of higher duties to be imposed by Congress, which therefore promoted importations, that became considerable in March, causing an outward flow of specie, which began to rise in premium in April, when the legal tender notes of the Government made their appearance. From that moment the metals, exchange, and old demand notes receivable for customs steadily appreciated, while gold flowed in a broader stream out of the country. The passage of the legal tender bill in Congress had alarmed foreign holders of stocks, and these were sent to New York for realization in considerable quantities, the proceeds to be remitted in specie. The imports of goods that had again become small in June suddenly rose in July, in anticipation of a new tariff, and the hope that the advance in prices under the influence of paper would prove remunerative. For the same reason the exports increased, because the rise in exchange favored the shipping of goods. Those months in which the largest exports took place are those in which the rates of exchange ruled highest. A barrel of flour that sold in Liverpool at 22*s.* 6*d.* in January, would at 10 per cent. exchange realize to the shipper $5.50 in exchange. At the same price for flour, when exchange in July rose to 130, the shipper got $6.50 for his bill, and in October, when exchange reached 150, he got $7.50 for his bill. Thus the rise on exchange for the time was equal to an advance abroad for the produce, but this movement soon produced a rise in prices which counteracted the exchange, and shipments fell off rapidly in the last two months. It is to be borne in mind that the import values are the specie invoice prices, and the sum represents the amount to be paid in specie; on the other hand the exports are home values in paper money, and represent a sum larger by the depreciation of the paper than will be actually received. Thus in the month of November gold was at 133 premium, or the paper was depreciated 25 per cent., hence the $14,390,681 of goods exported would realize in specie only $10,793,011 abroad. The aggregate of the exports for the year by no means therefore represents the amount that can be applied to the payment of goods, and the amount exported declined. Toward the close of the year the rise in paper prices here was to some extent counteracted by the decline in prices of western produce abroad.

The imports on the other had suffered a grievous burden; first in the higher duties, second in the high premium on gold, or gold notes, which were the only medium for the payment of duties, and third, on the rise of bills. An illustration is afforded in comparing the imports of any month, November for instance, with the same month of the previous year, as follows:

	1861.	
Goods, duty paid	....	$7,765,543
Duties, 24 per cent.	$1,853,384	....
Gold, par	....	....
Exchange, par	....	....
Total, 24 per cent.	$1,853,384	....

	1862.	
Goods, duty paid	....	$8,673,194
Duties, 34 per cent.	$3,003,270	....
Notes, 25 per cent.	750,917	....
Exchange, 35 per cent. advance	3,035,617	....
Total, 80 per cent.	$6,789,704	....

Thus the average expense of landing goods this year in November was 80 per cent., against 24 per cent. same time last year. This advance was very onerous, and exceeded the rise which took place in the markets of sale, subjecting the importers to loss; as a consequence the importations declined. The mere rise in the cost of importations was not the greatest evil encountered, since none could tell what the cost of landing goods already ordered might be. If the Government continued to emit paper money while it exacted duties in gold, the cost of importation would rapidly rise, and when goods arrived the expenses of entry might be 20 or 30 per cent. higher than when the goods were ordered. This was an evil against which no calculations could guard, and importations became a mere lottery. The time was approaching also when the old demand notes would all be absorbed, and the duties would then be payable in gold, which would involve an active demand for that article on the part of importers to the extent of $3,000,000 per month.

While all these radical changes were taking place in the condition of trade, the table on the preceding page indicates that Government stocks did not rise in any degree proportionate to other articles. Thus in January the 3-year bonds, which bear 7.30 interest, payable in gold, sold at 99 for specie; in December the price of the same bonds was 101½ for paper, 76⅛ for specie—a decline of 22⅞ per cent. The 20 year bonds

sold at 88 for specie in January, and for 72½ in December, a decline of 15½ per cent., although none of that description had been negotiated in that period. The 1 year certificates of the Government had fluctuated from time to time, as the creditors who received them from the Government pressed them upon the market for sale. From par in April for specie currency they fell to 96¼ for paper at the close of the year. Under the supposition that the certificates had on average 6 months to run, the holder gets in half a year for his outlay of $96¼, $100 principal and $3 interest in gold, worth $4 in paper, or $104; making $7.75 equal to 16 per cent. per annum on his investment. With this state of affairs before holders of Government securities, the Secretary announced 1,000 millions more to be borrowed. Yet he complained of "the ignorant fears of foreign investors in national and State bonds and other American securities, and the timid alarms of numerous nervous individuals in our own country, which prompted large sacrifices upon evidences of public and corporate indebtedness in our markets." The "foreign investors" measure the value of stocks not by paper but by the gold standard, and a fall of 23 per cent. in United States 20 year 6 per cent. stock was not an assuring fact. On page 303 of the "Cyclopædia" of last year is given the amount of specie estimated, from the best official data, to have been in the country at different periods. The whole amount for the Union, North and South, for January, 1862, was $237,510,148. This includes the specie in circulation, in banks and that used in the arts. The quantity used in the arts has been matter of conjecture, since there are no accurate data on which to estimate. The census of 1860 for the first time gave some particulars in relation to the use of the metals. In the city and county of New York the report was as follows:

Manufactures.	Number of establishments.	Capital invested.	Cost of raw material.	Male hands.	Female hands.	Value of annual product.
Gilt frames, mirrors, &c.	21	$189,600	$273,750	368	..	$548,300
Gold and silver refining and assaying	5	229,800	324,080	37	..	420,500
Gold chains, jewelry, &c.	84	1,113,000	1,191,630	906	68	2,162,000
Gold leaf	5	16,000	39,970	38	16	85,300
Gold watch cases, &c.	19	96,900	195,650	127	3	337,600
Silver ware	20	437,000	698,886	367	19	1,294,600
Silver-plated ware	35	136,700	200,480	228	126	423,500
Total	189	$3,219,000	$2,924,446	2,071	232	$5,271,800

There are various other branches of manufactures, beside those enumerated above, which consume large quantities of both metals.

The following tabular statement is from the preliminary report on the eighth census of the United States, year 1860. It is here shown, that in twelve States and the District of Columbia, there are about twelve or fourteen millions used in manufactures annually. If to these we add Ohio, Missouri, California, and other States, the amount will swell to nearly twenty millions of dollars:

JEWELRY, SILVER WARE, &c., PRODUCED DURING THE YEAR ENDING JUNE 1, 1860.

States.	Value of watches, &c.	Value of gold leaf and foil.	Value of silver ware.	Value of silver-plated and British ware.	Value of jewelry, watchcases, &c.	Total value.
Maine	....	....	....	$23,000	$11,240	$34,240

Total	$1,473,470	$479,672	$2,894,105	$3,742,530	$10,964,803	$19,554,580

The amount of raw material here used is not stated; but it may be placed at one half, or in round numbers at 10 millions. A large portion of this, however, is old material worked over. It is, however, estimated that about one half, or $5,000,000, is new metal, worked into the various objects of the goldsmith's art. In the last ten years of great prosperity the quantity of gold wrought up has much increased at the expense of the metallic currency. The use of plate particularly has become more common. There are many causes of error in an estimate of the metals. Thus much specie is brought in by immigrants, and not reported at the custom house; but as this is mostly foreign coin, it finds its way to the bankers, who sell it to exporters, when it appears in official returns. Much silver comes in overland from Mexico. A good deal of specie also goes out in the hands of travellers, and is not accounted for. Nevertheless the official returns of imports and exports, with that of the product of mines, afford a good approximation. The quantity of metals at the North was as follows during the year:

Specie in the Northern banks, January, 1862....			$70,000,000
" " States generally, &c..................			60,000,000
" " circulation..........................			35,000,000
Total in Northern States..................			$165,000,000
Received from California in 1862...	$24,882,846		
Net exported from New York and Boston........................	65,000,000—		40,117,154
In the Northern States, January, 1863......			$125,882,856
In banks..........................	$60,000,000		
In States, &c..	60,000,000—		$120,000,000

In the course of the year, as the price of specie advanced in New York city, the current of the metals began to flow to the common centre. The opening of trade to some extent in the border States following the progress of the armies, produced an additional demand for gold for the purchase of northern productions, which would be sold only for gold. The drain thus occasioned was such that the brokers of western cities raised the price there to some extent; but the great demand was in New York, where not only shipments became active, but much was taken on speculation to avoid the inevitable rise that would result from the use of paper. The current of silver also set toward Canada in a swelling volume. The moment that silver bore a small premium it ceased to circulate, because every small shopkeeper who received it would lay it aside, and convey it to Wall street to realize of the brokers the premium they offered. In like manner throughout the West dealers, brokers, and bankers collected and sent to New York the coin that fell into their hands, and which they purchased at a premium, to sell at an advance in New York. The current flowed thither in a deepening stream as the premium advanced, and the banks showed a continually increasing quantity on hand, notwithstanding the large weekly exports. The following table shows the movement of specie:

SPECIE MOVEMENT FOR 1862 AT NEW YORK.

Months.	From California.	From circulation.	Imports.	Exports.	In banks.	Price, per cent.
January	$2,199,533	$921,794	$163,658	$2,658,274	$27,479,583	2 @ 5
February	2,250,795	3,142,406	62,007	3,776,919	29,826,959	3 @ 4¾
March	1,846,752	3,554,154	89,327	2,471,233	32,841,802	1½ @ 2¾
April	1,834,117	3,553,406	26,152	4,037,675	35,297,944	1 @ 2¼
May	1,939,771	5,781,477	110,388	5,164,636	31,397,284	3 @ 3⅝
June	1,911,099	6,362,492	61,023	9,867,614	30,832,626	4¼ @ 9¼
July	1,961,468	6,781,868	219,001	8,067,337	34,022,490	9 @ 20
August	2,070,198	1,619,631	92,703	3,713,532	35,640,984	12⅜ @ 16¼
September	2,641,918	3,876,683	121,318	3,085,919	37,592,552	16 @ 19⅜
October	2,337,298	3,532,545	256,676	6,707,519	39,348,947	22½ @ 39
November	2,651,211	805,332	109,708	6,213,251	37,949,086	29 @ 33
December	1,435,267	3,976,169	178,316	3,673,112	35,780,807	31 @ 33⅜
Total in 1862	$25,079,787	$43,907,975	$1,390,277	$59,437,021	$40,971,000	
" " 1861	34,485,949	....	37,088,413	4,236,250	29,030,000	

The largest amount of specie received from the interior in any one month was in July, when the rate rose suddenly in New York to 20 per cent. for gold. The supply so drawn to the city caused a decline, and the receipts in August were small, increasing again in September, when gold recovered. When, however, the highest point was reached in October, the receipts fell off, showing as well an exhaustion of the floating specie, as a disposition on the part of individual holders not to sell at any price. With a price of 33 per cent. in November the receipts fell to a nominal amount as compared with July, and the export drain falling upon the banks they lost nearly $4,000,000. The California supplies are barely more than three fourths those of last year. The metals continued to be the currency in that State, and instead of being quoted at a premium for Government notes, the latter are quoted at a discount for coin. The above table shows that there were collected into the New York banks from circulation 39 millions of specie, mostly sent abroad. In the previous year the reverse was the case: 37 millions were imported and sent into circulation.

This year the fluctuations in the metals induced numbers of small speculators to buy gold when it fell, and on the occasion of a rise, they swarmed the brokers' offices to resell. Gradually, however, the amount of circulating specie in the country seems to have been absorbed, since the very high rates that ruled in October ceased to bring forward enough to supply the export demand. The supply from California was nearly reduced by the great number of shipments direct to England in consequence of the increasing risks of navigation. Toward the close of December the steamer Ariel, on her passage out to Aspinwall, was captured by the Confederate steamship Alabama. The troops on board were paroled, and the ship ransomed in order that she might proceed with her passengers. In consequence she did not, on her return to New York, venture to bring her freight of gold, amounting to $533,119, and the United States gunboat Connecticut was sent out to bring it home. Meantime, however, the Ocean Queen arrived at New York, January 3d, with $1,270,580, including the Ariel's freight. In consequence of this capture the insurance companies raised the rate of insurance from 3 to 5 per cent. Thus giving fresh inducement to turn the golden stream from New York to England direct.

The operations of the New York assay office, under the changed condition of the specie trade, were exceedingly small as compared with the previous year. They were as follows:

NEW YORK ASSAY OFFICE FOR 1862.

The deposits of gold declined from nearly 63½ millions to 2½ millions, and the payments in coin became nearly nominal. Of the silver deposits $22,000 was from the new mines of Washoe, and $7,000 from those of Lake Superior. The operations of the United States mint underwent a corresponding reduction; they were as follows:

Months.	Gold.		Silver.		Cents.
	Deposits.	Coinage.	Deposits.	Coinage.	
January	$439,188 99	$418,168	$86,490 42	$124,411	$12,000

The manufacture of money has thus declined to a very small amount at the national mint, although the national printing presses have been very prolific substitutes.

The use of paper money during the year in its effect upon business has not been adverse to the interests of holders of goods and property. It has indeed checked the movements of importers, since it has caused the cost of importation to rise faster than the market prices of the commodities. This has diminished importations, thereby giving additional effect to the paper in its influence upon the value of goods held. These have generally risen in price under the joint influence of small importations, lessened production, higher duties, and paper money. The rise thus brought about has been a welcome profit to many holders of goods. The following table gives the range of prices of some leading articles at the beginning and close of the year (see Table A).

This list suffices to show the general rise which has affected all branches, some more and some less according to the peculiar circumstances of each article. Some commodities, of which the value depends mostly upon the export demand, and which in the absence of that demand sells no higher than at the same time last year, have actually fallen in value to the extent of the rise in exchange. Other articles

TABLE A.

Articles.	December, 1861.	December, 1862.	Rise, p. ct.
Sterling exchange	$1.10 @ $1.10½	$1.45 @ $1.47	36

have fallen to a lesser extent, as in the case of hay, which, nominally 10 per cent. higher, is really for shipping purposes 25 per cent. lower than last year. Nevertheless, relatively to the other articles of the home market, there has been a general and large rise in prices, which has operated beneficially for all who held stocks of goods, and this state of affairs has given activity at par prices to goods which had been deemed "dead stock," but which became salable. As a consequence, a certain degree of prosperity has manifested itself in business circles, and the number of failures has been far less than last year.

The actual number of failures in the Northern States, as compared with last year, with the amount of liabilities, is as follows, per the report of the mercantile agencies:

	1861.		1862.	
	No.	Liabilities.	No.	Liabilities.
New York:				
N. Y. City and B'klyn	980	$69,067,114	162	$7,491,000

Total Brit. Provinces.	310	$6,471,769	288	$3,292,588
Total Northern States and Brit. Provinces.	6,245	$185,103,939	1,880	$26,341,888

The failure by months, as exhibited in the following figures, show that the larger portion occurred during the first quarter of the year, or before the advance in the value of goods to which we have been alluding:

January	374	July	151
February	353	August	118
March	263	September	75
April	179	October	84
May	103	November	57
June	84	December	39

The failures for previous years are given in the "Cyclopædia" for 1861. The amount this year has been reduced to a small item comparatively. The beneficial effect of paper money has thus been produced, but the danger commences. The goods if realized on cannot be replaced at their prices, but buyers must meet the rising market, which momentarily becomes more hazardous, because subject to the collapse of the paper money. Stocks have followed the same course of advance under similar influence. The monthly prices for the year 1862, will be seen in Table B, on the following page.

The average advance in the stocks was 40 per cent; that is, the sum of the quotations for December is 40 per cent. more than the sum of the quotations for January, showing that the rise in prices of stocks has about equalled that of gold and exchange. The average advance of the commodities in the above table of prices is also 38 per cent., thus showing a singular uniformity in the rise of prices.

The list embraces Government, State, and railroad stocks. These latter represent the proprietorship, and the theory of the paper money influence is, that the debts of the companies may be easily discharged in paper money, thus leaving the stock more valuable than before.

The advance which pervades all descriptions of business compels the railroads to demand higher freights and fares. This swells the sums of their revenues, and although their expenses are also more, yet the result is a higher profit. Thus a railroad may have earned in 1861 $7,000,000, paid $1,000,000 interest, and $4,000,000 expenses, and it would have $2,000,000 surplus; on the supposition that its expenses doubled in paper, and that it doubled its charges, it would pay $8,000,000 running expense, $1,000,000 interest, making $9,000,000, which from $14,000,000 revenue would give $5,000,000 surplus. Under this operation the first effects would be to improve second class bonds, which would now get interest in full. Ultimately, as the process progresses, the bonds would be paid off in this species of paper, leaving the roads clear to the stockholders. The question of the constitutionality of the legal tender notes must be settled however. Already suits have come before the courts, where payment of mortgages has been tendered in legal tender and refused, on the ground mainly that the State courts cannot recognize anything but specie as a legal tender: a law of Congress cannot override this proviso of the Constitution.

For finances of the Confederate States *see* CONFEDERATE STATES.

FLORIDA, which forms the South East Peninsula of the United States, contained in 1860 a population of 140,425, of whom 77,748 were white, 932 free colored, and 61,745 slaves. The ratio of increase for the previous ten years had been white 64.70, slave 57.07; total 60.59. The white male population of the State by the census of 1860 was 41,128; female 36,619. The decrease of the slave population during the ten previous years by manumission was 17; by escapes 11. The mortality in the State for the year ending May 31st, 1860, was 1,769, of whom 979 were males, 790 females, and 329 under the age of one year. The most fatal diseases are consumption, diarrhœa, dropsy, fever, remittent and typhoid, and pneumonia. Deaf and dumb 18, of whom 9 are slaves. The product of iron foundries for the year ending June 30th, 1860, was valued at $63,000; value of sawed and planed lumber $1,475,240; flour and meal $355,066; cotton goods manufactured $40,000; value of shad fishing $68,952; value of real estate and personal property $73,101,500. Lands improved 676,464 acres, ditto unimproved 2,273,008; horses 16,562, mules, &c., 2,294, cattle, exclusive of working oxen and cows, 284,736, sheep 29,958, swine 274,314; wheat 2,808 bushels, rye 21,314 bush., corn 2,824,538, oats 46,779 bush.; rice 223,209 pounds; tobacco 758,015 pounds; cotton 63,322 bales of 400 pounds each; wool 58,594 pounds; peas and beans 364,738; sweet potatoes 1,213, 493 bush.; sugar 1,761 hhds., molasses 435,890 gallons. Value of home manufactures $62,243: miles of railroads 401. The area of the State is 59,268 square miles, or 37,931,520 acres. It is divided into 33 counties. Key West is the most important commercial and military point in the State, Tallahassee is the seat of the State Government, Jacksonville has been a thriving commercial town on the St. John's river, from whence vast quantities of lumber were exported. The number of cotton plantations in 1850 was 990, and of sugar plantations 958. The Governor of the State is John Milton, whose term expires in November, 1863. The State election is on the first Monday in October, and the Legislature meets on the first Monday in November.

The State of Florida quietly reposed under the flag of the Confederate States until the military and naval expeditions were sent from Port Royal by Com. Dupont to capture her towns on the eastern coast. (*See* ARMY OPERATIONS.)—These expeditions met with very little resistance. Fernandina and New Fernandina were taken on the 3d of March, Jacksonville on the 12th, next St. Augustine and Musquito Inlet. The occupation of these points and the blockade outside gave to the Federal Government the control of the whole coast of east Florida. Situated as the State was, at a distance from the seat of the Confederate Government, which required all its available force to defend the northern border of the seceded States, the Confederate Government determined to relinquish the possession of the eastern portion of the State when the attack was made on Fernandina. An order was accordingly issued by the Secretary of War at Richmond, directing the Confederate forces to withdraw from the State. All the cannon, arms, ammunition, and stores were removed at the same time. These troops were sent into Tennessee to aid in resisting the Federal forces there. The effect of these measures was to discourage the efforts of the people for the Confederate cause and to prevent sol-

diers from enlisting in the army. If they were to be abandoned by the Government, their services were required to defend their homes instead of going to fight abroad, was the answer to the call of President Davis for 2,500 additional troops. Early in April, the Confederate defences at the entrance of Pensacola bay were evacuated and Forts McRae and Barrancas dismantled. A few soldiers yet remained in Pensacola, having made every preparation for a hasty retreat. At the same time all the towns on the west coast of the State were either evacuated or nearly so. Tampa Bay only was held with an appearance of military possession, but the garrison was prepared to evacuate on the approach of a hostile force.

The occupation of Jacksonville by the Federal forces was followed by active movements in favor of the Union, which are described in connection with the *Army Operations*. The position is the Key of east Florida, and it was held by about fifteen hundred Federal troops. With one or two gunboats, they were sufficient to hold the place against any force which might have been brought against them. By an order of Gen. Hunter, commanding the department of the South, with headquarters at Port Royal, the town was evacuated. Many of the citizens of Jacksonville who had fled, were induced to return while it was occupied by this force, and avow their loyalty, by a proclamation issued by Gen. Sherman, the predecessor of Gen. Hunter. This promised to all good citizens protection to life and goods. By the evacuation of the town, they were deprived of this protection, and having once expressed Union sentiments, they became marked men. Fifty-four of them, embracing men, women and children, were brought to New York in a steamer, when the troops left, and others came in a sailing vessel.

Although such a large proportion of the citizens of the State had volunteered in the army, and although the crops during the year were successful, yet the Legislature, to guard against a scarcity, passed an act forbidding the exportation from the State of any beef cattle, dried or pickled beef, hogs, pork, bacon, corn, corn meal, salt, or provisions of any kind. The same act forbid any person to buy these articles for the purpose of speculation, and directed that they should be sold at a price not to exceed 33 per cent. over cost and charges.

A scheme for the armed colonization of Florida was brought to the notice of the Federal Government by Eli Thayer of Massachusetts, during the year. It consisted of a proposition for an expedition of ten thousand colonists enlisted for six months, and to be supplied with arms, subsistence, and transportation by the Government, and a commander whose business it should be to occupy and hold the public lands of the State and the lands of disloyal citizens, which were to be seized for the non payment of taxes under a law of Congress passed at the session then closed. It received some consideration by the Government, but was not adopted.

FRANCE. The ten years, which had elapsed in November, 1862, since Louis Napoleon, by French suffrage, became Napoleon III, emperor of France, were witnesses of great changes in the political, social, intellectual, and moral condition of France. When by the *coup d'état* of December, 1851, the present emperor seized the reins of government, the whole country was in the condition of the crater of an active volcano, seething and boiling for another eruption: the peasantry impoverished, and in dread of losing their little all; the great artisan class, ill supplied with work, and clamoring for bread, and the "right to labor;" the *bourgeoisie* or mercantile and shopkeeping class, sick and disgusted with revolution, and willing to accept any government which would insure peace and quiet, and the opportunity of gain; the army discontented, and sympathizing too much with the masses to be a fit dependence for the government against the people. Paris, the heart of France, was, in the older portions of it, a city of narrow streets, courts and lanes, overshadowed by the lofty stone palaces of the middle ages, and there were hundreds of localities, where a resolute mob, erecting from the paving stones and other materials a barricade, could set at defiance a large army.

The people, as a body, were sick of republicanism; they preferred to be governed, to be governed well, but rigorously, and to be governed *much*, their idea of a paternal and beneficent government being that it must show its hand in all the affairs of social life.

No man understood the French character better, or was more competent to manage it in a way to promote his own purposes, than Louis Napoleon, and when, as "the elect of seven millions," he ascended the imperial throne, it was with a fully matured purpose and a well digested plan of maintaining a dynasty of Bonapartes. The measures by which he has accomplished this purpose thus far, are the conciliation of all classes of the French people by gratifying their tastes, while making them the agents to carry out his plans. He determined that there should be no more battles of the barricades; and, under the plea of improving and beautifying Paris, he has run straight, broad and elegant boulevards through every portion of the ancient city, and annihilated the old courts, lanes, and narrow streets, till now his cannon, trained upon any thoroughfare, could sweep away, with a stroke, every vestige of insurrection. He had determined to attach the army to the throne and to his dynasty, and he has modified the conscription laws so as to make service in the army profitable and desirable; he has cultivated the *esprit du corps*, and the love of glory, always a Frenchman's weakness, by noticing and rewarding deeds of bravery, by promotions from the ranks, by making his little son an officer of the army, and by the thousand measures which his astute and observing mind had taught him were most likely to win a French army's affection. The

artisans were conciliated by the abundance of employment furnished by the great changes making in the cities, by the increased rate of wages, and by the regulation, by imperial authority, of the price of provisions. The *bourgeoisie* found, in his vigorous administration, the strong government they had desired, and order and quiet being established, they had full opportunity to pursue their gainful traffic, and their speculative disposition was stimulated to the utmost by the emperor. The peasant class, assured of the possession of their little homesteads, and having the opportunity to invest their small hoardings in government securities, which they could not previously do, became the strong friends of the government. At times, indeed, floods, short crops, and financial panics brought distress, and occasioned some grumblings of discontent with the government, but the "empire was peace" to its inhabitants, and furnished them protection, while it ruled them with a strong arm; and none knew better than the emperor that the surest panacea for discontent at home was a foreign war. Hence, the conflict with Russia was rather sought than shunned; hence, Austria was menaced and driven into war; hence, Italian unity was delayed, that Europe might see that Napoleon III was the arbiter of its destinies; hence, too, the Syrian occupation, the war with China, the conquests in Anam, the attack on Mexico, the proffered mediation between the Northern and Southern States of the United States.

Other enterprises, also, home and foreign, tending to occupy and amuse the minds of the people, were undertaken. The building of railroads was stimulated; the construction of substantial highways aided; emigration to, and development in, Algeria encouraged; the great Suez canal project taken up and vigorously prosecuted, and considerable tracts of territory, on both the eastern and western coasts of Africa, secured.

These measures of policy were attended with some inconveniences which were rather formidable. The debt of France, which at the beginning was large for the resources of the country, has been constantly increasing at the rate of about 75 millions of dollars a year, and now amounts to $1,902,923,400, and the current annual expenditure, now $413,853,291, has been annually from 60 to 80 millions in excess of the ordinary revenue, while the extraordinary credits opened, at the pleasure of the emperor, for such purposes as he deemed desirable, have produced the utmost confusion in the finances of the state. The material prosperity of the citizen was the great aim and end of the government; the press was not only not free, but was under the control of a most rigid censorship; intellectual progress, except in the few directions which could not be considered as trenching upon the imperial prerogative, was trammelled and almost prohibited. Glory and territorial conquests abroad, wealth and the power that money brings at home, were the aims and ends to which the hearts of the French people were directed.

In the Annual Cyclopædia for 1861, the position of the empire with reference to the important questions of external and internal policy, which pressed upon it during that year, is briefly stated, and a similar review with reference to 1862 will be in place here.

The relations of France to Great Britain have been, on the whole, tolerably cordial. Its industrial progress was well represented in the great International Exhibition at London, and though some complaints were made at the withdrawal of that power from the Mexican expedition, and at its refusal when urgently solicited to concur in proffering a mediation between the United States and the Southern Confederacy, and at its demonstrations in regard to Syria, Greece, and the Suez canal, and a semi-official encouragement given to Spain to urge the surrender to her of Gibraltar, yet there were no serious disturbances of the comity observed for many years between the two powers.

Elsewhere on the Continent the policy of France has generally been peaceful. The Swiss difficulties have been settled; the personal interview between the emperor and William I, king of Prussia, led to a more cordial feeling between the two Governments; indications were not wanting of a Franco-Russian alliance, which, however, the sympathy of France for Poland in insurrection at the beginning of the present year may not impossibly prevent; the Austrian emperor has found nothing to complain of in the policy of France, and the manœuvres for taking possession of any portion of the Turkish empire have been, from the necessity of the case, postponed to a more convenient season. The imperial wishes have been thwarted in Greece, but the emperor has suceeeded in defeating the desires of the British Cabinet also; in Italy, the expectant policy has, in the main, been pursued, and in the Ratazzi Cabinet (*see* ITALY) Napoleon III found willing tools for his purpose; but the defeat of Garibaldi, and the suppression of his movements upon Rome, which the emperor compelled Victor Emmanuel II to undertake, opened the eyes of the Italian Parliament and people to the selfishness of the French policy, and lost the emperor his former prestige in that country. In Egypt, his relations with the late viceroy, Said Pasha, were very cordial; the pasha visited France during the summer of 1862, furnished some black troops for the Mexican expedition, and gave his assistance liberally to the Suez canal. (*See* AFRICA.) Under the head of Africa are also detailed his operations elsewhere in Africa, Madagascar, Senegal, &c. In Asia, the year witnessed a number of severe battles between the allied French and English troops and the Taepings in China (*see* TAEPING REBELLION), and in the spring by a short but vigorous campaign the French became masters of three provinces in Cochin China, besides securing the opening of several of the Anamese ports to

their trade. This conquest, though confirmed by a treaty, seems to be of somewhat uncertain permanence, as just at the close of the year, the Anamese had risen in insurrection, and made very determined and resolute attacks upon Saigon and Mytho, and though repulsed with considerable loss, there was room for apprehension that they would overwhelm the little garrisons in those towns by sheer weight of numbers. (*See* COCHIN-CHINA.)

In Mexico (*see* MEXICO) the British and Spanish allies having both withdrawn from the expedition, the French have been left to conduct the war alone, and have met with numerous and somewhat serious reverses; reënforcements have been repeatedly sent out, but the success of the French arms, and the "establishment of the power of the Latin race on this continent, as a counterpoise to the Anglo-Saxon," which the emperor, in his letter to Gen. Forey, so strongly indicated as his purpose, seems yet hardly realized. The gallant resistance of Mexico to this invasion has excited little sympathy among the European powers, with the exception of Italy, which sees in it the counterpart of its own struggles for freedom and independence.

In his relations to the United States the French emperor has maintained a strict and careful neutrality, neither attempting to run the blockade, nor suffering privateers to be fitted out in his ports to prey upon our commerce. He has sought to unite the leading powers of Europe in a proposal for mediation, (*see* DIPLOMATIC CORRESPONDENCE), and failing in that, proposed late in the autumn an armistice and convention in some foreign country between the two belligerents. During the summer of 1862, his minister at Washington, M. Mercier, visited Richmond, and held an interview with the Confederate authorities.

At the commencement of the year there was an intense excitement throughout France in regard to the Society of St. Vincent de Paul, which had its central council at Paris, and its affiliated associations, under the control of the central council, throughout the empire. As this Society was, to some extent, made one of the organs of the ultramontane party among the clergy, to attack the Government for its supposed opposition to the preservation of the temporal power of the Papacy, and as neither the Society nor its branches had taken out authorizations, as all benevolent societies in France are required to do, from the prefect of the place where they are established, and these authorizations give the prefecture the power of regulating, and if necessary, of suppressing them, the Government directed that they should take out in each city and town an authorization, or be suppressed. In most instances the authorization was taken out, and on the 5th of April the central council of the Society was dissolved, 766 out of the 854 local societies having signified their preference for independent existence. A part of the masonic lodges of the empire were closed about the same time, and some of the nunneries, which had been too active in their proselytism of Jewish children, were deprived of their authorizations.

The sanguine hopes entertained at the close of 1861, of a reform in the finances under the vigorous and skilful administration of M. Fould, were not destined to be wholly realized. This was not attributable to want of financial ability on the part of the minister, but to the extraordinary exigencies of the country; the Chinese war, the conquests in Cochin-China, and above all the war in Mexico, required large and to some extent unforeseen expenditures, and although on the 9th of October, the finance minister expressed the belief that the expenditure of the year would be about 157 millions of francs less than that of the preceding year, and that he should be able to commence the year 1863 with a reserve of 80 millions of francs, instead of a deficit as had been usual, the subsequent large expenditure occasioned by the disasters in Mexico seems to have thwarted his plans, and the surplus was only 4,300,997 francs, while the budget for 1863, 2,069,507,518 francs, was 100 millions of francs ($20,000,000) in advance of that for 1862, and with very little hope of any considerable surplus, even from the extraordinary taxes and imposts to be levied to raise it, the ordinary revenues indicating a deficiency of at least 335,000,000 francs. That the current expenditure of a nation of 37,000,000 inhabitants, in a time of no great or general wars, should reach the sum of $413,853,291 seems singular, and indicates gross extravagance of expenditure somewhere. The legislative body (*corps legislatif*) answering to our House of Representatives, endeavored in a protracted discussion on the budget to effect a reduction of 8,000,000 francs ($1,600,000), but the finance minister replied that the utmost allowable decrease would be 771,341 francs ($154,268), and with this slight reduction they were forced to be content.

The larger liberty promised to the *corps legislatif* and to the press had excited many hopes and anticipations, most of which were doomed to disappointment. The legislative body was indeed allowed somewhat more of freedom in the discussion of topics of finance and state policy, and their speeches were permitted to be reported stenographically; but when the democratic members made vigorous and eloquent arguments in favor of the withdrawal of the French troops from Rome, or the adoption of a real instead of a pretended liberality and authority in legislation, their arguments were suppressed and the papers were restrained by *communiqués* from publishing them. Still something was accomplished, the emperor had set his heart upon granting from the public treasury an annuity of 50,000 francs upon the general, Cousin-Montauban, Count Palikao, and a bill to that effect was introduced into the legislative body, but the

reputation of the count was bad, and the bill was rejected, and although the emperor somewhat angrily demanded its passage, it was a second time and almost unanimously rejected, and the baffled monarch was compelled to withdraw it. The prosecution of the war with Mexico has also excited a considerable opposition, which at the session of the present year is likely to be materially increased.

The press at first supposed that the notices and compulsory cessation of publication which had been the fate of the greater part of the newspapers of Paris and the other cities of France, at one time or another within the past ten years, were to be henceforth abandoned, and were a little riotous, perhaps, in their newfound liberty; but the delusion was a brief one, and they soon found that though the name of the thing was changed, a "*communiqué*" was just as effective a check upon the freedom of the press as a "notice." The censorship both of books and newspapers, has, in fact, been maintained with even greater rigidity, though under somewhat different forms, during the past year than in any of the ten which have preceded it.

The heavy duties imposed by the United States Congress on silks and other fabrics imported from Europe in 1861, and the general stagnation of trade induced by the American war, greatly depressed the manufacturing interest in France, and the silk manufacturers of Lyons were under the necessity, for a time, of stopping their looms; great suffering ensued among the operatives of that city and its vicinity, which was aggravated by the fact that there was early in 1862 a dearth in cotton, which rendered the production of cotton goods difficult and unprofitable. Lyons is not however the principal seat of the cotton manufacture; Rouen and the department of *Seine Inférieure*, and the departments adjacent have almost the monopoly of the production of French prints, while other descriptions of cotton goods are manufactured in Normandy. Of the 89 departments into which France is divided, 14 are, to a considerable extent, engaged in the production of goods of which cotton is partially or entirely the material. The scarcity and high price of cotton in the autumn of 1862, caused the closing of the greater part of the manufactories, and in the departments of Rouen and Seine Inférieure alone it was estimated that at the close of the year 30,000 workmen were out of employment and starving, and half as many more in Normandy. At the commencement of 1863 active measures were taken to raise funds for their relief, and large contributions were made by individuals, cities, and the Government.

Statistics.—In France a census is taken every five years, but it extends only to the population, not to the agricultural or industrial productions, mines, or railroads. The last census was taken in 1861. It gave as the population of the 86 original departments of France 36,735,871, and adding the population of the newly annexed departments of Savoy, High Savoy and Nice (645,103), the whole population of the France of to-day was 37,400,974. The increase in the population of the old departments in 5 years, was 716,507; in ten years, 972,812; and in 15 years 1,355,385, or 3.79 per cent. in 15 years. Of this increase 1.99 per cent. was since 1856. The increase of the French population is slower than that of any other nation of Europe, although the losses by emigration are not large. The two great wars of Italy and the Crimea, the short crops, and the revolutions through which it has passed, may all have had their influence in producing this result; but the general laxity of morals, and the abandonment of so many infants, legitimate or illegitimate, to the foundling hospitals, have unquestionably been the principal cause. The population since 1789 has increased but about 33 per cent., being at that time 27,957,165. The sexes are more nearly equal in numbers than anywhere else in Europe except in Italy, the excess of females over males being only $\frac{13}{100}$ of one per cent. Of the males 27.25 per cent. are unmarried (including children), 20.13 per cent. married, and 2.49 per cent. widowed; of the females, 25.31 per cent. are unmarried (including children), 19.01 per cent. are married, and 4.81 per cent. are widows.

In 26 departments, there had been an actual loss of population amounting in all to 101,678; in 60 departments there had been a gain, though in some it was very slight.

There has been no census of agricultural products since 1852; but that year, being a good average year for crops, will indicate pretty nearly the average amount at present; while in grains, it will be in excess of the last two years, which have been years of short crops. The crop of wheat in that year was 273,321,420 bushels; of barley, 48,943,245 bushels; of maize and millet, 23,813,088 bushels; the entire crop of cereals was 640,849,488 bushels, and it was valued at $522,833,340.40 for the grain, and $119,145,203 for the straw. The crop of potatoes was 165,859,400 bushels; of peas and beans, 17,428,571 bushels. The value of garden products was $7,708,100, and of orchard products, $6,900,492. The entire value of agricultural productions was $1,127,493,530. The number of horned cattle the same year was 10,093,737; of sheep, 33,281,592; of swine, 5,246,403; of goats, 1,337,940; of horses, mares and colts, 2,866,054; mules, 315,831. Total value of live stock, $556,192,282, the total annual gross product of farm animals (including 1,956,241 hives of bees) was $543,300,096. The production of brandy was $12,873,078; of beer, $12,679,842; of cider, $9,439,140; of Colza oil, $23,285,053; of olive oil, $5,940,225; of nut oil, $2,857,679; of silk, $13,198,094. The entire amount of industrial products, derived immediately from agriculture was $80,072,713. An industrial census was

taken in 1861, but its results are not yet published.

The imports of France for the year ending Dec. 31, 1861, were $1,105,900,000, of which $617,420,000 was under the head of general, and $488,480,000 of special commerce; the exports were $917,500,000, of which $532,240,000 belonged to general and $385,260,000 to special commerce. Of the *imports*, grain and flour were the largest items, amounting together to $78,000,000, and cotton next, amounting to $54,120,000; raw silk amounted to $33,220,000, and wool unmanufactured to $34,280,000. The other most important items were coal, sugar, coffee, oleaginous grains, coffee, indigo, live stock, wines and spirituous liquors, olive oil and zinc. Of the exports, silk fabrics took the lead, being valued at $66,580,000; and next in order were wines, $39,180,000; woollen goods, $37,600,000; dressed and prepared skins and leather, $18,300,000; cotton goods, $11,340,000; spirits $10,020,000; grain and flour, $6,820,000; metals, manufactured, $7,660,000; refined sugar, $8,400,000; raw silk, $6,120,000; and considerable amounts of live stock, glass and porcelain, linen goods, and machinery. The number of vessels entering French ports in 1861 was 30,021, measuring 4,934,000 tons; of which 11,653 were under the French, and 18,368 under a foreign flag. The number of vessels which cleared the same year was 17,246, measuring 2,684,000 tons, of which 6,868, were French and 10,378 foreign vessels.

The number of miles of railroad completed and in operation in France on the 1st of July, 1862, was 6,276, miles, of which $\frac{3}{5}$ was single track, and $\frac{2}{5}$ double track. The gross receipts of these roads in 1861 were $92,080,211. There were in 1862, 97 canals, having a total length of 2,829 miles, and there were also 5,290 miles of river navigation, a part of it made navigable by artificial means.

The French army in 1862 on the peace footing amounted to 404,192 men of all arms, and could be raised by calling out the entire force on the war footing to 757,725. Of this force about 250,000 were infantry, 60,000 cavalry, 39,000 artillery, and 7,400 engineers. In addition to this there are about 117,000 armed police, and 500,000 of the National Guard, answering very nearly to our militia. The navy of France in 1862 consisted of 94 iron clads, carrying 1,142 guns and having a total horse-power of 21,136 (of these 58 were gunboats of 1, 2, or 4 guns, 19 more floating batteries of 16 or 18 guns, for harbor defences, and 14 were 40 gun frigates); and one ship, ten frigates, and 13 floating batteries, of the whole number, were in process of construction. Besides the iron clads, there were 178 screw steamers, and 86 sidewheel steamers not iron clad, having together 6,196 guns and 81,300 horse power, and 111 sailing vessels, mostly ships of the line and frigates, carrying 2,380 guns. Total, 478 vessels, with 9,718 guns, and 102,436 horse power, of which 24 (all iron clads) are building.

The postal service in France increases rapidly. The charge for single-letter postage throughout France is 20 centimes, or $3\frac{1}{2}$ cents. 274,000,000 letters and 189,000 newspapers passed through the post offices in 1861. The amount of money orders transmitted was about $105,000,000. The gross receipts for the letter postage were $11,120,000.

The extent of the telegraph lines in 1862 was 14,799 miles, the number of stations (aside from railroad stations) 454, and the number of despatches 1,383,200.

FREDERICK, the capital of Frederick county, Maryland, and the capital of the State in 1861–'62, is situated on Carroll creek, two miles from its mouth, in Monocacy river. It is connected with the Baltimore and Ohio railroad by a branch road, three miles in length. The city is well built, the streets are wide and regular, and lined with houses of brick or stone. It contains a court house, jail, several churches, banks, scientific and literary institutes, corn and flour, lumber and paper mills, and is the second city in the State in commercial importance. The population in 1860 was 8,143, and that of the county 46,591. The county has an area of 770 square miles, and is bounded on the southwest by the Potomac river, which separates it from Virginia, intersected by the Monocacy river, and also drained by Catoctin, Pipe, Lingunore, and Bennett's creeks. The South Mountain, a continuation of the Blue Ridge of Virginia, forms its western boundary, and the surface is generally undulating. The soil, formed of decomposed limestone and slate, is highly productive. The city of Frederick was occupied by the Confederate army, under Gen. Lee, on the 7th of September; for particulars of which *see* ARMY OPERATIONS.

FREDERICKSBURG, a city of Spottsylvania county, Virginia, is pleasantly situated on the right bank of the Rappahannock river, at the head of tide water. It is 65 miles north from Richmond, and 110 miles from Chesapeake bay. The population in 1860 was 5,022. It contained a court house, jail, several churches, two banks, and two seminaries, an orphan asylum, a grist mill, and some large tanneries. Above the city are falls in the river which furnish valuable motive power. The railroad from Aquia creek, on the Potomac, to Richmond passes through the city, and was the principal route between Washington and Richmond. A canal also extends 40 miles above the city, affording an outlet to the productions of the rich farming country above. Nearly opposite the city, on the left bank of the river, is the little town of Falmouth, which was made the headquarters of Gen. Burnside while in command of the Federal army. Fredericksburg was evacuated by the Confederate troops, as their army retired from northeastern Virginia, and soon after occupied by the Federal troops without opposition. It was subsequently evacuated by the Federal troops in August, 1862, as Gen. Lee, in command of the Confed-

erate forces, advanced toward Maryland. Subsequently, as the Federal army appeared before the city, in November, a surrender was demanded. The commander of the Confederate force in the rear of the city caused the answer to be given, that his command would neither occupy the city or suffer the Federal army to do it. The heights in the rear of the city finally became the scene of a bloody battle between the Confederate forces under Gen. Lee and the Federal forces under Gen. Burnside. (*See* ARMY OPERATIONS.)

FREEDOM OF THE PRESS. There has been no interference with the usual publications of the press during 1862, beyond the orders to abstain from publishing information of intended military movements. On the 25th of February, the Secretary of War issued the following order to the Chief of Police at Washington:

WAR DEPARTMENT, WASHINGTON, *Feb.* 25.

To the Chief of Police:

All newspaper editors and publishers have been forbidden to publish any intelligence received by telegraph or otherwise respecting military operations by the United States forces. Please see this night that this order is observed. If violated by any paper issued to-morrow, seize the whole edition, and give notice to this department that arrest may be ordered.

EDWIN M. STANTON, Secretary of War.

On the next day the following more general order was issued:

WAR DEPARTMENT, WASHINGTON, *Feb.* 25.

It is ordered that from and after Feb. 26, the President, by virtue of an act of Congress, takes military possession of all telegraph lines in the United States.

2d. All telegraphic communications in regard to military operations not expressly authorized by the War Department, the general commanding, or the generals commanding armies in the field, in the several departments, are absolutely forbidden.

3d. All newspapers publishing military news, however obtained, and not authorized by official authority, will be excluded thereafter from receiving information by telegraph, or from transmitting their paper by railroad.

4th. E. S. Sanford is made military supervisor of telegraphic messages throughout the United States, and Anson Stager military superintendent of all telegraphic lines and offices in the United States.

5th. This is not intended to interfere in any way with ordinary business of companies or private business.

By order of the President.

(Signed) EDWIN M. STANTON,
Secretary of War.

On the 17th of March an order was issued from the War Department, directing the seizure of the Washington "Sunday Chronicle," and the parties concerned in its publication, in consequence of having published on the previous day information of military movements in disregard of general order No. 67.

The order of arrest was placed in the hands of the military governor of the District, and the editor of the paper brought before him. The editor stated that the news was handed in at a late hour, and the paper went to press without his personal supervision. He expressed his regret at the violation of the order, and promised to carefully guard against a recurrence of similar publications. Whereupon, at the request of the military governor, he being satisfied that the offence would not be repeated, the execution of the order was suspended.

The following order, issued in August, 1861, was continued in force:

WAR DEPARTMENT, ADJ'T GENERAL'S OFFICE,
Washington, August 26, 1861.

General Order No. 67. By the 57th article of the act of Congress, entitled an "An act for establishing rules and regulations for the government of the armies of the United States," approved April 10, 1806, holding correspondence with or giving intelligence to the enemy, either directly or indirectly, is made punishable by death, or such other punishment as shall be ordered by the sentence of a court martial.

The public safety requires a strict enforcement of this article. It is therefore ordered that all correspondence and communications verbally, or by writing, printing or telegraphing, respecting the operations of the army, or military movements on land or water, or respecting the troops, camps, arsenals, intrenchments, or military affairs within the several military districts, by which intelligence shall be directly or indirectly given to the enemy, without the authority or sanction of the general in command, be and the same are absolutely prohibited, and from and after the date of this order, persons violating the same will be proceeded aginst, under the 57th article of war.

(Signed) L. THOMAS, Adj.-General.

The subject of restrictions on the press was brought before Congress, and the following resolution was referred to the Judiciary Committee of the House:

Resolved, That the Judiciary Committee be requested to inquire if a telegraphic censorship of the press has been established in this city, and, if so, by whose authority, and by whom it is now controlled; to report if such censorship has not been used to restrain wholesome political criticism and discussion, while its professed and laudable object has been to withhold from the enemy information in reference to the movements of the army.

The report of the committee was made on the 20th of March, in which they state the following conclusions:

First. A telegraphic censorship of the press has been established in this city.

Second. The censorship existing at the time the investigation was directed by the House, was originally established upon the basis of the agreement between the representatives of the press and Gen. McClellan, but was enlarged in its scope by the Secretary of State.

Third. At the time the inquiry was directed by the House, and for some months prior to that time, and until the 25th of February last, the censorship was controlled by the Secretary of State.

Fourth. The original design was to prevent the publication of military information which might be of advantage to the rebel authorities.

Fifth. Despatches, almost numberless, of a political, personal and general character, have been suppressed by the censor, and correspondents have been deterred from preparing others because they knew they could not send them to their papers by telegraph.

The telegraph has become a most important auxiliary to the press of the country, and should be left as free from Government interference as may be consistent with the necessities of the Government in time of war. These necessities cannot extend beyond what may be legitimately connected with the military or naval affairs of the nation, and to these should the Government interference with the transmission of intelligence be confined, for it is this character of information alone which can be of importance to the enemy,

and which may be properly withheld from the press and the public, in order that it may not reach the enemy. The committee, therefore, recommend the adoption of the following resolution by the House:

Resolved, That the Government should not interfere with the free transmission of intelligence by telegraph, when the same will not aid the enemy in his military or naval operations, or give him information concerning such operations on the part of the Government, except when it may become necessary for the Government, under the authority of Congress, to assume exclusive control of the telegraph for its own legitimate purposes, or to assert the right of priority in the transmission of its own despatches.

FRELINGHUYSEN, THEODORE, LL.D., an American statesman, and scholar, born at Millston, Somerset co., N. J., March 28, 1787, died at New Brunswick, April 12, 1862. He graduated at Princeton College in 1804, studied law, and was admitted to the bar in 1808, where he soon gained a high reputation as a lawyer. In the war of 1812, he took part as a captain of a company of volunteers. In 1817, he was chosen attorney-general of the State by a legislature opposed to him in politics, and in 1826 was transferred to the United States Senate. During his period of service there, whatever acts came before Congress, having for their object the amelioration of the condition of the poor and oppressed, or of elevating their moral or religious character, received his hearty support. He was one of the earliest officers of the American Colonization Society, advocated bills for the improvement of the condition of the Indian tribes, the suppression of Sabbath mails, and supported Mr. Clay upon the question of the tariff, and the compromise act of 1832. In 1835, he left the Senate, and was succeeded by a democratic Senator. In 1838, he was chosen Chancellor of the University of New York. In 1844, he was the nominee of the whig party for vice-president when Henry Clay was the candidate for the presidency. In 1850, he resigned the chancellorship of the University, and became president of Rutger's College, New Brunswick, N. J., which position he occupied until his death. He filled many places of honor and of trust in civil life, and in the walks of learning, and adorned them in no ordinary degree with the graces of the man and the Christian.

FRONT ROYAL, the capital of Warren county, Virginia, is one mile east of the Shenandoah river, and 140 miles north of northwest of Richmond. The town is situated in a valley between the river and the Blue Ridge Mountains—the gap in which receives its name from the town. The railroad from Alexandria to Strasburg passes through this gap and the village. A plank road of 20 miles in length connects the latter with Winchester. Numerous flouring mills use the water power of the river. It was here that the advance of Gen. Jackson's force met a most spirited resistance from the 1st Maryland volunteers, under Col. Kenly, on the 23d of May, which defeated his design to cut off the retreat of Gen. Banks. It was subsequently, during the year, the scene of important military movements.

G

GEOGRAPHICAL AND ARCHÆOLOGICAL EXPLORATIONS. An epoch of civil war is not usually a time for extensive geographical explorations or discoveries; yet the past year has not been wholly fruitless in discovery in the United States or the North American Continent. Early in the year Congress published the elaborate report of Captains Humphreys and Abbott, who had been appointed in 1857 to survey the Mississippi river and its tributaries, and whose labors were brought to a close in 1861. This report is full of interest and importance, not only to hydrographical science, but to the military and naval operations of which that great water-course is now the seat. The great western tributaries of the Father of Waters, the Missouri, Red, and Arkansas rivers, were explored to their sources, their breadth, depth, and the character of the soils of the regions through which they pass accurately noted, and their usual periods of flood and ebb investigated. The military operations, which have been conducted in so many of the States of the Union, have been fruitful in reconnoissances and surveys, many of which will contribute to render the topography of those States much better understood in the future than it has been in the past.

The explorations for new mines of the precious metals have been unusually successful during the year. In California several new silver mines, and one extensive deposit of cinnabar (the ore of quicksilver) have been discovered, and copper deposits of great extent brought to light; in Nevada, the discovery of new silver lodes has been of almost weekly occurrence. In Colorado, the veins of gold-bearing quartz, and of pyrites rich in gold, have been found in almost all parts of the mountain ranges of that territory. The mines in Arizono on the Colorado river, long known to yield gold and silver in considerable quantities, have been opened and found richer than was previously supposed. The Salmon river, and John Day and Powder river gold mines in Oregon and Washington Territory (now included in the new Territory of Idaho), though discovered the year before, received their principal development in 1862; and a new mining region of extraordinary promise was discovered in the summer of 1862, on Grasshopper river, an affluent of the Yellow Stone, in lat. 43°, long. 109°

30′ W. from Greenwich, near the boundaries of Dakota, Nebraska, and Idaho, on the eastern slope of the Wind River Mountains. The great yield of gold in the placers of this region has already attracted a very considerable population thither, and a new territory will probably be organized there by the next Congress.

Considerable investigations have also been made concerning the flora and fauna of Lower California, by Mr. John Xantus, at Cape St. Lucas, under the direction of the Smithsonian Institution; and of the region lying south of Hudson's Bay, by some of the officers of the Hudson's Bay Company, especially by Mr. Bernard R. Ross, chief factor of the Mackenzie River district at Fort Simpson, and Mr. Lawrence Clark, jr., of Fort Rae, on Slave Lake. These gentlemen have not only contributed large collections of specimens of the flora and fauna of these regions, but have added materially to our knowledge of the character, habits, and customs of the Esquimaux.

Mr. Robert Kennicott has been for some years past employed, at the joint expense of the Hudson's Bay Company and the Smithsonian Institution, in exploring the northwestern portion of this continent. In September, 1860, he reached Fort Yukon, a port on the Yukon river in Russian America, lat. 65°, long. 146° W. from Greenwich, where he remained till the summer of 1861, and after spending the season in exploring that part of Russian America, hitherto almost wholly unknown, returned to Fort Simpson in the early autumn, and expected, in the spring of 1862, to penetrate to Fort Anderson, at the mouth of the Anderson river (a stream between the Mackenzie and Coppermine rivers), and collect the fauna of that portion of the Arctic Ocean in the summer of 1862, and return during the present year to the United States. The region thus explored has, much of it, not hitherto been penetrated by any competent observer, and Mr. Kennicott's report will undoubtedly be replete with interest.

An English expedition sent out in 1861, and composed of Messrs. Hind, Montgomery, and several other gentlemen, have explored the interior of Labrador, and ascended the Moise river for several hundred miles; but they find little of interest to report; the country is hopelessly sterile. The efforts of our countryman, Tal. P. Shaffner, Esq., to procure the laying of a telegraphic line between Great Britain and America by way of the Faroe Islands, Iceland, Greenland, and Labrador, have been powerfully seconded in England by Captain McClintock, and the route proposed has been examined, but as yet without practical result. There seems to be reason to fear that the icebergs in their resistless movements would destroy some of the cables of this line, though it would have much less length of submerged cable than the route proposed and once constructed through the efforts of Mr. Cyrus W. Field. This last is to be again attempted, the obstacles being so far removed that the organization of a company and the preparation of a cable is rendered certain, though it will probably not be laid before the summer of 1864.

The latest, though probably not the last, of the arctic explorations was completed in the autumn of 1862. Mr. C. F. Hall, formerly of Cincinnati, whose departure from New London, Conn., in the whale ship George Henry, on the 29th of May, 1860, we chronicled in the "Annual Cyclopædia" of 1861, returned to that port on the 13th of September, 1862. He reached Frobisher's Strait, as it has been called for about 300 years, in August, 1860, and soon after his arrival a fearful gale arose, which destroyed the shallop in which he had intended penetrating to the open sea around the north pole, and came near wrecking the George Henry. By the advice of the Esquimaux, he postponed efforts to proceed northward to the next summer, and explored, as far as he was able, the shores of the waters in which the vessel was compelled to winter. He discovered that the so-called Frobisher's Strait was a deep bay, terminating in lat. 63° 48′, and long. 70° W., the entire shore of which he traversed. In the spring of 1861, he procured a whale boat from the George Henry, and with a crew of six natives, started on his northern journey to the Countess of Warwick's Sound, and after much difficulty succeeded in discovering the place where Frobisher, in 1574 or 1575, had attempted to plant a colony. Numerous relics of this ill-fated colony were found, consisting of pieces of coal, wood, iron, broken bottles, and trenches dug for holding a supply of water. Among the natives he found a woman called Oo-ki-zox-i-noo, or the "White Bear," more than 100 years' old, who had heard from her parents about the capture and final death of the white men, and who recounted the story with great fidelity. At the head of Frobisher's Bay, he discovered a large mountain in which was an extensive deposit of fossils. Near Queen Elizabeth's Land, he found an immense glacier more than 3,000 feet high, one hundred miles in length, and fifty in width, which he named, in honor of Mr. Henry Grinnell, "The Grinnell Glacier." He also believes that he has determined the fate of two of the boats' crews of Sir John Franklin. During the winter of 1861–'2, the ship's company were subsisted mostly by the generous hospitality of the Esquimaux. Mr. Hall speaks in high terms of the bravery, honesty, truthfulness, and hospitality of the Esquimaux. He brought home with him a family of this people, whose intelligence and ability as interpreters he had fully proved.

During the year, the Northwest Boundary Survey, conducted under the direction of Mr. Archibald Campbell, completed its labors, and returned to Washington. The commission met with a great loss in the death, in Feb., 1862, of its surgeon and naturalist, Dr. C. B. Kennerly. The report of the survey has not as yet been published.

A French savant, M. Brasseur de Bourbourg,

who has passed many years in the exploration of Mexico, and the investigation of the habits, manners, and religion of the Indian tribes, found there by the Spanish invaders, published near the close of 1861 a remarkable work, entitled *Popol Vuh*, which he declares to contain the sacred book of the Quichés translated from the hieroglyphic language, and also the legends of the settlement of Mexico by that tribe and their heroic annals, and a few months later followed it with a grammar and dictionary of the Quiché language. During the past year M. Ferdinand Denis has furnished to the *Revue Orientale et Americaine*, a Mexican paleograph bearing upon the same subject. Dr. Poyet, well known by his Turkish explorations, has been for the past two years exploring Southeastern Mexico, and has sent home some interesting maps and descriptions of his discoveries in the State of Vera Cruz.

M. Garcia y Cubas has published within the past year a large atlas of the Mexican Republic, and M. Francis Lavallée has issued a work on the natural and political history, productions, &c., of that country.

In *Central America* the surveys and explorations connected with the proposed opening of new routes to the Pacific have brought to light many interesting facts. The United States Government have purchased a considerable tract of land at Chiriqui in Costa Rica, and proposed to send out a colony of free men of color there, but the protest of the Costa Rican Government led to a delay and finally to the abandonment of the project. In the little town of Vertud in the department of Gracias, Honduras, a grotto has recently been discovered, in the upper part of which is a fountain called *fuente de sangre* (fountain of blood), the liquid thrown up by which resembles in color, smell, and taste the blood of mammals. From the fountain it flows through the lower part of the grotto, depositing in its progress some apparent coagula, and discharges itself into the waters of a neighboring creek, which it reddens. Vultures, buzzards, and dogs seek for it greedily, especially when it is coagulated, and fatten from partaking of it. Considerable quantities of it have been taken away in bottles for analysis, but it decomposes very rapidly, and almost always bursts the bottles which contain it. Prof. Silliman has made an analysis of it and finds it very rich in organic matters, and regards its sensible properties as probably due to the presence in it of large quantities of colored infusoria.

Honduras has established Amapula on the island of Tigré as its principal port on the Pacific. A German geographer, M. Max of Sonnenstern, has issued the past year a very complete map of Central America, the result of recent explorations, and Dr. Frantz has published a narrative of his visits to the volcanoes of Costa Rica.

In *South America*, there have been as usual many political changes and revolutions, and though perhaps less actual geographical explorations than usual, the results of previous explorations have been published to a greater extent than at any former period.

In New Grenada, or as that republic now styles itself, the Confederation of the United States of Colombia, a French expedition under the direction of M. Boudiol is engaged in exploring the isthmus of Darien, in order to determine definitively the practicability of an interoceanic canal. Señor Samper, a distinguished scholar and a native of New Grenada, has published in the Spanish language during the past year a complete history, geographical, ethnological, and political of the Confederation, and has also communicated to the scientific journals of France several interesting papers concerning the physical features and races of New Grenada. Maurice Wagner, a German geographer, has issued a very complete map of the isthmus of Panama, and has accompanied it by a full letter-press description of the physical geography of the isthmus, and Mr. William Bollärt has published a work on the antiquities and ethnology of New Grenada. The Confederation has, by a decree, taken possession of the two islands St. Andrew and Providence, situated opposite the coast of Mosquitia, and which are very rich in guano.

Venezuela has been in a condition of civil war during the whole of the past year, and has had little opportunity for geographical explorations, but a very elaborate paper on its geology, prepared by M. Wall, has appeared in the *Zeitschrift der Erdkunde;* and Don Ramon Paez, son of the present President of that republic, has published at the commencement of the present year (1863), an interesting work entitled, "Wild Scenes in South America, or Life in the Llanos of Venezuela," which is a valuable contribution to the natural history and geography of the country. M. Cortambert, a French geographer, has compiled an elaborate work, from the notes of Dr. Plassard, on the productions and people of the Orinoco basin, and among others upon the geophagi or earth-eaters of that country.

In Ecuador, an American engineer, named James Wilson, has made a journey of exploration from the shores of the province of Esmeraldas to Quito, with a view to ascertain the practicability of constructing a railroad to connect Esmeraldas and Quito.

It has been known for many years past that the *Jivaros*, a tribe of Indians occupying the eastern part of the Republic of Ecuador, worshipped the heads of the prisoners whom they had taken in battle and decapitated; and it was said by travellers that they had some process by which they reduced these heads to a very small size. Many attempts have been made to obtain some of these idol heads for the ethnological collections of Europe or America; but such was the reverence in which they were held by the Jivaros, that until 1861 it was impossible to obtain a single specimen. In June, 1861, Prof. Cassola brought one to Lon-

don, which had been stolen from a temple on the river Pastaza. A second was obtained by a baptized Indian from a Jivaro who had much ill luck, by the representation that the idol head was tired of its imprisonment, and unless permitted to travel would continue to persecute him. Since that time ten of these heads have been sent to the United States, and two of them are in the possession of Dr. Merritt of New York. M. Bollärt, who has spent much time in Ecuador, thus describes the consecration of these heads as idols: The bones of the head are removed through the base, a heated stone introduced, and this process repeated until complete desiccation takes place, and the head (on which the long hair is retained) is reduced to about one fourth its original size; the appearance of the features being maintained, and the desiccation having been so uniform that there is no appearance of wrinkling in the skin. This accomplished, a feast takes place, in which the victor roundly abuses the head, which is made to reply in terms of defiance, an Indian priest acting as spokesman for it. Upon this the victor raises his lance, strikes and wounds the face of his enemy, and then sews up the mouth, condemning it to silence except as an oracle; and it is only consulted when the inquirer is under the influence of a narcotic (generally the coca). A double string is attached to the top of the head that it may be worn round the neck, and from the closed lips twenty or thirty cords a foot or more in length depend, the use of which is uncertain. If repeatedly disappointed in the results of their supplications to the idol head, the Jivaro women cut off its hair and throw it into the woods.

The governors of *French and Dutch Guiana* have sent out a joint scientific commissison to explore the upper regions drained by the Maroni river, which separates these two colonies, and their report will probably be published during the present year.

Brazil has within the last two or three years been very fully explored; and during the past year many of the results of the labors of the geographers and naturalists who have penetrated into the interior of the empire have been given to the public. A journal of physical science, the *Revista Trimensal*, is published at Rio Janeiro, and each number contains important geographical papers. A German savant has published, during the past year, the results of his explorations under the title *Brasilianische Zustande und Aussichten;* M. Biard, a French painter and naturalist, has described the scenery of the country in his *Deux Ans au Bresil;* M. Schultz, a German geographer, has described the *Sao Francisco* basin in the *Zeitschrift der Erdkunde*, and Dr. H. Kiepert has illustrated it with an excellent map. Doctor Moore, a citizen of Brazil, and a geographer of high reputation, has, in connection with the eminent French geographer Malte Brun, published a geography of the Brazilian empire in the Portuguese language, and has described in the bulletin of the French Geographical Society his explorations in the Paraguay basin. The region lying in the vicinity of the yet undetermined boundary between Brazil and French Guiana has been very fully described by the Chevalier J. C. de Silva, in a work in two volumes entitled *Oyapoc*. Of the interesting narrative of explorations of the brothers Grandidier in South America in 1857–'9, published the past year by M. Ernest Grandidier, the larger part is devoted to Brazil. Lieutenant Ashe, an English officer, has given in the *Nautical Magazine* an account of his journey across the Brazilian Andes.

Dr. Burmeister published early the last year the narrative of his travels in the Argentine Confederation from 1857 to 1860, and M. Martin de Moussy, who is still occupied in the exploration of these States, has already given to the public two volumes of his journeyings. Dr. Demersay, a Paraguayan scholar, has in progress of publication an elaborate physical, economical, and political history of Paraguay. Gen. Reyes has published within the past year a treatise on the geography and history of Uruguay. The Argentine Confederation, aside from its chronic condition of war with the State of Buenos Ayres, which during the past year has been terminated once more by a peace, has suffered from severe earthquakes, though none have been so terribly destructive as that which in 1861 made the flourishing city of Mendoza a heap of ruins. At Catamarca, in the northern portion of the Argentine Confederacy, a rich and extensive lode of silver has been discovered.

In *Chili*, M. Pissis, the eminent Chilian geologist and astronomer, is still at the head of the geodesic and geologic survey of the country which is in progress. M. Baldomero Menendez has published, the past year, a statistical and geographical manual of the Chilian Republic, and M. Philippi has continued his observations on the Chilian Andes, describing in a recent paper the formation of a new volcano near Chillan in 1861. In the southern portion of Chili, occupied by the independent and brave Araucanos, an Indian tribe famous in history, a Frenchman named Orelie Antoine de Tounens, who had resided for many years among the Araucanos, and who, as an educated man and a graduate of the Polytechnic School of Paris, had acquired a powerful influence among them, persuaded them on the 17th of November, 1860, to recognize him as their king, under the title of Orelie Antoine I, and to make the throne hereditary in his family. The Chilian Government were greatly displeased at this movement, especially as they had been for some time purposing to press the Araucanos farther south, and had even taken possession of some territory S. of the Biobio river, which had hitherto been their boundary. The new king determined to regain the lost territory and advanced with a considerable force toward the Biobio, but, while yet some miles distant from it and within his own acknowledged territory, was surprised on the 4th of January, 1862, with

his staff, by a large Chilian force, who had been guided to his encampment by a treacherous Indian, and, having been seized and disarmed by the Chilians, was committed to the prison at Nacimiento, where at the latest intelligence he was still incarcerated.

M. Guinnard, a French traveller, who passed three years in captivity among the *Poyuches*, a Patagonian tribe, has given, in the *Tour du Monde*, an interesting description of the geography, productions, ethnology, &c., of Patagonia, and a vivid narrative of his perils and sufferings in making his escape to one of the Chilian ports. The French have taken possession of the island of Tova on the E. coast of Patagonia, which has extensive deposits of guano.

On the western side of South America, M. Paul de Marcoy, a French astronomer, has published an interesting volume of travels in the Peruvian Andes, and the indefatigable explorer Von Tschudi is still pursuing his investigations in the same region.

In the *West Indies*, Messrs. F. Lavallée and F. Pastrana have published in the bulletin of the French Geographical Society, a historical and geographical sketch of the island of Porto Rico, with a fine map. M. Wall has made a geological exploration of Trinity Island, and Señor J. de Sivers has given to the world a treatise on the geography of Cuba. A new map of Hayti, much more complete than any which have preceded it, was published at Paris by the Haytien Government near the close of 1861. The Dominican Government was formally annexed to Spain in 1861.

Crossing the Atlantic, we find a few items of geographical interest in *Europe*. The trigonometrical survey of Great Britain and Ireland, begun in 1783, has during the past year been completed, and its results have been published in 7 quarto volumes. This survey has been connected by several triangulations with those of France and Belgium, which in their turn are connected with those of Holland, Denmark, Germany, Prussia, and Russia, and will furnish the means of measuring an arc of parallel of 75°. A cadastral survey of Ireland, Scotland, and England is also in progress, and a map of Ireland in 205 sheets, on the scale of one inch to a mile has been published, and those of Scotland and Ireland, on the same scale, are in the course of publication.

Sir Henry James has commenced the publication of a series of maps of the whole world on the scale of two inches to the mile, the intention being to have the sheets uniform in scale, so that any number of them could be united to give the map of a country or a continent without the need of adaptation, which has hitherto been a great difficulty with geographers. Six sheets have been issued, and an effort is making to enlist the geographers of other countries in the enterprise, so as to make the maps the best possible representations of all portions of the earth's surface.

The topographical survey of Spain has been prosecuted with great vigor during the past year, and the central provinces have been accurately mapped, and the entire triangulation of the first order completed.

M. Adrien Block has published a volume of the statistics of the different states of Europe, with an Atlas, a very complete and valuable work. M. Rudolph has completed a very elaborate gazetteer, geographical, topographical, and statistical, of all the towns in *Germany*. Two valuable geographical works on *Italy* have also been published during the year: *Le Royaume d'Italie, etudié sur les lieux mêmes*, by P. de Tchihatchev, and *L'Italia meridionale, o l'antico Ream delle Due Sicilie*, by J. de Luca. *Turkey* in Europe has been very thoroughly explored, especially its northern and eastern provinces, and Servia and Montenegro have been fully described by Boué, by M. Henri Thiers, and by Messrs. Lestak and Scherb, and Eastern Bulgaria by Dr. Allard.

In *Asia*, Syria, Palestine, Damascus, and the Haüran have been very thoroughly explored during the past three or four years. The works of Graham, Porter, and others had already made us familiar with the two latter, and no oriental tour was complete without a visit to the former; but during the French occupation of Syria several commissions were sent out by the French Government to explore the ancient ruins and relics of Phenician, Philistine, Edomite, Macedonian, and Roman rule in these regions, and their investigations have brought to light much that is interesting. The report of the Phenician commission was drawn up by M. Ernest Renan, one of the most eminent of French oriental scholars, and brought to light many new facts in regard to the archæology and ancient geography of Sidon, Tyre, and other cities of ancient Phenicia. M. Poulain de Bossay, who has also explored the ancient site of Tyre within the last two years, has published an essay on the topography of Tyre, in which he controverts some of M. Renan's positions.

M. G. de Perrot, who was intrusted with the direction of the commission for exploring the archæology of Asia Minor, discovered in the ancient Galatia many remarkable antiquities; among others, at Ancyra, the remarkable epigraphic monument known as the "Will of Augustus;" but though it has been asserted and generally admitted that the Galatians were a Celtic race and the original stock from which the Galli or Gauls of France sprung, the explorers could find no trace of Celtic or Druidic monuments in that mountainous region. Several of the French officers of the army of occupation explored very thoroughly the region of the Libanus, or Lebanon range of mountains; and MM. Emmerich de Rey and Aucapitaine penetrated into the Haüran, the ancient seat of the great races of Canaan, and have published interesting monographs in reference to that hitherto little known region. M. Pierrotti, who has devoted many years to the investiga-

tion, has published recently a very elaborate plan of ancient Jerusalem, in which he has fixed the location of every point mentioned by sacred or profane writers.

Dr. Blau gives, in the *Zeitschrift der Erdkunde*, a narrative of a journey across the Pontic Alps from Erzeroum to Mourad-tchai, a region hitherto seldom traversed by Europeans; and the same journal contains the account of the remarkable explorations of MM. Wetstein and R. Doergens in the interior of Syria. Remarkable physical changes have taken place in the Asiatic Turkish empire during the year past. Mecca has been nearly destroyed by inundations, and the Euphrates has changed its course: quitting its bed near Hilleh, it has taken a more westerly course, and now loses itself in the marshes which extend toward the Persian Gulf.

In Northern and Central Asia the Russians have been the most active and enterprising of explorers, and their savans have led the way for the progress of the Russian flag over vast regions, which for centuries had been the pasture grounds of nomadic tribes, or the homes of fierce and intractable Turkish, Tartar, and Toungousian tribes.

In the Aderbeijan region in Persia, M. Khanikoff, a Russian geographer, has made, in 1861 and 1862, extensive explorations. The Aderbeijan is a lofty plateau in the N. W. of Persia, lying between the Caspian Sea and Mesopotamia. It is shut in on all sides by mountains; on the east, the Talish range separates it from the basin of the Caspian; on the west, the chain of Kandilar forms a barrier between it and the plain of Mesopotamia; on the north, and through the central portion of it, spurs from the Kandilar chain stretch toward the Caspian; and at the south, the Buzgush mountains join Mount Sehend, 11,392 feet high, to the Kandilar range. The plateau at its lowest point, the shores of the salt lake Urmia or Ooroomiah, is 4,062 feet above the sea level, and rises in the lofty peak of Ararat to about 17,500 feet. Mount Savalan, another of its summits, is 15,444 feet high. This region is of special interest to us as having been for many years the seat of an important mission, that to the Nestorians, who, to the number of about 150,000, are settled in villages around the lake Ooroomiah. Professor Ronge, who accompanied a former expedition of M. Khanikoff to Khorassan, has published since his return the flora of Khorassan. The Count Constantin de Sabir has published, within the past year, a very good *résumé* of the recent discoveries in the basin of the Amoor, especially those of M. Maack, a Russian explorer, and has described the physiognomy and habits of the numerous tribes inhabiting the region, the Manegres, Ghiliaks, &c. The same eminent geographer has also sketched the recent explorations of Russia in Central Asia, principally in the country of the Seven Rivers and the Transsilian region. He has found there the ancient Soungaria or Dzoungaria, which, in the middle of the last century, submitted to China, and ceased to maintain a distinct political existence; it is now divided into two parts, Chinese Soungaria, and Russian Soungaria, or the province of Semi-palatinsk, comprising the districts of Ala-tau, Kopal, and Ayagouz. Among the recent Russian explorers who have visited this region are M. de Semenoff, who has crossed the chains of the Ala-tau or Ala-tag, and the Thian-Shan mountains, and passed through the valleys lying between these ranges, and who has prepared a valuable map of the orographic and hydrographic features of this region; the Sultan Valikhanoff, a Kirghiz prince, a descendant of Genghis Khan, who has explored the slopes of the Thian-Shan, and who first ascertained the circumstance of the death of Adolphe Schlagentweit. Captain Golobeff, whose return we noticed in the "Annual Cyclopædia" of last year, and M. Veniukoff, have explored and mapped the famous lake Issi-Kol or Warm Lake, which bears also the name of Touz-Kol or Salt Lake, and its shores, and have also added materially to our knowledge of the hydrographic systems of this portion of Central Asia. M. Zakharoff, the Russian consul at Kouldja, has also published a map of this region compiled from Chinese data.

M. Kullwein, a Russian savant, who accompanied Gen. Ignatieff in his last mission to Khiva and Bokhara, has recently published a narrative of his voyage, and has given some important information concerning the Amoo-Daria and Khiva rivers.

M. Gustave Radde has explored the region north of Mongolia, the country of the Khalkhas, and ascended the mountain Monkoo-Sardik, toward the northern shore of the lake Kosso-Kol or Kosso-Gol; and since his return has published an interesting map of this region lying between the lake Kosso-Kol and the island of Saghalien.

M. de Romanoff has published an account of the recent Russian explorations on the coasts of Japan and Mantchooria, and has described and laid down upon a map the course of the Lower Amoor, and the new Russo-Chinese frontier, established by the treaty of November 14, 1860. M. Schwarz, the astronomer of the scientific expedition sent out by the Russian Geographical Society, has published a seven-sheet map of Eastern Siberia.

During the past year, M. Schmidt, assisted by MM. Brylkine and Glenn, has been engaged in surveying and exploring the island of Saghalien; and Captain Gamoff has been making astronomical observations between the sea of Japan and the river Ossoori.

One of the results of the Anglo-French expedition to China, and the treaty of Tien-tsin, has been a very great number of exploring expeditions into the interior of China, hitherto so resolutely closed against European intrusion. Among those who have made public the results of their tours of exploration are the Count d'Escayrac, M. E. Desbuissons, and M. Chassirons, among the French writers; and Captain

Blakiston and Commander Brine among the English officers. These journeys of exploration were continued by English officers and civilians, and probably by the French also, throughout the whole of 1861 and 1862, and many of the narratives of the explorers are yet to be published. Captain Blakiston's "Five Months on the Yang-tsze" is an exceedingly valuable contribution to geographical science. In company with three friends, Lieut.-Col. H. A. Sarel, Dr. Alfred Barton, and Rev. S. Scheres-chewsky, an American missionary, he ascended the Yang-tsze river to a point 1,800 miles from its mouth, and over one thousand miles higher than any European traveller had previously penetrated, reaching the confines of Tibet. The course and depth of the river, the character of the inhabitants along its banks, the productions, scenery, and temperature, were carefully noted, and the adventures of the expedition, which was one of uncommon peril, are most charmingly described. Commander Brine's narrative is also one of deep interest, though of somewhat graver character. He has given the most clear and complete account of the origin, history, and character of the Tae-ping rebellion, and of the region in which it maintains its authority, which we have seen; he distinguishes between it and the other insurrections, three or four in number, now desolating other portions of that wretched empire, and throws a flood of light on the Chinese character and customs. During the year 1861–'2, six other companies of English explorers traversed China in different directions: Mr. Morrison and Superintendent Harcourt, in January, 1861, set out from Tien-tsin and travelled over land to Che-foo in the N. of China, going in all 700 miles through regions hitherto unexplored, and for nearly three hundred miles of their course passed along the banks of the Grand Canal.

In July, 1861, two English gentlemen, starting from Tien-tsin, penetrated to Mantchoo Tartary by an overland route, and visited Moukden, the capital of that country. They found that the Chinese, though nominally the conquered race, were really the conquerors, having most of the business of the country in their hands, and having imposed upon the Mantchoos, not only their habits and customs, but their language.

In November, 1861, Messrs. Richards and Slosson, also starting from Tien-tsin, undertook an expedition through Pe-chee-le and Shan-le, the two northern provinces of China, and made a tour of 1,560 miles, crossing the Great Wall, which they represent as greatly out of repair, four times.

In the centre of China, four gentlemen, Messrs. Dickson, Sherburn, Beach, and Bonney, passed, in April, 1862, from Canton to Hankow, a distance of 756 miles, and in their route explored the great Tung-ting lake and the course of the Seang river.

During the spring, Mr. Baker ascended the Tsien-tang river, in Che-kiang, and visited the celebrated green-tea districts of Nganhwuy.

In the south of China, Rev. Dr. Legge ascended the East river, in the Kwang-tung province, in April, 1861, for a distance of 300 miles, and Rev. Mr. Irwin and his companions ascended the West river, in the same province, to a higher point than had been previously reached.

The Island of Formosa, hitherto sealed from European exploration, is now open; and a party of explorers have been traversing it during the past year.

The French conquests in the Empire of Anam (*see* Cochin China), have led to extensive geographical explorations in that empire; the Me-kong, or Cambodia, the Oudong, the Dong-nai, and the Saigon rivers have been ascended for a distance of several hundred miles, and the populous cities on their banks explored. Panomping, at the junction of the Me-kong and Oudong, represented as one of the largest cities of Cambodia, was visited by one of the French ships of war. The principal islands on the coast, some of them large, and containing fine harbors, have been taken possession of by the French. Two English travellers, Messrs. King and Forrest, have explored the western portion of Cambodia, and made the circuit of the large and important Lake Tale-Sab, not hitherto found on most of the maps, on the banks and in the neighborhood of which they discovered extensive and remarkable ruins of two ancient cities, called by the natives Naken-Ouat and Nakon-Hluang.

Sir Robert Schomburgk, English consul at Bangkok, Siam, whose ascent of the Mei-nam river we mentioned in the "Annual Cyclopædia" of 1861, has contributed to Petermann's "Mittheilungen" a very full description of the course of the Mei-nam and of the productions of the regions through which it flows.

Rev. Francis Mason, D.D., an American missionary, of Toungoo, Burmah, to whom geographical and ethnographical science are already indebted for many important contributions respecting that country, has recently published, in the "Missionary Magazine," an account of a tour he has made in the interior of Burmah, where he has discovered two new tribes, of whom nothing except the names, and hardly these, had previously been known—the Paloungs and the Kakhyens. The former are a very intelligent race, evidently Mongolian in origin, Buddhist in religion, and, though tributary to the Burmese, yet maintaining a separate government. They are industrious, and their land is under good cultivation. They produce tea in large quantities, and export it to Burmah, Siam, and even to some of the Chinese provinces. Their language is peculiar, and bears no resemblance to that of the Burmese. The Kakhyens seem to be a branch of the Karen family, a simple-hearted race, who have no sympathy with the religion or language of the Paloungs, to whom they are subject. Some of

them practise a rude agriculture, while others are predatory and warlike in character. They resemble in many respects the Indian tribes of the Rocky Mountain regions.

Japan, so long impenetrable to Western nations, is becoming gradually the best known of any of the countries of Eastern Asia. The conquests and treaties of Russia are reducing the extent of its territory, the great island of Saghalien, the Kurile Islands, several of the important ports of Yesso, and the double island of Tsus-sima, the key of the Yellow Sea, having passed into the possession of that power within the past two years. Among those who have given much and important information relative to the climate, productions, manufactures, people, and political history of Japan, within the past few years, we may name Dr. D. J. Macgowan, an American medical missionary, who had unusual opportunities for obtaining information on these points, and who, since his return to the United States, has delivered courses of lectures on Japan; the Hon. Townsend Harris, late United States Minister to that country; Sir Rutherford Alcock's account of his residence in the island of Niphon, and his ascent of the volcano of Fusi-yama; Mr. Pemberton Hodgson, the English consul's narrative of his residence at Nagasaki and Hakodadi; M. Leon de Rosny's memoir upon Japan civilization; Messrs. Fr. Steyn and Hermann Wagner's *Nippon-Fahrer* ("Japanese Voyager"), with 140 plates and a map; and Dr. Petermann's account of the newly discovered atlas of Japan, published by native geographers, and containing 74 maps, and a general chart of the empire, on the scale of 1 to 800,000.

The Nicobar Islands, to the southwest of the coast of Siam, of which little save the names has hitherto been known, were explored by the Austrian exploring expedition in the Novara, and M. Brullé has given an interesting account of them in the *Annales des voyages*. The Andaman Islands, lying north of these, have been used since 1859 by the British Government as a penal colony for the revolted sepoys.

The enterprising English engineers Thuillier and Montgomerie, whose explorations in the Himalaya range we recorded in the "Annual Cyclopædia" of last year, have continued their labors in Cashmere and Ladak, and have discovered within 16 miles of the lofty peak K. 2 in the Karakorum range, a group of mountains, all of them exceeding 26,000 feet in height. Dr. Hooker, the English botanist, who accompanied them, has made public his observations on the botany of Sikkim.

The historical geography of Hindostan has been the subject of some important and interesting investigations during the year. M. Vivien de St. Martin has published an able essay on the India of Ptolemy; M. Reinaud, in an essay on Mesène and Kharacène, has settled the question of the situation of the ancient cities of Bahmanabad and Minnagara, which till now had remained undecided, and has determined the epoch of the author of an ancient treatise on the Ruddy Sea (the Indian Ocean), which he assigns to the 3d century.

Capt. Cameron has communicated to the "Royal Geographical Society" of London an elaborate account of the ancient history, ethnology, and physical geography of the Transcaucasus.

The expedition of Mr. O'Hara Burke to explore the interior of Australia and cross that island continent, whose failure was chronicled in the "Annual Cyclopædia" for 1861, turns out to have been one of the most tragical and distressing of the many unfortunate enterprises for geographical exploration. Burke had unwisely divided his force into three or four companies; of these, Messrs. Purnell, Wright, and Ludwig Becker, with several men, were left at Menindie, and Mr. Brahe, with others, at a point near Cooper river, while Burke himself, accompanied by Wills, King, and Gray, with 6 camels, a horse, and three months' provisions, pressed on toward the Sturt-Eyre river at the north. On the 21st of April, Burke not having arrived at Cooper river, Brahe with his men abandoned that post only nine hours before Burke reached it, and left a writing behind, saying that he was in fine health and his animals in good condition. The company left at Menindie had suffered terribly from scurvy, Becker and Purnell with most of the men having died. Burke had at first made rapid progress, but soon came upon a waterless region where his camels perished and the provisions rapidly diminished. Gray soon died from exhaustion, and Burke and King, finding starvation impending, started in search of food, while Wills, exhausted, made his way to Cooper's Creek, a branch of Cooper river not far distant, where he died soon after. Three days later, Burke, worn out with fatigue and starvation, died, and King alone remained. Reaching Cooper's Creek in a condition of great exhaustion, he found the dead body of Wills, and wandering in the vicinity in a half delirious state, he fell into the hands of the natives, who treated him kindly, and, when he was recovered, gave him his liberty, and on the 25th of May he reached Melbourne.

The most enterprising and successful of Australian explorers, Macdonald Stuart, has, after a third attempt, succeeded in crossing the Australian continent from south to north. After a journey of eight months he arrived in safety at the port of Victoria, the most northern point of the continent.

Mr. Kinlay, sent out by the South Australian Government to search for Capt. Burke while his fate was yet unknown, made some interesting discoveries. Traversing a country more fertile than most of the interior districts of the Australian basin, he came upon a lake hitherto unknown, near which were several *tumuli* containing the bones of Europeans who had evidently been massacred by the natives.

At first he thought them the remains of Burke's party, but was soon convinced that this was an error; and as no party of such a number was known to have been murdered, he was left in doubt. The lake he named Lake Massacre.

In New South Wales, Capt. Randall, in command of the frigate Gemini, has ascended the Darling river, an affluent of the Murray, to Walgate, a village within sixty miles of the boundary of Queensland, passing through a region hitherto unexplored.

Dr. Seeman, who was sent out by the British Government to examine the climate, productions, &c., of the Fiji Islands, the inhabitants of which desired their annexation to Great Britain, has published his report. He states that the islands are volcanic and coralline in their origin, that they are remarkably free from all forms of malignant fevers, and so fertile that, though very indifferently cultivated, they support a population of 200,000. Sugar, coffee, tamarinds, tobacco, and cotton are cultivated with success, and among the native or naturalized productions are sandal wood in great abundance, four oil-yielding and five starch-yielding plants, four different spices, twelve edible roots, eleven potherbs, thirty-six edible fruits, and a vast number of medicinal, fibrous, scent-yielding, and ornamental plants and shrubs. The list of choice timber trees growing upon the mountains is very extensive.

The progress of geographical discovery in Africa has brought to light many new facts during the past year, but the great problems of the source of the White Nile, the conformation of the vast equatorial region, and the character of the tribes which inhabit it, are still unsolved, though each year brings us a little nearer to them. Beginning with the empire of Morocco, which, though not wholly unknown, has been little traversed by Europeans, we have four works published the last year which will throw much light upon its topography, people, and history. The Canon Léon Godard, who spent two years (1858 and 1859) in the northern part of the empire, has published an interesting narrative of his journeyings; M. Amédée Barbié du Bocage, the associate secretary of the "French Geographical Society," has compiled a résumé of all the known facts relative to the geography of the empire; M. Edward Schlagentweit, one of the Bavarian family of geographers who joined the Spanish army in its late war with Morocco (*see* AFRICA), has published a treatise on the ethnography of Morocco, and M. Beaumier has translated from the Arabic an interesting "History of the Sovereigns of Moghreb and Annals of the City of Fez."

Passing eastward through Algeria and the Barbary States, where some interesting archæological discoveries have been made, we notice that Commandant Mircher, chief of staff of the governor-general of Algeria, in the autumn of 1862, by direction of his chief, visited Ghadamés, a town lying at the foot of the Black Mountains, in the extreme southwest of Tripoli, and on the 15th of December, 1862, concluded a treaty with the Touaregs, or Tuaricks, one of the principal Arab tribes of the Sahara, by which they bound themselves to convoy and accompany the French caravans in crossing the Sahara to Soudan.

Egypt offers nothing new or of interest geographically except the progress which is making in the completion of the Suez Canal, and thus reopening the water communication which once existed, though by a different route, between the Red and Mediterranean Seas. The source from which its great river flows, is, however, still the subject of as intense speculation as ever, and expeditions still fruitless in attaining their object have sought by approaches from the north and from the east to penetrate the secret of ages.

M. Lejean, who succeeded in penetrating to 4° 37′ N., but was compelled to return, has published a report upon the antiquities, productions, and topography of Eastern Soudan and Nubia, which is full of interest, and has contributed materially to our knowledge of the region of the White Nile by carefully prepared maps and plans. In the "Annual Cyclopædia" for 1861 the death of Dr. Peney, who had reached 3° 30′ N., was mentioned. His papers and collections in natural history and ethnography were carefully preserved and forwarded to the "French Geographical Society" by Espinasse Bey.

Two brothers, Messrs. Poncet, who have been for some years hunting in the region of the White Nile, have by their frequent communications to the "Geographical Society" rendered much service to geographical science. Several ecclesiastics of the mission of the Holy Cross, missionaries in Nubia, Fathers G. Beltrame, Morlang Kauffman, and Kircher, have made valuable contributions to the ethnography, philology, and geography of their districts. A corps of naturalists have made their headquarters at Khartüm, and from thence have made several excursions which have been fruitful in scientific results. A proposition has been made and a considerable sum subscribed by these naturalists and other French geographers to place a small steamboat upon the White Nile, and ascend in it to a higher point than any yet reached, and thus prosecute the exploration.

In connection with this problem of the source of the White Nile, the explorations from the east through Zanguebar possess much interest. Rev. Dr. Krapf, who spent eighteen years as a missionary in that region, and to whom and his associate Rebmann we are indebted for the first knowledge of the existence of the lofty mountains Kenia and Kilimanjaro, lying between 1° and 4° S. of the equator, has returned to Mombaz to commence anew his explorations in the interior. The Baron Von der Decken and Mr. R. Thornton, formerly one of

Dr. Livingstone's associates, in the autumn of 1861 visited Kilimanjaro, and by a series of triangulations from Mombaz ascertained its height to be 21,000 feet. M. Beke has also explored this country very thoroughly, and has satisfied himself that these two mountains are only summits of a chain of mountains extending from the Southern frontier of Abyssinia to about the 8th degree of S. latitude, and which, though running N. and S. instead of E. and W., he supposes to be the real Mountains of the Moon. MM. Vivien de St. Martin and Robin, two French geographers, have also arrived at the same conclusions. In some portion of the Mountains of the Moon, and perhaps on the slopes of Mt. Kenia, it is probable, will be found the headwaters of the White Nile, rather than in Lake Nyanza, as Capt. Speke supposed.

Returning for a moment to Abyssinia, the topography of which has been published (prepared from actual surveys) the past year by M. Antoine d'Abbadie, we find that it has been visited by terrible earthquakes early in 1862, and an eruption of the Djebel Dubbeh, an active volcano near the eastern coast, which has destroyed and covered with ashes the town of Edd, situated on the Red Sea.

M. Heuglin, a German traveller, already known by his discoveries in Northeastern Africa, has undertaken, sustained by a large subscription in Germany, to penetrate to Waday, the point where it is said the unfortunate Vogel died, and to recover, if possible, his papers, and to learn the circumstances of his death. For this purpose he has chosen a new route through Abyssinia, Upper Nubia, Kordofan, and Darfour. He left Abyssinia in the spring of 1862, but as yet there is no intelligence of his success.

Dr. Livingstone has prosecuted his explorations in S. E. Central Africa with unwearied zeal, but with not so large a measure of success as in former years. He ascended the Rovuma in 1861, which he hoped to find connected with Lake Nyassa, but being unsuccessful in entering the lake by that route, he explored the Comoro Islands at its mouth, and then returned to the Zambesi, where he revisited his old friends the Batoka and Makalolo, and in August, 1861, carried a boat past the Murchison cataracts in the river Shire, and launched it on the Upper Shire, which he found was a prolongation of the long-sought lake, though 60 miles below the entrance of the lake proper. He ascended the lake for 200 miles, and describes it as being in shape somewhat like Italy. It is about 225 miles in length, and varies in breadth from 18 to 60 miles, being widest toward its northern extremity. Its southern extremity, which is forked, commences in S. lat. 14° 25′, and it extends beyond the 10th parallel S. Its course is nearly from N. to S. and it lies between the 35th and 36th meridians E. from Greenwich. Five considerable rivers flowed into it from the west, and one more, Dr. L. believed, from the N. The population along its shores was very dense, and were maintained by the abundant supplies of fish in the lake and its tributaries. The traffic in slaves was very active. At one point he attempted to induce a tribe called Yawa to desist from slave hunting, and he and his party were attacked by them with poisoned arrows and guns, and compelled to use firearms in self defence. He returned to the Lower Shire in December, 1861, and in the spring, having received a steamer in parts from England, had it transported past the cataracts, put together, and launched upon the river, and in this he again ascended the lake in the spring, and was involved in some of the native wars, much to his regret and that of the members of the Oxford and Cambridge University Mission, who, under his guidance, had settled the previous autumn on the islands in the lake, S. of Mt. Zoruba, but who soon after this second visit abandoned the mission. Mrs. Livingstone, who had accompanied her husband on many of his perilous journeys, died on the river Shire in Africa.

Lieut. Rigby has contributed to the *Mittheilungen* a description of the states of the sultan of Zanzibar, and of the Island of Mombaz, which is under the protection of Great Britain.

A Portuguese geographer, the Viscount de Sa Bandiera, published in the summer of 1862 a map of the Portuguese states of Zambesia and Sofálla, with copious notes and explanations, which gives a better idea of the country watered by the Lower Zambesi and its affluents than any map previously published. This region is of interest not only from the discoveries of Dr. Livingstone, but from the missionary settlements planted in its southern part by the colonists sent out by Pastor Harms of Hermannsburg in Hanover.

The accession of Radama II to the throne of Madagascar (of which an account is given elsewhere; *see* AFRICA) has led to several exploring expeditions in that island, mostly of a missionary character. Mr. Ellis, a venerable English clergyman, formerly a missionary in the island, and driven from it by the fierce persecutions of the late queen Ranavalona, has returned there, and is now making a tour of the island. Several French Jesuit missionaries are also engaged in the investigation of the ethnology and language of the inhabitants. One of them, Father Deniaux, who had spent 18 years in the study of the Malagasha language, died in 1861, but left in manuscript a very complete grammar and dictionary of the language, which since his death has been printed by his native pupils.

Passing to the western coast, the new kingdom of Bihé, lying to the east of Angola and Benguela, has attracted some attention of late. Its king is a Hungarian, Ladislas Magyar, who has for many years resided in that country, and whose narrative of the inhabitants, productions, and history of the country he governs, recently published at Pesth, possesses great interest.

The region of the Gabün, whose exploration

by a French expedition was mentioned in the "Annual Cyclopedia" for 1861, proves to possess great interest. The narrative of the expedition throws much light upon the productiveness of the country in cotton, palm oil, coffee, &c., as well as in minerals. The natives of the Upper Gabün are said to be a milder and more intelligent race than those of the coast. Incidentally, most of M. du Chaillu's statements are confirmed. An English explorer has also visited this region and spent some months among the people described by Du Chaillu for the purpose of ascertaining the truth of his narrative, and has communicated to the Royal Geographical Society the results of his investigations. In a few unimportant particulars he disagrees with M. du Chaillu, but most of his statements confirm the accuracy of that traveller's observations. Major Burton, the African traveller, now English consul at Fernando Po, has also visited the Gabün country and sent to the Ethnological society an account of the Fans, whose habits and manners he had investigated; he also confirms the observations of M. du Chaillu. A live gorilla has been brought to London from this region.

In Upper Guinea, Dr. Baikie has been prosecuting his explorations in the region of the Quorra, and Major Burton has taken a part in the exploration; but much delay has been experienced in consequence of the unusual drought, which has made the streams very shallow. The English occupation of Whydah and Lagos has opened the way for new expeditions into Yoruba and the mountainous district lying from 70 to 120 miles from the coast, which seem admirably adapted to the culture of cotton, and are inhabited by an intelligent and partially civilized race. By the occupation of these ports, the slave trade has received a severe blow. The French have continued, during the past year, their explorations in *Senegambia*, and the coast of the Sahara lying between that country and Morocco. Lieut. Pascal visited Bambouk, but unfortunately fell a victim to the climate; and Lieut. Mage has spent a considerable time among the Duaish, a Berber tribe hitherto unknown, and has given an interesting account of their customs and manners. A line of telegraph has been constructed from St. Louis, at the mouth of the Senegal, to Goree Island. The unicorn (not the one-horned rhinoceros), so long regarded as a fabulous animal, is believed, by recent explorers in Central Africa, to exist. Dr. Baikie has heard it described very minutely by native hunters, who carefully distinguished it from the one-horned rhinoceros, which it is said not to resemble. Dr. Baikie gives the native names by which it is known, and several other explorers express their belief in its existence.

Archæology.—The study of the remains of antiquity, whether in its relation to history, ethnology, or civilization, has received an extraordinary impulse within the past two or three years. Prior to the discoveries of lacustrine habitations and remains in Switzerland in 1854, it had been confined almost exclusively to the exploration of the relics of Roman, Greek, Assyrian, Egyptian, Indian, or Aztec and Toltec civilization, within the historic period, or at least within a period which had its records of some sort, hieroglyphic, hieratic, or pictorial. The discoveries of M. Ferd. Keller, of Zurich, and subsequently of Messrs. Uhlmann, Jahn, Schwab, Troyon, Forel, Rey, Desor, and others, of the remains of the dwellings, implements, weapons, &c., of two distinct races who occupied the shores of the Swiss lakes before the historic period, have awakened much interest, and led to extensive investigations in regard to similar remains in other countries. Some account of these discoveries in Switzerland and elsewhere is given in vol. xvi of the "New American Cyclopædia," p. 776, under the title of Lake Dwellings, and a more full and complete one in the Report of the Smithsonian Institution for 1861, pp. 344–396. It is only necessary to say here that these investigations have been continued with increasing zeal during the past year, many new lacustrian villages discovered, and considerable light thrown upon the fauna of the stone or earlier age.

Turning from these to other archæological discoveries of the past year, we find that in Egypt the late viceroy, Said Pasha, established a museum of Egyptian antiquities in Cairo in 1861, and as a nucleus for a collection, purchased Mr. Huber's (late consul general for Austria) fine museum, which had been many years in forming, and to this have been added large numbers of articles from other sources. During the year, a number of mummies richly decorated were found by some boys at Gournoro, in ground unmarked by any tomb. On being unwrapped, more than thirty-five pounds weight of gold ornaments, many of them richly jewelled, were found on these mummies; this unrivalled collection has been deposited in this museum. There are also some rare silver models of funeral boats, with the rowers, a hatchet of gold with a hunting scene on the blade, a mirror with a lotus-shaped handle of gold, necklaces, bracelets, &c.

In *Algeria*, *Tunis*, and *Tripoli*, many remains of Roman buildings, baths, temples, arches, inscriptions, lachrymatories, utensils for cooking and worship, have been discovered at Constantine, Krenig, Lambessa, Tebesor, Philippeville and Robertville. Besides these, a vast hypogeum has been discovered near Susa, and a great number of sculptures and other objects of antiquity at Cyrene. Lieutenants Smith, Porcher, and Carter, the discoverers of these last, have forwarded them to the British Museum.

M. Beulé, one of the librarians of the Imperial Library of France, has been engaged for nearly two years past in investigating the ancient site of Carthage, and has not only been able to trace the exact location of the Byrsa,

the walls of the peribola of the fortress, and a part of the wall which, on the eastern side, sustained the acropolis, but also many relics of the Carthaginian occupation.

The publication by the British Museum in 1861 of *fac-similes* of a number of the most important Assyrian and Babylonic inscriptions, carefully prepared by Major-Gen. Rawlinson, and E. Norris, in order to submit them to the examination of the most eminent decipherers, has led to some interesting results, and has served to place the interpretation of the cuneiform inscriptions on a firmer and more satisfactory basis. There is very little difference of opinion in regard to the proper reading of most of these inscriptions among the learned experts of England, Germany, and France, who have furnished independent translations of them.

The commission with which M. Ernest Renan was charged by the French Government in 1861 (*see* FRANCE), to investigate the antiquities, tombs, mausolea, temples, and dwellings of Syria, and report upon them, was one of great interest to archæological science, and the results of his explorations throw much light upon Phenician history and character. The investigation was assigned to most competent hands, and the extensive explorations made by M. Renan show how heartily he entered into the work. In his report, published in the Moniteur, the past year, after stating that many of the so-called Phenician antiquities are not Phenician, but Roman, or even of the era of the Crusaders and Saracens in some cases, he lays down as a principle that the earliest Phenician temples, tombs, and dwellings of which any remains exist have, as their distinctive characteristics, the use of stones of large size, without mortar or cement, of monoliths, and of works executed in the solid rocks or ledges, like the rock dwellings of Petra, &c. The most remarkable of these primitive structures are: the walls which surround the Island of Ruad or Aradus, which are constructed of huge quadrangular prisms of stone, from 16 to 20 feet in length, placed on bases of rock in position, hewn for their reception; the temple, courts, sepulchral pyramids, mausoleum, amphitheatre, and stadium, with the colossal lions and demi-sphere of Amrith; the sepulchral grottos and sarcophagi at Saida (Sidon); the two colossal lions, executed upon huge rocks, at Oum-el-Awamid; and several colossal statues and figures, some of them in bas-relief, at Kana, the gorge of Irapta, in the mountains of Lebanon, near Douair (this is a bas-relief of Baal and Astarte); at Gebeil, Sabsakik, Neifedt, and Ruad. Besides these, he discovered many statues, sculptures, temples, and dwellings of the Greek, Roman, and early Christian periods.

In all parts of Europe, archæological explorations have been prosecuted with great zeal and enthusiasm the past year. In Greece, the Archæological Society of Athens, as well as numerous English and French explorers, have been actively engaged in the search for sculptures and edifices of the period of Grecian high art, at Athens, Corinth, at Castri (the ancient Delphi), Salonica, Pydna, Philippi, Larissa, Pharsalia, Apollonia, Nicopolis, Cyrene, and Gortigna in Crete. These researches have been amply rewarded by the discovery of numerous statues, bas-reliefs, terra-cotta figures, and tombs adorned with sculptures illustrating many of the scenes described in the "Iliad." The foundations of several temples, hitherto unknown, have been traced, and in their ruins statues of great beauty have been found. These treasures of classic art have been deposited in the museum of the Archæological Society of Athens, in the Archæological Institute at Rome, in the British Museum, and in the Palace of Industry at Paris.

In Rome, M. Guidgi has discovered a magnificent statue of Venus, near the Porta Portese, as well as an altar of Mars, and a statue of Bonus Eventus (Good Fortune). Several aqueducts and other indications of the direction of the ancient roads and watercourses of the city have been discovered by M. Rosa. The Emperor Napoleon III has purchased the Palatine Hill, in Rome, the site of the ancient Palace of the Cæsars, and has disentombed many relics, columns, pavements, mosaics, &c., of the ancient grandeur of that palace. In other portions of the city, other palaces have been discovered which have elegant bas-reliefs, representing scenes of sacrifice, &c. The excavations at Pompeii, under the new contractor, are proceeding with extraordinary spirit, and have brought to light several new dwellings, with frescoed walls of great beauty. At Herculaneum, also, excavations have been commenced on a grand scale, and have already resulted in the discovery of some fine statues in marble, especially two lions, evidently by a Greek sculptor. At Vulci, and Schiavi (the ancient Armentum), and Palestrina (Preneste), excavations have brought to light statues and monuments in bronze, of great beauty, and ornaments in gold and silver. Spain has also been seized with the archæological mania, and has discovered at Madrid a fine bust of Cicero, a bronze statuette of a young Ethiopian at Tarragona, and a noble Hercules, also in bronze, at Almazaron, near Carthagena. In France, the explorations made by order of the emperor, to determine the places mentioned by Cæsar in his "Commentaries" (the emperor, it is well known, is preparing a life of Cæsar), have led to some important results. Many relics of the Roman occupation of Gallia have been discovered, and large quantities of Roman weapons and armor, and, in several instances, statues and bas-reliefs. Numerous tumuli, mostly of Celtic origin, have also been opened, and the weapons, &c., buried with their owners, exhumed. It is said that these relics prove that in France the races which used implements of stone, and those which employed bronze knives, hatchets, arrows, &c., existed at the same time.

On the Western continent, the mounds and tumuli of the Northwest have received some attention, and the Smithsonian Institute has in hand a treatise concerning the ancient mining operations in the Lake Superior copper region, and has made arrangements for collecting specimens of the implements used in or about the ancient mines. The Institution has also sent out circulars giving instructions relative to archæological investigations in the United States, and suggestions relative to an ethnological map of North America.

GEORGIA, the most populous of the extreme Southern States, had in 1860, 591,588 whites, 3,500 free colored inhabitants, and 462,198 slaves—total 1,057,286. The ratio of increase of the population during the preceding ten years has been: white 13.42, free colored 19.41, slaves 21.10. The white male population was 301,066; females, 290,484. The mortality during the year ending May 31, 1860, was 12,807. Fevers and pneumonia were among the most fatal diseases. The number of deaf mutes in the State was 428, of whom 83 were slaves. Of the industrial products of the State, the value of iron founding for the year ending June 1, 1860, was $79,000; coal mined, 48,000 bushels; value of lumber sawed, planed, &c., $2,064,026; capital invested in cotton manufacture, $1,854,603; number of spindles, 41,312; looms, 1,058; value of leather, $393,-164; boots and shoes manufactured, $357,267. Value of real estate and personal property, $645,895,237; acres improved land, 8,062,758; do. unimproved, 18,587,732; cash value of farms and plantations, $152,072,803. Horses, 130,771; asses and mules, 101,069; milch cows, 299,688; working oxen, 74,487; other cattle, 631,707; sheep, 512,618; swine, 2,036,-116. Wheat produced, 2,544,913 bushels; rye, 115,532; corn, 30,776,293; oats, 1,231,817; rice, 52,507,652 pounds; tobacco, 919,316; cotton, 701,840 bales of 400 pounds each; wool, 946,229 pounds; peas and beans, 1,765,214 bushels; potatoes, Irish, 316,552; do. sweet, 6,508,541; barley, 14,682; cane sugar, 1,167 hogsheads; molasses, 546,770 gallons. Length of railroads in the State, 1,404 miles; cost of construction, $29,057,742.

The commerce of the State being entirely cut off, and a general stagnation prevailing in business, the military affairs of the country became the engrossing topic with the people. The same sanguine confidence which had sustained their efforts during the first nine months of the war still existed at the beginning of 1862, notwithstanding the aspect of affairs was changing. Their enemy, the Federal troops, was concentrating in powerful force on the islands adjacent to the coast. Certain of the leaders of secession who were the senators or representatives of the State in the Confederate Congress, aware that an invasion of the territory was to be expected, had united in issuing an address to the citizens. *See* page

This address recommended them to destroy their crops, especially cotton, and lay waste the country on the approach of the enemy. It was a confession of weakness, and recommended to the people of this once flourishing State a system of measures which they refused to adopt. Its effect, however, was to discourage the confidence of the people in the success of the war. Upon the call of President Davis upon the governor of the State, Joseph E. Brown, for troops, soon afterward, it was necessary to resort to a draft to obtain them. This draft took place in Savannah on the 4th of March. One military company of the city, the Mitchell Guards, was induced to volunteer toward making up the quota; but few others were added to the voluntary list. An immense crowd appeared before the officers on the day of the draft in Savannah and preferred their excuses. A large number of them were aliens, while others were invalids, all showing a disinclination to enter the army. In fact, at this time a large portion of those who had been in service refused to enlist, and a large party of the citizens of the State were dormant or indifferent as to the state of affairs. The same feeling existed widely in other of the Southern States. In central Mississippi most frantic appeals were made at this time to the lagging masses, while the people in the northern part of that State, like those in the same hilly latitude through Georgia and Alabama, were, from the first, largely Unionist, and waited as it was charged, "one-half to stare at, and the other half to welcome the approaching Federal forces." In other portions of the seceded States the same feeling existed. Even in South Carolina, upon a call of the governor for five thousand fresh troops, under the penalty of a draft, only nine reënlisted out of a regiment which had tried the war. The conscription act of the Confederate Congress was the salvation of the Confederate army in the year 1862.

The capture of Fort Pulaski, at the entrance of the Savannah river, on April 11, caused great excitement in the city of Savannah. A citizen has thus described it:

> I can give you but a faint idea of the consternation the capture produced. Since the abandonment of the design by the enemy to bring in gunboats from Wall's Cut the confidence of the citizens became more assured, and the wisest hoped that the fort, which thereupon became the key and safety of Savannah, would be enabled to detain the enemy for an indefinite time. The blow has been suddenly and totally unlooked for, and equally unprovided for.
>
> The enemy will not wait long to attack the batteries about Fort Jackson. Their heavy ships have entered the river above Pulaski as high as Venus Point, only seven miles below, and are in plain view of the defences of the city of Savannah. How long they will be able to withstand an attack, let Pulaski be your teacher. We will be driven from them as surely as we now accept the fact of the loss of Pulaski.
>
> The city has been in intense excitement between the bold and rapid advances of the Federals and the terribly unnerving taps upon the shoulder which the Brown satellites, under Gen. H. R. Jackson, without form of law or authority, inflict. Our citizens (the few who remain) have been arrested on the street, dragged to camp, shown a tent, and informed that there their

habitation should be. And this has been done by a parcel of beardless boys, who have been mustered into the State service.

Cotton has been removed, such as remained in store here, to the railroad. Ordnance stores and every variety of equipments have been thrown out and carted to the same receptacle for Government stores. Schooners have been seized, and some, already filled with earth, are ready to be sunk below, in common with the hulls of Com. Tatnall's fleet, which will never more venture beyond Savannah river. The Fingal, which now lies near Fort Jackson, is also to be sunk, and the gunboats—one of which is nearly ready for launching—will, if the enemy sooner advances, be given to the devouring flames. Women are leaving, and property of all kinds is being sent off, and will soon line the Central road from Savannah to Macon, rendering every log house a palace, if rosewood and satin damask can do it.

The demand for soldiers before the Confederate conscription act took effect was such as to cripple the manufacturing establishments so much that they could hardly fill the orders of the Government. As the Federal forces advanced to make their attacks upon the coast, at Brunswick and Darien, these towns were entirely abandoned by the inhabitants. (*See* ARMY OPERATIONS.) The defences of Savannah, however, were completed for the purpose of making a successful resistance whenever it should be attacked. They extended from the Savannah river, north of the city, to the Louisville road, thus making a circuit of earthworks. To supply the necessities of the soldiers, the governor, acting under authority from the Legislature, seized nearly $350,000 worth of goods in Augusta, under a promise to pay at reasonable rates. To make up for the deficiency of weapons, the governor ordered twenty thousand pikes and bowie knives to be made. Distilleries were also ordered by him to be closed after the 15th day of March, throughout the State. The penalty on a refusal to obey this order was a seizure of the still, and its removal to the Government foundery at Rome, there to be manufactured into cannon. All liquor brought near military encampments was to be seized and emptied on the ground. In Fulton county, the grand jury were instructed by the Supreme Court to find bills of indictment against all foreign born citizens who had once exercised the right of citizenship and subsequently claimed exemption from military service in the Confederate army on the ground that they were subjects of a foreign government. The act was held to be a misdemeanor, or punishable by imprisonment in the penitentiary.

The conscription law of the Confederate Congress met with serious opposition in the State. In some of the northern counties it has never been executed. The governor took decided ground against its constitutionality. (*See* CONFEDERATE STATES.)

In the Legislature, at its session in November, the subject was referred to a joint committee of both Houses on Confederate relations. This committee made two reports. The majority report declared that Congress had no right to compel the citizens of the States to bear arms except by a requisition upon the several States for their quotas, allowing each State to exercise such compulsion as might be necessary, and to appoint the officers for her own troops. It also recommended the adoption of the following resolutions:

Resolved, That all laws passed by the Confederate Congress to raise armies from the arms-bearing people of the States by compulsion, and without requisitions upon, or concurrent action of the States, are unconstitutional, and within our power to be declared void. While Georgia makes this declaration, she also declares her willingness and determination to furnish to the end of this unjust and wicked war which our enemy is waging upon us, as she has done from the beginning of it, all just quotas of troops that may be required of her in a constitutional way.

Resolved, That under the Constitution of the Confederate States and the laws of this State, all the troops which Georgia has sent to the field under requisitions from the Confederate Government, have the right to elect the officers who are to command them, and that the laws of Congress which deny or impair this right are unconstitutional, and in our power to be declared void.

Resolved, That while the foregoing resolutions express our fixed conviction, we are still willing to leave the conscript acts undisturbed in their operation, reserving to the State and her people such rightful remedies as may be demanded by future emergencies.

The report of the minority took the ground that the safety of the States demanded that no opposition should be made to any measures adopted by the Confederate Congress in the exercise of powers granted and intended for the common defence; and they recommended to the people of Georgia to acquiesce in the decision of the supreme judicial tribunal of their State, and the governor to countermand any and all orders which he might have issued to suspend the execution of these acts in the State upon the citizens subject thereto.

The Supreme Court of the State, on the 11th of November, decided that the conscription law was clearly constitutional under that provision of the Constitution which gave to Congress the power to raise armies, distinguished from the power to call out the militia.

The views of Gov. Brown were stated in a correspondence which took place at this time. Gen. Mercer, in command of the defences of Savannah, wrote to the governor on the 7th of November, stating that an order from the Secretary of War, received that day, withdrew from him all power to retain the negroes then working upon the fortifications of Savannah. Every one would probably leave him in a few days; he, therefore, made a requisition on the governor for fifteen hundred to work on the defences. The governor, in communicating this letter to the Legislature on the 10th, said:

I also append a letter from him dated the 8th instant, in response to one from me asking to make an urgent appeal to the Secretary of War to send to Savannah reënforcements at an early day.

It will be seen by reference to the first of these letters that the Confederate general looks to Georgia for the means to defend her seaport city.

While the right is denied to the State by the con-

scription act to call into the field and retain in her service any portion of her organized militia, or any part of the material of which it is composed, to defend herself against the invader at a time when the Confederate force within the State is inadequate to the task, the War Department has withdrawn from the general in command the powers to retain the labor necessary to complete the fortifications which are indispensable to a successful defence. I submit the question to the action of the General Assembly, and recommend that prompt provision be made to the extent of the ability of the State for the carrying out your resolution for the defence of the city to the last extremity.

In view of the fact that Georgia has furnished about seventy-five thousand troops to the Confederacy, who have rendered the most distinguished services on almost every battle field of the war, I cannot forbear the expression of my deep regret that so few of them should be permitted to return to her bosom to strike for their homes at a time of so much peril, when the right even to supply their place in the field, upon her soil, with others now at home, is denied to the State.

Three days later, on the 13th, the governor sent to the Legislature another communication, accompanied by a letter from Col. Henry H. Floyd, of Camden county, complaining that on the 4th of November three companies of negroes landed at St. Marys, and after insulting the few ladies remaining there, and perpetrating many thefts, retired to the gunboats without the slightest molestation. On the same day all the salt works in the county were destroyed. Col. Floyd asked for an order to call out the militia for three or six months. Adjoining counties on the coast could add to those in Camden county sufficient to make a considerable force, who, being well acquainted with all the localities, could make a better defence than strangers. The governor also adds, as follows:

It cannot be denied that the State owes it to her citizens, so long as she claims their allegiance, to afford them all the protection in her power.

The Constitution of this State having invested me for the time with the chief command of her militia, I should, under ordinary circumstances, have had no hesitation in issuing an order calling out the whole militia of the county, and of the adjoining counties, if necessary, to protect our citizens, and especially the women, against the outrages of invasion, robbery, and insult by negroes.

Under the acts of the Confederate Congress, and the late decision of our Supreme Court, the authority to command the militia of the State, even for the protection of our mothers and wives, our sisters and daughters, against the brutality of our own slaves in a state of insurrection, seems to be denied to the Governor, as each man composing the militia of the State, except the officers, is declared to be subject to the command of the President without the consent of the Executive of the State. It follows, therefore, that if the Governor should order out the militia in this pressing emergency, which admits of no delay, to protect those citizens of Georgia to whom no protection is afforded by the Confederacy, the President may countermand the order, and compel each person so called out to leave the State and go to the utmost part of the Confederacy to protect those who are not citizens of this State. The State has reserved to herself the right under the Constitution to "engage in war" when "actually invaded," and to "keep troops" while she is invaded. That authority which has the right to take from her this power, without which no State can exist, has the power to destroy her.

I believe it is admited, however, by high authority in this State, that the creature has no power to destroy the creator, the child no power to destroy the parent, and the parent no right to commit suicide. If this be true, the Confederate Government, which is admitted to be the creature of the States, can certainly have no power to deny to the States, which are the creators, the use of their own militia to protect their own inhabitants against the invasion of the enemy, and unbridled, savage cruelty of their slaves in actual insurrection; nor can that Government, as the child, destroy the parent by paralyzing her right arm when raised to ward off a blow struck at her very vitals; nor, indeed, can the parent, which is the State, commit suicide by surrendering the command of her entire militia when she is invaded, and her people are left without other sufficient protection, nor by removing her obligation to protect her citizens, and thereby forfeiting their allegiance.

Placed as I am in this embarrassing condition, when helpless innocence calls upon the State for protection, and when the Constitution of this State and the Confederate States seems to point clearly to the path of duty upon the one hand; but when the acts of Congress, and the decision of our own Supreme Court, rendered under heavy outside pressure, and, if not *ex parte*, under most peculiar circumstances: when the counsel on both sides, who had brought the case before the Court, agreed that in their individual opinions the decision should be as it was made, I deem it my duty to submit the question to the General Assembly, who as a coordinate branch of the Government represent the sovereign people of the State, and to ask your advice and direction in the premises.

If you should hold that the Governor no longer has the right to command the militia of the State for the protection of her people, it only remains for me to inform the people of Camden, and the ladies of St. Marys that, while the State collects taxes and requires them to bear other public burdens, she withdraws her protection from them, and leaves them to the mercy of negro invaders, who may insult and plunder them at pleasure. Should you hold, on the contrary, that the Governor still has the command of the militia of the State, and that she has the right to use her own militia for the protection of our homes, I shall not hesitate to call them forth, and to hold them in service as long as the coast is invaded, and our people are subject to the insult, robbery, and merciless cruelty of the enemy.

The action of the Legislature upon the subject resulted in the adoption of the following resolution:

Resolved, That the Governor be and he is hereby authorized to call out such parts of the militia as he may think necessary to protect the citizens of Camden county, and other counties on the coast similarly exposed, against the invasion being made by companies of negroes, sent by the abolitionists to make raids upon our citizens, and to continue them in service as long as the emergency may require.

The Legislature also passed resolutions authorizing the governor to contract for slave labor to complete the defences of Savannah; if it could not be obtained by contract, he was authorized then to impress slaves for the purpose. It also appropriated two millions of dollars to relieve the families of soldiers who had enlisted from the State into the Confederate service.

The term of the governor, Joseph B. Brown, expires in November, 1863. The election for State officers is held on the first Monday in October, once in two years. The governor had been reëlected to a second term. The senators from the State to the Confederate Congress in 1862 were John W. Lewis and B. H. Hill. The former having been appointed by

the governor to fill the vacancy, it became the duty of the Legislature at its session in November to elect a senator. The names voted for were very numerous, being thirteen on the first ballot. Among them were ex-Gov. Herschell V. Johnson, who was a candidate for the vice-presidency on the ticket with Stephen A. Douglas for presidency in 1860; Judge Jenkins, who a few days previous had delivered the decision of the Supreme Court of the State in sustaining the constitutionality of the conscript act of the Confederate Congress; ex-Senators Toombs and Iverson, late of the U. S. Senate; Howell Cobb, ex-Secretary of the Treasury, and Mr. James Jackson, formerly a member of Congress. Of 190 votes cast, Mr. Johnson received 84; Mr. Jackson 59; Mr. Toombs 24; Judge Jenkins 9; Mr. Iverson 3; Mr. Cobb 6, &c. A new ballot was ordered. Before taking the vote Mr. Whittle, of Bibb county, said he was in favor of sending a man to the Confederate Senate who would not be opposed to the Administration, and who would support and sustain the Government in this trying hour. His first choice was ex-Gov. Johnson, a man of unsurpassed abilities and patriotism; but he had understood that he was not in favor of the conscription law, and he could not vote for any man who was not in favor of that law. He referred to a letter from Gov. Johnson, which he understood the representative from Baldwin (Mr. Briscoe) had, and in which his views were defined. He called on the friends of Messrs. Jackson and Johnson to let the General Assembly know how they stood on these important points.

Mr. Briscoe, of Baldwin, said the letter from Gov. Johnson, which had been alluded to, was strictly private. He had shown it to a very few persons, not having the least idea that it would ever be alluded to publicly in any manner, and he greatly regretted it. He said he knew Gov. Johnson to be no seeker after office; that he was actuated by no consideration but patriotism, which burned as brightly in his breast as any man's; but yet, with this knowledge, he (Mr. Briscoe) would never have voted for him unless he had known him to be in favor of sustaining the Administration to the fullest extent in the prosecution of the war; and could not have voted for him or any other man who would oppose the execution of the conscription law. Mr. Briscoe therefore wrote to Gov. Johnson, and had received a letter in reply, an extract from which he read, the purport of which was that he believed the conscription law to be unconstitutional; but since the Supreme Court had otherwise decided he counselled acquiescence in its execution, and further counselled a most earnest and undivided support to the Government, and every measure thereof, in the support of the war, till the stars and bars waved in triumph over the Confederate States.

The next ballot was then taken, in which Johnson received 111 votes; Jackson 40; Toombs 14; Jenkins 2; Iverson 1, &c. Ex-Gov. Johnson was elected.

The manufacturers of cotton goods in the State, who composed the Manufacturers' and Free Trade Association, met at Augusta during the session of the Legislature, to fix upon some rate of compensation which they should receive for goods furnished to the State and Confederate States. The subject of the cost of the production of cotton goods was fully discussed by the convention, and a committee was appointed, with instructions to report upon the estimates presented by the various factories in regard to the actual cost of the production of those goods. The report of this committee was embraced in the following preamble and resolution:

Whereas, the Manufacturers' Convention, after comparing notes as to the immense advance upon every article in use pertaining to the cost of producing goods, viz.: Cotton, labor, oil, alcohol, varnish, gums, leather in its various uses, card clothing and hand cards for stripping cylinders, steel, iron, files, hardware, shuttles, bobbins, reeds, steel travellers, steel spindles, tin, Babbit's metal solder, nails, screws, and a thousand other articles largely in use, most of which have increased over 1,000 per cent. in value, and some extend to the fabulous advance of 10,000 per cent., therefore, be it

Resolved, That the Manufacturers' Convention consider, from actual estimates presented, the present cost of production of cotton goods to be equal to fifty cents per pound, and deem it unsafe to bargain with Government at any fixed price to extend beyond one month, without the establishment of a sliding scale, by which the price may be varied from month to month, as the cost of production may advance.

These views were submitted to the Legislature for their approval in future contracts.

On the 19th of November the first General Council of the Protestant Episcopal Church in the Confederate States assembled at Augusta. The Rev. Dr. Henckhill, of South Carolina, was elected permanent president, and Rev. Mr. Mitchell, of Alabama, permanent secretary.

The crops throughout the State, especially the southern portion, were very good. The average of cotton planted was about two acres to each planter.

GREAT BRITAIN, a limited monarchy, reigning sovereign, Her Majesty Alexandrina Victoria, Queen of Great Britain and Ireland, born May 24, 1819; succeeded William IV June 20, 1837; crowned June 28, 1838. Area of Great Britain and Ireland, 112,190 square miles. Population, 1861, 29,031,299. Revenue for year ending Jan. 1, 1862, $332,142,639; expenditure for the same year, $342,759,406. National debt, Jan. 1, 1862, $3,871,757,066.*

The death of H. R. H. Prince Albert, Prince Consort, on the 14th Dec. 1861, wrapped the whole British kingdom in gloom. He had not been personally so popular as the queen, but the strong affection which had existed between the royal pair, and the overwhelming grief manifested by the queen at his loss, aroused the hearty sympathy of the entire nation. Parliament, which assembled on the

*In this reduction of the revenue expenditure and debt to dollars the pound sterling is reckoned at $4.84, the par value of gold.

6th of February, was opened by commission, the queen being too deeply affected to open it, as usual, in person, and by common consent party hostilities were laid aside, and although the position of the ministry, at the close of the preceding session, had been extremely precarious, yet the leaders of the opposition felt unwilling to incur the odium of defeating the ministry, and bringing the care and anxiety of the formation of a new cabinet, and the ordering an election of a new House of Commons upon the sovereign, while thus borne down with sorrow.

Thus it happened that the measures of the Government in regard to the Confederate Commissioners, Mason and Slidell, were approved with but slight dissent; the resolutions offered for the recognition of the Southern Confederacy were, at the request of the premier, withdrawn by their movers; the budget of the chancellor of the exchequer, though including important modifications in the collection of revenue, passed both houses by a large majority; and other bills which, under other circumstances, would have excited earnest debate, if not a disastrous division, were permitted to pass with but little difficulty. It was not until late in the session that any measures leading to heated debate were introduced. In the latter part of May, Mr. Stansfeld, a radical member, introduced a resolution condemning, in strong terms, the large military expenditure of the Government, and censuring the ministry for acting as alarmists. There were indications that, if brought to a vote, this motion would be carried, and Viscount Palmerston, always fertile in expedients, and knowing the indisposition of the conservative party to compel a change of ministry at that time, took the bold position before the house that the pressing of that motion would be regarded as a vote of want of confidence by the ministry, which would of course lead to their resignation, and thus compelled the opposition to withdraw the motion. The battle of the Merrimac and the Monitor also gave rise to warm discussion, in which the ministry did not escape wholly undamaged. The Government were constructing a considerable number of iron-clad ships, but they were all of very large size, most of them built wholly of iron, and possessing but moderate speed; while for coast and harbor defences they relied either upon their wooden ships, which the battle seemed to prove were worthless, or upon forts built upon land, which a well-protected iron-clad might pass with impunity. The opposition demanded that the Government should desist from their immense expenditure for forts, and build, for coast and harbor defences, vessels analogous to the Monitor. A Captain Coles, who had three years before proposed something of the sort (though with an iron shield rather than a turret), and whose plans had been rejected by the Government, now brought them forward again, and, under the clamors of the opposition, the Government were compelled to contract with him for the construction of several vessels on his plan, and to postpone the construction of further fortifications at Spithead. The fortifications at Portsmouth and Plymouth were in progress, and would need further appropriations for their prosecution; but, in the existing temper of the house, the premier preferred to delay as long as possible the discussion of these appropriations, which the war minister reduced to the lowest possible sum. The cabinet did not, however, escape a severe attack from Mr. Cobden, the leader of the radical, or Free Trade party, who accused the premier of causing vast and needless expenditure to the nation by constantly exciting apprehensions of a war with France, the futility of which no man knew better than himself; and averred that he thus speculated on the fears of the people, in order to maintain himself in power. Viscount Palmerston replied with great bitterness, and with such caustic personalities as greatly irritated the Free Trade party, and led Mr. Cobden, in a dignified but severe reply, to announce the withdrawal of himself and his friends from the support of the administration. Thus threatened, the premier was compelled to accept an amendment offered by the Conservatives to the Fortifications Appropriation Bill, interdicting the Government from exceeding in any way the expenditure named in the bill, and from undertaking any new work which would involve further expenditure. Humiliating as this deprivation of all independent action was, the Government had no alternative but submission. The Government also experienced a defeat in regard to a measure which it had offered for the relief of the parishes in Lancashire, Derbyshire, and Cheshire, where the cotton famine had thrown a large number of operatives out of employment, and greatly increased the number dependent upon parish aid. The bill presented by the Home Secretary provided that when the poor rates of any parish exceeded 5s. on the pound, the parish should have the right to require assistance from the other parishes belonging to the Poor Law Union till the poor rates of the entire union were brought up to this maximum rate. This was opposed, and finally defeated, by the members from the manufacturing districts, who urged that the parishes should rather be allowed to contract loans for the amount needed, to be paid in instalments from the proceeds of the poor rates in subsequent years. An act was subsequently passed providing that when the parish expenditure for poor rates exceeded 3s. in the pound per annum for the ensuing year, the guardians might charge the excess to the other parishes of the union until all the parishes had reached the limit of 3s. in the pound, when the guardians might apply to the Poor Law Board for permission to borrow money to meet the necessary excess, to be charged to the common fund of the union; and if, in the distressed unions, the expenditure ex-

ceeds the rate of 5s. in the pound, they might apply to the Poor Law Board, who could make a general order on the unions of the county to contribute to the aid of the union thus distressed. The act is limited to the counties of Lancashire, Derbyshire, and Cheshire, and expires the 1st of March, 1863. The session was closed on the 7th of August, with an address, as usual, from the throne, in which Her Majesty averred her determination to continue to observe a strict neutrality in regard to American affairs, and discussed in general terms matters appertaining to the state of Europe, and the condition of the suffering operatives in Lancashire.

The diplomatic intercourse between Great Britain and the United States (*see* DIPLOMATIC CORRESPONDENCE) during the year has been courteous and friendly; but the U. S. Government has felt aggrieved at the persistency of the attempts of English merchant vessels to break the blackade, and at the construction in English dockyards of several vessels for the Confederates, intended to prey upon American commerce. There is no reason to believe that these vessels were thus built and fitted out by the connivance or tacit permission of the British Government, but the position taken by Earl Russell, that the case was similar to ours in 1855 when war vessels were built for Russia, (*see* DIPLOMATIC CORRESPONDENCE,) was such as to render that Government nearly powerless to prevent the construction of such vessels on British territory.

In the cotton manufacturing districts, especially in the counties of Lancashire, Derbyshire, and Cheshire, the continuance of the war in this country and the consequent scarcity and greatly enhanced price of cotton led to the stopping of most of the mills, and entailed a terrible amount of suffering upon the operatives.

Lancashire has been for many years the principal seat of the cotton manufacture. The number of persons directly occupied in the various branches of the cotton trade in that county is said to be about 400,000, and at least 400,000 more are dependent upon it. The average wages of an operative, taking children and adults together, were 10s. 3½d. or $2.49, which would amount to $996,232 per week, or $51,560,520 per annum. The number of spindles was estimated in 1859 at 28 millions, and the number of looms at 300,000. The capital invested in that county alone in the cotton manufacture was about $250,000,000. Of the 400,000 operatives usually employed, Mr. David Chadwick of Manchester, a careful and accurate observer, states, that in October, 1862, 150,000 were entirely out of employment, and 120,000 more were working on short time, not exceeding 3 days in the week. This would be equivalent, so far as loss of wages was concerned, to 60,000 more entirely unemployed. The entire loss of wages amounted to £105,000 ($508,200) per week. It was expected that by Christmas the number, including trades dependent upon the cotton manufacture, would be doubled, and a loss of wages equivalent to $1,000,000 per week would ensue. Of course it was out of the question for such a sum to be deducted from the earnings of a laboring population of 400,000, weekly, without inducing very soon terrible suffering. That this suffering was not sooner made public was due to the previous condition of the people. The operatives of Lancashire were, as a class, in much better circumstances than the manufacturing population of most old and densely populated countries. Working but ten hours a day for five days in the week, and seven hours on the sixth; men of ordinary ability and industry would earn from $5 to $10 a week, while skilled mechanics often received $15 or more. Women earned from $3.75 to $4.50, and boys and girls of 13 to 16 years from $1.75 to $2, while still younger children, who were obliged by law to spend half the day in school, would earn from 25 to 62 cents per week. It resulted from these liberal wages and the constant employment which up to July, 1861, these operatives had had, that they had been in circumstances of material comfort and, in some sort, independence for some years. This comfortable condition had been greatly enhanced by the very general diffusion of education among them by evening schools, scientific lectures, and a cheap but instructive literature. It was not a remarkable thing for a workman to rise from the masses to a position of responsibility and liberal remuneration; and not very rare for one to become himself an employer. Savings banks, temperance and teetotal societies had also done much for them. The use of intoxicating liquors had greatly diminished within a few years in the principal manufacturing towns, and reading rooms and libraries had taken the place of gin palaces. Thrift naturally followed from temperance and intelligence, and within the past ten years coöperative associations have made great progress in the manufacturing towns of Lancashire. There were at the commencement of the famine, about 100 of these associations in the county, with an aggregate capital of over $1,000,000, and doing a yearly business of about $5,000,000. Most of the more intelligent operatives who were heads of families were members, and had either put their small excess of earnings monthly into them, or had left their share of the profits after a first subscription to accumulate. Through the stores thus established they had been able to obtain better food and clothing for a smaller sum, while they shared in the moderate profits of the business. In some instances, as at Rochdale, the Coöperative Society has not only supplied its members with goods and provisions, but has erected mills for the manufacture of flour and meal, and finally has undertaken the manufacture of cotton and woollen goods.

The operative who had laid up his little savings in these societies or in the savings banks, had a small capital which, though not intended to be expended for his support, yet served as a

resource in the first trying months of the cotton famine, and had the period of the deprivation of work been shorter, the greater part of the Lancashire employés would have bridged it over with their little reserve without assistance from abroad, and though the poor rates might have borne somewhat hardly on the property holders, we should probably have heard little or nothing of the distress in Lancashire.

But the distress has been in existence for a long period. The market for cotton goods had been glutted by an immense over-production in 1859 and 1860, so immense that even a cessation of production almost entire for a year and a half has hardly sufficed to reduce the stock below the normal quantity; and at the same time the raw material was rising in value, slowly at first, but soon more rapidly, until it surpassed considerably the price which could be realized for the manufactured goods, and, under the double influence of an overstocked market and excessive cost of cotton, the manufacturers, in the summer of 1861, began to work short time, and in September many of them closed altogether. The hope that this state of things would not continue, encouraged the people to bear up under the privation of labor and wages. Nowhere in England were there in ordinary times fewer paupers, or lighter poor rates, than in Lancashire. The poor rates in 1860 had not averaged, throughout the county, 6*d.* in the pound of assessment, and the paupers were mostly of the idle and dissolute class, so that the name of pauper had there an idea of degradation connected with it, which these thrifty work people could not endure. It was not then till their little hoards in the savings banks and their reserves in the Coöperative Societies were gone, and even their clothing and furniture, and the bijous and mementoes of a more prosperous time, were all disposed of, that they would consent at all to ask parochial aid, and even then such was their horror of being regarded as paupers, that many of them, when urged to seek such assistance, would reply: "Nay, but we'll clem (starve) first;" and some did perish from starvation rather than ask parish assistance. It was not till the summer of 1862 that the necessity for further assistance to these distressed work people became generally known, and the first measure adopted for their relief was that by Parliament, of which we have spoken, authorizing the poor law unions to borrow money and to assess the excess of their rates on the other unions of the county. This act, properly called the "Rate-in-aid Bill," has produced some relief, though it was some time before it could be brought into operation, and meantime the poor rates, in some of the unions, had risen to the unprecedented and unendurable sum of 10, 11, 12, and even 13 shillings in the pound, and this, too, when the property holders, on whom this burden falls, could not collect their rents in consequence of the distress of their tenants. It became evident that further relief must be afforded, and while many of the mill owners paid small weekly sums to the operatives they could not employ, contributions were liberally made from all quarters to the amount, before the close of the year, of more than a million pounds ($5,000,000). Yet, notwithstanding this munificent contribution, to which has been added, we are glad to say, nearly half a million of dollars from this country, the suffering has been and still is severe; indeed it cannot be otherwise when full half a million of persons, whose earnings, in prosperous times, were not less than $1,250,000 a week, are wholly dependent upon charity for their support.

Under the wise influence of those who have been their true friends in this trying time, the girls and women, who are receiving aid, are gathered in sewing societies and taught to make garments for themselves and families, and perform other household duties, matters in which they had hitherto, from their constant employment in the mills, been somewhat deficient. The men frequent the reading rooms and working men's colleges to a far greater extent than the gin palaces. The probable supply of cotton for the present year, is not indeed sufficient to enable the mills to run more than half time, but with the enhanced price of cotton goods this may be sufficient to keep the operatives from starvation.

The other events of the year, whether relating to the external or internal policy of Great Britain, have not been of very great importance. The revolution in Greece excited the sympathy of the people and the Government, and although the agreement into which the three protecting powers had entered, could not admit of the gratification of the unanimous desire of the Greek people, that Prince Alfred (second son of Queen Victoria) should become their king, yet the British Government indicated its good wishes toward them by suggesting other candidates of a liberal character for the vacant throne, and by offering to the Ionian Republic, for many years under British protection, the opportunity of becoming a part of the Greek kingdom.

The overtures of the French Government, in the early part of November, for a joint offer of mediation in American affairs were declined, and the War Minister, Sir G. Cornwall Lewis, avowed himself opposed to any offers of mediation or interference.

In relation to Italy the Government confined itself to expressions of sympathy with the King of Italy, and a desire for the termination of the difficulties relative to the occupation of Rome; while the sympathy of the people for Garibaldi and their indignation at his being wounded and taken prisoner was very strong. The amnesty which was soon after proclaimed toward him and his followers was, not improbably, hastened by the suggestions of the British Government.

Statistics of Great Britain.—1. *Financial.* The gross amount of the revenue of Great Britain for the year ending Sept. 30, 1862, was

$337,278,014. The expenditure for the year was not made up, but there was a probability of a slight deficiency. Of the revenue, $115,496,920 was derived from customs, $84,264,400 from excise duties, $42,712,734 from stamps, $15,294,400 from taxes, $38,778,480 from the property tax, $17,230,400 from the post office, $1,435,162 from the crown lands, and $9,772,318 from miscellaneous sources.

The Bank of England is the principal though not now the only bank of issue of the United Kingdom. On the 20th of September, 1862, it had notes in circulation to the amount of £21,148,709; the Bank of Scotland, at the same date, had £3,987,290; the Bank of Ireland, £5,071,204; private banks £3,065,498, and the joint stock banks £2,795,424. The private banks, joint stock banks, and, we believe, the Bank of Scotland, pay out only Bank of England notes. The entire bank circulation of the United Kingdom of Great Britain and Ireland, at that date, was £36,068,125 ($174,569,725). The coinage of 1861 was £8,536,000, or about $42,000,000.

2. *Imports and Exports.*—The imports of the year 1861 were £217,315,881 ($1,051,808,864); the exports for the same year were £125,115,133 ($605,557,244). Of the imports £38,653,398 ($187,082,446) was of raw cotton; of this, £26,570,399 ($128,620,731) was from the United States; £34,741,692 ($168,149,789) was breadstuffs. The other principal articles were: wool, £9,366,296; raw silk, £7,907,162; sugar and molasses, £13,252,217; tea, £6,850,561; coffee, £2,628,694; butter, £4,902,394; flax, £3,423,137; tar, £3,311,717; timber, £10,270,566; wine, £3,862,233; flaxseed, £3,108,055; manufactured silks, £5,356,404; tobacco, £2,195,147. Of the exports, cotton goods took the lead, their value being £46,836,737; woollen goods came next, their value being £14,687,316; iron and steel (except hardware and cutlery) were valued at £10,341,574; machinery, £4,219,688; hardware and cutlery, £3,425,260; haberdashery and millinery, £3,423,493; coals and culm, £3,593,076.

The number of ships entering British ports from other countries in 1861 was 55,263 vessels, and their aggregate measurement 13,179,589 tons; of these, 29,907 vessels, measuring 7,721,035 tons, were British, and 25,356, measuring 5,458,554 tons, were foreign.

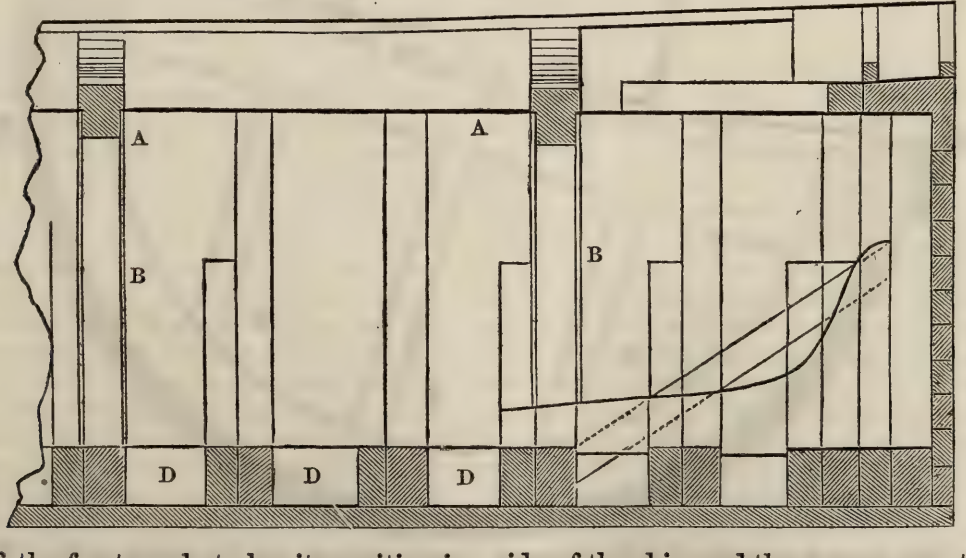
The clearances from British ports for foreign ports the same year were 56,056 vessels, with an aggregate measurement of 13,416,052 tons, of which 29,357, measuring 7,699,497 tons, were British, and 26,699, measuring 5,716,555 tons, were foreign. In the coasting trade the same year, 153,066 British vessels, with a tonnage of 17,357,131 tons, and 525 foreign vessels, tonnage 93,456, entered the several ports of Great Britain; and 156,981 British vessels, with a tonnage of 17,379,693, and 408 foreign vessels, tonnage 67,031, departed from those ports.

3. *Education in England.*—In England the Educational Committee of the Privy Council report in 1861 10,900 daily schools, with 1,028,690 children (5 boys to 4 girls), 8,069 certificated teachers, and 15,498 apprentices or assistant teachers. There were also 39 training colleges with 2,869 students and 2,782 candidates for teachers; 442 schools for pauper children, with about 30,000 inmates, and 58 ragged or industrial schools, with 4,411 inmates. For secondary education, there are in England 20 foundation schools, in most of which the course of classical and mathematical instruction is nearly or quite equal to that in the majority of our colleges; there are also about 40 colleges, mostly though not entirely under the direction of dissenters, and all in connection with the University of London as to degrees, and the three universities, Oxford, Cambridge and Durham. The University of Oxford has 19 colleges and 5 halls, and beside the college headmasters and teachers, or dons as they are called, a body of 41 university professors. Cambridge University has 16 colleges and one hall, and a corps of 28 University professors. The University of Durham has one college and 2 halls, and 7 professors and readers and 3 tutors. In the way of higher education there are theological professorships connected with the universities and most of the dissenting colleges, 48 medical schools, instructions in law in the 4 Inns of Court (the Middle and Inner Temple, Lincoln's Inn and Gray's Inn), and professorships of law in King's and University Colleges, London, and in Oxford and Cambridge Universities; military colleges at Landhurst and Woolwich, a naval college at Portsmouth, a Government school of mines at London, a royal agricultural college at Cirencester, and a royal veterinary college at Camden Town.

4. *Postal Communication.*—In 1861, the number of letters delivered in the United Kingdom was 593,240,000, of which 486,679,000 belonged to England and Wales, 50,009 to Ireland, and 56,552,000 to Scotland; or 24 letters to each inhabitant of England, 9 to each inhabitant of Ireland, and 18 to each inhabitant of Scotland. The number of newspapers delivered was 72,300,000, and of book packets 12,300,000. The gross revenue was £3,665,128 ($17,739,210), the expenditure £2,501,013 ($11,304,903), and the net revenue £1,161,985 ($5,624,007). The total number of miles over which the mails are transported during the year is 47,371,924, and the average cost per mile, 3⅝d. or about 7¼ cents. The number of money orders issued in 1861, was 7,580,455, and the amount £14,616,348 ($70,743,124). The profit to the Government was about $130,000. Only £267 ($1,292) has been lost in ten years. In 1861, the Government added to the Post Office Department a system of post office savings banks, on a very simple plan. This has found so much favor that on the 1st of April, 1862, only six months, there were 91,965 depositors, and the amount of deposits was £735,253 ($2,558,625). The average amount of deposits to each depositor was about $13.

GREAT EASTERN, Steamship, *the accident to and repairs of.* On the 27th of August the Great Eastern, while hove to—the propeller engines being in motion ahead and the paddle engines in motion aback, waiting for a pilot, came in collision with a submerged rock near the east end of Long Island. A large fracture was made in her outer skin, and a considerable list or careening took place from the entrance of the water between her skins, but the inner one being uninjured, she was brought to her anchorage near the city of New York. Her passengers, some without any knowledge of the accident, and her entire cargo, were discharged within ten days, without injury to a single article. The agents of the ship, Messrs. Howland and Aspinwall, called the engineers, Messrs. H. B. and E. S. Renwick, into consultation with Capt. Paton of the ship, and as there were no docks in the country of sufficient capacity to admit or lift her, it was decided to repair the injury by means of a caisson or scow, as in figs. 1, 2, with two entrance shafts extending from one of its sides upward a little above the surface of the water. To determine the form of the vessel at the fracture, in order to fit the gunwales of the caisson to it, the engineers proposed a species of adjustable template composed of a frame of timber of the same size as the intended gunwale of the scow, and having a series of sliding bars like fence pickets arranged around it, which could be moved perpendicularly to the plane of its surface to any desired positions. The frame was to be ballasted sufficiently to sink it and to be drawn by ropes against the ship, at the place where the caisson was to be fitted. Then a diver was to be sent down to shove the bars toward the ship until their ends touched it and secure them by nails, so that when the frame was drawn up the points would present an exact counterpart of the ship. The only difficulty was that the whole work depended on the skill of the diver, and it was finally decided to take the moulds from the inner skin, which was supposed to be parallel with the outer one. To do this 600 tons of coal were moved from the bunkers over the fracture, to the opposite side of the ship. While these moulds were being taken inside the ship, the divers were busy on the outside, determining the exact size and position of the fracture, of which preliminary examinations had already been made, and also in surveying the bottom to see if other fractures existed. The ship was undergirded by a chain drawn tight beneath the bulkhead immediately aft the screw engines, the first bulkhead aft the fracture, and the inside moulds were referred to the same bulkhead. The length of the fracture and its distance forward from the chain were now measured by the divers with a line. As only each outside strake of the plating at the side of the ship was connected with the inner skin by a longitudinal partition, it was deemed necessary to locate the port gunwale of the caisson upon an outside strake where the pressure against the ship would be best sustained. On this account it became not only necessary to determine the

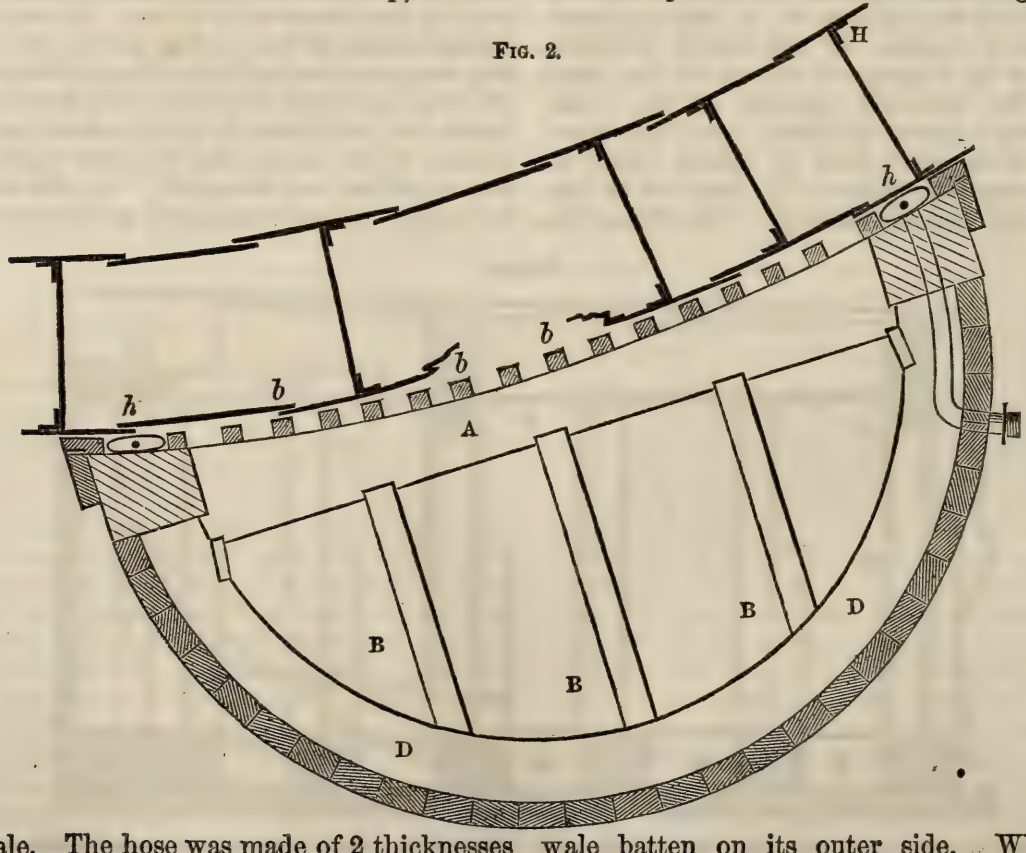
Fig. 1.



widths of the fracture, but also its position in reference to the strakes. The base for these measurements was the termination or line of the salmon colored strakes. This line was referred to the 30 ft. deck, as were also the inside moulds. A line with a hook at its end was carried down by the diver at every place where a measurement was made; it was hooked on to the edge of every outside strake and to the side of the fracture, drawn tight to the base line, and the distance noted. From the moulds taken from the inside of the ship, and the measurements outside, the lines of the ship were laid off on the moulding floor of the ship yard, the form of the fracture and indentation and the size of the caisson necessary to repair the injury determined. It was at first proposed to make the caisson of a rectangular section, but on consultation with the shipbuilder Mr. Van Deusen, it was decided to make the ribs curved. Fig. 1 shows a fractional longitudinal, and fig. 2 a cross section of the caisson, as it was constructed. In order

to distribute its pressure against the ship, it was built with a series of cross timbers AA, braced by shores BB. The lower sections of the entrance shafts were firmly secured to the caisson by knees and bolts. Each curved timber of the caisson DD consisted of 3 segments 8 inches broad, 11 in. deep, strengthened by 2 pieces 6 in. broad, breaking joints with the main timbers. The ends of the caisson, being flat, were strengthened by diagonal braces and knees. The planking was 4 inches thick, and the whole was thoroughly calked and pitched. At the suggestion of Capt. Paton, to guard against leakage, in case of change of form of caisson by twisting under the pressure, the outer surface of the caisson was covered with an old Brussels carpet secured by thin wooden battens. As it was necessary that the gunwale of the caisson should fit the ship, and as it was not be expected that this form could be determined accurately, the planking was of soft wood, and no diagonal bracing was used to interfere with the twisting of the caisson to adapt itself to the form of the ship. The entrance shafts F (fig. 3) were curved, as shown in the drawing, somewhat to the form of the ship, about 6 feet broad on the outside, lengthways of the ship, by 3 feet 9 inches on the inside crosswise. As it was necessary that these shafts should be about 35 feet long to be 6 feet above the draught line of the ship when in place, and as it was impracticable to attach them at the shipyard and float them 12 miles to the ship, they were made in two sections, and fastened together after the caisson was towed to the ship by bolts; a ladder was formed inside of each shaft for the convenience of the workmen. As said above, it was not expected that it would be possible to fit the caisson exactly to the form of the ship; some sort of adjustable packing would therefore be necessary to fill up any interstices, so that the water might be lowered in the caisson, and the pressure thus applied serve to twist the caisson and adapt it to the mould of the ship. In seeking for such a packing, the engineers conceived that the water tending to enter the joint at the gunwale might be kept out by a superior pressure of water in a hose around the gunwale. Accordingly an endless hose (*h h*, fig. 2) was made to fit a shallow groove on the gunwale of the caisson; this groove was made by nailing battens 2 inches thick upon the outer and inner edge of the

FIG. 2.

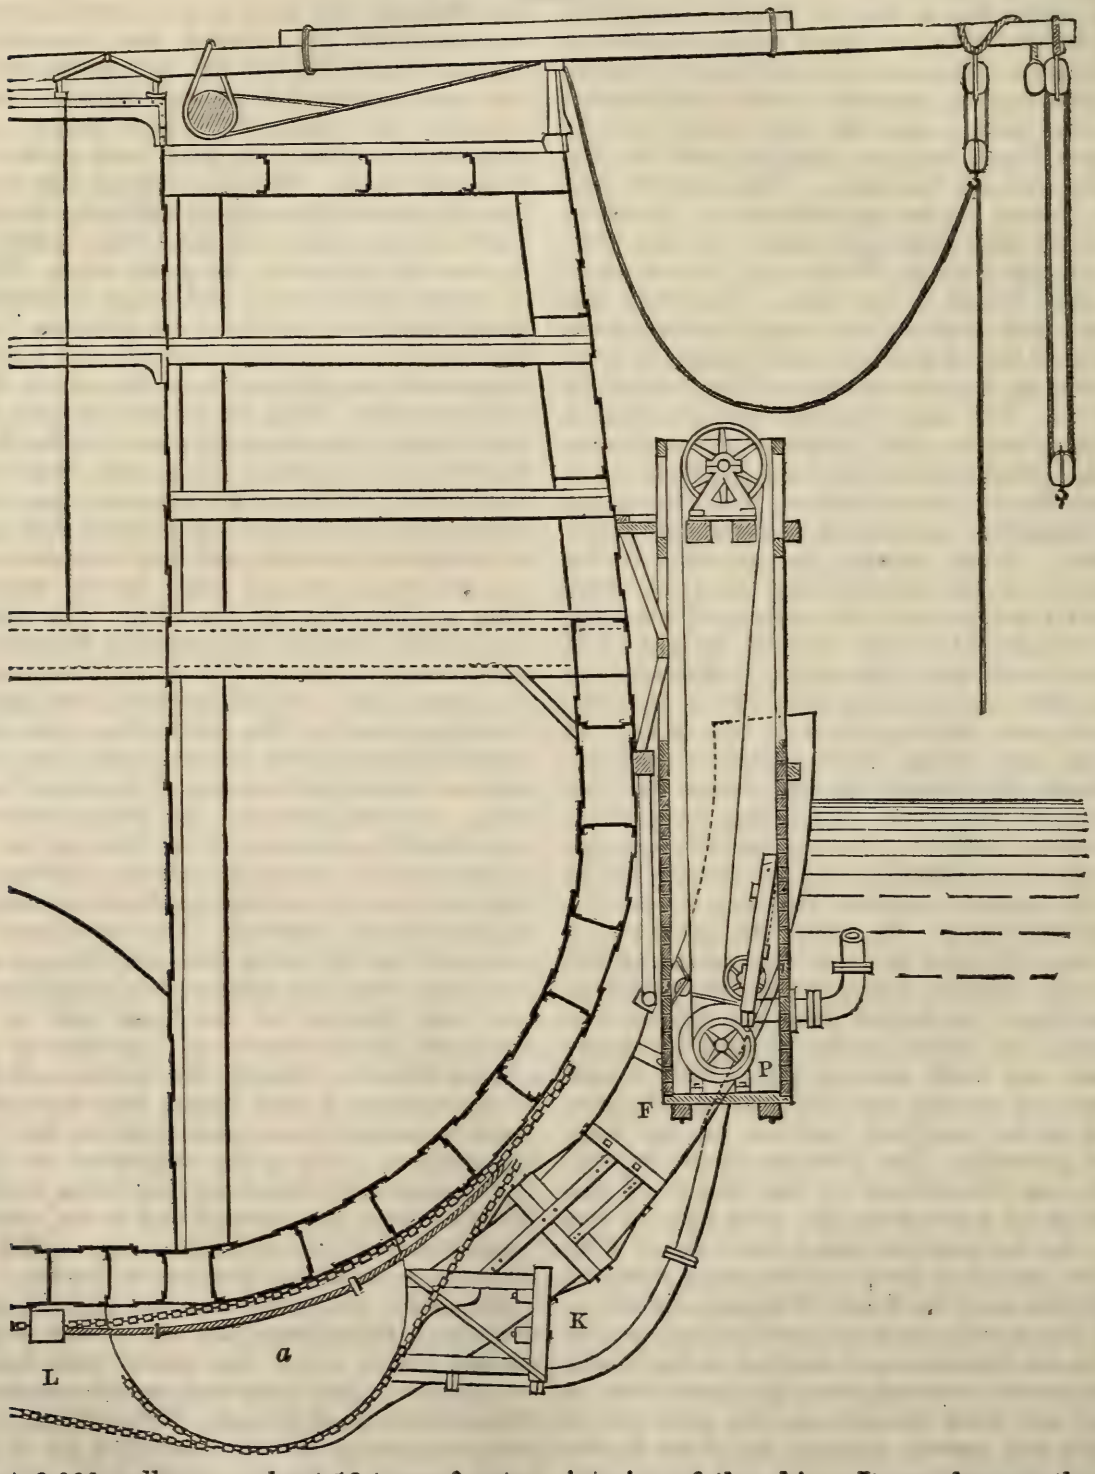


gunwale. The hose was made of 2 thicknesses of heavy cotton duck coated with beeswax, and was 9 inches diameter, as it was expected that the crack would not exceed 5 or 6 inches. In order to prevent the hose from being forced into the caisson by the pressure of the water, tending to enter over the gunwale before it was brought in contact with the ship, the hose was secured to the outside edge of the gunwale by passing bands of canvas around it and securing both ends of each band under the gunwale batten on its outer side. While the caisson was being lowered, the hose was held in the groove by a cross barring of rope yarn, that could be cut by the diver before the hose was distended. To prevent the hose from being squeezed so that the water could not pass through it at any point, a rope 1 inch in diameter was inserted in the hose while being made, to afford crevices for the water to pass if the hose was flattened. The hose was arranged to be supplied with water by means of smaller

hose—for fear of accident, two at each end. These were carried some distance above the water, and one of them was supplied by the ship's pumps discharging into it continuously, the surplus passing out of the upper end of one of the others. As a further precaution against the admission of water at the gunwale, there was a flap of Brussels carpeting four inches wide, the inner edge battened to the outside of the gunwale, and the outer sewn to a bolt rope to prevent it from being drawn into the joint. As the hose answered its purpose, there was not draft to hold the flap to the side of the ship. The caisson was built bottom up for convenience of planking, launched that way, and towed to the derrick at the Novelty Works and turned over, and then towed to the ship. To bring the caisson into position two heavy timbers were placed on the ship's deck, and projected over the side at the extremities of the caisson in position. Two heavy timbers were also placed in like manner for hoisting the entrance shafts. Blocks and tackle were attached to the extremities of these timbers, and connected with the caisson and shafts, and with the ship's capstan; chains, secured to eye bolts in the port side of the caisson near its ends, were carried down beneath the bottom of the ship, and were drawn up and secured by tackles at the starboard side of the ship; 2 chains led up to the davit tackle on the port side of the ship. To overcome the buoyancy of the caisson 26 tons of iron ballast were necessary, and the engineers determined to use chains for this purpose, as when the caisson was in position the chains could be drawn out through the entrance shafts readily, and the caisson would then be pressed against the ship by its regained buoyancy. To guide the caisson as it was lowered, and to have the means of determining readily when it was in position, a large log 4 feet longer than the caisson was ballasted and hauled under the ship by chains at each end until its port side, which would be next the caisson, was 18 inches to the starboard of the required position of the starboard gunwale. The position of the log laterally was determined by the length of the chains as let down from the port side of the ship; the log was let down a little ahead of its position, and then drawn endways according to the directions of the diver. Wire rope guides (*a*, fig. 3) had already been attached to each end of the log at a distance apart to admit of the length of the caisson between them, the loose ends of these ropes were brought up the port side of the ship and passed through eye bolts in the ends of the caisson to guide it as it was lowered into its place; the upper ends of the rope were secured to tackles at the extremities of the end davits, so that they could be slacked or tautened at pleasure. The ballast having been distributed in the caisson so that it floated at about the angle at which it was to be placed, it was filled with water by the ship's pumps, the port chains being kept taut; when filled it sank and was lowered by the port chains to the proper angle to receive the upper sections of the entrance shafts, which had already been raised by the intermediate davits; the shafts were then lowered and connected with the nozzles on the caisson by bolts passing through their flanges. As soon as the entrance shafts were attached the caisson was lowered by slacking the tackles at the four davits until it had sunk a certain measured distance determined by the length of the port chains; as it sank it glided down the wire rope guides left purposely slack. Then the caisson was drawn laterally against the ship by taking up the starboard chains, and at the same time guided to its place by tightening the guide ropes. When in contact with the ship and nearly in position, divers were sent to report its progress, to see whether it covered the fracture, and whether its gunwale would come upon the centre of an outside strake. When drawn into its right position 4 heavy hawsers were placed under it and the ship, to cramp it against the ship; these were hauled tight by the ship's capstan; the chain ballast was then drawn out, another pull taken at chains and hawsers, and then to make a still greater strain wedges were driven between them and the sides of the ship. The caisson was held in its place longitudinally by 2 chains, one secured to an eye bolt in the front end of the caisson, and carried forward at the side of the ship, ahead of the paddle box; the other chain was attached to the rear end of the caisson, and carried aft into one of the stern hawse holes. As first arranged, the pump (Andrew's centrifugal) was secured in its place, at the end of the frame K, before the caisson left the ship yard, and an intermediate shaft attached before the caisson was lowered. The small hose was connected at the same time with the gunwale hose, and when the caisson was in position, a line was attached to the loose end by the diver, and it was drawn up. In order to permit the divers to examine the interior gunwale of the caisson, a foot board was secured to brackets around the caisson about 4½ feet from the gunwale; and at the suggestion of Capt. Paton, cords with knots corresponding to their distances from the forward end of the caisson, were attached at every fathom to enable the diver to ascertain his position by feeling. On examination the divers reported that the cross timbers of the caisson bore against the ship in certain places where the plates were bulged out, whilst at their ends the gunwale was not in contact with the ship's side. This had been foreseen, and blocks of soft wood (*b*, *b*, fig. 2) had been placed on the top of the cross timbers, which could be split out to bring the gunwale in contact with the ship. The cutting out of the blocks was a tedious job, and occupied considerable time, and was done by divers, one splitting out the blocks, whilst the other held a submarine lamp, and secured the chips and placed them in a bag, to prevent them from

getting between the gunwale and the ship. As the blocks were split out, the caisson came nearer and nearer to the ship. When all were taken out that prevented the gunwale from coming in contact with the plating, it was found that the gunwale bore at the ends of the caissons, but intermediate there was a joint of about 3½ inches wide on the port side, and about 2 inches on the starboard side in the widest part. As this was satisfactory, the hose was filled and the pump was set at work, and worked continuously for 12 hours, discharging

Fig. 3.



about 3,000 gallons, or about 13 tons of water per minute without lowering the water in the entrance shafts more than 18 inches. It was evident that the water came in about as fast as it was pumped out. The divers were sent down into the inside of the caisson, and reported that the water did not come from between the gunwale and the ship, but from the interior of the ship. It was known that the space between the two skins was full of water, and that the water was draining into the caisson, but continued pumping made it certain that there was some other fracture in the outer skin outside of the caisson through which the water found its way into the ship, and then into the caisson. One such rent, about 11 feet

in length, and varying from a mere crack to 2 inches in width had been discovered by the divers on the first survey, and had been covered by a mat of rope; but on examination this mat was found sagged off, and the rent was now calked with a canvas sausage, stuffed with seaweed. The bilge pumps were now set to work to take the water out of the side where this rent was, and manhole plates were put in the fore and aft webs to cut off the passage of water from this rent to the adjacent sides. Meanwhile the Andrew's pump still continued at work, but the water did not lower in the caisson. Accordingly it became necessary to make a resurvey of the ship's bottom, keeping the pumps at work to cause a current to set in at every fracture, so that it might readily be found by the divers. The first examination had been made from a platform of ladders and spars ballasted, and suspended from the ship's sides, and beneath her bottom, and moved as required, by the crew on deck. In the rëexamination the shifting of the scaffold was left to the diver. A plank about 40 feet long was used for a scaffold. This plank had 2 eye bolts inserted in its under side, at a distance of 10 feet from its ends. Through these eye bolts ropes were passed, which undergirded the ship. This plank could thus be shifted laterally on the ropes at the pleasure of the diver, and fastened by small ropes to the undergirders. Commencing forward, as soon as one section of the ship's bottom had been examined, the undergirders were shifted aft half the length of the planks, and so aft till the whole bottom was thoroughly examined. This examination took from October 20 to November 3, and discovered six other fractures in addition to the forward one and that beneath the caisson. These fractures varied in length from 3 to 24 feet, and from mere cracks to a separation of about 3 inches. All these cracks were stopped temporarily before the caisson could be pumped out, by a contrivance suggested by the diver, Peter Fallon, consisting of a frame of light wood, a little larger than the hole to be stopped, and lashing to this frame like the sacking of a bed a sheet of India rubber belting; this belting was 12 inches wide, and to cover the biggest hole, it was necessary to use two strips lapped and riveted. As the rubber was placed over the fracture, the draft through the caisson when the pump was running drew the rubber close to the ship, and any joints or wrinkles in the rubber admitting water were chinked with sea weed. To secure the patches when the pumps stopped, flock mattresses, attached to light spars, were brought up against the patches by ropes undergirding the ship. By November 3d all the cracks were temporarily stopped, and the water began to sink rapidly in the shafts. As soon as it was down 6 feet below the outside level, the pump was run only fast enough to keep the water at this level, and the divers were sent down into the caisson and wedges were taken down in a bag, and driven between the cross beams and the ship's bottom to distribute the pressure as uniformly as possible. Some delay and trouble were caused by the want of fresh water for the boilers driving the pump, which were placed on the deck of the ship; but at 5 P. M. the caisson was sufficiently freed from water to enable Capt. Paton and one of the divers to enter at one shaft and pass through the caisson, and out at the other. Next morning the engine driving the pump broke down, repairs were made, and the engine started again; but the gale of Nov. 7th now came on; the ship dragged her anchors, and had to be put under full steam. A large rope, which had been used as a guy, either by accident or design, got foul of the pump shaft, was wound up by it, and the shaft broken and the pump so disarranged, that it had to be removed and repaired; and as it could not be replaced by the divers, some new arrangement was necessary, and that shown in fig. 3, in which the pump is secured in the bottom of an upright box bolted to the ship's side, and driven by a belt, was adopted. The construction of this box and placing it in position occupied a week. Everything was ready to start on Saturday, the 15th, but no work was done till Monday, when the pump was started. The work of wedging the cross frames, arranging the patches and chinking with sea grass wherever a leak showed itself, had to be gone over by the divers. On Tuesday the captain and the chief engineer of the ship, Mr. Rorison, went through the caisson, and a man was set to drilling the first rivet hole. The engineers of the ship were sent into the cells between the skins, where they found the water running in a stream about 3 inches deep through one of the manholes in one of the longitudinal webs between the cells. This manhole was closed by a plank with a rubber facing, and secured by a shore. The carpenters were now set at work to make a scaffold for the drillers in the caisson, and the men at work to drill the rivet holes, under the direction of the engineers of the ship, and the dimensions of the necessary plates were taken, and the iron ordered. On November 23d all the holes were drilled, and the plates were arriving; but now the Andrew's pump began to show signs of weakness, and gave out, and the caisson began to fill. The ship's pumps were set at work in the compartment of the skin over the caisson, and kept the water from rising over ten feet in the caisson. The centrifugal pump was taken out, sent to the city for repairs, and returned the same P. M.; put in place and set at work by the next A. M.; then the engineers of the ship commenced to apply the plates and the riveters set to work, the hot rivets being dropped into the caisson through tubes arranged for the purpose. To guard against another accident, another pump, a Worthington, which had been previously recommended by the engineers, but, on account of economy, not adopted, was placed in one of the stoke holes, over the fracture. Steam

being supplied to it though a rubber hose from one of the ship's boilers, it discharged its water through one of the coaling ports, and was kept at work until the last plate was applied, steam being still kept up in the boilers of the centrifugal pump so that it might be set at work in case of accident. The work of applying the plates to the ship's side went on night and day, under the direction of the engineers of the ship, Messrs. Rorison and Beckwith. The fracture varied in breadth, being in some places 4 feet wide. To cover the indented plates, and restore the form of the ship, the patch of new plates was 93 feet long by from 6 to 10½ feet in breadth, ⅝ inch thick, applied crosswise of the ship with lap joints. The work of applying the plates was commenced at the after end, the cross timbers were cut away to make room for the plates, and temporary shores were driven between the plates and the bottom of the caisson as the plates were put in place. Everything now went on quietly and rapidly. The job was completed, and, on inspection by a number of engineers and nautical men, was deemed very satisfactory. The accident has demonstrated in a most practical manner the value of the cellular system of construction. The outer skin was so abraded, torn, and indented that, had it been the only protection, the ship would have sunk immediately. As it was, with only the immense fracture of 86 feet in length closed, and the others only temporarily stopped, she has made her return trip successfully and safely. Similar plans have been previously adopted for the repair of ships' bottoms, but the magnitude of the caisson—104 feet long by 15 wide—is unprecedented, and complicated the work. The hose packing, which conduced, perhaps, more than anything else to the success of the undertaking, is, it is believed, a novelty, and was devised by the Messrs. Renwick, who projected the plans for the repair of the ship, and directed the whole work.

GREECE, a limited monarchy in the S. E. of Europe, having an area of 18,244 square miles, and a population of 1,067,216 inhabitants, or, adding the Ionian Islands, which the British Government have given the opportunity to unite with the Greek kingdom, 19,250 square miles, and 1,313,699 inhabitants. Greece is now under a provisional government, of which Demetri Bulgaris is president, with two vice-presidents and a council of seven.

During the past year Greece has undergone a revolution, which has resulted in the overthrow and banishment of the late King Otho I. A brief explanation of the causes which led to this revolution may properly preface an account of it. Greece, which since the 15th century had been under Turkish domination, worn out with the constantly increasing oppression of the Ottoman power, revolted in 1821, and a war of seven years, marked by terrible atrocities on the part of the Turks, followed. In October, 1827, the Greeks, aided by a combined English, French, and Russian fleet, gained the battle of Navarino, which broke the Turkish power, and led to the acknowledgment of their independence, under the protection of the three powers who had contributed to their liberation. At first the government was nominally a republic, and Count Capodistrias, a Greek statesman, long in the service of Russia, was president; but the three protecting powers decided that they must have a monarchical government, and on the assassination of Count Capodistrias in October, 1831, these powers, after some deliberation, selected, as their king, Otho, second son of the king of Bavaria, born in 1815. He arrived at Nauplia in 1833, and at first assumed the government under a regency of three, selected by his father, all Bavarians, and two of them utterly ignorant of the country, and even of its language. In 1836 the king married Amelia, daughter of the grand duke of Oldenburg, and took the management of affairs himself, or rather committed them to the queen, as the abler member of the royal firm. Otho was not by nature cruel or tyrannical, but he was weak, indolent, and selfish, and wedded wholly to Bavarian ideas. His queen was far more capable, but imperious, selfish, and bent upon the gratification of her own will, and scrupled at no tyranny which should extract from the Greeks the money necessary to carry out her plans, while she was unwilling to do anything to promote the interests of the people. The result has been that oppression followed oppression till all motive for enterprise or improvement was lost, and the country sunk into a state of apathy, from which it was only roused by occasional spasmodic efforts to throw off the hated Bavarian yoke. The municipal governments of the villages, a relic of ancient Greece, which had been preserved through three and a half centuries of Turkish domination, were discontinued; the monasteries were abolished, but their lands and funds, instead of being applied to the purposes of education, were taken as the property of the crown, which further became the proprietor of about two thirds of the cultivated, and four fifths of the uncultivated lands of the kingdom. On these lands the tenants were required to pay 15 per cent. of the gross product of the land in kind, as rent for its usufruct, and in addition a land tax of from 3 to 10 per cent. also in kind; and these taxes and rents were exacted in the most aggravating and wasteful manner. The whole taxes and rents were farmed, and the cultivator could neither reap nor thresh his crop without the permission of the farmer, who often withheld the permission, till the crop was nearly worthless, in order to extract more from the hapless cultivator. The crop when gathered must be transported from five to twelve miles over the most abominable roads, to be threshed, that there might be no withholding of the farmer's portion, and when brought to the threshing floor, it was often many weeks before permission to thresh

it was accorded, and during this time the cultivator must remain by to watch it. On an average three months were lost to each cultivator in this way, and all inducement to increase the quantity of the crops was taken away. Except in the immediate vicinity of Athens there were neither roads nor bridges, although the country is preëminently one of swift flowing streams, high hills, and deep ravines. There were not 120 miles of tolerable roads, and but half a dozen bridges in the kingdom. Manufactures were discouraged by heavy imposts, till there remained only some gold and silver embroidery work at Athens, some iron ware at Tripolitza, a little silk gauze at Calamata and Mistra, and some woollen fabrics on a very limited scale manufactured at Lebadœa. While five or six short and inexpensive railroads, connecting important points, would have soon quadrupled the production of Greece, the Government not only would not interest itself in their construction, but opposed and forbade any application of private capital for the purpose. Centralization was the policy of the court. Athens, as the royal residence, must be aggrandized, but all the rest of Greece might go to waste.

At the close of her struggle for independence Greece had a constitution of a somewhat liberal character, but this the regency and the king himself, when he came into power, utterly ignored, and the despotism of the Government grew more intolerable with each year, till in 1843 the people rose in revolution, with the rallying cry of *Ζήτω το Συνταγμα* ("Long Live the Constitution"). Gen. Kalergy was in command, and the army on which the king relied to defend him from the people, fraternized with them. After attempting in vain to escape the alternative presented him of resigning, or dismissing his Bavarians, appointing a new ministry, calling a national assembly, and accepting a constitution drawn up by them, he finally acceded to the latter, signed the ordinances presented to him, and when the national assembly had drawn up a constitution, he accepted it. The constitution thus prepared was defective in many particulars, but Otho and his queen did not observe its provisions, and hence any good there was in it failed to enure to the benefit of the people. The two chambers, instead of being elected by fair popular vote, were packed with adherents to the crown; the ballot was tampered with, and if by any accident a Greek patriot was elected, spurious ballots sufficient to defeat his election were substituted for the true ones. The ministry were notoriously takers of bribes, falsifiers of ballots, and tools of the despotism, and were openly accused of every species of baseness.

For ten years the people endured these increasing evils, which were aggravated by the growing rapacity of the queen. The revenues had been increasing; but this fact was carefully concealed from the people, and the payment of 900,000 drachmas annually, guaranteed by the constitution toward the liquidation of the debt of $12,000,000, contracted by Greece at her independence, with the endorsement of the three powers, was withheld by the king, and used for the purposes of the court, as a considerable portion of the principal of the loan had been.

In 1854 another revolution became imminent, and was only avoided by the adroitness of the Government (an adroitness never manifested on any other occasion), in bringing forward the project of a Byzantine empire. The questions which led to the Crimean war were in agitation, and the queen and ministers prompted the people to side with Russia, and to make the effort to alienate from Turkey the provinces of Epirus and Thessaly, and the Grecian islands, to form a new Greek domain. Infatuated with this idea, Otho for once became popular, and his already despotic powers were enlarged, while the wealthier Greeks subscribed large sums of money, which were greedily absorbed by the court to promote so desirable an end. In less than a year they woke from their dream to find they had been duped. The allied powers threatened them, and occupied their capital with an armed force; Turkey was exasperated, and their money had been spent on its own projects by the Government which had become more absolute than before. The people became satisfied that their Bavarian rulers cared nothing for them, but only for their money, and that there could be no improvement or progress till they were rid of them; but who could be substituted for them, was the question, and a very difficult one it was to solve.

In 1856 the three protecting powers appointed a commission to investigate the administrative and financial state of Greece. This commission, consisting of an English, French, and Russian member, spent more than two years in their inquiries, and published their report in 1860. According to this report the interest of the debt already referred to had not been paid since 1843, and amounted in 1859 to $11,228,476, and at the present time would amount to about $16,400,000. There was besides this a home debt of about $12,500,000. The Government, the commission reported, had used without accounting for them the communal funds, had encroached systematically upon the public domain, had published no account of the finances, and though the revenues had increased, had carefully concealed that fact from the people, whom they had constantly plundered.

This report did not lessen the utter distrust and contempt of their king and queen which was possessing the minds of the Greeks; and it required but a slight incident to develop it in another revolution. On the 28th of May a conspiracy, supposed to be of great extent, was discovered in Athens, but it turned out to be a false alarm, and the king and queen soon subsided into their old condition of apathy. Otho went in the summer as usual to the German spa, and left the queen as regent. On the 15th of September, at 9 o'clock in the evening, as

she was returning from her model farm at Parnes, seven miles from Athens, a man stepped forward and fired a pistol at her. He missed his aim, and was arrested on the spot; he proved to be a young man of high family, a nephew of Mavrocordatos, and a son of parents who had been illustrious both for patriotism and intellectual ability. His name was Aristides Dosias. He freely admitted the act, and justified it on the ground of patriotic devotion to his country's welfare, which the queen had imperilled. His trial caused great excitement throughout Greece, and when found guilty, and condemned to death, the queen commuted his sentence to imprisonment for life. A few months later, a conspiracy for the assassination of Otho was discovered just in time to save his life. Warned by these and other incidents, the king at first seemed disposed to satisfy his subjects, and about the 1st of January, 1862, summoned Canaris, a brave and patriotic Ipsariot, to form a ministry. The old patriot addressed to the king a memorial, in which he stated the conditions under which he would be willing to serve in this capacity; these were: 1st, the dissolution of the chambers, which had been fraudulently elected, and the guaranty of a perfectly free election of their successors; 2d, the formation of a national guard, and, 3d, the relieving of the press from the censorship which had paralyzed it. The king was not at all pleased with this programme, and fearing lest Canaris should present a list of patriotic ministers, he dismissed him, and the same day the profligate and corrupt tools who served the king as ministers, announced to the chambers that it had never been intended that they should be removed. "So then Canaris was only called to the court to be made a buffoon?" was the stinging reply. The nation was exasperated, but not quite ripe for revolution. In the reaction from his spasm of penitence the king showed himself more of a despot than before. More than a thousand patriots were arrested and thrown into prison on the charge of having intended to conspire against the Government, and maddened by this tyranny, a number of officers in the mountain fortress of Palamede, overlooking the city of Nauplia, on the 12th of February, 1862, proclaimed a revolt. Among them were Col. Coroneos, who had been an officer in the English, French, and German service; Col. Zimbrakaki, who had distinguished himself in the French service in the Crimea; Commander Artemis, and Lieut. Grivas, both officers greatly beloved by the soldiers. The Nauplians and the citizens of the vicinity responded to the call, but the country generally was not ready, and after a siege of two months, in which some sharp actions were fought, and Coroneos wounded, and made prisoner, they finally capitulated on the 20th of April, an amnesty being granted to all except 19, who were required to leave the country. This amnesty was disregarded, and the officers and men who had capitulated were thrown into prison. Meantime another insurrection had broken out on the island of Syra, at the head of which were Leotzakos, a distinguished Greek officer, and Moraitines, son of an eminent judge. In a naval battle at Thermia between the insurgents and Otho's forces, these two brave leaders were killed and their forces defeated; but the Syrans would not submit, nor yield allegiance to the king. As the summer approached, the evidences of the discontent of the people became more alarming, and the Government resorted to more high handed measures to repress insurrection. The criminals were set free from the prisons to plunder the patriots, and their places filled by the best citizens of Greece. The press was prohibited from uttering the sentiments of the people, and the chambers, though filled by those who had been the friends of Government, were awed into silence by force. The people in June and July were shouting for Amadeus (second son of Victor Emanuel) under the walls of the palace. At length, the king on the 23d of September prorogued the chambers, which he could not wholly silence, to November; and the people felt that the time for action had come. On the 20th of October, the king finding his power and influence gone, abdicated in favor of his brother. A provisional government was formed at Patras, under the presidency of Demetri Bulgaris, and proclaimed the deposition of the Bavarian dynasty; and on the 24th of October, almost unattended, and in fear and trembling, the royal pair went on board ship at Nauplia, and left forever that Greece which for thirty years they had so abused and oppressed.

The provisional government ordered an election for a king, and Prince Alfred of England was chosen by an almost unanimous vote; but as the agreement between the three protecting powers forbade the elevation of a prince of either house to the Greek throne, it has since been offered to the ex-king of Portugal, and to the duke of Saxe Coburg and Gotha, but was declined by both.

H

HABEAS CORPUS. The arrest and confinement of persons by orders from the Secretary of War, Edwin M. Stanton, continued nearly to the close of the year 1862 in the same manner as in 1861. (*See* ANNUAL CYCLOPÆDIA, 1861: HABEAS CORPUS.) It was declared by those citizens who were opposed to these proceedings, that they were in violation of the following amendments to the Constitution of the United States:

ART. 4. The right of the people to be secured in their persons, houses, papers and effects against unreasonable searches and seizures shall not be violated: and no warrants shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

ART. 5. No person shall be held to answer for a capital or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia when in actual service, in time of war or public danger; nor shall any person be subject, for the same offence, to be twice put in jeopardy of life or limb: nor be compelled in any criminal case to be a witness against himself; nor be deprived of life, liberty, or property without due process of law; nor shall private property be taken for public use without just compensation.

ART. 6. In all criminal prosecutions the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor; and to have the assistance of counsel for his defence.

A large number of the arrests of the previous year had been made by orders issued from the Secretary of State, but the matter was early in the year transferred to the War Department. On the 3d of December, 1861, the commanding officer at Fort Lafayette came to the prisoners' quarters and read a document of which the following is a copy:

To the Political Prisoners in Fort Lafayette:

I am instructed by the Secretary of State to inform you that the Department of State of the United States will not recognize any one as an attorney for political prisoners, and will look with distrust upon all applications for release through such channels; and that such applications will be regarded as additional reasons for declining to release the prisoners.

And further, that if such prisoners wish to make any communication to Government, they are at liberty to make it directly to the State Department.

SETH C. HAWLEY.

The prisoners, it would seem, were by the activity of their friends, becoming troublesome to the Government, and this notice had the effect to suspend their activity.

The following order is the only instance during the year in which an official statement was made of the arrest of any citizen. In this instance, the party arrested was soon after set at liberty.

WAR DEPARTMENT, WASHINGTON, *Feb.* 10, 1862.

Ordered that a person calling himself Dr. Ives, a native of a rebel State, whose brother, lately in the military service of the United States, is now an officer in the rebel army, and who pretends to be a special representative of the New York "Herald" for Washington, be arrested and held in close custody at Fort McHenry as a spy, and for violating the rules and regulations of this Department in this:

That on Saturday, the 8th of February, 1862, against the public and well known regulations for the safe transaction of Congressional business, he intruded himself into the War Department and into the chambers where the Secretary and his assistants were transacting business with members of Congress, for the purpose of spying and obtaining war news and intelligence in regard to Cabinet consultations, telegraphs, &c., for publication, which he knew was not authorized to be published; and having so intended, he conducted himself insolently, making threats to the Assistant Secretary, Peter H. Watson, of the hostility of the New York "Herald" against the administration of the War Department, unless he was afforded special privileges and furnished intelligence by the Department in respect to Cabinet consultations, telegrams, official communications, and all news the moment it was received by the Department, in advance of all other papers.

The War Department is the place where the President, the Commander-in-Chief of the Army and Navy and his subordinates, the Secretary of War, and other public officers, are earnestly engaged in the business of overcoming treason and rebellion against the Government of the United States. It is not a place were spies or traitors, or any person, but for public purposes, can be suffered to enter or harbor.

Newspapers are valuable organs of public intelligence and instruction, and every proper facility will be afforded to all loyal persons to procure, on equal terms, information of such public facts as may be properly made known in time of rebellion. But no matter how useful or powerful the press may be, like everything else, it is subordinate to the national safety. The fate of an army or the destiny of the nation may be imperilled by a spy in the garb of a newspaper agent. The nation is in conflict with treason and rebellion—may be threatened by foreign foes.

The lives and fortunes of twenty millions of people, and the peace and happiness of their posterity, in the loyal States—the fate of public liberty and republican government forever—are staked upon the instant issue. The duties of the President and his Secretary, of every officer of the Government, especially in the War Department and military service, are at this moment urgent and solemn—the most urgent and solemn that ever fell upon men. No news gatherer, nor any other person, for sordid or treasonable purposes, can be suffered to intrude upon them at such a time to procure news by threats, or spy out official acts which the safety of the nation requires not to be disclosed.

For these reasons the aforesaid Ives has been arrested and imprisoned, and all persons so offending will be dealt with in like manner.

(Signed) EDWIN M. STANTON,
Secretary of War.

On the 14th of February, an order was issued transferring the matter of all arrests to the War Department, offering to release political prisoners on parole, and directing that future arrests shall be made by military authority. The order was as follows:

Executive Orders in Relation to State Prisoners. No. 1.

WAR DEPARTMENT, WASHINGTON, *Feb.* 14.

The breaking out of a formidable insurrection, based on a conflict of political ideas, being an event without precedent in the United States, was necessarily attended by great confusion and perplexity of the public mind. Disloyalty, before unsuspected, suddenly became bold, and treason astonished the world by bringing at once into the field military forces superior in numbers to the standing army of the United States.

Every department of the Government was paralyzed by treason. Defection appeared in the Senate, in the House of Representatives, in the Cabinet, in the Federal Courts; Ministers and Consuls returned from foreign countries to enter the insurrectionary councils, or land or naval forces: commanding and other officers of the army and in the navy betrayed the councils or deserted their posts for commands in the insurgent forces. Treason was flagrant in the revenue and in the post office service, as well as in the territorial governments and in the Indian reserves.

Not only Governors, Judges, Legislators, and ministerial officers in the States, but even whole States, rushed, one after another, with apparent unanimity,

into rebellion. The capital was besieged and its connection with all the States cut off.

Even in the portions of the country which were most loyal political combinations and secret societies were formed furthering the work of disunion, while, from motives of disloyalty or cupidity, or from excited passions or perverted sympathies, individuals were found furnishing men, money, and materials of war and supplies to the insurgents' military and naval forces. Armies, ships, fortifications, navy yards, arsenals, military posts and garrisons, one after another, were betrayed or abandoned to the insurgents.

Congress had not anticipated and so had not provided for the emergency. The municipal authorities were powerless and inactive. The judicial machinery seemed as if it had been designed not to sustain the Government, but to embarrass and betray it.

Foreign intervention, openly invited and industriously instigated by the abetters of the insurrection, became imminent, and has only been prevented by the practice of strict and impartial justice with the most perfect moderation in our intercourse with nations.

The public mind was alarmed and apprehensive, though fortunately not distracted or disheartened. It seemed to be doubtful whether the Federal Government, which one year before had been thought a model worthy of universal acceptance, had indeed the ability to defend and maintain itself.

Some reverses, which perhaps were unavoidable, suffered by newly levied and inefficient forces, discouraged the loyal, and gave new hopes to the insurgents. Voluntary enlistments seemed about to cease, and desertions commenced. Parties speculated upon the question whether conscription had not become necessary to fill up the armies of the United States.

In this emergency the President felt it his duty to employ with energy the extraordinary powers which the Constitution confides to him in cases of insurrection. He called into the field such military and naval forces, unauthorized by the existing laws, as seemed necessary. He directed measures to prevent the use of the post office for treasonable correspondence. He subjected passengers to and from foreign countries to new passport regulations, and he instituted a blockade, suspended the writ of habeas corpus in various places, and caused persons who were represented to him as being or about to engage in disloyal and treasonable practices to be arrested by special civil as well as military agencies, and detained in military custody, when necessary, to prevent them and deter others from such practices. Examinations of such cases were instituted, and some of the persons so arrested have been discharged from time to time under circumstances or upon conditions compatible, as was thought, with the public safety.

Meantime a favorable change of public opinion has occurred. The line between loyalty and disloyalty is plainly defined; the whole structure of the Government is firm and stable; apprehension of public danger and facilities for treasonable practices have diminished with the passions which prompted heedless persons to adopt them. The insurrection is believed to have culminated and to be declining.

The President, in view of these facts, and anxious to favor a return to the normal course of the Administration, as far as regard for the public welfare will allow, directs that all political prisoners or State prisoners now held in military custody be released on their subscribing to a parole engaging them to render no aid or comfort to the enemies in hostility to the United States.

The Secretary of War will, however, in his discretion, except from the effect of this order any persons detained as spies in the service of the insurgents, or others whose release at the present moment may be deemed incompatible with the public safety.

To all persons who shall be so released, and who shall keep their parole, the President grants an amnesty for any past offences of treason or disloyalty which they may have committed.

Extraordinary arrests will hereafter be made under the direction of the military authorities alone.

By order of the President:

EDWIN M. STANTON, Secretary of War.

It is not known to what extent prisoners were set at liberty under this order; but on the 27th of the same month the following additional order was issued:

WAR DEPARTMENT, WASHINGTON, *Feb.* 27, 1862.

It is ordered, First, That a special commission of two persons, one of military rank, and the other in civil life, be appointed to examine the cases of the State prisoners remaining in the military custody of the United States, and to determine whether, in view of the public safety and the existing rebellion, they should be discharged or remain in military custody, or be remitted to the civil tribunal for trial.

Second, That Major-General John A. Dix, commanding in Baltimore, and the Hon. Edward Pierpont, of New York, be, and they are hereby appointed commissioners for the purposes above mentioned; and they are authorized to examine, hear and determine the cases aforesaid, *ex parte*, and in a summary manner, at such times and places as in their discretion they may appoint, and make full report to the War Department.

By order of the President:

EDWIN M. STANTON, Secretary of War.

This commission visited the Old Capitol prison at Washington and Fort McHenry at Baltimore, Fort Lafayette at New York, and Fort Warren at Boston.

Previous to the appointment of the co mission many prisoners had been offered their liberty on condition of subscribing to the following parole:

I hereby give my parole of honor not to render any aid or comfort to the enemy in hostility to the United States.

Many expressed their willingness to sign, provided they could do it without the act being considered as a condition of their release. To all applications for a legal examination of the case, or a discharge from confinement on such terms as would prove their innocence of all complicity with treason, no answer was returned.

The proceedings in one or two cases of examination before the commission have been made public. One is that of David C. Wattles, who was arrested at North Branch, Michigan, on Nov. 23, 1861, and imprisoned at Fort Lafayette. The examination is thus reported.

Mr. Wattles, with nine others, were first called up, and asked the following questions:

"When were you arrested?" "Where were you arrested?" "What is your age?" "*What were you arrested for?*" These questions were each answered by Mr. Wattles, except the last one, which he informed them was one he was as anxious to have answered as they could be. After asking him if he sympathized with the rebels, and a few similar questions, the Commission expressed themselves satisfied. Their secretary, however, was not so clear, and interposed to ask him if there was not a secession flag raised at North Branch, and if he did not participate in raising it? To this Mr. Wattles responded, that he heard that Isaiah Butler had an old shirt which he had used in straining blackberry juice for wine making, which he on an occasion exhibited as a secession flag, and that the story of this flag had travelled throughout the country, receiving additions as it went.

This closed the examination, and Mr. Wattles was

removed to the "house of detention," where he was retained until the day following, when he was again brought before the Commission and informed that he could have his liberty by signing the parole. He again expressed his willingness to sign after he could have an examination. Gen. Dix replied: "This is an examination that you have had." Mr. Wattles again demurred. He wished to return to his home free from all charges and suspicions; but as there was no other alternative, he concluded to sign.

The case of the Messrs. Flanders, of Franklin county, New York, contains some facts which took place at an earlier date, which have been thus reported:

Not long after the transfer of the prisoners from Fort Lafayette to Fort Warren, notice was given that on a certain day Mr. Seth C. Hawley would visit the fort for the purpose of ascertaining who among the persons confined there were willing to take the "oath of allegiance," as it was termed, as a condition, not of release, but of having their cases examined into and reported upon. This oath reads as follows:

"I do solemnly swear that I will support, protect, and defend the Constitution and Government of the United States against all enemies, whether domestic or foreign, and that I will bear true faith, allegiance, and loyalty to the same, any ordinance, resolution or law of any State, Convention, or Legislature to the contrary notwithstanding; and further, that I do this with a full determination, pledge, and purpose, without any mental reservation or evasion whatsoever; and further, that I will well and faithfully perform all the duties which may be required of me by law. So help me God."

The Messrs. Flanders united in a reply to this proposition, declining to take the prescribed oath for the following reasons:

"We have been guilty of no offence against the laws of our country, but have simply exercised our constitutional rights as free citizens, in the open and manly expression of our opinions upon public affairs. We have been placed here without legal charges, or, indeed, any charges whatsoever, being made against us, and upon no legal process, but upon an arbitrary and illegal order of the Hon. William H. Seward, Secretary of State of the United States. Every moment of our detention here is a denial of our most sacred rights. We are entitled to, and hereby demand an unconditional discharge; and while we could cheerfully take the oath prescribed by the Constitution of the United States, because we are, always have been, and ever intend to be loyal to that instrument (though at the same time protesting against the right of the Government to impose even such oath upon us as the condition of our discharge), we cannot consent to take the oath now required of us, because we hold no office of any kind under the Government of the United States, and it is an oath unknown to, and unauthorized by, the Constitution, and commits us to the support of the Government, though it may be acting in direct conflict with the Constitution, and deprives us of the right of freely discussing, and by peaceful and constitutional methods opposing its measures—a right which is sacred to freedom, and which no American citizen should voluntarily surrender. That such is the interpretation put upon this oath by the Government, and such its intended effect, is plainly demonstrated by the fact that it is dictated to us as a condition of our release from an imprisonment inflicted upon us for no other cause than that we have exercised the above specified constitutional rights."

After the Secretary of War, Mr. Simon Cameron, resigned in January, he was appointed minister to Russia. When he was nearly ready to embark for that country, on April 15th, a writ from the Supreme Court of Pennsylvania was served upon him at the suit of Mr. Pierce Butler for trespass, assault and battery, and false imprisonment on the 19th of August previous. At that time Mr. Butler was suspected of a correspondence with the Confederate States unfavorable to the cause of the Union, and during a moment of public excitement was arrested by order of Mr. Cameron, without process of law, and without any assigned cause, his trunks, drawers, wardrobe, and entire apartments searched, and private papers taken possession of by the United States marshal and four assistants. His office was also examined, his books and papers taken, and in one hour from the arrest he was on his way to New York, with the marshal and his assistants, all armed with revolvers, who conducted him that evening to Fort Lafayette. A subsequent application on the part of Mr. Butler's friends to the Secretary of War, to ascertain the reason of his action, though in a measure answered, induced no satisfactory response.

He asserted that nothing was found among his papers to call in question his loyalty to the Government, and in obtaining the writ he refrained from arrest and the demand for security from Mr. Cameron, as his wish was merely to test the constitutionality of his imprisonment. He was liberated five weeks from his imprisonment, without a reason being given for his discharge any more than for his arrest.

The following correspondence took place in consequence of this arrest:

PHILADELPHIA, *April* 16, 1862.

SIR: By the directions of Gen. Simon Cameron, I send you a summons issued by the Supreme Court of this State, at the suit of Pierce Butler *versus* Simon Cameron, July 1, 1862—November 17. The writ is returnable the first Monday of May, 1862, and is for trespass *vi et armis*, assault and battery, and false imprisonment.

The cause of action is no doubt founded upon the supposed misconduct of Gen. Cameron in causing the arrest of the plaintiff, Mr. Pierce Butler, and placing him in Fort Warren, or some other public fortification, without authority of law, while he, Gen. Cameron, was Secretary of War. As I am instructed, the act was not the act of Gen. Cameron, and was done by those who commanded it to be done for just reasons and for the public good.

You will please communicate the fact of the suit to the President and such other official persons as should properly be advised of it, and have such action taken as shall relieve the defendant, Simon Cameron, from the burden, cost, and responsibility of defending this suit.

By direction of Gen. Cameron, I have, as his private counsel, ordered my appearance for him, while I also invite and request the intervention of the proper authorities in his behalf and for his protection. I am, sir, truly, &c. BENJAMIN H. BREWSTER.

Hon. WILLIAM H. SEWARD, Secretary of State.

DEPARTMENT OF STATE,
WASHINGTON, *April* 18, 1862.

SIR: I have received your letter of yesterday, stating that, by directions of Mr. Simon Cameron, you transmit to me a summons issued out of the Supreme Court of the State of Pennsylvania, at the suit of Pierce Butler against Mr. Cameron, for trespass *vi et armis*, assault and battery, and false imprisonment, in causing the arrest of the plaintiff without authority of law.

This communication has been submitted to the President; and I am directed by him to say, in reply, that

he avows the proceeding of Mr. Cameron referred to as one taken by him when Secretary of War, under the President's directions, and deemed necessary for the prompt suppression of the existing insurrection.

The President will at once communicate this correspondence to the Attorney General of the United States, and also to Congress. I am, sir, your obedient servant, WILLIAM H. SEWARD.

BENJAMIN E. BREWSTER, Esq., Philadelphia.

A case bearing upon this point occurred a few years since in New York. It was that of Commander Hollins, against whom an action of trespass was brought in the New York Common Pleas on behalf of owners of property destroyed by him in his bombardment of Greytown, Nicaragua. The cause was removed into the United States Circuit Court, and argued before Mr. Justice Nelson on the point raised, that Hollins, as commander of the sloop of war Cyane, was acting under orders from his superior officer, the President of the United States, and therefore was not personally liable to the plaintiff. To this it was replied that the President had no power to declare war, and that therefore the act both of the President and Hollins was without show of authority, and both were guilty of injuring the plaintiff. The Court, after having had the matter under advisement for some time, ruled that the decision of the Executive was final, and justified Hollins in the execution of his orders.

Arrests still continued to be made, but under the form of military orders, of which the following is an instance: An order was issued by Maj.-Gen. Dix to a deputy provost marshal to arrest Richard Carmichael, judge of Talbot county court, Maryland, and Isaac Powell, the prosecuting attorney, on a charge of treason. Gen. Dix was at the time in military command at Baltimore. The arrest was made by the deputy marshal, McPhail, assisted by several officers from Baltimore. A military company was also detailed in view of threatened resistance, but their services were not used. The manner in which this arrest was made is thus related:

The marshal and his men went into the court house, where the Judge was presiding upon the bench, and ascending the place, told the Judge that he must consider himself under arrest and a prisoner. The Judge seemed astonished, and demanded the authority for such a proceeding, and was answered, by the authority of the United States Government. The Judge's reply indicated that he did not regard that authority under the circumstances of the case. Here a call was made for the sheriff of the county; and the crier of the court, seated near the window, was adding to the excitement, but was soon silenced with the threat that if he said another word he would be knocked down. Officer Bishop, receiving an order to take the Judge in custody, took hold of him, when the Judge kicked him. Bishop then drew a revolver, and with it struck the Judge upon the head several times. Others arrested Mr. Powell and two citizens named William Nabb and Elixir Pascault. The proceeding was prompt, decisive, and done in less time than is required to write an account of it. But the court room presented a most singular scene, all present being greatly excited. The members of the jury, who were sitting in the box, asked for directions as to what they should do, but getting no answer, soon left the building. The arrests having been made, Judge Carmichael was attended by a physician of the town, who dressed his wounds. The military soon made their appearance, and the whole party, after a short delay, marched to the landing, where a steamer was in waiting, and started for Baltimore. The boat stopped at Fort McHenry, and placed the prisoners in charge of Col. Morris, commanding the post.

Another instance is thus described:

Mr. William H. Offutt, a venerable citizen of Montgomery county, Md., was arrested at his home on May 23d, by order of Gen. Wadsworth, the military governor of the District of Columbia, and lodged in the Old Capitol as a "prisoner of State."

It seems that this gentleman had by a due process of law recovered a fugitive slave belonging to him under the laws of Maryland. On the ground that this slave had received a "military protection," Gen. Wadsworth sent a file of soldiers into Montgomery county, twenty-three miles from Washington, to demand the restitution of the person returned by the civil authority charged with the execution of the fugitive slave law. As the slave could not be produced, in consequence of his removal to another part of Maryland, the owner, Mr. Offutt, was arrested in his stead and brought to Washington, where, as before said, he was imprisoned at the "Old Capitol building."

Mr. Blair, the Postmaster-General, becoming aware of the facts, and being apprised of the estimable character of Mr. Offutt, as also of his approved loyalty, immediately procured his release from the custody in which he was held.

On the 24th of September, President Lincoln issued the following proclamation:

Whereas it has become necessary to call into service not only volunteers, but also portions of the militia of the States by draft, in order to suppress the insurrection existing in the United States, and disloyal persons are not adequately restrained by the ordinary processes of law from hindering this measure, and from giving aid and comfort in various ways to the insurrection,

Now, therefore, be it ordered—

First. That during the existing insurrection, and as a necessary measure for suppressing the same, all rebels and insurgents, their aiders and abettors, within the United States, and all persons discouraging volunteer enlistments, resisting military drafts, or guilty of any disloyal practice, affording aid and comfort to the rebels against the authority of the United States, shall be subject to martial law, and liable to trial and punishment by courts martial or military commission.

Second. That the writ of *habeas corpus* is suspended in respect to all persons arrested, or who are now, or hereafter during the rebellion shall be, imprisoned in any fort, camp, arsenal, military prison, or other place of confinement by any military authority, or by the sentence of any court martial or military commission.

In witness whereof, I have hereunto set my hand, and caused the seal of the United States to be affixed.

Done at the city of Washington, this twenty-fourth day of September, in the year of our [L. S.] Lord one thousand eight hundred and sixty-two, and of the independence of the United States the eighty-seventh.

ABRAHAM LINCOLN.

By the President:

WILLIAM H. SEWARD, Secretary of State.

This was followed soon after by an order from the Secretary of War, appointing a provost marshal general of the War Department, with headquarters in Washington; and one or more special provost marshals as necessity might require in each State, who were required to report to and receive instructions and orders from the provost marshal general. The chief

design of the order was stated to be the arrest of deserters. (*See*, for the order, ARMY OF THE UNITED STATES.)

The action of the civil courts during this state of affairs is illustrated by a few examples.

On the 18th of September, Isaac C. Thomas, a citizen of Bucks county, Penn., was arrested on a charge of discouraging enlistments. On the 20th John H. Cook, of Philadelphia, was arrested by authority of the following order, which is an example of those used in these cases:

WAR DEPARTMENT, WASHINGTON CITY, *Sept.* 19, 1862.

To BENJ. FRANKLIN, Esq., Chief of Police, Philadelphia:

Yours of the 17th instant and enclosed is received. You are hereby authorized to arrest John Cook upon the charge specified in the affidavits you sent. You will imprison him at the usual place of keeping in custody persons arrested for political offences, and report.

By order of the Secretary of War,
D. C. TURNER, Judge Advocate.

In the case of Thomas an application was made to Judge Cadwalader, of the United States District Court for the State of Pennsylvania, who on the 24th issued a writ of *habeas corpus*, returnable on the 26th. Similar action took place in the case of Cook, and both the parties accused were admitted to bail. The report of the proceedings of the court is as follows:

At the hearing, Mr. Knox, who, with Messrs. Coffee and Ashton, represented the marshal, filed a petition with a motion to quash the writ, citing the President's proclamation suspending the writ of *habeas corpus*. Mr. Knox contended that, under this proclamation, the judge could not interfere with the arrest.

Judge Cadwalader desired to hear an argument on the following points:

First. Whether a person who is not in the military service of the Government, and is not in a place where hostilities are actually pending or threatened, and is not at a place in military occupation, is liable to military arrest in a district in which the courts of ordinary civil and criminal jurisdiction are open for the regular administration of justice.

Second. Whether the third section of the act of 6th August, 1861, legalizing and making valid all the acts, proclamations, and orders of the President after 4th March, 1861, applies to his acts, proclamations, and orders of a similar character made after the enactment of that law; and if not, whether any other act of Congress has expressly or impliedly authorized the proclamation in question.

Third. Whether the President has the authority without or independent of any statutory authorization.

Mr. Knox contended that the burden of showing that the act of the President was not authorized, was with the other side. It was not incumbent upon him to show that the President had authority, as the judge must presume, until the contrary, that the act was lawful. He further contended that, if there was to be any postponement of the case, the accused should be remanded to the custody of the marshal.

Mr. Brewster, who, with Mr. Brooke, represented Mr. Thomas, stated that his client was amongst the most loyal of the citizens. He desired time to prepare an argument on the questions presented by the court.

Judge Cadwalader fixed Monday at noon for the hearing, and admitted the accused to bail to appear at that time.

On Monday, at the hour appointed, the cases of Isaac C. Thomas and John H. Cook, charged with disloyal practices, were called up, when the following proceedings took place:

Mr. Knox, representing the United States marshal, asked and obtained leave, in the case of Mr. Thomas, to withdraw the application, made a few days ago, to quash the writ of *habeas corpus*. He then presented the following return:

"*To the Hon. John Cadwalader, Judge of the District Court of the United States for the Eastern District of Pennsylvania:*

"Wm. Millward, the defendant in the within writ mentioned, for return thereto, respectfully states to your Honor that the said Isaac C. Thomas was arrested by him before the issuing of his writ, in pursuance of an order to that effect made by the Secretary of War, through L. C. Turner, Judge Advocate; and that immediately upon the issuing and service of this writ, the said Isaac C. Thomas was removed from the custody of the defendant by the order of your Honor, he having entered into recognizance, with sureties, for his appearance, and to abide the order of the Court in his behalf; and that he is not now, nor has he been since the time aforesaid, in the custody of the defendant; and the defendant further states that he has recently received directions from the War Department to discharge the said Isaac C. Thomas from the arrest aforesaid, and that he does not claim the custody of the relator. WM. MILLWARD.

"PHILADELPHIA, *Sept.* 30, 1862."

Mr. Knox also presented a return in a similar form in the case of Mr. Cook. He then said: In presenting these returns I desire to say that I knew nothing of these arrests until some time after they were made, and after the writs of *habeas corpus* had been issued by your Honor. Upon inquiry I learn that affidavits had been made making certain charges against these parties.

The Judge: Is it regular that, after these returns, I should hear any argument?

Mr. Knox: I do not propose to present an argument at all, but simply to make a statement. Affidavits had been made making charges against these parties. Those affidavits were forwarded to the War Department. That department, through the Judge Advocate at Washington, issued its orders for their arrest, one of the orders being directed to the chief of police of this city, the other to the marshal of the district. Upon receiving further information the proper authorities are satisfied that the public interests do not require that these persons should be further restrained of their liberty. Accordingly, the defendants have been instructed not to claim the further custody of the relators, without, however, conceding in any wise that, where a person is properly under military arrest, that arrest can be interfered with through the intervention of a writ of *habeas corpus*.

Mr. G. M. Wharton: We make no concession that there is any other "proper authority" than the judge of this court.

The Judge: These proceedings are ended by the returns. I regret that any subsequent remarks have been thought necessary. I have only to say to the respective petitioners that they are at liberty to depart and go whither they please.

About the same time a case occurred before the United States Court for the district including Vermont. Three persons had been arrested in Jericho, in that State, charged with disloyal practices, and imprisoned. A writ of *habeas corpus* was issued by Judge Smalley in behalf of one of these men. On the return day the marshal appeared before the court without the prisoner, and made return that the prisoner was detained under an order of the War De-

partment, dated August 8, suspending the writ of *habeas corpus* in such cases. The judge stated that "whether the President has the right to suspend the writ of *habeas corpus* without appealing to Congress was a controverted question. In his opinion the President has that power in cases of important military exigency; but be that as it may, that the Secretary of War and his subordinates have no power to suspend the writ; that the return of the marshal is not a compliance with the writ, and that unless within four hours the prisoner be produced in compliance with the order of court, he should issue a further order requiring the United States marshal and sheriff to show cause at the next term of the circuit court, on the 3d of October next, why an attachment should not issue against them for contempt of court."

The final decision of the court in this case was reported in substance as follows:

That the orders of the War Department under which the men against whom treason was alleged were arrested were in violation of the provisions of the Constitution of the United States, and were therefore illegal and void.

That if, under the provisions of the Constitution, the President of the United States had the power to suspend the writ of *habeas corpus*, he could not delegate that power to his subordinate officers.

That the Constitution made the President commander-in-chief of the military forces of the United States, and that this, with the provisions of the laws of 1795, which had been declared to be constitutional, conferred upon the President power to declare martial law, and martial law having been declared by the President's proclamation of the 24th of September, *ipso facto* the writ of *habeas corpus* was now suspended.

Therefore, if the said Field was now produced before the court, he could not be discharged, but would have to be remanded to the custody of the marshal.

On the 1st of September, however, when these proceeding were instituted against the marshal, the writ of *habeas corpus* was not lawfully suspended, and it was no justification to him that he acted under the orders of the War Department, those orders having been issued without the authority of law.

Marshal Baldwin was accordingly declared guilty of contempt of court, and fined one hundred dollars, which fine he paid.

In the State of New Hampshire, Nathaniel Batchelder, having been arrested on charges of disloyal speeches and practices by some of his fellow citizens, and imprisoned in Fort Constitution, on the 8th of September he applied to Chief Justice Bell, of the Supreme Court of the State, for the writ of *habeas corpus*. It was promptly granted, and served on the United States marshal, Mr. Ela. On the 19th Mr. Ela appeared before the court with counsel, Mr. Daniel Clark of the U. S. Senate, to make a return of the writ, and produced the following letter:

JUDGE ADVOCATE GENERAL'S OFFICE, *Sept.* 13, 1862.

HON. JACOB H. ELA, U. S. Marshal, Rochester, N. H.

SIR: Your telegram to the Secretary of War, under date of the 10th instant, relative to the writ of *habeas corpus* issued in the case of Nathaniel Batchelder, arrested for disloyal practices, has been referred to this office for reply.

The Secretary of War directs me to inform you that, by an order issued under the authority of the President of the United States, a printed copy of which is enclosed, the writ of *habeas corpus* has been suspended in all cases of arrests for "disloyal practices," to which class of offences that of Nathaniel Batchelder manifestly belongs. The Secretary instructs me to say that to the writ of *habeas corpus* issued by Chief Justice Bell you should return these facts as your warrant for holding the prisoner in custody. Should any attempt be made, after the return, to release the prisoner by the civil authority, which is not anticipated, the Secretary directs that you appeal for support and protection, in the discharge of your duties, to the military force of the United States in your vicinity.

Very respectfully, your obedient servant,

J. HOLT, Judge Advocate General.

After an argument by counsel, the chief justice stated that it seemed to him to be inexpedient and useless to the prisoner to issue an order for an attachment which could not be enforced; that the Government of the United States had plainly expressed their determination to resist by force any attempt of the civil authority to deliver the prisoner, and that he received this not as a threat, but as the announcement of a settled resolution, which, with the vast armies under their control, they had the ability to execute against any power which the State could command for the enforcement of the law. He, therefore, declined to take further action in the case.

In Wisconsin a case occurred in which one Nicholas Kemp was arrested, and a writ of *habeas corpus* was granted, to which a return similar to those in the preceding cases was made. Issue was taken on the sufficiency of the return, and Chief Justice Dixon gave the unanimous opinion of the Supreme Court of the State, as follows:

This case pertains to the power of the President under the constitution and laws of the United States in time of civil war to suspend the writ of *habeas corpus*, declare martial law, and to arrest and cause to be punished by the sentence of a court martial or military commission, citizens charged with offences against the laws and regulations of war. It goes one step further; it involves the power of the President to declare and punish as offences those acts which are not made such by acts of Congress. These are emphatically questions of Federal cognizance, and which must, in the last resort, be determined by the Supreme Court of the United States, and I repeat my regret that it has become my duty to decide upon them at all.

I have, however, this encouragement, that for my errors there is a remedy, which though slow and sometimes embarrassed by State opposition, is nevertheless such as Congress has seen fit to provide. And this consideration, that our decision is preliminary and not final—that we merely prepare the way for the determination of the court which can alone settle the law, will relieve me from that extended discussion of the questions which their gravity and importance would otherwise seem to demand. The only motives to such a discussion are to show that I have not passed lightly over the grounds of my opinion—that I have not assumed to deny the legality of the acts of the President without a careful and deliberate examination of the whole subject, and these I must suffer to rest upon the assertion that I have given the questions the fullest consideration that my time and limited opportunities would permit. I am also led to this course because I cannot regard the principles involved as either new or doubtful.

They are, in my judgment, settled, so far as any matters of judicial inquiry can be said to be settled before a court not authorized finally to determine the

law for itself, by the uniform decisions of the courts and the concurrent opinions of eminent jurists and statesmen. I say matters of judicial inquiry, because I observe that a distinction has been attempted by the present learned Attorney General of the United States between *judicial* questions and *political* questions. I question the soundness of that distinction, and without particular criticism, feel myself obliged, for the present and until it has received the sanction of the Federal Supreme Court, to disregard it. I am acting in judicial capacity and must be governed by the established rules and maxims of the courts.

I may furthermore add that the principles involved have recently been the subjects of most profound and elaborate argument by several most able lawyers and judges. I refer to the opinion of Chief Justice Taney, in *ex parte* John Merryman, 9th American Law Register, 524; the article entitled "*Habeas Corpus* and Martial Law," "North American Review," Oct., 1861, pp. 471 to 519, supposed to be from the distinguished pen of Professor Parker of Cambridge; the argument of Judge Curtis of Boston, entitled "Executive Power," pamphlet, Boston, Little, Brown & Co., 1862; and the opinion of Judge Hall, of the Northern District of New York, in the matter of Judson D. Benedict. I might under any circumstances, without repeating the arguments, content myself with a reference to these as a complete vindication of the conclusions at which I have arrived, and which I will proceed to state in as few words as possible.

And, first, I think the President has no power, in the sense of the ninth section of the first article of the Constitution of the United States, to suspend the privilege of the writ of *habeas corpus*. It is, in my judgment, a legislative and not an executive act, and the power is vested in Congress. Upon this question, it seems to me that the reasoning of Chief Justice Taney in *ex parte* Merryman is unanswerable; and in saying this, I accept as just the strictures of Professor Parker, in the article referred to, upon the decision there made. I agree that there is a plain distinction between the suspension of the writ in the sense of the clause of the constitution and the right of a military commander to refuse obedience when justified by the exigencies of war, or the *ipso facto* suspension, which takes place wherever martial law actually exists, which the Chief Justice seems to have overlooked.

But this kind of suspension, which comes with war and exists without proclamation or other act, is limited by the necessities of war. It applies only to cases where the demands upon the officer's time and services are such that he cannot, consistently with his superior military duty, yield obedience to the mandates of the civil authorities, and to cases arising within districts which are properly subjected to martial law. In cases of the latter description, it is probable that the civil magistrates would be bound to take judicial notice of the existence of martial law by which their functions are so far suspended; but as to the former, it would seem that the military officer should, if practicable, make return of the facts showing his excuse. The respondent in this case has made no such return, and this brings me to the next question.

Does martial law prevail at the present time in the State of Wisconsin? In using these words I adopt the distinction taken by Judge Curtis between military law and martial law; applying the former to those rules enacted by the legislative power for the government and regulation of the army and navy, and the militia when called into the actual service of the United States, and the latter to that government and control which military commanders may lawfully exercise over the persons and property of citizens and individuals not engaged in the land or naval service. Upon this question I entertain as little doubt as upon the other. I think it does not.

The powers of the President as Commander-in-Chief of the army and navy in time of war are strictly constitutional powers, so denominated by John Quincy Adams, who, I believe, has taken as broad ground in favor of the powers of war as any American statesman or jurist. They are derived from the Constitution in the authority given to Congress to carry on war, and though not defined by that instrument, they are limited by the laws and usages of nations adopted in their full extent by the common law of England (4 *Bl. Com.* 67) and of this country. Of those laws and usages there is no principle better settled in modern times, as respects free or constitutional governments, than that martial law is restricted to those places which are the theatre of war and to their immediate vicinity. Modified by the necessities of war it is obvious it cannot operate beyond these bounds.

The precise limits of the jurisdiction of the military commander in cases arising near the scene of the strife may be a question for discussion, to be determined according to circumstances; but over remote districts and those not immediately connected with the operations of the contending armies, all courts and writers concur in saying that martial law cannot be extended. The true test in case of civil war would seem to me to be whether the civil authorities are able by the ordinary legal process, to preserve order, punish offenders, and compel obedience to the laws. If they are, then the military commander has no jurisdiction. If, on the other hand, through the disloyalty of the civil magistrates or the insurrectionary spirit of the people, the laws cannot be enforced and order maintained, then martial law takes the place of civil law whenever there is sufficient military force to execute it.

The resistance in which the petitioner was implicated was riotous but not insurrectionary. Saving the definition of martial law, which I think too broad, preferring that given by Professor Parker on page 501, I commend the views of Judge Curtis upon this question, not only for their general force and accuracy, but for the spirit of candor and sympathy for the national executive in these times of our trouble, and of patriotic devotion to country evinced by the learned author, which should characterize the criticism of all loyal citizens.

The power of the President to prescribe offences, or to make rules for the conduct of citizens in districts not subject to martial law, and to enforce them by fines or imprisonment, by whatever form of trial, I think not a question of discussion. This power, whenever possessed by the Federal Government, resides in Congress. Whether under the fifth article of the amendments to the Constitution, Congress declaring the offence, might have vested the jurisdiction in a court martial or military commission, in the case of the present petitioner, I need not inquire. Nothing of that kind has been done, and he seems not to be charged with any offence known to the laws of Congress.

These I believe to be the real questions presented, and in stating my convictions of the law I desire to add that they are given without the slightest disrespect to the President, who has, in all his actions, been governed by the highest motives of patriotism, public honor, and fidelity to the Constitution and laws. Penned at the gloomiest period of our public misfortunes —when over fifty thousand of the noblest of the land, answering the summons, had fallen a sacrifice to the sacred cause of our nationality—when one division of the army of the Union, already most sadly repulsed, was threatened with complete overthrow by superior, almost irresistible numbers, and another, broken and wavering, was retiring before the resistless and implacable foe—when the only way to national life, honor, and peace, lay through the fire and blood of battle—and when, in response to a recent call for additional forces, instead of the utmost loyalty and patriotism on the part of every citizen of the loyal States, each asking where he could be most useful or how he could best promote the welfare and safety of his country, there was reason to apprehend, in some quarters, factious and disloyal opposition—the proclamation in question is not a welcome subject of criticism.

As not unfrequently happens in the affairs of war, it is easier, sometimes most painfully so, with time for deliberation, to point out mistakes after they are committed, than to see and avoid them amid the difficul-

ties and dangers by which the military commander is at the moment surrounded. If, under these circumstances of national and executive embarrassment, the President has transcended his lawful authority, he has committed an unintentional error, which he will be the first to repair and the last to vindicate. My duty, however, compels me to judge his acts, not by his intentions, but by the Constitution and laws, giving a fair and reasonable scope to all the powers which they confer upon him.

It follows that in my judgment the return of Gen. Elliot shows no sufficient cause for the detention of the petitioner or why he should refuse to produce his body before this Court; but as the issuing of the attachment at the present time may lead to serious and most unfortunate collisions, which it is possible to avoid by a short delay, I deem it advisable, adhering to the precedent set by other Courts and Judges under like circumstances, and out of respect to the national authorities, to withhold it, until they shall have had time to consider what steps they should properly take in the case.

Many other cases of applications to the courts for the writ of habeas corpus occurred; in some of which it was granted, and in others, refused.

The arrests, some of which were flagrant, attracted so much attention that they exerted an influence upon the State elections near the close of the year, in which the Administration party was very seriously defeated. Released prisoners on their return to their residences were in many instances received with immense popular demonstrations.

On the 22d of November, therefore, the following order was issued by the War Department:

WAR DEPARTMENT,
WASHINGTON, *Nov.* 22, 1862.

Ordered—1. That all persons now in military custody, who have been arrested for discouraging volunteer enlistments, opposing the draft, or for otherwise giving aid and comfort to the enemy, in States where the draft has been made or the quota of volunteers and militia has been furnished, shall be discharged from further military restraint.

2. That persons who, by the authority of the military commander or governor in rebel States, have been arrested and sent from such State for disloyalty or hostility to the Government of the United States, and are now in military custody, may also be discharged upon giving their parole to do no act of hostility against the Government of the United States, nor render aid to its enemies. But all such persons shall remain subject to military surveillance and liable to arrest on breach of their parole. And if any such persons shall prefer to leave the loyal States on condition of their not returning again during the war, or until special leave for that purpose be obtained from the President, then such person shall at his option be released and depart from the United States, or be conveyed beyond the military lines of the United States forces.

3. This order shall not operate to discharge any person who has been in arms against the Government, or by force and arms has resisted or attempted to resist the draft, nor relieve any person from liability to trial and punishment by civil tribunals, or by court martial or military commission, who may be amenable to such tribunals for offences committed.

By order of the Secretary of War:
E. D. TOWNSEND, Assistant Adjutant General.

Indictments were now found in some of the States against the individuals who had executed these orders to arrest. In New Jersey the grand jury of Hunterdon county found bills of indictment against the U. S. marshal and his aids, for arresting a citizen of that county. The marshal and his aids were arrested and put under bonds to appear at the term of the court in April, 1863. Similar proceedings took place in Ohio. The Congress subsequently in session passed an act authorizing President Lincoln to suspend the writ of habeas corpus, etc.

HARRISONBURG, the capital of Rockingham county, Virginia, is a small village situated in a fertile country, west of the southern termination of the Massanutten mountain. It is near Cross Keys, the scene of the battle between Gens. Fremont and Jackson, in the retreat of the latter from the pursuit of Gen. Banks across the Potomac. The population was about 1,500. It is the termination of the Manassas Gap railroad.

HOGG, THOMAS JEFFERSON, Esq., born at Norton, in the county of Durham, May 24, 1792, died at his residence, Clifton-road, St. John's Wood, August 27, 1862. He received the principal part of his education at the Royal Grammar School of Durham, under the late Rev. Dr. Britton, who was famed for the many able scholars he had sent to both universities. In January, 1810, he entered University College, Oxford, where commenced his intimate acquaintance with Percy Bysshe Shelley, whose biography he has not lived to complete. He was admitted to the bar at the Middle Temple in 1817, and for many years regularly attended the assizes and quarter sessions. In 1833 he was appointed one of the Municipal Corporation Commissioners for England and Wales, and subsequently, for more than twenty years, was the revising barrister for Northumberland and the northern boroughs. Few English scholars could surpass him in his thorough acquaintance with Greek and the Grecian authors, and he was also well read in the modern languages —German, French, Italian, and Spanish. He was the author of "Two Hundred and Nine Days; or, The Journal of a Traveller on the Continent," several essays in the "Edinburgh Review" and other periodicals, and two able articles in the last two editions of the Edinbugh "Encyclopædia Britannica"—viz., "Alphabet" and "Antiquities."

HOLLY SPRINGS, the capital of Marshall county, Mississippi, was a flourishing and beautiful village, 210 miles north of Jackson, the capital of the State, and situated on the railroad from New Orleans to Columbus, near Cairo, on the Ohio, called the Mississippi Central. It has been noted for the excellence of its schools and the intelligence of its inhabitants, and contains several churches and one bank. It was involved in the military operations of the year, and occupied by the Federal forces at two different periods. (*See* ARMY OPERATIONS.) Its population was about 5,000.

HOPE, Rev. FRED. WM., a clergyman of the Church of England, born in Portman-square, London, Jan. 3, 1797, died at the same place, April 15, 1862. He was educated at Christ

Church College, Oxford; graduated in 1820, and was ordained to the curacy of Frodesley, Shropshire. His health, however, proving insufficient for the duties of his profession, he was obliged to relinquish it, and henceforth turned his attention to scientific pursuits, for which he had a peculiar fondness. While in college he had devoted much attention to geology, and especially entomology, and, after leaving Oxford, pursued his zoological studies with great earnestness, extending his researches to every branch of animated nature. His success as a collector of English insects was very great, repeated reference being made to them in Stevens' great work on English insects and several other valuable publications upon that department of science. He did not, however, confine his attention to the insects of his own country, but formed, at great expense, an extensive collection, which became famous on the Continent for the numerous Indian, African, and Asiatic rarities amassed together. He was connected with several scientific societies, and his frequent contributions to their publications were of great value. His investigations followed the subject in all its branches, practical and historical. During the latter part of his life his health required a residence in the warmer parts of Europe, where he added to his collections fishes, crustacea, &c., as well as birds and shells. In 1849 he executed a deed of gift, making over his whole collection, as well as his library and engravings, to the University of Oxford, with a view of promoting the study of natural history in that institution. His donation likewise comprises one of the largest collections of engraved portraits and topographical illustrations ever formed. Of these the portraits cannot be fewer than 140,000, and the engravings of all kinds 100,000. The former are arranged in series, and composed of royalty, nobility, clergy, lawyers, statesmen, military and naval officers, authors, painters, sculptors, philosophers, medical professors, zoologists, botanists, geologists, &c. In the year 1855, the first stone of the new museum at Oxford was laid, on which occasion the honorary degree of D. C. L. was conferred on him by the university. In 1861, Mr. Hope further testified his devotion to the university by endowing a professorship of zoology.

HORNE, Thomas Hartwell, D. D., an English clergyman and author, born in London, October 20, 1780, died in the same city, January 27, 1862. His father was a barrister's clerk in the office of Mr. Graham, afterward one of the barons of the exchequer. Young Horne was educated at Christ's Hospital School, and made excellent proficiency in his studies; but, at the death of his father, when he was fifteen years of age, he was compelled to enter upon a life of labor for his own support and that of his younger brothers and sisters. For ten years he worked as a barrister's clerk for different employers, occupying his leisure hours, often far into the night, in study and literary labor. He very early experienced some disquietude from the infidel views prevalent at that period, and, having settled in his own mind the question of the authenticity and inspiration of the Scriptures, he sought to aid others, and published, when about twenty years of age, a "Brief View of the Necessity and Truth of the Christian Religion," in two vols. 8vo., which, obscure as its author was, passed through several editions, and led to his subsequent great work. From this time onward, for the next fifteen or twenty years, he occupied his leisure hours (being employed through the day regularly as a barrister's clerk till 1806, for the next three years as private secretary to Joseph Butterworth, Esq., and from 1809 to 1823 as sub-librarian of the Surrey Institution) in editing or compiling a great number of works upon the most miscellaneous subjects, in order to add to his slender income the means of educating his brothers and sisters. It is said that at least 50 separate works were thus prepared by this patient toiler. In 1824 he received the appointment of senior assistant librarian in the department of printed books at the British Museum, which he retained till 1860. It was while connected with the Surrey Institution that he prepared and published the first edition of his great work, "An Introduction to the Critical Study and Knowledge of the Holy Scriptures," London, 3 vols. 8vo, 1813. This work was at once adopted in Europe and America as a text book for theological students, and brought its author into notice. It passed, during the author's lifetime, through ten successive editions, being brought up to the latest results of biblical criticism, and the last edition, issued in 1860, was in four bulky quartos. Over 15,000 copies were sold in England during Mr. Horne's life, and it was republished in several editions in the United States, and translated into most of the languages of Europe, and several of those of India. An abridgment of it, by the author, had also a very large sale. In 1819, Mr. Horne was ordained by Dr. Howley, then Bishop of London, to the curacy of Christ Church, Newgate-street, and subsequently became assistant minister at Wilbeck Chapel. In 1833, Dr. Howley, then Archbishop of Canterbury, appointed him to the living of a small church in Lombard-street, which he held till his death. The University of Pennsylvania conferred on him the degree of D. D.

HUNTSVILLE, the capital of Madison county, Alabama, is a beautiful town, situated on the Memphis and Charleston railroad, 116 miles south by east of Nashville. It contains numerous fine edifices of stone, churches and seminaries, and had a population of about 4,500. It was occupied during the night of the 8th of April by a division of Federal troops, under Gen. Mitchell. This was done so quietly that the unsuspecting inhabitants were not aware of what had taken place until the troops were in peaceable possession, when consternation seized them.

I

ILLINOIS, one of the most fertile States of the West, bounded on one side by the Mississippi river and on another by the Ohio; has increased in population 860,481, in the ten years ending in 1860, when the total population was 1,711,981. The population of some of the cities of the State was as follows:

Cities.	1850.	1860.	Increase.
Chicago	29,963	109,260	79,297
Alton	3,585	7,338	3,753
Freeport	1,436	3,529	2,093
Galena	6,004	8,193	2,189
Pekin	1,678	3,467	1,789
Peoria	5,095	14,045	8,950
Quincy	6,902	13,632	6,730

The number of white males was 898,941, do. females 805,350.

The number of deaths in the State during the year ending May 31, 1860, was 19,263. The most fatal diseases were consumption, croup, dysentery, fevers, and pneumonia.

The number of deaf mutes was 801.

The industrial products of the State were during the year ending June 1, 1860, as follows: iron founding, $605,428; coal, $964,187; lead, $72,953; lumber, $2,275,124; flour and meal, $18,104,804; spirits, $3,204,176; malt liquors, $1,309,180; leather, $150,000; boots and shoes, $963,052; furniture, $873,609. Annual product, $56,750,000.

The value of real and personal property was $871,860,282: increase in ten years $715,595,276. The cash value of farms was $432,531,072; do. farming implements and machinery, $18,276,160. Land improvements, $13,251,473.

Some of the most important productions of agriculture were as follows: horses, 575,161; asses and mules, 38,881; milch cows, 532,731; working oxen, 90,973; other cattle, 881,877; sheep, 775,230; swine, 2,279,722; value of live stock, $74,434,621.

Wheat, 24,159,500 bush.; rye, 981,322 bush.; corn, 115,296,779 bush.; oats, 15,336,072 bush.; tobacco, 7,014,230 pounds; cotton, 6 bales of 400 pounds each; wool, 2,477,563 pounds; peas and beans, 112,624 bush; potatoes, Irish, 5,799,964 bush.; do. sweet, 341,443 bush.; barley, 1,175,651 bush.; buckwheat, 345,069 bush.; value of orchard products, $1,145,936; butter, 28,337,516 pounds; cheese, 1,595,368 pounds; hay, 1,834,265 tons.

There were 23 daily, 1 biweekly, 6 triweekly, 228 weekly, and 1 monthly political newspapers published in the State; and 5 weekly and 6 monthly religious newspapers.

The crops in the State during 1862 were abundant as usual, and with the loss of the Southern market in consequence of the war and the high price of transportation by railroad to the Eastern markets and the abundance of other freight, corn became at some points almost valueless, and was used as an article of fuel.

The convention elected at the close of 1861 to draft a new constitution for the State, assembled at Springfield in the beginning of January, 1862, and continued in session about three months. The constitution of the State then in force was adopted in 1841–'2, when the population of the State was about 478,183. In some of its details it was not suitable to the altered circumstances of the people. The instrument prepared by the convention failed to receive the votes of a majority of the people when submitted to them, and therefore did not go into operation. It extended the jurisdiction of the county courts; the finding of a jury was unnecessary for the prosecution of offences not punishable by imprisonment in the penitentiary; each county was to elect a prosecutor or county attorney. The number of members of the Legislature was increased from one hundred to one hundred and thirty-five. The restriction of the existing constitution upon the expenditures was wisely omitted in the new instrument. No fundamental law can be drafted with such foresight as to anticipate all future contingencies, and these restrictions have always led to embarrassment and subterfuge in legislation. The term of the office of governor was limited to two years, instead of four; soldiers in the field were allowed to vote. It secured a lien to the mechanic, also certain rights to married women, and an exemption of the homestead from execution for debt. It forbade any negro or mulatto to migrate or settle in the State after its adoption. It provided that no negro or mulatto should have the right of suffrage or hold any office in the State. It prohibited the creation of any banking corporation or association, and withheld from the General Assembly power to pass any law reviving, enlarging, extending, or renewing the charter of any existing bank or banking corporation. It prohibited the circulation within the State of any bank note, check, or draft as money, of a less denomination than ten dollars, and after the year 1864, of a less denomination than twenty dollars, and after the year 1866, of any bank note, check or draft of any denomination whatsoever, as money. It also contained the following addition to the Bill of Rights:

Sec. 30. The people of this State have the exclusive right of governing themselves, as a free, sovereign, and independent State, and do, and forever shall, enjoy and exercise every power pertaining thereto, which is not, and may not hereafter be, by them, expressly delegated to the United States of America, or prohibited to the State by the Constitution of the United States.

This expresses very clearly the views of the American people on the important question of State Rights, but, to avoid any, even the slightest misunderstanding, the convention also inserted this section immediately after the preceding:

SEC. 31. That the people of this State regard the Union of the States, under the Federal Constitution, AS PERMANENT AND INDISSOLUBLE, from which no State has a constitutional right to withdraw or secede.

These two sections embody the principle. They clearly define the distinction between the State and the Federal Governments, the preservation of which has justified the beautiful expression in regard to this system that the States, under the Federal Government, are "distinct as the billows, yet one as the sea."

In relation to negroes the constitution of the State has for some years contained the following provision:

ART. 14. The General Assembly shall at its first session under the amended constitution pass such laws as will effectually prohibit free persons of color from immigrating to and settling in this State, and to effectually prevent the owners of slaves from bringing them into this State for the purpose of setting them free.

This constitution was submitted to the electors of the State in June for their approval. Some of its provisions were also submitted separately. The result of the vote of the people was as follows:

For the new constitution	125,050
Against the new constitution	141,113
For the article prohibiting banks	126,588
Against the article prohibiting banks	130,339
For the exclusion from the State of negroes and mulattoes	171,896
Against the exclusion of negroes and mulattoes	71,306
Against granting the right of suffrage or office to negroes or mulattoes	211,920
In favor of granting the right of suffrage or office to negroes or mulattoes	35,649
For the enactment of laws to prevent negroes and mulattoes from going to and voting in the State	198,988
Against the enactment of laws to prevent negroes and mulattoes from going to and voting in the State	44,414
For Congressional apportionment	125,740
Against Congressional apportionment	132,970

Thus while some of the provisions of the new constitution received a majority of the votes cast and were thereby approved, yet the instrument entire was rejected.

The only movement of importance in political affairs related to the choice of members of Congress at an election held on the 14th of October, and members of the State Legislature. The State being entitled to an additional member of Congress, under the new apportionment of Congress, and as the election took place before any session of the Legislature by which the State might be redistricted, this additional member was chosen by the electors of the whole State. A treasurer and superintendent of public instruction were also chosen by the electors of the whole State.

As usual, the questions of national politics formed the issue of the election, and the respective parties, of which there were two, held their conventions, nominated their candidates, and made their declaration of principles.

The Republican Convention assembled at Springfield, on Sept. 24. B. C. Cook was chosen president. It nominated E. C. Ingersall for congressman at large, Newton Bateman for superintendent of public instruction, and Wm. Butler for treasurer, and adopted the following declaration of principles:

Whereas, The Government of the United States is now engaged in the suppression of a rebellion, the most causeless that has ever occurred in the history of nations; and whereas the successful and immediate suppression of the same demands the united and hearty coöperation of all loyal citizens, we, therefore, the Union men of the State of Illinois, do proclaim the following as the basis of our action:

Resolved, That we acknowledge but two divisions of the people of the United States in this crisis—those who are loyal to its Constitution, and are ready to make every sacrifice for the integrity of the Union and the maintenance of civil liberty within it, and those who openly or covertly endeavor to sever our country or to yield to the insolent demands of its enemies—that we fraternize with the former and detest the latter; and that, forgetting all our former party names and distinctions, we call upon all our patriotic citizens to rally for one undivided country, one flag, one destiny.

Resolved, That the preservation of constitutional liberty, the integrity of American soil, and the memories of three fourths of a century of peace and prosperity, such as before were never exhibited in the world's history, demand the prosecution of this war to whatever extent it may be necessary, or at whatever sacrifice may be required.

Resolved, That we cordially endorse the proclamation of freedom and confiscation of the President, issued September 22, 1862, as a great and imperative war measure, essential to the salvation of the Union; and we hereby pledge all truly loyal citizens to sustain him in its complete and faithful enforcement.

Resolved, That all laws now in force, passed for the purpose of crippling the latent resources of the rebellion, by confiscating the property of rebels, meet the hearty concurrence of this convention; and we shall hold all officers, both civil and military, responsible for a strict and vigorous enforcement of the same.

Resolved, That the maintenance of the Government and the preservation of national unity are the great end and purpose of the present war, and to accomplish these the rights of person and property in all sections of the country should be subordinate.

Resolved, That we admire and heartily commend the patriotic and efficient aid rendered by loyal Democrats to the present Administration, while we deprecate the course of political leaders, representing party organization, in finding fault with the Administration in the prosecution of the war, while they studiously avoid being harsh toward the conspirators of the South who are now attempting to sweep down the last vestige of constitutional liberty.

Resolved, That, while we are in favor of a system of direct taxation to any extent necessary to suppress the rebellion, maintain the public credit, and pay the interest on the national debt, we are, nevertheless, in favor of such modifications of the present law as may be found necessary to make it equitable in its operation.

Resolved, That, regarding the construction of a ship canal connecting the Mississippi and the lakes as a work of great national importance, demanded alike by military necessity and the wants of commerce, and calculated to unite more closely the different sections of our country, we would urge upon our representatives in Congress to use their best efforts to secure the passage of an act for the speedy accomplishment of this great national work.

Resolved, That the governor of this State, in his zealous and efficient labors to bring into the field the full quota of Illinois troops, and in the effort he has made to provide our soldiers with things necessary for their comfort, when sick and wounded, deserves and should receive the commendation and gratitude of the entire people of the State of Illinois.

Resolved, That the volunteers of this State who have so patriotically perilled their lives in the defence of our common country are entitled to the lasting gratitude of the people, and we hail with especial delight their noble heroism exhibited on every battle field from the Potomac to the Kansas.

The candidates nominated by the Democratic Convention were—for congressman at large, James B. Allen; for superintendent of public instruction, John P. Brooks; for treasurer, Alexander Starne.

As it is important only to show the chief points of national interest upon which the two parties were divided at this election, reference is here made to the resolutions adopted by the Democratic Convention in Indiana, on page 527, as illustrative of this difference of views with sufficient clearness. Both conventions were members of one and the same great party.

The votes of the citizens at the elections were given as follows:

The Republican vote for Congressman at large was	119,764
The Democratic vote for Congressman at large was	136,060
Democratic majority	16,299
The Republican vote for Treasurer was	120,116
The Democratic vote for Treasurer was	136,662
Democratic majority	16,546

The votes for members of Congress were given as follows:

	Republican.	Democratic.
1st district	9,966	8,206
2d "	12,612	4,785
3d "	10,496	6,785
4th "	8,711	11,626
5th* "	11,683	11,020
6th "	10,604	8,419
7th "	10,004	11,371
8th "	11,443	12,808
9th "	No candidate	13,391
10th "	7,712	14,259
11th "	5,523	13,644
12th "	6,854	10,990
13th "	4,290	9,497

The Republicans elected three, and the Democrats eleven, members of Congress. The Legislature was elected as follows:

	Senate.	House.
Democrats	13	56
Republicans	12	29

At the election in Chicago, the largest city of the State, for mayor, in April, 1862, the votes were cast as follows:

	1862.	1861.
Democrat	7,509	6,601
Republican	6,186	8,274

The governor of the State is Richard Yates, whose term of office expires Jan. 1, 1865; the Secretary of State is Ozias M. Hatch, whose term expires at the same time. The debt of the State is $12,337,381. The number of banks in the State at the close of the year was 18. Their circulation was fully secured.

The number of regiments sent by the State into the service of the United States, to the close of 1862, was 130 of infantry, 16 of cavalry, and 2 regiments and 7 batteries of artillery. The State has promptly furnished the troops called for by the Federal Government, without any drafting.

ILLUMINATION, Gas and Oils. Under this head will be presented certain important and recent additions to our knowledge respecting the materials employed for purposes of illumination, and also some of the latest processes in connection with the preparation of burning oils and of illuminating gases.

* 613 Independent.

Igniting Point of Coal Gas.—Dr. E. Frankland has, in the "Journal of Gas-Lighting," &c., No. 250, a paper detailing very fully the experiments and observations of different authorities on the subject named; the following being the conclusions to which he is led:

1. Coal gas cannot, even under the most favorable circumstances, be inflamed at a temperature below that necessary to render iron very perceptibly red hot by daylight in a well-lighted room. But this temperature is considerably below a red heat visible in the open air on a dull day.

2. This high igniting power of coal gas under all circumstances, is due in a great measure to the presence of olefiant gas and luminiferous hydrocarbons.

3. The igniting point of explosive mixtures of the gas of coal mines is far higher than that of similar mixtures of coal gas; consequently, degrees of heat which are perfectly safe in coal mines, may ignite coal gas; and the safety-lamp is hence much less safe in coal gas than in fire-damp.

4. Explosive mixtures of coal gas and air may be inflamed by sparks struck from metal or stone. Thus, an explosion may arise from the blow of the tool of a workman against iron or stone, the tramp of a horse on pavement, &c.

5. Explosive mixtures of coal gas may also be ignited by a body of a comparatively low temperature, through the medium of a second body, whose igniting point is lower than that of coal gas. Thus, sulphur, or substances containing sulphur, may be inflamed far below visible redness; and the contact of iron below a red heat with very inflammable substances, such as cotton waste, may give rise to flame, which will then, of course, ignite the gaseous mixture.—The full paper appears in the "Jour. of the Franklin Inst.," Aug. 1862.

Origin and Treatment of Petroleum: Uses of its Products.—The following instructive summary relative to the points indicated, is from a communication to the "Scientific American," by a member of the Chemical Society of Schenectady, N. Y.:

In regard to the origin of petroleum (rock oil), scientific authorities differ; but the theory most generally favored is, that it is the product of the slow distillation, at low temperatures, of organic matter in the interior of the earth; the vapors being condensed in certain fissures and the surrounding soil. The lake of Trinidad and the bituminous matter of the Dead Sea may also be referred to a similar source. But for how many centuries must this operation have been going on, to have effected such enormous results!

Of the many uses to which petroleum and its derivatives are applied, that of illumination is the most important; and the process of refining is exceedingly simple. The crude material is put into a large iron retort, connected with a coil of iron pipes surrounded by cold water,

called the condenser. Heat is applied to the retort, and from the open extremity of the condenser, a light colored liquid of a strong odor soon flows. This is naphtha, and is very volatile and very explosive. Some refiners mix it with the burning oil, and numerous accidents have resulted from such mercenary indiscretion. It is usually run into a separate tank. After the naphtha has passed over, the oil used for illumination distils off. Steam is now forced into the retort and the heavy lubricating oil driven over. There now remains a black, oily, tarry matter, sometimes used to grease heavy machinery, and a black coke, employed as fuel. There are, therefore, five substances separated in this operation, but only the first three are of any economic importance.

The naphtha is used as a substitute for turpentine in paints, or by repeated distillations the benzole is separated from it and employed to remove spots from fabrics. This, however, is rather a drug in the hands of the refiner.

The burning oil (called kerosene, and in England, paraffine), as it comes from the retort, is of a yellow color, and in order to remove this, it is placed in a large lead-lined cistern, and agitated with about ten per cent. of sulphuric acid. After the acid and the impurities have subsided, the oil is drawn off into another tank and agitated with four per cent. of soda lye. This last operation is to remove any acid remaining with the oil, and also to extract the residue of the coloring matter. In fact it is sometimes employed alone, and a very good oil obtained. The oil is now agitated with water to remove the soda lye, and is then ready for consumption. The colorless oil is by no means the most economical, but on the contrary more light is obtained from the yellow article.

The heavy oil is cooled down to 30° Fahr., when the paraffine (solid) crystallizes out, and is separated from the oil by pressing. It is further purified by another pressing and by alternate agitation, in a melted state, with sulphuric acid and soda lye. It is then moulded into candles. It is a curious fact that the composition of paraffine and of good coal gas is exactly the same.

In Egypt a substance derived from petroleum was used in embalming bodies; and in Persia and the neighboring countries asphaltum is used to cover the roofs of the houses and to coat the boats. In France asphaltic pavements have been successful in several cities, and for the protection of stone no material is better adapted. Mixed with grease the Trinidad asphaltum is applied to the sides of vessels, to prevent the borings of the teredo, and with quicklime it affords an excellent disinfectant. Among the products of the distillation of petroleum are naphthaline and kerosolene. The former is the substance from which is obtained aniline, the base of the beautiful colors, mauve, magenta and solferino. The latter has been proposed as a substitute for chloroform and ether. Many other substances have been separated, but as yet none of them have been applied. As this is comparatively a new field, many discoveries may be confidently expected in it in the course of a few years.

Paraffine (or *Kerosene*) *Oils.*—At the request of the Manchester Sanitary Association, Mr. Ch. O'Neil examined many specimens of paraffine oils. About 25 of these were bought in Manchester, 3 or 4 of them being from the United States; and there were besides 14 samples from oil wells in Pennsylvania and Canada. One sample from London and another from Liverpool formed with air an explosive vapor at as low a temperature as 60° F., and were to be considered as decidedly unsafe. Three of the samples gave with air explosive mixtures at 85°; of the remainder, 4 formed explosive mixtures at about 100°; then 3 more at about 120°, and 20 by the time of reaching 150°. Of the last 20, 18 were manufactures of one firm in Manchester, that of Mr. Young, all whose oils were found safe; 2 of them were from America. Out of 32 samples, 20 were pronounced safe; 3 less so; 9 dangerous. Some of these oils, even of high specific gravity, are dangerous—specific gravity being thus shown to be no test of safety. Neither is the boiling point such a test; since many substances of high boiling points have still a very high diffusive power; coal naphtha, for example, which boils at 260°, can form an explosive mixture in air, and almost instantly, at 32°.

The illuminating power of paraffine (kerosene) oil is remarkably high. One gallon of Young's paraffine oil, weight about 8½ lbs., will give, according to Dr. Letheby's experiments, the light of 23½ lbs. of spermaceti candles, or of 27 lbs. of wax candles, or of 28¼ lbs. of stearic candles, or of 40 lbs. of the best tallow candles.

For a valuable history of Petroleum or Rock Oil, with an appended note on the chemical composition of this oil and its relation to that of various coals, peat, woody fibre, &c., by Prof. T. S. Hunt,—and also for a paper on the "Explosibility of Coal Oils," by Mr. T. Allen, of R. I.,—the extent of which papers is too great to allow of a satisfactory abstract within the limits of this article, the reader is referred to the "Smithsonian Report," 1861. Mr. Allen, it may be remarked, traces the great explosiveness of the coal or rock oils, where it exists, to the fact of their not being entirely freed from the more volatile and extremely inflammable naphtha, benzole, benzine, &c., associated with them. Since crude petroleum and coal oils contain much naphtha, they partake in corresponding degree of its dangerous properties; and the careful and entire separation of all more volatile components by distillation, in preparing the so-called "kerosene," or other oils for burning, becomes a point of the highest importance.

In the autumn of 1862, the grand jury of the city of New York, taking into considera-

tion the increasing introduction of rock and coal oils, and products obtained by refining from these, and the facts of frequent explosions resulting either through imprudence or unavoidably, in cases of their being burned or stored for sale, recommended the passing of an ordinance prohibiting the storing of crude petroleum, &c., within the fire limits. The subject was discussed before several meetings of committees appointed by the Common Councils of both New York and Brooklyn, as well as the further question of fixing a vaporizing point for these oils, *i. e.*, a point any oil readily vaporizing below which should not be allowed for sale. It appears that finally no action was taken, at least in the former city, further than to the effect of prescribing an extremely small limit to the quantity of these oils allowed to be kept on sale at any one place and time. Some interesting facts, however, were brought out during the discussions. When the coal or earth oils are once on fire, the throwing on of water only aggravates the flames, by spreading the oils, which are lighter and float on the water, and bringing them more largely into contact with air. The practice of keeping these oils stored upon the walks, where the explosive mixture of their vapor with air outside the barrels, or within them when only partially full, may be accidentally ignited in many ways, was particularly reprehended as dangerous. By some who addressed the committees, it was claimed that the ordinary refined oils were quite as explosive as the crude. Mr. Tagliabue showed a sample of a purified oil which could not be lighted by a match, but which at 90° threw off an inflammable vapor, and exploded at 108°. Mr. Finch, a manufacturer, had experimented on the oils since 1854; he had found their vaporizing point to vary from 65° to 152°, the best petroleum he had ever burned vaporizing at the temperature last named. In England, and in the State of Ohio the vaporizing point fixed on is 100°; it is believed that this is also the point established in Brooklyn. It was proposed to fix the vaporizing point for New York at 120°, and by others at 110°—the lowest of these points being here never attained by the heat of summer; but no definite action on this subject appears finally to have been taken.

Dr. Frankland, in his account of illuminating materials and processes as illustrated in the exhibition of 1862, speaking of the new branch of industry—the preparation of burning and other oils from peat, coal, petroleum, &c.—remarks on the enormous development there shown to have taken place in this line of production within the past seven years. Besides the oils from various parts of Great Britain and France, others and of equally excellent quality were shown from the United States, and from Germany, Prussia, and Austria. The yield of petroleum by the oil wells of the United States surpasses that of any other part of the globe, that of the Oil Creek region alone, in the year 1862, being estimated at not less than 71,000,000 gallons.

Carburation of Gas.—Mr. Haywood, engineer to the Commissioners of Sewers, London, and Dr. Letheby, have prepared for that body a report on the subject named, which appears in the "Chem. News," No. 105, and in the "Jour. of the Franklin Inst.," March, 1862. Experiments were made with a view to testing the value of the proposed application of the Carburating Gas Company's process to the public lamps. The patent of this company is for placing near to the gas burners a receptacle containing coal naphtha; the gas passing through or over this, takes up, and becomes enriched by the addition of the volatile hydrocarbons contained in the naphtha—the illuminating power of the gas being thereby increased, and in a ratio determined mainly by the quality of the naphtha used. Chemical and photometrical experiments showed that the gain in illuminating power was, with different samples of naphtha, from 25 even to 77 per cent. In experiments with 12 lamps in Moorgate street, the equalization of the amount of light secured by burning 6 of these without and 6 others with the carburetting apparatus, being judged by the eye, and without careful measurement, and extended over 30 nights of June and July, the result was that the former burners consumed an average of 4.39 cubic feet of coal gas per hour, the latter an average of 2.09 cubic feet of the same gas carburetted per hour, the naphtha being in this case of the best quality. It was inferred that, for the warm months, 3 cubic feet of the carburetted gas may be considered about equal to 5 cubic feet of that not carburetted; and assuming the data applicable to all seasons of the year, the process applied to the 2,825 lamps within the city would effect a saving annually of about £2,825. In a final report on the subject, the gentlemen named conclude that the use of naphthalized gas (the best naphtha being employed) will secure an economy of from 40 to 50 per cent. in the volume of gas consumed; and they favor a practical trial of the method.

Bassett's Carburetting Apparatus.—For the carburation of gases, *i. e.*, the charging of them with some other substance in the state of gas, or vapor, and which is more rich in carbon than themselves, naphtha offers itself as the most convenient and effective material. A difficulty attendant on its use, however, is that the vapors which it most readily yields are such as at low temperatures, as under 60°, or certainly under 50° F., are re-condensed, thus leaving the gas little if at all improved, and clogging the pipes with the resulting liquid. To obviate this, attempts have been made to keep the pipe beyond the carburetting apparatus heated. But naphtha being in fact a combination of several hydrocarbons having different degrees of volatility, Mr. J. A. Bassett, of Salem, Mass., has devised a gas carburetting apparatus (patented July, 1862) in which he

takes advantage of this circumstance, cooling the gas before passing it through the naphtha, so that it may take up only the hydrocarbons of such high volatility as not to be likely to recondense even at low temperatures. The gas is cooled by causing it to flow through a long, labyrinthine passage, formed by placing one within another a series of cylinders between which annular spaces are left. Some naphtha is placed in the lower part of this cooler, and the gas finally escaping from it and partly charged ascends into a second vessel or tube filled with a porous material, which, being by capillary attraction kept saturated with naphtha, exposes this liquid in the most effectual manner to the gas rising through it. For this use, the inventor prefers the material known as porous carbon, and sometimes employed for filters. A valve is so placed between the two vessels, that the opening it allows for the gas shall be inversely proportional in area to the pressure and velocity of the current, thus serving to equalize the delivery of the gas; and another valve, nearly closing when the supply of naphtha in the apparatus diminishes to a certain extent, interrupts in this manner the flow of gas, and reduces the light, thus giving notice of the necessity of replenishing with the carburetting liquid.

Illuminating Gases from Petroleum, or Coal Oil, or from their Derivatives.—Petroleum and coal oil are alike mixtures of a variety of hydrocarbons, liquid (at common temperatures), or dissolved; and these components are to such an extent identical or closely allied in the two compound oils, that the latter may be taken as for many purposes, very nearly equivalents, the one of the other. Both of them offer in quite concentrated and convenient form the elements necessary to the production of illuminating gases. This is in yet higher degree true of certain derivatives or products separable from the rock or coal oils, as naphtha, benzole, kerosene, &c.; and in case of these latter, an additional advantage is, that the gas directly as produced is certain to be very much more pure than any coal gas can be, even after the best practical system of washing and purifying. Besides, the rock and coal oils are now to be had, the one in nature, the other as resulting in the manufacture of coal gas, &c., in very great abundance; so that, in some situations actually worthless or of merely nominal value, they are generally cheap in all places in which an actual demand for them could exist. In view of these facts, as would be expected, numerous methods and processes have been attempted, or are now in course of trial, for producing from the crude oils or their derivatives the desideratum of an illuminating gas, at once more convenient and certain in its manufacture, as well as more pure and also more economical in price, than the coal gas so generally in use. Of course, the gas so sought must be a permanent one, capable of being stored in gasometers and delivered without condensation through pipes in the coldest weather; while it is further quite certain that, if an illuminating gas can be economically produced from these oils or their products, one element of its economy will be in the superior brilliancy of its light, due to the taking up of a larger percentage of the carbon so abundant in them.

In fact, these oils and their several components alike contain an excess of carbon over the hydrogen present, as compared with the proportions of these two elements required to produce even the *heavy*, and much more the *light* carburetted hydrogen, or the mixture of both, as usual in coal gas. If, now, in attempts at obtaining a gas from these oils, the effect of the process employed is merely to produce in whole or in part a vapor, in lieu of a permanent gas, that is, if the molecules of the vapors of the oils be not made by heat or by some other cause to assume a new arrangement and combination (so that the oil can be said to be destructively distilled), then, so far as a mere vapor is the product, this is quite certain to prove worthless and positively troublesome by recondensing at low temperatures. If, on the other hand, destructive distillation of the oils does take place, with generation of permanent gases, these are quite certain to be chiefly the light and the heavy carburetted hydrogen (C_2H_4 and C_4H_4) in mixture, and the latter, in view of the abundant carbon of the oils, in larger relative proportion than occurs in case of coal gas. But, further, the percentage of hydrogen in the oils being fixed by the composition of each of them, and always at a small limit, it follows that this fact will limit also the amount of the gases that can be generated, and that in attempting to convert the oils alone into gas, a considerable residue of carbon which could not be taken up in the formation of the gases must present itself after the process. So far as the making of gas is concerned, this is a waste of the material employed; and as a matter of fact, the destructive distillation of any one of the oils referred to shows such waste in the copious residue of carbon, in form of soot, or coke, &c. By the introduction, however, during gasification of the oil vapors, of the requisite addition of hydrogen from some extraneous source, the conditions of the moment favoring chemical union, it is safe to presume that a greatly increased proportion of the carbon will be taken up; indeed, it appears, from certain trials, that the whole of the carbon is taken up in gaseous form, if the supply of hydrogen be sufficient. In such case, while a pure and highly illuminating gas is produced, there is no loss of the material which can enter into its composition. Thus have been indicated the various aspects and conditions of the problem under consideration; that, namely, of the economical production of an illuminating gas from the oils already named. Some of the methods recently tried or now being developed with a view to such manufacture will now be described, the reader being left to judge how

far they severally succeed in meeting the actual requirements of the case.

Gas from Petroleum Alone.—Messrs. L. Davis & F. M. Parks patented, in 1862, a process for producing a permanent gas for general illumination, from petroleum at a very high temperature. They employ the crude petroleum, passing this through a double vertical retort, so that the oil may be subjected to a very high temperature at two rapidly succeeding intervals. The gas is permanent, but the account does not state what percentage of the petroleum is in this way convertible into gas, what amount of waste remains from the process, nor what is the exact chemical nature and illuminating power, and hence the actual cost and value of the gas obtained. Since the crude petroleum contains much water, if some material which will abstract the oxygen of the water be present in the retorts during the process, the liberated hydrogen must act to insure a large increase in the volume of combustible gases, although incombustible carbonic acid must probably, in that case, be mixed with them.

Hill's Air Gas, Oleo-Water Gas, and Electro-Chemical Gas.—Mr. Hill, of New York, secured, June 15, 1858, a patent for an air gas. The process consists in blowing air, oxygen, carburetted hydrogen, or hydrogen, over, into, or through an oil, such as petroleum, coal oil, naphtha, oil of turpentine, or even alcohol, and igniting the mixture at the orifice of a pipe or burner, a brilliant light being thus produced. By further diluting the oil vapors, by means of increasing the proportion of the gas blown into the oil, a more complete combustion results, with the production of little light, but of an intense heat, said almost to equal that of the compound blowpipe of Dr. Hare. The air gas in this form of combustion is stated to have been already applied as the fuel for driving steam engines, and the inventor is now adapting it to locomotives. By burning the diluted gas within a perforated platinum capsule, an extremely brilliant light is produced, and the platinum cup may be made of any required dimensions.

Mr. Hill's oleo-water gas was patented in 1861. In preparing this, a common gas retort is used, billets of pine wood being placed within an iron cage inside the retort; heat being applied, wood gas distils over (passing on its way through a washer, or purifier), until the wood is converted into charcoal. When the retort has attained a cherry-red heat, regulated streams of petroleum, or other gas-yielding oil, and of water, are allowed to flow into it. The heat suffices to convert the water into steam and the oil into vapor, as introduced. The steam parts with its oxygen to the red-hot charcoal (or, in part, it may be, to superfluous carbon in the oil vapor), and a considerable volume of a permanent illuminating gas passes over into the gasometer, the presumption being that the oil vapor has been destructively changed, combining at the same time with the hydrogen liberated in decomposition of the steam (water), and that the resulting gas—which, to the eye, burns with a white, clear, and brilliant flame—is rich in, or mainly composed of, the highly illuminating bicarburetted hydrogen or olefiant gas. It does not appear, however, that the gas produced has been chemically analyzed, the consumption and illuminating power exactly measured, nor, of course, the comparative cost and value determined. It must be added that the entire body of oxygen abstracted from the admitted water probably goes at the temperature of the retort to the production of its equivalent of carbonic acid, this product, if really the result, constituting so much incombustible or dead matter already in the gas, as prepared for consumption. A recent statement furnished by Mr. Charles Sears, chemist, gives the best proportions of the materials, for a good strong light, as, of paraffine oil (or other equivalent), one volume; of water, four volumes; the product, when heavy oil is used, being about 1,000 cubic feet of gas for two gallons of oil and eight gallons water. With a retort of 14½ x 12 inches, the product was about 200 cubic feet of gas per hour. When the residuum of oil distillates is used, the cost of material becomes merely nominal. It is also claimed that the cost of this gas, as produced from petroleum, needs not exceed forty cents per thousand cubic feet.

The electro-chemical gas is apparently only hydrogen gas set free from water, in the acid liquid of a battery of some thousand pairs, consisting of coils of copper wire and scrap iron successively connected in the manner required, and the whole placed within a vessel called a generator, the liberated hydrogen being subsequently passed through petroleum to be carburetted. The sulphate of iron resulting in the cells of the battery is said to pay the cost of the iron and acid employed.

McDougall's Fixed Gas, and Atmospheric Gas.—These gases, processes for which have been patented by Mr. S. T. McDougall, of New York, appear to be nearly or quite identical in principle and mode of preparation, as well as in their composition and employment, respectively, with Mr. Hill's "oleo-water" and his "air gas." It is claimed that the illuminating power of a jet in which is consumed one and a half cubic feet of the fixed gas per hour, is equivalent to that of fifteen sperm candles; and also, that the gas can be produced more cheaply than coal gas, and so as to be much cheaper than burning fluid, coal gas, or candles. Its specific gravity is declared to be about 900 (air 1,000), that of the best coal gas being from 350 to 470. The atmospheric gas, a mixture of vapor of some hydrocarbon with air, can be burned in places and seasons in which the temperature does not fall below 50° F., and it is said to afford a good and cheap light.

Elmer's Pure Illuminating Gas.—Dr. Wm. Elmer, of New York, patented, in 1862, a process in which he claims that from hydrocarbons

vaporized, and water, acted on in form of steam, by zinc, a permanent gas, consisting mainly or wholly of bicarburetted hydrogen, *i. e.*, olefiant gas, is produced. Olefiant gas consists, by weight, of .86 of carbon and .14 of hydrogen. The percentage of carbon in petroleum, naphtha, &c., is always greater than this, so that, while those oils simply vaporized by heat seldom or never result in a permanent gas, it is further true that, owing to the excess of carbon, the vapors, when burned, are liable to smoke, and the flame lacks brilliancy. Dr. Elmer proposing to supply the deficiency of hydrogen in the oil vapors by liberating that gas from steam during oxidation of iron filings, Dr. Levi Reuben, of New York, suggested to him, as preferable, the plan of liberating the hydrogen by oxidation of zinc, which readily sublimes at the heat required for the gas process, so as to mingle freely with the steam, and secure rapid oxidation and a free supply of the requisite hydrogen, but which has especially the advantage of affording incidentally, in the resulting white oxide of zinc, a product having a sure commercial value, and one which would, therefore, go far toward paying the cost of materials and labor. A simple calculation showed the proportions of zinc, water, and a given oil required, in order to set free just the additional percentage of hydrogen necessary, if such chemical union be supposed to take place, to convert the entire carbon of the oil into its equivalent of olefiant gas; and, slight volatile impurities in the oil excepted, the gas so produced must be almost perfectly pure. The suggestions and data being adopted, the invention consists essentially in their application and working out in practice.

It is presumed, though (it appears) not yet proved by chemical tests, that the product in this process consists nearly, or altogether, of olefiant gas. Substantially, the method of producing the gas is as follows:—1. Vapor of water being admitted into a retort at white heat, in which zinc has been brought to the state of sublimation, oxidation of the metal occurs, the white oxide of zinc produced ascending, and being caught in suitably arranged boxes, so as to be saved, the hydrogen of the water which is meanwhile set free passing on into a second, and less highly heated, retort; 2. Into this second retort, the required relative proportion of benzole, petroleum, or any suitable liquid hydrocarbon, is at the same time continuously admitted, its conversion into vapor at once taking place; 3. The hydrogen gas and the oil vapor being thus continually supplied in this retort, and exposed in it to an extremely high temperature, a corresponding volume of a permanent gas (probably olefiant gas) is continuously and rapidly formed and delivered. The gas resulting is, at least, incondensable, and capable of being stored; while the second retort after the process needs not contain any residue of carbon; and further, if the zinc be volatilized in sufficient quantity, no oxygen needs pass over into the second retort, and if it do not, no worthless carbonic acid can enter into the gas product obtained. In the apparatus, the steam is supplied by a small boiler within the furnace, and just beneath the first retort, and in order to insure its entering the retort in a state in which no condensation will occur, the steam is superheated by passing on its way through a coil of pipe exposed to the heat of the furnace. In some trials of this method, in which, in the earlier part of the process, a deposit of carbon in powder did occur in the second retort, it was found that, the heat being sufficiently great, and a stream of hydrogen alone being subsequently for a time admitted, all of this solid deposit of carbon was cleanly taken up and carried over in gaseous form into the gasometer. This fact appears incidentally to confirm the theory of the formation of the gas, and of its character already given; and the obtaining of an illuminating gas in this way from hydrogen and finely divided solid carbon (soot) has been included in the patent. An important advantage of the method of gas making now described is in the circumstance that since (if properly conducted) no oxygen can gain access within the generating retort, not merely is there no worthless product of combustion already in the gas as made, but there can, of course, occur no waste whatever by burning up in the retort of a portion of the gas, as too generally occurs in the making of coal gas: the gas formed is protected from chemical agencies, and the whole of it must be delivered and secured. The gas as produced in the trials thus far made by Dr. Elmer, gives a white, solid, intense, and beautiful light; but exact tests of consumption of material, illuminating power, &c., appear not yet to have been made.

Air Light for Locomotives.—Dr. George Hand Smith, of Rochester, N. Y., has invented an apparatus for burning any permanent gas, as ordinary coal gas, in such way as to secure an intense heat, and the ignition to whiteness of a small cylinder of lime, through means of supplying to the burning gas an abundance of oxygen, by mechanically forcing out in connection with the issue of gas from each burner a jet of atmospheric air, and which, previously to its escaping, has been also highly heated. In a word, his invention consists in applying the principle of the common forms of air or atmospheric light, in lieu of the more expensive oxygen and hydrogen gases, and with the addition of heating the supplied air, to the production of a lime light. His arrangement appears thus far to have been expressly designed for use on railroads. The cylinder of lime being fixed at the focus of the parabolic reflector employed for projecting the light, as now, in front of the locomotive, the lime is rendered incandescent by burning in a circle surrounding it and directed upon it four jets of the compound gas described, and issuing from as many separate burners. Two gas holders

placed beneath the engine communicate with these burners by means of pipes, their capacity being considerably above the requirements of a single trip. The charging of these before starting occupies less time, and is more conveniently accomplished, than the filling and care of the lamps previously in use. The flow of air and gas is controlled by regulators and stop-cocks at the command of the engineer. The peculiar economy, in view of its great brilliancy, of this light, arises from the circumstances that the ignition of the lime cylinder is purely an effect of heat, so that there is no attempt to secure brightness in the burning gas jets, but heat only; and to effect this latter purpose, the air, simply taken in from the atmosphere and warmed, constitutes much the larger portion of the compound jet, the coal gas, which alone costs, being consumed in a very small amount. The inventor states that, while the head lights previously in use on the Central Railroad, requiring oil, wicks, and chimneys, and the first of these costing 6¼ cents an hour, were maintained at an expense each of about $108.75 per annum; on the other hand, the consumption of gas in the new light not exceeding in expense 1¼ cents an hour, these lights, which are also more brilliant, need not cost more than $26.87 each per annum.

Lampe Eolienne.—This new lamp, which, it is said, will soon be on sale, and which is intended for the combustion, not only of all the hydrocarbon oils that can be burned in lamps now in use, including whale oils, but also of those heavier oils to the employment of which the common styles of lamps are not adapted, is the invention of M. B. De Keravenan, a French engineer. The perfect combustion, and without smoke, of the heavier and highly carbonaceous oils, as well as of others, which is secured in this lamp, is effected by means of the forcing upward, within a tube rising through the middle of the lamp, and discharging directly in connection with the wick and flame, of a continuous current of air impelled by a fan wheel or vane driven by clockwork—the mechanical arrangement for the purpose being placed within the base of the lamp, and out of sight. The motive power is, of course, that of a spring; and the mechanism, like that of a clock, requires to be wound up at certain intervals. The current of air is thrown from the tube against the inner side of a cone placed upon the burner, and is thus deflected into or upon the flame; and it is stated that, as a consequence of this arrangement, the flame is rendered pure, white, and intense, as well as almost fixed, *i. e.*, well nigh free from flickering; while it does not smoke even where there are draughts of air, or on being carried about the room. The current of air is usually one of considerable amount; but the quantity can be regulated by a valve controlling the admission of air, and the flame can in this way be varied in color from white to yellow, orange, or reddish. The perfect combustion removes the possibility of an odor of the oil from the flame; while danger of explosion is said to be obviated by the cooling effect of the air current in its passage upward, and through the cap of the lamp, and which prevents the heating of the vapor forming over the liquid within it. Much time and study are said to have been devoted to the invention and perfection of the mechanism and parts of this lamp, in order to adapt these to accomplish in the most satisfactory manner the purposes to be attained. The size of the flame obtained may, by suitably proportioning that of the wick, be very greatly increased; so that the light is adapted to a variety of uses, from that of the portable house lamp, to that of the lights of docks, steamboats, cars, locomotives, and even of lighthouses. Though the new lamp is less likely to be made of small sizes, or to be cheap, it will, of course be likely to prove a desirable one where lamps of a large size are required, through the relatively increased brilliancy and economy of the light, and the less unwholesome character of its products, resulting from the complete combustion of the oils, as well as through its saving the inconveniences and disfigurement of the glass chimney.

INDIANA, situated north of the Ohio river, and west of the State of Ohio, had in 1860 a population of 1,350,428, which was an increase of 362,012 since 1850. The increase in the population of some of the principal cities and towns was as follows:

Cities and Towns.	1850.	1860.	Increase.
Fort Wayne	4,282	10,388	6,106
Indianapolis	8,034	18,611	10,577
La Fayette	1,215	9,387	8,172
La Porte	1,824	5,028	3,204
Richmond	1,443	6,603	5,160

The number of white males was 693,348; do., females, 646,862.

The mortality during the year ending May 31, 1860, was 15,205. The most fatal diseases were consumption, croup, fevers, and pneumonia.

The industrial products of the State were as follows: iron founding, $168,575; coal, $27,000; lumber, 3,169,843; flour and meal, $11,292,665; spirituous liquors, $8,358,560 gallons; malt do., 66,338 bbls.; cotton goods, $349,000; woollen do., $695,370; leather, $800,387; boots and shoes, $1,034,341; furniture, $601,124; fish, $17,500. Total, $43,250,000. Value of real and personal property $528,835,371, being an increase during the preceding ten years of $326,185,107. The cash value of farms was $344,902,776. The amount of some of the productions of agriculture was as follows: horses, 409,504; asses and mules, 18,627; milch cows, 491,033; working oxen, 95,982; other cattle, 582,990; sheep, 2,157,375; swine, 2,498,528; value of live stock, $50,116,964; wheat, 15,219,120 bushels; rye, 400,226 bush.; corn, 69,641,591 bush.; oats, 5,028,755 bush.; tobacco, 7,246,132 lbs.; wool, 2,466,264 lbs.; potatoes, Irish, 3,873,-

130 bush.; do., sweet, 201,711 bush.; butter, 17,934,767 lbs.; hay, 635,322 tons; maple sugar, 1,515,594 lbs. There were 13 daily, 5 biweekly, and 154 weekly political papers published in the State in 1860, and 3 weekly and 3 monthly religious papers.

The number of miles of railroads in operation is 2,169; cost of construction, $71,864,304.

The governor of the state is Oliver P. Morton, whose term of office expires on the 1st of January, 1865. The secretary of State is James S. Anthon. The judiciary of the State consists of 4 supreme court judges, 14 circuit judges, and 21 district judges of common pleas courts.

The receipts into the treasury of the State to October 31, the end of the fiscal year, together with the balance of the preceding year on hand, were $3,857,450, and the expenditures $2,974,976. Balance $876,474. The debt of the State is $8,755,453. The State tax is two mills on a dollar, and a poll tax of 50 cents. The banking institutions of the State consist of the State Bank and its branches; in all 21 banks, besides 18 free banks. Their circulation at the close of the year was $6,660,000.

The State election is held on the second Tuesday in October. At the State election, in 1862, members of Congress, one half of the State Senate, and all the members of the House of the Legislature were to be elected. Two distinct parties are organized in the State, which are known as democrats and republicans, the latter belonging to the party which elected the officers of the Federal Government.

The democrats held a convention at Indianapolis on the 8th and 9th of January, 1862, being the first held by them since 1860. Thomas A. Hendricks presided. A series of resolutions was adopted, asserting that the restoration to power of the democratic party could alone preserve the Union, and endorsing the principles heretofore put forth by the national conventions of that party; they declared that the present civil war had mainly resulted from the slavery agitation of a geographical party in the North, producing its counterpart in the South of secession, disunion, and armed resistance to the Government; condemning the course of the republicans in the Congress which terminated March 4, 1861, for the rejection of all peace propositions; that peace and harmony would now reign had the party in power shown the same desire to settle the internal disputes that it recently exhibited to avoid a war with England; that the republicans have fully demonstrated their inability to conduct the Government through the present difficulties; denouncing all violations of the Constitution and usurpation of power; regarding the *habeas corpus*, and the imprisonment of citizens of the loyal States as flagrant violations of the Constitution; that the seizure of Mason and Slidell was either legal or illegal; if the former, the nation has been humiliated by their surrender under threat; if the latter, they should have been delivered up before their imprisonment.

The convention also nominated for secretary of State, James S. Anthon; for State treasurer, Matthew L. Brent; auditor of State, Joseph Restine; attorney-general, O. B. Hord; superintendent of public instruction, M. B. Hopkins.

On the 30th of July the same party held another convention at Indianapolis, at which a series of resolutions were adopted, the principal points of which are shown in the following extracts:

That the Constitution, the American Union, and the laws made under and by the authority of the Constitution, must be preserved and maintained in their proper and rightful supremacy; that the rebellion now in arms against them must be suppressed and put down, and that it is the duty of all good citizens to aid the General Government in all measures necessary and proper to that end.

That the democracy of Indiana, with patriots everywhere, have made and will continue to make every sacrifice to the end that the rebellion may be suppressed, the supremacy of the Constitution maintained, and the Union under it preserved; but they are unalterably opposed to a war of conquest or subjugation, and they will never consent that the war on their part shall be waged for the purpose of interfering with the rights or overthrowing the established institutions of any of the States. In the language of Senator Douglas, uttered at Chicago a few days before his death, "We must not invade constitutional rights. The innocent must not suffer, nor women and children be the victims. Savages must not be let loose."

That we protest, in the name of ourselves and of our children, and in the name of all that is dear in the future of our beloved country, against the mischievous measures of negro emancipation in the District of Columbia, and the payment for such negroes out of the National Treasury; and we further protest against the resolution of Congress pledging the nation to pay for all negroes which may be emancipated by the authority of any of the Southern States; that we regard such measures, involving as they do an expenditure of two thousand five hundred millions of dollars, as measures of transcendent enormity, and fruitful only of national beggary to the land we love; that we are unalterably and unconditionally opposed to all schemes having for their object, immediate or remote, the taxation of the white man for the purchase of negroes anywhere; that we deny the constitutional right of the President or Congress to adopt a policy which taxes white labor to pay for negroes, or which would make the Government or people slave dealer, a policy which, if not arrested by the votes of the people, will entail upon unborn generations of our kindred a debt more overwhelming and appalling than ever cursed any nation of ancient or modern times.

That, in opposition to measures of this kind, we desire to interpose the peaceful and powerful agent, the ballot of a free people, and say, in the language of another, "We will neither surrender our rights nor forsake them. We will maintain our constitutional liberty at all hazards, and as a necessary step toward that end, we will maintain the Union in like manner. We are for the Constitution as it is, and Union as it was."

That, in the language of the resolution of the conservative members of Congress, the doctrines of the secessionists and of the abolitionists, as the latter are now represented in Congress, are alike inconsistent with the Constitution, and irreconcilable with the unity and peace of the country. That the first have already involved us in a civil war, and the others (the abolitionists) will leave to the country but little hope of the speedy restoration of union or peace.

That the happy accord of the Border State Union men of Kentucky, Maryland, Missouri, Delaware, and western Virginia, with the democratic delegations in

Congress, in their joint efforts to arrest the tide of fanaticism in both houses, has filled all national hearts in this State with sentiments of deep affection for our brethren of those gallant commonwealths, and we hereby pledge to them and the country our best efforts to secure to the councils of the nation statesmen who will labor to restore the union of the States on the basis and in the spirit of our matchless and revered Constitution,

That, the people of Indiana having inhibited, by the State constitution and law, the entrance of free negroes and mulattoes into this State, and as the present disturbances on our border are likely to bring in an influx of that population from neighboring States, we respectfully ask the public authorities of Indiana to see that the constitution and laws are properly enforced on that subject. When the people of Indiana adopted that negro exclusion clause by a majority of ninety-four thousand votes, they meant that the honest laboring white man should have no competitor in the black race—that the soil of Indiana should belong to the white man, and that he alone was suited to her free institutions.

That we approve of and endorse the resolutions drawn by Hon. John J. Crittenden, and approved by the conservative members of Congress on the 22d of January, 1861, as a clear and just declaration of the objects which ought to be had in view by the American people in the present fearful emergency of their national affairs.

The republican convention assembled at Indianapolis on the 18th of June. It was designated a Republican Union Convention, thereby intending to embrace all persons who were disposed to unite with the republicans in the work of sustaining the Union and the Constitution. Gov. O. P. Morton was elected president of the convention. Wm. A. Peele was nominated for secretary of State; Albert Lang for auditor; Jonathan S. Harvey for treasurer; Dulaney E. Williamson for attorney-general. The following declaration of principles was made:

Whereas, the National Government is engaged in a war waged against it by its enemies for the avowed purpose of its destruction and the subversion of our republican form of government, therefore,

Resolved, That the present civil war was forced upon this country by the disunionists in the Southern States, who are now in rebellion against the Constitutional Government; that in the present national emergency, we, the people of Indiana, in convention assembled, forgetting all former political differences, and recollecting only our duty to the whole country, do pledge ourselves to aid with men and money the vigorous prosecution of the present war, which is not being waged upon the part of our Government for the purpose of conquest, subjugation, or the overthrowing, or the interfering with, the rights or established institutions of any of the States, but to suppress and put down a wicked and causeless rebellion, defend and maintain the supremacy of the Constitution, and to preserve the Union as established by our patriot fathers, with all the dignity, equality, and rights of the several States unimpaired; and when these objects are fully accomplished, and not before, we believe the war ought to cease; and that we invite all who coincide in these sentiments to unite with us in support of the ticket this day nominated.

Resolved, That we demand and expect of our executive and legislative bodies, both State and National, an economical administration of governmental affairs, and the punishment of fraud against the Government, as well as the fearless discharge of their duties.

Resolved, That so long as patriotism, courage, and love of constitutional liberty shall be honored and revered among the people of the United States, the heroic conduct of the soldiers of the Union who have offered their lives for the salvation of their country, will be remembered with the most profound feelings of veneration and gratitude; and that we now tender to them the warmest thanks and lasting gratitude of every member of this convention; that we tender to the 60,000 volunteers of Indiana our heartfelt congratulations, and hail with pride the fact that upon every battle field they have displayed the bravery of patriots in defence of a glorious cause; and we pledge them that, while they are subduing armed traitors in the field, we will condemn at the ballot box all those in our midst who are not unconditionally for the Union.

The vote of the electors, estimated by congressional districts, was as follows:

Districts.	Secretary of State.		Congressmen.	
	Anthon, Democrat.	Peele, Republican.	Democrat.	Republican.
First	12,282	9,078	11,963	9,583
Second	10,425	6,929	10,911	6,211
Third	11,529	10,127	11,524	10,144
Fourth	10,805	8,027	10,926	7,992
Fifth	7,157	10,490	7,414	9,272
Sixth	11,814	12,336	11,654	12,525
Seventh	12,545	9,990	12,517	10,036
Eighth	11,383	12,114	11,181	12,005
Ninth	14,366	14,835	14,546	14,775
Tenth	12,414	11,987	12,353	11,917
Eleventh	13,057	12,473	13,142	12,219
Total	127,977	118,386	128,131	116,679

Majority for Athon, 9,301. Majority for democratic congressional ticket, 11,462.

In the 1st, 2d, 3d, 4th, 7th, 9th, 10th, and 11th districts the democrats elected the members of Congress; in the 5th, 6th, and 8th districts the republicans elected the members of Congress.

The provisions of the constitution of the State, relative to the immigration of negroes or mulattoes, are as follows:

Sec. 1. No negro or mulatto shall come into or settle in the State after the adoption of this constitution.

Sec. 2. All contracts made with any negro or mulatto coming into the State contrary to the provisions of the foregoing section shall be void; and any person who shall employ such negro or mulatto, or otherwise encourage him to remain in the State, shall be fined in any sum not less than ten dollars nor more than $500.

Sec. 3. All fines which may be collected for a violation of the provisions of this article, or of any law which may hereafter be passed for the purpose of carrying the same into execution, shall be set apart and appropriated for the colonization of such negroes and mulattoes and their descendants as may be in the State at the adoption of this constitution, and may be willing to emigrate.

Sec. 4. The General Assembly shall pass laws to carry out the provisions of this article.—*Constitution of Indiana*, art. 13.

Sec. 6. All contracts made with negroes or mulattoes who shall have come into the State of Indiana subsequent to the 1st day of November, A. D. 1851, are hereby declared null and void.

Sec. 7. Any person who shall employ a negro or mulatto who shall have come into the State of Indiana subsequent to the 31st day of October, in the year 1851, or shall hereafter come into the said State, or who shall encourage such negro or mulatto to remain in the State, shall be fined in any sum not less than ten dollars nor more than $500.—*An act to enforce the thirteenth article of the Constitution of Indiana.*

The military spirit manifested by the people

of Indiana, and the alacrity with which they took up arms was mentioned in the "Cyclopædia" for 1861. No flagging was indicated during 1862 in their efforts to perform the duty of the State. Upon the first call of the President for three hundred thousand men, on July 7, the governor immediately issued an address to the citizens, in which he said: "Again I call upon the loyal and patriotic men of Indiana to come forward and supply the quota due from our State. Up to this hour Indiana occupies a most exalted position connected with the war. Her troops have been in almost every battle, and have behaved with uniform and distinguished gallantry. Never before has the State held so proud a place in the opinion of the world, and it should be the prayer and effort of every loyal citizen that she may not now falter, and that nothing may hereafter occur to detract from her well earned honors. But while we are justly proud of the high rank to which Indiana has attained, we should never forget that our allegiance and highest duty are due to the nation, of which Indiana is but a part. That in struggling for our National Government, we are contending for our national existence, honor, and all that is dear to freemen, and that in this struggle we must succeed at whatever cost. That it is the duty of every State to furnish promptly her full proportion of the military force called for by the President, and that in doing so she has no right to dictate the terms of his military policy, or prescribe conditions precedent upon which such force shall be furnished. To do so would be to recognize the odious doctrine of State Rights, as it has been taught by rebel politicians for many years, and which is but another name for secession, and the cause of all our woe."

Liberal bounties were offered, and volunteers accumulated rapidly. The second call for three hundred thousand men on the 24th of September, for nine months, offered some special attractions which induced many to enlist who otherwise would not have entered the service under the first. The term of service in the first instance was for three years or the war; in the second it was only for nine months. The bounties in many places were alike for each. Consequently it became necessary to resort to the militia draft, which created considerable dissatisfaction. Under the first call 31½ regiments of infantry, 2 of cavalry, and 2 batteries were raised. The whole number of troops mustered into service from the State up to the close of the year was 102,700, of whom 3,003 were drafted men. The expenditure of the State for war purposes was $1,979,248.

INGERSOLL, Charles Jared, an American statesman, born in Philadelphia, Oct. 3, 1782, died in that city Jan. 14, 1862. He was a son of Jared Ingersoll, an eminent lawyer, and one of the signers of the Declaration of Independence. After completing his collegiate course he studied law, and was admitted to practice before he became of age. Not long after, he visited Europe, and became attached to the American embassy to France. In 1813, he represented the old Northern Liberties district of Philadelphia in Congress. In 1815, President Madison appointed him United States District Attorney in Philadelphia, in which capacity he served until removed by General Jackson, in 1829, and shortly afterward was elected to the Legislature of Pennsylvania. In 1827, he was a member of the State Convention, and, in 1829, of the National Assembly for the Encouragement of Domestic Manufactures. In 1837, he was a member of the convention elected to revise the State Constitution, and made the reports on currency, judiciary, &c. In 1840, he was reëlected to Congress, and served until 1847, when he was nominated by President Polk as United States minister to France, but the Senate refused to ratify the nomination. He was not only prominent as a politician and statesman, but was an author of some distinction, and his productions show a wide range of talent as well as of learning and literary taste. He wrote on constitutional law, as well as history, and, in early life, was the author of "Inchiquin's Letters," a production of much merit. He also wrote a "History of the War of 1812," "Chiomara," a poem, "Edwy and Elgiva," a tragedy, "Historical Sketch of the Second War between the United States and Great Britain," and, more recently, had prepared for the press "A History of the Territorial Acquisitions of the United States."

INSURANCE COMPANIES, during the year 1862, have not apparently suffered by the fact of war, notwithstanding the diminution in some branches of business and the reduced stocks of some descriptions of goods to be insured. The losses by fire have, however, been very heavy in the Northern States, and the marine losses, considering the diminished transportation of Southern products, have been considerable. The large losses sustained by the merchant marine from the enemy's cruisers have been covered by war risks to some extent, but the aggregate losses of the New York marine companies have been less than in the previous year:

Companies.	Premiums rec'v'd during the year.	Premiums earned during the year.	Losses for the year.
Atlantic	$5,116,444 87	$4,485,253 68	$2,094,012 17
Commercial	362,964 62	397,580 39	219,084 66
Columbian	815,521 44	725,386 39	411,013 61
Great Western	1,642,316 48	1,330,959 13	992,957 15
Mercantile	1,069,194 23	1,041,005 09	633,422 58
Neptune	366,630 98	376,691 20	260,057 42
New York	535,891 80	562,797 37	358,815 41
Orient	381,170 84	400,550 51	225,474 23
Pacific	591,508 90	523,789 21	258,868 35
Sun	1,710,183 26	1,629,089 61	1,141,564 29
Union	481,334 57	449,975 50	136,920 33
Washington	229,831 32	225,655 99	125,596 24
Total, 1862	$13,302,993 31	$12,148,734 07	$6,857,786 44
" 1861	15,521,340 20	12,827,911 92	7,902,168 58
" 1860	17,859,948 16	12,620,210 04	10,748,814 28

This result for the year has been encouraging, and some of the companies have greatly improved their condition. The scrip dividends have ranged from 8 to 40 per cent., except for

three companies which have made no scrip dividends, two of them, however, paid cash dividends of 5 per cent. In the aggregate of the companies the net premiums are $5,290,968 in excess of the losses; in 1861 they were $4,922,000 in excess of the losses, and in 1860 $1,872,000 only in excess of the losses. In other words the losses have declined $3,891,000, while the earned premiums have only diminished $472,000. The war has not apparently been adverse to the interests of the New York companies. In Massachusetts the reverse is the case in some degree. The premiums have not exceeded the losses to the same extent. The risks and losses in Massachusetts have been as follows:

Companies.	Risks.	Losses.
In 17 Stock Companies	$38,742,435 00	$1,247,962 61
In 12 Mutual Marine and Mutual Fire and Marine	55,717,841 50	2,391,975 07
Total Marine	$94,460,276 50	$3,639,937 68
" 1861	94,024,701 50	3,451,520 23
" 1860	114,350,563 00	3,714,093 31

The losses this year as compared with the risks are much greater than in 1860. The marine losses for the year 1862, including the vessels captured by the enemy, were as follows:

Months.	Steamers.	Ships.	Barks.	Brigs.	Schooners.	Number of vessels.	Estimated loss.
January...	4	16	18	20	27	95	$1,825,600
February .	2	25	33	18	31	109	1,529,200
March	4	49	40	32	57	182	2,340,800
April.....	3	23	34	14	24	98	1,416,300

The trade and values transported on the lakes were very large in 1862 by reason of the turning of produce eastward from its usual southern route, and that circumstance has swollen the aggregate of inland transportation risks.

The fire risks for the year have also increased, but, although there were three very large conflagrations, the aggregate of losses has been less than usual. In the month of January two large fires occurred in New York, involving a loss of $650,000. In February, one in Boston destroyed $1,000,000, and one in Bowling Green, Kentucky, $1,000,000. In March, one in Jacksonville, Florida, $500,000. In May, a great fire in Troy, New York, destroyed $3,000,000, and one in Brooklyn $300,000. The aggregates of fires, for the year 1862, amount to nearly $18,000,000, as shown in the following summary:

Date.	Place.	Loss.
January.		
1	Rochester	$45,000
2	Richmond, Va.	65,000
2	Aquia Creek, Va.	20,000
5	Henderson, Ky.	20,000
5	Gardner, Mass.	75,000
5	Rochester	28,000
6	Philadelphia	75,000
6	Dover, N. H.	25,000
7	Pittsburg	125,000

RECAPITULATION.

MONTHS.	1862. Fires.	1862. Losses.	1861. Fires.	1861. Losses.
January	27	$1,863,000	28	$1,420,000
February	15	2,913,000	9	412,000
March	20	1,440,000	23	1,265,000
April	9	620,000	11	562,000
May	17	4,515,000	21	1,130,000
June	7	455,000	18	1,265,000
July	6	760,000	12	1,623,000
August	16	1,120,000	18	1,122,000
September	14	1,021,000	13	790,000
October	20	1,507,000	8	310,000
November	13	577,000	13	680,000
December	15	849,000	9	7,341,000
Total	179	$17,640,000	183	$18,020,000

There were thus 10 fires that destroyed $7,600,000, an average of $760,000, and 169 fires that destroyed an average of $60,000 each. There was destroyed also, by fires of less than $20,000 each, an aggregate of $6,000,000. Making a total loss by fire of $23,640,000 against $24,020,000 last year. The aggregates of fires over $20,000, distinguishing Northern and Southern States, were as follows:

YEARS.	Southern States.	Northern States.	Total.
1861	$9,330,000	$8,690,000	$18,020,000
1862	1,925,000	16,715,000	17,640,000
Decrease	$7,405,000	....	$380,000
Increase	....	$8,025,000	....

Thus the losses at the North were nearly doubled during the year. These losses, however, do not include the ravages and devastation caused in the border States by the movement of armies, and which cannot be approximated until perhaps after years of peace, when numerous claims for damages shall have been passed upon. Some of these claims have already been presented to Congress, particularly in the case of the raid into Pennsylvania.

The insurance returns for the year indicate a considerable increase in fire risks. In Massachusetts these have been as follows:

COMPANIES.	Risks.	Losses.
In 29 Stock Companies	$155,571,139 43	$1,185,146 84
In 4 Mutual Fire and Marine	11,832,484 00	112,151 80
In 59 Mutual Fire	218,085,634 98	346,725 95
Total, 1862	$385,489,258 41	$1,644,024 59
" 1861	355,987,306 37	1,340,059 97
" 1860	379,624,707 82	1,493,941 76

The returns of the fire business of the stock and mutual companies nearly approximate the ratio of premium to loss, or the average cost to the insured, as a body. The following is a comparison, in this point of view, of the last two years:

COMPANIES.	Premium.	Loss.	Average cost of each dollar of indemnity.
1861:			
Stock Companies	$1,283,326 00	$963,266 00	$1 33
Mutual Fire Companies	454,446 00	349,265 00	1 30
Total	$1,737,772 00	$1,312,531 00	$1 32
1862:			
Stock Companies	$1,289,410 95	$1,185,146 84	$1 09
Mutual Fire Companies	402,783 69	346,725 95	1 15
Total	$1,692,194 64	$1,531,872 79	$1 12

It is apparent from this that the companies, on the whole, suffered much more severely from fires in 1862 than in 1861. The losses were also less evenly distributed. There were not only a larger number of companies which paid more for losses than they received in premiums, but the net losses of the year were much larger to several companies than any experienced in the previous three years. The following table shows the number of stock companies that made net losses, putting expenses out of the account, in the past four years, the aggregate premium receipts, losses and net losses of said companies in each year, and the largest net loss of any company:

YEARS.	No. of companies.	Premiums.	Losses	Aggregate net loss.	Largest net loss.
1859	3	$74,005 67	$81,714 09	$7,708 42	$6,642 40
1860	2	28,419 00	38,590 00	10,171 00	6,224 00
1861	3	168,789 29	184,660 99	15,871 70	9,430 18
1862	10	646,511 78	784,365 68	137,853 90	30,400 08

That ten out of thirty-four home stock companies should lose in the same year more than their premium receipts, to the extent of twenty-one per cent. of the same, is a startling fact. And it is none the less so that out of forty-eight foreign stock companies doing business in the Commonwealth, only four, and those all in New England, failed to receive premiums during the year in excess of their losses. These four have made an aggregate net loss of $8,377, the largest being $4,454.96. It is true, a large portion of the extraordinary loss of the year came from the single conflagration in Troy. But setting that aside, the table above given shows a tendency to misfortune of more than one year's standing.

The operations of the ninety-six New York fire companies, showing the fire and inland navigation risks, were for the year 1862 as follows:

Paid up capital of fire and inland navigation insurance companies of New York State.	$20,432,860 00
Total assets, December 31, 1862	27,327,990 97
Net cash premium taken in 1862	7,732,479 90
Total income	9,723,421 40
Losses paid in 1862, incurred before	360,908 43
Losses paid in and for 1862	4,215,500 29

Total loss incurred in 1862, as reported	$4,746,046 47
Actual indebtedness, or present liability	783,978 07
Amount of reinsurance fund, or unearned premium	2,530,947 12
Total expenditure in 1862	8,626,042 46
Expenses of working the business, exclusive of taxes paid	2,162,055 89
Total liabilities, including estimate for reinsurance as returned, but excluding profit scrip	4,117,699 66
Net surplus (above capital) over liabilities and reinsurance	3,590,836 70
Amount of fire risks written in 1862	1,191,983,193 09
Amount of fire risks in force at end of 1862	891,620,365 58
Amount of inland navigation risks written in 1862	6,432,347 00
Amount in force at end of 1862	2,037,333 20
Average percentage of expenses on total income	22 23
Average percentage of expenses on net cash premium	27 96

The amount of risks taken by the companies in 1862 exceeded those of 1861 by $362,644,325. The foreign companies doing business in New York, had risks in New York of $121,726,767 fire and $9,861,867 inland navigation. The amount of risks of the Massachusetts, New York, and of other States, exclusive of Massachusetts, doing business in New York, are as follows:

COMPANIES.	Inl'd navigation.	Fire.
Massachusetts	....	$385,489,258 00
New York	$6,432,347 00	1,191,983,193 00
Ætna of Hartford	25,594,138 00	124,526,555 00
American, Providence	2,920,034 00	5,355,329 00
American, Philadelphia	354,380 00	12,334,681 00
Atlantic Fire and Marine, Providence	785,097 00	7,253,212 00
City Fire, New Haven	....	10,956,467 55
City Fire, Hartford	None.	11,936,130 05
Connecticut, Hartford	None.	6,317,133 88
Delaware Mutual Safety, Philadelphia	12,020,420 00	16,437,113 00
Franklin, Philadelphia	....	23,551,668 84
Hartford, Hartford	....	57,258,700 00
Home, New Haven	455,249 00	11,303,383 24
Hope, Providence	....	5,346,746 34
Insurance Co. of North America, Philadelphia	14,613,651 00	24,153,038 00
Jersey City, New Jersey	None.	6,030,774 66
Merchants', Providence	2,687,423 00	4,468,776 00
Merchants', Hartford	None.	10,598,024 00
North American, Hartford	None.	14,447,006 00
Norwich, Norwich	None.	6,642,302 66
Phœnix, Hartford	None.	34,007,029 00
Providence Washington, Providence	None.	13,923,605 00
Thames, Norwich	None.	3,075,064 00
Total, 1862	$65,049,351 00	$1,978,396,191 00

Such is the enormous amount of property at risk against fire in the companies in and about New York.

The insurance in New York companies is becoming more on the participation plan to the extent of three fourths of their profits.

They issue scrip to the policyholder for his share of said profits, and make no provision whatever for the redemption of this scrip except the excess of the fund of profits over a fixed sum, which may be $500,000. When it comes to redemption, the oldest scrip takes precedence, and the fund is always subject to losses as much as the capital, and *before* the capital.

This principle works well. In Massachusetts the law requires the companies to divide the whole surplus cash premiums.

The directors divide money which should be kept. The premiums of new comers are taken to pay losses or dividends to the old ones; money is borrowed to do the same thing, thus still further anticipating the future business; and at last, when no more can be borrowed and debts can no longer be put off, resort is had to the notes, which can be collected with great difficulty. Among the Massachusetts companies there are ten that insure to the extent of $15,185,994; to reinsure this amount would require $91,205, and the whole available cash assets of the companies amount to $16,480.

The mutual marine companies, though they issue scrip for profits, are allowed by law to retain the actual funds absolutely subject to be absorbed by future losses, and do not begin to redeem the scrip till the reserve fund exceeds a certain fixed amount; viz., it is at the option of the company to begin to redeem scrip after the fund reaches $250,000, and it is imperative after it reaches $500,000.

The past year has been one of unwonted activity in life insurance. The unusual number of men engaged in hazardous military and naval employments has apparently been accompanied by a desire to provide for families, and this desire has been met by the companies on appropriate terms. The demand so occasioned has induced the establishment of many new companies in different parts of the country; of them two have been started in New York. The following return (see Table on p. 533) shows the leading features of the companies doing business in New York during the year 1862.

The amount insured in 1862 was an average of $2,492 on each policy, and equalled one third of the whole amount outstanding at the beginning of the year. The tendency has been to a great number of policies at a lower average sum, from the fact that, on military and naval risks, the amount insured by each policy has been more strictly limited than on other risks, whereby the companies have been able to extend the benefit of insurance to a greater number and still keep the aggregate within a prudent limit.

The reasons for receiving such applications were apparent. The members of the company and their families, wherever resident, have the same interest in the defence and perpetuation of our institutions as other citizens, and if the number of a family is taken to be five, on an average, this consideration would extend to about three hundred and twenty-five thousand individuals, and therefore, if the assumption of such risks would have a favorable influence, it was expedient to assume them on just terms and not to an excessive amount. The principal difficulty in the case was the want of satisfactory data on which to estimate the risk, since precedents applicable were wanting. But estimates were carefully made and such rates of premium adopted, subject to modifications for the varieties of risks, as would seem to put

LIFE INSURANCE COMPANIES IN NEW YORK.

Name of Company.	Date.	Policies issued during the year.		In force at end of year.		Income during the year.			Expenditures during the year.				Total assets.	Per centages.

them upon a just footing, the amount to be limited in such manner that the companies should not be subject to a material shock, though the degree of risk should eventually prove to have been underestimated. So far as the rates adopted have been tested by experience, they seem to be fairly proportionate to the risks.

Some of the companies have paid about ten per cent. of the aggregate losses on military and naval risks. The whole amount of losses is somewhat below that which ought, according to approved records of mortality, to have occurred, notwithstanding a much greater proportion of extra risks by land and sea subject to extra premium, than ordinarily comes into the tables. But the older companies are of course gradually approximating, from year to year, toward the point when, in consequence of the increased average ages of members, a greater ratio of mortality becomes due from the company.

As long as the mean of the aggregate ages of the whole number of members shall continue to increase, a greater ratio of losses to the whole number will be annually due to the law of mortality.

There are in Massachusetts 24 life companies doing business. These embrace few Massachusetts companies — but companies doing business in New York, except the Wisconsin Mutual, and some others. The returns of all these companies give the following results for 1862, as compared with former years:

Years	Number of policies.	Amount insured.	Net value.	Ratio of value to amount.
1830..	1	$2,000 00	$1,080 45	54.00
1834..	2	5,000 00	2,711 74	54.20
1835..	1	5,000 00	1,821 24	36.40
1837..	1	1,500 00	624 12	41.60

1861..	7,900	20,839,273 71	669,953 96	3.21
1862..	15,544	37,619,734 53	730,325 49	1.94
Total.	71,425	$189,494,395 88	$18,007,867 91	9.51

The number of policies outstanding, Nov. 1, 1862, it appears, was very nearly double the number that was outstanding at the same period in 1861, and the risks were increased by the sum of $16,780,461.82. This fact indicates the very great impulse which the war has given to life insurance, and how carefully

many of those who have put their lives in peril in the country's service have protected the interests of those to whom those lives in some degree belong. In compliance with the request of the Massachusetts commissioner, 21 of the companies doing business made voluntary returns of the number of policies altogether that had been issued by each, the whole amount insured, the receipts of premiums, the payments, losses, surrenders, &c., and expenses for all other purposes. The results were as follows:

Companies.	Number of policies issued.	Amount insured.	Receipts (including premium notes, interest, &c.)	Disbursements.		Ratio of expenses, &c., to receipts.
				On policies (including losses, surrenders, and dividends paid).	For all other purposes (including losses on investments, expenses, &c.)

Total	175,608	$409,565,919	$60,936,768	$25,109,936	$7,098,611	11.6

Of this vast amount, $409,565,919, that has been insured, it appears that nearly one half is outstanding, and that $25,000,000 has been paid. The greater part have apparently discontinued through the cessation of the necessity for insuring, which may to a greater or less extent be the case in times of prosperity; there were also, no doubt, numbers who ceased to pay a premium through inability, and others through growing disregard of its utility. It is apparent, however, that within 20 years over 60 million dollars have been paid over to insurance companies from prudential motives, and these 60 millions are savings of earned capital of a nature similar to the deposits in savings banks. The deposits and the life premiums together make an amount equal to 250 millions thus saved within 20 years.

IOWA, one of the northwestern States, bounded on the east by the Mississippi river, contained in 1860 a population of 674,913, being an increase of 482,699 since 1850. The number of white males was 353,900, do. females 319,879.

The mortality in the State during the year ending May 31, 1860, was 7,260. The most fatal diseases were consumption, croup, fevers, and pneumonia.

The value of some items of the productive industry of the State during the year ending June 1, 1860, was as follows: iron founding, $187,435; lead, $160,500; coal, $6,500; lumber, $2,378,529; flour and meal, $6,950,949; spirituous liquors, 383,320 galls.; malt liquors, 35,588 bbls.; woollen goods, $167,960; leather, $81,760; boots and shoes, $325,296; furniture, $157,491. Total value of industrial products, $14,900,000.

The value of real and personal property was $247,338,265; lands improved, 3,780,253 acres; do. unimproved, 5,649,136 acres; cash value of farms, $118,741,405.

Crops produced in 1861, according to the report of the superintendent of agriculture, were as follows: wheat, 18,350,000 bushels, valued at $7,200,000; corn, 60,000,000 bu., value, $7,200,000; oats, 10,000,000 bu., value, $1,500,000; potatoes, 3,000,000 bu., value, $750,000; hay, 800,000 tons, value, $1,200,000; orchard products, value, $300,000; butter, 15,000,000 pounds, value, $1,200,000; cheese, 3,000,000 pounds, value, $240,000; cattle 200,000; wool, 50,000 pounds; domestic manufactures, $800,000; total of all products, $33,251,000. The number of miles of railroad in this State, in 1860, was 679; cost of construction, $19,494,633.

The governor of the State is Samuel J. Kirkwood, whose term of office expires Jan. 1, 1864. The secretary of State is James Wright. The judiciary consists of three supreme court judges, elected by the people for six years, and eleven district judges. The funded debt of the State is $1,192,295. There is one State bank with a capital of $720,800, and fifteen branches. Legislature meets biennially, and consists of forty-six senators, and ninety-three members of the house. The former are elected for four years, and the latter for two years. This body was twice in session

during 1862. The first session was at the beginning of the year, and the second in September. They were devoted to providing for the unusual circumstances of war in which the State was called to take a part, and to the ordinary objects of local legislation. Some of these objects were to make provision for sick and wounded soldiers, offer inducements to volunteers to enlist; a modification of the election laws, that volunteers might vote when absent; and increasing the resources of the executive department.

The State election for members of Congress and half the Senate and the members of the House of the State Legislature, took place on the second Tuesday of November. The people were divided into two parties, the republican and the democratic. The platform of the republican party was similar in its general principles to that adopted by the same party in Illinois, on page 519, to which reference is here made. The platform of the democratic party was similar to that adopted by the same party in the States of Ohio and Pennsylvania, to which reference is made. The offices to be filled at this election were secretary of State, auditor of State, treasurer, attorney-general, and register of the land office, and six members of Congress. The vote of the citizens was as follows:

For the republican candidate for Secretary of State..	66,014
For the democratic candidate for Secretary of State..	50,899
Majority for the former.....	15,115

The soldiers in the several regiments which had gone from the State, were also allowed to vote, with the following result:

For the republican candidate for Secretary of State..	14,874
For the democratic candidate for Secretary of State..	4,115
Republican majority.....	10,759

The votes for the other State officers were as follows:

	Republican.			Democratic.			Majority.
	Citizens.	Soldiers.	Total.	Citizens.	Soldiers.	Total.	
Auditor....	51,126	14,862	65,988	46,674	4,112	50,786	15,202
Treasurer..	51,112	14,835	65,947	46,694	4,145	50,839	15,108
Register...	51,147	14,858	66,005	46,645	4,113	50,758	15,247
Attorney ..	51,040	14,880	65,920	46,647	4,136	50,783	15,137

The candidates of the republican party for Congress were all chosen by the following vote:

	Republican.	Democratic.
1st district.....	12,705	10,486
2d "	12,433	8,930
3d "	12,112	8,452
4th "	12,900	11,529
5th "	10,306	7,346
6th* "	5,386	2,755

At the election for governor in 1861, the republican majority was 16,608; do. at the presidential election in 1860, 15,298.

The republicans obtained a large majority in both branches of the Legislature at the last election in 1861, when that body stood as follows:

	Republican.	Democratic.
Senate.....	32	14
House.....	59	33

* Incomplete.

The number of regiments of infantry from the State in the field near the close of the year was thirty-nine; do. of cavalry four, and three batteries. In addition, there are soldiers from the State in the 1st Nebraska, 5th Kansas, 7th, 10th, 21st, and 25th Missouri.

ITALY, a limited monarchy of Southern Europe, embracing the whole of the Italian peninsula except a small part (4,502 square miles) of the States of the Church and the Austrian province of Venetia, formerly the Republic of Venice. King Victor Emanuel II, born 1820, acceded to the throne of Sardinia in 1849, and was crowned King of Italy, 1862. Area of the kingdom, 95,942 square miles. Population, 1862, 22,430,000. The ordinary revenues of the kingdom for the year ending Jan. 1, 1862, were $97,756,440; the expenditures for all purposes, $155,996,260. The national debt at the same date was $536,032,422.

The record of the condition of Italy in the "Annual Cyclopædia" for 1861, leaves it at the critical moment when the death of its great statesman, Cavour, had plunged the nation in sorrow. The people of Italy, as well as its king, felt that Cavour, and he only, was capable of solving the difficulties of their situation; of coping, by the force of his genius and the power of his will, with the shrewd and selfish policy of Napoleon III; of paralyzing the efforts of the weak but mischievous Bourbon, whom Garibaldi had relieved of his crown, to overthrow the new government; of overcoming the sullen obstinacy of the Pope, and of restraining the fiery impatience of the revolutionary chief, Garibaldi.

When, by a sudden stroke, they were deprived of this wise and patriotic statesman, the king and the nation sought at once for some man whose patriotism, intellectual ability, and personal influence were such that he could, at this critical juncture, assume the responsibilities and carry out the policy of the deceased minister. One name, and one only, seems to have suggested itself to the minds of the nation, that of the Baron Ricasoli, not as the equal in intellectual power of the great minister, but as a man of pure patriotism, of inflexible integrity, of personal sympathy with and devotion to Cavour's views, and of sufficient ability and influence to push to their consummation the purposes and plans of the deceased minister. To him, accordingly, the premiership was at once tendered, and he accepted it with the avowed purpose of being governed by the views and endeavoring to attain the objects which Cavour had sought. For this purpose he made slight and only absolutely necessary changes in the *personnel* of the cabinet, and promoted the measures which Cavour had initiated.

But there were numerous obstacles in the way of his success on which he had not counted. Though irreproachable in the integrity and purity of his character, and intensely patriotic, the Baron Ricasoli's manners were somewhat haughty, and he possessed little of that power

of personal fascination which had given Cavour such thorough control over those with whom he came in contact. He utterly abhorred everything like bribery and corruption, and the indolence of the king, which led him to yield to the solicitations of the unworthy to avoid trouble, drew down upon him more than once the stern remonstrances of the honest and upright minister, and led to a want of that personal sympathy between them so indispensable to the successful administration of the government. His colleagues, too, complained of his haughty manners, and one of them, M. Minghetti, Minister of the Interior, resigned in September, 1861.

The French emperor found the premier as incapable of being moulded to his purposes as his predecessor had been, but he feared him less than Cavour, and sought only the means of covertly securing his overthrow. These were, unhappily, not wanting. Among the prominent political leaders of Italy, was the commendator Urban Ratazzi, a citizen of Alexandria in Piedmont, educated by the Jesuits at Turin, and given to intrigue. This man, who possessed considerable talent in political affairs, and the specious and adroit manners which enabled him to force his way into public notice, was a member of the first Sardinian Parliament in 1848, and became a member of Gioberti's cabinet the same year, and having by an act of treason to that statesman, who had intrusted him with his plans, procured the overthrow of the cabinet of which he was a member, succeeded in obtaining the position of premier in the new cabinet which succeeded, and as such, urged the unfortunate Charles Albert on to the resumption of those hostilities which culminated in the fatal battle of Novara. Driven from power by this catastrophe, Ratazzi took his place in the opposition, watching for another opportunity of grasping the reins of government. In 1852, Cavour, who knew how to use such men, procured his election to the presidency of the Lower House of the Parliament, and before the close of the same year, becoming himself premier, gave him a subordinate position in the cabinet. He remained in this cabinet several years, being finally promoted to the Home Secretaryship, but was eventually driven to resign, from his suspected complicity with men who were seeking to overthrow the Piedmontese Government. Cavour again procured his election to the presidency of the Lower House, though he knew that he had been intriguing to oust him from the premiership. When, after the peace of Villa Franca, Cavour resigned his position as incompatible with honor, after the pledges made to the Italian people had been violated by their ally, the French emperor, Ratazzi, who had assiduously courted the good will of Napoleon III, pushed himself forward for the premiership and was appointed to it by the king. His whole career (of six months) was one of obsequious servility to French dictation, and of officious meddling with the affairs of Lombardy, while all the overtures for union with Sardinia and Tuscany, Modena, Parma and the Romagna were repelled.

At last this cabinet fell, pushed from power by the overwhelming conviction of its utter incapacity, and the vigorous hand of Cavour again assumed the reins of government, only to be relinquished at his death. It would have seemed that, after thrice being compelled to resign in disgrace, Ratazzi would not have aspired again to power; but such was his brazen assurance that he again made himself prominent. He had been reëlected president of the Lower House of Parliament, and while professing to sustain the administration of Ricasoli, his whole thoughts were bent upon its overthrow. For this purpose he ingratiated himself into the favor of the indolent king, and craftily sought to bring about a feud between him and his minister; during the vacation of Parliament he made a journey to Paris, causing his creatures to give out that he was sent on a secret mission from Victor Emanuel to the French emperor; while in Paris, he assumed the airs, and received the honors due to an envoy extraordinary; Napoleon III understood his man, and so far lent himself to his purposes, as to manœuvre for his succession to the premiership. On his return to Turin, he sought the confidence of the radical party (the followers of Garibaldi, who were disaffected by what they regarded as the slowness of Ricasoli in securing the possession of Rome as the capital). Ratazzi professed the utmost sympathy for Garibaldi, and an earnest desire to promote his plans, and finally pledged himself if the Ricasoli Cabinet was overthrown, and he placed at the head of the new one, to put two of Garibaldi's friends in the cabinet, to appoint others prefects at such points as he should request, and to aid the revolutionary chief in his attack on Rome or Austria with money and arms, and permit the raising of corps of volunteers for that purpose throughout Italy. To the French emperor and the French party he promised to prevent any movement to seize upon Rome, and offered to pledge his cabinet in advance to take no measures for the acquisition of that city, which, he said, Italy did not need. To still another party, small in numbers, but possessing considerable influence, the party of the old Piedmontese aristocracy, he avowed his hostility to territorial acquisition, and his determination to maintain a policy of centralization by which the institutions, laws, and administration of the newly acquired State should be made to conform to the Piedmontese pattern, and their beloved Turin should become to Italy what Paris was to France. He had not neglected to subsidize the press in his favor, not at his own cost, but at the king's, and more than one prominent journal was filled with his praises.

It was in December, 1861, when all his plans for Ricasoli's overthrow had been laid,

that that statesman offered to him the portfolio of the Interior, which had been vacant since September. The crafty politician had no intention of accepting it, but he parleyed for some time, and at first gave encouragement that he would comply with the premier's offer, but finally with apparent reluctance, declined it, and Ricasoli, following Cavour's example, added it to his other duties. The plot was fast ripening; and Ratazzi, sitting with seeming impartiality as president of the chamber of deputies, prompted first one and then another of his allies to attack the ministry, while he himself avoided any public committal. Meantime he had succeeded in corrupting Sigor Cordova, one of Ricasoli's cabinet, whom he had promised, for his treachery, a place in his own cabinet. On the 2d of March, 1862, the king, who, to his subsequent regret, had been completely under the influence of Ratazzi and his followers, sent a communication to Baron Ricasoli, which led him to convene his cabinet and submit to them the propriety of resigning office. The resignation was unanimously agreed upon, Cordova being the loudest in his consent, and was tendered to the king the same day, and at first declined, but afterward accepted, and when, on the morning of March 3, the ministers waited upon the king to surrender the seals of office, they found Cordova closeted with the monarch, and arranging for his retention in the cabinet. Ratazzi fulfilled his promise to Garibaldi by giving place to Persano and Despretis, professed friends of Garibaldi, in his cabinet, and subsequently appointed other of his friends as prefects in Sicily and Naples. Of the other members of the cabinet three belonged to the French party, and two were of the old Piedmontese aristocracy. On the 7th of March, Ratazzi, having completed his cabinet, announced to the parliament that "the principles of his government would be a largely conciliatory spirit toward all true Italians, without regard to personal differences, the removing all dualism between government and nation, a policy of non-isolation from foreign powers, economical management of the finances, and a cordial alliance with France, whereby that completion of Italy would be best achieved, which as the wish of every patriot, was naturally the cherished wish of the ministers."

It was inevitable that a cabinet constituted from such discordant materials, and hampered by pledges to parties so diametrically opposed to each other, would very soon fall into difficulties.

It was with difficulty, and only from a strong sense of duty on the part of the patriotic majority in the parliament that the Ratazzi administration managed to live through the first month of its existence. Baron Ricasoli withdrew into the country, and his friends, desirous of avoiding embarrassment to the king, voted down as inopportune, a motion of direct censure, offered only 12 days after the cabinet was announced. Ratazzi found himself compelled to intimate to Cordova and Mancini, two of the members of the cabinet, the necessity of their resigning, and to supply their places with men more acceptable to the parliament.

Garibaldi had previously sought to hasten the redemption of Italy from Austrian and Papal sway by an appeal to the Hungarians to rise against their old oppressors, and had, after considerable forbearance on the part of Ricasoli, been warned that if an expedition which he had planned to attack Austria through Hungary, were not given up, the Government would be compelled to arrest it by force. The ex-dictator had submitted reluctantly, and with a feeling of hostility to Ricasoli, which Ratazzi had carefully stimulated.

On the 12th of April parliament was adjourned to the 3d of June, and soon after the premier and the king visited Naples, accompanied by Garibaldi, who with their apparent approval was already organizing his schemes, and enlisting his bands of volunteers. In Lombardy he had, in May, gathered a considerable body of riflemen, and made some feints of attacking the Tyrol. Probably at the French emperor's instigation, Ratazzi, on the 12th–15th of May ordered the arrest of several of Garibaldi's confidential officers, and a large number of the men he had enlisted, and committed them to prison, sequestering their arms, all the while professing the greatest regard and respect for Garibaldi himself, who he affected to believe was not cognizant of their doings. Garibaldi, furious at this unexpected act, avowed his responsibility for their conduct, denounced the arrest, and demanded their release, but could get no reply from the Government. On the 16th of May a collision occurred at Brescia between a mob who endeavored to set the arrested men free, and the soldiers, in which several persons were killed. The Government soon after published a circular, declaring a direct contradiction to his own asseverations that they had good grounds for believing that Garibaldi had had no participation in the enterprises for which these men had been arrested, and that his name had been improperly used. Meantime the crafty minister had prevailed upon the ex-dictator to return to Caprera, and on the reassembling of parliament took to himself great credit for having suppressed an insurrection which bid fair to disturb the public peace, reading a professed letter from Garibaldi to sustain his position. He was destined, however, to receive, from Crispi, a deputy who was a friend of Garibaldi, a castigation which would have driven any other man to tender his resignation.

Garibaldi, meantime, was projecting new schemes, and was still duped by the promises and manœuvres of the wily premier. He had gone to Palermo, and in the presence, and with the sanction of prefects whom Ratazzi had appointed, broached his plan for an expedition to attack Rome from Sicily. He roused the

enthusiasm of the Sicilians by his proclamations and, coöperating with Mazzini, commenced organizing a small army of invasion, believing that the measure had the full sympathy of the Government, which indeed had furnished it with means and arms. Napoleon III began to protest, and Garibaldi and Mazzini denounced the emperor without stint. Thus passed the month of July without remonstrance from the Italian Government. At length, on the 3d of August, Victor Emanuel issued a proclamation to the Italian people warning them to take no part in any enterprise such as was proposed, as it would be regarded as revolt and civil war, and pledging himself to secure for them eventually the possession of Rome. This proclamation under Ratazzi's secret explanations Garibaldi regarded as a ruse, and went on with his preparations. The Emperor sent war vessels to blockade the Sicilian coast to prevent his passage to the main land, and Ratazzi finally sent Gen. Cugia with orders to prevent the ex-dictator from marching toward Rome, but not to interfere with him if he wished to go anywhere else. Garibaldi meantime had moved forward to Catania on the 18th of August, adopting as his watchword, "Rome or Death." On the 24th and 25th of the same month, he succeeded in crossing the strait near Cape Spartivento, having had a slight skirmish with some Italian troops, in which he lost a few prisoners. He had, at the time of crossing, a force of about 2,300 men. About 500 whom he had left at Catania were taken prisoners on the 26th. It was no part of his purpose to come into conflict with Italian troops, and he accordingly passed by mountain routes from Mileto and Reggio toward Aspromonte, encountering, on the 27th, a small force, and losing 42 of his men as prisoners. On the 29th, he occupied a strong position at Aspromonte, where he was attacked by Col. Pallavicini. He directed his men not to fire at Pallavicini's troops, but the royal commander was not so forbearing, and 12 of the Garibaldians were killed, 200 wounded, among whom were Garibaldi himself, and his son, Menotti; 2,000 were taken prisoners, and conveyed to Spezzia. Garibaldi asked to be put on board an English ship, but Ratazzi refused to grant this, and he was kept as a prisoner. His wounds were painful, and one of them (a ball in the foot) was deemed dangerous. The knowledge of his being wounded and taken prisoner produced great excitement throughout Europe: an eminent English surgeon went on to Spezzia to attend him, and his expenses were defrayed by a public subscription. After some months of suffering the ball was extracted, and his recovery, though tedious, is probable. The Italian Government found itself greatly embarrassed with the prisoners thus taken. The revolutionary chief, who had given Victor Emanuel the kingdom of the Sicilies, could not be treated as a common prisoner, even though taken in arms against his king; nor was it to be believed that he was at heart disloyal to that king; he was rather the dupe of the prime minister, and had believed himself really doing the king service. From all quarters came appeals for an amnesty for him and his followers. At the wedding of the second daughter of Victor Emanuel and the young King of Portugal, on the 27th of September, both the bride and bridegroom, and Prince Napoleon and the Princess Clotilde (the eldest daughter of the king) added their prayers for the amnesty, which was granted on the 5th of October.

The arrest of Garibaldi's expedition intensified rather than checked the feeling of the whole Italian nation that Rome must become their capital. This feeling found vent in the circular of the minister of foreign affairs, Signor Durando, to the representatives of Italy at foreign courts, on the 10th of September, in which he said that Garibaldi's watchword ("Rome or Death") was but the expression of a national necessity, more imperious now than ever. It found a still stronger expression at the reassembling of the Parliament, when the Chamber of Deputies adopted an address to the king, in which, after thanking him for the amnesty decreed to Garibaldi and his followers, they proceed to say, "the time for action for the acquisition of Rome is delayed; for the present we will strengthen our finances by an active industry; we will increase our army to 400,000 men, and then, sire, with you at its head, we will see who will withhold Rome from us!"

The Ratazzi cabinet fell in November, at the reassembling of Parliament, under the withering scorn of the nation's representatives; having sunk so low in reputation that no respectable minority could be found to support it. The premier, in his intense desire for a prolongation of his power, even for a few weeks, begged the king to prorogue the Parliament so that a new ministry might not be confirmed, but Victor Emanuel, to his credit, firmly refused. The new cabinet consists of Signor Farini, premier; Peruzzi, minister of the interior; Mughelti, minister of finance; Amari, public instruction; and Manna, commerce. It is said to be a cabinet of great ability and high character.

J

JOHNSTON, Albert Sydney, a general in the Confederate service, born in Mason county, Kentucky, in 1803, was killed at the battle of Shiloh, April, 6, 1862. He graduated at West Point in 1826, as lieutenant in the 6th infantry, served in the Black Hawk war, and in 1836 entered the Texan army as a private soldier. After several promotions, he succeeded Gen.

Felix Houston in the chief command, and was involved in a duel with him in consequence. In 1838, he was appointed secretary of war, and, the following year, engaged in a successful expedition against the Cherokees. In 1840, he retired to private life for a time, in Brazoria county, Texas; but in 1846, at the solicitation of General Taylor, he assumed the command of a volunteer Texan regiment against the Mexicans. At the siege of Monterey, he served as inspector-general, and won himself much distinction. In October, 1849, he received from President Taylor the appointment of paymaster of the army, with the rank of major. In 1857, he conducted the expedition against the Mormons, and commanded the district of Utah, with the brevet rank of brigadier-general, until 1860, when he was removed to the command of the Pacific department, and stationed at San Francisco. His sympathies being upon the side of the Southern Confederacy, he was making arrangements to deliver the State of California to the Confederacy when he was unexpectedly superseded in his command, by General E. V. Sumner, before his plans were completed. Upon his return to the East he was placed in an important command, and, at the battle of Shiloh, was commander-in-chief of the Confederate army of the West, and, in the first day of that sanguinary fight, when encouraging and urging forward his troops, was mortally wounded.

K

KANSAS, a central State of the American Union, admitted to the Union in 1861. Area, 80,000 square miles; population in 1860, 107,206. The local administration of the State in 1862 was involved in some trouble; Gov. Robinson, elected in 1860, before the admission of the State into the Union, claiming to hold over, on the ground that the term for which he was elected had not expired, while, at an election held under the State constitution, George A. Crawford was elected by 5,429 votes. The matter was finally settled by the courts, which decided that Gov. Robinson's claim was just. In the autumn of 1862 an election for State officers, Legislature and members of Congress, was held, and Thomas Carney, the republican candidate, was elected governor for two years from Jan. 1st, 1863, receiving 4,545 majority. W. W. H. Lawrence, also a republican, was elected secretary of State for the same term. A. C. Welder, republican, was elected representative in Congress, receiving 4,993 majority over the democratic candidate. The Legislature was about four fifths republican.

Having had long experience in border warfare, during her period of territorial pupilage, Kansas had a large military force, in proportion to her populatiou, ready to enter the national service at the commencement of the war. She had sent on the 1st of Dec., 1862, over 14,000 men into the field, a larger percentage of the whole population than any other State has contributed.

In the spring of 1862 an expedition was fitted out in the State to go south, through the Indian Territory, to reduce the Indian tribes which had joined the Confederacy to subjection, and repossess the U. S. forts, Gibson, Arbuckle, Washita, and Cobb, of which the Confederates had taken possession. The expedition consisted of about 5,000 troops, of which 2,000 were whites and 3,000 loyal Indians. The expedition was unfortunate in its commanders at first: Gen. Blunt having assigned the command to Col. Charles Doubleday, of the Second Ohio cavalry; but, from some political influences, he was removed, and Col. Wm. Weir, of Kansas, substituted. Col. Weir's management was so inefficient and ruinous that Col. Salmon, of the 9th Wisconsin regiment, who commanded one of the brigades, deemed it necessary to arrest him on the charge of insanity. Under Col. Salmon's management the expedition took possession of the Indian Territory, arrested John Ross, the principal Cherokee chief, as being of doubtful sentiment toward the United States, and received professions of loyalty from about two thirds of the Cherokees and Creeks. The Choctaws they found mostly on the side of the Confederacy. Large numbers of the slaves of the Indians enlisted in the army of the expedition as "Woolly-headed Indians." The expedition had subdued and held the country north of the Arkansas river before the 25th of July, and Gen. Blunt, on the 8th of August, taking command in person, routed the Confederate force at Maysville, in the N. W. corner of Arkansas, on the 22d of Oct.; on the 28th and 29th of Nov. he again met and defeated, with heavy loss, the Confederate forces under Gen. Marmaduke, at Cane Hill, Ark.; on the 7th of Dec. he defeated and scattered a greatly superior force (28,000) of the Confederates under Gen. Hindman, at Prairie Grove, Ark., his loss being about 1,000, and that of the Confederates 1,500, the Confederates retreating in the night, abandoning their dead and wounded; and on the 27th and 28th of Dec. Gens. Herron and Blunt defeated two regiments of Confederate cavalry at Dupping Spring, and captured Van Buren, a strong fortress on the Arkansas river, taking one hundred and twenty prisoners, and four steamboats laden with stores.

KEARNEY, Maj.-Gen. PHILIP, an officer of volunteers in the United States army, born in the city of New York, June 2, 1815, was killed at the battle of Chantilly, Va., September 1, 1862. He was of Irish descent, his great-grandfather having settled in Monmouth county, New Jersey, in 1716, and was a nephew of Gen. Stephen Watts Kearney. He studied law, but having a decided taste for military life, at the age of 22 accepted the commission of second lieutenant in the United States 1st dragoons, commanded by his uncle, and soon after was sent to Europe by the Government to study and report upon the French cavalry tactics. To accomplish this object he entered the military school at Saumur, in France, and from thence went to Africa, where he joined the First Chasseurs d'Afrique, as a volunteer. By his daring exploits he attracted the attention of the French army, and was presented with the Cross of the Legion of Honor. In 1840 he returned home and received the appointment of aide-de-camp to Gen. Macomb, and the following year was aide-de-camp to Gen. Scott, serving in that capacity until 1844. In 1846 he became captain of a company of dragoons, and from his private means provided for his men equipments and horses, and his corps formed the escort of Gen. Scott when he made his entrance into Vera Cruz. For gallant and meritorious conduct at the battles of Contreras and Churubusco he was breveted major. While making a brilliant charge upon a battery at the St. Antonio gate of the capital, he lost his left arm. He had ordered the charge, but his men beginning to waver under a terrific fire, he dashed forward, and the troops electrified by his example followed, and slaughtered the Mexicans at their guns. After the Mexican war he was sent to California, and commanded an expedition against the Indians of the Columbia river, displaying during the campaign such tact and courage as won him the praise of the best military judges. In 1851 he resigned his commission, and returning to Europe, devoted several years to military studies. During the Italian campaign of 1859, Major Kearney served as volunteer aid to Gen. Morris, a distinguished officer in the French army, and upon its conclusion he received from the Emperor Napoleon a second Cross of the Legion of Honor. He was residing in Paris when the present war broke out in 1861, and hastened home to offer his services to his country, and after some delay was appointed brigadier-general of volunteers, and placed in command of the New Jersey troops, and afterward of United States volunteers. He distinguished himself at Yorktown, Williamsburg, Fair Oaks, White Oak Swamp, the Cross Roads, and Malvern Hills, and subsequently near Washington, under Gen. Pope. He was commissioned major-general July 4, 1862. As a disciplinarian Gen. Kearney was second to none in the army, and his troops were enthusiastic in their admiration of his military ability.

KENTUCKY, the garden of the United States in fertility and productiveness, had, in 1860, a population of 919,547 whites, 10,684 free colored, and 225,483 slaves, which was an increase of 273,279 during the preceding ten years. The number of white males was 474,-193; do. females, 445,291.

The mortality in the State during the year ending May 31, 1860, was 16,467. The most fatal diseases were consumption, croup, typhoid fever, pneumonia, and scarlatina.

Of iron, there were produced 23,362 tons of pig, and 6,200 tons of bar. The product of iron founding was valued at $757,400; coal mined, 6,732,000 bushels; lumber, $2,200,674; value of flour and meal, $5,034,745; spirituous liquors distilled, $3,247,203 gallons; do. malt, 74,850 barrels; cotton goods manufactured, $167,500; do. woollen, $1,128,882; leather, $701,555; boots and shoes, $685,783; furniture, $256,046; soap and candles, $486,900; value of products of industry, $36,310,000. The value of real and personal estate was $666,-043,112; lands improved, 7,644,217 acres; do. unimproved, 11,519,059 acres; and cash value of farms, $291,496,955.

Some of the productions of agriculture were as follows: horses, 355,754; asses and mules, 117,635; milch cows, 269,215; working oxen, 108,999; other cattle, 457,845; sheep, 938,990; swine, 2,330,595; value of live stock, $61,868,-237; wheat, 7,394,811 bushels; rye, 1,055,262 bushels; corn, 64,043,633 bushels; oats, 4,617,029 bushels; rice, 24,407 pounds; tobacco, 108,102,-433 pounds; cotton, 4,092 bales of 400 pounds each; wool, 2,325,124 pounds; peas and beans, 238,349 bushels; potatoes (Irish), 1,756,532 bushels; do. sweet, 1,057,558 bushels; barley, 1,057,558 bushels; hemp (dew rotted) 33,044 tons; do. water rotted, 2,026 tons; do. other, 4,344 tons; flax, 728,234 pounds; maple sugar, 380,941 pounds; honey, 1,768,692 pounds; value of home-made manufactures, $2,095,578; slaughtered animals, $11,640,740; miles of railroad, 569; cost of construction, $19,068,-477.

The position of Kentucky relative to the affairs of the Union, on the whole, remained unchanged during the year. Her determination was to sustain the Federal Government in all its measures designed for an honest restoration of the Union without interference with the institutions of the States. A very considerable portion of her citizens, however, sympathized with the Government of the Confederate States, and made valuable contributions to its aid. The governor, in his message to the Legislature, at its session, in the beginning of the year, thus describes the condition of the people:

> There is no disguising the fact that the people are suffering seriously in every quarter of the State for the want of means to meet their engagements. Trade is stopped in a great measure, and even what produce finds its way to market is sold at ruinous sacrifices. In regions over which the contending armies have passed large amounts of property have been taken or destroyed, the country has been made desolate, and

large numbers of the people who were contented, comfortable, and independent, are suffering for the necessaries of life; their fences have been destroyed, their stock and provisions taken, so that many cannot make a crop this year; add to this, that many persons have been frightened or dragged from their homes and suffering families. The laws are silent, or cannot be executed. Universal gloom and distress pervade these regions. Families are divided and broken up, and each has its wrongs or its woes to relate. Starvation stares many in the face. In other and more highly favored districts no property of any description can be sold at one third of its former value. The people are much in debt. They would gladly pay if their property would bring anything like a reasonable price; but owing to the great reduction in the circulation of the banks, from thirteen to five millions of dollars within a year or two; owing to the enormous war debt which must be met by an increase of taxation, the destruction of property and of confidence, the withdrawal of funds by capitalists, and the consequent fall in prices, the indebtedness of our people, and the opening of the courts, bankruptcy, and ruin stare them in the face unless they get relief.

There was not a cordial coöperation between the governor and the majority of the Legislature. Several bills, passed by the Legislature, were vetoed by him, such as an act to disfranchise all citizens who entered the Confederate service; another requiring all clergymen to take an oath to sustain the Constitution of the United States before performing the marriage ceremony, &c. These things, however, were soon lost sight of by the movements of the Federal troops, which engrossed attention. Kentucky was not only completely under their control, but the Confederate forces were driven beyond her limits. Even at this time the State had contributed more than its quota to the Federal army, and there was no military organization of the State but entirely acquiesced in this contribution.

In August an extra session of the Legislature was held on a call by Gov. Magoffin. The necessity of the session was thus explained by him:

Most cheerfully have I convened you in extraordinary session, upon the earnest appeal of the Speaker of the House of Representatives, and other distinguished members of both branches of the Legislature, who thought themselves justified, by the alarming condition of the State, in taking the responsibility of making the request in behalf of the absent members of the General Assembly. Divided and distracted as we are, with almost every neighborhood threatened with civil strife, with dangerous combinations of bad men forming in different sections of the State, to frighten, rob, and, if need be, to murder the good citizens of the Commonwealth; with lawless bands of desperate men, who have nothing to lose, headed by daring and reckless leaders, already roaming over the country, plundering indiscriminately at will the men of property, influence, and position, followed by the daring, dashing, and successful adventure and invasion of the State by Col. John Morgan, at the head of a large cavalry force, which forcibly seized and carried away a large amount of valuable property belonging to the Government and private citizens; with all this, condemned by law-abiding men, staring us in the face; with numerous appeals made to me by the people, as governor of the State, to protect them in the peaceful enjoyment of their property, their liberties, and their rights under the Constitution, and totally without the means or the power to keep the peace, to protect them, or to enforce the laws; with my persistent and unavailing efforts to organize the militia of the State under the late law, growing out of the divided sentiment of our people, their distrust of each other, and a conflict of authority with the military board, they claiming they had the paramount authority over the arsenal, arms, munitions of war, &c., under the old law, and I claiming it under the new one, which, according to my construction, reinstated me in the authority I had under the Constitution, and of which I had been deprived by a previous Legislature; with no power to organize the militia myself; with none in the military board; threatened with invasions and anarchy, I not unwillingly yielded to the request to call you together, so that you can determine by an amendment of the law, or the passage of a new one, the extent of the authority you intended to grant, and provide for the defence and protection of the people of the Commonwealth.

The governor also condemned the invasion of the State by guerillas under Col. Morgan, expressed regret at the arrest of citizens without any legal process, and recommended the adoption of the resolutions proposed by Senator Crittenden at the last session of the thirty-sixth Congress, as a standing proposition for peace, and the settlement of the war.

Immediately afterward the governor resigned his office, and James F. Robinson, secretary of state, was elected by the Legislature to fill the unexpired term. The most important subject which came under the consideration of this body during this session was the resolution of President Lincoln proposing a system of gradual emancipation to be adopted by the border slaveholding States. The report of the committee on the subject states that if a restoration of the Union, as it was, required the sacrifice of the value of their slaves, the people of Kentucky, in their opinion, would make it. It further says:

But devoted as we are to the Union, we do not feel that our loyalty demands at our hands the adoption of the measure proposed. We do not agree with the President that the gradual emancipation of the slaves in the border States would bring about a speedy termination of the war. Unhappily for our country, the dominant party in the Congress of the United States are bent on the destruction of the Constitution and the Union. No curse which the direst enemy of our country could have imposed would, in our opinion, have borne more bitter fruits than the action of that party has produced. We have viewed with alarm the rapid strides which the dominant party in Congress has made toward the prostration of every guarantee which the Constitution provides for the dearest rights of the people. They have endeavored, through the instrumentality of the executive and Congress, to strip the people of the disaffected States of their property; they have passed confiscation bills, in utter violation of the plain provisions of the Constitution; they have sought to take away from those people their State governments, and reduce them to a state of territorial vassalage; they have declared their purposes to free the slaves of the rebel States, and elevate them to an equality with the white man; they have declared that the war should be prosecuted until slavery shall be swept from the entire land; they proclaim that they are against restoration of the Union unless slavery is abolished.

The people of Kentucky justly feel horror and alarm at the enunciation of such doctrines. They will oppose them by all peaceable means, and if the time should come when the counsels of reason shall no longer be heeded, when the barriers erected by the Constitution shall no longer afford protection, then will Kentucky rise up as one man and sacrifice the

property, and, if need be, the lives of her children, in defence of that Constitution under which alone we can ever hope to enjoy national liberty. We deny what has been so often asserted by that party, that the question of slavery is the cause of the war. Disappointed ambition, grovelling lust of office and power produced it. Slavery was but the pretext for the execution of a purpose long nourished to overthrow the Government.

The report closed with a recommendation that a system of gradual emancipation of slaves be declined. This course was followed by the Legislature, and no action taken on the subject. On other subjects its action was such as to sustain the Federal Government in the great objects for which the war was originally declared to have been undertaken.

The Assembly, although expressing a conviction that the quota of troops from the State, under the calls of the President made in July and September, would be raised by voluntary enlistment, nevertheless passed an act authorizing a draft by a vote of 64 to 9. On the approach of the Confederate force to Lexington, in September, the Legislature adjourned to Louisville, where it convened. The archives of the State were also removed.

A statement of the financial condition of the State on the 31st of July reported the sum of $423,935 in the treasury, of which $84,169 belonged to the revenue fund; $169,419 to the sinking fund; $126,347 to the school fund; and $43,998 to the military fund.

The more important military movements within the State will be found described under ARMY OPERATIONS.

On the 9th of June, Gen. J. T. Boyle assumed command of the Federal forces in Kentucky. On the 9th he issued the following order of instructions to his officers, thereby indicating the course which would be pursued by him:

1. All peaceful and law-abiding citizens and residents of the State must be protected in their persons, property, and rights; but citizens and residents who joined the so-called Confederate forces, or gave them aid or assistance, or went within their lines without license from the proper authorities, and have returned, or may return, and be repentant for their conduct, must report themselves to Col. Henry Dent, provost marshal of Louisville, Col. S. D. Bruce, at Bowling Green, Major Brocht, provost marshal of Lexington, or Col. Noble at Paducah, and furnish evidence of such repentance, and take the oath of allegiance, and give bonds and security for their future good conduct, and if they fail so to report themselves, they must be arrested and committed to the military prison at Louisville, and sent thence to Camp Chase, with a statement of their case, to await the action of the Secretary of War.

2. All persons who organize or aid in organizing forces for the rebellion, or organize or aid in organizing guerillas, or harbor or conceal, or give information or assistance to guerillas, must be arrested and dealt with according to military law.

3. In times of trouble like these, good, law-abiding men will refrain from language and conduct that excite to rebellion. For anything said or done with the intent to excite to rebellion, the offender must be arrested and his conduct reported, that he may be dealt with according to law.

4. When damage shall be done to the person or property of loyal citizens by marauding bands or guerillas, the disloyal of the neigbourhood or county will be held responsible, and a military commission appointed to assess damages and enforce compensation.

5. All arrests will be reported to these headquarters, with a descriptive list of the prisoners, and a full statement of the case, and the substance of the evidence, and names and residences of the witnesses.

By command of Brigadier General BOYLE.

About this time some of the lower counties of the State began to be troubled by guerillas, who committed all kinds of outrages, and kept the inhabitants in a constant state of alarm. Horses and all other valuable property were seized by them, chiefly from Union men, but often from their own friends.

At this time, about the 10th of July, a report that Col. John Morgan was approaching Lexington and Frankfort created much excitement in Cincinnati. Troops were immediately despatched from the camps in Ohio, and Lexington was occupied and placed under martial law.

On the 17th of July, Cynthiana, a village on the south fork of the Licking river, thirty-seven miles northeast of Frankfort, was occupied by Col. Morgan, with a mounted force of about two thousand men. At the same time Henderson, a town on the Ohio river, two hundred miles below Louisville, was occupied by a guerilla force. A portion of the same crossed the Ohio to Newburgh, and captured a number of arms, and made several prisoners.

The effect of these movements was to produce an immediate organization of the citizens for self-defence, which served to check them for a period, and to cause Col. Morgan to retire. Previously, however, Gen. G. C. Smith took command of the forces at Lexington, and marched in pursuit of Col. Morgan, whom he encountered near Paris. Col. Morgan was defeated with the loss of a small number killed, and twelve taken prisoners. Col. Morgan retired toward Winchester, and was rapidly pursued by Gen. Smith, who had been reënforced.

A guerilla force was also congregated at Hawesville on the Kentucky river.

On the 29th of July Russelville, on the south of Louisville, was occupied by guerillas, and on the 30th Mt. Sterling was attacked, but the enemy were repulsed by the Home Guards. In their retreat they were met by a party of the 8th Kentucky, under Major Bacht, and severely handled, losing all their horses, and several men killed.

On the 22d of August, the 54th Indiana was attacked at Bowling Green, by a guerilla force under Col. Woodward, with three pieces of artillery, to whom the former surrendered. Active operations now ensued under Gen. Bragg, and the guerillas were concentrated in his command. Col. Morgan, in a despatch by telegraph (of which he had taken possession of a station) to a former friend and Union man, boasted that he had captured seventeen cities, destroyed millions of property, and paroled 1,500 Federal prisoners. These guerilla operations, by bands of men collected in Kentucky, were continued throughout the year. The more formidable bands were organized under the act of the Confederate Congress to create "Partisan Rangers."

The provisional government of Kentucky, organized near the close of 1861, was forced to remove with the Confederate army on the approach of the Federal forces under Gen. Grant. It never had any other than a nominal existence. Persons went from Kentucky as members of the Confederate Congress, and took their seats in the Senate and House of Representatives. (*See* CONGRESS, CONFEDERATE.)

KNOWLES, JAS. SHERIDAN, a British dramatist, and subsequently a clergyman, born in Cork, Ireland, in 1784, died at Torquay, England, Nov. 30, 1862. He was the eldest son of James Knowles, author of a "Dictionary of the English language," and a lecturer on elocution, and received his name in consequence of his connection with the Sheridan family. At 12 years of age he began to evince a taste for that department of literature in which he afterward became so distinguished, and, it is said, composed a play for a company of juvenile performers, of whom he was the leader. At fourteen, he wrote the ballad of the "Welsh Harper." For several years he led an unsettled life, but at 22 years of age determined to make the stage his profession, and made his first appearance as an actor at the Crow street theatre, in Dublin, afterward performing in Waterford, Swansea, and various other places. In 1815, his "Caius Gracchus" was produced in Belfast, and met with great favor, and, eight years afterward, was well received in London. His next play, "Virginius," in which Macready sustained an important part, at Drury Lane, brought him more prominently before the public. His "William Tell," "Beggar of Bethnal Green," "Hunchback," and "Wife," followed in rapid succession. After a successful tour in Europe and the United States, he produced "The Love Chase," "Woman's Wit," "The Maid of Mariendorpt," "Love," "Old Maids," "John of Porcida," "The Rose of Aragon," and "The Secretary." In several of these plays he sustained the leading characters. He also delivered courses of lectures on elocution and kindred subjects. Upon the failure of his health, in 1849, a literary pension of £200 per annum was bestowed upon him, as an acknowledgment, by the crown, of his labors in the cause of literature. A few years since, he abandoned the stage for the pulpit, and became a zealous and eloquent preacher, of the Baptist denomination; since then he published two works on subjects of polemical theology—"The Rock of Rome," and "The Idol Demolished by its Own Priests." His dramatic works have been collected and published in England, in three volumes.

L

LANDER, Brig.-Gen. FREDERICK WILLIAM, an officer of volunteers in the United States service, born in Salem, Mass., December 17, 1822, died at Pawpaw, Va., March 2, 1862. He was educated at the Dummer Academy, Byfield, and completed his studies as engineer at Partridge's Military Academy, in Norwich, Vt. After practising his profession a few years in Massachusetts, he was employed by the Government to conduct several important surveys, among which were two to determine the practicability of a railroad route to the Pacific, from the second of which, organized at his own expense, he was the only one who returned alive. In 1858 he had the command of an expedition to open a wagon road to California, across the plains. He made five explorations across the continent, as engineer, chief engineer, or superintendent, and for his celerity and efficiency was highly complimented by the Secretary of the Interior, in his official report. While engaged in this work his party were at one time attacked by the Indians, over whom they gained a complete victory, thereby ensuring safe conduct to the emigrant trains crossing the country. Of the appropriations made by Congress in two seasons alone for the construction of these roads, he brought back $100,000 of unexpended funds. At the commencement of the civil war, in 1861, he offered his services to Gen. Scott, "in any capacity, at any time, and for any duty," and was successfully employed on several important missions in the Southern States. After serving as a volunteer aid to Gen. McClellan in western Virginia, and participating in the capture of Philippi and the battle of Rich Mountain, he was, in July, 1861, commissioned brigadier-general, and assigned to an important command on the Upper Potomac. During the disaster at Ball's Bluff, he was at Washington arranging for the opening of the Baltimore and Ohio railroad. Receiving the intelligence of the action, he hastened to the spot, and in the skirmish which he had with the enemy opposite Edwards' Ferry, was wounded in the leg by a musket ball. Before the wound was healed he reported for duty, and was assigned the command of the forces at Romney, Va. A movement on the part of Gen. Jackson, threatening to outflank his troops, rendered it expedient for him to evacuate the position, which he did without loss, and soon after recovered it. Having discovered a Confederate camp at Bloomery Gap, he marched his four thousand men a distance of forty-three miles through deep snow, without rest and with little sustenance, and charging upon them completely routed the enemy, capturing seventeen commissioned officers and fifty privates. In this brilliant dash, the Confederate commander and his staff surrendered to Gen. Lander, who, with a single aid, had outridden the

rest of the force and coming upon them at full gallop demanded their swords. In recognition of these services he received a special letter of thanks, written by the Secretary of War in behalf of the President. Soon after Gen. Lander was compelled, in consequence of his health, to apply for a temporary respite from military duties, but before his request could be complied with, he learned that the enemy were within his reach, and while preparing for a midnight attack, died suddenly with congestion of the brain. In personal presence Gen. Lander was commanding and attractive, and as a military leader combined a spirit of the most daring enterprise with clearness of judgment in the adaptation of means to results.

LITERATURE AND LITERARY PROGRESS IN 1862.—I. In the United States. The continuance of the war materially checked the enterprise of publishers, and caused the number of new works published to be greatly below that of some former years; yet the literary record of the year is by no meaus unimportant either in the number or character of the books issued. A number of works involving large outlay and which had been for some years in progress, were completed; others were continued as promptly and regularly as in times of ordinary prosperity, and a considerable number of important new enterprises were undertaken. The whole number of books published during the year, aside from the issues of the religious publishing societies, which are not usually enumerated among the publications of the book trade, and which are for the most part dependent upon a distinct class of agencies for their dissemination, was about 600. Of these 199 were reprints or translations, though in a number of instances the American edition was materially improved by notes and additions. The new books published by the religious publishing societies did not much if at all exceed 300. Forty-six volumes, of which only seven were translations and one a reprint, were devoted to military science and art. Of these 17 or 18 were manuals of tactics and instruction, or text books for the different branches of the military and naval service; some of them works of great merit and adopted by the Government as its manuals of instruction both in the volunteer service and in the schools of the regular army and navy. Among these were the "Authorized Infantry Tactics," prepared by Brig.-Gen. Casey; the "Course of Instruction in Ordnance and Gunnery," prepared by Capt. J. G. Benton, U. S. A.; the "Field Manuals of Evolutions of the Line," and of "Battalion Drill," by Capt. Henry Coppee; the "Naval Gunnery Instructions" of Lieut. E. Barrett, U. S. N.; the manual of "Outpost Duty" of Brig.-Gen. Butterfield; the "Manual of Engineer Troops" of Capt. J. C. Duane; Col. W. W. Duffield's "School of the Brigade and Evolutions of the Line;" Capt. Henry Heth's "Target Practice for the Use of Troops;" a new and revised edition of Maj.-Gen. Halleck's "Elements of Military Art and Science; or, Instructions in Strategy, Fortification, Tactics of Battles," &c.; Commodore U. P. Levy's (U. S. N.) "Manual of Internal Rules and Regulations for Men of War, with additional Rules for the Engineer Department by Chief Engineer A. C. Stimers;" Col. J. Monroe's Company Drill and Bayonet Fencing; "Manuals of Heavy Artillery, Light Artillery, and of Ordnance;" Lieut. E. Simpson's (U. S. N.) "Text Book of Ordnance and Naval Gunnery;" Maj. G. L. Willard's "Manual of Target Practice;" Lieut.-Col. H. B. Wilson's United States Rifle and Light Infantry Tactics; and Dr. J. J. Woodward's (U. S. A.) "Hospital Steward's Manual."

Besides these manuals and text-books, there have been a considerable number of valuable contributions to higher military science.—Prominent among these should be named the treatise of the present commander-in-chief, Major Gen. Halleck, on "International Law, or Rules regulating the Intercourse of States in War and Peace," a work which, though prepared previously to the commencement of the present war, was not published till the beginning of last year; the able essay of Prof. F. Lieber, on "Guerilla Parties considered with reference to the Laws and Usages of War;" Capt. Emeric Szabad's "Modern War; its Theory and Practice;" Capt. S. W. Benét's (U. S. A.) Treatise on Military Law and the Practice of Courts Martial; J. F. Callan's Military Laws of the United States, 1776–1863; and the timely translations of Baron de Jomini's "Art of War" and "Political and Military History of the Campaign of Waterloo," and Marshal Marmont's "Spirit of Military Institutions." An English writer, Capt. Lendy, has also made a valuable contribution to military literature in his compilation (translated from the French) of "Maxims, Advice, and Instructions on the Art of War;" as has Henry Barnard, by his compilations and translations of the history and courses of Instruction in the European Military Schools. Among the lighter literature called out by the war, may be mentioned Brig. Gen. Barnard's "The C. S. A. and the Battle of Bull Run;" "Cadet Life at West Point," by an officer of the U. S. Army; Prince de Joinville's "The Army of the Potomac;" Count Anatole de Segur's "Notes from the Diary of a Soldier;" J. Cook's "Siege of Richmond;" "Stars and Stripes in Rebeldom;" "Texas and its late Military Occupation and Evacuation," and "Thirteen Months in the Rebel Army," &c., by an impressed New Yorker. Our notice of military works for the year would be incomplete without mention of the valuable "Naval Text book and Naval Dictionary" of Com. B. J. Totten; "The History of the Naval Academy," by Edward C. Marshall, and the "Official Army Register" for 1862.

The literary event of the year was the completion of the New American Cyclopædia, in 16 vols. royal 8vo. The 16th volume was not indeed delivered to subscribers until Feb-

ruary, 1863, but the work was completed before the close of the year 1862. This was by far the largest and most costly enterprise ever undertaken by any publishing house in this country, involving an immense outlay, occupying a period of nearly six years, and having about 375 contributors. Unlike some of the gigantic enterprises of this description undertaken in England, the New American Cyclopædia has proved pecuniarily a success, and is unquestionably destined to attain to a further sale of many thousand copies.

The publishers of the "Cyclopædia" issued also, during the year, the first volume, uniform in size and style with that work, of an "American Annual Cyclopædia, or Annual Register of Events;" a work which was greatly needed. Of other works of reference, the American reprint of Chambers's Encyclopædia has progressed to its fourth volume, two volumes having appeared during the year; Rev. Peter Bullions, D.D., has published, in connection with his series of Classical Text Books, "A Copious and Critical Latin Dictionary" of 1,014 8vo pages; Mrs. A. C. L. Botta has issued a new and revised edition of her "Handbook of Universal Literature," and on the Pacific coast Mr. William H. Knight has published, in a small but compact volume, a "Hand-Book Almanac for the Pacific States for 1863."

The historical works of the year have mainly had reference to the war now in progress. First among them, as a repository of the facts of history, is the 'Rebellion Record" of Mr. Frank Moore, which had reached its fourth volume before the close of the year, three volumes having been issued during the year. Mr. Moore had also issued two numbers of the "Companion to the Rebellion Record," intended to form a supplementary volume of speeches and documents, and one number of "The Spirit of the Pulpit," giving a collection of the sermons of the most conspicuous clergymen, North and South, on the war. Of histories of the war, the number commenced or projected is very large. Forty-two had been announced before the close of 1862, and either numbers, or the first volume of nearly half that number, had appeared. Of these, the authors best known were: Messrs. Evert A. Duyckinck, J. R. Kennedy, J. T. Headley, J. S. C. Abbott, Thomas P. Kettell, Orville J. Victor, W. A. Crafts, Robert Tomes, M.D., Mrs. Ann S. Stephens, E. G. Storke, &c., &c.

A work of more general character, as reviewing the past history of the United States, has appeared from the pen of W. C. Fowler, LL.D., under the title of "Sectional Controversy, or Passages in the Political History of the United States." The elaborate and valuable history of "The Puritans," by Samuel Hopkins, was completed by the issue of the third volume during the year. The number of local histories was hardly as large as usual; the most important were, "History of the Town of Marlborough, Mass.," by Charles Hudson; "A Condensed History of Cooperstown, N. Y., with a biographical sketch of J. Fenimore Cooper," by Rev. S. T. Livermore; an "Illustrated History of the Panama Railroad," by F. N. Otis; "History of Delaware County, Penn.," by Geo. Smith, M.D., and a "History of Erie County, Penn., by Laura G. Sandford.

Among reprints, those specially noticeable, are a new edition of Hallam's "Constitutional History of England from the accession of Henry VII to the death of George II," in 3 volumes 12mo, with a continuation of the "Constitutional History from the accession of George III," by Thomas Erskine May, C. B., in 2 vols. 12mo. Both works are in the admirable typography of the Riverside press, and their form and style of publication leave nothing to be desired. "The Student's History of France," and John Francis's "History of the Bank of England from 1694 to 1844," are also noticeable reprints of works of permanent value.

Biographic literature does not present a formidable array of titles, though some of the memoirs published have been works of great merit. The most successful work in this class was the autobiographical narrative of Rev. W. G. Brownlow (better known as "Parson Brownlow"), entitled "Sketches of the Rise, Progress, and Decline of Secession, with a narrative of Personal Adventure among the Rebels." This work had reached a sale of 75,000 copies within six months after its publication. Several serials were devoted to short memoirs of persons who had become famous during the war, or of those eminent officers who had fallen in battle. Among these the most noteworthy were, "Heroes, Martyrs, and Notable Men," edited by Frank Moore; "The Fallen Brave," edited by J. Gilmary Shea, LL.D., and "The Men of the Time," edited by O. J. Victor.

Of memoirs not connected with the war, the second volume of the "Life and Letters of Washington Irving," by his nephew, Rev. Pierre M. Irving; the "Life of Rev. Nicholas Murray, D.D.," by Rev. S. J. Prime, D.D.; "Jefferson at Monticello: the Private Life of Thomas Jefferson," by H. W. Pierson, D.D.; and "Memoirs of Mrs. Joanna Bethune," by her son, Rev. G. W. Bethune, D.D., who himself passed away during the year, are the most remarkable. The Sermons of Rev. Oliver Brownson, with a Memoir of his Life, by Rev. W. B. Sprague, D.D.; a Sermon, with biographical sketch of Rev. Timothy Woodbridge, "the blind minister," from the same facile and eloquent writer; a "Discourse on the Life, &c., of Count Cavour," by Vincenzo Botta, Ph. D.; the "Life, Times, and Correspondence of Rt. Rev. Dr. Doyle," by W. J. Fitzpatrick, and a brief sketch of "Martin Van Buren, Lawyer, Statesman, and Man," by William Allen Butler, also belong to this class. "The Life of Mary, Queen of Scots," by Donald MacLeod, is another effort to settle one of the vexed questions of history, the more difficult of

settlement from the extraordinary beauty and grace of its subject.

Genealogy is akin to biography, and in this field the contributions, though few, have been of great importance. James Savage has completed during the year, by the publication of the third and fourth volumes, his "Genealogical Dictionary of the First Settlers of New England," a colossal undertaking, and one requiring an amount of patient and persevering labor for which few are competent. Mr. William H. Whitmore has also published in a quarto volume, a "Handbook of American Genealogy;" and Mr. C. S. Sims has furnished to the public an interesting treatise on the origin and signification of Scotch surnames.

The reprints in biography are not numerous. The most remarkable are Mrs. Oliphant's "Life of Edward Irving," a work of deep interest both from the remarkable character of the subject, and the relations existing between him and his biographer; the "Life of Arthur Vandeleur, Major Royal Artillery," by the author of "Life of Capt. Hedley Vicars," and "Louise Juliane, Electress Palatine, and her Times," by Fanny Elizabeth Bunnett.

In theological and religious literature, of sixty-eight titles, just one half are reprints or translations, though several of the works have received valuable additions from their American editors. Of the American works, none possess such extraordinary merit as to entitle them to extended notice. Rev. Abel Stevens, D.D., LL.D., published the 3d volume of his "History of the Religious Movement of the 18th century, called Methodism;" Rev. J. H. Kurtz, D.D., an eminent Lutheran clergyman, prepared a "Text-Book of Church History from the Reformation to the Present Time;" Rev. J. S. C. Abbott, a treatise on "Practical Christianity," a continuation of his Young Christian Series; Rev. Hollis Read, a religious writer of considerable reputation, a work on the "Coming Crisis of the World, with an Introductory Note by S. H. Tyng, D.D.;" Rev. Joseph H. Allen, "Hebrew Men and Times; from the Patriarchs to the Messiah." "Solomon's Song, Translated and Explained," by Rev. Leonard Withington, D.D., is a brief but admirable commentary, from the pen of a writer who does not appear in print as often as the public desire. Of volumes of sermons, discourses, and public addresses published during the year, the number is considerable. The last collected volume of the sermons of the late Rev. Dr. James W. Alexander, is a series of discourses on Faith; a series of Discourses on Sacramental Occasions, delivered by the late Rev. Ichabod T. Spencer, D.D., have been published, with an introduction by the venerable Dr. Gardner Spring; Rev. W. G. T. Shedd, D.D., late professor at Andover, but now colleague pastor of Dr. Spring, has published a volume of "Discourses and Essays" of great logical power and ability. Rt. Rev. C. P. M'Ilvaine, bishop of Ohio, defends, in a series of discourses, the doctrine of "Righteousness by Faith;" Rev. William R. Scott, late of San Francisco, has given to the public a volume of sermons, under the somewhat singular title of "The Church in the Army; or, The Four Centurions." "The National Preacher and Village Pulpit," a monthly serial, containing sermons from conspicuous living clergymen of the United States, has a wide circulation, and is edited with decided ability.

A volume entitled "Sermons and Speeches," and containing the public discourses on religious topics, and the addresses of the noted anti-slavery orator, Gerrit Smith, was published in the early part of the year. Among the other religious works of the year are: Rev. Dr. Nehemiah Adams' "Broadcast," a collection of thoughts, apophthegms, illustrations, as gathered during a long period of ministerial labor; "The Christian Sabbath; its History, Duties, etc.;" Rev. James Chrystal's "History of the Modes of Christian Baptism;" Rev. Dr. H. Darling's "The Closer Walk; or, The Believer's Sanctification;" Mrs. E. H. B. Mason's "Great Expectations Realized," a singular medley of autobiography, missionary experiences, and advocacy of direct effort for the religious instruction of Burmese women; "Meditations on the Duties of Clergymen;" "Prayers," by the late Theodore Parker; "The Prodigal Son, or the Sinner's Departure and the Sinner's Return," by Rev. Geo. E. P. Rogers, D.D.; "Sacred Cosmogony," by the Abbé A. Sorignet. Rev. J. A. Seiss, D.D., "The Parable of the Ten Virgins."

The most noticeable of the reprints of this class are Peter Bayne's "Testimony of Christ to Christianity;" "Essays and Reviews" (4th American from 2d London edition); "Aids to Faith; a series of Theological Essays, being a reply to Essays and Reviews;" "Replies to Essays and Reviews;" Bishop Colenso on the "Pentateuch and Book of Joshua," part I; Arthur Penrhyn Stanley, D.D., Lectures on the History of the Eastern Church; C. J. Ellicott, D.D., Historical Lectures on the Life of our Lord Jesus Christ, and Critical and Grammatical Commentary on Ephesians, with revised translation; Brooke Foss Westcott's Introduction to the Study of the Gospels, edited with preliminary essay, by H. B. Hackett, D.D.; Dr. Thomas Guthrie's "The Way to Life;" the 2d volume of Dr. K. R. Hagenbach's "Text Book of the History of Doctrine," revised with large and very valuable additions, by Prof. H. B. Smith; Rev. William Hanna, LL.D., "The Last Day of our Lord's Passion;" Hay's Devout Christian Instructed in the Faith of Christ; Father Senescalchi Ligorio, S. J., "Meditations of St. Ignatius; or, Spiritual Exercises," translated from the Italian; Rev. James McCosh, LL.D., "The Supernatural in Relation to the Natural;" "Patience of Hope," by the author of "A Present Heaven," with an introduction by J. G. Whittier; Spurgeon's Sermons, 7th series; Octavius

Winslow, D.D., "The Sympathy of Christ with Man; its Teaching and its Consolation;" a new edition of Cardinal Wiseman's "Lectures on the Principal Doctrines and Practices of the Catholic Church."

In Moral, Intellectual, and Political Science, there have been several works issued of decided merit. Among these may be named President Mark Hopkins's "Lectures on Moral Science;" Mr. J. Bascom's "Æsthetics, or the Science of Beauty;" President J. T. Champlin's "First Principles of Ethics:" Prof. C. K. True's "Elements of Logic;" Mr. P. McGregor's "System of Logic;" B. R. Curtis' Essay on "Executive Power;" Rev. M. D. Conway's "The Rejected Stone; or, Insurrection *vs.* Resurrection in America;" and Furman Sheppard's "First Book of the Constitution of the United States." Several of the reprints in this class are also works of great ability. Prominent among these are Prof. J. E. Cairnes' "The Slave Power, its Character, Career, &c;" Count A. de Gasparin's "America before Europe; Principles and Interests," translated by Mary L. Booth; John Stuart Mill's "Considerations on Representative Government," and "The Contest in America." The elegant library edition of Lord Bacon's works, was completed by the issue of the 3d and 4th volumes. Prof. F. Bowen, of Cambridge, edited with notes, a new edition of Reeve's translation of De Tocqueville's "Democracy in America."

In physical and mechanical science, a department for many years past diligently cultivated in the United States, many important works were issued. Among them were: the 4th volume of Prof. Agassiz' magnificent "Contribution to the Natural History of the United States;" a revised edition of J. J. Audubon's "Birds of America;" Prof. James D. Dana's "Manual of Geology;" A. A. Gould, M.D., "Otia Conchologica; Description of Shells and Mollusks, from 1839 to 1862;" Hermann Hagan's "Synopsis of the Neuroptera of North America; with a list of the South American Species;" William Stimpson's "Notes on North American Crustacea in the Museum of the Smithsonian Institution;" Prof. James Hall's third volume of the "Palæontology, in the Natural History of New York;" Prof. James Hall and J. D. Whitney's "Report on the Geological Survey of the State of Wisconsin;" a new edition of Dr. T. W. Harris' "Treatise on some of the Insects Injurious to Vegetation," edited by Charles L. Flint; Mr. John S. Hittell's admirable essay on "Mining in the Pacific States of North America;" Capt. A. A. Humphreys and Lieut. H. L. Abbott's "Report on the Physics and Hydraulics of the Mississippi River;" H. Ruttan's "Treatise on Warming and Ventilating Public and Private Buildings," developing his new and admirable system; Mr. G. W. Tryon's "List of American Writers on Recent Conchology," with the titles of their memoirs and dates of publication; and the Annual of Scientific Discovery for 1862. New editions were also published of Dr. A. Snowden Piggott's "Chemistry and Metallurgy of Copper;" E. C. Perkins' "Practical Treatise on Gas and Ventilation;" Commander J. H. Ward's "Steam for the Million;" Prof. Gillespie's "Manual of the Principles and Practice of Road Making," and Engineer W. R. King's "Notes on the Steam Engine, Propellers, &c., for Young Marine Engineers, Students," &c.

In philology, the most noteworthy books of the year were the "Origin and History of the English Language," by George P. Marsh, LL.D., U. S. minister to Italy; a work of profound learning and research, by the ablest of American Philologists; and an edition of vol. I of Hensleigh Wedgwood's "Dictionary of English Etymology," with notes which more than double its value, by Mr. Marsh; while Prof. R. L. Tafel's "Investigations into the Laws of English Orthography and Pronunciation;" Messrs. R. Soule and W. A. Wheeler's "Manual of English Pronunciation and Spelling;" Prof. William Henry Green's "Grammar of the Hebrew Language," and Rev. M. C. Pandosy's "Grammar of the Yakama Language," translated by George Gibbs and J. Gilmary Shea, and forming one of the volumes of Dr. Shea's invaluable "Library of Linguistics," are all important contributions to philological science.

In mathematics the most remarkable books are Mr. J. W. Nystrom's "Project of a New System of Arithmetic, Weights, Measures and Coins," proposed to be called the Tenal System with Sixteen to the Base; and a scientific treatise on the "Laws and Practices of the Game of Euchre." In educational science, aside from the new series of Dr. Barnard's American Journal of Education, a work of great value and importance, there was published an admirably arranged "Graded Course of Instruction for Public Schools, by William H. Wells, A.M., Superintendent of Public Schools in Chicago;" a Manual of Instruction on the Plan of Object Teaching, by Marcius Willson; a report of the "Proceedings of the Educational Convention at Oswego, Feb., 1862;" and an able essay in opposition to the so-called Object Method of Teaching, entitled "Some Suggestions on the Principles and Methods of Elementary Instruction," by H. B. Wilbur, M.D., Superintendent of the New York State Asylum for Idiots.

The number of new works on agriculture is not large, though the agricultural periodicals are liberally sustained, and some of them display a high order of talent. Two works were published on wine making and the grape culture: one, Mr. A. Haraszthy's, with special reference to California, where wine making is becoming an important branch of productive industry; the other by Mr. John Phin, devoted to open air grape culture generally. From San Francisco, there comes also a Beekeeper's Directory, the keeping of bees having proved very profitable on the Pacific coast.

Messrs. G. B. Emerson, M.D., and Charles

L. Flint published early in the year a "Manual of Agriculture for the School, the Farm, and the Fireside," intended to introduce the elementary principles of scientific agriculture into the course of common school instruction. Mr. Edward Parrish of Philadelphia introduced a new art to the attention of the curious in a little volume entitled "The Phantom Bouquet; a Treatise on the Art of Skeletonizing Leaves and Seed Vessels."

The larger part of the new medical works of the year have a bearing on surgery, and especially military surgery; on this subject treatises have been published or former treatises revised, by some of the ablest members of the profession, such as Drs. Gray, Gross, Guthrie, Longmore, Powers, and Sargent. Of treatises on other medical topics, may be named Dr. Barclay's "Manual of Medical Diagnosis;" Dr. J. Byrnes's "Researches on Pelvic Hæmatocele;" Dr. J. Frick's "Physical Manipulations," translated by Dr. J. D. Eaton; Dr. John O'-Reilly's elaborate treatise on the "Placenta," &c.; Dr. Henry W. Williams' "Practical Guide to the Study of Diseases of the Eye;" Dr. George H. Smith's monograph on "The Insertion of the Capsular Ligament of the Hip Joint," and Dr. C. H. Cleaveland's "Causes and Cure of Diseases of the Feet." In hygiene, Dr. Dio Lewis has published a most admirable system of "New Gymnastics for Men, Women, and Children;" the venerable R. D. Mussey, M.D., L.L.D., a capital essay entitled "Health; its Friends and its Foes;" Mr. A. J. Davis, "The Harbinger of Health;" and Dr. W. W. Hall, a ninth volume of his spicy and eminently readable "Journal of Health." Dr. O. W. Holmes, whose brilliant position in literature does not diminish his interest in his profession, published during the year two volumes as contributions to medical literature, viz., "Border Lines of Knowledge in some Provinces of Medical Science," and "Currents and Counter-Currents in Medical Science, &c." The most valuable of the reprints were the two admirable summaries of medical and surgical knowledge, Braithwaite's Retrospect, and Ranking's Half-Yearly Abstract of the Medical Sciences. The number of books of travel, or treatises on the habits and manners of foreign countries, have been very few. Rev. W. H. Bidwell, editor of the Eclectic Magazine, has compiled a volume of biographical sketches, entitled "Imperial Courts of France, England, Russia, Prussia, &c.," with 42 fine steel portraits, as a presentation volume. A lively little volume of incidents of travel in the islands of the southern seas, appeared under the title of "Life and Adventures in the South Pacific, by a Roving Printer." Messrs. Harper published a "Handbook for Travellers in Europe and the East," by W. P. Fetridge, and the publishers of Rev. T. Starr King's charming "White Hills, their Legends, Landscape, and Poetry," issued a cheaper edition of it. Two books by English writers on portions of this country, were reprinted here almost simultaneously with their appearance in England, viz., Capt. R. F. Burton's "City of the Saints, and Across the Rocky Mountains to California," and Mr. Anthony Trollope's "North America." The lively work of the Princess Belgiojoso on "Oriental Harems and Scenery," was also translated from the French and republished here.

In the way of essays and lighter literature, not fictitious, a number of works of great merit appeared; among these was a new volume by Timothy Titcomb (Dr. J. G. Holland), in his admirable and peculiar vein, entitled "Lessons in Life, a Series of Familiar Essays;" a volume characterized by remarkably vigorous and powerful thought and vivid powers of description, entitled "Country Living and Country Thinking," by Gail Hamilton (Miss A. Dodge); a collection of papers mostly communicated to the New York Ledger, by Henry Ward Beecher, under the title of "Eyes and Ears;" a vigorous essay on the times, by Rev. Marcus D. Conway, entitled "The Golden Hour;" a narrative of the doings of Maj.-Gen. Fremont's famous body-guard, from the pen of Mrs. Fremont, under the title of "The Story of the Guard; a Chronicle of the War;" an address with notes, &c., by John S. Hart, LL.D., entitled "Mistakes of Educated Men;" a collection of essays, addresses, &c., of much merit, on the "Future of Africa," by Rev. Alex. Cromwell, a man of color, and professor in the Liberia College; a new volume of miscellaneous sketches and letters, by Bayard Taylor, entitled "Home and Abroad; a Sketch Book of Life, Scenery, and Men, 2d series;" a series of humorous and satirical letters on the war, displaying keen wit and trenchant powers of sarcasm, entitled "The Orpheus C. Kerr (Office Seeker) Papers."

Among the essays and narratives more directly pertaining to the war were an essay by Mr. William Whiting, on "The War Powers of the President, &c.;" an able exposition, by Mr. Henry T. Tuckerman, of "The Rebellion, its latent causes and true significance;" an essay of remarkable ability by Mr. Alfred Stille, of Philadelphia, entitled "Must the War go on;" narratives of adventures as prisoners of war, by Hon. Alfred Ely, M. C. from New York, and Lieut. William C. Harris; a "Narrative of the Campaign of the First Rhode Island Regiment in the spring and summer of 1861," by Rev. Augustus Woodbury; and three or four pamphlet reports of speeches by Mr. George Francis Train, in England, relative to the war and kindred topics. In addition to these, there were a few essays on subjects not readily classified, as, for instance, the "Ethical and Physiological, chiefly relative to subjects of popular interest," of Mr. A. H. Dana; Mr. Eli Bowen's treatise on the "Creation of the Earth"; "Record of an Obscure Man," and "Climbing the Mountains," both by anonymous authors. The only reprints worthy of special notice were "The Book Hunter," by

John Hill Burton, enriched with an introduction and notes by Richard Grant White; the "Spirit of the Hebrew Poetry," by the venerable Isaac Taylor, with a biographical introduction by William Adams, D.D.; "Two Friends," by the author of "The Patience of Hope;" two more volumes by "The Country Parson," and J. C. Jeaffreson's "Book about Doctors."

Of the 138 volumes of novels published in 1862, only 34 were by American authors; but some of these possessed a high degree of merit, and attained a large sale. Remarkable success was achieved by the work of a new author, "Among the Pines," by Edmund Kirke, a description of Southern plantation life, and the hopes, aspirations, and plans of the slaves for the attainment of freedom. In graphic power and fidelity to nature, it was pronounced by some critics equal to "Uncle Tom's Cabin," though lacking somewhat, perhaps, in the artistic ability of that work. Mrs. Stowe's two novels, "Agnes of Sorrento" and "The Pearl of Orr's Island," met with a hearty and not undeserved welcome; the posthumous novels of Major Theodore Winthrop (a young officer of great promise, who fell at Great Bethel in the summer of 1861), "Cecil Dreeme," "John Brent," "Edwin Brothertoft," and the "Canoe and Saddle," were also favorably received. Among other novelists of known reputation, Marion Harland's (Mrs. Terhune) "Miriam," Richard B. Kimball's "Undercurrents of Wall Street, a Romance of Business," Mr. A. S. Roe's "Like and Unlike," "Sutherlands," by the author of "Rutledge," Mrs. C. H. B. Richards' ("Mrs. Manners") "Springs of Action," Mrs. Mary A. Denison's "The Master," and Mrs. E. D. E. N. Southworth's "Broken Engagement," "Hickory Hall," and "Love's Labor Won," all attained a fair, and some of them a large, measure of success; while among the new aspirants for fame, as writers of fiction, Mrs. Elizabeth Stoddard (wife of the poet, R. H. Stoddard), in her "The Morgesons," and the authoress of "Margaret Howth, a Story of To-Day," were received with great favor. Others, as, for instance, T. B. Aldrich (already favorably known as a poet), in his "Out of his Head, a Romance;" Kinahan Cornwallis, in his "Pilgrims of Fashion;" E. S. Gould, in his "John Doe and Richard Roe, or Episodes of Life in New York;" Virginia Townsend, in her "Amy Deane, and other Tales," and one or two others, though perhaps not less deserving than those named above, did not achieve such marked success.

The most remarkably successful novel of the year, all things considered, was Victor Hugo's "Les Miserables." It was at first published here in five volumes, in an American translation, and subsequently the five volumes bound in one. After some months a reprint of an English edition, somewhat abridged, was put upon the market, and the sales of the two editions reached, before the close of the year, about 50,000 copies. Some of the reprints of English and French novels have been very favorably received; among these may be mentioned Bulwer ("A Strange Story"), "Chronicles of Carlingford," Wilkie Collins ("After Dark," "Sister Rose," "The Yellow Mask," "Stolen Mask," and "Hide and Seek"), author of Margaret Maitland ("Last of the Mortimers," and "Lilliesleaf"), Chas. Lever ("Barrington"), Miss H. Martineau ("The Woman I Loved and the Woman who Loved me"), Miss D. M. Mulock ("Mistress and Maid, a Household Story"), Charles Reade ("The Cloister and the Hearth"), Geo. A. Sala ("Seven Sons of Mammon," and "Two Prima Donnas"), Anthony Trollope ("Orley Farm," "The Warden," "Barchester Towers," and "The Struggles of Brown, Jones, and Robinson"), "Why Paul Ferroll killed his wife," Mrs. Henry Wood ("The Channings," "The Mystery," "The Heir to Ashley," and "Earl's Heir"), Miss Yonge ("The Young Stepmother, or a Chronicle of Mistakes"), W. M. Thackeray ("The Adventures of Philip on his Way through the World"), Mrs. S. C. Hall ("Can Wrong be Right?") Gustave Aimard ("The Trail Hunter," "Flower of the Prairie," "Pirates of the Prairies," and "Indian Scout"), Alexander Dumas ("André de Taverney," "Castle of Souday," and "Twin Lieutenants"), Balzac ("Eugene de Grandet"), Madame Emile de Girardin ("Marguerite, or Two Loves"). Of far higher character than these, and belonging rather to the class of allegories than novels, is the Countess de Gasparin's "Vesper." Among new editions of standard novels, we have the beautiful household edition of Dickens, of which 15 volumes, comprising "Dombey," "Martin Chuzzlewit," "Barnaby Rudge," and "David Copperfield," have appeared during the year. Miss Jane Austen's works, complete in 4 volumes, in uniform style, comprising "Emma," "Mansfield Park," "Sense and Sensibility," "Persuasion," "Pride and Prejudice," and "Worthanger Abbey."

The year was not prolific in poetry of a high character. Only three volumes of considerable size and containing new poems of merit, appeared. These were Bayard Taylor's "Poet's Journal and Autobiography;" Thomas Buchanan Read's "Wagoner of the Alleghanies: a Poem of the Days of '76," and Rev. T. H. Stockton's "Poems with Autobiographical and other notes." A few short poems or collections of lyrics, mostly called forth by the war, such as G. W. Hewes' "Ballads of the War;" "Rhymed Tactics," by "Guv.;" "Rifle Shots at Past and Current Events;" "Midnight Chimes; or, the Voice of Hope;" Meditations and Hymns," by X.; "The Flying Dutchman," by J. G. Saxe; and "The Branch; a Sacred Poem, and other Poems," have also made their appearance, but have generally excited little attention. The poems of O. W. Holmes, Longfellow, Bayard Taylor, Tennyson, and Mrs. Barrett Browning, have been collect-

ed and published in new and complete editions mostly in the blue and gold style; and the poetical works of Adelaide Anne Procter (daughter of the poet B. W. Procter) ("Barry Cornwall"), Arthur Hugh Clough, and William Allingham, have been published in a style uniform with them Among the compilations of great merit may be named, Prof. F. J. Child's "Poems of Sorrow and Comfort," and Prof. F. D. Huntington's "Series of Hymns of the Ages." The admirable edition of Shakspeare edited by Richard Grant White was completed during the year by the publication of the 9th, 10th, 11th, and 12th volumes. Dr. J. G. Holland's poem "Bittersweet," published four or five years ago, has been reprinted with 50 exquisite illustrations.

In juvenile literature, the year has been less prolific than many former ones. Many publishers have adopted the custom of having their works for the young prepared in sets of four, six, eight, or twelve volumes, and these, though usually written by the same author, are often of very unequal merit, the sale being for the most part in sets, and the better volumes securing the sale of the poorer. Among the juvenile works of the year, are eight or ten of these sets comprising in all about 60 volumes. Rev. Jacob Abbott is, as usual, the most prolific of the writers for the young, having furnished, in addition to the "Harlie Stories" in six volumes, a fourth volume of his American history for the young ("Northern Colonies"), and a fourth volume of "Florence Stories" ("The English Channel"). Rev. J. Banvard, D. D., has also published a series entitled "Story Truths," and the author of the "Night Cap series" has followed those popular juveniles with the "Mitten Books," a set of six volumes. Mrs. Madeline Leslie (a daughter of the late Rev. Dr. L. Woods, of Andover Theol. Seminary) has published during the year four very charming juveniles, "The Bound Boy and Young Soldier," "Sequel to Tim the Scissors Grinder," "The Bound Girl and other Stories," and "The Two Homes; or Earning and Spending." Mrs. Horace Mann is the author of an interesting little book entitled "Flower People." Rev. D. C. Eddy, now of Philadelphia, has contributed another volume to his series on foreign countries, under the title of "Walter in Egypt." Other interesting juveniles are, "Buy an Orange, Sir? or the History of Jamie Woodford;" "Wayside Flowers," by Carrie Carlton; Ellie's, and Jeanie's scrap-books (two volumes); "Johnny Wright, the Boy who tried to do right;" "Little Brown Bible;" "Harry's Mistakes, and where they led Him," by M. A. Parrott. Among reprints the "A. L. O. E. Stories" take the lead; that attractive writer for the young having added during the year six more to her already very long list of children's books. In the class of what for want of a better term may be called "Crusoe Books," there are three volumes which will afford great pleasure to boy readers. "Dog Crusoe," and "The Gorilla Hunters, a tale of the Wilds of Africa," both by P. M. Ballantyne, and the "Bear Hunters of the Rocky Mountains," by Annie Bowman. The only other noticeable reprints are, "Lines left Out," by the author of "Line upon Line," "The Old Lieutenant and his Son," by Norman Macleod," "The Exiles of Madeira," by Rev. W. M. Blackburn, and "Life Lessons, or Scripture Truths illustrated for the young," by Rev. James Bolton.

II. English Literature.—The space to which this article is necessarily restricted, will not admit of so full an analysis of the literature of Great Britain as has been given of that of the United States; but this is the less to be regretted, as a large portion of it has been already noticed under the head of reprints. A glance at the principal works of the year in each department is all for which there is space or necessity.

In theology and religious literature, the engrossing topic of the early part of the year was "Essays and Reviews," to which numerous replies were published, and as these provoked rejoinders and replications, not less than sixty volumes were published on the subject during the year. The interest awakened by these "Essays" had not subsided, when the works of Bishop Colenso on the Romans and the Pentateuch and Book of Joshua aroused a new controversy, which is still raging. Aside from the works connected with these two controversies, there have been published several interesting books on Church History, by Canon Stanley, Dr. Vaughan, the late Dr. Cunningham, Dr. Howsen, Messrs. Angers and Waddington, and a translation from the Russian of Popoff of the "History of the Council of Florence;" a work on "Biblical Criticism" by Dr. Davidson; two able works on Brahminism and Buddhism; and several memoirs and didactic works of merit. Many of the works of history and biography are of local character, and have comparatively little interest for readers in other countries; others, and a very considerable number, are compilations of greater or less merit by such indefatigable bookwrights as John Timbs, Horace Welby, Samuel Lucas, Erskine Neale, and G. Fletcher. But, aside from all these, there have been more than ordinary valuable contributions during the past year to the works of permanent value in these departments. Such works as Sir G. Cornwall Lewis's "Historical Survey of the Astronomy of the Ancients;" Rev. Charles Merivale's "History of the Romans under the Empire;" Mr. George Rawlinson's "Five Great Monarchies of the Ancient world;" Dyer's "History of Modern Europe, from the Taking of Constantinople to the close of the War in the Crimea;" Sayer's "History of Gibraltar;" Lord Stanhope's "Life of William Pitt;" Spedding's "Life of Francis Bacon" (republished here in connection with the Riverside edition of Bacon's works); Lady Morgan's "Memoirs, Autobiography, and Correspondence;" Prof.

Wilson's (Christopher North) "Memoirs, by his Daughter;" "The Life of John Graham, Viscount Dundee" (the Claverhouse of the Waverley Novels); Dean Milman's "Memoir of Lord Macaulay," &c., &c., cannot be regarded as ephemeral in character.

Geographical works and narratives of travel have for many years formed a very large constituent of the current literature of Great Britain, and many of them possess great value. Several new atlases and manuals of geography have appeared during the year, which, though generally inferior in accuracy to the best German geographical works of the class, have yet no inconsiderable merit. The volumes of travel and exploration are almost numberless, and hardly any portion of the globe has been left unvisited. The less frequented peaks and passes of the Alps have been admirably described by the Alpine club, Prof. Tyndall, Mrs. Freshfield, and Francis Galten; while the mountains of Lebanon, Iceland, and the Faroe Islands, Wales, the Pyrenees, Italy, Calabria, and the Liparian Islands, Dalmatia, Servia, Borneo, Greece, Turkey, Russia, Finland, Sweden, and "Gomle Nergo" (old Norway), have each been visited and described by the tourists; and even the Channel Islands have been most admirably and accurately portrayed in all their physical aspects by Profs. Ansted and Latham. African travellers are not so numerous as a few years ago; yet there are works on Thebes, on Egyptian travel generally, Algeria, the Niger, Abyssinia, and a volume of wonderful adventures in hunting in South Africa, by Mr. William Charles Baldwin, since reprinted in this country. In Asiatic exploration there are two books on Afghanistan, three or four on China, of which Commander Brine's "The Taeping Rebellion," and Capt. Blakiston's "Five Months on the Yang-Tsze," are specially noteworthy; as are Lieut.-Col. Torren's "Travels in Ladak, Tartary, and Kashmir," and Mr. Spencer St. John's "Life in the Forests of the Far East," a book of travels in northern Borneo. Of half a dozen books on Australia, the most noticeable are "Thirty-three years in Tasmania and Victoria," by G. T. Lloyd, and "Robert O'Hara Burke and the Australian Exploring Expedition," by Andrew Jackson; Dr. Russell of the London "Times," published his "Diary North and South" (reprinted here), and another "Own Correspondent" (S. P. Day), "Down South." Mr. E. B. Underhill has issued an interesting volume on the "West Indies;" and British Columbia and Vancouver's Island have been described by five or six writers, among whom Mr. Forbes Macdonald and Mr. Alexander Rattray have, by the thoroughness and accuracy of their books, established the best claim to the attention of the emigrant or tourist. Prof. Berthold Sumann gives the result, in an interesting volume, of his "Mission of Exploration to the Viti or Fiji Islands;" and Mr. Manley Hopkins has given a very readable resumé of what is known of the Hawaiian Islands. In island explorations the "Narrative of the Circumnavigation of the Globe," by the Austrian frigate Novara, is very valuable. The scientific corps of that vessel took especial pains to explore islands hitherto little known.

The department of science and art is especially rich in the literature of the current year. In physical science and zoology, the number of valuable books is very large. Three elaborate works are devoted to "British Birds;" to "European birds not British," and to "Our Feathered Families," by Messrs. Bree, Morris, and Adams; "Exotic Butterflies have their Attorney;" and the various phenomena and peculiarities of animal life have met with patient observers and able describers. The number of botanical works exceeds a dozen—three of which are devoted to ferns; and Charles Darwin has, in one of those admirable essays which speak of such accurate and continued observation, described "The Contrivances by which British and Foreign Orchids are Fertilized by Insects." Geology, palæontology, chemistry, mechanics, geography, and geodesy, have each furnished the subject of contributions to science, while in astronomy and its cognate sciences are several books of great interest.

In architectural and art works the most remarkable book was Mr. James Ferguson's magnificent "History of the Modern Styles of Architecture," with 312 illustrations; a new and improved edition of Sir William Chambers' "Treatise on the Decorative Part of Civil Architecture;" "Pictures of English Landscape," by the Brothers Dalziel, with "Pictures in Words," by Tom Taylor; Dickes' "Studies from the Great Masters, with Letter Press Descriptions;" and several treatises on military drawing, surveying, engineering, &c. In antiquities there are two works of interest: "Colossal Vestiges of Olden Natures" (describing Stonehenge, &c.); and Mr. Samuel Sharpe's "Essay on the Egyptian Antiquities in the British Museum." The contributions to philology have been of great importance; the most remarkable are: "Langue Basque et Langues Finnoises," by Prince Lucien Bonaparte; "English Retraced" (a comparison of the English of the sixteenth century with that of to-day); "Elements of Comparative Philology," by R. G. Latham; G. L. Craik's "Manual of the English Language from the Norman Conquest;" "Essay on the Origin and Formation of the Romance Languages" (a new edition), by the late Sir G. Cornewall Lewis. In moral and mental philosophy, politics, sociology, education, &c., the most noticeable works are "First Principle," by Herbert Spencer; "An Inquiry into the Theories of History, with Special Reference to the Principles of the Positive Philosophy;" "Unto This Last;" "Essays on Political Economy," by John Ruskin; "The Criminal Prisons of London," &c.; Professor F. D. Maurice's "Modern Philosophy, from the Fourteenth Century to the French Revolution, with a Glimpse into the Nineteenth Century;"

Sir J. Kay Shuttleworth's "History of Our Educational System in the Four Periods of 1832, 1839, 1846, and 1852;" and Dr. G. H. Townsend's "Manual of Dates."

The publishers of Mr. Charles Knight's "English Cyclopædia" issued a "Synoptical Index" of the four divisions of that work, giving great facility of reference to the different sections.

The number of books issued in the extensive departments of fiction and juvenile literature was very great; but most of those possessing a high order of merit were reprinted in the United States. The whole number of original works published in Great Britain during the year was somewhat above 3,000, beside reprints and translations.

LOUISIANA, the great sugar-producing State in the southwestern part of the United States, has a population, according to the census of 1860, of 357,629 whites,18,647 free colored, and 331,726 slaves; total, 708,002. The ratio of increase in her population during the previous ten years has been, white 39.98, free colored 6.78, slave 35.50. The white male population was 189,648, female 167,808. The population of New Orleans in 1860 was 168,675; in 1850 it was 116,375—increase in ten years, 52,300. The increase in the whole State during the same period was 180,240. The number of slaves manumitted in ten years was 517; the number of fugitives, 46. The mortality in the State during the year ending May 31, 1860, was 12,329. The most fatal diseases were consumption, diarrhœa, dysentery, fevers, and pneumonia. The number of deaf mutes was 215, of whom 38 were slaves. The industrial products of the State during the year ending June 1, 1860, were as follows: Iron founderies $525,800; lumber, $1,018,554; flour and meal, $11,694; cotton goods, $509,700; leather, $47,000. Total value of all products of industry, $15,500,000. The value of real and personal estate was $602,118,568. Improved lands 2,734,901 acres, unimproved 6,765,879, value of farms or plantations $215,565,421. Number of horses 79,068, mules and asses 92,259, milch cows 130,672, working oxen 61,008, other cattle 329,855, sheep 180,855, swine 642,855; total value of live stock $24,751,822. Crops raised were as follows: Wheat, 29,282 bushels; rye, 12,789 bush.; corn, 16,205,856 bush.; oats, 65,845 bush.; rice, 6,455,017 lbs.; tobacco, 40,610 lbs.; cotton, 722,218 bales of 400 lbs. each; wool, 296,187 lbs.; peas and beans, 430,410 bushels; potatoes, Irish, 332,725 bush.; potatoes, sweet, 2,070,901 bush.; sugar, 297,816 hhds.; molasses, 14,535,157 galls.; miles of railroads, 334; cost of construction, $12,020,204.

The educational institutions of the State consisted of the University of Louisiana, College of the Immaculate Conception, St. Charles College, Centenary College, Washington College, Mt. Lebanon University, and St. Joseph's College. Some of them are now closed in consequence of the war.

The change which took place in the political and military affairs of the State previous to the occupation of New Orleans by the Federal forces, on May 1, is unimportant. Her commerce was entirely cut off by the blockade, and the stagnation produced by the war was chiefly experienced at New Orleans, where large numbers were obliged to resort to the free market, established by the city, to procure subsistence. The number of troops which had been sent by the State to Virginia up to the beginning of February was small. They consisted of the following regiments and battalions: the 1st, Col. Vincent; 2d, Col. W. M. Levy; 5th, Col. T. G. Hunt; 6th, Col. I. G. Leymore; 7th, Col. H. T. Hays; 8th, Col. H. D. Kelly; 9th, Col. E. G. Randolph; 10th, Col. M. Marigny; 14th, Col. V. Sulakouski; battalions: Washington artillery, 1st, 3d, and 4th, Wheat's battalion, St. Paul's battalion, Louisiana zouaves, and three independent companies.

Military affairs, however, continued stagnant until the advance of the Federal forces at the West aroused the Confederate States to the danger which threatened them. Gen. Beauregard was then sent to take command in the West, and President Davis issued a call for more troops. On the 14th of February, Gov. Moore issued a proclamation calling for volunteers to meet this requisition from President Davis for five and a half regiments.

On the 16th Fort Donelson was captured, and the Federal advance was immediately made upon Nashville. Gen. Beauregard, aware of the true state of affairs, immediately sent the most pressing requests to the governors of Tennessee, Mississippi, and Louisiana for troops. The urgency of this appeal is developed by the entreaties which the governor and the messenger of Gen. Beauregard addressed to the people. The governor's appeal was as follows:

FELLOW-CITIZENS AND SOLDIERS: I address you today in a double capacity, as governor and commander-in-chief. A call has been made upon me by Gen. Beauregard for 5,000 men to defend the Mississippi Valley, and with it your loved State, this beautiful city, and more than all, our homes and those dearer than all else, save honor. The laggard and the dastard await the foe at the very shrine of the sanctuary. It is the part of the brave and noble hearted to meet him at the threshold or beyond it; and did we choose any other portion we would be false to our history and traditions, recreant to our brothers' blood, which stained the hard fought fields of Virginia and Missouri, and unworthy of the high gift of independence sanctified by the blood of patriot martyrs.

This is not the hour for vain regrets or despondency. No, not even for hesitation. An insolent and powerful foe is already at the castle gate—the current of the mighty river speaks to us of his fleet advancing for our destruction, and the telegraph wires tremble with the news of his advancing columns. In the name of all most dear to us, I entreat you go meet him. A brave general, fellow-citizens, calls for you, and his patriot heart feels you will come. Laurels have already clustered around his brow, and he calls you to share with him new honors and new victories. Sacrifices must be made, but the recollection of them will nerve

your arm in the day of battle and make dearer your successes.

Fathers, husbands, brothers, lovers, your country calls you! Citizens, your property and your rights are in danger! Will you not go? The hour for glorious action is upon us; let it not pass unheeded by. Gen. Beauregard does his fellow-citizens the honor to wish them at his side in the hour of trial. A special messenger, member of his staff, Dr. Choppin, waits to return to him a glorious response. Upon volunteering you will be ordered to Gen. Beauregard, at Jackson, Tenn., and in a few weeks, when the necessity is past, you will return victorious, or leave your names as martyrs embalmed in our hearts.

THOMAS O. MOORE,
Governor and Commander-in-Chief.

The address of the surgeon-general to the soldiers of New Orleans was as follows:

Soldiers of New Orleans:

You are aware of the disasters which have befallen our armies in the West. Greater disasters still are staring us in the face. Gen. Beauregard—the man to whom we must look as the saviour of our country—sends me among you to summon you to a great duty and noble deeds—invoking and inspired by the sacred love of country and of priceless liberty, he has taken the deathless resolution *de les venger ou de les suivre.* And with the immortal confidence and holy fervor of a soul willing, if need be, to meet martyrdom, he calls upon you to join him, in order that he may restore to our country what she has lost, and lead you on to glory and independence. In tones rigid and sullen as the tollings of the funeral knell, but with clarion accents that should send a quiver through every heart, and string the nerves of every man, he cries out the final refrain of that immortal hymn—

" Aux armes, citoyens! formez vos battaillons,
Marchons!
Marchons!
Qu'un sang impur abreuve nos sillons!"

Creoles of Louisiana, on to the work!

S. CHOPPIN,
Surgeon-Gen. Beauregard's Staff.

February 25, 1862.

So urgent was the necessity, that, on the 28th of February, Gen. Beauregard thus addressed the governor:

JACKSON, *Feb.* 28, 1862.

I will accept all good equipped troops, under act of 21st August, that will offer, and for ninety days. Let the people of Louisiana understand that here is the proper place to defend Louisiana.

G. T. BEAUREGARD.

At the same time the regulations to govern the formation of the volunteer organizations were issued, of which the 18th is in these words: " Pikes and lances will be furnished by the State to all volunteer organizations not supplied with fire arms." In every part of the Confederate States this scarcity of arms existed.

In New Orleans martial law was declared, and a provost martial appointed under the command of Gen. Lovell. All process for the ejection of the families of soldiers for the non-payment of rent was suspended. Steamboats were forbidden to take white men as deck hands, and required to discharge all who were engaged. No exemptions from military duty were allowed to any except minors, or persons of physical disability. Passports were required from all persons leaving the city. Founderies and workshops were required to furnish lists of workmen to whom exemptions were granted for a certain number of days. The traffic in gold and silver against the notes of the Confederate States was prohibited. A tariff of prices was fixed for beef, pork, bacon, flour, bread, rice, corn, meal, peas, hay, oats, salt, &c., according to which all these articles were to be sold.

The effect of these efforts, and similar ones in Mississippi, Arkansas, and Tennessee, was to gather such a force under Gen. Beauregard as enabled him to check the Federal advance at Shiloh, and detain it before Corinth until the advance of the season and the low stage of the water in the rivers made their further progress impracticable until later in the year. Garrisons were kept up at the forts below New Orleans, and the city was put in a state of defence, which was believed to be sufficient to defy any attack. The preparations of the Federal Government for its capture, and the concentration of military and naval forces at Ship Island, were well known; but no real apprehensions were entertained of the success of that expedition. That these convictions of safety were not unreasonably sanguine is manifest from the fact that the history of military and naval affairs records no achievement so brilliant as the capture of New Orleans. (*See* NAVAL OPERATIONS.) The loss of this city, and the subsequent capture of the capital, Baton Rouge, placed so completely in the power of the Federal commander the important portion of the State, that there remained to the State Government little else than its name. Its troops were required by the Confederate Government elsewhere, and the military power which continued in the State was only sufficient for a force of observation, as to make an attack upon any unguarded or exposed Federal position.

On the 18th of June, Gov. Moore published an address to the people of the State, declaring what regulations should be observed by them relative to their enemies. This address closed as follows:

I am not introducing any new regulations for the conduct of our citizens, but am only placing before them those that every nation in war recognizes as necessary and proper to be enforced. It is needless, therefore, to say that they will not be relaxed. On the contrary, I am but awaiting the assistance and presence of the general appointed to the department to inaugurate the most effectual method for their enforcement. It is well to repeat them:

Trading with the enemy is prohibited under all circumstances.

Travelling to and from New Orleans and other places occupied by the enemy is forbidden. All passengers will be arrested.

Citizens going to those places, and returning with the enemy's usual passport, will be arrested.

Conscripts or militiamen, having in possession such passports, and seeking to shun duty under the pretext of a parole, shall be treated as public enemies. No such papers will be held as sufficient excuse for inaction by any citizen.

The utmost vigilance must be used by officers and citizens in the detection of spies and salaried informers, and their apprehension promptly effected.

Tories must suffer the fate that every betrayer of his country deserves.

Confederate notes shall be received and used as the currency of the country.

River steamboats must, in no case, be permitted to be captured. Burn them when they cannot be saved.

Provisions may be conveyed to New Orleans only in charge of officers, and under the precautionary regulations governing communication between belligerents.

The loss of New Orleans, bitter humiliation as it was to Louisianians, has not created despondency nor shaken our abiding faith in our success. Not to the eye of the enthusiastic patriot alone, who might be expected to color events with his hopes, but to the more unimpassioned gaze of the statesman, that success was certain from the beginning. It is only the timid, the unreflecting, and the property owner, who thinks more of his possessions than his country, that will succumb to the depressing influences of disaster. The great heart of the people has swelled with more intense aspirations for the cause the more it seems to totter. Their confidence is well founded. The possession by the enemy of our seaboard and main watercourses ought to have been foreseen by us. His overwhelming naval force necessarily accomplished the same results attained by the British with the same in their war of subjugation. The final result will be the same. Let us turn unheeding ears to the rumors of foreign intervention. To believe is to rely on them. We must rely on ourselves. Our recognition as a nation is one of those certainties of the future, which nothing but our own unfaithfulness can prevent. We must not look around for friends to help when the enemy is straight before us. Help yourself. It is the great instrument of national as of individual success.

THOMAS O. MOORE, Governor of Louisiana.

OPELOUSAS, *June* 18, 1862.

For the state of affairs at New Orleans after the capture by the Federal forces, *see* NEW ORLEANS. For the further movements of the fleet after the capture of the city, *see* NAVAL OPERATIONS. For the capture of Baton Rouge, *see* ARMY OPERATIONS. Its evacuation took place August 16, by order of Maj.-Gen. Butler. On August 31 the village of Bayou Sara, in the parish of West Feliciana, on the Mississippi river, 165 miles above New Orleans, was fired upon and burned by the Federal gunboat Essex. The cause of this destruction was the firing from the town upon the gunboat, a method of annoyance and injury adopted by Confederate citizens along the shores of the river whenever steamboats passed. The Mississippi river from New Orleans nearly to Baton Rouge runs a nearly east and west course, and the tract of country between the river and the Gulf is probably the richest and most productive in the State. The New Orleans and Opelousas railroad runs a distance of 80 miles to Brashiar. It contains the parishes of La Fourche, Terre Bonne, &c. A Federal force was sent from New Orleans to operate there under Gen. Weitzel. On the 26th of October he marched from Donaldsonville, which is on the right bank of the Mississippi, 82 miles above New Orleans, to Napoleonville, and bivouacked for the night. On the next day, about one mile above Labadieville, he encountered a Confederate force under the command of Col. J. P. McPheeters, with whom an action ensued, which lasted for half an hour, when the Confederate force were defeated and retired, leaving their colonel among the killed. Gen. Weitzel had eighteen killed and seventy-four wounded, and took 208 prisoners, seventeen of whom were wounded. His troops were the 8th New Hampshire, 75th New York, and 12th and 13th Connecticut, and 1st Louisiana regiments. No further resistance was made to his march to Thibodeaux, the capital of La Fourche Interior Parish. On the 9th of November all the property of this parish was confiscated by an order of Maj.-Gen. Butler. Citizens who had been loyal to the Government of the United States were to be secured in their rights of property. The plantations not confiscated were to be worked by hired negroes for the benefit of the United States.

The term of office of Gov. Moore expires on the 1st of January, 1864. The State is represented in the Confederate Congress by two senators and six members of the House. For the commerce of New Orleans in 1862, *see* COMMERCE.

LUTHERANS. The Lutheran Church, in the United States, consisted at the end of the year 1862 of 41 synods, 1,419 ministers, 2,672 congregations, and about 284,000 members. Two entire synods consist of Scandinavian (Swedish and Norwegian) churches, and a considerable portion of most of the others are made up of Germans. The following twenty-seven synods are united in a General Synod, which meets every second or third year: 1, New York, Ministerium; 2, Hartwick Synod (in the State of New York); 3, Synod of New Jersey; 4, Synod of Pennsylvania; 5, Synod of East Pennsylvania; 6, Synod of West Pennsylvania; 7, Synod of Central Pennsylvania; 8, Alleghany Synod; 9, Pittsburg Synod; 10 Synod of Maryland; 11, Melanchthon Synod (Maryland); 12, Synod of Virginia; 13, Synod of Western Virginia; 14, Synod of North Carolina; 15, Synod of South Carolina; 16, Synod of Texas; 17, Synod of Kentucky; 18, English Synod of Ohio; 19, East Ohio Synod; 20, Wittenberg Synod; 21, Miami Synod of Ohio; 22, Synod of Northern Indiana; 23, Olive Branch Synod (Indiana); 24, Synod of Illinois; 25, Synod of Northern Illinois; 26, Synod of Southern Illinois; 27, Synod of Iowa, together with 862 ministers, 1,694 churches, and 162,298 members.

Three of these twenty-seven synods, viz., those of Virginia, North and South Carolina, have however declared their intention to secede from the General Lutheran Synod of the United States, and to form a General Synod of the Confederate States. The Synod of Texas was not represented at the last General Synod of the United States, but a letter was read from the delegate of the synod, stating that the Lutherans of Texas generally desired to remain loyal citizens of the United States, and loyal members of the General Lutheran Synod of the United States. There are also two Lutheran synods in Tennessee, the Tennessee Synod and the Holson Synod, mostly consisting of Germans, which were never in connection with the General Synod, but all the members of which, with a very few exceptions, were Union men, and not likely to enter into any connection with a General Synod of the Confederate States. The lead-

ing denominational organ in the Northern States claims moreover to have positive information that also in the churches of Virginia and South Carolina there is still a strong attachment to the Union, and they would resume their connection with the church of the United States as soon as the union of the States should be restored. The majority of the ministers and congregations of the three synods of Virginia, North and South Carolina, show themselves, however, determined to establish a permanent, independent organization. They have in operation at Charleston, South Carolina, a book establishment, and a new weekly organ, called the "Southern Lutheran," which is well patronized by the churches.

The General Lutheran Synod of the United States met, in 1862, at Lancaster, Penn., and was opened on May 1. About two hundred and fifty members of the church were present, representing twenty-two synods, the synods of Virginia, North and South Carolina, Texas, and Western Virginia having sent no delegates. The Rev. Dr. B. Kurtz, one of the oldest members on the floor of the synod, and a minister of the church for almost half a century, was elected president, and in his opening address referred briefly to some of the trials endured by the synod during the weakness of its infancy, about forty years ago, and the present extended and honorable position to which the body has since attained. Among the resolutions passed by the General Synod were the following:

Resolved, That it is the deliberate judgment of this Synod, that the rebellion against the constitutional Government of this land is most wicked in its inception, unjustifiable in its cause, unnatural in its character, inhuman in its prosecution, oppressive in its aims, and destructive in its results to the highest interests of morality and religion.

Resolved, That we regard this rebellion as more immediately the natural result of the continuance and spread of domestic slavery in our land, and, therefore, hail with unmingled joy the proposition of our chief magistrate, which has received the sanction of Congress, to extend aid from the General Government to any State, in which slavery exists, which shall deem fit to initiate a system of constitutional emancipation.

Some of the synods which are in connection with the General Synod regard the latter as unsound in doctrine, because not adhering with sufficient strictness to the old confession of faith, especially the Confession of Augsburg. This is, in particular, the case with the German synods of Missouri, Buffalo, and Iowa, and the two Scandinavian synods. These synods hold, however, no intercommunion with each other, and those of Missouri and Buffalo have even, on account of doctrinal differences, excommunicated each other. The (German) Synod of Iowa strictly adheres to the views of the Rev. Mr. Loehe, a prominent Lutheran minister of Bavaria, by whom the first congregation of the synod was established, and by whom nearly all of its ministers have been educated. This synod had, in 1862, 37 ministers, 50 congregations, and about 5,000 communicants. It has no fellowship with any other part of the Lutheran Church of the United States, holds strict millenarian views, uses in the churches pictures and crucifixes, and at communion wax candles. Both the Germans and the Scandinavians receive every year large accessions to their number by the arrival of immigrants from Europe, and of late the churches in Germany and Scandinavia have begun to extend to them a more liberal support in the establishment of new congregations. As many of the immigrants live widely scattered, some of the western synods have appointed synodical itinerant preachers. Thus the German Synod of Michigan has a missionary, who statedly preaches at fifteen settlements.

There are 6 theological seminaries, 8 colleges, 14 academies, and 10 female seminaries in connection with the General Synod, and 6 other institutions, not connected with the General Synod. One seminary (Newberry, S. C.), and 3 colleges, Roanoke College, at Salem, Va.; Newberry College, at Newberry, S. C., and North Corolina College, at Mt. Pleasant, N. C., are within the bounds of the seceded synods. Of the newspapers of the Lutheran Church, 6 are published in the English, 12 in the German, 1 in the Swedish, and 3 in the Norwegian language.

In the British possessions in North America the Lutherans have one synod, the Canadian Synod, with 12 preachers, 25 congregations, and 1,300 communicants. From the census of Canada taken in 1861, it appears that the Lutheran population has increased from 12,107 in 1852, to 25,156 in 1861, thus more than doubling in nine years. Of these 25,156 there were 857 in Lower Canada, and 24,299 in Upper Canada. In Upper Canada they form nearly 2 per cent. of the whole population. The increase is mainly from foreign emigration, and this is increasing rapidly from year to year.

In Germany, where the Lutherans originated, the church has lost a considerable portion of its members in consequence of the fusion of the Lutheran and the German Reformed Churches into the United Evangelical Church. This new denomination has replaced the Lutheran Church in Prussia, which had in 1861 a Protestant population of 11,273,730 in Baden, and in a number of other states. A considerable portion of the new denomination claims, however, to be still Lutheran, regarding their new church only as an external confederacy of the two old denominations; but it is impossible to ascertain its numerical strength. In Bavaria (Protestant population, in 1861, 1,280,000), Brunswick (269,000 Protestants), Hanover (1,640,000 Protestants), Mecklenburg (647,000 Protestants), Saxony (2,180,000 Protestants), Wurtemberg (1,159,000 Protestants), and several of the minor states of Germany, the great mass of the Protestant churches are still strictly Lutheran, but even there a struggle is constantly going on between the party which

wishes to adhere to the old landmarks of Lutheranism, and, in particular, to the symbolical books, and those who are desirous to abandon the strictly Lutheran character of the church. These movements are likely to affect ere long to a considerable degree the condition of all the Lutheran State churches. Where the voice of the laity has made itself heard, it has been in most instances in favor of abandoning the Lutheran character of the church. Many of the State churches have been, on this account, disturbed by an immense agitation, and none more so than the church of the kingdom of Hanover, where the Government, in union with the consistory of the capital, attempted the introduction of the catechism of Luther into the Lutheran schools of the kingdom, and raised thereby such an opposition, that at length it was deemed wiser to abandon all attempts at compulsion, and permit every congregation to introduce the catechism or not. In Prussia and the other States which have adhered to the United Evangelical Church, there are small Independent Lutheran churches, which have seceded from the State churches, in order to maintain a pure Lutheran confession. This Free Church counts in Prussia a population of about 40,000 souls, but has recently split again into two parties, one of which favors the Presbyterian, and the other a Congregational form of Church Government. The Lutheran Church in Austria counts, according to the census of 1857, a population of 1,218,831 souls, but the great majority of the boards of the church do not acknowledge the obligatory character of the old confession of faith, and the synods of Hungary have declared in favor of a union with the Reformed Church.

In France the Lutheran Church, which there, as in Austria, is officially designated as the Church of the Confession of Augsburg, counted in 1862, 44 consistories, 229 parishes, 197 stations, 390 oratories, 658 schools, 261 official pastors, 36 vicars and chaplains. This church has been, during the year 1862, greatly distracted by a hot controversy between the orthodox and the liberal (Rationalistic) school. The latter school denies the inspiration of the Scriptures, and rejects the authenticity of a number of books of both Testaments. Their chief seat is Strasburg, where they are strongly represented in the theological seminary, and where they publish an able organ, the *Nouvelle Revue de Theologie.* The election of the editor of this review, Colani, as professor of the Theological Seminary, called forth a very animated literary controversy, and an earnest opposition on the part of several members of the supreme consistory, and the year 1862 closed without any abatement of the excitement prevailing in the Church.

In Sweden a dissatisfaction is spreading in the Lutheran State Church with regard to the servile condition in which it finds itself in relation to the State. A High Church paper has declared in the name of its party that if the church was unable to exclude the Rationalistic element, the High Churchmen would secede and organize an independent church. Many of the Evangelical clergymen envy the untrammelled position in which the Baptists and other free denominations find themselves, and are desirous of obtaining an equal freedom from the State. All the church press begins to give more attention to this subject, and a thorough change in the relation between Church and State is considered inevitable. The Government favors a change, and has laid before the Swedish diet a bill introducing certain reforms into the Church, and, in particular, providing for the regular convocation of General Church Synods.

Russia has a Lutheran population of more than three and a half millions. The members of the Lutheran Church, with the exception of the entirely Lutheran provinces in the northwest, some Lutheran colonies in the south and the large cities, are mostly so scattered that it is exceedingly difficult, if not impossible, for them to keep up their connection with the Church. Hundreds of thousands of members have thus been lost to Protestantism. To remedy this evil, a Church Aid Society was organized in 1859 by the General Consistory of the Lutheran Church, whose operations promise to be of importance to the future of Protestantism in eastern Europe and northern Asia. The central committee of the society, which has its seat in St. Petersburg, is supported by twenty district committees, extending through all the parts of the immense empire, and again embracing numerous branch committees. The following facts will convey some idea of the difficult task which the Church Aid Society has undertaken to perform. In the province of Ingria there are 10,803 children of the age to attend a school, but only 1,198 receive instruction in 10 parochial and 6 Sunday schools. The Lutheran parish of Novgorod extends over a territory larger than the aggregate area of Sweden and Norway; it has 2,083 members, and only 2 schools. In the governments (provinces) of Vladimir, 1,132 manufactories employ 80,000 workmen, a majority of whom are Lutherans. But it was not until February, 1859, that the first Lutheran congregation of the province was organized. The district of the committee of Moscow embraces also West Siberia, which has only two Lutheran parishes, Tobolsk with 329 souls, and Tomsk with 168 souls. All East Siberia, a country equal in extent to about five sixths of Europe, has only one Lutheran congregation, at Irkutsk. The number of Lutherans in this parish, as far as they are known, is 1,086, and to see them all the pastor has had to travel during the past four years 60,000 versts, one verst being about two thirds of an English mile.

M

MACKENZIE, Rt. Rev. Bishop, died in Central Africa, Jan. 31, 1862. He was born at Harcus-cottage, Peebleshire, April 10, 1825, studied at the Edinburgh Academy and at Dr. Cowan's Grange school, near Sunderland. In 1844 he entered St. John's College in the University of Cambridge, where he remained only two terms, and then removed to Gonville and Caius College, where he graduated with honor in 1848. Soon after taking his degree he was elected to a fellowship and ordained by the Bishop of Ely. He resided in the college as a lecturer until 1854, and during this period exercised a wider influence in the university than any man of his age had ever done previously. His thoughts were first turned to the mission field of labor by a sermon of the apostolic Bishop of New Zealand, and in the autumn of 1854, he went out to Natal as archdeacon of Pieter-Maritzburg under Bishop Colenso, where he remained nearly five years, maintaining himself at his own charges and applying his stipend to the support of another clergyman in the colony. In 1859 he returned to England in order to offer himself for more directly missionary work among the Zulu Caffres; but circumstances rendered it desirable to defer the establishment of the mission; meanwhile Dr. Livingstone had been in England, and urged upon the Universities of Oxford and Cambridge the necessity of establishing a mission somewhere in the centre of Southern Africa. Committees had been formed for this purpose, and upon the failure of the Zulu Mission, Archdeacon Mackenzie, being at liberty, accepted the offer of a place at the head of the mission, and in 1859 and during the 11 months following was engaged in collecting the requisite funds from England, Scotland, and Ireland. In Oct. 1860, he set forth upon his enterprise with a small company of missionaries, lay and clerical, and Jan. 1, 1861 was consecrated bishop by the Metropolitan of Capetown. On Jan. 5, he sailed for the Zambesi, and after some necessary explorations settled at a village named Magomero, where his labors commenced but were speedily closed by his untimely death.

MAINE, the most northeastern and the most maritime of all the States of the Federal Union, has increased in population during the ten years preceding 1860 the number of 45,110. For further statistics of the census relative to the State of Maine, *see* UNITED STATES.

The citizens of Maine were divided into three parties at the election which took place on the second Monday in September. The object of the election was to choose State officers, members of Congress, and members of the State Legislature. The governor and Legislature are chosen annually. On the 5th of June a convention of the republican party assembled at Portland, over which Sydney Benham, of Paris, presided. The convention nominated Abner Coburn as their candidate for governor, and adopted a series of resolutions, in substance as follows: "First, inviting the patriotic citizens of Maine to unite on a simple basis to support the policy and principles characterizing the Administration of Abraham Lincoln; second, that the rebellion must be put down at any cost; third, expressing sympathy with, and praise of the American army and navy, and approving national and State measures for their relief and reward; fourth, expressing respect for and confidence in the present governor, Mr. Washburne; fifth, expressing confidence in the Hon. Abner Coburn, the nominee for governor."

The convention of the second party, designated as "war democrats," assembled at Bangor, on the 26th of June. Francis G. Butler, of Farmington, presided. The convention nominated Col. Charles D. Jameson for governor, and adopted the following resolutions:

Resolved, That it is the first duty of the citizen, in this perilous national crisis, to yield a ready, unwavering support to the Government in all necessary and proper efforts to subdue the existing rebellion and vindicate the authority of the Constitution and Union over every inch of territory in the United States.

Resolved, That our army and navy are entitled to the warmest gratitude and support of every citizen for their self-sacrificing efforts in behalf of our common country, and that we will resist all measures and efforts to convert this war for the Union into a crusade for negro emancipation.

Resolved, That we cordially invite all citizens of this State, who concur with us in the foregoing declaration of sentiment, to unite with us in the elevation of men to official place who will act in accordance with these sentiments.

Resolved, That we cordially approve of the patriotic course of the brave Gen. McClellan; that we admire his genius and skill as commander of our army, and that our whole hearts are interested in his success before Richmond. That we view with detestation and scorn the wicked attempts of scheming politicans to undermine and weaken him and his army in their brave efforts for the vindication of the Union.

A motion was made in the convention to declare Col. Jameson nominated without a ballot, which met with so much opposition from the friends of another candidate, Bion Bradbury, that the ballot was taken, and resulted in 160 votes for the former, and 107 votes for the latter. Mr. Bradbury, who had failed to receive the nomination at this convention, was afterward nominated as a candidate for governor by the regular democratic party, which held its convention at a later day. This convention assembled at Portland on the 14th of August. Luther S. Moore, of York county, presided. The following resolutions were adopted:

Whereas, The American Constitution was ordained and established by our fathers in order to form a more perfect Union, establish justice, ensure domestic tranquillity, provide for the common defence, promote the

general welfare, and secure the blessings of liberty to posterity, therefore

Resolved, That the purpose of the Democratic party is the restoration of the Union as it was, and the preservation of the Constitution as it is; and to secure these objects we will stand shoulder to shoulder with Union men everywhere in support of the Federal Government, in maintaining its safety, integrity, and legitimate authority by all constitutional and proper means.

Resolved, That the Constitution was first formed and adopted by the States and the people, in a spirit of concession and compromise, and the Union resulting from its adoption has hitherto been preserved by the same means, and must from its very nature, and the principles upon which our institutions are founded, still rely mainly for its continuance or restoration, upon the prevalence among the people of the same spirit by which it was formed, and not upon military power alone. That we hold sacred, as we do all other parts of that instrument, the following provisions of the Constitution of the United States:

[These provisions relate to the trial by jury where the crime was committed; the abridgment of the freedom of speech and the press; the reserved power of the States and people; the right of the people to be secure from unreasonable searches and seizures; the right of the accused to a speedy public trial where the crime was committed.]

And we utterly condemn and denounce the repeated and gross violation by the Executive of the United States, of the said rights thus secured by the Constitution; and we also utterly repudiate and condemn the monstrous dogma that in time of war the Constitution is suspended, or its powers in any respect enlarged beyond the letter and true meaning of that instrument. That we view with indignation and alarm the illegal and unconstitutional seizures and imprisonment, for alleged political offences, of our citizens without judicial process, in States where such process is unobstructed, but by Executive order by telegraph or otherwise, and call upon all who uphold the Union, the Constitution, and the laws, to unite with us in denouncing and repelling such flagrant violation of the State and Federal Constitutions and tyrannical infraction of the rights and liberties of American citizens; and that the people of this State cannot safely, and will not submit to have the freedom of speech and freedom of the press, the two great and essential bulwarks of civil liberty, put down by an unwarranted and despotic exertion of power.

The election was held on the 8th of September, and the votes were cast as follows:

The republican candidate received	45,534
The "war democratic" candidate received	7,178
The regular democratic candidate received	32,331
The republican majority over both the others was	6,025

The majority of President Lincoln over all other candidates, in 1860, was 24,704.

The vote in the congressional districts was as follows:

	Republican.	Democrat..	War Democrat.
1st	10,205	10,332	
2d	9,092	7,237	
3d	9,971	6,549	
4th	8,113	3,976	1,290
5th	9,160	8,217	

The Legislature was elected as follows:

	Senate.	House.
Republicans	24	107
War democrat	3	12
Democrats	3	32

The force sent into the field from the State of Maine for the war was twenty-seven regiments of infantry, one regiment of cavalry, one regiment of mounted artillery, six batteries, and one company of sharpshooters, exceeding thirty thousand men. These troops were distributed in Virginia, on the peninsula, and southwest of Washington, at Port Royal in South Carolina, Fernandina and Pensacola, Florida, and at New Orleans.

An event of considerable interest to the people of the State, and one also of national importance, occurred at the beginning of 1862. This was the permission granted by the Secretary of State, Mr. Seward, for British troops to pass across the territory of the State. Just previously, the seizure and removal of Messrs. Mason and Slidell from on board the British steamer Trent had been made, and the British, in connection with their demand for the release of these persons, were sending large numbers of troops to Canada. On the 13th of January the senate of the State adopted a resolution requesting the governor to inquire if such permission had been given. Mr. Seward replied on the 17th, stating that on the 4th of January his department was advised by a telegraphic despatch from Portland, in the State of Maine, that the steamship Bohemian, due there on the 7th, was telegraphed off Cape Race, with troops for Canada; and inquiring whether, in case they came to Portland, any different course was to be taken than what has been heretofore pursued, and asking instructions, in that contingency, by telegraph.

Upon this information he replied by telegraph, addressed to the marshal of the United States, and all the Federal officers in Portland, directing that the agents of the British Government shall have all proper facilities for landing and conveying to Canada, or elsewhere, troops and munitions of war of every kind, without exception. The immediate grounds for this proceeding were, that it was supposed that a passage of the troops and munitions named across the territory of the United States, by the Grand Trunk railroad, would save the persons concerned from risk and suffering, which might be feared if they were left to make their way, in an inclement season, through the ice and snow of a northerly Canadian voyage.

The principle upon which this concession was made to Great Britain was that, when humanity, or even convenience, renders it desirable for one nation to have a passage for its troops and munitions through the territory of another, it is a customary act of comity to grant it, if it can be done consistently with its own safety and welfare. It is on this principle that the United States continually enjoy the right of the passage of troops upon the Panama railroad across the territories of the republic of New Granada.

It was not supposed that the State of Maine would feel aggrieved; but if it was so, the directions would be modified.

The principal institutions for education in the State consist of Bowdoin College at Brunswick, and the college at Waterville, a theological seminary at Bangor, and a medical school at Brunswick. The number of common school districts making returns to the superintendent was 4,151, and 360 reports of districts. The average attendance at these schools is 110,969, and the number between the ages of 4 and 21 years is 249,061. The amount of the public school fund is $154,700, and the amount raised by taxation for the year ending December, 1861, was $478,017. There are in addition seminaries or academies in a large number of towns.

The geological survey of a portion of the State, which was commenced in 1861, has proceeded so far in the exploration and examination of the new lands belonging to the State, as to report the discovery of gold and copper, lead, tin, and iron ores, the latter of which in some localities is of excellent quality; also quarries of slate and marble. The climate of Aroostook county is reported by them to be warmer than in some portions of the State farther south.

The railroads in operation and projected within the State reach 592 miles. Those in operation in 1860 amounted to 472 miles, at a cost of construction of $16,576,385.

The debt of the State is small, being about $2,000,000. The wild lands which belong to Maine are valued above this amount.

MANSFIELD, Joseph King Fenno, a brigadier-general in the United States army, born in New Haven, Conn., Dec. 22, 1803, was killed at the battle at Antietam, Sept. 17, 1862. At the age of fourteen he received a cadet's appointment, and entered the military academy at West Point, where he distinguished himself in military studies, passing through every grade of office in the cadet battalion, and during a portion of the fourth year acted as assistant professor in the department of natural philosophy. He graduated in 1822, standing No. 2 in a class of forty members, and was made a second lieutenant of the corps of engineers. For the next two years he was an assistant to the board of engineers, then assembled in New York, and engaged in planning fortifications for the defence of the harbors and cities on the coast. In 1832, he was promoted to be a first lieutenant, and for a few years following was engaged upon the construction of Fort Pulaski, though in the mean time occasionally being detached upon duty at other posts. On the 7th of July, 1838, he was appointed captain. He served in the Mexican war as chief engineer, under Gen. Taylor, was brevetted major for gallant and distinguished services in the defence of Fort Brown, Texas, in 1846, and, the following September, was brevetted lieutenant-colonel for gallant and meritorious conduct in the battles of Monterey, where he received no less than seven severe wounds. In 1847, he was brevetted colonel for his meritorious services at Buena Vista. On the 26th May, 1853, he was appointed an inspector-general of the United States army, with the rank of colonel, which position he held at the breaking out of the present war. In May, 1861, he was commissioned brigadier-general, and was placed in command of the department of Washington. He fortified the city on every side, crowned the heights of Arlington with earthworks, and took Alexandria. Upon the return of Gen. Wool to Fortress Monroe, he was sent to Hatteras, and afterward to Camp Hamilton and Newport News. On the 10th of May he marched, with a division, to the attack on Norfolk, and, after the capture of that place, was assigned to the command of Suffolk, Va., where he acted as military governor. After the second battle of Bull Run, he was summoned to the court of inquiry at Washington, and, during the delay, becoming impatient for active duty, he was assigned to the command of the corps formerly under Gen. Banks, and, at the battle of Antietam, fell mortally wounded, while cheering on his troops in a brilliant charge.

MARYLAND, the most northeastern border slave State except Delaware, increased in population from 1850 to 1860 the number of 104,015 persons. The further details of the census of 1860, relative to Maryland, will be found under United States.

The Legislature of Maryland at its last session, in 1861, ordered inquiries to be made of the governor of Massachusetts relative to the families of the soldiers of the latter State who lost their lives at Baltimore during the riot there on April 19, 1861. (*See* Annual Cyclopædia.) The inquiry was made with a view to provide relief for those families. This called forth the following reply from the governor of Massachusetts:

Commonwealth of Massachusetts, Executive Department, Boston, *Dec.* 25, 1861.

Hon. John V. L. Findlay, Chairman of the Committee on Militia of the House of Delegates of Maryland:

My dear Sir: It is with feelings which I will not attempt to express that I have received, on this anniversary day, your letter addressed to me from Annapolis.

I have immediately addressed the mayors of the cities of Lowell and Lawrence on the subject of your inquiries, and hope to be able to transmit their answers at an early day.

The past cannot be forgotten, but it can be forgiven; and in the good providence of God, I believe that the day is not distant when the blood that was shed at Baltimore by those martyrs to a cause as holy as any for which sword was ever drawn, shall be known to have cemented in an eternal union of sympathy, affection, and nationality the sister States of Maryland and Massachusetts.

With sincere respect, I have the honor to be, faithfully and respectfully, yours,

JOHN A. ANDREW.

Upon receiving the information desired, at the subsequent session, the Legislature appropriated seven thousand dollars for the relief of the families of those who were killed and wounded on that occasion.

This appropriation was made at the regular

session, convened on the first Wednesday of January. At this session Gov. Hicks sent in his final message, as his term of office had expired, and was succeeded by Augustus W. Bradford, who was inaugurated on the 8th as governor for the four ensuing years. The position of Maryland at this time, relative to the troubles of the country, is very clearly indicated in the following remarks in his inaugural message, by the new governor, who was elected by a majority of 31,412:

The leaders of the rebellion may assert over and over again that the South never will submit to this national rule—that it will resist to the last the proposed reunion. So far as those leaders are concerned, we may not doubt the sincerity of their protest; their offences against free institutions are too rank and too recent to allow them willingly again to submit to the will of the majority. But to say nothing of that popular voice which they have for the present stifled, to admit, for argument sake, that but one sentiment pervades the entire South, and that it clamors for a separate Government; earnest as that purpose may be, there is a still stronger force opposed to it, not merely the force of a vast numerical superiority, but a power made irresistible by the force of necessity; a controlling and decisive power, growing out of the demands which the laws of self-preservation make imperative. Nationality with us therefore is a necessity, and peace, anxiously as we may await it, can never come until that necessity is recognized, and our whole country once more united under its old established rule. Who can doubt that such will be the ultimate result of the war if it is confined to the faithful pursuit of that object?

This was still further shown by the following resolutions, adopted by the Legislature, and presented in the U. S. Senate on January 2:

Resolved by the Senate and House of Delegates of Maryland, That the Constitution of the United States, so admirably framed by the wisdom of our forefathers, is recognized by the people of Maryland as the charter of their liberties—the foundation, support, and protection of their rights, and the main source of all their prosperity; that they are at all times ready cordially to renew the expression of their devotion to its principles; that they unreservedly acknowledge the supremacy of all laws made in pursuance thereof, and repudiate every construction of that instrument which would destroy its efficiency, its very existence, indeed, by the assertion of any right expressed, implied, or reserved in the States to secede from the Union; and though they consider the right of revolution, for justifiable cause, inherent in every people, they unhesitatingly declare that they know no existing cause to justify the people of the United States in attempting the overthrow of their Government.

2. *Resolved,* That the duty and interest of the people of Maryland alike forbid that they should take part in the infatuated and suicidal rebellion which now seeks to separate the States of this Union, and to destroy that great nationality which has made us prosperous at home and respected abroad, which separation, if accomplished, must result in the most serious disaster to all the States, but from the peculiarity of our geographical position, can bring to our own State nothing but irretrievable ruin.

3. *Resolved,* That the present unhappy and fratricidal war has been forced upon the Government of the United States by the seditious and unlawful acts of those who have attempted its overthrow by violence, and the State of Maryland will cheerfully contribute her proportion of men and means to sustain the nation in its struggle for existence so long as the war is conducted in accordance with the principles of the Constitution, and so long as the purpose of those in power is the maintenance of the Union, with the rights guaranteed by the States unimpaired.

4. *Resolved,* That the loyalty of the people of Maryland to the General Government, established by the Constitution, is untouched by any shade of servility, and they must ever regard with extreme jealousy all attempts, from whatever quarter, to make the present war for the restoration of the Union the means of interfering with the domestic institutions of the States; and they solemnly protest against all schemes, the object or tendency of which is to excite insurrection among the slaves, declaring the same illegal, and calculated, if put in practice, to produce results too horrible to contemplate.

5. *Resolved,* That this Legislature is gratified to know that the true principles on which the war should be conducted have been expressed in most emphatic language by both houses of the present Congress in their extra session of July last; that they have been declared by the President in his latest message, and that they have been conspicuously illustrated in the proclamation of Gen. Dix to the people of the eastern shore of Virginia.

6. *Resolved,* That although in the immediate presence of armies, when war or insurrection exists, it cannot be expected that the civil power should at all times maintain its supremacy, and there may be cases of extreme necessity, where the safety and preservation of the Government would excuse a resort to extraordinary measures, yet the dangers of a departure from the forms of law, which are the protection of the individual rights, should never be forgotten, and all irregular proceedings should be abandoned as soon as it is clear that the extreme necessity which gave rise to them has passed away.

7. *Resolved,* That the people of Maryland do not hesitate to express their approval of the course and policy of the President in the conduct of the war thus far, as exemplified by his official acts, and they hereby tender him their thanks for the earnest desire he has manifested to avert from them the immediate horrors and calamities of civil war; assured by his firmness and honesty in the past, they confidently expect that, in spite of the importunities of pernicious fanatics, he will keep steadily in view his sworn duty to preserve, protect, and defend the Constitution of the United States.

The views of the people of the State, as indicated by the opinions of the governor and Legislature, were strongly in favor of sustaining the Government and the Union. The system of aiding the families of volunteers was adopted by the Legislature, and many other measures relating to the internal affairs of the State under the circumstances in which it was placed.

The introduction before Congress, and the adoption of an act to emancipate the slaves in the District of Columbia, was very repugnant to the people in the adjacent counties of Maryland. A large meeting of these of Montgomery county assembled at Rockville about the first of April, and passed a series of resolutions declaring that the measure was regarded as the entering wedge to a scheme of general emancipation, a violation of public faith, unconstitutional, as taking private property not for public use, nor for a just compensation, unwise, ill-timed, both politically and financially. The action of Congress was, however, acquiesced in.

The attachment to the Union which has existed in the State of Maryland, and which has been manifested most amply during the past

year, places her in the front rank of all the States devoted to that cause. Together with Kentucky, this State held the balance of power between the two hostile sections when the war commenced, and if they had failed in taking the stand they did take against disunion, the capital of the nation would inevitably have been lost, and the Union cause compromised, perhaps hopelessly, in the estimation of foreign nations.

The supremacy in the physical contest with these two States firmly united with the Southern States, so far as to have secured a return of the seceding States, would have been so doubtful and demanded such years of contest as to have discouraged the most sanguine. It was the belief of the Government and people of the Confederate States that Maryland would unite with the Confederacy, if she was supported to maintain the contest that would follow within her borders. As the divisions of Gen. Lee's army crossed the Potomac, deficient in supplies of every kind, they were expecting to be received into a land of plenty, and to be joined by the brave soldiers of that State. In less than fifteen days their weary feet recrossed the same river retreating from a victorious foe. No great popular welcome had met them; their thinned ranks had not been filled by new recruits, and no tokens of substantial sympathy had been shown. At every step as they advanced they found themselves in an enemy's country. Yet the State of Maryland could not approve of many of the great measures of the Government, which were destined to destroy some of her most cherished institutions, neither was the administration one with which she had the smallest sympathy. Such were the circumstances in which she was placed and such the heroic patriotism she displayed amid them.

The details of the advance of the Confederate troops into Maryland will be found under ARMY OPERATIONS, to which the reader is referred.

Upon the call of President Lincoln for three hundred thousand men, an enrolment of all the citizens of the State subject to military duty was made by the order of Governor Bradford. Preparatory to this draft for soldiers, committees were appointed by the governor in every county, nearly all of whom upon investigation recommended such draft as both necessary and proper to complete the quota of the State. The draft was in due time carried into effect and sustained by the people. The places of a large number of those drafted were subsequently filled by substitutes. In Baltimore, Harford, and Prince George counties, and Baltimore city, the complement was thus made up. The bounties required to be paid were from $225 to $275, and not higher than in any Northern State. In Massachusetts the quota of the second call was not even made up by a draft. The quota of Maryland under the first call was eight thousand five hundred and thirty-two, of whom about one third were to come from the city of Baltimore. At the time the number of men liable to the service in the city was seventeen thousand. The quota under both calls was about sixteen thousand, and the proportion of Baltimore about five thousand six hundred.

The number of miles of railroad within the State is 422, of which the cost of construction has been $46,265,634. The canals of the State are the Susquehanna and Fishwater, 45 miles; Chesapeake and Ohio, 184 miles; Chesapeake and Delaware, 12 miles.

Maryland contains a number of excellent institutions for education. There are four in the city and county of Baltimore. Others are at Annapolis, Ellicott's Mills, Chestertown, and Frederick. The State has a school fund amounting to nearly $350,000, and the public expenditure for schools exceeds half a million. The system of public schools in operation in Baltimore is hardly surpassed by those of any other Northern city.

The arrest of citizens without legal process continued to be carried on to a greater extent in Maryland than any other State. The following instance is an illustration. On the 28th of July a large Union mass meeting was held in Baltimore, at which a resolution was adopted to appoint a committee to investigate certain charges of disloyalty and official corruption. On Oct. 28, a meeting of the vice presidents of the original meeting was called to hear a report of this committee. The committee reported that they had summoned a large number of persons to testify in regard to these matters, and taken ninety-six affidavits of respectable men proving an enormous amount of disloyalty on the part of persons in position; that they had prepared a brief of the evidence, which, with the affidavits, they had laid before the president. That owing to preoccupation no action had been taken on the papers, which were afterward at their request returned. Before the report of the committee was concluded the meeting was broken up by the sudden appearance of Major Jones and other officers of Gen. Wool's staff, and a company of soldiers, who seized upon the documents exposing official corruption and arrested the members of the committee then present, viz.: Thomas H. Gardner, clerk of the criminal court; Col. Thomas R. Rich, aid to the governor; Alfred Evans; and Thomas Sewell. The prisoners were sent to Fort Delaware, but afterward unconditionally released.

MASSACHUSETTS, the 30th State in the Union in area, ranks in population as the seventh, the census returns of 1860 showing that her total number of inhabitants was 1,231,066, of whom 596,713 were males, and 634,353 females, and 9,602 colored. In density of population and absolute increase of population per square mile she ranks first, and in the amount of her manufactures, third. The aggregate products of the latter amounted to $266,000,000, of which $55,675,684 were cotton and woollen goods, and the products of her fisheries to $9,300,402. In

1862 the State had about 1,550 miles of railroad in operation, or under construction, in which upward of $60,000,000 have been invested. The total value of her real and personal property amounted to $815,237,433, which was exceeded by that of only 4 other States. The number of newspapers and periodicals published in the State was 232, and their aggregate circulation was 102,000,760 copies. (*See* UNITED STATES.)

In January, 1862, the Legislature met and organized, by the choice of John H. Clifford, as president of the Senate, and Alexander H. Bullock, as speaker of the House of Representatives, both being the candidates of the republicans, who were in a large majority. John A. Andrew was at the same time inaugurated as governor of the State, a post which he had filled during the previous year. The amount of debts and liabilities of the State was stated to be $10,988,345.56, of which $1,368,000 were floating, and the remainder funded debt. The resources amounted to $14,835,161.27, of which $3,205,744.98 were unproductive, leaving a surplus over the liabilities of the State of $3,846,-241.62.

One of the first acts of the Legislature was to provide for the protection of the chief seaports of the State in the event of a foreign war, without waiting for the tardy and uncertain action of the National Government, from which however a reimbursement for moneys expended was expected. A resolution was accordingly adopted as follows:

That his Excellency, the Governor, by and with the advice and consent of the council, be and he is hereby authorized to enter into contracts on behalf of the Commonwealth for the manufacture of suitable ordnance for the coast defences of Massachusetts, to an amount not exceeding five hundred thousand dollars, after advertising for proposals therefor; provided, that the work shall be done under the supervision of officers to be appointed by the Government of the United States.

In accordance with this resolution the armament of the fortifications in Boston harbor and at New Bedford, was put on a war footing, and plans were prepared by the engineer and ordnance officers of the State, for the fortification of other ports in Massachusetts, by earth works to be thrown up in a few days, in cases of necessity.

The following resolutions reported by the Committee on Federal Relations were adopted on April 30, in relation to the act passed by the General Assembly of Maryland for the relief of the families of the killed and wounded of Massachusetts at Baltimore, on the 19th of April, 1861:

Resolved, That the Commonwealth of Massachusetts hereby acknowledges the liberal appropriation of her sister State of Maryland, for the relief of the wounded, and of the families of the killed of the Sixth regiment of Massachusetts volunteers, in the lamentable occurrences at Baltimore on the 19th of April, 1861. The people of Massachusetts will welcome with sincere and cordial satisfaction this evidence of the generous sympathy of the people of Maryland, which will tend to restore and strengthen that kind of fraternal feeling which should ever exist between the citizens of the different States of this Union.

Resolved, That his Excellency, the Governor, be requested to transmit a copy of this resolve to his Excellency, the Governor of Maryland, with the request that it be laid before her Legislature at its next session.

On Jan. 1, 1862, Massachusetts had sent to the field (including 3,736 three months' volunteers) 33,636 men, and had also contributed 11,000 men to the navy. Six months later she had in actual service 26 regiments of infantry, 1 of cavalry, 1 of heavy artillery, 8 batteries of light artillery, and 2 companies of sharpshooters, beside 3 additional regiments in process of recruitment, all of which were enlisted for three years; and the number of seamen for the navy furnished by her was estimated at from 12,000 to 18,000.

On May 19th the U. S. adjutant-general telegraphed from Washington to Gov. Andrew, requesting to know how soon he could raise and organize three or four more infantry regiments, and have them ready to be forwarded, armed and equipped, to the seat of war. The governor, in reply, sent the following communication to Secretary Stanton:

A call so sudden and unexpected finds me without materials for an intelligent reply. Our young men are all preoccupied with other views. Still, if a real call for three regiments is made, I believe we can raise them in forty days. The arms and equipments would need to be furnished here. Our people have never marched without them. They go into camp while forming into regiments, and are drilled and practised with arms and muskets as soldiers. To attempt the other course would dampen enthusiasm, and make the men feel that they were not soldiers but a mob.

Again: if our people feel that they are going into the South to help to fight rebels who will kill and destroy them, by all means known to savages as well as civilized men; will deceive them by fraudulent flags of truce and lying pretences, as they did the Massachusetts boys at Williamsburg; will use their negro slaves against them both as laborers and fighting men, while they themselves must never fire at the enemy's magazine, I think they will feel the draft is heavy on their patriotism. But if the President will sustain General Hunter, and recognize *all* men, even black men, as legally capable of that loyalty the blacks are waiting to manifest, and let them fight with God and human nature on their side, the roads would swarm, if need be, with multitudes whom New England would pour out to obey your call.

Always ready to do my utmost, I remain, most faithfully, your obedient servant,

JOHN A. ANDREW.

A few days later came the intelligence of the sudden march of the Confederate Gen. Jackson down the valley of the Shenandoah, and of the retreat of Gen. Banks's small army and the imminent danger apprehended at Washington. The northern and eastern States responded with eagerness to the call of the Government for aid, and among the first to take active measures in that behalf was Gov. Andrew, who, forgetting the scruples which he had urged in his previous communication, issued a proclamation. (*See* page 108.)

With an alacrity which rivalled that of their ancestors, the "minute" men of the Revolution, the citizens of Massachusetts responded at once to the call of the governor, and on the suc-

ceeding day, May 26, 3,100 men reported to him at his headquarters on Boston Common. These were the regular militia of the State, and did not embrace a regiment of volunteers despatched on the same day to Washington. It was noted with gratification that this was double the number which reported in April, 1861, immediately after the fall of Fort Sumter, and claimed that Massachusetts was still among the first of the States in devotion to the Union as well as in resources.

Within a few days the retreat of Gen. Jackson relieved the General Government of fears for the safety of the capital, and in accordance with orders from the War Department the militia were released, and all future enlistments were directed to be made for 3 years or during the war.

The calls of the Government in July and August for additional three years' men and 300,000 nine months' men were responded to by Massachusetts with her accustomed readiness, and by the 18th of December out of the 75,294 men, which constituted the quota of the State to that period, all but 3,809 had been furnished. By the report of the adjutant-general rendered at the commencement of 1863, it appears that subsequent to July, 1862, the State sent 15,012 men for the three years' service and 22 regiments, comprising 19,806 men, for 9 months, and that during 1862 6,628 men had been recruited to fill up the ranks of the old regiments in the field. If to these be added the men recruited for the navy, a total of about 90,000 men enlisted since the commencement of the war will be entered to the credit of the State. These amount to about 64 per cent. of the total number of non-exempts enrolled by the State officers, and .073 of the whole population. The aggregate number of soldiers in service at the close of the year was estimated by Gov. Andrew at 60,000.

In connection with the subject of the equipment of the Massachusetts regiments, in which upward of $4,000,000 had been expended under the direction of the executive, it may be added that a legislative committee, which had been invested with absolute authority to investigate the matter, reported unanimously that after a thorough examination, in which they had even advertised in the public journals "that they were holding meetings for the purpose of receiving such complaints as any person might be desirous of making concerning any contracts," they had been "unable to fix a charge of fraud or improper conduct upon any person connected with the Government," that they had no complaints before them which remained unexamined, and that they had no reason to suppose that any more would or could be preferred.

In the early part of September the political parties began to organize for the November election of State officers and members of Congress. A convention of the republicans nominated Gov. Andrew and his colleagues in office for reëlection, and adopted the following resolutions:

Resolved, That Massachusetts with all her heart and strength will support the Government of the United States in the prosecution of this war, by the employment of all the means sanctioned by the usages of Christian civilized warfare.

Resolved, That the most decisive measures for the complete and permanent suppression of this rebellion are the most prudent, and that, as the institution of slavery is a principal support of it, that institution shall be exterminated.

Resolved, That we heartily applaud the gallantry and endurance of our soldiers, and mourn the loss of those who have fallen, and that we will cherish their memories in our hearts and preserve them by most enduring monuments.

Resolved, That we recognize and acknowledge the preëminent merits and services of our Senators in the Congress of the United States, the honorable Charles Sumner and the honorable Henry Wilson. In the posts of duty assigned them by the suffrages of their brother Senators, one as Chairman of the Committee on Foreign Relations and the other as Chairman of the Committee on Military Affairs, they have cordially and unreservedly, and with masterly ability, supported all governmental measures, and fitly represented the Commonwealth as among the most cheerful and enthusiastic defenders of the Government. And now that the second term of our senior Senator is drawing to a close we desire to express our warm approbation of his course and appreciation of his services, and to commend him to the suffrages of his fellow-citizens, whom he has served so well, that the Commonwealth may again honor itself by returning to duty at the capital a statesman, a scholar, a patriot, and a man of whom any Republic in any age might be proud.

Resolved, That the administration of the affairs of the State during the past year, and the intelligent and energetic manner in which its Chief Magistrate and other officers have discharged their severe duties, merit and receive our most hearty commendation.

On the 13th of September, a call signed by many eminent citizens of Massachusetts was issued for a convention of delegates from the people to meet at Boston on Oct. 7. The purpose of the call was thus stated:

In order, therefore, that the loyal men in Massachusetts may in the most effectual manner sustain and support the Government, the Constitution and the laws, and aid the chosen and constituted head of the nation, the President, in his patriotic and self-sacrificing labors to save the country and put down rebellion, we ask the people of this Commonwealth, irrespective of all party, to meet at some future time to be agreed upon, to nominate candidates for State officers at the coming election, and take counsel together for the common weal.

The convention assembled at the appointed time at Faneuil Hall, which was filled with delegates and friends of the movement. Linus Childs was appointed president of the convention, and the following nominations were made: for governor, Charles Devens, jr.; lieut.-gov., Thomas F. Plunkett; secretary, Oliver Warner; treasurer, Henry K. Oliver; attorney-general, Henry W. Paine.

The views of the convention were expressed by the following resolutions:

Resolved, That our sentiments are clearly expressed by adopting the language of the following resolution passed by Congress at the extra session in 1861:

"That the present deplorable civil war has been forced upon the country by the disunionists of the Southern States, now in arms against the Constitutional Government, and in arms around the capitol; that in this great

national emergency, banishing all feeling of mere passion and resentment, we will recollect only our duty to the whole country; that this war is not waged on our part in any spirit of oppression, or for any purpose of conquest or subjugation, or purpose of overthrowing or interfering with the rights or established institutions of those States, but to defend and maintain the supremacy of the Constitution, and to preserve the Union with all the dignity, equality, and rights of the several States unimpaired, and that as soon as these objects are accomplished the war ought to cease."

Resolved, That the expenditure of nearly two thousand millions of treasure, the loss of two hundred thousand men of our armies in a war of eighteen months against traitors, two thirds less in numbers and inferior in resources for war of every description—and the traitors still not only unsubdued, but apparently vigorous and threatening as at the beginning—call loudly upon the people, without distinction of party or opinion, to make inquiry as to the cause of disaster, and to unite with all their heart, mind, and might in urging on and sustaining the Executive in a more vigorous and successful prosecution of the war, that it may be a short war, and that its end may be a speedy and honorable peace, with every State restored to the Union and the Constitution.

Resolved, That we recognize in Abraham Lincoln, the chief executive magistrate of the nation, commander-in-chief of the army and navy of the United States, a responsible and constitutional head, whose rightful authority and power ought always to be vigorously and religiously guarded and preserved as the condition on which our form of government and the constitutional rights and liberties of the people can be saved from the wreck of anarchy or the gulf of despotism. Now, more than any other time in the history of the republic, the President ought zealously to guard himself, lest in the assumption of war powers, as the commander-in-chief of vast armies, he transcend the limits and bounds set by the fathers to guard the liberties of the people.

Resolved, That we have read with pleasure the declaration of the President, as commander-in-chief, in his proclamation of Sept. 22, 1862, that the war hereafter, as heretofore, "will be prosecuted for the object of practically restoring the constitutional relations between the United States and the people thereof, in which States that relation is or may be suspended or disturbed." We know that in the mode and manner of conducting this war to that issue, in the means and policy to be adopted in its prosecution, a solemn and fearful responsibility rests upon him.

Resolved, That freedom exists only under the Constitution; it confines and limits authority; it defines executive, legislative, and judicial power. Without a strict and guarded observance of and adherence to it, military power, which in time of war, within rebellious districts, occupied by armed forces, arrests its citizen, condemns and executes him by decree of court martial, might become supreme and perpetual over the whole land, and the Government be made a despotism. In this time of war we want men in our Congress who shall be vigilant, sleepless, and far-seeing watchmen upon the towers of freedom—shall guard against the slightest encroachments upon the legislative and judicial powers, and shall see to it that those great safeguards to liberty, exemption from arrest without legal warrant, trial by jury, and the writ of *habeas corpus*, are preserved in loyal and peaceful States. In times like the present, passion is apt to overwhelm reason and judgment. Now, and for years to come, during the war, at the end of the war, after the war questions are to be discussed and determined more tremendous in their consequences than have been presented to the nation since the founding of the government. We need legislators who are patriots and statesmen. Massachusetts no longer wants men to represent her who see one thing so clearly that they can see nothing else.

Resolved, That we offer the thanks of this convention to the loyal States of the border, for their devotion to the Union, the Constitution, and the flag. We know what they have suffered. We know against what they contended. We know the strength of their patriotism. It is firm and true when hostile armies encamp upon their soil and devastate their homes. And we brand as false and wicked the imputation of fanatics, and partisans that their loyalty is doubtful, and, therefore, their counsel should be spurned. God bless Maryland for the last proof of her fidelity. God help the brave State of Kentucky, cursed to-day by the tread of a rebel army. Her people are our people, her cause is our cause, and it is our proud confidence that she will pass through her present trial with her fair fame untarnished, and while she routes those who have invaded her, will confound those who have slandered her.

Resolved, That Massachusetts responds with full heart to the acclaim with which the army of Virginia greeted the appointment to its command of Maj.-Gen. George B. McClellan. We put trust in him whom brave men desire to do battle for our cause. Let all irregular and irresponsible intermeddling with his command of the army, whether in high places or low, by letter writers in camp or governors in convention, anywhere and everywhere, henceforth cease.

A complete party organization was also made by the convention.

On the next day, the 8th, a convention, representing the democratic party, assembled at Worcester, and declined to make any nominations for State officers, but adopted the following resolutions, as expressive of their views on national affairs:

Resolved, That the democracy of Massachusetts, waiving the expression of their views on questions not rendered imperative by the imperilled condition of our country, will continue to render the National Government their sincere and united support in the use of all legitimate means to suppress the rebellion, and maintain the Constitution and restore the Union.

Resolved, That we believe the Constitution of the United States, formed in wisdom by our fathers, gives to the constituted authorities ample power to suppress rebellion, and we earnestly invoke the President to stand by that sacred instrument, so that all loyal and law-abiding people may with earnest, confiding hearts stand by the President; and while we yield a ready and cheerful obedience to all the requirements of the Constitution, we demand of the Government and governed alike an unwavering fidelity to and enforcement of all its safeguards and provisions.

Resolved, That in common with and adopting the language of the President, our "paramount object in this struggle is to save the Union, and is not either to save or destroy slavery;"

That the policy announced by Congress in the resolution unanimously adopted in July, 1861, cannot be departed from without a violation of the public faith.

[*See* first resolution of people's convention.]

Resolved, That we are opposed to the doctrines of secession and abolition, both of which tend directly and surely to the destruction of the republic, and that there can be no permanent union or confederacy of independent States where the right of secession is admitted, or where any State, by a claim of "higher law," usurps the right to disregard the Constitution or bond of Union by which such States are united.

Resolved, That during this rebellion, which requires the whole strength of the people to subdue, the introduction and discussion of mere partisan questions or higher law theories, are calculated to weaken the hands and unnerve the heart of the soldier, to awaken distrust and jealousy among the people, to arouse the slumbering animosities of party; to beget strife and dissension among ourselves, and thus deprive our action of its great moral power and grandeur; therefore,

Resolved, That we deeply regret that the President of the United States, at this time forgetful of his obligations to the whole country, as the constitutional head of the Government, and yielding to unwise counsels, should have declared in proclamation of Sept. 22, 1862, his determination to adopt hereafter, in the prosecution of our deplorable civil war, the policy of a party which the House of Representatives, by the resolution of Feb. 11, 1861, unanimously declared to be too "insignificant in numbers and influence to excite the serious attention or alarm of any portion of the people of the republic."

Resolved, That in the name of civilized humanity, we respectfully but earnestly protest against the emancipation proclamation of the President of the United States, both on the ground of its unconstitutionality and inexpediency, and unjustifiable on the ground of military necessity, as it is prospective, not immediate, in its action, and we accept as conclusive reasons against it the unanswerable arguments of the President himself to the self-constituted Chicago delegation: that it deprives the noble Union men in the rebellious States, alike with the most guilty, of their property; that if inoperative it will bring down upon us the scorn of the world, and if capable of practical execution it must produce a war of races, in which all alike, the innocence of woman and the helplessness of childhood, must suffer with the guilty, and which must sooner or later end in the extinction of the negro race in the Southern States.

Resolved, That in order to prevent such deplorable results we feel it incumbent upon us to use all honorable efforts to surround the President with sound, safe, and wise counsellors, and send to Congress from this Commonwealth statesmen, whose standard of loyalty is neither above the Constitution, nor in conflict with it.

Resolved, That the right of trial by jury, and the ancient and constitutional right of this people to canvass public measures, should be at all times, and in all places, as well in time of war as in time of peace, jealously guarded;

That the right of the writ of *habeas corpus* is older than the Government itself; it is one of the main pillars of the common law, and the great bulwark of civil liberty, with the wisdom of centuries pleading for its sanctity, and under the Constitution there is no power that can suspend it except the Congress of the United States, and, as the people of the loyal States have voluntarily given millions of their treasure, and thousands of their sons to sustain the Government, no exigency requires its suspension, and we therefore call on the President to recognize the loyalty of the people, by restoring to them the right of trial by jury and freedom of speech, and of the press.

Resolved, That meetings of the governors of States, with the view to control or shape the policy of the General Government, or to dictate terms to the President, is not only not warranted by the Constitution, but is revolutionary in its tendency, and deserving severe reprobation.

Resolved, That the services of Maj.-Gen. George B. McClellan entitle him to the grateful acknowledgments of the people, and that any attempt to deprive him of the command he now holds, or to embarrass his plans or impair the confidence with which the soldiers and people regard him, whether made by conventions of Governors, by Senators, or Congressmen, or any other politicians, is fraught with great danger to our cause and deserves the severest censure.

The election took place on the first Tuesday of November, and the votes of the electors were given as follows:

	1862.		1861.
Republican	80,835		65,261
People	52,587	Democrat	31,266

The votes for members of Congress were given as follows:

	Republican.	People.
1st District	8,399	2,762
2d "	9,271	5,884
3d "	5,044	5,020
4th "	5,828	5,351
5th "	8,505	5,398
6th "	8,124	6,152
7th "	7,994	6,496
8th "	10,128	5,178
9th "	14,311	No candidate.
10th "	7,449	5,785

The members of the Legislature were elected as follows:

	Senate.	House.
Republican	35	198
Democratic	5	41

A proposition was made to Gov. Andrew, on the 30th of September, from Gen. Dix, commander at Fortress Monroe, with the approbation of the War Department, to receive into Massachusetts a certain number of the slaves, or "loyal blacks," collected there, whose removal was desirable "for reasons both military and humane."

The correspondence was conducted through Major Bolles, of Gen. Dix's staff, and the governor. It was contemplated to relieve the Government, by the removal of a large number to Massachusetts and other Eastern States. The governor, although earnestly invoked on the subject in the name of humanity to the "loyal blacks," declined to receive them, on the ground that their stout arms could be of service in fighting for liberty. He further said:

Contemplating, however, the possibility of their removal, permit me to say that the Northern States are, of all places, the worst possible to select for an asylum. These poor people, afloat upon the world, are inhabitants of a southern climate, and have habits, and are subject to needs and to peculiarities of physical constitution accordingly. Where, then, is the prudence or the humanity of subjecting them at once to the rigors of our northern sky, in the winter season, with the moral certainty of inflicting extreme suffering, resulting probably in disease and death? If their removal is definitely determined upon, I would take the liberty of suggesting for the asylum some Union foothold in the South—as Hilton Head—where they could retain their health, be trained as soldiers, and their labor be rendered economically available. For them to come here for encampment or asylum would be to come as paupers and sufferers into a strange land and a climate trying even to its habitués, as a swarm of homeless wanderers, migrating without purpose, and not to the wilderness where the strong arm would suffice for maintenance, but to a busy community where they would be incapable of self-help—a course certain to demoralize themselves and endanger others. Such an event would be a handle to all traitors and to all persons evilly disposed. We should be told that the experiment had been tried and had failed; that the negroes were proved worthless and incapable of taking care of themselves, when the truth would be that we had pursued the plan most eminently calculated to disable and corrupt them. I meet with pleasure the motives of humanity which have dictated your proposed plan; but from the very same feelings I must consider the plan mistaken. It is precisely because I do not wish the negroes to suffer; precisely because I would save their wives and children from perishing; precisely because I do not wish their new freedom to become license, corruption, and infamy, that I respectfully decline to aid or countenance your plan for their transportation to the North.

McCULLOCH, Ben, a general in the Confederate army, born in Rutherford co., Tenn., in 1814, killed in the battle of Pea Ridge, March 7, 1862. He was a son of Alexander McCulloch, who fought under Gen. Jackson at the battles of Talladega, Tallahassee, and Horseshoe, during the Creek war. He attended school in Tennessee until he was 14 years of age, and from that time until 21 was mostly engaged in hunting, in which occupation he became highly skilled. This life gave him a taste for adventure, and, upon learning of an expedition of trappers to the Rocky Mountains, he made arrangements to join them; failing in this, however, he engaged to join the expedition of David Crockett to Texas, to take part in the revolution; but, arriving at Nacogdoches, the place of rendezvous, too late, he proceeded alone to the river Brazos, where he was taken sick, and did not recover until after the fall of the Alamo. In 1836 he joined the Texan army under Gen. Sam Houston, and was assigned to the artillery. He served gallantly at the battle of San Jacinto, and afterward settled in Gonzales co., Texas, and was employed on the frontier, surveying and locating lands. Upon the breaking out of the Mexican war he raised a company of Texan rangers, and arrived at the seat of war four days after the battles of Palo Alto and the Resaca. His company were accepted by Gen. Taylor, and won great honor at the battles of Monterey and Buena Vista. He afterward joined Gen. Scott's army, and for his gallant services at the taking of the city of Mexico, was appointed United States Marshal of Texas by President Pierce. In 1857, he was appointed, in conjunction with ex-Governor Powell, commissioner to Utah. At the time of the inauguration of President Lincoln he was in Washington, it was believed, making arrangements, at the head of a body of secessionists, to take possession of the city; but, owing to the precautions of Gen. Scott, the idea was abandoned. He was subsequently made brigadier-general in the Confederate army, and assigned the command of the Arkansas forces. In June, 1861, he issued a proclamation to the people of Arkansas to assemble at Fayetteville to defend the State from invasion from Missouri. He commanded at the battle of Wilson's Creek, where Gen. Lyon was killed, and, it was said, having some misunderstanding with Gen. Price, surrendered the command to him. At the battle of Pea Ridge he led a corps of Arkansas, Louisiana, and Texas troops, and fell on the second day of the engagement.

McNAB, Sir Allan Napier, Bart., a Canadian statesman, born at Niagara, C. W., Feb. 19, 1798, died at Toronto, C. W., Aug. 8, 1862. He was of Scottish family, his father, lieutenant Allan McNab, having been appointed by Gen. Simcoe one of his aids when he came to explore Canada, and his grandfather having been a captain of the 42d Highlanders. At the age of 14 the subject of this notice joined the grenadiers of the 8th regiment, who were stationed for the defence of Toronto, when attacked by the Americans in 1812, and was compelled to retreat with his regiment to Kingston. He was promoted to the rank of ensign during the war, but at its conclusion left the service and commenced the study of law at Toronto. In 1824 he was admitted to the bar and settled in his profession at Hamilton, C. W., where his public enterprise greatly contributed to the growth and improvement of the city. In 1829 he was elected a member of the Provincial Assembly from the county of Wentworth, and after serving three terms was returned by the electors of the city of Hamilton. In the ensuing session he was chosen Speaker in the House of Assembly, and was serving in this capacity, when the rebellion, headed by William Lyon Mackenzie, broke out. Sir F. B. Head wrote to him informing him of the peril in which the Government was placed, and he immediately marched from Toronto at the head of the militia, routed the insurgents on the 7th of Dec. 1837, and soon after seized the Caroline, a steamer used by the insurgents for communication with the American shore, set it on fire and sent it over Niagara Falls. This act occasioned much excitement in the United States, and led to some threats, but the English Government sustained Colonel McNab, and on the 14th of July, 1838, he was knighted by patent, and received the thanks of the governor-general of Canada, and the Provincial Legislatures. The Union of the Upper and Lower Provinces deprived him of his emoluments of office as speaker, and the governor-general asked the British Government for compensation for him, but was refused. He was subsequently a member of the provincial cabinet, under several administrations, and prime minister in 1854–6. In Feb. 1858 he was created a baronet of the United Kingdom. He subsequently spent three years in England, and in 1859 contested Brighton, Eng., for Parliament, in the conservative interest, but was defeated. His title became extinct with his death, as he left no male issue.

MEADE, Rt. Rev. William, D. D., a bishop of the Protestant Episcopal church, in the State of Virginia, born in Virginia, Nov. 11, 1789, died at his residence near Millwood, Clark co., Va., March 14, 1862. He was a son of Col. Meade, the confidential aid of Gen. Washington, graduated at Princeton College, N. J., in 1808, and, in 1811, was ordained to the ministry of the Protestant Episcopal church. He was a man of marked character and extensive influence. He took an active part in the establishment of a diocesan theological seminary, and various educational and missionary societies connected with his denomination in Virginia. In 1829 he was elected and consecrated assistant bishop of that State, and, upon the death of Bishop Moore, in 1841, took the sole charge of the diocese. In 1842, ill health obliged him to apply for an assistant, and Dr.

Johns, of Baltimore, became his associate. Bishop Meade was the author of several tracts and treatises on doctrinal questions, local church history, &c.. In 1834, he published "Family Prayer;" in 1849, "Lectures on the Pastoral Office," "Lectures to Students;" in 1856, "Old Churches, Ministers, and Families in Virginia."

MEMPHIS. Immediately after the naval engagement opposite Memphis, June 7, several prominent citizens of the place went on board the flag ship to inquire of Com. Davis his intentions with respect to the city, and a correspondence thereupon took place between the commodore and the mayor. (*See* ARMY OPERATIONS.)

A satisfactory arrangement was thus made with the civil authorities, all the more readily as the mayor and a great many of the citizens—according to some accounts the majority—were Union men. In the mean time Col. Ellet, commanding the ram fleet, had made an independent movement toward placing the city under the Federal authority, of which the following is his official report to the Secretary of War:

U. S. RAM SWITZERLAND,
OPPOSITE MEMPHIS, *June* 7, P. M.

Hon. E. M. Stanton, Secretary of War:

SIR: Yesterday, after the engagement with the rebel fleet had nearly terminated, and the gunboats and one of my rams had passed below, I was informed that a white flag had been raised in the city. I immediately sent my son, a medical cadet, Chas. R. Ellet, ashore with a flag of truce and the following note to the authorities:

"OPPOSITE MEMPHIS, *June* 6. I understand that the city of Memphis has surrendered. I therefore send my son, with two United States flags, with instructions to raise one upon the custom house and the other upon the court house, as evidence of the return of your city to the care and protection of the Constitution.

"CHAS. ELLET, JR., Commanding."

The bearer of the flags and the above note was accompanied by Lieut.-Col. Conkell, of the Fifty-ninth Illinois regiment, and sixty-two men of the boat guard.

The following is the reply of the mayor of the city:

"MEMPHIS, *June* 6.

"*Col. Chas. Ellet, Jr., Commanding, &c.:*

"SIR: Your note of this date is received and the contents noted. The civil authorities of this city are not advised of its surrender to the forces of the United States Government, and our reply to you is simply to state respectfully that we have no power to oppose the raising of the flags you have directed to be raised over the custom house and post office.

"JOHN PARK, Mayor."

On receiving this reply the small party proceeded to the post office to raise the national flag, and were there joined by the mayor. It is proper to say that the conduct of the mayor and some of the citizens was unexceptionable. The party was surrounded by an excited crowd, using angry and threatening language, but they ascended to the top of the post office and planted the flag, though fired upon several times and stoned by the mob below. Still I believe this conduct was reprobated by the people of standing in the place; indeed, many evidences of an extensive Union feeling there reach me. Respectfully,

CHAS. ELLET, JR.,
Commanding Ram Fleet.

The same evening the citizens, to the number of some 2,000, reported themselves, armed and equipped, to the provost marshal to prevent the destruction of property by the mob, who it was feared would fire the city, in fulfilment of a threat which had been made some time previously; but, beyond the breaking open of the Mississippi and Tennessee railroad depot, little or no disorder occurred. The same day Col. Fitch issued a proclamation to the citizens, announcing that he had taken military possession of the city. "Residents who may have fled from their homes," he continues, "are exhorted to return; merchants and others who have abandoned their business are requested to reopen their stores and shops, excepting those dealing in intoxicating liquors, who are forbidden to resume that traffic under penalty of having the stock immediately destroyed. The mayor and common council will continue in the exercise of their municipal functions, the military authorities simply coöperating with them in enforcing all proper ordinances, unless some exigency arises rendering it imperative to place the city under martial law. It is hoped and believed, however, nothing will occur to render this step necessary." In fact, the most perfect tranquillity continued to prevail; the municipal authorities coöperated cordially with the military in preserving order; and great numbers of citizens, who had fled on the destruction of the Confederate fleet, began to return to their homes. Before the surrender, 1,494 bales of cotton, and large quantities of sugar and molasses, had been destroyed by order of the Confederate Government, but the citizens had succeeded in concealing probably $150,000 worth of these staples, which now began to find their way to the levees. Any person was allowed to go North, or ship goods thither, on taking the oath of allegiance. Trade was extremely dull for a week or two; many of the shops remained closed, and owing to the lack of every species of currency except Confederate scrip, Northern merchants, who had sent goods to Memphis, were in several instances compelled to reship them.

The Memphis post office was reopened on June 13.

On the same day Col. James R. Slack, of the 47th Indiana volunteers, assumed command of the city, and immediately issued the following order:

General Orders No. 3.

HEADQUARTERS UNITED STATES FORCES,
MEMPHIS, TENN., *June* 13, 1862.

Hereafter the dealing in and passage of currency known as "Confederate Scrip" or "Confederate Notes" is positively prohibited, and the use thereof as a circulating medium is regarded as an insult to the Government of the United States, and an imposition upon the ignorant and deluded.

All persons offending against the provisions of this order will be promptly arrested and severely punished by the military authorities.

By order of JAS. R. SLACK,
Colonel Commanding Post.

The Mayor and Board of Aldermen addressed a letter to Col. Slack, representing that in the absence of almost all other money the order above cited was certain to cause great distress

and suffering among the laboring class, and requesting him to leave the matter for sixty days "to the judgment and discretion of the people." Their request was not granted, Col. Slack reminding them in his answer "that the so-called Confederate States issued all their notes in bills of the denomination of $50's and $20's," and that consequently the laboring class probably had very few of them in their possession. "The ruinous effect to which you allude," he continued, "will strike a different class altogether. The calamity of having to contend with a depreciated currency, and to which you refer, will come upon the people sooner or later, and I see no reason why it may not as well come now as sixty days hence.

"Those who have been the most active in getting up this wicked rebellion, are the individuals whose pockets are lined with Confederate notes, and if sixty days' time should be given them, it is only giving that much time for those who are responsible for its issue to get rid of it without loss, and the worthless trash will be found in the hands of the unsuspecting and credulous, who have always been the dupes of designing Shylocks, by inducing them to accept of a circulating medium which was issued to aid in the destruction of the first and best Government ever known to civilization."

On the 17th Gen. Lewis Wallace arrived at Memphis, and assumed the chief command by virtue of his rank. His principal official act, during the few days that he remained in Memphis, was to take possession of the "Argus" newspaper office, where he installed the correspondents of the "New York Herald" and "New York Tribune" as editors. The provost marshal also issued orders to the guard to shoot any one tearing down United States flags, and imprison citizens carrying concealed weapons.

On the 20th Col. Slack issued the following "General Orders No. 8:"

"Members of the Board of Aldermen, the Mayor, City Recorder, and all other persons discharging any official duty within the city of Memphis, and under the charter thereof, are required to come before the Provost Marshal and take the oath of allegiance to the Government of the United States within three days, or, in default thereof, will be regarded as sympathising, aiding, and abetting rebellion, and will be arrested and treated as only traitors deserve."

On the 25th a Union meeting was held in Court House square, at which some 350 or 400 persons were present, about 200 of them being citizens. After several speeches had been made, a series of resolutions were passed pledging the support of the meeting to the Union ticket at the municipal election to be held the next day; and the meeting then adjourned, to reassemble in the evening for the purpose of nominating candidates. The election on the 26th passed off quietly, not more than 700 votes being cast. John Park, the Union candidate, was reëlected mayor without opposition. All persons offering to vote were required to take the oath of allegiance.

The city was now for some weeks the headquarters of Gen. Grant, and Col. J. D. Webster was appointed commandant of the post. The editors of "the Argus" were permitted to resume the direction of their paper, with the understanding that their immediate arrest and the suppression of the paper would follow the appearance of any disunion article in it.

The Northern shipments from Memphis up to the 27th of June were, according to the report of the Trade Committee, 9,206 hhds. of sugar, 8,117 hhds. of molasses, and 7,061 bales of cotton. The number of persons who had taken the oath of allegiance in the city at the same date was estimated at 3,000.

On the 1st of July the "Memphis Avalanche" was suppressed, but its reissue being allowed on condition of the retirement of the chief editor, it appeared the next day as a "Bulletin."

On the 10th of July Gen. Grant published the following order:

"The families, now residing in the city of Memphis, of the following persons, are required to move South beyond our lines within five days from the date hereof:

I. All persons holding commissions in the so-called Confederate army, or who are voluntarily enlisted in said army, or who accompany and are connected with the same.

II. All persons holding office under or in the employ of the so-called Confederate Government.

III. All persons holding State, county, or municipal offices, who claim allegiance to the said so-called Confederate Government, and who have abandoned their families and gone South."

Gen. Grant went to Corinth on the 11th, and was succeeded at Memphis by Gen. A. P. Hovey, who published an order on the 16th requiring all male residents of the city, between 18 and 45 years of age, to take the oath of allegiance within six days or go South. About 1,300 took the oath and 500 were sent South. On the 17th it was discovered that a Confederate telegraph operator had interrupted the line between Memphis and Corinth, over which passed Gen. Halleck's messages to Flag Officer Davis, Gen. Curtis, and the Commandant at Memphis, and with the aid of a pocket instrument had read all the official despatches sent over the wire for four days.

Maj.-Gen. W. T. Sherman reached Memphis with reënforcements on the 20th, and took command of the post. On the 24th he published an order reopening trade and communication with the surrounding country under certain restrictions. Travel into and out of the city, over five specified roads, without passes or any hindrance except the right of search by the guard at the discretion of the officer in command, was freely permitted to farmers, planters, and business men with their families and servants. This travel must in all cases be by daylight, except in the case of market and supply carts. Another order prohibited the payment of gold, silver, or treasury notes for cotton, and ordered quartermasters to seize all cotton purchased after that date and send it North to be sold, the proceeds to be

held subject to the claim of the owners. Tennessee or Southern paper might be used for the purchase of cotton, or buyers might give obligations to pay at the end of the war, or at the pleasure of the Government, or might deposit the value of it with the quartermaster, to be held in trust for the planters. This order was soon afterward modified by direction of the Government at Washington.

A few days later Gen. Grant directed Gen. Sherman to "take possession of all vacant stores and houses in the city, and have them rented at reasonable rates, and to be paid monthly in advance." These buildings, with their tenants, were to be turned over to the proprietors on proof of loyalty. Houses, which had been leased by disloyal owners, were also to be seized, and the rents appropriated by the United States.

Early in August Gen. Grant ordered the families of all persons absent in the Confederate States to be sent out of Memphis.

On the 9th of the same month it was announced that one artillery and three infantry companies, comprising in the aggregate 400 men, had been enlisted in Memphis for the Federal army and had taken the field, and two others were recruiting.

Toward the close of the month Gen. Sherman issued an order prohibiting the importation and sale, except by permit, of arms, ammunition, salt, and salt meat; and commanding dealers to keep an account of goods received and the disposition made of them, said account to be subject to inspection at all times by the provost marshal. Dealers in arms and medicines, detected in endeavoring to get the same outside the Union lines, were to suffer the extreme penalty of military law.

A meeting of citizens was called by the General on the 7th of September, at which he made an address in answer to various complaints which had been made of his administration. The attendance was very large, and an unmistakable feeling of loyalty was indicated by the assembly.

About the 10th a joint order was issued by Gen. Sherman and W. D. Gallagher, agent of the Treasury Department, for the regulation of commercial intercourse between Memphis, Helena, and other points. No boats were to receive goods without permits, and persons who had never encouraged secession were to receive facilities for shipping supplies on their taking oath that no part of the same were to be sold to disloyal parties.

Up to this time, with the exception of guerilla raids in the neighborhood of the city, no hostile operations had taken place near Memphis since its surrender, and the military government, as a general thing, had been lenient. The operations of the partisan corps, however, became more serious; transports plying between Cairo and Memphis were fired upon from the shores, and about the end of September Gen. Sherman ordered that for every boat fired upon thereafter, ten disloyal families should be expelled from the city. In accordance with this threat thirty families soon afterward received notice to quit the place, but the provost marshal was subsequently directed to grant fifteen days' grace to afford the Confederate Government an opportunity to disavow the actions of the guerillas.

On the 25th of October Gen. Sherman published stringent regulations for the government of the city. A military commission of three army officers was to sit daily to try offenders under the laws of war. Vagrants, thieves, and other disreputable characters, were to be organized into gangs and set to work in the trenches or on the streets. Citizens lurking about the camps were to be treated as spies. The inhabitants were to keep within doors between tattoo and reveille, unless attending church, places of amusement, a party of friends, or necessary business. After midnight, all persons must be in their houses, except the guard. Assemblages of negroes were forbidden, except by permission previously obtained from the provost marshal.

On the 7th of November another Union meeting was held at Memphis.

About the same time the General commanding prohibited the importation of liquors, except by gentlemen-citizens and officers, for the exclusive use of themselves and their families; by regular apothecaries for medicinal purposes, to be retailed on a physician's prescription; or by keepers of hotels and licensed saloons, in limited quantities, not exceeding one month's supply at a time.

Gen. Sherman took the field about the middle of December, and the command of Memphis devolved upon Gen. Hurlbut, who immediately caused all drinking saloons to be closed.

On the 21st of December the guerillas, who had been for some time growing daily bolder in their operations about Memphis, burning cotton, intercepting supplies, and forcing conscripts into the Confederate army, attacked the suburbs of the city, committed great depredations, and carried off 100 head of cattle and 180 mules. The next day a meeting of the citizens was held to provide means of defence. On the 24th the guerillas appeared again, drove the Federal pickets within the fortifications, and plundered the neighboring shops and houses. Two companies of citizens were immediately enrolled for home defence, and the provost marshal interdicted for the time all trade with the surrounding country. The arrival of two regiments of Federal troops, however, soon quieted the public alarm. In consequence of these occurrences, the election for member of Congress in the district of which Memphis forms a part, which was to have been held, under Governor Johnson's proclamation, on the 29th of December, was postponed twenty days. A quiet state of affairs ensued. The population of Memphis in 1860 was 22,623.

METEOROLOGY. In this department of science, the questions that have most engaged the attention of explorers during the year past, are those connected with the distribution of vapor in the atmosphere, and its relation to the air proper and to the barometer, as well as also certain points relative to the production and fall of rain. Some of the new views advanced appear likely to bring about important changes in meteorological theories, as well as in their practical applications. An abstract of these views, and of some other papers presenting features of special interest, will be given.

Comparative Temperatures of the Air and Soil.—M. Pouriau has during 5 consecutive years made observations of the temperature of the air at a few feet above the surface of the ground, and that of the soil at a depth of 2 mètres (about 6 ft. 6 in.). His results will, of course, hold very nearly true for all countries or sections having a like mean temperature and climate with France, or that, in other words, lie between the same isothermal lines, while with some modifications, they may be applied also to regions lying within the near isothermal belts on either side. Of those results, the following is a summary:

1. The mean temperature in the air for the year was 50°.37 F.; in the soil, 55°.02: difference in favor of the soil, 4°.65.

2. The mean temperature of the soil in winter and autumn is higher than that of the air; in summer the former is about 3°.6 lower; while in spring the mean temperatures of the two are very nearly equal.

3. The mean of the extreme maximum temperatures in the air was 94°.1; in the soil, 67°.55. On the other hand, the mean of the extreme minimum temperatures in the air was 10°.15; while in the soil this minimum never sank below 42°.8.

4. While in the air the mean of the total differences between the extreme maxima and the extreme minima reached 115°.95: in the soil this mean was only 56°.73.

5. In 1860, the mean temperature of the air sank to 4°; in the soil the mean was never less than 41°.84.

6. While in the air the maximum temperature usually occurred in July or August, and the minimum in December or January, the time of maximum temperature in the soil always corresponded to the end of August; the minimum always occurred at the end of February, or on the first days of March.

7. The changes taking place in the temperature of the soil at the depth given may be thus stated: While the mean temperature of the air usually began to sink toward the end of July, in the soil the heat continued to accumulate in the superior layers under the influence of the still intense solar radiation, and from these to extend to the lower layers, until the end of August. From this time, the upper layers begin to lose by radiation upward into the air more heat than they receive from the sun; the flow of heat in the soil accordingly now changes its direction, passing from the lower to the upper layers and becoming lost in the air; and this ascending movement continues until February, being more rapid as the external temperature is lower, *i. e.*, as the winter is longer and more severe. Toward the middle of February or the beginning of March, the upper layers of the soil begin again to become heated under the influence of the solar rays, the direction of which has become less oblique; the inferior layers give less and less heat to the upper ones; they begin on the contrary to receive some, and to become re-heated—this process going on with accumulating effect until August.

Experimental Researches on Evaporation and Absorption.—Two papers by Mr. Thomas Tate detailing such researches, with an account and drawings of corresponding measuring instruments, these being termed respectively "evaporameters" and "absorbometers," appear in the "Philos. Magazine," 4th series, vol. xxiii, 1862. The object of the evaporameter is stated to be that of determining with considerable precision the amount of evaporation which takes place from a given surface of water in different states of the atmosphere. In one of its forms, a large open-mouthed vessel has extending from it, and in a line rising very slightly above the horizontal as it recedes, a small tube, the vessel being filled with water to a certain height, and the tube at the same time being filled through a part of its length: a slight evaporation of water from the vessel, occasions a very noticeable recedence of the water in the tube, and after a proper lapse of time, a displacement-gauge, which also dips into the water, being depressed until the liquid is returned to its first position in the tube, this gauge shows directly, by the level at which it then stands, the number of cubic inches of water in the mean time evaporated.

Among the results holding generally true in reference to evaporation from a water surface, it was found that—other things being in each case the same—the rate of evaporation is nearly proportional to the difference of the temperatures indicated by the wet and dry-bulb thermometers; 2, the augmentation of evaporation due to air in motion, is nearly proportional to the velocity of the wind; 3, the evaporation is nearly inversely proportional to the pressure of the atmosphere. In respect to spontaneous evaporation from surfaces of wet fabrics, &c., exposed to the atmosphere, this being nearly uniform so long as the temperature and hygrometric state of the air are constant, the following results were determined:—1. The rate of evaporation from damp porous substances of like material, is proportional to the extent of the surface presented to the air, without regard to the thickness of the substances. 2. The rate of evaporation from different substances mainly depends upon the roughness or inequalities of their surfaces, being most rapid in case of those most uneven; in fact, in this respect, the best

radiators of heat are the best vaporizers of moisture. The evaporation from a given surface of still water appeared to be $\frac{4}{5}$ that of an equal surface of "calico" (*i. e.*, cotton cloth); while the latter, which vaporizes better than flannel, has very nearly the same power with woollen cloth, unsized paper, bran, or fine sand. 3. The evaporation from equal surfaces, of the same or nearly the same material, in a quiescent atmosphere, is very nearly the same in amount, whatever inclination the surfaces may have; as, whether upward, or downward, &c. This fact would appear to show that vapor does not, as has been supposed, pass from the evaporating surface by force of an ascensional current, except so far as it may at the same time be aided by a greater heat in the source, but that it is in reality carried into the air in the way of diffusion. 4. The rate of evaporation is greatly affected by the elevation at which the damp surface is placed above the level of the ground; and damp fabrics close to the earth may, when the sun's rays are feeble or wanting, even gain moisture by absorption, while similar ones a few feet above them are losing moisture in vapor. 5. The rate of evaporation is affected by the radiation of surrounding bodies; so that even a screen at a little distance above a damp surface caused the evaporation to go on from it more rapidly than from similar surfaces at the same time not exposed to such source of radiation.

Dalton's Theory of an Independent Vapor Atmosphere questioned.—Prof. Lamont, of Munich, in a recent letter to the distinguished meteorologist, Prof. Kämtz, calls in question the long-received theory of Dr. Dalton respecting the relations of the watery vapor of the atmosphere to the air proper, or dry air. Any dry gas flows into and diffuses through a space occupied by another gas, in the same manner as if such space were a vacuum. In accordance with this fact, Dr. Dalton was led to consider the actual atmosphere of the earth as a combination of as many distinct atmospheres as it has gaseous and vaporous constituents, each of these pressing only on itself, so that the actions of each might be treated irrespectively of the others. Meteorologists have since generally adopted this view; and in practice they have endeavored to separate the pressure of the aqueous vapor from the whole barometric pressure of the atmosphere, and thence to infer the separate "pressure of the dry air."

To this question, so important not only to a right investigation of the barometer, but also in connection with general physics, as to whether the aqueous vapor does, or does not, form an atmosphere independent of the air, Prof. Lamont addresses himself. Dalton's experiments showed that the same amount of water evaporates into a space filled with air as into an equal one destitute of air; and that, while evaporation takes place rapidly into a space void of air, it goes on very slowly in a space filled with air not in motion. Those experiments in reality afford no information as to the mutual relations subsisting between the vapor and air: this deficiency Dalton supplied by interposing the hypothesis already stated. It has since been too much overlooked that the idea of an independent vapor atmosphere stands only as a possible, not as a necessary result of the experiments on which it was based. Objections to the theory were, however, from time to time presented, and especially by Bessel, Brown, Jelinek, and Espy.

Prof. Lamont believes that he himself first brought forward a decisive proof of the incorrectness of Dalton's theory (*Denkschriften der Münchner Akad.*, &c., 1857). He showed by observations extending over many years that the mean reading of the barometer stands quite as high in cases of a small, as in those of a great, vapor pressure. In the same place, he described an experiment in which a mass of vapor and a mass of air, placed in communication with each other, mutually preserve a state of equilibrium, without the vapor penetrating the air, or the reverse; and he laid down the proposition that the vapor of the atmosphere exerts a pressure on the air proper, and the air on the vapor. He has more recently endeavored to furnish the experimental proof that Dalton's laws themselves contain an essential error. The reasoning which led to the new experiments may be briefly stated as follows: If a little water be introduced into the bottom of an upright closed tube, and there gradually evaporated into the air above it, then, on Lamont's theory, that the vapor and air exert a mutual pressure, the expansive force of the vapor and air at any moment will act on any part of the interior of the tube by an amount equal to the sum of the expansive forces of the two; and while the vapor is yet undiffused through the air, its pressure, say upward against the top of the tube, will be just as great as after it has reached that surface. On the contrary, if Dalton's theory be true, the vapor must diffuse itself in the interstices of the air, and with no mechanical effect, until it becomes a confined body, that is, until it has reached the top of the tube. The conditions here supposed can be rendered sufficiently permanent to admit of testing the principle, by an arrangement in which the space furnishing the vapor is kept at a higher, and that representing the top of the tube at a lower temperature. To effect this, a glass tube having at one end a bulb, and a little above this bent at right angles, is so placed as to extend horizontally, and being farther on bent into a depending U shape, it runs horizontally again from this, terminating in an open end: into this last horizontal part a globule of mercury is introduced, to show, by the extent to which it is pushed along the tube, the pressures at different times exerted upon it by the confined atmosphere within the bulb, and included portion of the tube. The diameter of the tube used, was 1.1 Paris lines; and a point extending from

the bottom of the bulb being broken off to allow of introducing water into it, when desired, could then be replaced so as to close the bulb again.

The experiments were duplicate—first, with air only in the bulb, then with a little water added. In either case, the bulb was made to dip into a vessel of warm, and the U into another of cold water; the temperatures of both these were noted, and also the distances to which the mercury was moved along the tube. As an example of the experiments: the cold water in the second vessel being at 12° C., and the warmer water in the first being from 15°.7 raised to 41°.8 , the bulb containing air only, the mercury globule advanced along the tube 11.47 Paris inches. Water being afterward introduced, and when, by Dalton's theory, even if the vapor resulting had penetrated quite to the mercury, the latter should by the same temperatures have been moved, at most, but $\frac{1}{58}$th farther, it was found on trial that the actual motion produced was nearly doubled; and now, to secure movement of the mercury over 11.47 Paris inches, it was only requisite to raise the temperature of the bulb from 15°.7, to 30°.9 C. Now, the calculated increase of the expansive force of the dry air, in the first case, equals .119 of its pressure at the outset; and the calculated increase of expansive force in the second case is for the dry air .070, and for the vapor .048, together making .118 of the pressure at the outset. An identity very nearly as close as this runs between the two classes of results in all the experiments; and in view of the fact (established by other means) that, in the cases of added vapor pressure, the vapor had not advanced even to the U bend of the tube, it follows accordingly that the vapor of the water, while yet but partially distributed through the enclosed space, is already exerting the full pressure due to its density and temperature. To determine whether the penetration of the vapor to the mercury would produce a difference in the result, the warmth of the water about the bulb was in one instance maintained for a full hour; but the mercury was not in consequence moved farther.

Professor Lamont concludes from these experiments and other data that Dalton's theory *must* be erroneous; that in the atmosphere, the air proper presses on the vapor, and the vapor on the air. This, however, expresses only the effect; and he anticipates being able to show, at some future time, that the humidity in the atmosphere must be regarded as actually adhering to the molecules of air; and that the phenomena admit of a simple explanation by means of a natural hypothesis concerning the expansion of dry and of wet molecules of air. Applying the new theory to the case of the atmosphere, it must be inferred, since the diffusion of vapor in air takes place very slowly, and since, from natural causes, very different quantities of vapor pass into the air at different places, that in regard to the humidity of the air no relations exist that can be, strictly speaking, conformable to any law. Of course, the currents of air continually occurring will as constantly intermingle masses of air more or less humid; but this action takes place in no uniform manner. There can thus be no exact relation of dependence between the degrees of humidity of different points in space. But particularly, the idea of an atmosphere of vapor subsisting independently within the general atmosphere, appears wholly inadmissible; and the data furnished by the psychrometer can no longer be regarded in any other light than as expressions of local humidity of the places at which they are obtained.—"Philos. Mag.," Nov., 1862.

Vapor of the Upper Atmosphere.—Lieut.-Col. R. Strachey, in a long communication before the Royal Society, and which appears in the journal just quoted (April, 1862), furnishes a second proof of the inadmissibility of Dalton's theory. His position is that previously taken by Bessel, but supported by a wider and more exact survey of facts. An independent vapor atmosphere, if such exist, must within itself conform to the general laws of pressure of elastic fluids. But the specific gravity of the vapor is less than that of the dry air in the ratio of about .625 to 1, or 5 to 8. Consequently, the rate of diminution of pressure on the upper strata of the vapor atmosphere would be much slower than that holding true in respect to the air or general atmosphere; and, leaving aside any effect of temperature, the height required in the vapor atmosphere to produce a given diminution in density, must be to the corresponding height in the general atmosphere, inversely as the specific gravities of the two, or about as 8 to 5. Thus, the barometric pressure being by an ascent of about 19,000 ft. reduced one half, to reduce the pressure of the vapor atmosphere in like ratio a height of 19,000 × $\frac{8}{5}$ = more than 30,000 ft. must be reached. Mr. Strachey then gives tables showing in parallel columns the tensions (and hence, the proportionate quantities) of vapor, at different elevations; first, as calculated from Dalton's theory, and secondly, as actually observed by Dr. Jos. Hooker, in ascending the Himalayas to upward of 18,000 ft., and by Mr. Welsh in balloon ascents to a height of 23,000 ft.

The vapor tension at the earth's surface, as observed, being called 1, and this being necessarily the unit or value for the same level by Dalton's theory, then the calculated tensions according to this theory, at heights respectively of 4,000, 8,000, 12,000, 16,000, and 20,000 ft., should be expressed by the fractions .92, .84, .77, .70, and .64 of the vapor at the surface; while the actual tensions found by Dr. Hooker at the heights severally named (the last only being determined by calculation), were as low as .68, .52 .35, .25, and .16 of the vapor at the surface; and those of Mr. Welsh for like elevations .77, .45, .30, .18, and .12 of the vapor at the surface. Observations for certain heights made at other points correspond nearly with those here given. (*See*, also, Mr. Glaisher's

conclusion on this subject, in the next section.) All the observations thus coincide in finding in the upper atmosphere much less vapor than Dalton's hypothesis requires—the tension and quantity of vapor being reduced at a rate much more rapid than can be supposed to occur in an independently subsisting vapor atmosphere. In reality, the tension diminished to $\frac{1}{2}$ by an ascent of only about 8,000 ft., instead of 30,000. The practice of subtracting the vapor tension from the total barometric pressure, to find the simple gaseous pressure, is hence absurd; and the indications of the barometer thus "corrected" (as it is expressed) have no true meaning whatever.

The quantities of vapor disseminated in the upper parts of the atmosphere being very small, it follows that inequalities of level on the earth's surface, insignificant in respect to the dimensions of the globe, become of great importance in connection with the atmosphere and atmospheric phenomena. Three fourths of the whole mass of air is within range of the influence of the highest mountains; one half the air, and nearly nine tenths of the vapor, are concentrated within about 19,000 ft. of the sea level, a height hardly exceeding that of the mean level of the crest of the Himalayas; while one fourth of the air and one half of the vapor are within a height of 8,000 ft. Mountains, even of moderate magnitude, may thus produce important changes in respect of movements, temperature, and hygrometric state, in considerable masses of atmosphere, and this especially in those strata that contain the great bulk of the watery vapor, and that have the greatest effect, therefore, in determining the character of the climate.

Meteorological Observations in Balloon Ascensions.—An account of the balloon ascensions of Mr. Glaisher for scientific purposes will be found under the title "Ballooning." As might be anticipated in first attempts, the scientific observations made appear not to have been of very great extent; but some of them are, nevertheless, valuable. From the observations on temperature, which were among the most complete, the following table, including four of the ascents, was constructed. In it are shown the actual temperatures at the earth and for every 5,000 ft. of elevation, and also the corresponding decrease of temperature between any two consecutive elevations:—

Height above the level of the sea.	Temperature of the air.					Decrease of temperature for each 5,000 feet.
	July 17.	Aug. 18.	Aug. 21.	Sept. 5.	Mean.	
—— feet ...	61.2°	69.6°	62.0°	62.2°	63.8°	....
5,000 " ...	39.7°	48.0°	43.3°	41.4°	43.1°	20.7°
10,000 " ...	28.0°	40.7°	32.0°	31.0°	32.9°	10.2°
15,000 " ...	31.0°	31.1°	19.0°	21.0°	25.7°	7.2°
19,500 " ...	42.2°	..	..	..	..	....
20,000 " ...	33.0°	25.9°	..	10.6°	23.2°	2.5°
25,000 " ...	16.0°	23.9°	..	0.0°	13.3°	9.9°
30,000 " ...	..	..	..	—5.3°	..	....
Decr'se of temperature in 25,000 feet...	44.9°	45.7°	..	62.2°	50.5°	....

The results of July 17 are highly anomalous. Up to 10,000 ft. the decrease accords with that of the other experiments; from 10,000 to 20,000 ft. a remarkable deviation occurs; while above 25,000 ft. the results again accord. Proceeding upon the data obtained up to 10,000 ft., and again at 25,000 ft., it results that at 15,000 ft. there was an excess of 8°.3 of temperature; at 19,500 ft., 22°.2 excess; at 20,000 ft. 13°. 5 excess. The average decrease of temperature is seen to be over 20° for the first 5,000 ft., and over 10° for the next; while for 25,000 ft. it is nearly 51°. In another table, including the eight ascents, and giving the temperature for each 1,000 ft., from the earth up to 5,000 ft., the mean decrease of temperature is found to be more than 21° for the first 5,000 ft., so that full $\frac{2}{3}$ of the whole decrease of temperature within 5 miles of the earth takes place in the first mile. The decrement of temperature in the several series of observations is not uniform, either for the whole height reached or for the first mile. Further elucidation on this point is desirable, particularly in reference to the influence of the irregularly decreasing temperatures of the strata of air on atmospheric refraction.

The observations made in respect to the humidity of the atmosphere show that the proportion of vapor decreases continually with increase of elevation, and in a rapidly augmenting ratio, until, at heights of 5 miles and upward, the quantity of aqueous vapor present in the air is extremely small. The electricity of the air was found to be positive, and decreasing in intensity with increase of elevation. A better test paper being in the latter ascents employed, the presence of considerable quantities of ozone in the air was indicated. Mr. Glaisher concludes, from his use of the aneroid barometer, that such an instrument can be constructed, which shall read correctly to the first, and probably to the second, place of decimals, and that also down to a pressure as low as 5 inches of mercury.

Dew Bow on the surface of Mud.—The small rainbows, or parts of such, seen upon spray formed in various ways, are familiarly known, as also the somewhat similar bows which may be seen upon grass heavily laden with dew, and which are known as dew bows. Professor Rankine, along with other persons, witnessed, on the 13th of February, 1862, a prismatically colored bow, exactly resembling the dew bow, but in this case displayed on the muddy surface of a by road near Glasgow, and also for more than a mile along the less trodden parts of an adjoining turnpike road. The morning had been hazy, but the mist had cleared away, and the sun was shining brightly: time (Greenwich) of the observation of the bows, between 12 30 and 1 P. M. The angular dimensions of this iris were obviously the same with those of a rainbow of the first order; its colors were complete, from red to violet, and very bright and distinct, especially where the mud was

most soft and moist. Where the road had been much disturbed, and over any pool of water, the iris disappeared, and no trace of a bow could be seen elsewhere, on the grass or in the sky. The conclusion drawn was that the surface of the mud was thickly covered with globules of pure water, perfectly spherical, and, although resting on the mud, not in absolute contact with it; but from their invisibility to the eye, these globules must also have been exceedingly minute.

Soap Bubbles, and the Nature of Cloud.—M. Felix Plateau, son of Professor Plateau, being about to throw out from a capsule, or broad, shallow vessel, a slightly viscid liquid, endeavored, by throwing it obliquely, to spread it out in a sheet; the unexpected result was that the film of liquid thus formed instantly drew together at the edges into a hollow bubble of 3 to 3½ inches diameter, which slowly fell. He then repeated the experiment many times with soap suds, and always successfully, while now there were usually several bubbles formed at each trial, sometimes as many as fifteen at once, their diameter less as the number increased. He succeeded best with a vessel of basin shape, about 6 inches in diameter, and containing a considerable quantity of liquid—1 part of Marseilles soap to 40 parts of water—the liquid being thrown out at an angle of about 45° with the horizon, the person turning rapidly round meanwhile, so as to produce as extensive a sheet as possible. Observing from an upper window, while another below performed the experiment, he discovered that the liquid sheet of very irregular form, and indented on the edges, was resolved along the edge into numerous full drops, while the remainder of it was generally torn into several parts, each one of which closed up rapidly, so as to form a complete bubble.

It has long been a disputed point among meteorologists whether clouds are composed of minute solid drops or of almost equally minute hollow spheres or vesicles. Saussure declares that he caught and measured, on the Alps, particles of cloud, the vesicular character of which was unquestionable. The actual lightness of the particles which form even very dense and opaque clouds, and the fact that clouds do not, as do collections of solid drops, show rainbows, have long been instanced in confirmation of the theory of vesicles; while among the chief objections to it has been the difficulty of conceiving how the vapor, in passing to the liquid state, could aggregate in the form of envelopes enclosing air. Professor Plateau considers that the experiments above alluded to help to solve this difficulty, since they show that the molecules of water need not directly aggregate in the form of vesicles. It is sufficient that the molecules at first unite in open sheets of any figures or curvatures; each of these will then immediately close, so as to give rise to a vesicle. And the formation of the films, however difficult in itself, is more easily conceived than the formation at once and entire of the vesicular bodies.

Question of Formation of Rain near the Earth: Rain Gauges.—Since the year 1767, many meteorologists have come to adopt the opinion that the larger part of the rain which falls on the surface of the earth does not proceed from the clouds, but is derived from the lower strata of the atmosphere, within 200–300 feet of the surface. This paradox arose chiefly in consequence of experiments in which rain gauges placed at moderate elevations in the atmosphere were found to collect much less rain than those placed on the ground—a result which will commonly hold true in testing the rain fall with the usual forms of rain gauges and in the ordinary manner.

Now, it must be observed, that in these experiments the higher gauges are placed on the roofs of houses, the summits of church towers or other erections; and that not only are all these objects which present themselves as obstacles to the wind, but that the common form of gauge is itself, though of so much less size, such an obstacle. To determine the effect of such obstructions, Mr. W. S. Jevons, author of the paper from which this abstract is made, set up at a distance of ¼ of an inch apart, two oblong plates of glass, and causing a current of air continually charged with smoke to ascend between these, he introduced at one side, within, a small obstacle to represent a house or gauge: with such an arrangement, it could readily be observed that the moving current of air between the plates, obstructed at the place of the object, rose in a curve over it, and in this part of its course moved more rapidly; the curves traced by the smoky air in its movement being exactly observed, were represented in a drawing; and the relative velocities in the several parts of the current were also noted. In like manner, when a wind, the movement of which can be taken as in a general way uniform, meets an obstacle, some parts of it must move more rapidly in sweeping over the latter, just as, also, a river flows most rapidly in the narrowest part of its channel. As parallel facts, a wind is known to be in all cases most fierce at the corners of buildings, the ends of high walls, or on the summits of hills.

Mr. Jevons considers, that in the facts now given is to be found the whole explanation of the observed deficiency of rain in elevated rain gauges. A falling rain drop is influenced at once by gravity and the motion of the air; it moves through the diagonal of a rectangle, of which the perpendicular represents the velocity of fall, and the horizontal the force of the wind. If at some fixed point, as the summit of an obstacle to the wind, there occur continually an increase in this horizontal force, the rain drops will at such place be as constantly hurried along and spread apart in their course, so that fewer drops (less rain) can there fall on a given surface than will fall where no such interfering cause operates, and a surplus of rain

will be carried to and fall at the lee side of the obstacle. A first corollary from this reasoning is, that, did the instrument or its support cause no disturbance in the wind, no deficiency of rain would appear. But only a gauge with its mouth level with the ground can fulfil this requirement. And in the case of elevated gauges, it is probable that the house or tower causes the chief part of the deficiency in the rain caught. [Another consequence is, that in absolutely calm rains, if the view taken be correct, the deficiency in the elevated gauge should not appear.]

A number of facts confirmatory of the view given are then presented. Mr. H. Boase, of Penzance, July, 1822, having observed the quantity of rain caught in gauges on the ground and in an elevated position, concludes that "the difference of the quantity of rain caught in a gauge placed on the top of a building, and one at the level of ground, is, for some reason or other, proportional to the velocity of the wind." The measurements given by Luke Howard, when arranged in the order of difference of quantity of rain caught at the same times in higher and lower gauges, are also found to be arranged exactly in the order of the force of the accompanying wind, as given in notes annexed. Thus, in rains attended with a strong wind, the ratio of difference in the two sets of gauges is from 3 : 1 down to 1.75 : 1; in those with light and scarcely noticeable winds, it is from 1.6 : 1 down to an equality in the two. The continued meteorological observations at Greenwich Observatory and elsewhere, exhibit an extreme irregularity and discordance in the results of measures of fall at different heights, showing at least that in a case of this sort we cannot appeal to average results, but must have specific, careful observations. Yet many individual instances are found in the Greenwich records which corroborate the position taken. Prof. Phillips, for some time in charge of the observatory named, himself remarks that a great deficiency in the upper gauge was a phenomenon of wintry character; and as a rule the deficiency is more marked in March than in any other month. Dr. Trail and Mr. Meikle referred the difference in some way to action of the wind; and the latter nearly anticipated Jevons' views. Prof. A. D. Bache, in a paper before the British Association, 1838, on the effect of deflected currents of air, and the quantity of rain collected by rain gauges, showed by experiments the immense difference that may occur between gauges placed at the different angles of the same building; and he found also that the gauges to leeward received generally more rain than those to windward.

In another way, reasoning from the known conditions of the air in higher and lower strata, in reference to temperature and saturation, Herschel has shown that within the last 213 ft. of the ground not more than $\frac{1}{77}$th of the quantity of rain to be accounted for could possibly be added to the fall. Mr. Jevons proceeds to prove that even Herschel's allowances on this score are too liberal, and that under no circumstances will the increase of falling rain within the last few hundred feet be more than almost infinitesimal. In fact, distant showers of rain are often observed which evaporate and vanish before reaching the ground; but no observations of the reverse character are known. A second argument in favor of increase of rain near the earth, drawn from the fact that the internal supernumerary fringes of rainbows are only seen in the upper parts of the bows, never near the earth, and as proved by Dr. Young, are only producible where the drops are of equal size, is readily disposed of by remarking that the requirement in respect to the drops is equality of size, not any given size; and the jostling of drops together by the wind, or either increase or decrease of some of the drops more than others, could alike give rise to the want of uniformity which seems to characterize the drops near the earth.

From the conclusions reached, it further follows that all observations by means of elevated or exposed rain gauges must be rejected as fallacious or useless. And the most unexceptionable rain gauge of the common kind, would be a sheet of metal, say 10 feet square, spread flat upon the ground in an open place, with a simple collecting vessel let down in its centre, and the edges of which should not rise more than an inch above the plate. In this there would be no appreciable loss by wind, nor irregularity from splashing. The water collected in such vessel should be conveyed by a pipe running from it below to a sunken reservoir or recording apparatus.—"Philos. Magaz.," Dec., 1861. —It may here be added that the new rain gauge, or pluvioscope, of M. Hervé Mangon, of Paris, could doubtless be so arranged as not to present an obstacle by rising above the general level of the ground. This consists of a long strip of paper, prepared with solution of sulphate of iron, and after drying, rubbing with finely powdered galls, so that each drop of rain falling on its surface will produce an ink and so leave a black spot, this paper to be gradually unrolled by clockwork, so that in the course of 24 hours every part of it shall have been exposed to the open air. The sheet of paper is easily spaced for hours and minutes, and the relative frequency of the spots on its different parts shows the comparative, not the absolute, rainfall in different parts of the time occupied in unrolling it.

Admiral Fitzroy's System of Weather Forecasts, Storm Signals, and Meteorological Telegraphy.—President Fairbairn, in his opening address before the British Association, 1862, in course of allusions to the scientific and practical progress of the time, called attention to the labors of Admiral R. Fitzroy and his coadjutors in the collection of meteorological facts, and the application of the principles of the science to useful purposes. He stated that, in 1854, in consequence of representations originating with

the association, the Government created a special department in connection with the Board of Trade, under Admiral Fitzroy, its object being the obtaining of hydrographical and meteorological observations at sea, after the manner of those which had been for some years collected by the American Government, at the instance, and under the direction of Lieut. Maury. In the course of the system of observations, as now developed, especial attention has been given to the study of the winds, by means of the various self-registering anemometers of Whewell, Osler, Robinson, and Beckley.

Mr. Fitzroy read before the Royal Institution, March 28, 1862, a long and somewhat rambling paper upon the system of "forecasts" of the weather, with the plan of telegraphing the important results arrived at to various ports or other prominent points on the coasts of the British Islands, and the indicating of the information thus received to mariners on board ships within sight, by means of a prearranged system of weather or storm signals. The paper just referred to, however, deals more especially with the subjects of observations of the barometer and thermometer, and of winds, &c., and the connections supposed to be established between the characters of weather and winds and the indications of those instruments—in a word, with the basis of the supposed newly-developed system of weather forecasting and warnings. Although the meteorological department had been previously constituted, the first step toward the present system, embodying the employment of the telegraph for conveying forecasts of weather, was made at the Aberdeen meeting of the association already named, 1859. The department, advancing slowly at the first, transmitted to parts of the coast early in 1861 its first cautionary or storm-warning signals. These appear to have been in some parts disregarded; but on the following days a terrible storm ensued, with great loss of life, on the northeast coasts. Since that time the warnings have been continued, and the plan gradually perfected and extended. In August, 1861, the first published forecasts of weather were tried, and about six months later the system, as now in operation, became fully established. At the date of the paper above given, 20 reports of weather data were received each morning (Sundays excepted), and 10 each afternoon, besides 5 from the Continent; and double forecasts (*i. e.*, each day one, two days in advance) were published, with the full tables of observations on which they chiefly depend, in six daily papers, in one weekly when it apears, and also at Lloyd's, at the Admiralty, the Horse Guards, and the Board of Trade.

The foretellings of the weather in this system are not to be understood as prophecies or predictions: the term "forecast" was chosen as properly applicable to an opinion, the result of scientific observation and deduction, but which must still, occasionally, prove incorrect; as, in case of the sudden "downrush" (Herschel) of southerly wind sometimes occurring, or of rapid electrical accumulation not yet sufficiently detectible by our senses or other existing methods. As must have been expected in the outset of an undertaking of such magnitude and novelty as this, whether in principle it be really sound or not, two opinions are held in England in reference to the correctness of the basis of these forecasts and the actual value of the warnings founded on them. By Mr. Fitzroy and his adherents, it is claimed that the system is well grounded upon the actual weather observations of its founder through a long course of years, together with an analysis of comprehensive and accurate weather tables (barometer and thermometer indications included) furnished for his use from the British shores and coast points, along with, of course, all the aid supplied by the general science of meteorology. By opponents, however, the sufficiency of the observations, and more especially the completeness of the analysis of these, and hence, the certainty of the general principles supposed to have been ascertained from them, are still decidedly questioned. Of these general principles, those which underlie the whole system, are: 1, that the condition of the air (as to heat, moisture, pressure, existing winds, &c.) foretells what the weather is soon to be, rather than indicates the weather that is present; 2, that the longer the time between the signs and the change foretold by them, the longer the altered weather (when occurring) will last; and conversely, 3, that the less the time between a warning and a change, the shorter the continuance of the predicted weather. As an example, now, of points at issue between the upholders and the critics of the practical system, Prof. Dove lays down that the advance current of an incoming north wind blows along the ground, and that the storm is upon us before the instruments afford due indication of it; while Fitzroy asserts that the north, like the south current, advances aloft at a considerable height; and that, therefore, the barometer will generally testify to the existence of the one as of the other, long before the actual change of wind. If the latter be in error in this particular, there necessarily follows a doubt in regard to a considerable portion of the forecasts.

Admiral Fitzroy has recently had published a volume entitled the "Weather Book" (London; Longman & Co.), in which he explains, for the benefit of those who may desire to apply it in any part of the world, the system of forecasts from present weather, and barometer and thermometer indications, along with the aid of such special weather "signs" as are considered trustworthy. His own forecasts are made from observations and reports daily received, as already mentioned, at the office of the department, in London. For convenience in making up, and telegraphing the forecasts, the British coasts are divided into 5 dis-

tricts, respectively known as—1, North Britain (including from the Moray Firth to the middle of Northumberland), along the coast; 2, Ireland, generally, around the coast; 3, Central (Wales to the Solway), coastwise; 4, East Coast (from Northumberland to the Thames); 5, South England (from the Thames round to Wales), by the coast. At the most suitable points along the coast in each of these divisions, main stations are established, at which a set of signals can be made to mariners within sight of those points, by means of hoisting upon separate poles or the same, a storm drum and cone; these at night are illuminated by lights placed within them. By an arbitrary and previously understood arrangement, the order or combination of these as hoisted is made to indicate a coming gale or tempest, its probable severity, and the quarter from which it will come. The warnings are telegraphed from the central office in London, as directly as possible to these stations, and to the principal ports; from these, as centres, the information is then conveyed to other points from which the signals cannot be seen. When practicable, the signals are displayed first at the point at which it is calculated the storm will first be felt, and from this progressively on to others, in accordance with its expected course. The warnings are thus quite generally conveyed to vessels in port and to craft near the shores; while from a large number of points visible to a distance at sea, they are also made known by the signals. It is still not expected that boats or ships shall delay sailing for a gale that, after all, may not happen: the real meaning of the signals is simply, "Be on your guard"—"A storm is probable"—"Consult your instruments and the signs of the weather;" or, in certain cases, "Make immediate preparation for a gale," &c. Persons contemplating brief voyages are also thus warned of occasions on which it is less safe to embark than at others. In very many instances, already, important testimony has been borne to the value of the weather forecasts and signals. The preparation of navigators within sight of the coasts for coming storms, not otherwise anticipated, is believed already to have resulted in the saving of many lives and large amounts of property. In the recent violent gale on the English coast, Jan. 17–19, 1863, it is believed that the fatality and marine losses would have been increased far beyond what they actually were, had not the classes concerned been warned beforehand by the Fitzroy signal drums and cones displayed along the coast.

When—admitting that the great system of the trade winds is equivalent to the maintaining of a certain general uniformity in the directions and character of the air currents for parts of the earth in which it prevails, including (though in less marked degree) even the temperate zones, the directions of the prevalent winds being generally the same for each region or part in which the trades have an influence—it is nevertheless remembered that there are continual causes of disturbance or local variation in this regularity, as by changing temperatures of neighboring sections of the earth's surface or of strata of air at different heights, with changing amounts of evaporation, condensation, rain fall, &c., so that in fact at any given time, and particulary in temperate latitudes, air currents at the surface may be flowing side by side, but in opposite directions; or two, three, or more such currents may be superposed, the one flowing above the other, and in opposite directions or at any angle with each other: these movements being attended with collisions and intermixtures of bodies of air, and followed by the results naturally due to their unlike qualities, it will at once be seen that the interpretation of the continual variations of the barometer and thermometer along with present weather signs, so as (if it be really possible) to forecast with a good degree of certainty the coming weather, becomes in itself an extremely complex and difficult study. Of course, it is impracticable to present here even an outline, which should be of real value to the reader, of the principles by which the forecastings of the weather are attempted. Those principles necessarily include the rules for interpreting the indications of the barometer, but which Mr. Fitzroy has still further extended and particularized. Those who may be interested to prosecute the subject in its details, are referred to the "Weather Book," already named, to Mr. Fitzroy's paper in the "Philos. Magaz.," May, 1862; and to an abstract of his rules for "reading the barometer," in the "Journal of the Franklin Institute," May, 1862; and of course, to the standard works on Meteorology.

It may be here remarked, however, as a particular consequence of the general movement of the trade winds, that in the northern temperate regions a long-continued north wind tends to become easterly, and a continued south wind to become westerly. That is, the general tendency of the winds in shifting is to "veer"—turn to the right, or by a direct rotation; and it is much less common that they "back"—turn in the opposite course; the probability of the former change being to that of the latter at least as 2 to 1. Not unfrequently, within a lapse of time varying from 24 to 60 hours, the surface wind, starting it may be in the southwest or west, veers in this manner through the complete circuit of the points of compass (Dove's law of "rotation of the wind"). Great changes or storms are usually preceded by a fall of the barometer through an inch or more, and within a comparatively brief time. The tenth of an inch an hour may be taken as foretelling a tempest or very heavy rain. The more rapidly such changes occur, the more imminent and violent the approaching commotion. Mr. Fitzroy sums up as follows the influence of the three causes known (electrical

agency being yet uncertain) to affect the barometer:

1. The *direction of the wind*,—the N. E. wind tending to raise it most—the S. W. to lower it most; and wind from points of the compass between these, in proportion, as they are nearer one or the other extreme point. N. E. and S. W. may therefore be called the wind's extreme bearings (by some, its poles). Other things being the same, the entire range or difference of height of the barometer that can occur through change of the wind only, from one of these bearings to the other, amounts in these latitudes to about half an inch.

2. The *amount of vapor, moisture, rain, or snow* in the wind or current of air. Other things being the same, this appears capable of causing a change in an extreme case of about half an inch.

3. The *strength or force of a wind* (apart from other conditions), coming from any quarter. Other things being the same, the strength of the wind, according as less or greater, is preceded or foretold by a fall or rise ranging in an extreme case to more than two inches.

Hence, supposing the three causes to act together, in extreme cases, the height of the barometer would vary from near 31 inches to about 27 inches, before and during a given change of weather; and this, though rarely, has happened, and even in tropical latitudes. In general, however, the three causes act much less strongly and less in accord; just as ordinary varieties of weather occur much more frequently than extreme changes.

Weather Signs.—Mr. Fitzroy's summing up of the more marked "signs" of weather, useful alike to the seaman, the farmer, and the gardener, embraces the following indications:

Whether clear or cloudy, a rosy sky at sunset presages fine weather; a red sky in the morning, bad weather, or much wind (perhaps with rain); a gray sky in the morning, fine weather; a high dawn (the first daylight being seen above a bank of clouds), wind; a low dawn (the first light being low or in the horizon), fair weather.

Soft-looking or delicate clouds foretell fine weather, with moderate or light breezes; hard-edged, oily-looking clouds, wind. A dark, gloomy, blue sky, is windy; but a light, bright blue sky indicates fine weather. Generally, the softer clouds look, the less wind (but, perhaps, the more rain) may be expected; and the harder, more "greasy," rolled, tufted, or ragged, the stronger the coming wind will prove. A bright yellow sky, at sunset, presages wind; a pale yellow, wet. Thus, by the prevalence of red, yellow, or gray tints, the coming weather may be very nearly foretold; almost exactly, indeed, if coupled with the aid of instruments.

Small, inky-looking clouds foretell rain; light scud-clouds driving across heavy masses of higher cloud show wind and rain; if alone, they may indicate wind only. High upper clouds crossing the sun, moon, or stars, in a direction different from that of the lower clouds or of the wind felt below, usually foretell a change of wind.

After fine clear weather, the first signs in the sky of a coming change are usually light streaks, curls, wisps, or mottled patches of white, distant clouds (*cirri* and *cirro-cumuli*), which increase, and are followed by an overcasting of murky vapor (the *stratus*) that grows into cloudiness (*cumulo-stratus.*) This appearance, more or less oily or watery, as wind or rain will prevail, is an infallible sign. Usually, the higher and more distant such clouds seem to be, the more gradual, but general, the coming change of weather will prove.

Light, delicate, quiet tints or colors, with soft, undefined forms of clouds, indicate and accompany fine weather; but gaudy or unusual hues, with hard, definitely outlined clouds, foretell rain, and probably strong wind. Misty clouds forming or hanging on heights, in case they remain, increase, or descend, show wind and rain coming. If such clouds rise or disperse, the weather will improve or become fine.

When sea birds fly out early, and far to seaward, moderate wind and fair weather may be expected; when they hang about the land, or over it, sometimes flying inland, expect a strong wind, with stormy weather. When birds of long flight, rooks, swallows, or others, hang about home, and fly up and down, or low, rain or wind may be expected. Many other creatures besides birds give indications by their actions of approaching rain or wind. When animals seek sheltered places, instead of spreading over their usual range, and when pigs carry straw to their sties, an unfavorable change may be expected. [The frequent whistling of quails in summer, and the flight and screaming of the nighthawk early in the afternoon, are very sure indications of the near approach of rain.]

Remarkable clearness of atmosphere near the horizon, distant objects, such as hills, unusually visible, or raised (by refraction), and what is called a "good hearing day"—sounds being heard with unusual clearness, or to unusual distances—are among the signs, usually, of rain, sometimes, of wind. Much refraction (*mirage*) indicates an easterly wind. When, during a calm, smoke ascends with difficulty or to but little height, or settles, an unfavorable change is indicated.

Dew is an indication of fine weather; so is fog. [Not always: in this country, very heavy dew or white frost, especially if repeated, is almost a sure presage of rain; and fog may precede, or occur during, long rains.] Dew never, and fog seldom, occurs under an overcast sky, or when there is much wind. Fog is occasionally rolled away by wind, but seldom or never formed while it is blowing. More than usual twinkling of the stars, indistinctness or apparent multiplication of the moon's horns, haloes, "wind-dogs" (fragments of rainbows, or de-

tached clouds), and the rainbow, are more or less significant of increasing wind, if not of approaching rain, with or without wind.

Near land, in sheltered harbors, in valleys, or over low ground, there is usually a marked diminution of wind, during part of the night, and a dispersion of clouds. At such times, an eye on an overlooking height may see an extended body of vapor below (condensed by the cooling of night), which seems to check the wind. Finally, along with the other indications of change or continuance of the wind or weather, the dryness or dampness of the air, and its temperature, are never to be overlooked.

Cyclones and Anti-Cyclones.—The occurrence of cylones, or rain and wind storms of several hundred miles diameter, which at once advance and rotate or whirl, is now pretty generally received as a fact by theoretical and practical meteorologists. Prof. Dove lays it down as generally true that when the air is indraughted from all or many sides to a stormy centre of light ascending currents, the resulting wind at the surface takes a movement in cyclonic curves (retrograde in northern latitudes, or in a direction the reverse of that of the hands of a watch, face upward); and that such winds are also produced when the equatorial current forces its way from S.W. against a mass of quiescent air. Mr. S. A. Rowell, before the British Association, 1862, presented what he considered objections to the cyclone theory; among them, the great unlikelihood of the rotation of an extremely broad and thin disc of air, the greatest thickness not exceeding the one or two miles of height through which only such turning current can be formed, and of the supposition that this revolving disc will also make its way forward through the densest parts of the atmosphere. In truth, however, this is not a question to be settled by likelihood, but rather by actual record and comparison of the places of storms and the directions of winds in different parts of the area they cover, at successive hours and days through their continuance; and evidence of this sort appears now to be decidedly in favor of the cyclone theory.

Mr. Galton, in a paper very recently read before the Royal Society, asserts that the occurrence of direct rotations of vast discs of air (that is, those turning in the direction opposite of that of the cyclone, namely, in that of the hands of a watch) are also common, being due to an opposite cause, namely, heavy descending currents over a considerable area nearly calm; and these winds he proposes to name anti-cyclones. A comparison of simultaneous charts of the weather of Europe, over 93 epochs of observation, compiled and shortly to be published by him, showed an almost invariable deflection of the wind currents in the course above mentioned (the same as that required in Dove's law of the rotation of the wind), with occasional instances of strongly marked and complete anti-cyclones. Indeed, an anti-cyclone can feed a cyclone at any part of the circumference of the latter, and without abruptness, just as two wheels by contact at their circumferences turn in opposite directions. The localities of highest and lowest barometer, at the same time, were separated in his charts by distances of from 1,000 to 2,000 miles; and he concludes that whenever there are limited areas of very high and low barometer at distances not exceeding the above, a line drawn from the former to the latter will be cut in all cases by winds coming from the left. He argues that, as the area of the cyclones is one of storm and rain, so that of the anti-cyclones is an area of general calms and fair weather.

METHODISTS. The Methodists are by far the most numerous religious denomination of the United States, and were divided, in 1862, into the following branches: 1. The Methodist Episcopal Church, with a membership of 942,906 (which, however, includes the Missionary Conference of Germany and the Liberia Conference); 2. The Methodist Episcopal Church South, with about 700,000 members. 3. The American Wesleyan Methodists, with about 21,000 members. 4. The Methodist Protestant Church, with about 90,000 members. 5. The African Methodist Episcopal Church, with about 20,000 members. 6. The African Methodist Episcopal Zion Church, with about 6,000 members. 7. The Evangelical Association, also called German Methodists, with 46,000 members. 8. The Free Methodist Church (origited in 1859), with a few congregations in New York and other Northern States. 9. The Independent Methodist Church, the first congregation of which was organized in 1860, in New York city. 10. The Central Methodist Episcopal Church, consisting of three churches in Baltimore, which separated from the Methodist Episcopal Church, on account of the changes made by the last General Conference of the Church in the book of discipline.

The Methodist Episcopal Church, the most numerous of these denominations, suffered during the year 1862 a decrease of 45,617, the decrease of members being 22,045 and that of probationers 23,573. The largest decrease was shown in the border Conferences, which had been during the year the seat of the war, and part of which had even been under the control of the Confederates. Four of these Conferences, the Missouri and Arkansas, the Baltimore, the East Baltimore, and Western Virginia conferences, showed alone a decrease of 10,161 members. A considerable increase was shown by the following Conferences: Nebraska, North Indiana, East Maine, East Genesee, Minnesota, and Wisconsin.

Six of the fifty-one Conferences of the Methodist Episcopal Church, viz.: Missouri and Arkansas, Baltimore, East Baltimore, Philadelphia (embracing the churches of Delaware), Kentucky and Western Virginia, are wholly or partly in slaveholding States. In one of these Conferences—Baltimore—a great dissatisfaction was manifested with a change made by the

last General Conference in 1860, respecting the position of the church on the Slavery question. A convention of laymen of the Conference, held at Staunton, Virginia, in March, 1861, simultaneously with the annual meeting of the Conference, adopted an address to the Annual Conference, in which they declared in favor of proclaiming the Baltimore Conference and those other Conferences which voted with her against the New Chapter on Slavery, "to be the Methodist Episcopal Church, and that the General Conference and the majority of the Church have ceased to be any portion of said church." The Annual Conference, in conformity with the memorial of the laymen, passed a series of resolutions, declaring that the General Conference "by its unconstitutional action has sundered the ecclesiastical relation which had hitherto bound the Conferences together as one church, as far as any act of theirs could do so;" that the Baltimore Conference therefore "declares itself separate and independent of the General Conference, still claiming to be notwithstanding an integral part of the Methodist Episcopal Church;" that the Conference would however "reunite with the other Conferences in the organization of another General Conference, if three fourths of the Annual Conferences should disavow the act of the General Conference of 1860 on the subject of slavery, and give thorough and satisfactory redress, by abrogating the New Chapter, by transferring the subject of slavery to the exclusive jurisdiction of the Annual Conferences where it exists, and by placing a fair proportion of the periodicals of the church under the charge and the direction of said Conferences." These resolutions were passed by a vote of 87 (of whom 58 were stationed in Virginia) in their favor, 45 refusing to participate in the proceedings as illegal, and 38 being absent. The actual secession of the Baltimore Conference was, however, prevented by the outbreak of the civil war, and when the Annual Conference met again in March, 1862, but few of the Virginia members were present, and a considerable majority of the Conference, though renewing their protest against the New Chapter, passed resolutions of loyalty to the Methodist Episcopal Church. Five ministers withdrew, in consequence, from the jurisdiction of the Conference, and established in the city of Baltimore three independent societies, which were organized under the name of the Central Methodist Church. No trustworthy information had been received up to the end of the year 1862 as to what the preachers in the Virginia portion of the Baltimore Conference would do. About forty of them assembled at Harrisonburg on the second Thursday in March, but no decisive resolutions were passed.

With the exception of the Baltimore Conference, all the Conferences, both of the border slaveholding and free States, passed resolutions expressive of loyalty to the National Government, in most instances with entire unanimity. These resolutions, with only a few exceptions, also expressed a wish for the speedy overthrow of slavery, and approbation of the President's emancipation policy.

One of the most important questions which agitated the church during the year 1862 was that of lay delegation. In accordance with a resolution passed by the General Conference, in 1860, the vote of the ministers and of the laity of every Annual Conference was taken on the subject, and the returns gave the following result: Ministers (in 48 Conferences), for lay delegation, 1,336; against, 3,025; laity (in 46 Conferences); for, 27,984; against, 46,405. The lay vote had not been taken up to the close of the year in the Baltimore and Kentucky Conferences. The ministerial vote shows a majority for the measure in only 4 Conferences: viz., Philadelphia, East Genesee, Genesee, and Oregon; and the vote of the laity in 12 Conferences; Philadelphia, New York, New York East, Providence, New England, New Hampshire, Black River, Oneida, East Genesee, Genesee, Wyoming, California.

The Methodist Episcopal Church South was reduced by the war to an unfortunate condition. The General Conference of the church, which was to have met during the year 1862 at New Orleans was, indefinitely postponed. The book concern at Nashville, after the occupation of that city by the Federal troops, was entirely broken up. The missionary treasury was reported to be without funds to meet outstanding drafts. The organs of the church published in St. Louis, San Francisco, New Orleans, and Memphis, and probably nearly all the other denominational papers, were discontinued. An informal meeting of 3 of the 6 bishops of the church, together with several members of the board of managers of the Missionary Society, and several ministers of the Georgia Conference, was held at Atlanta, Georgia, in April, 1862, when it was resolved to apportion the support and travelling expenses of the bishops among the several Annual Conferences. In some of the border States the church was greatly disorganized, as a considerable portion of the members showed themselves decidedly opposed to the secession doctrines which were advocated by nearly all the church organs. In Missouri and western Virginia a number of members joined the Methodist Episcopal Church. In Missouri a convention of Union members of the Methodist Episcopal Church South was held on August 6, which adopted an address to the Missouri Conference of the denomination, announcing their intention to remain in the church only if the church would be loyal to the Government of the United States. It is believed that a considerable portion of those members of the church will soon join the Methodist Episcopal Church. From Kentucky it was reported that there were 36 of the travelling preachers in the Louisville Conference, and a goodly number in the Kentucky Conference,

who were determined to adhere to the Federal Union, and many of whom intimated that if the separation of the States should be final, they would be inclined to return to the Methodist Episcopal Church. It was also ascertained that the senior bishop of the church, Bishop Soule, was opposed to secession. In California and Oregon the Southern Methodist organization is threatened with utter extinction. The organ of the denomination has been discontinued, the book depository in San Francisco closed, an institution of learning, which was to be made a first class college, is only a small preparatory school, and toward the close of the year it was expected that Southern Methodism, as an organization, would soon cease to exist in the Pacific States.

In the Methodist Protestant Church the war has developed the breach which has always existed between the Northern and Southern Conferences with regard to the slavery question, and the denomination has actually split into two organizations. All the Conferences in the free States, as well as that of West Virginia, have indicated their loyalty by taking strong and firm ground in support of the Federal Government. They also, with only one exception, have expressed themselves in favor of a restoration of the General Conference. The Conference of West Virginia has, in every respect, fully identified itself with that of the free States.

The British possessions in North America have offshoots of the several Methodist organizations in Great Britain, as well as the Canada Conference of the Methodist Episcopal Church, which in the Episcopal form of church government agrees with the main branch of Methodism in the United States. In Canada, according to the official census of the population, taken in 1861, the Methodists occupy the third rank numerically, after the Roman Catholic and Anglican churches, treading very closely on the Church of England, which only outstrips them by 2,733. Both in Lower and in Upper Canada the Methodists have gained, in the interval between the two last enumerations (1852 and 1861), relatively to all other denominations. In Lower Canada they numbered 21,183 in 1852, or 2.38 per cent. of the population: and 30,582 in 1861, or 2.75 per cent. In Upper Canada they numbered 207,656 in 1852, or 21.81 per cent.; and 341,572 in 1861, or 24.47 per cent. In the whole province they numbered 228,839 in 1852, or 12.42 per cent.; and 372,154 in 1861, or 14.85 per cent. of the increased population. Among the several Methodist denominations, the New Connection Methodists showed the greatest progress. They numbered, in 1852, 10,989; and, in 1862, 29,492, giving an increase of about 170 per cent. during the ten years.

In South America, the Methodist Episcopal Church of the United States has a flourishing mission at Buenos Ayres, numbering, in 1862, 92 members.

In Hayti, the English Wesleyans sustain a mission which had, in 1862, 4 circuits, 4 chapels, 8 other preaching places, 6 missionaries, 10 other agents, 239 members, 16 members on trial, 265 scholars in schools, and an average attendance of 1,400 in public worship.

In the British portion of the West Indies, the Wesleyan Methodists have numerous churches in Antigua, St. Vincent's, and Demerara, Jamaica, Honduras, and Bahama, together with 84 missionaries and 48,719 members.

The main branch of Methodists in Great Britain, the Wesleyan Methodists, held, in 1862, their 119th Annual Conference in Camborne, Cornwall, on July 31 and the following days. It was presided over by the Rev. C. Prest. Of the "Legal Hundred" ministers who form the Conference, three had died during the year, and two had retired. The amounts raised during the year from all sources for the funds of the connection were as follows: foreign missions, £137,280; theological institution, £7,363; contingent, £14,825; general chapel fund, £6,151; education fund, £9,857; worn-out ministers, £12,987; Kingswood and Woodhouse Grove schools, etc., £14,211. The British Conference of Wesleyan Methodism comprises the churches of Great Britain, of Ireland, and numerous foreign missions, and in close connection with it are four other Conferences, viz., the French, Australasian, Canada, and Eastern British America Conference. The general statistics of Wesleyan Methodism, in 1862, are exhibited in the following table:

Conference.	Members.	On trial.	Ministers.
I. British Conference:			
Great Britain	325,256	25,608	1,110
Ireland	22,741	728	142
Foreign Missions	68,349	5,175	399
Total	416,346	31,511	1,651
II. French Conference	1,586	155	25
III. Australasian Conference	36,307	6,514	159
IV. Canada Conference	50,341	4,064	375
V. Eastern British America Conference	15,389	1,448	99
Total	519,969	43,692	2,809

The New Connection Methodists, who were formed in August, 1797, of about 5,000 members, numbered at the Conference, in 1862, 12 districts, 56 circuits, and 3 missions, 127 preachers, and 24,271 members; in Ireland 7 circuits and stations, 7 missionaries, and 782 members; and in Canada 82 circuit preachers, and 7,423 members. There has been, during the year, an increase of 1,539 members in England, and a decrease of 16 in Ireland.

The Bible Christians, who originated in 1818, held, in 1862, their 44th Conference at Portsmouth, on the 30th of July. This, although one of the smallest, is, in proportion to its numbers, the most flourishing branch of the great Methodist denomination in that country. The number of travelling preachers is 207, four of whom are women. Foreign missions, in the strict sense of the word, the Bible Christians

have none. The home circuits are 32 ; the home mission stations, 27; those in Prince Edward's Island, 6; in Australia, 13. They had, in 1862, 25,392 members, and 32,658 scholars.

The Primitive Methodists, according to the minutes of the 43d Annual Conference, had in 1862, 776 travelling preachers, male and female, 2,519 connectional chapels, 3,542 rented chapels, 141,185 members (increase 5,791), 2,322 Sunday schools, 189,057 scholars (increase 8,993), including the Home and Foreign Missions.

The United Methodist Churches, who were formed in 1857, by the amalgamation of the association (the secession headed by Dr. Warren, 1835, and some who seceded, principally at Leeds, in 1829), and the seceders of 1849 reported, in 1862, 60,880 members, and 122,320 scholars.

The yearly delegate meeting of the Wesleyan Reform Union was held in London, August 19 and 20. Thirty-five delegates were in attendance. The following is a summary of the detailed circuit returns: chapels and other preaching places 323, preachers 635, members in society 11,355, Sunday schools 179, Sunday scholars 20,754.

The French Wesleyan Conference—the statistics of which have already been given—began its annual session at Nimes, on the 27th of June. It was reported that during the last two or three years the building of chapels has been begun, and that they are now quickly multiplied in all directions. There is also a considerable increase in the membership. It was determined by the Conference to extend the publication interests, to enlarge the organ of the denomination (the *Evangeliste*), and to publish several new works. The Government, during the last few years, has manifested a more friendly feeling toward the Methodist Church.

The German Annual Conference, which comprises the Methodist Churches of Germany and German Switzerland, and is in connection with the Methodist Episcopal Church of America, met at Ludwigsburg, Wurtemberg. This Conference comprises 15 missionary members in Conference, 1,753 members in full connection, 824 members on trial, 8 churches with parsonages, 4 districts, 19 circuits. The Mission Institute at Bremen has already sent out 13 ministers, and had, in 1862, 8 students. Besides this Conference of the Methodist Episcopal Church, the Wesleyan Methodists of England sustain a mission in Germany, which, in 1862, had 4 numbers of circuits, 2 chapels, 71 other preaching places, 6 missionaries, 47 subordinate agents, 416 members in full connection, 137 members on trial, 30 scholars, and 2,400 attendants on public worship. The Evangelical Association (German Methodists) of the United States have also established a mission in southern Germany.

The Scandinavian missions of the Methodist Episcopal Church in Denmark and Norway had, in 1862, 4 churches, 911 members, and 5 Sunday schools, with 193 children.

The foundation of Methodist missions has also been laid in Spain, Italy, and Bulgaria. In Spain the Wesleyan Methodists of England had, in 1862, 1 chapel, 3 other preaching places, 2 missionaries, 20 subordinate agents, 51 members, 6 members on trial, 267 Sunday scholars, and 650 attendants on public worship. A mission in Italy was begun by the Wesleyan Methodists of England in 1862 ; the nucleus of a congregation was formed in Parma, and a literary institution opened in Milan. In Bulgaria the Methodist Episcopal Church has had, since 1857, a mission, which now comprises three stations, Tirnooa, Shumla, and Tultcha. At the latter place there are 4 members, 2 day schools, with a regular attendance of about 70 children, 2 Sunday schools, with a regular attendance of about 50 children. The missionary of this place is chiefly laboring among the Melokans, a Russian sect, and the Germans in Tultcha, in the neighboring villages, and in southern Russia.

In Asia the Wesleyan Methodists were supporting, in 1862, the following missions: southern Ceylon (Singhalese), with 22 missionaries, 1,736 members, 427 members on trial; northern Ceylon (Tamul), 23 missionaries, 452 members, 18 members on trial; in India 17 circuits, 22 chapels, 25 other preaching places, 36 missionaries, 156 subordinate agents, 890 members, 40 members on trial, 2,979 scholars, 4,115 attendants on public worship; in China 1 missionary, 30 members. The Wesleyan printing establishment at Colombo, Ceylon, issued and distributed every month 10,000 copies of tracts, periodicals, and portions of holy Scriptures among the native Singhalese. At the printing establishment at Bangalore, southern India, the printing of a quarto edition of the New Testament in Canarese has been completed, and the whole Bible is now, for the first time, available in this language. The same establishment has issued 80,000 Canarese tracts, 15,000 English and Canarese school books, and several other books. The Methodist Episcopal Church has a mission in China, the centre of which is at Fuhchau, with 25 missionary agents, American and Chinese, and 87 members; and another in India, which had, in November, 1862, 21 missionaries, 12 native preachers, 178 communicants, 29 schools, and 1,224 scholars.

In Africa the Wesleyan Methodists of England have missions at the Cape of Good Hope, Kaffraria, and Bechuana, Natal, Sierra Leone, Gambia, and Gold Coast, together with 80 missionaries, and 16,425 members. They have printing presses at Mount Coke, British Caffraria, at Sierra Leone, and at Thaba Unchu, in the Bechuana country. The number of pages printed in the latter of these establishments amounted to over 300,000. The Methodist Episcopal Church of the United States has, in Africa, 20 missionaries and 1,473 members.

The Australasian Conference of Wesleyan Methodists met in January, 1862, at Adelaide. The increase of members in the colonies has

been 1,137, besides 1,059 on trial. In the mission districts there has been an increase of 5,455, the largest being in Fiji, and the smallest in Zealand, where the relations of the Maori and European populations are still in an unsettled state.

MEXICO, a North American Republic. Area, 833,028 square miles. Population in 1858, 8,283,088. President, Benito Juarez.

The Annual Cyclopedia for 1861, in its account of Mexico, closes with the military occupation by the allied English, French and Spanish forces, of Vera Cruz and the fortress of San Juan d'Ulloa, which had been yielded to them by the Mexicans without a conflict, the latter retiring a short distance into the interior and cutting off their supplies. Vera Cruz and the low lands in its vicinity have a deadly climate, especially for unacclimated foreigners; and between that city and the Mexican capital rises an elevated country, difficult of passage and void of water, food, or forage for the enemy. To traverse this route with a small force (the united forces of the allies did not exceed 25,000 men, more than half of whom were sailors), surrounded at every step of the route, was impracticable. To remain at Vera Cruz, which had been their previously declared policy, was to expose themselves to almost certain death from the terrible *vomito* or yellow fever always prevalent there during the hot season, and which threatened to be unusually virulent the ensuing season. At the beginning of the year the Mexican President, Juarez, had appealed to the Mexicans of all parties, forgetting their party differences for the time, to unite in expelling the hated invader from their soil, and his appeal had been listened to with favor. All classes, even the most strenuous of the *Moderados*, or clerical party, united with the most advanced of the *progressistas* or liberals, in defence of the republic, and despite the poverty of the country from years of anarchy and revolution, they were capable of offering a formidable resistance to the invaders. To add to the difficulties of the allied forces, they soon began to quarrel with each other. General Prim, the commander of the Spanish forces, finding that the proposition of Spain to have a Bourbon placed upon the throne of Mexico when conquered, was received with disfavor by the French, who wished for an Austrian prince, became convinced that the claims of Spain could be settled by negotiation. President Juarez had at the commencement of the year demanded that the allies should reëmbark the bulk of their forces at Vera Cruz, and retaining only a body guard of 2,000 men, should meet him with a similar guard at Orizaba, a few leagues in the interior, for a negotiation; and this proposition being declined, he had sent a skilful diplomatist, Senor Zamacona, to Vera Cruz to ascertain what was the prospect for an arrangement with the allies. This statesman soon comprehended the position of affairs between the Spanish General and the French Admiral, and arranged for an interview between General Prim and the Mexican Minister of Foreign Affairs, Senor Doblado. This interview took place on the 15th of February, at the little village of Soledad, upon the road between Cordova and Orizaba, and resulted in the arrangement known as the Convention of Soledad. This convention evinced the high diplomatic ability of the Mexican minister. It allowed the allies to occupy healthy positions in *Tierras Templadas*, or more elevated regions at some distance from the coast; but at the same time it postponed the period for commencing negotiations to the 15th of April, and thus indirectly recognized, which the allied powers had before refused to do, the government of Juarez, as the *de facto* Mexican government, gave him time to collect his forces, and delayed the action of the allies to a period when the *vomito* would prove his powerful ally, while it afforded the means of promoting the discord already existing between the leaders of the allied forces. General Prim signed this convention in behalf of Spain, and presented it to the other leaders, for their acceptance. The English minister, Sir Charles Wyke, who was with the English forces, inclined to accept the convention, as a preliminary to separate negotiations for England alone, though not altogether satisfied that Gen. Prim should have negotiated it alone, but the French Admiral opposed it, and though provisionally accepting it so far as to lead his troops into the interior referred it to the French government, which wholly disapproved it, and refused to be bound by it. One object, at least, of the astute Mexican statesman was accomplished by it, the feud between the allies became every day more open, and presently they separated, the English occupying Cordova, the French Tehuacon, and the Spaniards Orizaba, and their action and intercourse with the Mexicans gradually became entirely independent of each other. Sir Charles Wyke made an arrangement for the payment of the English claims, which were much larger than either of the others (*see* Annual Cyclopædia, 1861), by receiving a portion of the customs, and Gen. Prim made some composition of the Spanish claim.

Juarez, meantime, understanding their differences, and foreseeing that he should have only the French to fight, took a more decided position, increased his forces, proclaimed that those Mexicans who took sides against the government should be regarded as traitors and punished as such, and his commanding general Zaragoza, having taken General Robles, a Mexican officer, who had adhered to Miramon, and had endeavored to overthrow the government of Juarez, a prisoner, tried him by martial law, and executed him at once, almost within sight of the French camp. During the first days of March, Gen. Almonte, another Mexican officer, formerly a president of the republic, but who had been a bitter opponent of

Juarez, and had, while in Europe, advocated the overthrow of the Mexican government, and the placing of the Archduke Maximilian upon the throne of the kingdom to be established by the allies, arrived at Vera Cruz, having a letter from the emperor Napoleon III, and proceeded to the French camp at Tehuacan. Juarez demanded that he should be surrendered to his officers as a traitor and outlaw. The French Admiral refused peremptorily to give him up; the Spanish and English commanders insisted that it was his duty to do so. The French Admiral, finding that his refusal was regarded as a violation of the armistice by the Mexicans, fell back to Chiquihuite, according to the terms of the convention of Soledad, which the other commanders contended he had no right to do without consulting with them. Angry interviews resulted, and at length, after a final conference not of the pleasantest character, on the 8th of April, 1862, at Orizaba, the Spanish and English commanders returned to Vera Cruz with their forces, embarked on board their transport ships and left the French alone in Mexico. The course adopted by these commanders was subsequently approved by their respective governments.

No sooner were the allies of the French forces gone, than Senor Almonte, who up to that period had remained quiet, stirred up a few malcontents to make *pronunciamentos* in his favor at Cordova and Orizaba, and took advantage of these to proclaim himself the dictator of Mexico, and to organize around him a band of officers composed of those who had been traitors to their country. He collected also a little troop of soldiers, which he put under the command of one of his creatures, a General Galves, and as Miramon had previously done, commenced a course of plunder, outrage, and murder, and by his subsequent course in contracting loans in the name of his pretended government, and his cruelties toward the Mexicans who have fallen into his hands, he has greatly embarrassed his French allies, and made them so obnoxious to the Mexicans, that they have greatly regretted their connection with him.

After the departure of the English and Spanish forces, the Admiral De la Graviere was superseded by General Lorencez, who brought reënforcements to the French forces, and who, pushing forward from Chiquihuite toward Puebla, and deceived by the promises of Almonte and his followers, that there was a large party in that city who would revolt in favor of the French, suffered himself to be persuaded to attack it without sufficient artillery, met with a mortifying and disastrous defeat, and was compelled to fall back upon Orizaba. Here he remained, urging the French Government to send him speedy reënforcements and supplies, as all other sources of supply were cut off, and even much of those sent to him from Vera Cruz (where the fleet lay), was interrupted by the Mexican guerillas. On the 18th of May, one of his battalions repulsed a Mexican force which sought to prevent a junction of his forces with those of Gen. Marquez, one of Almonte's generals. On the 12th of June, General Zaragoza, the Mexican commander of the forces of Juarez, arrived at Tecamalucan, about 7 miles from Orizaba, with a considerable force, and sent the same day a letter to Gen. Lorencez, representing the perils of his position and demanding his surrender; Lorencez made an evasive answer, and by two well-planned sallies, on the 13th and 14th of the month, defeated separately the corps of Orteza, and that of Zaragoza, and compelled their retreat with a heavy loss, estimated by the French at 5,000 or more, killed, wounded and missing. From this time until October, there were no battles; but the French army suffered terribly from the vomito, losing nearly 1,000 men out of about 5,000, and were so constantly harassed by the guerillas, who cut off their supplies, that they were at times reduced almost to starvation. Early in October, Gen. Forey arrived with nearly 35,000 fresh troops, a part of them negro troops from Egypt, loaned to the emperor by Said Pasha, the Viceroy of Egypt; but the Mexicans, nowise daunted by this display of force, were working with great diligence to make Puebla impregnable, and harassed the French constantly by their guerilla attacks. Gen. Forey moved forward on the route to Puebla in November, but soon found that his communication with Vera Cruz, which was indispensable for his supplies, was cut off, and it was only by stationing a strong body of troops at La Soledad that he could keep it open. His vanguard, 4,000 strong, under Gen. Berthier, were surprised, before reaching Puebla, and over 2,000 killed and wounded. The main army approached Puebla, but were repulsed with heavy loss. Tampico and Jalapa, the former an important port, which had been in possession of the French forces, were evacuated in the latter part of December, in order to concentrate his force on the line from Vera Cruz to Puebla. The small-pox, in its most malignant form, had broken out among the French troops at Vera Cruz, and the French general found himself compelled at the beginning of 1863 to call for 10,000 more troops.

The position of the Government of the United States on the affairs of Mexico was thus described by the Secretary of State in a circular dated March 3, 1862:

> The President has relied upon the assurance given his Government by the allies, that they were in pursuit of no political object, but simply the redress of their grievances. He entertains no doubt of the sincerity of the allies; and if his confidence in their good faith had been disturbed, it would be restored by the frank explanations given by them, that the Governments of Spain, France, and Great Britain have no intention of intervening to procure a change in the constitutional form of government now existing in Mexico, or any political change which should be in opposition to the will of the Mexican people. In short, he has cause to believe that the allies are unanimous in declaring that the revolution proposed to Mexico is solely prompted by certain Mexican citizens, who are now in Europe.

MICHIGAN, one of the northwestern States, bounded on the west in part by the lake of the same name, increased in population during the ten years preceding 1860, the number of 351,459. For the further details of the census of 1860, which were published in 1862, relative to Michigan, *see* UNITED STATES.

The Legislature of Michigan assembled on the 1st Wednesday of January, 1862. It had been elected on the 1st Tuesday of November preceding. The members were divided as follows:

	Senate.	House.	Total.
Republicans	18	63	81
Democrats	14	37	51

On the 18th of January, the following resolutions were adopted, as expressing the prevailing opinion of this body, and subsequently laid before Congress:

Whereas the Government of the United States is engaged in putting down a causeless and wicked rebellion against its authority and sovereignty, inaugurated by ambitious men to obtain political power—a Government, the safety and perpetuity of which must ever rest upon the loyalty of its citizens, and in an adherence to the Constitution; and whereas the welfare of mankind, the usefulness and power of the nation, are involved in the events and issues of the present conflict, therefore,

Be it resolved, That Michigan, loyal to herself and to the Federal Government, reaffirms her undying hostility to traitors, her abiding love for freedom, and her confidence in the wisdom and patriotism of the national Administration.

Resolved, That the people of Michigan deem it the imperative duty of the Government to speedily put down all insurrection against its authority and sovereignty, by the use of every constitutional means, and by the employment of every energy it possesses; that Michigan stands firm in her determination to sustain, by men and treasure, the Constitution and the Union, and claims that the burden of loyal men should be lightened, as far as possible, by confiscating, to the largest extent, the property of all insurrectionists; and that as between the institution of slavery and the maintenance of the Federal Government, Michigan does not hesitate to say that in such exigency slavery should be swept from the land, and our country be maintained.

The citizens of the State were divided into two parties—the republicans and the democrats; the latter were designated by some as "Unionists," meaning by that all who were in favor of preserving the Union, but opposed to the Administration. The democratic party held a convention at Detroit, on the 5th of March, and passed a series of resolutions, but postponed the nomination of any candidates for the election in November:

The resolutions were expressive of the position of the democracy of Michigan, in the present crisis, promising to support the Government in all constitutional means to suppress the rebellion, and opposing the termination of the war until all resistance to the Government everywhere ceases.

Abolitionism was strongly denounced as equally guilty with Southern secessionism, and the speedy extinguishment of both was hoped for.

Also approving the modification of Gen. Fremont's proclamation, and of Secretary Cameron's report, and the appointment of the present Secretary of War, as indications that the President would adhere to the Constitution.

Also denouncing corruption and extravagance, and demanding honesty and economy in the administration of Government.

Subsequently the same party nominated for governor ——— Stout, with candidates for State officers. The principles upon which the election was based will be perceived by the foregoing, and by reference to the resolutions adopted by the democratic conventions of Indiana and Iowa.

The republican party nominated for reëlection for governor Austin Blair, and candidates for State officers. The general principles by which they were influenced in voting can be seen with sufficient clearness by reference to the resolutions of the Illinois republican convention, and by those above mentioned, subsequently adopted in the Legislature of Michigan.

At the election on the second Tuesday in November, the votes of the citizens for governor were cast as follows:

	1862.	1860.
Republican	68,716	87,806
Democratic	62,102	67,221
Majority	6,614	20,585

Six republican members of Congress were chosen, for whom the vote was as follows:

	Republican.	Democratic.
1st District	13,400	13,208
2d "	14,147	11,385
3d "	12,317	11,467
4th "	10,013	7,308
5th "	10,432	10,696
6th "	7,879	7,340

The number of troops which entered the Federal army from the State is nearly 50,000; of whom 24,097, embracing eighteen regiments of infantry, one regiment and one company of engineers, three regiments of cavalry, six companies of sharpshooters, one company of light and six of heavy artillery, and thirteen companies of infantry, and two squadrons of cavalry, enlisted in other States, took the field in 1861.

The length of railroads in the State exceeds 800 miles, at a cost of construction of over $31,000,000. Three principal lines, connecting the eastern portion of the country with the Upper Mississippi valley, cross the State. These are called the Southern, Central, and Detroit and Milwaukee. A fourth, intended to connect by steam ferry with the Sheboygan and Fond du Lac of northern Wisconsin, has been commenced. The State has one canal, which extends around the falls of St. Mary, and connects Lake Superior with the other lakes. (*See* page 230.)

No State has an institution so largely endowed or with so complete an organization as the University of Michigan. It has not only the faculty usually found in colleges in this country, but a corps of legal and medical professors besides others of the higher sciences and the fine arts. An entrance fee of $10 is the only payment required of the student. There are also the Kalamazoo College, under the direction of the Baptist denomination; Albion College, under the Methodist denomination;

and Hillsdale College, under the Free Will Baptists. The State has a primary school fund exceeding $1,698,861, a university fund exceeding $500,000, and the normal school fund not far from $20,000. The number of children attending school in the State, in 1861, was 202,504 out of 252,533.

The salt manufactures in the State, in consequence of the high price of the article during the last year, became rapidly developed. Saginaw is the principal town in the region, and the salt fields extend from the bay westward between forty and fifty miles, to the point where the Chippewa river passes into the Tittibawâssee, and even beyond. In breadth they are about thirty miles. This whole district forms a basin constantly filling with brine 85 to 92 per cent. Boring is pushed to the depth of eight hundred feet, and the supply continues inexhaustible. The brine, although containing impurities, compares well with the Onondaga and Kanawha brines. This portion of the country is also a great lumber region, which is inducing a rapid settlement. Salt docks and lumber yards alternate for twenty-five miles up the Saginaw river. About six hundred thousand barrels were manufactured during the year. The old kettles and furnaces are gradually giving way to the new process of evaporating by steam in large vats, which produces a better quality of salt at a reduced cost. The geological survey of the State has also developed vast treasures of iron, copper, lead, coal, marble, and gypsum. The debt of the State on July 1st, 1862, was as follows:

"Adjusted bonds," 6 per cent., due in 1863....	$1,744,185 00
Full paid "Five Million Loan," 6 per cent., due in 1863	177,000 00
Part paid "Five Million Loan," when funded, due in 1863, will be.....	83,314 00
"Renewal Loan," 6 per cent., due in 1878	216,090 00
"Temporary Loan," 7 per cent., due in 1878....	50,000 00
Internal improvem't warrant bonds, on demand	50 00
Sault Canal bonds, 6 per cent., due in 1876	100,000 00
War loan bonds, 7 per cent., due in 1886.....	605.500 00
Internal improvem't warrants, due on demand	3,592 82
Total..	$2,979,731 82

MINNESOTA, one of the northern central States of the Union, enclosing in its boundaries the head waters of the Mississippi river, the Red River of the North, and the St. Louis, the highest source of the St. Lawrence; area, 83,-531 square miles; population, in 1860, 173,855.

Minnesota, though one of the youngest of the sisterhood of States, having been organized as a territory in 1849, and admitted into the Union as a State in 1857, has exhibited great energy and enterprise. Its population is largely from New England, but considerable bodies of Germans, Norwegians, and Swedes have also settled in different portions of the State, attracted by its fine climate, and the productiveness of its soil. The population of some of the western counties is almost wholly German, while in the more northern counties the Swedes and Norwegians predominate.

The governor of the State is Alexander Ramsey, of St. Paul, who was chosen in October, 1861, and assumed office in January, 1862. His term expires in January, 1864. The secretary of State is J. H. Baker, of Blue Earth, elected at the same time and for the same term as the governor. At the election in October, 1862, a Legislature and two members of Congress were chosen. The political complexion of the Legislature elected was: senate, republicans, 16; democrats, 5. House, republicans, 29; democrats, 12; Union democrat, 1. The congressmen elected were William Windam, in the 1st district, majority, 2,940; 2d district, Ignatius Donnelly, majority, 2,010. Both are republicans.

The State has been very prompt in furnishing her quota of troops, having equipped and sent into the field before December 1, 1862, 11,887, including the first three months' regiment of 930 men. This amount is about 300 in excess of her quota on all the calls.

During the spring and early summer of 1862, reports from various sources reached the United States Government, indicating that the Indian tribes of Utah, Colorado, Dakota, and western Nebraska would ravage the Territories and frontier States. It was said that emissaries from the Southern Confederacy had been among them, stimulating them to rise and plunder and destroy the frontier settlements; and to encourage them in this movement, they were told that the United States Government was broken up by the South, and could make no resistance. Adventurers from Canada, too, had visited them in the early part of the year (when, in consequence of the Mason and Slidell affair, it was expected there would be a war with Great Britain), urging them to bring their furs across the boundary, and assuring them that they should be aided with money and arms to drive the Americans from their lands. The Indians while thus prompted to insurrection, by evil and designing men from both north and south of their hunting fields, had also many imaginary and some real grounds of complaint against the Indian agents sent among them by the United States Government. Some of these had proved unworthy of their trust; had swindled and defrauded the Indians, and had treated them with harshness; and though these were the exceptions, and perhaps rare exceptions, yet the delay in paying the Indian annuities, owing to the negligence of the Indian bureau, and the attempt on the part of some of the agents to pay them in legal tender notes instead of gold, which the Government had furnished, aroused distrust in the minds of the Red men, and led them to plot revenge.

The reports which reached the Department of the Interior had given rise to so much apprehension that the commissioner of Indian affairs published in the summer an advertisement warning the public of the dangers in taking the overland route to the Pacific.

Meantime the settlers in western Minnesota were entirely unsuspicious of danger. A large

proportion of these settlers were Germans, especially in Brown and the adjacent counties; a considerable number were Norwegians, and the remainder generally of American birth. Most of them had purchased considerable farms, and they had built up small but thriving villages throughout the tier of western counties. They were on terms of friendship with the Indians, and had no apprehension of any treachery from them.

Though an insurrection had been deliberately planned, there is reason to believe that the massacre was precipitated somewhat sooner than was at first intended. On the 17th of August, 4 drunken Indians, belonging to Little Crow's band of Sioux, roaming through the country and becoming intoxicated on whiskey obtained from a white man, had a violent altercation with each other as to which of them was the bravest, and finally determined that the test of their bravery should be the killing of a white man. After committing several murders, and becoming somewhat sober, they fled to their village (Red Wood), and told their chief, Little Crow, who was one of the conspirators, what they had done. He, expecting retaliation for this outrage, at once determined upon commencing the intended attack, and on the morning of the 18th, with a force of 250 or 300 Indians, proceeded to the agency at Yellow Medicine and engaged in an indiscriminate slaughter of all the whites he could find there. Mr. Galbraith, the agent, was absent, having left home three days before, but his family were among the victims of this murderous assault. A force of 45 soldiers, sent up from Fort Ridgley at the first rumor of disturbance, were attacked by the Indians in ambush, and half their number slain. The marauders, flushed with success, pressed on with their work of death, murdering, with the most atrocious brutalities, the settlers in their isolated farmhouses, violating and then killing women, beating out the brains of infants or nailing them to the doors of houses, and practising every species of atrocity which their fiendish natures prompted. On the 21st of August, they had attacked New Ulm, a flourishing German settlement, the capital of Brown county, with a large force, had beleaguered Fort Ridgley, and were advancing upon other settlements. The only Indians engaged in these outrages were Sioux, and that portion of them under the special command of Little Crow. The Chippewas, the inveterate enemies of the Sioux, who had also a reservation in Minnesota, were uneasy, and assumed a threatening attitude. They alleged gross frauds on the part of their agent, who escaped from the reservation and committed suicide; but they took no part in the Sioux massacres, and, indeed, a few weeks later, offered to raise a force of their warriors to fight the Sioux, an offer which the Government did not think it wise to accept. On the first intelligence of this insurrection Governor Ramsey sent four companies of the 6th regiment of volunteers from Fort Snelling, and, two days later, on fuller information, he sent forward seven companies more. Col. (now Gen.) H. H. Sibley, who had 30 years' experience among the Indians on the frontier, was placed in command. Mounted volunteers were also called for by proclamation to join these forces, and large numbers obeyed the call. The 3d Minnesota regiment, then on parole at St. Louis, was also ordered to report at St. Paul, and arrived there on the 4th of September.

On the 23d of August New Ulm was attacked by the Indians, who were repulsed after a severe battle by a body of the citizens under Judge Flandrau; but remained in the vicinity, intending to renew the assault. The next day, a detachment of Col. Sibley's troops relieved them from siege, and scattered the marauders; but as 2,000 women and children, who had fled in terror from the surrounding region, had taken refuge there, it was deemed best to evacuate the place, in order to convey them to a place of permanent safety. Fort Ridgley had been besieged for 9 days, and its little garrison had sustained and repelled three desperate attacks; they were relieved on the 26th by a force under the command of Lieut.-Col. McPhail, sent forward by Col. Sibley. Finding a large force concentrating on their trail in this direction, the greater part of the Indians proceeded northward, burning and killing everything in their way, toward Breckenridge, a town at the junction of the Bois des Sioux and Red River of the North, which at that point formed the west boundary of the State, massacred the settlers there, and crossing the river, laid siege to Fort Abercrombie in Dakota Territory. Intelligence of these movements having reached St. Paul on the 27th, two companies were forwarded at once to reënforce Fort Abercrombie. On the 3d of September a force of 150 Indians unexpectedly appeared at Cedar City, in McLeod co., in the centre of the State, attacked a company of volunteers there, and drove them to Hutchinson, while another band about as numerous attacked Forest City not far distant, and were repulsed by the citizens. A few days later, the Indians attacked Hutchinson, but were repulsed. Troops were sent at once to these points. Driven back here, the savages next extended their raid to Jackson, Noble, and Pipeston counties, in the S. W. part of the State on the border of Iowa, and Col. Flandrau, who had so valiantly defended New Ulm, was sent with 500 troops to protect that region. Gov. Ramsey had meantime apprised the United States Government of the condition of affairs, and had called the Legislature of Minnesota together to meet in extra session on the 9th of September. At their assembling, he laid before them, in his message, the circumstances of the Indian insurrection, and suggested the measures requiring their action, all of which were promptly passed. Meantime the Government had despatched Maj.-Gen. Pope to command in that department, and aid in sup-

pressing the insurrection. The Indians, finding a force greatly superior to their own ready to take vengeance on them for the terrible and dastardly outrages they had committed, began to withdraw from the region they had desolated. A force of 300 or 400 of them made two assaults, in September, on Fort Abercrombie, but were repulsed in both, the second time with heavy loss; the larger part of those who had invaded the central and southwestern portions of the State, fled toward the western border, but were overtaken and brought to bay at Wood Lake on the 22d of September, where after a sharp battle they were utterly defeated, and Little Crow, with his women and children, fled to the Yankton Sioux of Dakota Territory. About 500 Indians were taken prisoners, and 498 were tried by court martial, of whom 300 were sentenced to be hung. The President ordered, however, that only 38 of these should be executed, while the remainder were kept in confinement until further investigation could be had. One of the 38 executed on the 26th of December was a negro named Godfrey, who had been a leader in the massacres, and it was said had killed more than any one of the Indians.

The whole number of Indian warriors among the Minnesota Sioux did not exceed 1,000 or 1,200, and many of these had taken no part in the insurrection, so that probably the killed and captured constituted the greater part of the insurgents. This defeat and prompt arrest of the assailants carried terror into the hearts of the other Indian tribes in the vicinity, and though there have been occasional symptoms of uneasiness since that time among some of the Indians of that region, and the inhabitants of Minnesota cannot feel safe with such treacherous and bloodthirsty foes so near them, it is hardly probable that there will be another uprising for some years. The citizens of Minnesota are, not without cause, exceedingly desirous the Government should remove the Indians from their State.

The loss of life in this insurrection has never been accurately ascertained. Gov. Ramsey, in his message, stated it in round numbers at 800, a number undoubtedly larger than subsequent facts would sustain. Some of the writers from the region in which it occurred speak of it as not exceeding 100, which is probably as great an error in the other direction. 85 were buried at Yellow Medicine, nearly all of whom were horribly mutilated, and a considerable number at New Ulm, Breckenridge, Birch Coolie, Fort Abercrombie, Red Lake, Red Wood, and Wood Lake, and many more in the isolated farm houses in the extensive tract overrun by the savages. Probably not far from 500 in all lost their lives, either through the ferocity of the Indians or from the sickness, suffering, and starvation which resulted from their hasty flight from their homes. Between 20,000 and 30,000 persons thus fled for their lives, leaving everything behind them. A part have since returned, others have found their way to their friends at the East, but for some months between 6,000 and 7,000, mostly women and children, were necessarily dependent upon charity. The people of the State contributed most liberally to their relief, and considerable sums were forwarded from other States. Gov. Ramsey urged upon the Government the forfeiture of the annuities of the Sioux for the benefit of these innocent sufferers, and the Secretary of the Interior warmly seconded the proposition, which indeed seems no more than justice. The loss of property was estimated at from $2,500,000 to $3,000,000, and the capital of annuity paid to the Minnesota Sioux, was $2,000,000.

MISSISSIPPI, one of the cotton-growing States bordering on the east side of the Mississippi river, contained in 1860 a population of 353,901 whites, 773 free colored, and 436,631 slaves. The increase during the preceding ten years was 44,729. The white males in 1860 were 186,273; do. females, 167,626. The mortality during the year ending May 31, 1860, was 12,214. The most fatal diseases were consumption, fevers, and pneumonia. The value of industrial products was as follows: iron founding, $147,550; lumber, $2,055,396; flour and meal, $541,994; cotton goods, $261,135; woollen goods, $184,500; leather, $223,862. Total of all products, $6,000,000. Value of real and personal estate, $607,324,911. Lands improved, 5,150,008 acres; do. unimproved, 11,703,556. Cash value of farms and plantations, $186,866,914; do. of implements and machinery, $8,664,816. Some of the productions of the State were as follows: horses, 117,134; mules and asses, 112,488; milch cows, 207,134; working oxen, 104,184; other cattle, 415,559; sheep, 337,754; swine, 1,534,097. Value of live stock, $40,245,079; wheat, 519,452 bushels; rye, 41,260; corn, 29,563,735; oats, 121,033; rice, 657,293 lbs.; tobacco, 127,736; cotton, 1,195,699 bales of 400 lbs. each; peas and beans, 1,986,558 bushels; potatoes, Irish, 401,804; do. sweet, 4,348,491; sugar, 244 hhds.; molasses, 3,445 galls. Miles of railroad in the State, 872; cost of construction of roads, $2,020,000. The principal educational institutions of the State are the University of Mississippi, Mississippi College, Madison do., and Semple Broaddus College. The number of students in 1860 was 402. Some of these institutions are now closed.

The internal affairs of the State during the year 1862 present very few points of interest, except in connection with military affairs. The same indisposition to enter the army at the beginning of the year which existed in northern Georgia and Alabama, prevailed in Mississippi, and indeed through all the more southern States. The Legislature, at its session which commenced on Jan. 1, 1863, passed an act authorizing the governor to draft men to fill up the quota of the State for the Confederate service. Much objection was urged against this act, inasmuch as the members of the Legislature made them-

selves exempt from liability to the draft. A portion of the troops from Mississippi in the field at the close of the year were men enlisted for 60 days, who returned to their homes in January, after having suffered great mortality. Gov. Pettus, immediately upon the passage of the act, issued a call for 10,000 men to serve for two years. After stating the authority upon which the call was made, he thus proceeded:

Now, therefore, in virtue of the power thus vested in me, I issue this my proclamation, appealing to the patriotism of the people to evince their willingness to respond to every call their country may make upon them in the perilous crisis through which that country is called to pass. The power to draft has been conferred upon me by the Legislature, when volunteers failed to respond. I have too much confidecne in the determination of the people of Mississippi to meet every responsibility and bear every burthen which may result from their severance of connection with an enemy intent upon their destruction, to believe that it will ever become necessary for me to resort to the exercise of that power. After the liberal contribution Mississippi has furnished in men and money for the prosecution of the war, the act authorizing this call would never have been passed if the necessity had not been most urgent.

I will therefore receive volunteers to the number of ten thousand, to serve for the term of two years. They are expected to bring arms with them, for which they will be allowed a fair value. To such as have no arms they will, as far as possible, be furnished. The time and places of rendezvous will be hereafter designated. Companies enlisting under this call will report to the adjutant-general at Jackson. Each company is required by the act to consist of sixty-four men rank and file. JOHN J. PETTUS.

EXECUTIVE OFFICE, JACKSON, *Jan.* 31, 1862.

The scarcity of arms was such that volunteers were required, if possible, to furnish them. This call was followed by another from President Davis upon the governor for 7 regiments. While these affairs were in progress the advance of the Federal forces up the Tennessee and Cumberland rivers with the disasters to the Confederate cause which ensued, caused intense excitement. The most frantic appeals were made to the people, of which the following are examples:

The time is at hand when every man able to shoulder a gun has to go. The enemy is at our doors, and reverses are everywhere overtaking our arms. It is now to do, and do at once, or our cause is dead, and we are hopelessly lost.

Countrymen! fellow citizens! the time of peril has come. All that is dear to us is suspended upon the issue of arms. The sword is the arbiter, and the sword is alone potent when numbers are sufficient. Bear this truth in mind, and let none feel that they are exempt. Let us imitate the example of the ancients; when the cry was "Rome demands your help"—all, from the highest to the most humble, flew to arms. Or, if need be, in spirit at least, imitate the Carthaginian women, who cut off their hair to make ropes for their vessels. To arms, countrymen! We have nothing to hope for but victory or death.

The governor issued another proclamation calling upon every citizen capable of bearing arms to have his arms in readiness, and directing the boards of police in every county to appoint enrollers preparatory to drafting; and to establish gunshops for the repair of arms. By these efforts the larger portion of the military strength of the State was brought into the field before the Confederate conscription act took effect. The battle at Shiloh now was fought, and the investment of Corinth and its evacuation followed, after which there was a cessation of active operations for some months. The important events will be found fully described under ARMY and NAVAL OPERATIONS. On June 17, Holly Springs was first occupied by Federal troops from the army of Gen. Halleck. This movement of troops in the northern part of the State and the defenceless condition of the counties on the river against the approach of the Federal gunboats caused the removal of the archives of the State from Jackson, the capital, to Columbus, near the border of Alabama. On June 26 the first attack on Vicksburg was made, which continued for 11 days. On Sept. 10, Natchez surrendered to the commander of the gunboat Essex, after a bombardment of two hours. The result of these operations was the firm occupation of the northern extremity of the State by the Federal forces, while the coast at the southern extremity was completely under the control of the Federal naval forces in the neighborhood. Two points on the Mississippi river within the state, Port Hudson and Vicksburg, were strongly fortified by the Confederate Government in order to preserve its communication with Texas, and to prevent the complete control of the river from falling into possession of the Federal Government. These were measures of the utmost importance to the Confederate States.

The crops of the State suffered severely from drouth in the month of August. The crop of corn, which had given promise of great abundance, was thereby very much reduced.

The governor of the State, John J. Pettus, who was in office at the time of the secession of the State, entered upon a second term of two years, which expires on June 1, 1864.

MISSOURI. The commencement of 1862 found Missouri in a more quiet condition than for many months previous, although, from the preparations making for warlike operations on either side, hostilities conducted on a larger and more systematic scale were anticipated. The army of the Confederate general, Sterling Price, lay around Springfield, in the southern part of the State, and was represented to be largely made up of Missouri militia, whose stability could not be depended upon in the event of a retreat. Along the southern and western frontiers the operations of guerillas caused occasional disturbance, but the central and northern parts of the State, together with the counties bordering on the Mississippi, remained tolerably quiet. The headquarters of the national army were at St. Louis, but considerable bodies of troops were distributed at various points between that city and Springfield, busily preparing for the campaign against Gen. Price.

At St. Louis early in the year, in consequence of complaints of disproportionate assessments having been made under the operation of Order

No. 24, levying assessments on wealthy secessionists for the support of loyal refugees, Gen. Halleck appointed a new board of assessors to revise the former list and make such modifications as circumstances demanded. Several secessionists having, nevertheless, failed to pay their assessments, he ordered their property to be seized under execution, with 25 per cent. additional to the assessment. One of the number, Samuel Engler, a prominent merchant of St. Louis, with a view of testing the legality of the transaction, caused a writ of replevin to be served on the provost marshal to recover the property taken from him; whereupon he and his attorney were arrested and lodged in the military prison.

By a special order, issued on the 23d, Gen. Halleck directed the provost marshal to send Engler beyond the lines of the department of Missouri, and to notify him that his return, without permission from the commander-in-chief, would subject him to punishment according to the laws of war. For the purpose of preventing any similar resistance to his orders, he reiterated his intentions in the following emphatic language:

Martial law having been declared in this city by authority of the President of the United States, all civil authorities, of whatever name or office, are hereby notified that any attempt on their part to interfere with the execution of any order from these headquarters, or impede, molest, or trouble any officer duly appointed to carry such order into effect, will be regarded as a military offence, and punished accordingly. The Provost Marshal General will arrest each and every person, of whatever rank or office, who attempts in any way to prevent or interfere with the execution of any order issued from these headquarters. He will call upon the commanding officer of the department of St. Louis for any military assistance he may require.

On the 9th of January the provost marshal general issued an order requiring all publishers of newspapers in Missouri, those of St. Louis excepted, to furnish him a copy of each issue for inspection, under penalty of having their papers suppressed. No little excitement was caused on the same day in the St. Louis Chamber of Commerce by the refusal of the secession members, who were in the majority and had just elected officers of their own views, to admit a number of Union applicants for membership. The consequence was the withdrawal of the Union members and the establishment of a Union Chamber of Commerce.

The indication of latent sympathy with secessionism which was afforded by this occurrence determined Gen. Halleck to adopt more stringent measures to secure adherence to the Government, and on the 26th he issued the following order:

HEADQUARTERS, DEPARTMENT OF MISSOURI.

The President, Secretary, Librarian, Directors, and other officers of the Mercantile Library Association, the President, Secretary, Directors, and other officers of the Chamber or Chambers of Commerce of this city are required to take the oath of allegiance prescribed by article 6 of the State ordinance of October 16, 1861.

Any of the above officers who shall neglect to file in the office of the Provost Marshal General, within ten days of the date of this order, a copy of the oath so subscribed, will be deemed to have resigned; and any who, after neglecting to file his oath of allegiance within the time prescribed, shall attempt to exercise the functions of such office, will be arrested for contempt of this order, and punished according to the laws of war.

2d. It is officially reported that carriages bearing the enemy's flag are in the habit of driving to the vicinity of the military prison in McDowell's College. The commanding officer of the prison will seize and take possession of any carriage bearing the enemy's flag, and the horses, carriage, and harness be confiscated.

3d. It is officially reported that certain women are in the habit of approaching the vicinity of the military prison, and waving hostile flags, for the purpose of insulting our troops and carrying on communications with the prisoners of war. The commanding officer of the prison guard will arrest and place in confinement all women so offending.

4th. Any carriage or other vehicle bearing a hostile flag in the city will be seized and confiscated. The city police and patrol guards are directed to arrest persons in vehicles under such flags; also, persons wearing or displaying a hostile flag in the city.

By command of Maj.-Gen. HALLECK.
M. H. McLEAN, Asst. Adj.-Gen.

This measure was followed by the promulgation of an order dated Feb. 3d, requiring the president and faculty of the University of Missouri to take the oath of allegiance under penalty of having their offices vacated. "The institution," observed Gen. Halleck, "having been endowed by the Government of the United States, its funds should not be used to teach treason or to instruct traitors." The order also exacted a similar oath from the presidents and managers of all railroads in the State, together with a bond that they would not employ persons neglecting to conform to the same requirement; directed the commissary and subsistence departments to deal with none but those who had taken the oath, or were men of approved loyalty; and recommended that all clergymen, professors, and teachers, and all officers of public and private institutions for education, benevolence, business, and trade, in favor of the perpetuation of the Union, should voluntarily subscribe to and file the oath of allegiance, in order that they might be distinguished from those wishing to encourage rebellion, and to prevent the Government from restoring peace and prosperity.

A supplementary order required all licensed attorneys, counsellors, and proctors, to take the oath, under penalty of being debarred from practising in the courts; and another, more general in its provisions than any which had preceded, was in the following terms:

It is hereby ordered that at all future elections in this State, whether State, municipal, county, or town elections, every voter will be required to take the oath of allegiance required by the State Convention, Oct. 18, 1861. Officers of polls will see to the execution of this order. If they receive votes of persons not taking the oath, they will be arrested and tried for military offence, and the elections declared null and void.

The arrest and trial of the persons apprehended in northern Missouri for destroying the bridges and other property of the Hannibal and St. Joseph's railroad, led to an important correspondence between Gens. Halleck and

Price, touching the right of the prisoners to be dealt with as ordinary prisoners of war. The extracts which follow sufficiently indicate the points raised by the Confederate general, and the policy of Gen. Halleck.

After complaining of the unusual and cruel confinement to which his discharged soldiers had been subjected, Gen. Price observes:

I have obtained information that individuals and parties of men specially appointed and instructed by me to destroy railroad culverts and bridges, by tearing them up, burning, &c., have been arrested and subjected to general court martial, for alleged crimes, which all laws of warfare, heretofore recognized by the civilized world, have regarded as distinctly proper and lawful. I have learned that such persons, when tried, if convicted of the offence or offences, as stated, are viewed as lawful subjects for capital punishment. These statements I cannot believe to be correct, but let us understand each other on this subject.

Do you intend to continue the arrest of citizens engaged in their ordinary peaceful pursuits and treat them as traitors and rebels? If so, will you make exchange with me for such as I may or will make for similar cases? Do you intend to regard the members of this army as persons deserving death wherever and whenever they may be captured, or will you extend to them the recognized rights of prisoners of war by the code of civilized warfare? Do you regard the destruction of important roads for transportation facilities for military purposes as the legal right of the belligerent power? Do you intend to regard men whom I have especially despatched to destroy roads and burn bridges, tear up culverts, &c., as amenable to the enemy's court martial, or will you have them tried as usual by the proper civil authorities according to the statutes of the States?

To this Gen. Halleck replied:

Where individuals and parties of men violate the laws of war, they will be tried, and, if found guilty, will certainly be punished, whether acting under your special appointment and instructions or not. You must be aware, general, that no orders of yours can save from punishment, spies, marauders, robbers, incendiaries, guerilla bands, etc., who violate the laws of war. You cannot give immunity to crimes. But let us fully understand each other on this point. If you send armed forces, wearing the garb of soldiers, and duly organized and enrolled as legitimate belligerents, to destroy railroad bridges, &c., as a military act, we shall kill, if possible, in open warfare, or if we capture them we will treat them as prisoners of war. But it is well known that you have sent numbers of your adherents in the garb of principal citizens, and under false pretences, through our lines into northern Missouri, to rob and destroy the property of Union men, and burn and destroy railroad bridges, thus endangering the lives of thousands; and this, too, without any military necessity or possible military advantage. Moreover, peaceful citizens of Missouri, quietly working on their farms, have been instigated by your emissaries to take up arms as insurgents, and rob and plunder, and commit arson and murder. They do not even act under the garb of soldiers, but under false pretences, and in the guise of private citizens. You certainly will not pretend that men guilty of such crimes, although specially appointed and instructed by you, are entitled to the rights and immunities of ordinary prisoners of war. If you do, will you refer me to a single authority on the laws of war which recognizes such a claim?

The trial of the bridge burners, meanwhile, went on before a military commission in Palmyra, and in the latter part of January eight persons were found guilty, and sentenced to be shot. In accordance with the views above expressed, Gen. Halleck approved of the sentence, and ordered it to be carried into effect in the succeeding month. And inasmuch as the secession organizations for the destruction of railroad property in northern Missouri exhibited occasional activity, a bridge near Palmyra, just reconstructed, having been burned as recently as the 25th of January, he directed in a general order, issued February 16, that all persons "accused of acts in violation of the laws of war, such as the destruction of railroads and bridges and private property, firing into trains, assassination, &c., should not be released on any terms, but be held for trial before a military commission."

In the last week of January the national forces, under Gen. Curtis, commenced their march southward, and on the 13th of February the advanced guard entered Springfield, Gen. Price retiring across the boundary into Arkansas at their approach. (*See* ARMY OPERATIONS.) This movement, for the time, freed the State of the presence of armed opponents of the Government, and the St. Louis papers of February 22 announced, with no little satisfaction, that "the last vestige of military insurrection had been swept away." In view of this fact, and of the increasing loyalty of the citizens of Missouri, as well as of the recent victories in Tennessee, Gen. Halleck issued an order abating the stringent military regulations in force in the State, and mitigating the sentence of death against the bridge burners to close confinement in the military prison; but with this proviso, that if Confederate spies should again destroy railroads or telegraph lines, the original sentence should be carried into effect. He also directed that no further assessments should be levied on persons who had taken the prescribed oath of allegiance.

Lieut.-Gov. Hall, in the absence of Governor Gamble, appointed Robert Wilson, president of the State Convention, and John B. Henderson, a Douglas democrat, as United States Senators, in the place of Waldo P. Johnson and Trusten Polk, whose seats had been declared vacant by a resolution of the Senate of January 10th.

In the latter part of January the troops destined by Gen. Halleck to coöperate with the army of Gen. Grant in Tennessee, took their departure from Commerce, on the Mississippi river, under Gen. Pope, for New Madrid. (*See* ARMY OPERATIONS.)

The departure of General Halleck for Corinth, in April, left Gen. Schofield in command of the greater part of the State, and on June 1st he assumed command of the entire department of Missouri, fixing his headquarters at St. Louis. On April 8th Gen. Sterling Price resigned the command of the Missouri State guard.

On June 3d, the State Convention met pursuant to adjournment at Jefferson City. In an official communication Gov. Gamble reviewed the history of affairs during the interval succeeding the adjournment of the convention, and showed that the finances of the State were still

in an unsettled condition, only forty-one counties out of one hundred and twelve having returned tax books for 1861. Of $640,220 due from these not more than $253,386 had been paid in. From the counties not heard from the amount was very large; but officers were daily finding it more easy to make collections, and in every respect the condition of things was quite as favorable as when the present authorities received control of the government. The bondholders, he thought, could hardly expect the July interest to be paid, but of the ability of the State to pay ultimately he entertained no doubt. In most parts of the State courts of justice were open and the laws properly administered, but elsewhere disturbance and crime were perpetrated under the name of guerilla warfare. Sufficient force, however, was now ready to compel the cessation of such acts, and "troops hostile to the people and the institutions of the State" had been supplanted by home volunteers, who would prove less objectionable. He doubted the expediency of electing members of Congress seventeen months before taking their seats, and, in view of the fact that a large body of the voters of the State were absent as volunteers, suggested the repeal of the ordinance passed in the previous November, which provided for an election of executive officers and for the ratification of the provisional government in August.

On June 4th the Committee on Elections reported bills continuing the present officers of the State until 1864; repealing the ordinance submitting the action of the convention to the people; and defining the qualifications of voters in the State. The last named bill prohibited all Confederates from holding office or voting except on condition of taking the oath to support the constitutions of the United States and Missouri, and required judges of elections to administer a similar oath to all voters.

On the 7th Judge Breckenridge of St. Louis introduced a bill for gradual emancipation, framed in accordance with the President's Message to Congress.

He argued the merits of the bill at length, claiming that it was the only measure at all likely to quiet the agitation rapidly growing in the State. All men agreed that slavery was doomed in Missouri, that secession had ruined it, and it only remained to determine whether, as wise, careful, and conservative men, they would take hold of the subject as a political question, or leave it to be dealt with by radicals. Pass this ordinance, and there would be nothing left to build up radical men and measures; the whole subject could be acted on by the people, after two years of calm reflection, with peace, quiet, and prosperity restored to the country.

At the conclusion of Mr. Breckenridge's remarks several members endeavored to gain the floor, and Mr. Hall, of Randolph county, being recognized, moved to lay the bill on the table. In spite of the remonstrances of several members, who wished to speak on the subject, Mr. Hall adhered to his motion, which was carried by yeas 52 to nays 19. He then moved to reconsider the motion to lay on the table, and to lay that motion on the table. This was agreed to, and thus the emancipation scheme was thwarted almost at its inception.

During the 9th and 10th the convention was chiefly occupied in discussing the bill defining the qualifications of voters, which had been reported back without the disfranchising clause. An amendment, offered by Judge Breckenridge, "to disfranchise all persons engaged in rebellion subsequent to Dec. 17, 1861," was, after a protracted debate, carried by a vote of 35 ayes to 31 noes, and the bill was finally passed by 42 yeas to 27 nays. The chief objection urged against the amendment was, that it would discourage emigration from the Southern States.

On the 11th, the bill to continue the present provisional government and postpone the election of State officers until 1864, elicited much discussion, and was finally lost by yeas 31, nays 35. But on the next day the vote was reconsidered by yeas 43, nays 15, and the bill was passed by yeas 45, nays 21. A resolution expressing the confidence of the convention in the integrity and patriotism of Governor Gamble and the other State officers was also unanimously adopted. By this action of the convention the next election was restricted to the choice of members of the 38th Congress and of the State Legislature. On the 12th also an ordinance was passed enabling citizens of the State in the military service of the United States to vote at all the State elections.

On the 13th, Governor Gamble submitted a message calling the attention of the members of the convention to the fact that Congress had, in accordance with a message from the President adopted a joint resolution declaring its willingness to furnish aid to any State that might think proper to adopt a measure of emancipation.

On motion of Judge Breckenridge the message was referred to a special committee of five, consisting of Messrs. Breckenridge, Douglass, Doniphan, Orr, and Howell, with instructions to report without delay upon the subject, by resolution or otherwise. The majority of the committee, Messrs. Breckenridge, Douglass, and Orr, accordingly reported on the 14th the following series of resolutions, by Mr. Hitchcock, of St. Louis, previously referred to the committee, and which were adopted by a vote of 32 to 27:

Whereas, The Congress of the United States, on the special recommendation of the President, has adopted a joint resolution in the following words, to wit:

Resolved, That the United States ought to coöperate with any State which may adopt a gradual emancipation of slavery, giving to such State at its discretion compensation for the inconvenience, public and private, by such a change of system.

And whereas, the President of the United States, in his recent proclamation revoking and annulling a certain authorized declaration, assumed to be made by Maj.-Gen. Hunter, of the United States army, has

earnestly invited the people of the States interested to take into consideration the said joint resolution; be it therefore

Resolved 1*st*. That in the opinion of this convention the proposition contained in the said joint resolution adopted by Congress, approved, 1862, is entitled as well from its source as from its intrinsic importance to the deliberate and respectful consideration of the people of Missouri.

Resolved 2*d*. That while a majority of the convention have not felt authorized at this time to take action in respect to the grave and delicate question of private rights and public policy, presented by said resolution, yet this body desires cordially to recognize as well the generous spirit displayed by the Government of the United States as the eminent patriotism and ability which have distinguished the President of the United States in his efforts to subdue this unholy rebellion, and restore peace and order to this State.

An ordinance was then adopted fixing the time for all subsequent general elections on the Tuesday next after the first Monday in November, and the convention adjourned to the 4th of July, 1863, unless sooner called together by the governor.

On June 16th, in pursuance of a call issued some time previous, a mass convention of emancipationists, consisting of 195 delegates from 25 counties, assembled at Jefferson City, to organize the party for the fall elections. The following, among other resolutions, were unanimously adopted by the convention, a considerable number, if not a majority, of whom were slaveholders:

Resolved, That the President of the United States, by and with the approval of the National Congress, having invited the loyal slave States to a consideration of the propriety of initiating a system of gradual emancipation for the purpose of relieving themselves from the incubus of slavery, and removing causes that are seized upon to promote disloyalty; and, furthermore, our own State Convention having had that subject before them for action and thought, and having, after mature reflection, resolved it was, in view of present exigencies, one worthy of "the deliberate and respectful consideration of the people of the State of Missouri," therefore we take this the earliest opportunity of bringing the subject matter involved before our citizens for their consideration, in order that they may take such action in regard thereto, both as they have been invited to take, and as the public necessities require they should take in the premises.

Resolved, That we are in favor of initiating forthwith a system of emancipation for the State of Missouri, gradual in its character, and the operation of which shall be so adjusted as not to work injury to the pecuniary interests of any loyal citizens whose vested property rights may be involved, and not to disturb by any violent disruption present social relations in our community.

Resolved, That the General Government, by the munificent tender of aid to the State, has relieved the question of emancipation in Missouri of all constitutional and financial embarrassment.

Resolved, That it should be the duty of the next General Assembly of this State to take measures for securing from the National Government the aid pledged by resolution of Congress to those States undertaking the establishment of a system of gradual emancipation, and that the same should be so disposed of as to insure compensation to such as may be adjudged as entitled to compensation for any losses that may be sustained in the inauguration and consummation of such a policy.

Scarcely had the two conventions dissolved when the State was threatened by a new and formidable outbreak of guerillas, who were emboldened by the absence of the greater part of the national forces to repeat on a more extensive scale their operations of the previous year. The greater part of them consisted of the disbanded troops of Gen. Price.

On June 22, Gen. Schofield issued an order holding "rebels and rebel sympathizers responsible in their property, and, if need be, in their persons, for damages thereafter committed by guerillas or marauding parties."

This had so little effect that by the middle of July the whole northern and western parts of the State were disturbed by rumors of guerilla raids and outrages. In the northeast quarter Col. Porter and Col. Quantrell began, as early as the last week in June, to gather followers about them, and early in July the former was defeated and his band dispersed, at Cherry Grove, in Schuyler county, on the Iowa line.

The increasing alarm in the State, heightened by the apprehension that the sudden rising of the guerillas was to be followed by another invasion from the South, rendered necessary vigorous measures of defence, and on July 22 the following important order was issued by Governor Gamble:

HEADQUARTERS, STATE OF MISSOURI,
ADJUTANT-GENERAL'S OFFICE, ST. LOUIS, *July* 22, 1862.

The existence of numerous bands of guerillas in different parts of the State, who are engaged in robbing and murdering peaceable citizens, for no other cause than that such citizens are loyal to the Government under which they have always lived, renders it necessary that the most stringent measures be adopted to punish all such crimes, and to destroy such bands.

Brigadier-General John M. Schofield, in command of the Missouri State militia, is hereby authorized to organize the entire militia of the State into companies, regiments, and brigades, and to order into active service such portions of the force thus organized, as he may judge necessary for the purpose of putting down all marauders, and defending peaceable citizens of the State.

H. R. GAMBLE,
Governor of the State of Missouri.

This was followed on the same day by an order from Gen. Schofield for the immediate organization of all the militia of Missouri for the purpose of exterminating the guerillas infesting the State.

The organization of the militia was effected with energy and rapidity, and in a brief space of time the forces of the State were prepared to make vigorous opposition to the guerillas in all quarters.

On July 28, Cols. Porter and Cobb were defeated in Calloway county, on the Missouri river; but within three days the former captured Newark, in Knox county, with two companies of national troops. About the same time a new partisan leader, Col. Poindexter, began to be active in the central counties on the Missouri, and during the first week in August his movements, together with those of Col. Quantrell in the west, compelled the national commanders to take additional measures of precaution. On August 6th, Col. Porter

was disastrously defeated by Col. McNeil, at Kirksville, in Adair county, and for several weeks was compelled to keep aloof from active operations. As a consequence, the war shifted to central and western Missouri, where Cols. Coffee and McBride were reported to have come to the assistance of Col. Quantrell.

After a series of desultory skirmishes, an attack was made on the 13th by the combined bands of these leaders, who had been joined a short time previous by Col. Hughes, and other officers of the Confederate army, upon Independence, resulting in a severe defeat of the State troops; and two days later a body of 800 of the latter were drawn into an ambuscade at Lone Jack, Jackson county, by Cols. Quantrell and Coffee, losing two pieces of cannon, and a number of prisoners. Heavy reënforcements under Gen. Blunt, of Kansas, coming up, however, the guerillas beat a hasty retreat southward, and never paused until they were over the Arkansas line.

Scarcely was the southwest cleared of guerillas than their operations commenced in the north with renewed activity. Col. Poindexter, after several defeats, was captured early in September, but so daring were the raids of Col. Porter and his followers in Lewis, Maria, and other northeastern counties, that a Palmyra newspaper declared the whole of that part of the State "to be in the possession of the rebels, with the exception of the posts immediately garrisoned by State or United States troops." It estimated the number of the Confederates at 5,000, divided into numerous small bands, and commanded by reckless and enterprising leaders. On the 12th, Palmyra, occupied by a small Union garrison, was plundered by Col. Porter's force; but, subsequent to the 15th, the efforts of Cols. McNeil, Guitar, and other Union commanders began to discourage the guerillas, whose strength was gradually frittered away in petty combats.

By an order from the War Department of September 19, the States of Missouri, Kansas, and Arkansas were formed into a military district, under the command of Gen. Curtis, and soon after Gen. Schofield assumed command of the so-called "Army of the Frontier" in southern Missouri. Moving with rapidity and in considerable force, he broke up a formidable camp in Newtonia, and by the 10th of October had driven the enemy completely over the Arkansas border. In the latter part of the same month Cols. Lazear and Dewry defeated the Confederate bands in southeastern Missouri in several engagements, capturing many prisoners, and driving them finally into Arkansas. Col. Quantrell had reappeared in the west in the middle of September, but was almost uniformly beaten in his encounters with the State troops, and by the end of October the war, both there and in the north, was practically ended.

Before this event was consummated in the north an incident occurred in Palmyra, which created no little comment throughout the State. On the occasion of Col. Porter's raid upon Palmyra, in September, he had captured, among other persons, an old and respected resident of the place, by name Andrew Allsman, who had formerly belonged to a cavalry regiment, and had been, from his knowledge of the surrounding country, of great service to scouting parties sent out to arrest disloyal persons. Allsman was not paroled like ordinary prisoners, but was conveyed by the band to one of their hiding places, and from the known hatred of his captors and their repeated threats, it was believed that he would be summarily executed by them. When several weeks had elapsed without intelligence of him, this belief ripened in the minds of his friends into absolute conviction, particularly as several Union men had been barbarously murdered by the guerillas in the course of the campaign.

When Gen. McNeil returned to Palmyra, and ascertained the circumstances under which Allsman had been abducted, he caused to be issued, after due deliberation, the following notice:

PALMYRA (Mo.), *October* 8, 1862.

JOSEPH C. PORTER.—SIR: Andrew Allsman, an aged citizen of Palmyra, and a non-combatant, having been carried from his home by a band of persons unlawfully arrayed against the peace and good order of the State of Missouri, and which band was under your control, this is to notify you that unless said Andrew Allsman is returned unharmed to his family within ten days from date, ten men who have belonged to your band, and unlawfully sworn by you to carry arms against the Government of the United States, and who are now in custody, will be shot, as a meet reward for their crimes, amongst which is the illegal restraining of said Allsman of his liberty, and, if not returned, presumptively aiding in his murder. Your prompt attention to this will save much suffering.

Yours, &c. W. R. STRACHAN.
Provost Marshal General,
District N. E. Missouri. Per order of Brigadier-Gen.
Commanding McNeil's column.

A written duplicate of this notice he caused to be placed in the hands of the wife of Joseph C. Porter, at her residence in Lewis county, it being well known that she was in frequent communication with her husband. The notice was published widely, and as Porter was in northeast Missouri during the whole of the ten days subsequent to the date of this notice, it is supposed to be impossible that he should have been unaware of Gen. McNeil's determination in the premises.

The ten days having elapsed without tidings of Allsman, ten prisoners, already in custody, were selected to pay with their lives the penalty demanded.

They received the announcement for the most part with composure or indifference, and were executed at Palmyra, on October 18, in the presence of a multitude of spectators, in literal accordance with the notice of Gen. McNeil.

The act excited the animadversions of many friends of the Union cause, and gave occasion

to a vindictive retaliatory order from President Davis. (*See* PRISONERS, EXCHANGE OF.)

Early in October the political parties began to prepare for the November election, and the issue of emancipation or anti-emancipation was at once distinctly set before the people of the State. The emancipationists, however, were divided in sentiment on several important points, the radical portion, under the lead of B. Gratz Brown, of the "Missouri Democrat," being in favor of immediate emancipation, while the more conservative members of the party, represented by Col. Frank P. Blair, urged a gradual removal of slavery from the State. Many of the latter were slaveholders and residents of large slaveholding districts, and, although pledged unconditionally to the maintenance of the Union, were necessarily averse to the too sudden dissolution of the relations of master and servant. Throughout the State generally the two divisions of the party united in the support of the same candidates; but in St. Louis a somewhat bitter contest was waged between them, which, had not the democrats been in a very small minority, might have led to the defeat of the emancipation ticket in that city.

On Tuesday, Nov. 4, the election took place, and resulted in the choice of the following members of Congress: 1st district, F. P. Blair; 2d do., H. T. Blow; 3d do., John W. Noell; 4th do., S. H. Boyd; 5th do., J. W. McClurg; 6th do., Austin A. King; 7th do., Benjamin Loan; 8th do., W. A. Hall; 9th do., James S. Rollins. Of these Blair, Blow, Noell, Boyd, McClurg, and Loan were avowed emancipationists, King and Hall democrats, and Rollins a Union man. In St. Louis, the contest between Blair and Knox, the radical emancipation candidate, was very close, the official return showing a vote of 4,743 for Blair to 4,590 for Knox, and 2,536 for Bogy, democrat. The emancipationists were equally successful in securing a majority in both branches of the Legislature, that in the lower house being large.

On December 29, the new Legislature met at Jefferson City, and the House of Representatives was immediately organized by the election of the emancipation candidate for Speaker, by a vote of 67 to 42. On the succeeding day Governor Gamble submitted his annual message.

After congratulating the Legislature and the State upon the fact that a Union General Assembly had at length been convened, he reviewed the condition of the State since the outbreak of secession, and showed that the number of volunteers from Missouri, after allowing for the casualties of war, and mustering out irregularly enlisted troops, was 27,500, which, with 10,500 State militia, gave a total force of 38,000 men in service for the war. The enrolled militia, numbering 52,000, would give the State the grand total of 90,000, the latter force furnishing a large body of men, armed and equipped for any emergency.

The indebtedness of the State, according to report of the auditor, was stated at $27,370,090, composed of the following items:

Miscellaneous debt	$602,000
Pacific Railroad bonds (main)	7,000,000
Pacific Railroad, Southwest branch	4,500,000
Hannibal and St. Joseph	3,000,000
North Missouri	3,350,000
Iron Mountain	3,600,000
Cairo and Fulton	650,000
Platte county	700,000
Revenue bonds	431,000
State defence warrants	725,000
Arrears of interest due	1,812,090
	$27,370,090

In view of the constantly increasing arrearages of interest upon this sum, owing to the impossibility of collecting the State taxes during the continuance of the civil war, he earnestly recommended the adoption of measures to restore the State credit and reduce the State debt.

On the subject of emancipation he observed that he had long been convinced that the material interests of Missouri would be advanced by substituting free for slave labor, and recommended a plan by which the children of slaves born after the passage of the act shall be free, but remain under the control of their owners until they have arrived at a certain age, the owners to be compensated for the diminished value of slave mothers after being thus rendered incapable of bearing slave children. He, however, denied that the Legislature could constitutionally adopt a scheme by which the owners of slaves could be divided into classes, and the slaves of one class be emancipated without compensation while compensation was provided for the other class.

MITCHEL, ORMSBY MACKNIGHT, an American astronomer, and major-general of volunteers in the United States service, born in Union co., Ky., Aug. 28, 1810, died of yellow fever, at Beaufort, S. C., Oct. 30, 1862. He received his early education at Lebanon, Warren co., Ohio, and, at 12 years of age, began life for himself as clerk in a store in Miami, Ohio. In 1825 he received an appointment to a cadetship in West Point. In 1829 he graduated fifteenth in a class of 46, among which were Robert E. Lee and Joseph E. Johnston, now generals in the Confederate service. He was at once appointed assistant professor of mathematics, which position he occupied for two years. He subsequently studied law, was admitted to the bar, and practised in Cincinnati until 1834, when he was elected professor of mathematics, philosophy, and astronomy in the Cincinnati College. In 1845 he proposed the establishment of an observatory at Cincinnati, raising nearly the whole of the requisite amount by his own exertions, and was made director of the institution. To obtain the necessary apparatus he took a flying trip to Europe, visited London, Paris, and Munich, completed his contracts and returned to his college duties in the short space of 14 weeks. In 1859 he was chosen director of the Dudley Observatory at

Albany, retaining, at the same time, his connection with that at Cincinnati. As an astronomical lecturer, he was exceedingly popular, and among the monuments of his skill in perfecting the necessary apparatus for that department of science is an instrument at Albany for recording right ascensions and declinations by electro-magnetic aid to within $\frac{1}{1000}$ of a second of time, and for the measurement, with great accuracy, of large differences of declination incapable of being reached by the micrometer.

Among his published works are: "Planetary and Stellar Worlds," "Popular Astronomy," and a treatise on Algebra. On the 1st of July, 1846, he commenced the publication of a periodical entitled the "Sidereal Messenger," which, at the end of two years, was discontinued for want of sufficient patronage. At the breaking out of the present war, Professor Mitchel left his scientific pursuits and sought an opportunity of serving his country. In August, 1861, he he was commissioned brigadier-general of volunteers, and ordered to the department of the Ohio, under the command of Maj.-Gen. Buell. After the capture of Bowling Green and Nashville he made a forced march southward and seized the railway between Corinth and Chattanooga, thereby breaking the enemy's line of communication, and possessed himself of various points in northern Alabama, for which he was made a major-general. In July, 1862, he was relieved of his command, and, on the 17th of the September following, was appointed commander of the department of the South, where he was making preparations for a vigorous campaign when he fell a victim to the yellow fever.

N

NASHVILLE. Intelligence of the capture of Fort Donelson reached Nashville on Sunday, February 16, and produced the utmost consternation. The Confederate governor, Harris, immediately convened the Legislature, but they speedily adjourned to Memphis, whither the public archives and money were also removed. On the same day, Gen. A. S. Johnston passed through the city on his retreat from Bowling Green, and, before nightfall, hundreds of families were abandoning their homes and making their way southward. The general confusion was increased by the destruction of unfinished steamers at the wharves, and the free distribution of the stores by the military authorities to all who would take them. On Monday the public stores were closed, and an effort was made by Gen. Floyd, who had been placed in command of the city, to recover what had already been given out; but on Tuesday the distribution began again, and continued until Saturday morning. On Tuesday night the troops destroyed the wire bridge and railroad bridge across the Cumberland river, in spite of the earnest remonstrances of the leading citizens. The former cost $150,000, and the latter $250,000. Governor Harris made a speech recommending the citizens to burn their private property, and calling on Tennesseeans to rally and meet him at Memphis, but little or no response was made to his appeal. The machinery was removed from many of the most important workshops and carried to Chattanooga. On the 23d, the rear guard of the Confederates evacuated the city, and the same day the advance of Gen. Buell's column occupied Edgefield, a small town on the opposite side of the river. The next day Mayor Cheatham and a committee from Nashville waited upon the general, and agreed to surrender the city at a certain hour on the following morning (the 25th), receiving assurances that the liberty and property of all citizens should be sacredly respected. Before the surrender was effected, however, Gen. Nelson arrived with his column on transports, accompanied by the gunboat St. Louis, and landed at Nashville. The following proclamation was afterward issued by the mayor:

> The committee representing the city authorities and people have discharged their duty by calling on Gen. Buell, at his headquarters, in Edgefield, on yesterday. The interview was satisfactory to the committee, and there is every assurance of safety and protection to the people, both in their persons and property. I therefore respectfully request that business be resumed, and that all our citizens of every trade and profession pursue their regular vocations. The county elections will take place on the regular day, and all civil business will be conducted as heretofore. Commanding General Buell assures me that I can rely upon his aid in enforcing our police regulations. One branch of business is entirely prohibited, viz., the sale or giving away of intoxicating liquors. I shall not hesitate to invoke the aid of Gen. Buell in case the recent laws upon the subject are violated. I most earnestly call upon the people of the surrounding country, who are inside the Federal lines, to resume their commerce with the city, and bring in their market supplies, especially wood, butter, and eggs, assuring them that they will be fully protected and amply remunerated.
>
> R. B. CHEATHAM, Mayor.

The city remained perfectly quiet, and the Federal troops, to use the words of the Confederate press, "conducted themselves with marked propriety." The Union feeling in the city, however, was for many weeks extremely faint. A correspondent, writing ten days after Gen. Buell's arrival, says: "The disagreeable, but irresistible conviction forces itself upon the mind of even a superficial observer, that whatever the number and warmness of Unionists may have been at the time when, and for some time after Tennessee was juggled out of the Union, eight out of every ten have been made submissionists by the protracted secession pres-

sure that was brought to bear upon them." The same writer adds: "Most of the stores continue closed. But few male and fewer female inhabitants are visible upon the streets. Victorious soldiery alone enliven them. Half of the private residences are deserted, and add further gloom to the aspect by their closed doors and window shutters and grave-like stillness. Hardly less than a third of the population must yet be absent."

Senator Andrew Johnson, military governor of Tennessee, by appointment of President Lincoln, Horace Maynard, M. C., Emerson Etheridge, and other prominent Union exiles, arrived at Nashville on March 12, and the next evening delivered speeches, which were listened to with considerable favor by a large audience.

The newspapers of Nashville had all suspended publication on the evacuation of the city by the Confederates, but they soon reappeared, and one of Governor Johnson's first official acts was to place them under military supervision. The "Daily Times," in consequence of this measure, was discontinued. On the 10th of April, a daily paper was started, under the title of the "Daily Nashville Union."

On the 25th of March, Governor Johnson requested the municipal officers to take the oath of allegiance. The city council refused, by a vote of 16 to 1, and the following reply was accordingly sent to the governor:

CITY HALL, NASHVILLE, *March* 27, 1862.

Gen. Andrew Johnson, Military Governor of the State of Tennessee:

SIR: Your communication of the 25th inst., requiring the mayor, members of the city council, police, and other city officials, to take an oath to support the Constitution of the United States, pursuant to the first section of the tenth article of the Constitution of the State of Tennessee, has been received and duly considered.

We respectfully beg leave to submit the following facts for your Excellency's consideration:

Since we have had any connection with the city Government, which, in some cases, has been for several years, we have never before been required to take any other oath than the simple oath of office, to discharge our respective duties faithfully; and upon a reference to the records of the city, running back for twenty-five or thirty years, we find that no former mayor nor aldermen have taken any oath to support either the Constitution of the State of Tennessee or the United States; but the understanding seems to have been that the provision of the Constitution referred to applied only to State and county, and not to corporation officers.

We have also consulted some of our best lawyers upon the subject, and the majority of them are of opinion that we, as municipal officers, do not come within the purview and meaning of said section of the Constitution, but that the same applies alone to State and county officials.

Under the foregoing facts and circumstances, and we having taken the only oath ever taken by, or required of, our predecessors, and never having been required to take any oath inimical to our allegiance to the United States or the State Government, we respectfully ask to be excused from taking the oath sent us, honestly believing that, under the Constitution and our charter, we are not properly subject to such requirement, and believing that the same was made of us under a misapprehension of what had been required heretofore.

On the 29th the mayor and several other citizens were arrested for treason, and a few days later Governor Johnson issued a proclamation ejecting from office the mayor and most of the city councilmen, and appointing other persons to fill their places. Numerous arrests were made for disunion practices about the same time.

On April 24 the following resolutions were adopted by the city council:

Resolved, That the Mayor of the city of Nashville is requested and instructed to have the flag of the United States placed upon all public property belonging to the Corporation.

Resolved, That the Board of Education are hereby requested, during the present week, to take the oath of office taken by ourselves and other officers of the city.

Resolved, That the Superintendent, together with every teacher in each of the public schools of the city of Nashville, shall be and they are hereby requested to take the oath of allegiance prescribed to us within five days from the passage of this resolution, or resign their respective positions.

The last resolution was lost in the board of Aldermen. The condition of the city on the 1st of May is thus described by the "Union":

"Our courts are proceeding pretty much as formerly. The United States court is in session, and the regular business pursuing its accustomed channels. Process is being issued daily from the circuit and chancery courts, returnable to their next terms. The magistrates' courts are also in continuous session. Business is beginning to recover and to wear its accustomed appearance, and as facilities are being opened with the country, it is extending in all directions. Our city market is daily improving. Prices are rapidly moderating to a reasonable standard, and custom proportionately increasing. The passenger and freight trains on the Louisville and Nashville railroad are making daily trips. The cars on the Tennessee and Alabama road run as far as Columbia; those on the Nashville and Chattanooga road run as far as Wartrace, and connect by branch road with Shelbyville. Houses left vacant, some time since, are now nearly all occupied, and the inquiry for houses to rent is becoming active. This is the case with both dwelling and business houses. Some sales in real estate are being effected at reasonably good prices. Confidence in our State currency is being restored, and there is a corresponding appreciation in the value of our bank notes."

A great Union meeting was held at Nashville on the 12th. (*See* TENNESSEE.)

On the 24th several Confederate newspaper offices and other establishments were seized by the United States marshal, in accordance with the general confiscation act passed by Congress.

On the 29th General Dumont, commanding the Federal forces at Nashville, issued the following order respecting trade with the interior:

General Orders No. 7.

Whereas, it is represented to me that salt, bacon, coffee, iron, leather, medicines, and other goods, are being sold in this city and finally find their way to the enemy:

It is ordered that no goods shall be sold in, or taken away from, this town or vicinity, toward the enemy's lines, without a written permit from the Provost Marshal of the city, which permit shall specify and contain an accurate list of the articles that may be bought, sold, and shipped; but this prohibition shall not apply to necessary articles, not contraband, in small quantities absolutely necessary for family use, sold to citizens of the town or neighborhood, the person selling and buying and transporting being held to a rigid accountability that no improper use is made of the same.

Any person violating this order, or in any way aiding or consenting to its violation, will be held as an enemy and punished accordingly.

All guards and officers are charged with the arrest of any and all persons violating this order, and will examine wagons and other vehicles of transportation, to see that it is enforced.

On June 8 an order was published entirely forbidding the retailing of intoxicating liquors.

On July 13 the Nashville "Union" published the names of some 700 persons, a portion of those who had voluntarily taken the oath of allegiance before the provost marshal in that city.

The ravages of the guerillas in the vicinity of Nashville caused great alarm, and it was believed that they were about marching upon the city, which at this time was but ill prepared for a defence. At the suggestion of a few private persons the military band of the 69th Ohio marched through the streets on the 14th, and word being given that the loyal citizens would hold a meeting for the purpose of organizing a force for home defence, in a short time a large procession gathered and proceeded to the capitol. Here they were addressed by the governor, the mayor, and other persons, and the governor, in the course of his speech, made the following offer: "All loyal men who will take the obligation, will be furnished with arms and ammunition. If the volunteers serve as much as a month, they shall be paid for their time, and if absent from home shall receive rations."

A large force was very soon recruited, and reënforcements arrived also from the army, so that the panic died out. Toward the end of the month the guerrillas succeeded for a time in completely cutting off communications by railroad and telegraph between Nashville and the North. Some of the streets of the city were barricaded on the night of July 21, in anticipation of the approach of Col. Forrest, and the work of fortifying the city was pushed forward with the greatest possible rapidity. One thousand negroes, belonging to Confederate slaveowners of the county, were impressed by Col. Miller, commanding the post, to labor on the fortifications. Their masters were required to provide them with tools and subsistence, and the length of service and terms of payment were to be fixed by the Government. About the middle of August railroad communication with Nashville was again cut off; prices of nearly all the necessaries of life rose to an unprecedented height, and apprehensions were felt of a scarcity of provisions. The demolished tracks and bridges were replaced as speedily as possible, but intercourse continued extremely precarious and irregular.

The following circular was addressed by Gov. Johnson to a number of the richest secessionists of Nashville, especially to those who had distinguished themselves by their hostility to the Federal Government or their active friendship for the rebel authorities:

STATE OF TENNESSEE, EXECUTIVE DEPARTMENT,
NASHILLE, *August* 18, 1862.

SIR: There are many wives and helpless children in the city of Nashville, and county of Davidson, who have been reduced to poverty and wretchedness in consequence of their husbands and fathers having been forced into the armies of this unholy and nefarious rebellion. Their necessities have become so manifest, and their demands for the necessaries of life so urgent, that the laws of justice and humanity would be violated unless something was done to relieve their suffering and destitute condition.

You are therefore requested to contribute the sum of dollars, which you will pay over within the next five days to James Whitworth, Esq., Judge of the County Court, to be by him distributed among these destitute families in such manner as may be prescribed.

Respectfully, &c.,
ANDREW JOHNSON, Military Governor.

Attest:
EDWARD H. EAST, Secretary of State.

The sums thus assessed ranged from $50 to $300.

Gen. Rousseau took command at Nashville about the 28th of August, by which date the capital was again, for the fourth time since its occupation by the Union forces, completely isolated from the North. Gen. Rousseau was succeeded a week or two later by Maj.-Gen. Thomas, and he shortly afterward by Gen. Negley. In view of a threatened attack upon the city by Gen. Bragg, police and military regulations were made more stringent. On the 9th of Sept. an order was issued by the provost marshal forbidding the "sale of intoxicating liquors (spirituous, malt, or vinous), wholesale or retail, publicly or privately," in the city of Nashville and vicinity; and on the 10th the following order was published by command of Gen. Thomas:

Hereafter any citizen found in the streets of Nashville between the hours of 9 P. M. and reveille (daylight) without a written pass, will be arrested and confined. Passes to be out after 9 o'clock P. M. will only be granted at the headquarters of the Major-General Commanding.

The Confederate generals J. R. Anderson and Forrest, with the Confederate governor, Harris, concentrated a large force with the avowed purpose of assaulting Nashville; but on Oct. 7 were completely routed at Lavergne, 15 m. from the city by a detachment of Gen. Negley's forces under command of Gen. Palmer. Soon afterward a force of 8,000 or 10,000 Confederates appeared before Nashville and opened a cannonade from a hastily constructed battery, but they were driven off with little difficulty, the movement having been probably a feint to cover other operations. At the same time Col. Morgan's guerillas attempted to destroy the railroad bridge at Nashville (which had been re-

built), but were repulsed with some loss. The army and citizens were now subsisting almost entirely upon supplies obtained by foraging in the neighborhood; and as the Confederates not only restricted to a few miles the area within which Gen. Negley's forage parties could safely operate, but also ravaged the country themselves almost to the outskirts of the city, provisions soon became distressingly scarce. When the advance of Gen. Rosecrans's army reached Nashville, early in November, reopening communication with the North, the troops had been for some time on half rations. From this period until the close of the year the city was the headquarters of Gen. Rosecrans.

About the 20th of November the board of trade appointed in the spring to grant recommendations to loyal persons wishing to ship goods to Nashville resumed operations, and permits to a limited extent were given to traders friendly to the Government.

On the 9th, in order to prevent misunderstandings between citizens and soldiers, Gen. Rosecrans issued an order reminding the troops that loyal men were entitled to all the rights, privileges and protection due to any citizen; that peaceable inhabitants, whether loyal or not, were entitled to immunity from violence and plunder, subject only to needful surveillance; and that outspoken rebels could claim no other protection than that afforded by the laws of war and humanity. Citizens guilty of any acts of hostility, or belonging to partisan corps, being removed beyond the reach of proper military control, were to be treated as pirates and robbers. Soldiers were strictly forbidden to enter private grounds or houses without written permission or order from a commissioned officer, who was to be held responsible for all that was done. Another order, addressed to provost marshals and their deputies, gave special instructions for avoiding unjust and unnecessary arrests of private persons. General Orders No. 23, after prescribing regulations for sutlers, designed to prevent goods from being passed South through the lines of the army, announced that "in towns and cities now or hereafter within the lines of this army, no one will be allowed to sell goods needed for the use of the resident citizens, unless he be a resident trader."

On Dec. 13 Governor Johnson published a proclamation, nearly identical in terms with his circular letter of August 18, calling attention to the destitute condition of the widows, wives, and children of Confederate soldiers, and ordering an assessment of some $60,000 for their benefit, "from those who contributed directly or indirectly to bring about this unfortunate state of affairs." The population of Nashville in 1860 was 16,988.

NAVY, CONFEDERATE. The passage of secession ordinances by the several States united under the title of Confederate States, was immediately followed by the resignation of nearly all the officers of the United States Navy, who were residents of any one of those States. These resignations were made with the intention of seeking service under the new Government about to be organized. Their applications met with a ready response from the Confederate Government. A Navy Department was at once organized, and these officers were appointed with a rank similar to that which they had previously held. The grades of rank were afterward altered as follows: admiral, flag-officer, captains, commanders, lieutenant commanding, first and second lieutenants, lieutenants for the war, masters, passed midshipmen, midshipmen, &c. The officers were assigned to the ports of the Confederate States to perform such duties as might offer in connection with the small steamboats at those places. The operations at sea, under the authority of the Confederate Government, are hereto annexed.

The operations of the Confederate privateer Sumter were closed in the year 1861 by the refuge of the vessel in Gibraltar, where, being unable to procure coal, she remained watched by the Federal ship Tuscarora. The Sumter was finally sold, and the Federal steamer left Gibraltar, Jan. 13th, for the Spanish waters of Algesiras. The efforts of the Confederates were then turned to the formation of an extensive navy by purchasing vessels in England. It very soon became apparent that a number were in process of construction at the shipyards near Liverpool, and the attention of the British Government was called to the fact, which became the basis of diplomatic correspondence. Early in April, the American minister, Mr. Adams, addressed Earl Russell relative to the Oreto, then in a forward state, and by general report destined for the Confederate service. For particulars respecting her construction and departure from England, *see* DIPLOMATIC CORRESPONDENCE. On her arrival at Nassau, she was immediately seized by the captain of her Majesty's steamer Greyhound, but almost as quickly released. Shortly after she was seized again, but, after some difficulty, released again. The authorities appeared to have great doubts as to whether she was or was not intended for the Confederate service. On one occasion, when the British gunboat Bulldog went to seize her, she was discharging shell. The Oreto, on the 4th of September, suddenly appeared off Mobile harbor, which was blockaded by a steamer under Commander George Henry Preble, whose instructions were emphatic against giving offence to foreign nations while enforcing the blockade. The Oreto approached flying the English flag and pennants. Commander Preble hesitated to fire lest the stranger should really prove an English man-of-war. The few moments' time lost in the hesitation sufficed for the Oreto to pass out of range and gain her object, getting safely into Mobile bay with her freight. For this want of success, Commander Preble was summarily dismissed from the service without a hearing.

On the 27th of December, the Oreto again left Mobile bay, fully armed for a cruise, under the command of John Newland Maffit, who was born in Ireland, and when quite young was brought to this country by his father, a celebrated preacher of the same name; was appointed to the United States navy from the State of New York. He originally entered the naval service in the year 1832, and became a citizen of Georgia.

After the sale of the Sumter her captain, Semmes, was active in England in building a new vessel, and it was soon ascertained that one was in a forward state for the Confederate service. Complaint was made to the British Government of infringement of the neutrality laws, and means were taken to prevent the departure of the vessel as she approached completion. The orders came, however, too late. Meantime a barque had loaded in London with arms, and sailed from the Thames. The United States ship Tuscarora was at the same time watching for the Alabama to make her appearance, but she avoided her by taking the North Channel out. After a short run she arrived at the Western Islands, giving an excuse to the authorities for making harbor there. Soon after the barque arrived, alleging stress of weather. The Alabama at once hauled alongside of the barque, and cranes were rigged by the order of the Alabama's captain. When in readiness he began to transfer the cargo, and this infringement of quarantine rules excited the ire of the Portuguese authorities, but it was alleged that the bark was sinking and it was necessary to save the cargo. On the following day, when the transfer was nearly completed, the British screw steamer Bahama arrived, bringing Capt. Semmes and other late officers of the Sumter, the remainder of the armament, and 20 more of the crew. This arrival exhausted the patience of the authorities, and all three vessels were ordered to leave at once. The Bahama handed over to the Alabama what was destined for her and left immediately, followed by the "290," towing the bark. They went a few leagues to Angra bay and remained 24 hours, when they were again ordered to leave, which they did, all being now in readiness. The bark left for Cardiff to load coal for the Alabama. Capt. Semmes then took command, mustered the crew, read his commission as post captain in the Confederate navy. It was a document duly attested at Richmond, and bore the signature of "Jefferson Davis, President, Confederate States of America." He then opened and read his sealed orders from the President, directing him to assume command of the Confederate sloop-of-war Alabama, hitherto known as the 290, in which (having been duly commissioned) he was to hoist the Confederate ensign and pennant, and "sink, burn, and destroy everything which flew the ensign of the so-called United States of America." Captain Semmes then ordered the first lieutenant to fire a gun, and run up the Confederate flag and pennant. The gun was fired by the second lieutenant (Armstrong, a relation of the famous inventor), and ere its smoke had cleared away, the stars and bars of the Confederacy were floating on the breeze, and the ceremony was complete; Captain Semmes declared the vessel, henceforth to be known as the Alabama, to have been duly commissioned. The next step was formally to engage the crew to serve and fight under the Southern flag, which having been done, the men were addressed by their captain, who informed them that if any of the crew were dissatisfied they could leave in the Bahama about to take her departure for England. The offer was declined, the two vessels parted company, the Bahama for England and the Alabama in chase of a whaler. The operations of the vessel were very active. The following is a list of vessels captured and destroyed by her:

Sept.	6,	Ship Ocmulgee	Edgartown,	Burned.
"	7,	Schooner Starlight	Boston,	"
"	9,	Bark Alert		
"	9,	Schooner Weather Gauge	Provincetown,	"
"	9,	Bark Ocean Rover	Mattapoisett,	"
"	13,	Ship Benjamin Tucker	New Bedford,	"
		Bark Osceola		"
		Bark Virginia, Tilton	" "	"
		Ship Elisha Dunbar, Gifford	" "	"
		Brig Allamaha	Sippican,	"
		Schooner Courser	Provincetown,	"
Oct.	3,	Ship Brilliant, Hagar	New York,	"
"	3,	Ship Emily Farnham, Simms	" "	Released.
"	10,	Ship Tonawanda	Philadelphia,	Bonded.
"	15,	Ship Lamplighter	New York,	Burned.
"	15,	Ship Manchester	" "	"
"	15,	Brig Dunkirk	" "	"
"	23,	Ship Lafayette, Small	" "	"
"	23,	Schooner Ocean Cruiser	" "	"
"	26,	Schooner Crenshaw	" "	"
"	28,	Bark Laurietta, Wells	Boston,	"
"	29,	Brig Baron de Castine, Saunders		Bonded.
Nov.	2,	Schooner Alice		
"	8,	Ship I. B. Wales	Boston,	Burned.
"	18,	Steamer Ariel	New York,	Bonded.
		Ship Levi Starbuck		
"	30,	Bark Parker Cook, Fulton	Boston,	Burned.
Dec.	5,	Schooner Union	Baltimore,	Bonded.

Ship Lafayette had a cargo consisting of 13,369 bushels of wheat, 47,663 bushels of corn, and 16,850 lbs. of lard.

Bark Lamplighter had a cargo of 300 hhds. of tobacco.

Bark Laurietta had a cargo of 1,424 bbls. of flour, 225 kegs of nails, 998 bbls. of flour, 205 boxes of herring, and 7,200 staves.

Schooner Crenshaw had a cargo of 1,298 bbls. of flour and 9,272 bushels of wheat.

Ship Manchester had on board 45,141 bushels of wheat and 14,666 bushels of corn.

Brig Dunkirk had a cargo of 2,967 bbls. of flour and 6,000 staves.

Ship Tonawanda, her cargo being insured in England, was released on giving a bond for $80,000. She had a cargo of 48,700 bushels of wheat, 40 bbls. of flour, 36 hhds. of bark, 172 cases of wine, 128 bales of hemp, and 50 bales of hops and rags.

The course of the Alabama was to destroy, since under the regulations of foreign powers she had no means of landing and condemning her prizes. Her case is certainly a very peculiar one. She has neither register nor record, no regular ship's papers nor evidence of transfer, and no vessel captured by her has ever been sent into any port for adjudication and condemnation. All forms of law which civilization has introduced to protect and guard pri-

vate rights, and all those regulations of public justice which distinguish and discriminate the legalized naval vessel from the pirate, are disregarded and violated by this famous rover, which, though built in and sailing from England, has no acknowledged flag or recognized nationality, nor any accessible port to which to send any ship she may seize, nor any legal tribunal to adjudge her captures. She was built and fitted out in British ports in alleged violation of British law and of the royal proclamation of neutrality, and her crew is composed almost exclusively of British subjects, or persons who, pursuing a lawful voyage, would be entitled to ship and receive protection as British seamen. Most of the crew sailed from Liverpool to join her, and others volunteered from captured vessels, as in the case of the crew of the ship Brilliant. The prize money or half the value of the vessels and cargoes destroyed was, it was stated, regularly paid in money to the crew, who were thus large gainers, and their prosperity tempted the men of captured vessels, from which also supplies were procured. Among the first of the captured were the Virginia and the Elisha Dunbar. The statements of the captains of those vessels indicate the course pursued by the Confederate commander.

Captain Tilton, of the Virginia, says that he was overhauled by the Alabama on the morning of the 17th of September, in lat. 39° 10′, and long. 34° 20′. The enemy showed British colors, but when a quarter of a mile from the Virginia set Confederate colors, and sent an armed boat's crew on board. Captain Tilton was informed that he was a prize to the Alabama, and was ordered to take his papers and go on board that steamer. The Confederates then stripped the ship of all the valuable articles on board, and at 4 P. M. set fire to the vessel. Captain Tilton adds:

I went on the quarter deck with my son, when they ordered me into the lee waist, with my crew, and all of us put in irons, with the exception of two boys, cook and steward. I asked if I was to be put in irons? The reply was that his purser was put in irons and his head shaved by us, and that he was going to retaliate. We were put in the lee waist, with an old sail over us and a few planks to lie upon.

The steamer was cruising to the west, and the next day they took the Elisha Dunbar, her crew receiving the same treatment as ourselves. The steamer's guns being kept run out the side ports could not be shut, and when the sea was a little rough or the vessel rolled, the water was continually coming in on both sides and washing across the deck where we were, so that our feet and clothing were wet all the time, either from the water below or the rain above.

We were obliged to sleep in the place where we were, and often waked up in the night nearly under water. Our fare consisted of beef and pork, rice, beans, tea and coffee, and bread. Only one of our irons was allowed to be taken off at a time, and we had to wash in salt water. We were kept on deck all the time, night and day, and a guard placed over us.

The steamer continued to cruise to the northwest, and on the 3d of October fell in with the ships Brilliant and Emily Farnham—the former of which they burnt, and her crew, with ourselves, were transferred to the latter ship, after signing a parole. On the 6th instant was taken on board the brig Golden Lead, of Thomaston, Captain Smith, from Jersey for New York; was treated with great kindness.

Captain Gifford, of the Elisha Dunbar, stated as follows:

On the morning of the 18th Sept., in lat. 39° 50′, long. 35° 20′, with the wind from the southwest and the bark heading southeast, saw a steamer on our port quarter standing to the northwest. Soon after found she had altered her course and was steering for the bark. We soon made all sail to get out of her reach, and were going ten knots at the time; but the steamer gaining on us under canvas alone, soon came up with us and fired a gun under our stern, with the St. George's cross flying at the time. Our colors were set, when she displayed the Confederate flag; being near us, we hove to, and a boat with armed officers and crew came alongside, and upon coming on board, stated to me that my vessel was a prize to the Confederate steamer Alabama, Captain Semmes. I was then ordered on board the steamer with my papers, and the crew to follow me, with a bag of clothing each. On getting aboard, the captain claimed me as a prize, and said my vessel would be burnt. Not having any clothes with me, he allowed me to return for a small trunk of clothes—the officer on board asked me what I was coming back for, and tried to prevent me from coming on board. I told him I came after a few clothes, which I took and returned to the steamer. It blowing very hard at the time and very squally, nothing but the chronometer, sextant, charts, &c., were taken, when the vessel was set fire to and burnt; there were 65 barrels sperm oil on deck, taken on the passage, which were consumed. We were all put in irons, and received the same treatment that Captain Tilton's officers and crew did, who had been taken the day before. While on board we understood that the steamer would cruise off the Grand Banks for a few weeks to destroy the large American ships to and from the Channel ports. They had knowledge of two ships being loaded with arms for the United States, and were in hopes to capture them. They were particularly anxious to fall in with the clipper ship Dreadnought, and destroy her, as she was celebrated for speed; and they were confident of their ability to capture or run away from any vessel in the United States. The steamer being in the track of outward and homeward bound vessels, and more or less being in sight every day, she will make great havoc among them.

DAVID R. GIFFORD,
Late Master of Bark Elisha Dunbar.

The Brilliant was built in Boston in 1861, was 839 tons, and was valued at $80,000. The Confederate commander, in reply to the captain of the Virginia, on protesting against his detention, stated: "You Northerners are destroying our property, and New Bedford people are having their war meetings, offering $200 bounty for volunteers, and send out their stone fleets to block up our harbors, and I am going to retaliate!" The officers were in some cases ironed in accordance with this view of retaliation. The number of prisoners had now increased to 68, and these were placed on board the Emily Farnham, which was captured on the same day as the Brilliant, and released because the ship's papers showed the cargo to be on English account. The large number of prisoners exceeded the accommodations of the vessel, and eight of the number were put on board the brig Golden Lead. The Alabama landed 170 prisoners at the Island of Flores. Her action in relation to British ownership seemed to be a little eccentric. When the ship

Lafayette was captured, Capt. Small produced his British consular certificate and remarked he supposed that would be sufficient protection. Captain Semmes replied, "The New York people are getting very smart, but it won't save you; it's all a hatched up mess." He then gave orders to burn the ship. It was the case that the property of a large circle of merchants known to Capt. Semmes was respected much more scrupulously than that of strangers. It is obvious that, as 290 merchants were subscribers to build the Alabama, any of their names upon a manifest would be a safe passport.

When the news of these depredations reached New York great excitement was created. The insurance companies advanced the war risks. British consular certificates were in demand, and freights were placed in British bottoms rather than American. The New York Chamber of Commerce held a meeting in relation to the matter, on the 21st day of October, and a series of resolutions were adopted.

Captain C. H. Marshall submitted the following letter from the Secretary of the Navy:

NAVY DEPARTMENT, WASHINGTON, —— 1862.

SIR: I received your letter of the 14th instant, also your letter of yesterday, referring to it, inquiring, as the chairman of a special committee of the Chamber of Commerce, what measures have been taken to capture the rebel pirate Alabama, and also whether the Government will grant commissions to private vessels, if fitted out under promise of reward by citizens, for that purpose. An earlier reply to the inquiry of the committee has been unavoidably delayed. The department has several vessels in search of the Alabama, in addition to the flying squadron of Acting Rear Admiral Wilkes in the West Indies, and other ships of war on the European coast. Additional force will be despatched in this service as early as practicable. There is no authority for granting commissions to private vessels to search for the Alabama or other piratical vessels or privateers. I am, respectfully, your obedient servant,

GIDEON WELLES, Secretary of the Navy.

C. H. MARSHALL, Esq., Chairman.

The events also produced some excitement in England. The vessels destroyed and threatened were those sailing under the Federal flag. But vessels so sailing have hitherto carried more property of British owners than of any others. And as Capt. Semmes burns vessels and cargoes without distinction, and the cargo is commonly much more valuable than the vessel, the English, as a neutral nation, have hitherto been, probably, the chief sufferers. Time, of course, soon changed this aspect of the case. Vessels under the Federal flag became by so much less eligible for safe conveyance; and, though a corresponding premium of insurance will always cover the war risk, it in this case so enhanced the ordinary charges as to put Federal vessels to a very serious disadvantage in the market of freight; thus affording some compensation to English interests.

An attempt was made to obtain redress from the Confederate Government for British losses in the manner indicated in the following correspondence:

To his Excellency the British Minister, Washington:

PHILADELPHIA, *Nov.* 7 1862.

EXCELLENCY: As a British subject and a shipper of merchandise upon the ship Tonawanda, lately overhauled by the Confederate war steamer Alabama, I beg most respectfully to call your attention to this matter.

The Tonawanda, as you are no doubt aware, was released from capture, and allowed to proceed on her voyage under a bond of $60,000, as a ransom, and this sum will be rated upon ship and cargo by the average staters, on her arrival in Liverpool.

I respectfully suggest that your Excellency make application to the Government of the Confederate States that consent be given that all sums so rated upon property belonging *bona fide* to British subjects be remitted, and that the same shall be deducted from amount of said bond of $60,000, with similar proceedings in all such cases as may arise.

I have also merchandise on board the ship Lancaster, American, now in this port, and advertised to sail on Tuesday next. To my bills of lading, which the captain takes with him, I have attached the British consul's certificate that the property belongs to British subjects; but, as it is feared that this may not be sufficient to save from destruction, in the event of capture, I beg that your Excellency will be so good as to furnish me with a letter protesting, as the highest British authority in this country, against the destruction of British merchandise, to be used by the captain of the Lancaster, if necessary. Any cost attending such letter I will gratefully pay, and trust your Excellency will think that I only do right in seeking to protect my friends in England from loss, for whom I have shipped these goods, by appealing thus to our own Government.

It will mitigate the horrors of this war if your Excellency shall succeed in preventing the destruction of ships holding certificates of British property, and it will be but just that British merchants should be exempt from contributing to the ransom of ships and merchandise belonging to belligerents. I cannot but think that your Excellency's protest, which I ask for, will be respected on the seas, and also that the Confederate Government will readily grant the exemption desired.

Your immediate action in these matters will, I feel certain, be satisfactory to yourself, and will be hailed with much gratitude by British merchants everywhere, and meet with the approval of the home Government.

I have the honor to be your Excellency's most obedient servant, W. H. TRENWITH.

WASHINGTON, *Nov.* 8, 1863.

W. H. TRENWITH, Esq., Philadelphia:

SIR: I have received your letter of the 7th instant, in which you suggest that I should make an application to the Government of the so-styled Confederate States with reference to the ransom of British property on board American vessels, in consequence of the recent proceedings of the war steamer Alabama; and that I should furnish you with a letter of protest, for the purpose of protecting some merchandise which you have shipped on board the American ship Lancaster.

While greatly regretting the risk to which British property is exposed by being shipped in belligerent vessels, it is not in my power to accede to either of your suggestions.

You are aware that the so-styled Confederate States have not been recognized by her Majesty the Queen, and for that reason I shall not be justified in entering into communication with the Government of those States, except under special instructions from her Majesty's Government. Neither do I feel at liberty to supply you antecedently with the protest which you desire, having no authority to issue such a document, and seeing no reason to believe that it would insure a more effective protection to your goods upon the high seas

than the consular certificate, with which you seem to have supplied yourself.

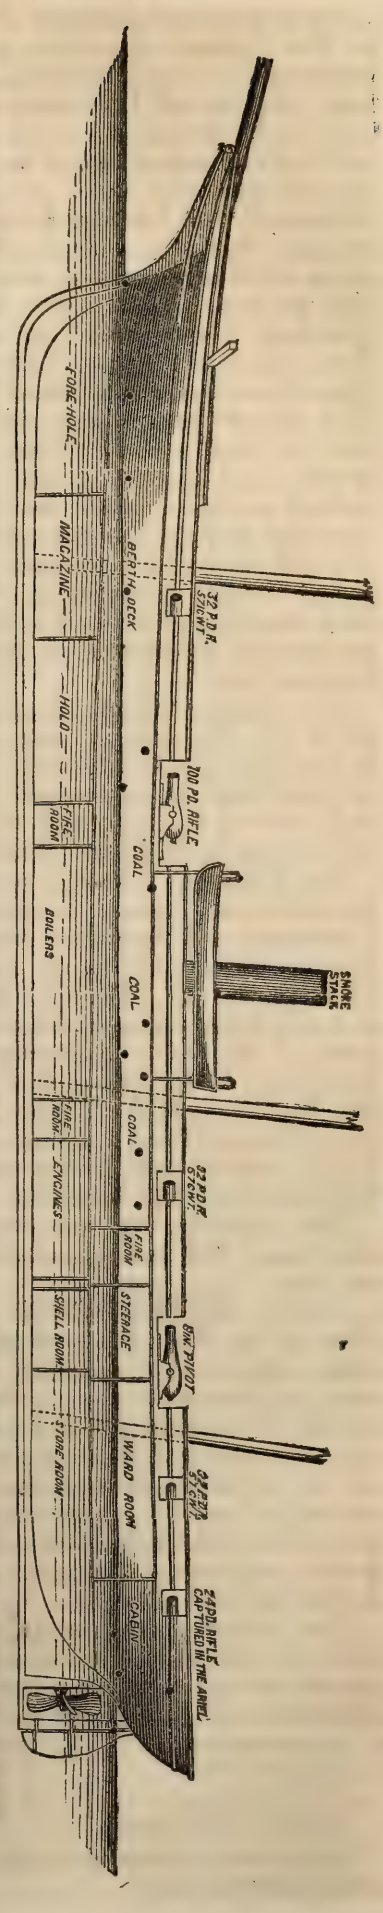
I am, Sir, your obedient servant, W. STUART.

On the 18th of November the Alabama fell in with the steamship Ariel, on her way from New York to Aspinwall. The steamer was bonded and allowed to proceed with her passengers; but the alarm occasioned by her seizure prevented her from bringing back her usual freight of gold. A United States gunboat was sent to bring it. In the mean time, however, it arrived by the next boat of the company. A number of armed vessels were sent out to cruise in the track of the Alabama, without much success. The Vanderbilt sailed from New York for Fayal, December 11. Two other steamers left New York, one from Boston, one from Philadelphia, and one from Portsmouth, N. H. None of these were, however, of sufficient speed. The U. S. frigate Sabine, Com. Cadwalader Ringgold, left New London, November 3, in search of the Alabama. Arrived at the Azores November 28. Sailed thence December 2, and arrived at Cape de Verde December 23, and left there January 2. Absent 100 days, cruising 93 days, and sailed 10,000 miles in vain.

The Alabama meantime, having captured the Ariel on the 18th, arrived on the 26th, two days before the Sabine reached the Azores, at Martinique, where she took in coal from a British bark. The United States steamer San Jacinto, at the same date, was off St. Thomas watching for the Alabama, which on the 30th captured the Parker, Cook, off the Moro Passage. December 5 she captured the Union off Cape Mais, and was off Havana December 31. Thus she does not appear to have left the American coast, while the Vanderbilt and other vessels sent in search were seeking her elsewhere. In some cases the Alabama released her prizes on a ransom bill being signed by the captain, and agreeing to pay a sum of money after the close of the war. By the general law of nations these bills or contracts are recognized as between belligerents, and a captain may by his contract bind his owners, the whole cargo as well as the ship. Those ransoms were forbidden by the English Government under George III, but have never been prohibited by the United States.

The theory of ransom is that it is a repurchase of the actual right of the captors at the time the bill or bond is given, be that what it may; or, more properly, it is a relinquishment of all the interest or benefit which the captors might acquire or consummate in the property by regular adjudication of a prize tribunal, whether it may be in the interest of the ship and cargo, or a lien on the same, or a mere title to expenses. These ransom bills are, by rules of international law, an exception to the general doctrine that no contract with an enemy is valid.

In the case of the ransom bill given by the Ariel, it seems not to be payable till six months after the recognition of the Southern Confederacy. If then, that contingency should happen, what court would have jurisdiction to enforce the agreement? Primarily, all questions of prize belong to the tribunals of the capturing power; and foreign tribunals will not interfere, unless where their territorial rights have been violated. Ransoms belong to the same jurisdiction, and may there be enforced or set aside, as the facts disclose a good or bad prize. It is, however, competent for the captors to change the *forum* in cases of ransom, and apply for redress in any country where the person of the owner of the Ariel may be found, or the ship itself.



A CORRECT SKETCH OF THE CONFEDERATE STATES STEAMER "ALABAMA'S" HULL, WITH THE POSITION OF THE SHOT HOLES AFTER THE FIGHT WITH THE "HATTERAS;" ALSO THE POSITION AND WEIGHT OF HER ARMAMENT.

On the 11th of January, 1863, about 3 P. M., as the Federal squadron, consisting of the steamers Brooklyn, Hatteras, and five others, was cruising off Galveston, a vessel hove in sight at the southeast, which the Hatteras was ordered to proceed to and learn her character. As she came in sight she appeared to the officers of the Hatteras to be endeavoring to escape. Just after dark the officers of the Hatteras could perceive that she was bark rigged, and set a topgallant sail; and, as they approached, found her lying to, under steam. The crew of the Hatteras were at quarters, and Capt. Blake hailed and asked what ship it was. The answer was, "Her Britannic Majesty's ship Spitfire." Capt. Blake replied that he would send a boat aboard. The Alabama ranged a little ahead, her officer declaring that she was the Confederate steamer Alabama, and immediately opened fire on the Hatteras. It was returned by the Hatteras, and both started ahead under a full head of steam, exchanging broadsides as fast as they could load and fire.

The heavy guns of the Alabama soon disabled the Hatteras, so that it was impossible to keep her afloat. Two guns were fired to the leeward, the contest ceased, and the officers and crew of the Hatteras, which soon sunk, were taken to Kingston, Jamaica, and paroled.

The following were the principal officers of the Alabama: Captain, Raphael Semmes; First Lieutenant and Executive Officer, J. M. Kell; Second Lieutenant, R. T. Armstrong; Third Lieutenant, J. D. Wilson; Fourth Lieutenant, J. Low; Sailing Master, Arthur St. Clair; Surgeon, F. M. Galt; Assistant Surgeon, R. H. Lewelien; Lieutenant of Marines, B. K. Howell; Engineer, Michael Freeman; Paymaster, C. T. Young (since discharged); Midshipmen, Maffit (son of Capt. Maffit, of the Oreto), St. Clair, Bullock, and Anderson.

The Alabama was supposed not to be the only vessel built in England for the Confederate service.

NAVY, UNITED STATES. The organization of the Navy Department of the United States embraces a secretary and two assistants; a bureau of navy yards and docks; a bureau of construction and repairs; a bureau of provisions and clothing; a bureau of ordnance; a bureau of medicine and surgery; a bureau of steam engineering; a bureau of equipments and recruiting; a bureau of navigation, embracing the naval observatory and hydrographical office.

The officers of the navy, by an act of Congress of July 16, 1862, are divided into nine grades, taking rank according to the date of commission in each grade, as follows:

1. Rear-Admirals,
2. Commodores,
3. Captains,
4. Commanders,
5. Lieut.-Commanders,
6. Lieutenants,
7. Masters,
8. Ensigns,
9. Midshipmen.

Their rank as compared with officers of the army is as follows:

Rear-Admirals	to rank with	Major-Generals,
Commodores	"	"	Brigadier-Generals,
Captains	"	"	Colonels,
Commanders	"	"	Lieutenant-Colonels,
Lieut.-Comm'ders	"	"	Majors,
Lieutenants	"	"	Captains,
Masters	"	"	First Lieutenants,
Ensigns	"	"	Second Lieutenants.

The number of officers of each rank, at the close of the year, was as follows:

	Active list.	Reserved list.	Retired list.
Rear-Admirals	4	..	9
" " acting	5	..	..
Commodores	16	..	16
Captains	39	10	22
Commanders	90	11	7
Lieutenant-Commanders.	144	..	..
Lieutenants	104	17	6

The vessels of the navy building and in service, and the number of guns carried by them, and the class to which they belonged, were on Nov. 1, 1862, as follows:

Steamers:	No. of vessels.	Guns.
Side-wheel steamers	102	532
Screw steamers	114	672
Iron-clad steamers	53	266
Steam gunboats and rams	13	67
Total	282	1,537
Sailing Vessels.		
Ships and frigates	12	804
Sloops-of-war	21	346
Mortar fleet	19	56
Ships, barks, brigs, &c.	50	194
Total	102	1,400

The vessels in service have formed the following squadrons: West Gulf squadron, 59 vessels; West Indies, 8 vessels; East India squadron, 3 vessels; Mediterranean, 6 vessels; Pacific squadron, 5 vessels; South Atlantic blockading squadron, 63 vessels; North Atlantic blockading squadron, 65 vessels; Western Flotilla, 79 vessels; East Gulf squadron, 24 vessels; Potomac fleet, 21 vessels; coast of Africa, 1.

For the operations of the navy in contest with the Confederate forces, *see* Naval Operations, and Army Operations.

The most important subject before the Government and people of the United States relative to their navy respects the iron-clad vessels. The operations of the Government during the year, with the principles that have been developed, and the improvements which have been made relative to these vessels, so far as they are allowed to be known, are presented in the annexed pages.

Iron-clad, or Armored Vessels.—The ground occupied by either army in an engagement in open field being of uncertain character and extent, and liable to continual change, it results that here no definite system of defence is practicable, and that a land battle is chiefly waged, on both sides, in the way of offensive operations. On the contrary, in naval engagements, and those carried on from within fortifications, the area and objects against which the assault is directed are limited and well defined; in effect, the ground (so to speak) of the defending party is for the time not only small but unchangeable. However simple and obvious this distinction, it is radical, and one that is even now developing consequences of

the utmost importance. Thus, it is in the case of ships and forts alone that the problem and means of defence become equally essential with those of offence; and that the former, like the latter, are of a highly definite and special character, and only to be advanced through careful study of the mechanical and other conditions involved. In fact, in the case of ships, it is most distinctly seen to be true that, when the defence can no longer be improved so as reasonably to keep pace with increasing efficiency and power in the means of assault, the necessary alternative must be the abandonment altogether of naval warfare, or the comparative worthlessness, at the least, of any resort to it. Now, since the early part of the present century, a steady increase has been going forward in the caliber of ordnance and in its available power, that is, in other words, in the penetrative and, generally, the destructive effect of projectiles; while the course and prospects of a naval engagement have been, in a particular manner, changed by the introduction of the so-called Paixhan guns, which throw shells of great weight and at a velocity sufficient for penetrating the wooden sides of the ordinary ships of war, preparatory to spreading destruction and conflagration within them. It is these facts that have forced upon military authorities of the time the specific problem of defence, especially for all classes of war vessels, and so urgently that within the past three years it has become the paramount question in connection with the practice of warfare. Under such circumstances, the subject can, of course, only be presented as one in a state of progress—its results being not merely still undecided, but for the present beyond even the reach of conjecture.

The Necessity of Armor Recognized.—A ship or boat, then, being a definite point or object of attack, and the penetration and destructiveness of solid and hollow shot having been gradually and very greatly increased, the inevitable consequence was that, sooner or later, wooden war vessels must become too vulnerable to leave even a reasonable chance of their withstanding a well-directed fire. And, this point once reached, the idea of seeking a more efficient resisting material in some metal, and naturally in iron, must, by a necessity just as inevitable, have presented itself; so that it becomes a matter of slight importance at what precise time, or by whom, the suggestion of such a change was publicly made. By some authorities the proposition is accredited to Mr. John Stevens, of New Jersey, its date about the year 1811; by others, to Col. Paixhan, of the English army, some ten years later.

Among the earliest systematic experiments with a view to the substitution of the resistance of iron for that of wood in the sides of ships, were those made by English authorities in the year 1840, and a few years following, in the way of firing upon targets representing a portion of the side of an iron ship, as ordinarily constructed. As a result, it was found that the thin plates of such ships, when struck by projectiles that pierced them, crushed into fragments, which were scattered with peculiarly destructive effect; so that ordinary iron ships were wholly unsuitable for war purposes. A definite proposal for constructing shot-proof iron floating batteries was, about the year 1852, entertained by the United States Government; but the results of experiments made with a view to that end being deemed unfavorable, the project was, for the time, abandoned. Still, the subject was more or less under discussion in this country, and in France and England. It is said that, many years previously, an imperfect attempt had been made at mailing the English ships which took part in the battle of Algesiras (1801), and that, subsequently to that occasion, M. Montgéry, of France, had published several memoirs on the subject. The project having become, in that country, in a degree forgotten, attention was again called to it during the war between France and Russia, by the circumstance that wooden ships were found incapable of withstanding a skilfully-directed fire from near land batteries. The French emperor directed, in 1854, that experiments should be made with a view to the protection by iron armor of ships of a draught rendering them suitable to be employed in an attack on Cronstadt. Upon a renewal of some experiments discontinued about 15 years before, the conclusion was reached that, in order to afford protection against the round shot then in actual use, a thickness of $\frac{1}{10}$ mètre = 3.937 inches, was required. Of the armored boats or floating batteries hastily constructed in accordance with these views, and which, from the weight of the plates and the depth of water they drew, were incapable of speed, and even of independent navigation, three that were taken to the French fleet, then before Kinburn, participated in the attack, Oct. 1855, on the forts at that place. Though struck by very many 24-lb. balls at about 600 yards, the armor of these boats was not actually pierced, but only somewhat deeply indented; but considerable injury was done by shots which entered the portholes. Some British batteries of like construction did not arrive so as to take part in the action.

In the year 1854, experiments in relation to iron armor were also made in England; in these, a target, consisting of a wood backing covered with wrought-iron plates of $4\frac{1}{2}$ inches thickness, and intended to represent the side of an armored ship, was found to be indented at 400 yards by 32-lb. solid shot and 8-inch and 10-inch hollow shot, to depths respectively of $1\frac{1}{2}$, 1, and $2\frac{1}{2}$ inches; while 68-lb. solid shot, fired with 16 lbs. of powder, penetrated the plates, splitting them especially in the line of the bolt-holes, which were about 1 foot asunder. In France, a new interest was awakened, by the comparative success of its trial at

Kinburn, in the subject of iron armor; and, in experiments in which 50-lb. balls were fired at several yards' distance, and with a heavy charge of powder, upon plates of the thickness already adopted, it was found that the balls sufficed to break the plates, though they did not go through them. The results, however, differed much with differences in quality of the iron; and, if not previously admitted, it now became evident that, for resistance to shot, a somewhat soft iron is preferable to an iron having great hardness, with its attendant brittleness. The experiments undertaken in the United States had tended to show that, for guns of the largest caliber then in use, although 4½-inch plates, well backed with solid timber, were likely, for a time, to resist piercing by shot thrown from considerable distances, yet nothing less than 6 inches of iron plating could be relied on to render a ship practically invulnerable. This result was discouraging, in view of the fact that the complete armoring of a ship with 6-inch plates appeared to involve a weight which no vessel can carry without great sacrifice of speed, and a loss even of capacity for open-sea service.

The next step in the construction of iron-clad ships (French, *vaisseaux en cuirass*, or *navires cuirassés*), was the building of *La Gloire* in France (1860), and of the Warrior in England (1861). The armor of these ships is described in the preceding volume of this CYCLOPÆDIA. Sir Howard Douglas has lately asserted in substance that both these ships are failures, so far as sea-going qualities, speed, and the stability requisite for successful firing upon a heavy sea, are concerned. Both appear to be, with combined armament and armor, overloaded, and owing to the lowering, in consequence, of the *meta-centre* (centre of pressure of the liquid displaced) to near the place of the centre of gravity, both these ships roll in a heavy sea with quick and considerable movements, so that the gunner's aim in such cases becomes extremely uncertain. Moreover, while *La Gloire* has not exceeded 11, in place of the 13½ knots an hour anticipated, and the Warrior at sea not more than 12, the latter can carry but 9 days' coal, and in long voyages must often rely on tenders or sails. Apparently, therefore, these ships, and, probably, the others armored by the two nations upon respectively the same patterns, are not, on the score of their capacity for distant expeditions and aggressive warfare, very greatly to be dreaded.

The Revolving Turret, or Cupola.—But while ships may possibly be so armored as to be in the main nearly impregnable to an enemy's fire, yet their portholes remain subject to the entrance of shot, and that in proportion to the size that must be allowed for properly working and pointing the guns; while the lateral sweep in this way secured is always limited, and the entire ship must often be manœuvred in order to bring the guns into the desired line. If, however, instead of the ordinary casemate or broadside arrangement, the guns can be placed within a protecting structure which can be revolved into any required line of fire, all the difficulties connected with the management of the guns, the exposure incident, and the continual effectiveness of the ship's armament, vanish or are reduced to their minimum. Such is the idea of the revolving turret or cupola, and such the objects to be attained through its use. The original invention of this important addition of the last few years to the means of naval warfare, has already been claimed on behalf of three persons, Capt. John Ericsson of New York city, Mr. Theodore R. Timby, of the State of New York, and Capt. Coles, of the British navy. In the year 1854, Capt. Ericsson forwarded from New York to the emperor Napoleon a communication (dated Sept. 26) in reference to a new form of armored vessel for naval attack, designed by him—the plan embodying many of the features of the "Monitor," presently to be referred to, but especially those of a deck rising but a few inches out of water, and of a turret amidships to contain one or two large pieces of ordnance, and to be capable of being revolved so as to bring the guns into any desired line of fire: the shape of this turret, however, was that of a dome, or half a hollow globe, the ports being at one side. The receipt of the communication was duly acknowledged by the emperor. Capt. Ericsson further states that the idea of a revolving tower for ordnance upon land is very old; but that the thought of placing such a structure upon a ship was original with himself, having been conceived many years before the time of the communication above mentioned. Capt. Coles, in a letter to the (London) "Times," April 5, 1862, states that the idea of building impregnable vessels was suggested to him by his experience in the Baltic and Black seas, in 1855, and that toward the close of that year he had a model for such vessels made, in which he proposed to protect the guns by a stationary "shield" or "cupola." Notwithstanding official neglect, he persevered, producing in March, 1859, drawings of a "shield fitted with turntables;" and in December, 1860, he published an account, with drawings, in which the platform of the shield was to be turned by manual power. Mr. Timby constructed, in 1841, a model of a revolving tower for land fortifications, pierced with one or two tiers of portholes, and to contain several guns, these to be fired in succession as they were brought by the revolution in line with the object of attack. A larger model was exhibited in many places in 1843, among others in New York, notices of it appearing in the "Evening Post" of June 13, of that year, and in the "Herald," during the same month. It will be seen that the purposes and principle, on the one hand, of the Ericsson and Coles turrets (accounts of which will be given farther on), and on the other, of that of Mr. Timby, are wholly distinct: with the former, the revolution of the tower is not

the object sought, only so far as needful to point the guns upon the enemy; in the latter, the revolution is indispensable, as well as nearly continuous—a condition that must involve important difficulties in practice. So long as it revolves properly, the Ericsson turret serves to keep an enemy continually under fire, in spite of changes of position. In this way, two guns become—supposing no necessity of delay from their heating—equal in effective force to at least eight mounted on stationary carriages.

Earliest American Iron-clad Vessels.—"It so happens," Admiral J. A. Dahlgren very appositely remarks in his Report supplementary to the Report of the Secretary of the Navy, Nov. 22, 1862, "that circumstances impose on England and France the necessity of grappling with the most difficult solution of the problem [that of armoring ships], their shores being washed by the deep waters of the ocean; therefore their iron clads must be more than mere floating batteries, and be possessed of the best nautical qualities. With the United States the case is, happily, different—the depth of water on the coast being generally adapted to vessels of light or moderate draught, and only a few of our ports being at all accessible to heavy iron clads like those of France and England. The solution of the question is, therefore, in its immediate requirements, comparatively easy and inexpensive for us. Vessels of the Monitor and Ironsides class are likely to serve present purposes sufficiently well, and to give time to obtain, from our own and the experience of others, better data than can now be had for advancing to a more perfect order of vessels." The facts here stated in respect to the general character of the coast navigation, Atlantic and Gulf, of this country, as also the great extent to which naval operations may require to be carried on in navigable sounds, bays, and rivers, but which are not always of great depth, have been kept in view in all the earlier attempts here made in the way of armoring vessels—with the single exception, indeed, of the first of them all, the Stevens Battery, the proposed draught of which is 21 feet. (For a full description of this battery, as well as of Capt. Ericsson's first iron-clad battery, the Monitor, the plan of which was one of the three first adopted by the United States Government, in 1861, see the preceding volume of the CYCLOPÆDIA.) Of these three patterns of iron-clad vessels, and the draught of which ranged from 10 to 13 feet, all were in fact mainly new in conception, differing from the earlier French and English batteries in being intended to realize independent navigation and fair speed, and from the *Gloire* and Warrior styles in being of much less dimensions, while also nearly or quite completely mailed. The most original in principle of the three, and the one that has come to be regarded as peculiarly the American style of iron-clad vessel, was the Monitor—a name that is now employed as distinctive of the growing class of vessels involving the same general construction. The Monitor was built at the Continental Works, Greenpoint, L. I., by Mr. J. F. Rowland, under the direct supervision of Capt. Ericsson, and delivered to the Government, March 5, 1862. The vessels completed in accordance with the other two of the three contracts, were, for that with the firm of Merrick & Sons, Philadelphia, the New Ironsides, and for that with S. C. Bushnell and Co., of New Haven, Conn., the Galena.

The experiments preceding the inception of the Monitor had already determined that, since very hard and brittle plates are proportionally more liable to crack, and very soft ones to be simply punched or penetrated, for armoring in the modes thus far adopted, neither steel or hard cast iron on the one hand, nor copper or the softest wrought iron, on the other, should be employed, but in fact an iron possessing fair forging and rolling qualities, and having along with moderate hardness also a high degree of absolute strength or tenacity. In the case, however, of armor applied, not in a single thickness or plate, but in a succession of thinner plates (laminated armor), a harder iron or steel is said to be used with advantage. It will be remembered that the armor of the upper hull of the Monitor consisted of 5 inches of rolled iron (1-inch) plates; that of the turret generally of 9, and that of the deck of 2 inches of similar plating. Of course, though in England there is an apparently open avowal and discussion of all information acquired in respect to penetration of projectiles and qualities of armor indicated, it is probably true that in all the leading countries now interested in this question, as is evident in the case of the Government of the United States, there is nevertheless a degree of reticence in respect to important results, and especially as to certain points in the construction, armament, and working of iron-clad vessels. Hence, there are portions of information in regard to these subjects which can only become public after the lapse of a few years, or under a condition of national questions different from that which now exists.—An account of the experiments in the way of testing the relative capacities of the most recent and improved ordnance and iron armor, with the bearing of the results on the questions of thickness, kind, quality, and extent of armor protection for vessels, as well as of the modes in which the plates are prepared for being applied, will be given farther on.

The First Class Monitors (Smallest Size).—The course and result of the engagement between the Monitor and Merrimac, in Hampton Roads, March 9, 1862, having established the suitableness and success of the Ericsson form of battery, both for purposes of defence (at least, against guns of the power there employed) and of attack, orders were speedily issued by the U. S. Government for the construction of 10 similar batteries, one or more of which, indeed, must have been at the time already com-

menced. The following are the vessels included in the orders referred to:

	Name.	Where built.	Date of Launching.
1.	Passaic	Greenpoint, L. I.	April 31, 1862.
2.	Patapsco	Wilmington, Del.	Oct. 1, "
3.	Nahant	Boston, Mass.	Oct. 6, "
4.	Montauk	Greenpoint, L. I.	Oct. 9, "
5.	Nantucket	Boston, Mass.	Dec. 6, "
6.	Lehigh	Chester, Penn.	
7.	Sangamon	" "	
8.	Catskill	Greenpoint, L. I.	Dec. 6, "
9.	Weehawken	Jersey City, N. J.	
10.	Camanche	" " "	

These batteries were built and armored substantially in accordance with the plan of the original Monitor, but of somewhat larger dimensions, and with some important modifications introduced from the start or when near their completion, as suggested by further experience in working vessels of a style so unusual. Exteriorly, they show an upper and broader portion of hull, heavily armored and nearly vertical, and a much shorter, as well as narrower lower portion of hull, not armored: the form of the actual hull (of iron), however, appears only from within, being somewhat modified from the shape usual in vessels of like size, and not unaptly compared to that of the half of an egg-shell cut lengthwise. Their decks are mainly clear, and intended to rise but from 18 to 30 inches above the water. They are rated at 844 tons burden; and they have each 1 turret, revolving, and a total armament of 2 guns, now, generally, of 11 and 15 inches caliber. Their construction being substantially the same, a description of one of these batteries will serve for the whole class.

The Passaic has a length of upper hull equal to 200 feet, width 45 feet, total depth 12 feet, draught of water when laden $10\frac{1}{2}$ feet. The lines of the hull are finer than those of the first Monitor, and the buoyancy and speed greater. The hull of the vessel is first built of $\frac{3}{4}$-inch iron plating, fastened upon a frame of angle iron, of 6 inches width by $\frac{3}{4}$-inch thickness. The broader upper portion of the hull commences at about 5 feet below the deck, that is, $3\frac{1}{2}$ feet below the water line, by a sort of horizontal iron shelf, upon which is first built up the wood backing for the armor, consisting of solid oak, to a thickness of more than three feet, and braced with iron. Over this is applied the armor, consisting of 5 thicknesses of wrought-iron plates, each 5 feet in length and width. In addition to and beneath this, for a distance of 50 feet from the bow, in the Passaic, are inserted a succession of wrought-iron stringers 4 inches thick, the two combined being equivalent for this part of the boat to 9 inches of solid armor, and giving it immense strength for use as a ram. The deck beams are of oak, 24 inches apart, 12×12 inches at the middle, and 12×10 at the ends. Over these is a pine planking 8 inches deep; and upon the whole two thicknesses of 1-inch plating. The hatches are of wrought iron, and let in flush with the deck; in action they are closed with covers of like material, secured below. Within, the vessel is strengthened forward of the turret bulkhead by three rows, and aft of the bulkhead by one row, of stanchions of 23×4 bar-iron, fastened with 1-inch bolts; and there are six water-tight compartments, formed by $\frac{1}{2}$-inch plates properly secured, and between which communication is furnished by means of doors.. The turret has an internal diameter of 21 feet, height 9 feet. Its sides are composed of 11 thicknesses of 1-inch plating, each in 20 vertical sections, but so put on that at any part in the entire thickness but a single joint occurs. It rests on a flat ring of composition metal, 12 inches wide by $1\frac{1}{2}$ thick, and provided at its inner edge with a vertical flange of like thickness, and $2\frac{1}{2}$ inches in height. The pilothouse, with a total diameter of 7 feet, 4 inches, rests on the top and middle part of the turret, the general framework of the top consisting of stout forged iron beams alternating with others resembling railroad bars, these being respectively three inches apart. Over these, on the part of the top not occupied by the pilothouse, is a covering of $\frac{1}{2}$-inch wrought-iron plates, these being perforated at certain parts with holes 1 inch in diameter, for the supply of air to the turret and hull. The pilothouse, 6 feet in height and in interior diameter, is formed of 8 inches of plates, and is pierced with 8 lookout holes, each giving a horizontal range of vision of 45°, so that together these render every part of the horizon visible from within. The turret has 2 portholes near together; and the armament is an 11-, and a 15-inch Dahlgren gun. The portholes are closed with ponderous portstoppers, each weighing more than 6,000 lbs.; one man can readily open these preparatory to firing, and close them immediately afterward. The engines, 2 in number, built at the Delamater Iron Works, have cylinders of 40 inches diameter, and 22 inches stroke. There are 2 boilers, of Martin's plan, each 9 feet 3 inches in height, and 12 feet 6 inches long, with 3 furnaces. The propeller is of cast iron, 12 feet in diameter, and of 16 feet pitch.

The hull and armor-shelf of this battery (save about the upper 2 feet of height) being, when the vessel is afloat, below the water, and the unarmored portion of the hull being in effect removed 5 feet within the sides, and descending in all but a few feet below them, it results that no shot fired upon the battery can reach this lower portion without first having penetrated the armor and timbers, or in the rare case of coming at a very small angle with the water, having its force quite expended before striking. Moreover, the armor-shelf or platform, which projects no more than 5 feet at the sides, is extended at the ends so as to project at the bow full 16 feet beyond the boat proper or hull, and at the stern 25 feet. The effect of this arrangement is to give complete protection to the anchor and capstan within the bow, and the propeller and rudder at the stern. A propeller well opens from the deck through the aft over-

hang, while through the fore overhang is an anchor well, 5 feet in diameter, and so arranged that the anchor—a patent form, with 4 flukes—can be taken up through it.

Among the important changes from the plan of the first Monitor introduced generally in the new batteries, the following should be particularly named: 1. While the former had the sides of its lower hull sloping at an angle of 80° to the vertical, and a flat bottom, the latter have more nearly an ordinary midship section, with an ordinary rise of flow, and a round bilge. 2. While, in the former, the turret received the support of but a single bulkhead running across the vessel, the turrets of the latter receive support from 4 bulkheads, 2 transverse and 2 longitudinal, and which are heavily braced with "angle bars." 3. The overhang at the stern is greatly reduced in the new batteries, so that in a seaway they are correspondingly less subject to strain on this account. 4. The new batteries only are provided with a heavy iron-plate chimney, which rises about 6 feet above the deck. In these, accordingly, the retraction of the chimneys through the deck during an action is not required. 5. In them, also, the air supply is more safely and effectually obtained through the top of the turret, the blowers, driven also by blower engines of larger size, being placed just beneath the turret flooring, and acting to force air into the boiler room and other parts of the hold. The guns within the turrets, moreover, do not usually require sighting, since the direction of fire can be found and kept by means of the "turret sight," fixed parallel with the guns before a small opening in the wall.

Besides the 9 new Monitor batteries first ordered, others involving further variations of plan or dimensions have been commenced at different places. In January, 1863, the Osage, one of these, was launched at St. Louis, Mo. This boat is 180 feet in length, having 1 turret and 2 11-inch guns, the deck oval and at the edge only 12 inches above the water, and with an oval pilothouse at the stern. The Camanche was constructed in sections, to admit of being taken apart for transmission to California, for protection of the coast of which country she was designed. Another fleet, of 8 Monitors of the first class, and of dimensions differing not much from those of the previous ten, are now in course of construction.

Improvements in Working the new Monitors.—In the first Monitor, the guns were run out for firing, so as to project through the portholes; and they were, of course, exposed for the moment to increased danger of being struck and disabled. Besides, it was becoming desirable to substitute guns of 15-inch for those of 11-inch caliber; and while, when this change was decided on, some of the turrets were already bored with portholes of the original dimensions—for 11-inch guns—it was desirable also, in view of saving the strength of the turret and diminishing risks of entrance of the enemy's missiles, to keep the portholes as small as possible. All the ends indicated could be subserved at once, if it were practicable to discharge the guns within the turret. To this important problem, involving such particulars as the means of reducing greatly the recoil of the piece on firing, as also the question of the effect of the concussion and reverberation on those within the turret, Capt. Ericsson diligently applied himself. An apparatus for the guns was devised, the details of which have not been made public, but which was intended to control the action of the piece in the moment of firing, especially in the way of allowing of all needful recoil within the limits of the turret. November 15, 1862, a short trip was made up the Hudson river, with the Passaic, for the purpose of experiments with the new apparatus, among those on board being Admiral Gregory, general superintendent of iron-clad vessels, and chief engineers Stimers, Lawton, and Robie. Three hollow shot weighing each 330 lbs. were successively fired, in the direction of the Palisades on the west bank of the river, from the 15-inch gun within the turret; the first, with a charge of 20 lbs. of powder, the other two with a charge of 35 lbs. each; and the recoil was found to be brought wholly within control, being 17 inches for the first shot, 3 ft. 10 in. for the second, and 2 ft. 8 in. for the third. It appears that the recoil is diminished by means of a friction apparatus of peculiar form; and the excessive recoil of the second shot was due to the circumstance that the screws or "compressors" in the apparatus had not been properly tightened beforehand. No inconvenient effect from the concussion was experienced by those within the turret. Thus the entire feasibility of discharging the piece within the turret was demonstrated; and a few days subsequently orders were sent from Washington directing that the turrets of all the Monitors be at once completed with portholes of the original dimensions.

Again, in view of the ease with which the great guns now employed on these batteries, and especially as fitted with the new apparatus, can be served, it results that a very great economy in the requisite force of gunners, and in expense is secured. Thus, while 25 men have been found insufficient to serve a single Armstrong gun on shipboard, its weight only 14 tons, it is here true that 6 men serve efficiently and with ease the two guns of the Passaic, the 15-inch one weighing 42,000 lbs., and with a charge of 35 lbs. of powder, throwing a 450-lb. solid shot, or a shell of the weight above mentioned. The total complement of officers and men for each of these Monitors is less than 100.

Among other improvements in working the Monitors, and, as well as the preceding, severally by plans of Capt. Ericsson's invention, are those by which the bed of the turret is rendered water tight; the arrangement for using the compass, when not in action, free from the

interference due to the attraction of the iron mass of the battery itself; and the consequent plan of steering by a mirror. The leakage occurring under the turret in the first Monitor, when her deck was washed by a heavy sea, was a serious inconvenience. Means have now been devised by which, while the turret has the requisite freedom of movement, the leakage beneath it is wholly prevented. In the new arrangement of the compass, this is raised far above the disturbing influence of the iron turret and deck; while, by means of mirrors suitably placed, the movements and position of the needle are rendered perfectly visible to the helmsman at his place within the pilothouse.

In reference to the sea-going qualities of the Monitors, repeated experience has shown that though in a storm or heavy sea the waves continually break or roll over their decks, yet they possess remarkable stability and steadiness of movement; and since they are now rendered water-tight, save for the water, easily removed by the pumps, that may enter by the top of the turret, they are safe against all casualties except such as may arise by grounding on rocks or springing a leak, and to which all vessels are exposed. Again, since the boiler fires need no longer be interfered with by influx of water, and the boilers and engines must continue to perform more successfully in a tempest than those of vessels which pitch and roll more, it follows that their chances of weathering a storm are even better than the average for vessels generally, and that they may safely undertake sea voyages of any length for which the coal they carry will suffice. On the 20th and 21st of January, 1863, the Weehawken outrode successfully and without inconvenience, while on her way to Hampton Roads, one of the severest gales known to our coasts. The speed of these batteries has not exceeded about 8 knots an hour.

Up to the time of the attack (April 7, 1863) on the forts in Charleston harbor—full particulars of which cannot be included in this article—the new batteries had taken little part in actual service. The Montauk was engaged during at least three hours in the attack on Fort McAllister, on the Ogeechee river, Feb. 27, 1863; and while her shot told with great effect on the loose sand works of the fort, the 40 shot received upon every exposed part of the battery herself, and consisting of rifle bolts and 8 and 10-inch solid shot, occasioned no actual damage to her, but served to show the possession of invulnerability in a very high degree. The 5 or 6 shot which struck the deck glanced, leaving only slight furrows in the upper plate. The shot striking the side armor of the battery (5 inches) were smashed, and left on the armor dints of about ¼ the area of their greatest section, and an inch in depth. Upon the turret (11 inches of plates) and the pilothouse above it (8 inches), the results were similar, save that the dints were not so deep. Within, no perceptible effect of the blows remained, except in the pilothouse, where 7 of the bolt-heads, which had been screwed up too tightly, were broken off by the concussion of the shot striking the plating, or perhaps by the slight recoil of the plates after concussion, and so were projected from the wall into the enclosed space. There was nowhere any sign of penetration. The 15-inch gun was handled with ease; and no annoyance resulted from the discharge, the concussion, or the smoke, nor from the impact of the enemy's shot, except that the blast from the guns returned through the eye holes of the pilothouse, so as to prevent observing the effect of the practice. In fact, but a part of the shot of the Montauk were directed against the fort, her principal fire being aimed at the ship Nashville, lying under its protection. This vessel she destroyed; and the instance is the first in naval history in which a war vessel, safely disregarding the heavy fire of fortifications, has effected the destruction of her antagonist lying under cover of their guns. After the action, the immense weight of the turret (160 tons), which is supported upon a central shaft, had caused a slight settling; but the shaft being keyed up from below, the turret again revolved freely.

In the attack at Charleston, above referred to, the New Ironsides, flagship, the Monitors Weehawken, Passaic, Montauk, Patapsco, Catskill, Nantucket, and Nahant, and the Keokuk, were engaged. The conflict lasted in all about two hours, the iron-clad vessels carrying all together but 32 guns, and firing only 151 shot. During nearly three quarters of an hour, they sustained the converging fire of the Cumming's Point battery, Forts Moultrie and Sumter, and Battery Bee, these probably mounting in all not less than 300 guns, which threw 8, 9, 10, and 11-inch round shot and shell, and 5 and 6-inch rifled shot, some of the latter evidently from guns of the latest Whitworth pattern—the whole number of shot supposed about 3,500. It has been stated that, as a result of the fire of the fleet upon Fort Sumter, several holes were knocked through the northeast face of the wall, one or more of these apparently 3 feet across. While the number of guns in the fleet was very small, it was practically reduced about one half, by the failure to bring the casemate guns of the New Ironsides to bear upon the fort, beyond the extent of a single broadside. The firing commenced and ceased at about 1,300 yards; during the period in which it was at close quarters the range varied from 300 to about 600 yards. In the conflict, the Passaic was hit 58 times, one of the shot hammering down the plating at the point struck at bottom, so as to cause it to bind, and interfere with the turning of the turret; while the gun-slides on which the 11-inch gun were placed were also sprung. The Weehawken was struck 59 times; the Montauk 20; the Nantucket 51; the Catskill about the same number of times; the Patapsco, 40, and the Nahant about 80 times. The armor of the

Monitors, including the plating of the decks, turrets, and pilothouses, was considerably dinted; but nothing like fracture of the armor or turrets occurred, and nothing approaching to penetration. In one or more instances a shot ploughed its way, while glancing, nearly or quite through the thinner plating of the deck. Nor was the propulsive machinery of any of these vessels damaged. The only casualties within them occurred by the snapping off, in the manner before referred to, of some of the bolt-heads inside the pilothouse of the Nahant—these not having been covered, as they were in most of the Monitor fleet, with sheet-iron guards: four of the officers and men of the Nahant were wounded by these bolts, one of the men mortally. The entire list of wounded upon the fleet was but 13, the remaining nine of these on the Keokuk; and the only fatal wound was in the case already named.

Loss of the Original Monitor.—The loss of this now world-famous battery, which occurred off the coast of North Carolina, Dec. 31, 1862, during a violent gale which commenced on the previous day, although an accident that appears to call for regret from national considerations as well as for the painful sacrifice of life attending it, could not serve to overthrow the conclusions already expressed in respect to the sea-going qualities of the Monitor batteries; and especially so, since the 10 new vessels of the sort, built under less urgency in respect to time, were also constructed expressly with more regard to fitness for navigation and sea service. The Monitor was in tow of the Rhode Island, and, the water which entered the hold gaining so as to stop the working of the engines, at about 1 30 P. M. of the 31st, she went down. Four of her officers and nine men, as well as eight men of the Rhode Island, were lost.

A New Life-raft, devised, or at least completed, since the sinking of the Monitor, has been supplied to several of the new Monitors, as well as, of course, to other vessels of the navy. This raft consists of several watertight hollow air-filled cylinders of canvas coated with gutta percha, pointed at the ends, and each of the cylinders having projecting flanges furnished with eyelet holes, through which the several cylinders are lashed together. Each cylinder is composed of 3 thicknesses of the canvas, its flanges, by doubling and lapping of the edges, of four. For rowing, three light boards or stretchers can be placed above the whole. The very great buoyancy of this raft was shown in trials in which every available foot of room upon it was crowded with sailors standing closely together; the raft showed no sign of sinking under such a burden; and when but ordinarily loaded it can be rapidly propelled by oars or sails.

The Second and Third Class Monitors.—In January, 1863, there were building seven new Monitor batteries of 1,034 tons burden, and to be known as those of the second class; three of these, the Mahopac, Manhattan, and Tecumseh, at Jersey City; two, the Catawba and Tippecanoe, at Cincinnati; the Canonicus at Boston, and the Manayunk at Booneville, Ky. These are to have each one turret, and carry within this 2 15-inch guns. Thus, the weight of their battery alone will (as in case of some of the first-class Monitors also) be about 50 tons, and they will discharge at once 900 lbs. of iron—a weight quite equal to that of the whole broadside of an old-fashioned war vessel. The armor of these vessels is to be 9 inches of plating, their turrets and pilothouses 11 inches thick, the increase in weight being allowed by the fact that they are to be of 18 inches deeper draught than the first-class Monitors. Of the third-class Monitors, are the Tonawanda, building at Philadelphia, the Monadnock, at Boston, the Miantonomah at Brooklyn, and the Agamenticus, at Portsmouth. These are each to be of 1,564 tons burden, and to carry 4 guns. Their armor will also be very thick, and the intention is to make them of unusual strength.

The Onondaga, built at New York, is of 1,250 tons burden, and carries 4 guns. This also, known as the Quintard battery, is a modification of the Ericsson pattern, having 2 turrets, length 226 ft., breadth 48 ft., depth of hold 13 ft., and the construction of which is expected to give unusual buoyancy. She has two screw-propellers, for use in manœuvring, as in turning on her centre, &c.

The Dictator and Puritan.—These are two large batteries and rams, also of the Ericsson pattern, the former building at New York, the latter at Greenpoint, L. I. The former of them is to be 320, the latter 341 feet in length, and each of 50 ft. beam. The vertical sides are to be 6 ft. in depth, armored with plates and wrought-iron slabs to a thickness together of 10½ inches, this being backed with 4 ft. thickness of solid oak. The turrets, of which the Dictator has one, the Puritan two, are to be absolutely invulnerable to the 450-lb. shot of 15-inch guns, and for this purpose to be of 15 inches thickness, the outer 6 inches of plates, then 5-inch slabs, and within these 4 inches of plates. The propulsive power will also be unusually great; each ship having two engines, with cylinders of 100 inches diameter and 4 ft. stroke. The modified Martin's boilers employed are to have 35,000 ft. of heating surface, with 1,180 ft. of grate surface. The propellers are Ericsson's, 21½ ft. in diameter, and of 32 ft. pitch. The guaranteed speed is 16 knots, or near 19 miles an hour. The armament is to consist of the most powerful wrought-iron guns that can be made. The plates and armor stringers meeting at the bow will form an iron wedge 21 inches thick at the base, and terminating in a nearly sharp edge; this wedge being sustained by the entire length and depth of the armor of the ship will constitute a ram of the utmost possible strength.

The New Ironsides.—This frigate, at the time of its launching the largest American iron-clad vessel afloat, is built somewhat upon the plan of the English Warrior. Her frame is of white oak, averaging in thickness at top of the sides 20 inches. Her armor is partial, extending from 4 feet below the water line upward to the spar deck, and horizontally the length of that portion of the gun deck containing her armament (170 feet), besides a belt of 7 feet width at her water line, and running entirely around, thus leaving a part both at bow and stern unprotected. The bulkheads, however, at each end of the gunroom are bomb proof. The armor is of single plates, 4 inches in thickness. The ports, 8 on a side, are closed, each by means of 2 wrought-iron plates which fall together at the recoil of the gun. The total length of hull is 232 ft.; breadth of beam, 57 ft. 6 in.; depth of hold, 25 ft.; draught of water at deep load line, 15 ft.; tonnage by measurement, 2,486 tons; displacement, 4,120 tons; estimated weight of armor, 750 tons. The vessel is bark-rigged, with short bowsprit, and no jib boom. Besides 2 200-pounder Parrott rifled guns, and 4 24-pounder boat howitzers, she carries a proper battery of 16 11-inch Dahlgren guns, the united weight of which is 234,800 lbs., while they throw at one broadside a weight of metal, shell, equal to 1,100 lbs., or solid shot, equal to 1,600 lbs. There are 2 horizontal direct-acting engines, diameter of cylinder 50 inches, stroke 30 inches, with surface condensers of 3,000 sq. ft. condensing surface; and, to supply these, 4 horizontal tubular boilers, with a heating surface of 8,450 square ft.; the estimated consumption of coal in 24 hours being 48 tons 840 lbs. The propeller is a single composition screw, with 4 blades, diameter 13 ft., mean pitch 16 ft., length 29 inches. With her masts (three in number) and spars in place, she can also carry quite a press of sail. Her bow is fitted with a heavy ram, securely fastened. From a circular pilothouse upon the spar deck the commanding officer communicates directly with the gun deck, and with the helmsman below. A defect of this ship is said to be in want of speed. In the attack on the forts at Charleston, in moving against the tide, she refused to obey her rudder, becoming quite unmanageable. Although she remained at about the longest range named above from Fort Sumter, and did not long present her side, so as to receive the enemy's shot direct, it is stated that some of the thick plates composing her armor were cracked.

The Galena.—This, one of the earliest completed of American iron-clad vessels, was built by Messrs. Mason and Fish, at Mystic, Conn., after designs by Mr. Julius Patterson. Her length is 208 ft., breadth of beam 36 ft., depth 12 ft. 6 in.; she is of 1,000 tons burden, and pierced for 18 guns. Her hull is of the best white oak, strapped with iron; and her sides, above water, slope inward at an angle of about 30°. Her armor is applied in the form of iron bars, 24 ft. in length and 3 inches in width, these successively overlapping each other by $\frac{1}{3}$ part of their width, and fastened to the wooden frame by screw bolts; while over this is an additional plating of 1-inch iron, also secured with like bolts. The gun deck is about 7 ft. in height, and has ports for 18 guns. The upper or spar deck is covered with thin plate iron, but said to be gun proof. The ports are closed by large pendulum shutters, which part in the middle, so that only the muzzles of the guns need protrude, and the gunners are comparatively safe. The round pilothouse has 5 inches thickness of plating. The armament consists of 11-inch guns and 100-pdr. rifles. In the combat with Fort Darling, on the James river, the plating of the Galena did not successfully resist a well-directed fire of large solid shot.

The Roanoke.—This vessel was originally a double-decked war frigate, and with the Merrimac also, one of a class of 5 steam frigates built in 1855. Having proved singularly unfortunate and expensive in her original trim, she was, by order of the Government, in 1862, razeed or cut down flush with her gun deck, preparatory to plating, the object being to convert her into a powerful iron clad, exposing but little of her hull above water to an enemy's fire. This vessel was armored, and received her additional engines, at the Novelty Iron Works, New York; her armor, consisting, like that of the Ironsides, of single or solid iron plates, in this case mainly of $4\frac{1}{2}$ inches thickness, having been forged at the "Franklin Forge" of Messrs. Tugnot, Dally & Co., of the same place. The plating, backed with 30 inches of oak, extends 4 ft. below the water line, and the whole length of the hull. The deck is covered with $\frac{3}{4}$-inch plates, placed one upon the other, so as to break joint where the edges meet; the joints come neatly together, but with a small space left to allow of expansion and the natural working of the ship. The plates are secured by countersunk bolts to the deck beneath. Over the hatch surrounding the smoke pipe where it issues from the deck, is a heavy grating of wrought iron, 1 inch thick by 7 inches deep, so that projectiles striking this must glance off without injury. The form of hull is that of sea-going vessels generally, and the deck will be without guards. The portion of the rudder post usually exposed will be covered by a strong wrought-iron hood, which will also protect the propeller from shot. There are three revolving turrets, of the new Monitor dimensions and pattern—11 thicknesses of 1-inch plate—and each pierced for two guns; two of these being forward, and one abaft the centre. The parts of the deck over which the turrets are severally placed are strengthened with circles of oak timber beneath, nearly 12×12 inches, these, again, being supported at regular intervals by stanchions of like dimensions. Each central turret

shaft rests on an immense cast-iron step, provided with a wrought-iron key, and a composition seat or base upon which this is to advance: the key being driven, the ways on which the turret revolves are thus relieved of a portion of its weight. Besides the blowing engines, and the auxiliary ones for moving the turret, &c., the vessel is propelled by the engines used in her when a wooden frigate—2 trunk engines, with 80-inch cylinders, and 36 to 42 inches stroke; the whole are supplied with 4 Martin's boilers and a large auxiliary or donkey boiler. The battery of the Roanoke consists of—forward turret, 1 15-inch smooth-bore gun and 1 250-pdr. rifle gun; middle turret, 1 11-inch and 1 15-inch smooth-bore gun; after turret, 1 15-inch and 1 200-pdr. rifle gun. This is said to be the heaviest battery ever yet put together on a single ship.

The Roanoke's bow is also furnished with a powerful ram. To form this, the forward plates project some feet beyond the stem, and farthest at about the water line. At the extremity, a solid piece of iron is inserted and firmly secured between the plates projecting from the two sides; and the angular space between this and the bow proper is filled in with solid timbers firmly bolted together. The Roanoke, now armed, is said to be as yet the most impregnable and formidable vessel of the navy. She is expected about the 20th of April, 1863, to take her position off the Narrows, as the permanent guardship of New York harbor.

The Keokuk.—This vessel, also named, from Mr. C. W. Whitney, her constructor, Whitney's Battery, was built in New York. The Keokuk is a two-turret ram, length 159 ft. 6 in., breadth 36 ft., depth of hold 13 ft. 6 in., draught 9 ft. Her hull is of ½-inch rolled plates, the sides, above the water, sloping in at an angle of 37°, to prevent a square hit by the enemy's shot. The sloping sides, and the deck higher at the middle of its length, in this and a few other iron-clads of similar form above water, have gained for them the name of "turtles." Without going into all details of construction, it may be said that the peculiarity of the Keokuk's side armor consists in its being formed of alternating bars of iron and strips of yellow pine, each 4 inches thick by 1 wide, over the whole of which there are applied 2 continuous ⅝-inch plates: it is claimed that this arrangement will give the strength of 5¼ inches of iron, without its full weight. The turrets do not revolve. Each is to contain an 11-inch gun, which is to be turned, as required, to different portholes. The turret armor is constructed like that of the sides, its total thickness being 5¾ inches; but the turrets, also, are sloping, being 20 ft. in diameter at base, 8 ft. 8 inches high, and 14 feet at top. A strongly-made ram, 10 ft. broad at the hull, 3½ inches thick at the front and foot, and 5 feet long, projects from the bow. By means of bulkheads, water-tight compartments are formed within. These can be filled in 15 minutes when it is desirable to depress the vessel in the water during an action, and emptied again by the pumps in 40 minutes. The Keokuk has two engines, each of 250 horse power, and two propeller screws, by means of which she can be manœuvred with great facility.—In the action at Charleston, occurring since the above was prepared, the Keokuk was struck by 90 shots: of these, 5 went through the after turret, 3 through the forward one, 7 through the smokestack, and several through the side armor, some near the water line. One Whitworth steel-pointed shot remained sticking in the wall of the after turret. The vessel sank the next morning, and was to be blown up.

The Dunderberg.—This, intended to be a highly impregnable and, in all respects, formidable iron-clad war vessel, is now building, after plans designed by Mr. W. H. Webb, and at his shipyard, New York. Her extreme length will be 378 ft., breadth 68 ft., depth of hold from the main deck 23 ft., tonnage 7,000, and she will be propelled by engines of 5,000 horse-power. The bow of this vessel, for a length of 56 ft., will be a solid mass of timber, and the frame and decks, in fact, the remainder of the hull throughout, will be constructed of an almost incredible weight of timber of the largest size, and braced within with iron bars diagonally crossing each other, of dimensions of 6 by ⅞ inches. The sides proper of the vessel, 2 ft. thick, are strengthened by an additional 2 ft. of timbers without. Before applying the armor, a projecting angle or "hip" is built on over the 4 feet of wood already mentioned, and entirely round the vessel, the greatest thickness occurring at the level of the main deck, and being there 7 ft. in all: from this level the hip slopes in at an angle of 58° with the vertical, until it terminates at the sides, about 6 ft. below water line. This sloping portion is completely coved with armor, of course set at the angle just named. Upon the main deck, for 170 ft. in the middle part of the vessel's length, a casemate of long octagonal form is built up, its sides sloping upward and inward at an angle of 47°. This, so far as it extends along the deck at the sides, forms a single angle with the slope of the sides below; and it rises by its entire height—7 ft. 6 in. in the clear—above the level of the deck at bow and stern. The sides and ends of this casemate are plated in the same manner as the sides of the hull, with 4½-inch solid plates. The deck plating and that upon the casemate roof is of ¾-inch plates. The total weight of armor will be about 1,200 tons. The main deck, and so the hip, is at 6 ft. above the water line. Upon the casemate roof will be erected two revolving turrets of great strength, and each to contain two guns of the heaviest caliber. There will also be at least 10 large guns in the casemate, the port sills being 8 ft. above the water line. There will be two rudders, so that in case one becomes disabled the other can be used; and both the rudders, along

with the immense propeller screw, will be protected by a strongly built overhang at the stern, its length about 17 ft., its width on either side of the propeller shaft, 12 ft., while, as a further protection, the sides of the overhang also curve or project downward. The solid bow, with its plating, will constitute the vessel a very powerful ram, the destructive force of which will be greatly augmented by the high speed, of 15 knots an hour, she is intended to possess; while, on the other hand, the hip will afford protection by first receiving the shock of a ram that may attempt to run her down. The Dunderberg is expected to be a highly efficient sea-going vessel. She will, probably, not be completed until about the beginning of the year 1864.

The Italian iron-clad frigates, *Re d'Italia* and *Clotilda*—the first-named already built and the last in process of construction—are also built by Mr. Webb, and at his shipyard. The *Re d'Italia*, now being armored with 4½-inch plates at the Novelty Iron Works, is a 40-gun propeller frigate, 294 feet long, and furnished with a ram. Five other Italian iron-clad frigates are building in France and England.

The Benton, Gunboat.—This is one of the fleet of gunboats hastily improvised for service upon the Mississippi and its affluents, in the early period of the war. She was constructed of two hulls joined side by side,—length 186 ft., total breadth 74 ft.—these hulls being sealed up between with 4-inch oak plank. The entire upper part of the hull, to several feet below water line, was then plated with ½-inch iron, securely bolted on. The Benton draws 4 ft. of water, and, besides having a bomb-proof bow, she is divided into 40 water-tight compartments, so that if her bow were shot away she would still float, and her gunners and men would be protected as before. The wheels are between the two single hulls, toward the stern, the wheel houses being, for ordinary missiles, shot proof. The sides, above water, slope inward at an angle of 45°. Her armament consists of 18 8 and 9-inch guns. In operations on the Western rivers, this and other gunboats of its class have, in a general way, performed satisfactorily, their fire being very efficient, and themselves, in but rare instances, thus far, disabled or sunk.

The Essex, Gunboat.—This iron-clad, which has figured quite conspicuously in river operations at the West, has a length of 205 ft., beam 60 ft., depth of hold 4 ft. 6 in. Her hull is nearly submerged, and her casemates have the unusual height of 17 ft. 6 in. The wood-work of her forward casemate is 39 in. thick; of the side casemates, 16 in., and of the pilot-house 18 in. thick. Over all these parts is a continuous layer of rubber, 1 inch thick. The iron plating bolted on over this is, upon the forward casemate and pilothouse, 1¾ inches thick, that upon the side casemates ¾ inch thick. This vessel is also divided into 40 water-tight compartments, and upon her sides are hips, or false sides, intended first to receive and break the blow of an enemy's ram. Her armament consists of 3 9-inch Dahlgren guns, 1 10-inch shell gun, 2 50-pdr. rifles, 1 long 32-pdr., and 1 24-pdr. boat howitzer.

The Tuscumbia, Gunboat.—This vessel, recently completed, is one of the largest of the Western fleet. Her length is 182 feet, beam 70 feet, depth of hold 8 feet, draught, when laden, 5¾ ft., tonnage 980. The sides of this vessel are plated with 3-inch, and the deck with 1-inch wrought iron; the plates over the batteries or gun rooms will be 6 inches thick forward, and 4 aft. Her timbers are very strong, her build staunch, and outfit complete. A bulwark of iron, loopholed for musketry, is placed around her guards. Her engines and machinery were made by Messrs. McCord & Co., St. Louis. The main engines, two in number, with 30-inch cylinders, of 6 ft. stroke, impel 2 powerful side wheels; while 2 other engines, with 20-inch cylinders and 20-inch stroke, work the two screws. Her armament is 3 11-inch Dahlgren guns, in battery, forward, and 2 100-pdr. rifled guns, in battery, aft. The magazines, or the hold, can, by the pumps, be completely flooded in a very brief time; while, as an addition to her armament, she has an apparatus for throwing, to a distance of 200 ft., a stream of scalding water.

Other Gunboats and Rams.—Certain iron-clads building at Pittsburg will have a length of 175 ft., beam 50 ft., depth of hold 7 ft.; the bottoms will be flat, the hull rising considerably out of water will present somewhat the form of a coal barge, though with sides less vertical, and greater sharpness toward the bow. The hull will be plated with 4-inch iron to 2 ft. below the water line. There will be 1 turret, its sides of 6 inches of plates. Each boat will be propelled by 4 engines, and will carry 2 large guns, her draught, loaded, being about 5 ft. These boats are intended solely for river service.

The Indianola is one of a new class, of gunboat and ram combined, intended for river service, and to have a light draught and high speed. Her wooden sides are 3 ft. thick, and her armor, over this, three inches of iron. The wheel, wheel house, and roof are bomb proof. The Choctaw, in many respects of similar construction, though of different form above water, will carry a heavy armament, and, with her high speed, will constitute a formidable craft.

Recent English and French Armored Vessels.—The French *navires cuirassés* thus far completed having, with the exception of the iron frigate *La Couronne*, wooden hulls over which the armor is applied, are like some of the American armored vessels correctly described as being "iron clad;" but a large proportion of the English vessels of the class under consideration being really iron ships with armor in addition, these are more properly described as "armored

iron," than as iron-clad vessels. In fact, a strict classification of the new vessels, based on materials employed and mode of combination in the construction of their hulls, has not yet been attempted; and while the (American) Roanoke and Dunderberg are strictly iron-clad vessels, in the Keokuk and some others, the character of hull is more nearly or exactly entitled to the description of "composite."

The only English counterparts, thus far, of the Warrior (described last year), are the Black Prince, also of 6,039 tons, and the Defence and Resistance, each of 3,668 tons burden. Their armor is, briefly, that of the sides only through about one half the length amidships, and from the upper deck to 5 ft. below the water line. In the Achilles, also of 6,039 tons, the same extent of armor is applied, along with the important addition of a belt of armor extended, for a space reaching a little above and below the load water line, entirely about the remaining portions at bow and stern; the purpose of this being to guard against the unfavorable accident of penetration "between wind and water." The Defence and Resistance carry each 14 casemate guns: their speed is slow. The Achilles has a casemate 200 ft. long, carrying 26 guns. The Northumberland, Minotaur, and Agincourt, each of 6,621 tons, and 390 ft. length, are to be protected over their iron shell, from stem to stern and from the upper deck to 5 ft. below water line, with a 9-inch wood backing and 5½ inches of armor, forming a casemate the whole length of the vessel, and carrying 40 broadside guns. All these are iron ships. The Prince Consort, Royal Oak, Royal Alfred, Ocean Triumph, Caledonia, each of 4,045 tons, and 277 ft. long, are wooden frigates previously in part constructed, and now being converted into iron clads; the extent of their armor will be the same as in the preceding (Northumberland) class, and their armament 32 68-pdrs. The Hector and Valiant, each of 4,063 tons, and 275 ft. long, and armored to the same extent, with the singular deficiency of a short distance at the water line near the bow and stern, will carry each 30 casemate guns. It may be added that many, if not all, of the vessels here described will carry in addition 2 or more Armstrong swivel guns, fore and aft.

The vessels of the three last-named classes are thus very heavily laden with armor; and to avoid this condition, it appears, Mr. E. J. Reed, Secretary of the Institution of Naval Architects, was first to suggest the plan of confining the armor to a short casemate amidships, with shot-proof bulkheads at its terminations fore and aft, and with this additionally a belt of armor a few feet wide carried round the remainder of the vessel at the water line. The ships recently, if not now, building expressly upon his plans, are the Enterprise and Favorite; the former of 990 tons, 180 ft. long, with four guns; the latter of 2,168 tons, 220 ft. long, with 8 guns. In the Enterprise, the hull below the base of the central battery is of wood, but protected by plating with iron the deck situated at level of the top of the water-line belt of armor. The remaining upper works of the ship are of iron; while from the square central armored portion or tower the guns can be fired both athwartships, and fore and aft. Of the Favorite, the entire hull is of wood; and to protect it from being fired by shells, the portion of the sides above the armor belt and before and abaft the central battery are plated, but more thinly, with iron.

Besides the English vessels now described, there are three or more classes furnished with Capt. Coles' revolving "shields" or "cupolas," which correspond in purpose with the turrets of our iron-clad vessels, with the peculiarity, however, that (like those of the Dunderberg) they have sloping sides. The Royal Sovereign, three-decked line-of-battle ship, cut down to her lower deck, and completely plated with iron, her length being 330 ft., has 5 of these cupolas, each intended for 2 110-pdr. breech-loading Armstrong guns. The Prince Albert, also a razeed ship and of the same length, has 6 cupolas, each to receive two similar guns. These formidable batteries are intended for coast defence. The class of iron vessels carrying two of Coles' cupolas have a length of 175 ft., beam 42 ft., depth 24 ft., draught 17 ft. All the vessels with cupolas, though not as high out of water as the casemate vessels, still rise above the water line higher than do those of the Monitor classes. Like the American turret-carrying vessels, they have no masts, and a mainly clear deck. Very recently, Capt. Coles urges that vessels of this sort should be masted; and he has prepared a model of such a ship with 4 masts, having a lengthened hull, and with one shield removed. To obviate the objection arising from risk of shooting away rigging, he proposes to make the masts of iron tubes rigid enough to bear the strain of the canvas, when standing entirely alone, *i. e.*, without shrouds or stays.

Of French armored ships, the original *La Gloire* class, 4 in number, and built of wood, have a length of 255 ft., and are completely clad with 4½-inch solid armor. There are 10 other French vessels of similar construction but of somewhat larger dimensions. The Solferino and Magenta, also of wood, and about 270 ft. in length, are plated on the same general plan with the American New Ironsides, and the English Enterprise, namely, with a central battery or casemate amidships at which the plating extends from the upper deck to a few feet below the water line, and a belt of armor a few feet in width at this line about the rest of the ship. They will carry each 26 guns.

The Manufacture and Application of Armor Plates.—Since it is for the present admitted that the armor must possess qualities to be found only in a good wrought or malleable iron, its production has thus far been confined to the two modes of rolling and hammering.

The relative advantages of these two methods are still only in part decided. In this country opinion and practice have favored the making of thin plates by rolling, since in such plates homogeneity of structure and uniformity of strength are less likely in this way to be sacrificed, and the manufacture is much more rapid; while for thick plates, in order to secure close interlacing of the fibres and uniform tenacity, working under the hammer has been preferred. The thin rolled plates are formed from bar iron or blooms, produced in the usual manner. The blooms for the thick plates are usually produced from "scrap iron," selected, but of mixed description, piled in fagots of a convenient size, brought to a welding heat in a furnace, and reduced under the steam hammer to a solid mass. Several of these blooms are then laid in a pile, four or more layers deep, and successively crossing each other in length, conveyed in this condition into a large furnace in which they are again heated until the whole becomes highly malleable, and under the steam hammer are then welded into a portion of a plate; and additions are made in like manner to one end of this, until the material requisite for a single plate has been in this way united. The plate so produced can be of almost any size desired, and it is finally brought to more uniform condition and surface by one or more heatings followed by working under the hammer. The plates of the Roanoke, forged and built up in this way, were of a usual length of 12 to 15 ft., and width of about 3 ft., their thickness generally 4½ inches, and their weight 4,000–7,000 lbs. Such a plate is a sort of oblong plank of iron: other plates of irregular outline required for special parts of the ship's sides are shaped by appropriate machines.

These plates are next drilled for the bolts, and those requiring it are also bent to fit the part to which they are to be applied. By means of "templets," or fac similes, in thin board, marked with spots corresponding to the holes already bored in the wooden body, or drilled (as the case may be) in the parts of the iron hull upon which they are to be fastened, the successive courses of plates, numbered in their proper order, are then marked for the bolt-holes and drilled; after this the holes are usually "countersunk," in order that the bolt-head may enter so as to stand even with the outer surface. The plates are finally bent to the shape they may be required to have, by the action of powerful hydrostatic presses. The required curvature is readily given to the plates for upright turrets, by placing them one at a time between a curved bed upon the upper surface of the movable platform of the hydrostatic press, and a fixed frame of like curvature above, and forcing the plate upward until it is shaped between the two, as in a mould. These plates are, at different works, bent either cold or heated. The plates for the sides of the ship require to be bent to a great variety of curves, and the expense of preparing a corresponding number of moulds is obviated by employing an upper and a lower "die," each consisting of a series of strong iron bars, these being severally capable of being raised or depressed, as required, and at either end, by the action of stout screws which fix their positions. Above the upper die, which is movable, is a heavy iron casting to give it weight, while the lower die is stationary. A templet, representing any required plate, being placed between the two dies, the upper and lower sets of bars have their ends raised or lowered by the screws, until each bar exactly fits upon its own part of the templet; and the upper die being then raised to some distance, and the templet removed, the plate, already heated to a highly soft and ductile condition, is placed upon the lower die; the upper being then let fall, the weight with which it is loaded suffices at once to bring the soft plate to the required shape; or any slight departure from this is corrected by tightening the bars, at points where it is requisite.

In England, the two modes of producing the single thick plates under the hammer, and by the rolls have each their advocates. The hammered plates of the Thames Iron Works are thus made: The best scrap iron being selected and cleaned, is piled, heated, hammered into a bloom, and then rolled into bars 6 inches broad by 1 thick; these bars are cut up, piled and again hammered into a slab; several of these slabs are laid upon each other, heated, and hammered into the form of part of a plate; and the process being repeated by like additions at the end of this, the requisite length of plate is gradually produced. In other cases the hammered plate is more simply produced by successively welding together lumps or masses of scrap iron, to the required length. It has been objected to such, and in a degree to all hammered thick plates, that the iron under this mode of working becomes hard and brittle, and must lack a continuous and uniform tenacity. To this it has been replied that in properly made hammered plates, though somewhat hardened, the iron does not lose its fibrous and tough character, that by the requisite annealing, as observations on drilling and bending the plates and experiments upon targets show, the toughness of the iron is preserved and perhaps improved by the working; while the solidity and freedom from blisters or other faults in the incorporation of the parts are greater with the hammered plates.

Messrs. Brown & Co., of Sheffield, among others, advocate and practise the making of the plates by rolling. The dimensions usually required for the frigates now building in England are—length 15–18 ft., width 2 ft. 6 in. to 3 ft. 10 in., thickness 4½ in. The weight of an unfinished plate of usual size, as it comes from the rolls, is 80–140 cwt.; a few inches being cut from the sides and ends, the weight of the finished plate ranges from 60 to 110 cwt. In the making of a 5-ton plate, bars of

iron are first rolled to 12 inches broad by 1 thick and sheared to 30 inches length; 5 of these are piled and rolled down to a rough slab; two such slabs are then welded and rolled down to a plate $1\frac{1}{4}$ inches thick, which is sheared to 4 ft. square. Four such plates are then piled and rolled down to one of $2\frac{1}{2}$ inches thickness, and 8 feet by 4; and, lastly, 4 of these plates are piled and rolled to form the entire plate. There are thus welded together, during their successive reduction in thickness, 160 thicknesses of plate. That blisters and imperfection of welding and of cohesion should occur in a plate so produced is inevitable, especially, on account of the difficulty of bringing so large a mass to a perfect welding heat throughout, during the final operation of rolling into one the 4 large plates, each of $2\frac{1}{2}$ in. thickness; and this want of perfect incorporation is held to be a source of weakness, by reducing the thick plate, in some degree, to the condition of laminated armor composed of plates extremely thin. Some plates recently made in this way, however, and of 5 inches thickness, have been proved, by experiments upon them at Shoeburyness, to possess a very satisfactory degree of tenacity and strength.

The subject of the methods adopted in fastening the armor to the wooden or iron sides of the vessel, by means of bolts, screws, &c., is one of too much detail to be interesting to others than the ship-builder or artisan; and, besides, it is probably not in all cases fully made known. It is still a matter of much difficulty to fasten any armor securely enough to the actual hull of an iron ship through a considerable thickness of wood backing; and, again, to fasten thick plates strongly to either an iron or wooden hull without, at the same time, weakening the plate by the number or size of the bolt-holes. The attempts to render thick plates in effect continuous by tonguing and grooving appear to have been abandoned on account of their expense, as well as of the weakness of the union thus made. Different patents have lately been taken out, however, for modes of fastening, partially or wholly, of the character here referred to, and both in this country and in England; as well as others for providing the plates with flanges within, through which only the bolts requisite for fastening are to be passed. Plates may be fastened, to some extent, by bolts made to protrude only from the back, or by holding them between angle-irons; and it is believed that they may yet be strengthened at the joints by welding, in the manner lately employed with boiler joints, by moving along the part light furnaces, from which a jet of flame is blown upon it, and following up closely with hammers. In some of the target experiments, in which the thick armor plates were fastened by means of screw bolts, screwed up from the inside, the bolts broke off short at the nuts whenever the target was struck by heavy shot. This mode of fastening is to some extent adopted in the Monitor turrets, and for the plates of the New Ironsides, in the former of which some bolts have been broken, in the way named. An easy remedy appears to offer itself in screwing up the bolts less tightly.

The Aspects of the Armor Question meanwhile Changing.—The aim of the preceding part of this article has been to show the more important steps by which the plan of armoring ships became gradually matured, and to present in brief the several modes of armoring that have been actually and in rapid succession resorted to up to the beginning of the year 1863. Still, the armor actually adopted constitutes only one side of the question, and this, in fact, the secondary one. For, so long as the power of ordnance can be yet further increased, the demand for increased capability of resistance on the part of the armor of ships grows in the same ratio; and just so long the issue between the two remains undecided. The struggle is, on one side, for positively irresistible artillery; on the other for absolutely invulnerable ships: will either of the two finally and completely distance its antagonist? and if so, which one? or will the two come ultimately again to a tolerable balance of chances, such as, some 50 years since, existed between wooden ships and broadsides of the largest round shot then in use? and, if this is to be the result, through what steps is it to be reached?

It is a well-known fact that while, for the past two years, iron-armored vessels of all dimensions, and in great numbers, have been hurriedly building on both sides of the Atlantic, during this very period, and also on both sides, the caliber and firing charge of cannon have been undergoing a marked increase, and which, moreover, promises still to continue. Already shot and shell are safely and regularly thrown, which have powers of crushing and of penetration such as were not at all contemplated in the estimates of requisite strength that dictated the armor of *La Gloire*, the Warrior, the ordinary Monitors, the Ironsides, and their counterparts. The present phase of the armor question cannot be understood without a fair idea of the most recent advance in the capacities of heavy ordnance, and of the execution done by the projectiles thrown by it. While upon these points theoretical views must, still, to a certain extent, be accepted, much information may be drawn from the set experiments made in the way of firing upon targets; and, for the latter source, reliance must, as yet, chiefly be placed upon the English experiments, as the only ones very fully published. Some principles relating to the subjects of ordnance and projectiles must, of course, here be introduced as preliminaries.

Destructive Power of Projectiles.—The momentum, or quantity of motion, in a moving projectile is proportional to the product of its weight into its velocity; that is, *momentum* varies as $W \times V$. This is the measure of the

capacity the projectile has, if instantaneously stopped by some other body in any part of its flight, to put that other body in motion. Consequently, supposing a cannon ball in no degree to penetrate armor plating against which it is fired, but to be instantly and totally arrested at the surface, this momentum is also the measure of the shock or concussion the ball will give to the armor. The ball, having its motion extinguished, either the ship as a whole or the part struck must be proportionally moved; and, remembering that the most rigid sides of iron and wood will, still, bend, and may fracture, while it is the nature of inertia to prevent the communication of the motion, instantaneously, to the whole ship, it follows that the part struck, for a greater or less area, and to a greater or less extent, according to the conditions of the case, will move from before the projectile which it arrests. If this yielding be under a blow sufficiently great, the effect will be permanently to bend the plate, or to fracture it, perhaps to drive it into the wood backing, and to start or crush the latter. In this way the plates may be fractured, shattered or loosened, the bolts driven in, or the structure of the ship, at the part, racked or strained, and perhaps a leak produced. Now, it is important to remember (a point too often overlooked) that all these effects, *per se*, are due to, and measured simply by, momentum, and, hence, increased directly and simply by increasing the product of weight and velocity (not of weight and the *square* of velocity). Thus, if the two balls be of similar form, and could act by momentum alone, then, at short range, Sir Wm. Armstrong's 110-pounder, fired with 14 lbs. of powder, and with an initial velocity of 1,210 ft. per second, should have, to the common 68-pounder, fired with 16 lbs. of powder, at an initial velocity of 1,580 ft. per second, a damaging effect in the ratio of $110 \times 1{,}210$ to $68 \times 1{,}580$; or, nearly as 13 : 11.

But precisely to the extent that the material and structure of the ship's side combine to give rigidity and immobility to the part struck, so that, while the gradual operation of inertia will not allow the whole ship to recede, these qualities refuse to allow the part to yield through any considerable extent so as to be crushed in or fractured and recoil, it will then be true that one or both of two other results must follow, namely: the projectile must expend the quantity of force stored up in it in the way of compressing, flattening, or crushing its own mass, in the first case, perhaps rebounding, either whole or fractured, or else it must expend the same force in the way of overcoming the cohesion and resistance of the materials it strikes, and pushing or cutting its way into or through them. But this quantity of force or work stored in the moving ball is proportional to the product of its weight into the *square* of its velocity; that is, the *work* varies as $W \times V^2$. It is already evident, then, that the execution of a ball or shell in the way of punching or penetrating the armor, and generally the sides, of a ship, must also be in this ratio: it increases, so far as the mere force is concerned, as weight and square of velocity. Supposing, then, their entire energy to be expended in the way of penetration, the projectiles above named would be capable of damaging effect in the ratio of $110 \times 1{,}210^2$ to $68 \times 1{,}580^2$; or, nearly as 16 : 17; so that here, allowing for the Armstrong projectile the highest initial velocity claimed for it, the advantage is still on the side of the 68-pounder, with larger firing charge and higher velocity. The weights of projectiles of like form being, in general, as the products of their diameters and densities, it may be correctly said, also, that their punching or penetrative capacity will be as the products of the three factors, diameter, density, and velocity *square*.

Thus, projectiles can have two sorts of effect upon obstacles, say the armor or sides of a ship, namely, that of pushing or crushing away the part before them until their *motion* is consumed in imparting an equal motion; or, that of overcoming their own cohesion or that of the part struck; in the latter case driving or cutting into the part until the *work* stored up in them is in this way expended. But since, generally, under the instantaneous blow of a projectile the armor and side of the ship, in degree, both yield and refuse to yield, it follows that, in actual cases, the two kinds of effect will usually be mixed, though one or the other may predominate. It would appear, however, to follow that, other things equal, very large and heavy projectiles, thrown at a lower velocity, should be relatively more effective in the way of fracturing or shattering armor, and straining the general structure of the part, while shot or shell of less weight, from guns bearing a heavy charge of powder, and giving a high initial velocity, should be more effective in the way of penetrating the armor and sides, as where the object may be to cause a leak or to carry shells into the interior. This distinction, questioned by some authorities, and not always clearly drawn, appears, still, to be that more generally held as practically correct.

Sir Wm. Armstrong concludes that it is not by piercing small clean-cut holes with steel shot, that a ship is to be disabled or destroyed, but by knocking large ragged holes in the side, and rendering the interior untenable from splinters. Stating the case, however, in the most general way, it appears that the greatest amount of destructive effect will be produced by the guns which can give to the heaviest projectiles the greatest velocity; and this amounts to saying, in other words, those which with a given caliber and weight of projectile admit of being fired with the heaviest charge of powder. In spite of some assertions to the contrary, the opinion is now gaining ground that the superior execution of the new wrought-iron, hooped, or otherwise strengthened forms of ordnance, over

the usual cast-iron guns, is especially due to the increased charge—35 to 60 pounds, or more, of powder—of which their greater tenacity and strength admit. So far as smooth-bore guns admit of heavier charges than rifled, the former have also the advantage in this respect; but there are important differences in the behavior during flight of the two kinds of projectiles, that must also be considered. At short ranges, say, under 400–600 yards, the round shot of the smooth-bore gun still moves with somewhat nearly its initial velocity; but this it is rapidly losing, owing to the greater resistance it encounters from the air; and a little farther on it is outstripped by the rifled projectile, which at long ranges is thus the more effective. Admiral Dahlgren says, "The rifle shot has greater penetration than the round, but much less concussive power. . . . If, in battering an iron-clad, penetration only shall be the paramount consideration, and other effects merely incidental, the rifle cannon must be selected. But if the concussion and shattering of the plate and its backing be preferred, with such penetration as might be consequent thereon, then the heavy, swift, round projectile will supply the blow best adapted to such work. So long as the present mode of plating continues, there can be little doubt that it will be most effectively attacked by cracking and bending the iron, starting the bolts, stripping off the armor, and breaking away large portions of the wooden structure within." In respect to the form of the ends of shot, Prof. Fairbairn's experiments appear to prove that the penetrative power and effect of round-ended is twice as great as that of flat-ended projectiles.

The material of the shot has also an important bearing upon the nature of its effects. In striking armor or other rigid obstacle, hardened steel shot undergo less compression than any others, and their great tenacity renders them but little liable to fracture; hence, the work of which they are capable is, in higher degree than with other sorts, expended upon the opposing body. For round-ended shot, Prof. Fairbairn has found by experiments in punching plates, that when these are of steel, the dynamic resistance or work of which they are capable is more than three times that of like shot of cast iron. He concludes (in a paper read before the Brit. Assoc., 1862,) that the conditions apparently desirable in projectiles, in order that the greatest amount of work may be expended upon the armor plate, are: 1. Very high statical resistance to rupture by compression. In this respect, wrought iron and steel are both superior to cast iron. The statical resistance of steel is more than 3 times, and that of wrought iron more than twice, that of cast iron. Lead is inferior to all the other materials named. 2. Resistance to change of form under great pressure. In this, also, hardened steel is superior to wrought iron, and cast iron inferior to both these. Finally, the shot which would effect the greatest damage to a plate would be one of adamant, incapable of change of form. Such a shot would yield up the whole of its *vis viva* to the plate. And experiments prove that the projectiles that approach nearest to this condition are the most effective. The much greater cost of steel shot has hitherto stood in the way of their adoption; but M. Bessemer appears to have assured Fairbairn that he could produce steel shot at little more than the cost of those of cast iron. Dahlgren asserts that the actual damaging effect of cast-iron is greater than that of wrought-iron shot, in that, while the latter is merely flattened or crushed by impact, and tends then to lodge in the plating, the former, though it breaks, is more apt to pass completely through, making a larger hole, and badly cracking the plate.

In this country, guns for throwing very heavy shot—450–476 lbs. solid—are in successful use; and one at least for throwing a 1000-lb. ball is already constructed and in readiness. But the most recent change in the direction of efficiency of shot, appears to be in the adoption of the plan, which had already come into favor in England, of larger charges of powder. The maximum charge, up to this time, has been 35 lbs. of powder. The Government, it is stated, has now ordered cannon, preparations for fabricating which are already in progress, which will bear the explosion of 60, and possibly of 70 lbs. of powder; and it is believed that the 450-lb. shot thrown with such a charge, will prove the most destructive missile thus far ever employed. Admiral Dahlgren, also, in his recent report, states as the result of repeated and severe tests of their capacity in this particular, that the 9-inch and 11-inch cast-iron guns, until recently the largest in use, bear continued firing with charges much greater than those for which they were intended; the 9-inch one half greater, and the 11-inch with double the original weight of powder.

Resistance of Iron Plates.—The law admitted to hold generally true in respect to the resistance of plates of any given kind of iron to punching or fracture, is, that such resistance is directly proportional to the sheared or fractured area—the total length and breadth of metal, throughout which the cohesion of the particles is overcome,—and hence, that it is as the depth and diameter of a hole cut in the plate, or as the total length and depth of the fracture produced in it.

The question as to the relation the strength and resistance of a single homogeneous plate bear to its thickness, appears not yet to be decided. Experiments early made at Manchester appeared to show that the resistance varies directly and simply as the thickness, so that a plate twice as thick as another has only twice its power of resisting impact. During the last year, however, at Shoeburyness, a target of 5-8 inch boiler plates, with a $1\frac{1}{2}$-inch plate in front, the whole held together by alternate rivets and screws 8 inches apart, and having a thickness

of 8 inches, was completely penetrated by the 8-inch 68-pdr. smooth-bore gun and the 100-pdr. rifle, at 200 yds., though at like range these guns have not greatly injured the best 4½-inch solid plates; and a 10-inch target similarly constructed was much bulged and broken at the back by the same guns. From these and other data, Fairbairn deduces a conclusion in common with that now generally held in England and France—and made in those countries the leading argument in favor of armoring with single thick plates—namely, that up to a certain limit, and which lies beyond the thickness of any plates yet adopted, the resistance of the plate to shot increases very nearly as the square of the thickness; so that with thicknesses of 1, 2, 3, etc., the capacities of resistance are as, 1, 4, 9, etc.; and that a single 4½-inch plate has practically about twice the strength of two 2¼-inch plates laid together, though the latter give the same total depth of metal. In the experiments of Mr. Stevens in 1854, however, a 10-inch 125-pdr. round shot, with 10 lbs. of powder, and having about the same penetrating power with either of those above named, only slightly indented and did not break a 6⅝-inch target composed of plates of similar thickness to those made use of in the English experiments. It is stated that the experiments, individual and official, on the subject in this country concur in showing even a superior resistance in laminated armor. The comparatively smaller firing charge, and lower velocity of ball which have here been hitherto the rule, may serve in part to explain away the value of these results. In explanation of the assumed superior resistance of single thick plates—though the fact makes against them when penetration actually occurs—it has been urged that in punching such a plate with a projectile, the hole made is conical, about the size of the ball in front, and much larger at back, while the hole made through laminated armor is cylindrical; so that, in the former the sheared or fractured area must be much greater.

Besides the area of fracture, however, and the absolute thickness of single or partial plates, many other circumstances must enter to decide in a given case the relative capacities of the ball and the armor. Among these are: differences in the qualities of the metal of the ball and of the armor, as in case of the best hardened steel shot striking armor which has either too great brittleness or too great softness; the presence or absence of uniform cohesion and strength throughout the thickness of each single or partial plate, depending on the manner in which it has been manufactured; the necessity of joints and bolts or rivets in the armor—almost always elements of weakness at the points where they occur; and the extent to which the mode of applying and fastening the plates is made to prevent or compensate such weakness. The latest conclusions still appear to be to the effect that, for the most effctive sort of plating, the three qualities requisite are: 1, that the iron shall not be of a crystalline texture; 2, that it shall possess considerable ductility and the greatest possible tenacity; 3, that, to these ends, it shall be a very fibrous iron. To these qualities it will probably have to be added that, fourthly, in order to effectual resistance to the almost unfracturable shot of metal having the utmost tenacity and hardness, the possession also on the part of the plate of the utmost hardness compatible with the three qualities above named, is indispensable. Beside the use of Franklinite, presently to be referred to, it has been suggested that possibly a very low Bessemer steel, or iron, as likely to supply all the needful conditions, may yet be cheaply adapted to the making of armor plates.

Mr. A. L. Holley, after remarking that our information in respect to the relative strength of single and laminated armor is still too incomplete to warrant a conclusion, adds: "It is probable that the heavy English machinery produces better-worked thick plates than have been tested in America, and that American iron, which is well worked in the thin plate used for laminated armor, is better than English iron; while the comparatively high velocities of shot used in England are more trying to thin plates, and the comparatively heavy shot in America prove most destructive to solid plates. So that there is as yet no common ground of comparison [between the results obtained in the practice of the two countries]." In respect to joints and fastening, Fairbairn was led by tests made with a view to this particular subject, to the result that, taking the cohesive strength of a given plate at 100, the strength of an ordinary double-riveted joint is about 70, and that of a single-riveted joint not more than 56.

It appears very recently to have occurred to the English naval authorities that the bending of the thick iron plates to fit the ship's sides, as has so far been practised in case of all or nearly all their armored vessels, must render the plates so bent more vulnerable. Very few of the American armored vessels have been constructed with bent plates; among such are at least the Roanoke and the Onondaga. It would seem that the greatest strength, in this respect, would be secured by forging the plates as nearly to the required shape as possible, and then fitting the sides or backing to the plates, rather than these to the surface they rest upon.

The Recent Experiments with Modern Heavy Ordnance.—In October, 1861, a target 20 feet long by 10 feet wide, and representing the side of the Warrior—4½ inches of solid iron on 18 inches of teak backing, with an inner lining of ⅝-inch wrought iron—was fired on at 200 yards' distance, at Shoeburyness, during the principal part of two days, with solid 68-pounders, 110-pounders, and 200-pounders, both singly, and also in salvos of 3, 4, and 6 guns at a time, concentrated on white spots painted on the supposedly weaker parts of the target. The missiles simply rebounded, or broke and flew

off in fragments; and though they battered the plates and heated them in parts almost red hot, yet none of them passed through, nor, until the final salvo of 6 100-lb. balls, fired with 16 lbs. of powder each, and aimed on a single spot to one side, did they even fracture the outer plating: the effect of this last fire, however, was to make a gap in the outer plate 15 inches long and its whole depth, loosening some of the bolts, but not really disturbing the backing or inner plate. The conclusion for the time was, that the Warrior style of armor was practically invulnerable to the ordnance at the time in use.

But during the whole course of the experiments at Shoeburyness, it was observed that the smooth-bore 68-pdrs., fired with more powder, left their mark in deeper dints in the plate than did the Armstrong rifled 110-pdrs.—a fact the cause of which has been shown in the section on the *Power of Projectiles*. This led to or strengthened a conviction in the minds of those interested in the making of ordnance, that large wrought-iron guns, strong enough to bear heavy firing charges, would at close range penetrate the armor which came so triumphantly out of the previous tests. Sir Wm. Armstrong accordingly had a gun fabricated for elongated 300-lb. shot, its bore 10½ inches and greatest diameter 38 inches, and which, not having been rifled, was fired (April 8, 1862) with a 156-lb. round shot and 40 lbs. of powder, against the target above described, or a similar one: the first shot crushed the outer plate at the point struck into "crumbs" of metal, splintered and mashed the teak backing, and badly sprung the inner plate; and the second, striking near, aggravated the damage and its extent. The charge was then increased to 50 lbs., and the third and fourth shots each went, at different points, completely through the outer plate, backing, and lining, burying themselves in the timbers supporting the target. A change of opinion in reference to the practical invulnerability of the Warrior armor, at least for a square hit at short range, of course set in; and although for a time it was urged by some that the actual damage to the target had been overstated, and in spite of the fact, that after some 160 discharges the Armstrong gun burst, showing that the charges used were too much for the metal and construction, the more decisive experiments, soon afterward made, completed the overthrow of the confidence previously entertained on the side of armor defence.

The experiments in firing solid shot and shell upon targets were renewed in August, 1862; and upon an occasion on which members of a select committee of the Government on iron plates and ordnance were present, the new Horsfall wrought-iron smooth-bore gun, caliber 13 inches, weight 22 tons, and carrying a 286-lb. solid ball, as well as other pieces, was tried. The standard Warrior style of target being used, range 200 yds., and charge 75 lbs. of powder, the first shot smashed through the entire target, striking out a huge hole more than 2 ft. in diameter, cracking the surrounding iron in all directions, and unfitting the target for further experiments. The gun appeared to be in no way strained or injured by the fire.

In the experiments previous to this time, the shells fired against armor of moderate thickness had been broken; and it had been held that vessels covered with 2½-inch plates were shell-proof. A Whitworth rifled breech-loading 12-pounder field gun of 4-inch bore was on this occasion loaded first with a flat-fronted solid steel shot, and fired at 100 yds. upon plates of 2 and 2½ inches: in both cases the shot cut their way clear through the plates. The same gun was then loaded with a flat-fronted steel shell, containing 6 oz. of powder, and fired with a charge of 30 oz.: no fuze was employed, but, as expected, the concussion ignited the bursting charge; one such shell passed through a 2-inch plate and 12-inch oak backing, another pierced the plate and burst in the backing, shattering it to pieces. A Whitworth 70-pdr. naval gun was then tried against a target of 4-inch plating on 9 inches of oak, attached to another frame of four inches of oak, lined finally with a 2-inch iron plate, the space between the two frames being 30 inches. A 70-lb. flat-fronted steel shell, fired with 12 lbs. of powder, at 200 yds., was driven clean through the first plate and backing, reached and fractured the 2-inch plate, and then burst, shattering the target. Prof. Fairbairn concludes that, against such weapons as those employed in these experiments, no American gun-boat [query, iron-clad vessel?] is proof; but that, with Whitworth's hardened steel shells, such vessels could be destroyed at 1,500–2,000 yards. It was observed in these experiments that the Whitworth flat-fronted steel projectiles cut clean holes through the outer plates, without fracturing them as did the ball from the Horsfall gun. It was believed by those present at the trials, that the latter would have gone through a plate 6 inches in thickness.

Sept. 25, 1862, experiments were made with the same Horsfall gun, and an Armstrong 120-pdr., rifled on Whitworth's plan, the range now being 800 yards for the former (13-inch) gun, and 600 yards for the latter (7-inch). The target was 21 feet long, 15 feet high, of the Warrior pattern, already given, and strengthened within by a framing of massive angle irons, set 18 inches apart. The Horsfall gun was fired 14 times with solid shot of 275 lbs., and a 75-lb. charge, at least two of the shot striking. One, a ricochet, bounded from 40 yards in front, smashed through the armor, making a great hole, shattering the teak and fracturing the lining, but not passing through; another, striking the upper corner of the target, made a huge fracture, breaking out several great pieces from the outer plate. The Whitworth rifle, with a firing charge of 23 lbs., sent a solid hexag-

onal flat-fronted shot, 13½ inches long, weight 130 lbs., through the armor into the wood, shattering one of the angle irons, but not going through. With the same gun, a shell of "homogeneous metal" (low cast steel), 17 inches in length, holding 3½ lbs. of powder, weighing 130 lbs., and fired with a 25-lb. charge, was sent clean through the 4½-inch armor plate and the wood backing, exploding as it struck the inner plate, and tearing the latter into fragments. The solid shot and shell from this gun made clean 8-inch holes through the armor; and their velocity at the moment of impact was ascertained to be 1,284 ft. per second. Thus, the standard English system of armor was proved to be completely vulnerable even to shells; but, on the other hand, the result appeared to be due to the high firing charge and velocity secured by the Horsfall and Whitworth guns, and to the use with the latter of the hardened steel shot and shell; so that the English authorities consoled themselves with the conclusion that, in comparison, the French navy rifle guns, and the American cast-iron Dahlgren guns are "useless against iron sides." It appears that, still more recently, the Whitworth rifle, last referred to, has thrown a 150-lb. shell, holding 5 lbs. bursting charge, and fired with 27 lbs. of powder, completely through a 5¼-inch armor plate and 9 inches of backing, the shell exploding in the space beyond, representing the hold of the ship!

In respect to recent experiments in the United States, as already implied, although these have been now for a long time in progress at Washington, as well as, perhaps, elsewhere, and, it appears, on no limited scale, very little connected with the results has yet been made public. It is said that the hollow 375-lb. shot of the 15-inch guns, their walls 3 inches in thickness, thrown against 10½-inch laminated armor, backed with 18 inches of oak, were broken without doing serious damage to the armor. Admiral Dahlgren speaks of a new class of gun—caliber not positively given, though probably 15 inches—which, at 200 yards, has sent its shot, with ease, through 5¼ inches of iron plates and 18 inches of oak backing.

Practical Qualifications as to the Relative Efficiency of Guns and Armor.—Even, however, the facts that the most powerful ordnance has sufficed to pierce and demolish fixed targets, under a fair fire on land, do not prove the actual (similar) armor of ships useless; and many qualifications of the results above found in reference to the resistance of plates and the power of projectiles must, in practice, come in on both sides—so many, in fact, that the actual trial of the two in naval engagements must finally decide these questions, and may decide them quite differently from any present anticipations. Prof. Fairbairn considers that the victory is now in favor of the guns, and that it may be difficult to construct ships of sufficient power to prevent their destruction by entrance of shells. Again, the destructive effect of ordnance generally is greatest at short range, and on account of the limited number of guns usual in the new styles of armament, and the known resisting power of an antagonist's sides, as well as the difficulties of aiming at sea at a distant moving object, iron-clad warfare will probably be carried on as a rule at close quarters. Still there are many circumstances which will be availed of on each side to delay or avert a conclusive blow, until its own guns can be brought into play. Thus, in favor of the armor and ship (defence), there are the uncertainty of securing a square hit, even on vertical sides; the danger with large charges of bursting of the antagonist's guns, an accident but too much favored by the new charges of ¼ to ⅓ the weight of the ball; with certain styles of iron-clad, the limited number of the guns, and in proportion as these are of large size and heavy firing charge, the necessity of longer intervals—with 15-inch guns, not less than from 3 to 8 minutes—between the discharges; the relatively small chance, where a partial damage has been inflicted, of increasing or completing it by another shot upon the same point; and so on. It would for the present appear that the 20-inch 1,000-pdr. guns must be confined to use in forts, and from which their steady aim would enable them to tell with terrible effect on vessels even at a distance of 1,000 yds. or more; so that while they are obviously desirable for harbor defence, they are likely at the same time to be in the main or wholly excluded from naval conflicts.

On the other hand, in favor of the guns (attack), are found such facts as, that the practical thickness of armor and backing must always be confined within a small limit; that heavy armor on a ship's sides, more especially when far removed from the frame and proper walls of the hull by intervening thick wood backing, continually exerts a strain tending to break down the sides, and thus in effect coöperates with the racking blows of heavy projectiles; that an enemy's portholes are always exposed to the entrance of the most damaging missiles at the moment of being opened for firing; that the concentration, in partially protected vessels, of armor over casemates and at the water line, necessarily leaves some parts vulnerable, &c.; while to all these circumstances another arising from an entirely different source must be added; namely, that the targets used in the experiments made on land have unquestionably possessed a greater strength and resisting capacity (though this is perhaps less true of laminated armor), than is likely to be found in any section of an actually armored ship's side, which they are intended to represent.

The Question of Inclined or of Vertical Armor.—The principle of inclining the armor from the vertical, so as to favor the glancing of

shot, and save the plates from receiving the full force of the blow, appears to have been first proposed by Mr. Josiah Jones, of Liverpool. Among the experiments made to test the value of this plan, were those in England, in 1861, in which a 3¼-inch solid plate fixed at an angle of 45° was more injured by elongated 100-lb. shot, than a 4½-inch solid plate in a vertical position, the two plates having the same backing and equal weights of metal in the same vertical height. In fact, the Iron Plate Committee have recently reported that with any practicable inclination from the upright—as much as 52°—it takes the same weight of iron to cover effectually with armor a certain length and height of side, whether this be inclined or upright. This is but another mode of expressing the conclusion arrived at by Mr. Stevens in this country, that a given thickness of iron measured on the line of fire, whether the plate be fixed in a vertical or an inclined position, offers about equal resistance to the average shot striking it. These general statements must, however, be to some extent qualified, both for the form of projectile and sort of gun, on one hand, and for the relative hardness of the armor surface, on the other. Elongated projectiles thrown from smooth-bore guns are notoriously uncertain of effect in a first oblique impact, and of direction after being from any cause once "ended over" or glanced. With projectiles of such form, rifling appears indispensable, in order to give persistency in direction of flight, and to keep them on end while cutting into armor. And in such case, especially if the shot be hardened and flat fronted, it is not glanced except by armor set at an angle with the horizon so small as to be impracticable, in view of its forbidding the proper accommodation and working of the guns, and rendering the hull deficient in stability and bearing; while, further, if the shot are glanced, and often in that case in fragments, they must prove so destructive to objects on deck as to render masts, rigging, and sails unavailable. Round shot, indeed, are likely to be glanced by armor set at an angle of about 40° or more with the vertical; and in experiments on the subject in this country, a 6½-inch laminated target, vertical, was by a 125-lb. spherical shot indented about 4 times as deeply as 6¾-inch plate, also laminated, fixed at an angle of 27½°. Besides the disadvantages of inclined armor already named, are those of its greater expensiveness, the waste of room it occasions, and the fact that to a more direct fire from elevated guns, as those of shore batteries, its less actual thickness renders it quite vulnerable. In fact, in the United States comparatively few armored ships have been constructed with inclined armor, and in England the principle is regarded as abandoned. Since, on the part of the armor, a surface at once highly hard and tough must increase the tendency to glance shot, the use of the Franklinite iron for surface plating may be found to render a practicable inclination of greater value as a means of protection; and experiments with a view to this end are said to be in progress.

In the Exhibition of 1862, Mr. C. J. Richardson exhibited drawings of a modification of the inclined principle for the sides of ships. He proposes to apply the armor in the form of projecting conical shields, each shield having slightly curved projecting lips or bases; the forms being such as he believes will cause shot striking to be deflected in a direction back toward that from which they came. He makes the portholes either circular or oval, and continues the circular lip round them, so that shot glancing over the surface of the shield may be deflected from this also. Mr. J. W. Couchman, in a model of a floating battery, combined with vertical ports the sloping side between ports, as attic windows are formed in a sloping roof. The necessity of rendering the sides and roofs also of these ports shot-proof, would probably make the proposed armor enormously heavy.

The Question of Kind of Armor, and of Backing.—So far as the data upon which must be decided the question between the claims of laminated and of solid armor have yet been determined, those data have, it is believed, been in the main embodied in the foregoing parts of this article, and particularly in the section on *Resistance of Iron Plates.* Each method of plating has its own advantages, and its own defects; and while it is certain that the question of the relative value and desirableness of the two systems has not been decided either way, the final result may be in finding each of them the more eligible for particular sorts of vessel or kinds of service. Certain well-conducted experiments would seem to prove at least that, with the same thickness of iron, the solid armor throws off and keeps out a shot which may deeply indent or pass through the laminated. This might be quite conclusive, if penetration were alone the question; but such is by no means the case. While Admiral Dahlgren gives prominence to the fact that a very thick solid plate can scarcely be made equal in texture to the thinner ones, and remarks that, in every instance in which he has seen a solid plate pierced by shot, a separation of the metal at the welds has shown the imperfection of the union there formed, Mr. Holley regards the experiments as showing so great a difference, in simple and absolute resistance to shot, in favor of the solid iron, as to leave a large margin for possible defects in the quality of the latter. It appears quite certain that fracture is more likely to result in solid than in laminated armor, since in the latter the separate plates are more capable of yielding in virtue of their elasticity; and that, when caused, it is also more serious in the former. All thick plates are in proportion much more weakened by the necessary large bolt-holes through them than, owing to its mode of application, are the plates of laminated armor;

and with the solid plates, as their thickness is increased, this source of weakness will be aggravated in a degree in which it is not with armor of many thin plates. Thick plates impart no strength to the ship, nor do they help to strengthen each other, but in fact hang separately as so many loads on the ship's sides, constituting again by their weight a source of of strain and weakness. Thus, the Duke of Somerset, in the House of Lords, in the early part of 1862, admitted, and the statement holds equally true of all English armored ships built up to this time, "We have not yet constructed a vessel in which the iron plating adds to or assists in constituting the strength of the vessel." "A series of thin plates," however, as Mr. Holley remarks, "breaking joints and bolted through the backing, not only fasten each other, but are in effect a continuous girder;" and in this way, they not only afford support to each other, but strengthen the entire hull at the same time. Meanwhile, laminated armor is both the cheaper and the more easily put on. On the side of solid plates, it has been urged that if the resistance practically does increase as the square of thickness, and 4½ and 5-inch plates are found to tax severely the powers of the best ordnance, then in plates of 8 inches thickness is probably to be found a positive protection against the most powerful guns that can be constructed. Supposing this could with such plates be the result, the facts already presented appear to throw doubts, if not upon the feasibility of constructing them of good quality throughout, at least on that of securely and satisfactorily applying them.

In respect to the use or disuse of a wood backing for the plates, it may be stated that while English opinion and practice decidedly favor the armoring only of iron ships—and this, in spite of the recent efforts of the Admiralty to get the surplus wood in the shipyards used up in a certain number of wooden hulls,—there are those interested in the subject in that country, who argue in favor of armoring with *iron on iron*, dispensing with the intermediate wood. Among the advocates of this plan has been Prof. Fairbairn, who urged that while a wood backing by its elasticity and yielding softened the blow of a projectile, this was done at the expense of the plate, since the latter would be more deflected and driven into the wood. But in all the firing upon the laminated armor of the Monitors which has yet taken place, no such result of a broad area of the plating being permanently bent and compressed into the backing has occurred. Fairbairn admits, however, that with iron on iron there is greater risk that the result of two or more heavy shot or of a well-concentrated fire might be not only to penetrate the plates, but also to break the ribs of the ship; and from results of the very latest experiments with the 300-pounder gun, he concludes that some softer and more compressible substance than iron between the armor and sides is necessary, in order to deaden the blow; so that the wood backing cannot be dispensed with. This action in the way of distributing and softening the blow upon the hull and ribs of the vessel, as well as upon the armor, appears to be the true function of the wood backing, so that while it adds little to the real strength of armor, it adds greatly to the protection of the ship, and may be considered as generally indispensable. And again, though such backing is subject to the disadvantage of being fired by shells, it becomes a special and important protection of the ship's crew and force, by arresting or preventing the discharges of iron splinters, otherwise so likely to be driven into the interior.

Extent of Armor, and Plans of Armored Vessels.—As American practice in constructing armored vessels has thus far favored moderate or comparatively small dimensions, so it has tended most strongly to the plan of complete and nearly uniform protection of the entire hull, to a depth below which penetration becomes very unlikely. The French and English practice, directed chiefly to sea-going vessels, and hence of generally large dimensions, has been divided, but in good degree, it would appear, driven—through the desire of preserving speed—to the plans of partial armoring, as previously described. With ships of large size, it appears quite evident that—and especially as against the most recent styles of guns and projectiles—armor from stem to stern, and of a thickness to be invulnerable, is a thing utterly impracticable, at least without such a weight of metal as to sacrifice all desirable manageableness and speed. Besides, it is argued in England that, while the complete mailing of the Royal Sovereign, Prince Albert, and others, as intended for coast defence is well enough, vessels mailed on this plan could not properly lift their loaded ends in a heavy sea, so that these must in such case continually be submerged by the waves. Consequently, for large sea-going vessels, a sufficiently armored casemate, or turrets, amidships, with a broad belt of armor at the water line, a shot-proof deck being formed at the upper level of this armor belt or at water line, the hull being as much as practicable divided into compartments severally water-tight, and with pumping engines and pumps of good capacity within the protected space—such, keeping in view sea-going qualities, celerity of turning, and speed, appears to be in brief the general plan indispensable to securing at once any sufficient degree of practical invulnerability and fair chances of keeping afloat. Since there must somewhere be a shot-proof deck, the placing of this near water line does not increase the weight of the hull, though it may have some effect on its stability; but it saves a considerable weight of metal from the unarmored parts, a portion of which can well be used to strengthen the armor where applied. Again, it has been proposed, with hulls of the ordinary height out of water, to save weight

and increase the strength of armor by plating more heavily at the water-line belt, and again at the height of the battery, with a lower shot-proof deck, as before, and shot-proof passages leading from the lower protected space to that of the battery or gun deck.

Large dimensions of hull, by increasing the carrying power of the ship in a more rapid ratio than the resistance it meets with in motion, allow not only of heavy armor and armament, but also favor speed; so that, in a general way, such dimensions must be aimed at in sea-going ships. But an important increase, on the other hand, in a vessel's efficiency may be secured, as is aimed at in the Monitors, by dispensing, as far as practicable, with everything but a protected hull, a battery and its auxiliaries, and engines for propulsion, for the needful work of ventilating and pumping, and working the turret, if not of serving the guns; the latter, meanwhile, by the device of the revolving turret, being reduced in number and increased in caliber and power. The settling, however, of the Montauk's turret, under the blows of shot from Fort McAllister, and the blocking of the turrets of the Passaic and Nahant, in the attack on the forts in Charleston harbor, show that in order to secure a good degree of endurance and efficiency in actual combat, some important improvements are yet required, and, perhaps, intimate that, with small vessels of this construction, the large armaments of line-of-battle ships will have to be replaced by the large number of turrets, and so of hulls, composing an attacking fleet. Since the attack referred to, Capt. Ericsson declares that the construction of the turrets and pilothouses of the Monitors is purposely made such as to admit of the application of additional thicknesses of plating, if this (as now appears to be the fact) should be proved necessary; and he implies that all the apparent imperfections in the batteries, shown by that contest, can be readily and completely remedied.

Among the means which appear to promise a great increase in the efficiency of small batteries may be named the plan of Mr. E. A. Stevens, of "elevating and lowering, by hydraulic machinery, the turn table on which the gun carriage is fixed, so that the gun can be fired above deck, and loaded and protected, except at the moment of firing, below a shot-proof structure; and especially Mr. Stevens' arrangement for loading and cooling guns rapidly by simple steam machinery;" as well as the plan of "a rotating battery, designed by Mr. Julius King, of New Jersey, in which two or more guns are loading below deck, while another in the same revolving frame, and covered by a shot-proof hood, may be trained, elevated, and fired above deck." [Holley.]

It is stated that Mr. E. A. Stevens has recently, with the proviso that the Government shall purchase it in case of success, proposed to complete his well-known battery at his own expense, and then to submit it to the severest tests known to modern navigation and gunnery, among its assumed qualities being a speed of 20 miles per hour, capability of turning in an extremely short time on its own centre, and invulnerability to shot of the most powerful known ordnance. This last quality is in a good degree to be derived from the submersion of the hull, during action, to such a depth that the lower deck shall be considerably beneath the surface of the water, the deflecting influence of which is held to afford the most efficient possible protection to the hold, with the engines and machinery, so enveloped. The bottom of this battery is of wood, and so, free from the fouling which proves, after a little time, so serious a barrier to speed with vessels having iron bottoms, unprotected.

The question of the best construction of hull for armored ships is, in fact, still by no means settled. The comparatively thin shell of a very usual style of iron ships, perforated by rows of holes running in the direction of the ribs, is manifestly a source of weakness in reference to transverse strains; while the shell may also be crushed in by collision with ledges of rocks, or a blow from the flukes of an anchor. To remedy these defects, it has been proposed to apply a thick wooden sheathing outside the iron shell, and over this copper or brass sheathing; and, again, to introduce a double bottom, as is done in the Great Eastern, and in the new English "shield" ships; an objection to this being that the necessary allowance of space enough between the two bottoms to admit of the entrance of workmen, diminishes greatly the available room of the hold.

Experience in this country appears not to favor the armoring of old wooden vessels for the new sort of service; but whether or not the proper hull of an armored ship were better constructed of wood, appears to be still an open question. The wooden bottoms, with or without copper sheathing, have the advantage of fouling far less than those of iron. The iron surface, acted on by salt water, rusts rapidly and unevenly, and then affords a lodgement to barnacles and seaweeds to such an extent as to unfit it for gliding easily upon the water, thus reducing the speed. Lord Palmerston declared that the Warrior fouled so fast that she lost a knot an hour in speed every six weeks she was afloat; and such vessels, if the bottoms be not in some way protected from this action, require frequent docking and cleaning, and are not so suitable for long voyages. Copper sheathing oxidizes slowly and more evenly, and thus constantly dislodges the foreign bodies that would become attached to its surface. But against wooden hulls, on the other hand, it is an objection that they work more under the action of a heavy sea than does a well-constructed shell of iron; and this is by far a more serious difficulty in the case of single thick plates than in that of laminated armor.

Hence, in England, a very strong feeling, on this score, adverse to wooden hulls exists in naval circles. It is stated that the four large frigates which lately made a trial trip to Portugal returned with their plates so loosened that they required to be at once docked and repaired. Mr. McKay, favoring wooden hulls for reasons some of which have been given, asserts that, since thick oak planking of from 40 to 60 ft. in length, can be obtained in abundance in Delaware and Ohio, and nowhere else on the globe, therefore far stronger wooden vessels can be built in America than in the old world.

One very apparent result of the great innovations which are being made in the construction of ships of war is, that but little attention is paid to ornament, or even to beauty of form. This, in view of the more vitally interesting questions that are now at issue, is not surprising; and some of the armored vessels and designs for such are not a little strange and uncouth. The decoration of the head and of the stern and quarters of these vessels is wholly sacrificed; both extremities of the ship are plain, and, in some instances, scarcely to be distinguished, unless it be by some such mark as the unsightly cowl sometimes employed to protect the rudder post where it rises through the deck. If many of the new styles of vessels have any beauty whatever, it is only of the sort that springs from utility, and a utility—in this particular class of cases—which it requires a good degree of philosophy to discover.

Preserving the Bottoms of Armored Vessels.—The bottoms of wooden vessels not covered with sheathing are known to be liable to become worm-eaten; while a sheathing of iron, or an iron shell, becomes rapidly fouled. The value of copper sheathing has been above referred to, as also the method of covering iron bottoms with wood and then with copper. Against this plan it is urged that the timbers so applied give no structural strength to the ship, so that while the frame requires to be as heavy as before, the whole timber applied is so much additional expense. Brass or copper cannot be applied as a sheathing directly over an iron bottom, on account of the galvanic action and rusting of the iron that would thus be induced. Only two methods appear to remain. Of these, the first is that of sheathing with copper over iron, but with the introduction between the metals of a layer of non-conducting material, such as bitumen of Trinidad. This is the plan and material adopted by Mr. C. W. Lancaster, the bitumen being used to separate the metals and also to cause adhesion of the copper sheathing—the latter purpose being aided by copper studs tapped at considerable intervals into the iron plates, and riveted upon the surface of the copper sheets. This plan appears to be that now most generally in favor among English shipbuilders. There are those who doubt the practicability of sufficiently insulating the metals in this way, and who rely on the second of the remaining methods, that of coating iron bottoms with some paint or composition resisting the action of salt water, and perhaps in other ways unfavorable to adhesion of barnacles and weeds. It is said that, in 1859, the British iron steamer Himalaya ran during nine months a distance of 26,000 miles, and in all climates, and that when docked on her return for repairs, the bottom was found quite smooth and free from rust. The bottom had been coated with red lead, and over this with a composition, chiefly of asphalt. Mr. James Jarvis, U. S. government inspector, in a letter written in 1853, declares that equal surfaces of wood and of iron, one set of each coated with three coats of red lead, and the other with three coats of zinc white, being placed during the summer in the water (salt) adjacent to the Gosport Navy Yard, at the end of the time the surfaces coated with the red lead were found quite covered with barnacles, and those coated with the zinc white entirely free. While most of the paints or compositions used for the purposes under consideration afford but partial protection and require frequent renewal, the zinc white has been found, when applied to iron bottoms of steamboats in this country, to afford the most enduring and effectual means of protection; and accordingly the bottoms of the Dictator, Puritan, and some other iron-clad vessels, are to be coated with this material.

Rams.—Mr. Stevens, some ten years since, determined on introducing into his battery, in order to give it efficiency in acting as a ram, engines of full 8,000 horse-power, although 4,000 would have given the speed of ordinary war vessels. It is universally admitted that, for the purposes of securing a choice of position, ability to attack with the greatest effect and upon any desired point, and if needful to escape, as well as that of passing forts with the least risk of being struck, speed of movement and celerity of turning are qualifications not less essential in rams than is actual strength of the hull and beak with which their blows are to be inflicted. Yet, singularly enough, no steam ram or vessel furnished with the appendage of a beak is yet afloat which possesses in high degree the important requisite of speed. A strong construction is secured, but not the rapid resistless dash of movement that must overtake almost any flying foe, and make the monster the most truly effective against whatever it encounters. Possibly this fundamental defect may be remedied in the Stevens Battery, the Puritan class, and the Dunderberg, when these are brought into service. With a mass so heavy as that of the ram, since its damage is due to momentum, a slightly greater speed than that of the vessel struck, and of course, if the latter be at rest, a slow movement, may suffice to do to the enemy's sides or to the screw and stern an irreparable injury, and that without racking the structure of the ram itself. It has been urged as particularly a mistaken plan to give unusual strength to the head and bow of a ram, as ne-

cessarily interfering with its speed and celerity of movement; and again, that since even a slower ship may keep her broadside away from the prow of the ram, two or more of these are much more likely to make a successful assault on even a single vessel than is one.

The means of giving sufficient speed to a ram, though perhaps difficult in practice, are so simple in principle as to require no further remark. The means of securing celerity of manœuvring are, usually, found in the use of two independent screw propellers,—as, for example, one under each quarter. By backing one of these, and driving the other in the ordinary manner, the vessel may be rapidly turned on her centre or heel. Two screws have the further advantages of allowing of the application of greater power, and of furnishing still a means of propulsion, if one, and only one, should be disabled.

In a discussion following the reading by Mr. Aston of a paper on the penetration of projectiles, before the British Association for Advancement of Science, 1862, Mr. Nasmyth is reported as saying: "The steam ram was an old subject with him. A plan was proposed by him to the Admiralty, so long ago as 1845. He thought the more destructive you can make the attack on your adversary, the better. It was not right to be torturing your enemy by drilling numerous small holes in him; it was like taking a whole day to draw a tooth. His ideawas to make one large hole and sink the ship at once, with the enemy. It was a question of *momentum*. The first practical ram was the Merrimac, but the Southerners made a mistake in giving her a sharp end: it should be blunt. Such was the original plan of the speaker, nor had he seen any reason to alter his views. The vessel must present as low an angle as possible, to turn shot; but she must also have strength in the direction of her length, and use the utmost possible amount of steam; and to meet the objection that the impact might destroy the engines, which he did not anticipate, he would place the engines on a slide, with buffer arrangements. With such a vessel he would dash into the Warrior as into a bandbox. The plates would be crushed at once. He hoped the Admiralty would devote a thousand pounds or two to try the effect of a ram against an old hulk, the ship Trusty, and afterward upon the Warrior herself."

Coast and Harbor Defences.—To the familiar modes of defence of coasts and harbors, by means of forts, shore batteries, and ordinary vessels of war, with the addition in case of the latter of sunken obstructions, chains, &c., the recent progress of naval warfare has added iron-clad ships, steam rams, cordons of submerged torpedoes, and the imminent prospect, if not yet the practice, of iron-armoring also the exposed faces of fortifications. The location of torpedoes and obstructions is simply the work of the engineer; but the immense importance of this new sort of sub-aqueous "outworks" to harbor fortifications, as an aid in embarrassing an enemy's attack upon the latter, and a means of preventing his running them for the purpose of assault on the seaport they are intended to protect, is convincingly shown in the instance of the recent attack of the Monitor fleet on the Charleston forts; and the subject is one of which the importance cannot be over-estimated. With reference to armored vessels and rams, nothing further need here be added; the points obviously to be regarded being simply that their strength, armament, and number be, if possible, sufficient for all probable emergencies.

In respect to forts and land batteries, the superior certainty of aim and efficiency of fire of guns placed in them, over those of the guns of ships, have long been well understood; and so long as the former are supplied with ordnance of the best patterns, of the largest caliber and highest firing charge, a contest of the best armored vessels with them—their walls being of good thickness and strength—would seem to remain, as heretofore with wooden ships, a matter of doubtful result. This superiority in damaging and destructive power of forts over ships is likely, as previously intimated, to reach its maximum if the former only shall be able to mount and use the new 20-inch guns throwing 1,000-lb. shot, and more especially when the endurance of the forts themselves shall be increased by iron plating. One of the 20-inch guns, munufactured at the Pittsburg foundry, is to be mounted within Fort Tompkins at the entrance to New York bay, in April, 1863. In reference to protecting the walls of forts with iron plating, it would appear that in this case some of the difficulties experienced in armoring ships will not be encountered; and that solid plating of as large dimensions and as great thickness as can be manufactured, can here be successfully applied and far more securely fastened; so that, in simple resistance to penetration, forts are likely to have the advantage over ships. The usual elevation of their guns, often of their walls, to a considerable height above the gun deck and body of the ship, give them a double advantage in another way, that they can aim a more direct plunging fire upon the deck and sides of the ship, while the balls of the latter may have of necessity to be thrown upon their walls in a more or less oblique direction.

Conclusions.—The results in the way of riddling armor targets, in England, with the fire of the latest Whitworth and Horsfall guns have shown that, even before the first large and expensive fleets of armored ships built by the United States, France, and England, are fairly brought into service, a considerable portion of them all, but more especially (it would appear) of those of the two countries last named, are no better against guns that *can* now at any time be brought to bear upon them, than the old wooden walls; since the former would have, as certainly as the latter, to rely on speed and

manœuvring to escape near direct firing, and so to prolong their existence and power of aggression. The result in England has been a suspension of opinion in reference to the effectiveness of practicable iron armor, and more than this, the questioning by some authorities whether any effective armoring is not in the nature of the case an impracticable thing. In this country, the same degree of distrust on this question has not arisen; and the greater confidence existing must be traced in no inconsiderable degree to the fact of the general choice here of models for armored vessels, and plans of armoring that, for the purposes intended and the tonnage and capacity given, have unquestionably, nay, demonstrably, proved more decided successes and steps of advance in practical naval warfare, than have any or all the armored ships thus far produced by France and England. There can be little doubt that, for their tonnage, the Roanoke and Dunderberg will prove quite as formidable antagonists as any of the Royal Oak and Prince Consort class of English (similar) plated wooden ships; nor that the Puritan and Dictator, with their 10½-inch armor and four feet of oak, but practically backed also with the entire remaining deck of 40 ft. breadth, its own thickness of the sides only rising above water, will be almost absolutely invulnerable; while it must, at the least, be admitted that, when completed, these will be beyond comparison the most formidable war vessels in the world. The enduring capacities of even the smallest-size Monitors are proved abundantly by the absolute freedom from penetration and the slight actual damage with which seven of them came out from the terrific hail of projectiles poured upon them for more than an hour in Charleston harbor; and the assurance is given that even this class can be practically much further strengthened, to meet future assaults.

Still, these smaller vessels are valuable only for their purposes, and within a certain sphere of service. Mr. McKay justly urges that, while they are well fitted for defending or operating in harbors, they cannot command the high seas, take the necessary part in great naval engagements, break blockades on distant coasts, nor protect our commerce in remote parts of the world; and he anticipates that in a contest with large iron-clad frigates, they would be terribly handled, and would probably be run down. He calls attention to the fact that the French will soon have a fleet of 16 iron-cased frigates fit for foreign service and an aggressive warfare, the English 16 such frigates and 2 iron-cased corvettes, suitable for the like purposes. It may still be answered that, if the true policy of this country be anticipated to continue a defensive one, then her war navy is increasing in strength in the right direction. But Mr. McKay argues that, to be compelled to keep on the defensive is in itself a defeat; and yet, that for such purpose only, in case of a war with any of the great naval powers, it is absolutely necessary that we have at least 20 large, powerful iron-cased frigates, that can be used also as rams, of at least 12 knots speed, capable of carrying ten days' coal, and in draught not exceeeding 24 feet. These ships, he thinks, should be of wood, and copper bottomed, while, besides these, there would be need of 20 to 30 armored shell-proof corvettes, of high speed and light draught, and carrying each 10 to 12 guns.

Perhaps the practical conclusions following from the whole subject, in reference to the improvements now appearing desirable, both in the line of ordnance and of armored vessels, cannot better be expressed than in the language of Mr. Holley, in the "Atlantic Monthly," for January, 1863,—in an article from which, as well as from that by the same author in the "National Almanac," for 1863, some of the facts and deductions given in this paper, and not separately credited, have been drawn—when he says: "The direction of immediate improvement in ordnance for iron-clad warfare appears to be in the abandonment of cast iron, except as a barrel to be strengthened by steel; binding an inner tube with low-steel hoops, having a successively increasing initial tension; and the use of spherical shot at excessive velocities by means of high charges of powder in bores of moderate diameters [rather, it would appear on this point, in bores of the largest possible diameters for which the due strength of metal to bear the proportional firing charge can be secured]. The rifling of some guns is important, not so much to secure range or accuracy, as to fire elongated shells through armor. The direction of improvement in [large?] iron-clad vessels, appears to be in the concentration of armor," with shot-proof decks and bulkheads, as already described; "high speed without great increase of weight of the driving parts, by means of improved engines and boilers, and high pressure; the production of tenacious iron in large, thick, homogeneous masses; and the rapid manœuvring of heavy ordnance by machinery."

Finally, even if it should not appear altogether apposite to our subject, it is certainly apposite to *man*, who is still greater in himself than all the wonderful things he can do, and more important to himself than all that he can accomplish in his Titanic play with matter and forces, to add from a moral point of view the reflection that, to accept the struggle now going on between the means of offensive and of defensive warfare as an *end*, or as anything indeed more than a passing disturbance or convulsion running through the human mind and over the face of society, would be to put a wholly new interpretation henceforward upon the meaning and intention of all scientific advancement, and upon that more authoritative presage of nearly nineteen centuries since, conveyed in the words "On earth peace, good will toward men."

NAVY, U. S., OPERATIONS OF. The operations of the navy during the year 1862 comprise the history of several distinct squadrons. 1. The North Atlantic squadron, guarding the Virginia and North Carolina coasts, was in charge of Rear Admiral L. M. Goldsborough until Sept. 5, when he was relieved at his own request by Acting Rear Admiral S. P. Lee. 2. The South Atlantic squadron, blockading the coasts of South Carolina and Georgia and the N. E. coast of Florida, was commanded by Rear Admiral S. F. Dupont. 3. The Gulf squadron was divided in February into the Eastern Gulf squadron successively under Flag-Officer McKean, and Acting Rear Admirals Lardner and Bailey, extending from Cape Canaveral, on the E. coast of Florida, to Pensacola; and 4, the Western Gulf squadron, under Rear Admiral Farragut. 5. The Western flotilla, on the Mississippi, was until May 9 under command of Rear Admiral A. H. Foote, who was relieved by Commodore C. H. Davis; and since October 15 has been commanded by Acting Rear Admiral D. D. Porter. 6. The Potomac flotilla was under Commodore Harwood. 7. The James river flotilla was under Commodore Wilkes.

1. *North Atlantic Squadron.*—Early in January a joint naval and military expedition for operation in the waters of North Carolina sailed from Hampton Roads under the command of Flag-Officer L. M. Goldsborough, and General Burnside. (*See* ARMY OPERATIONS). The naval force, consisting of 17 light-draught vessels with an armament of 48 guns, most of them of heavy caliber, arrived at Hatteras Inlet, January 13. The battle of Roanoke Island took place on the 7th and 8th of February, the fleet commencing it by a spirited attack on the Confederate batteries and vessels, and covering the landing of the troops on the second day. At the close of the engagement the Confederate naval forces retired to Elizabeth City, pursued by the Federal flotilla under Commander S. C. Rowan, who discovered his enemy on the morning of the 10th, drawn up under a battery of four guns. Disregarding their fire, Commander Rowan pushed steadily on until within three fourths of a mile, when he delivered a volley and dashed ahead. The Confederates fled before this unexpected onset; the battery was demolished; and their whole fleet was captured or destroyed.

Flag-Officer Goldsborough having been recalled to Hampton Roads, the naval forces which accompanied Gen. Burnside to Newbern were placed under Commander Rowan. The joint expedition reached the place of landing at Slocum's Creek March 12th, and in the battle of the 14th and the occupation of Washington, N. C., on the 21st, the navy took an active part.

The engagement between the Monitor and Merrimac in Hampton Roads, March 8, was narrated in the "Annual Cyclopædia" for 1861.

At the battle of West Point, May 7, the gunboats Wachusett, Maratanza, and Sebago were assigned to assist Gen. Franklin.

On the 8th of May the iron-clad vessels Monitor, Naugatuck, and four others shelled Sewall's Point near Norfolk, mainly with the view of ascertaining the practicability of landing troops there; the Merrimac or Virginia steamed out to engage them, but neither side seemed anxious to open an engagement, and both soon after retired. On the 10th Norfolk surrendered to Gen. Wool, and Commodore Tatnall, then in command of the Merrimac, proceeded to lighten his ship with the intention of taking her up the James river; but after she had been so much lightened as to be rendered unfit for action, the pilots declared there was not sufficient water to carry her beyond the Jamestown Flats, up to which point the shore on both sides was in possession of the Federal army. In this dilemma she was run ashore on Craney Island and set on fire, and on the morning of the 11th blew up.

The James river was now open for Commodore Goldsborough's gunboats, and on the 15th Commander John Rodgers was ordered to proceed with the Galena, Monitor, Aroostook, Port Royal, and Naugatuck, to Richmond, and shell the city to a surrender. They met with no artificial obstructions until they reached Ward's or Drury's Bluff, about 8 miles from Richmond, where they encountered a heavy battery and two separate barriers formed of piles and steamboats and sail vessels. The banks of the river were lined with sharpshooters who effectually prevented any attempt to remove the obstructions. The Galena ran within about 600 yards of the battery, and opened fire; the Monitor attempted to pass ahead of her, but was obliged to retire several hundred yards as her guns could not be elevated enough for effective service: the wooden vessels were ordered to keep in the rear. The Naugatuck was disabled by the bursting of her 100-lb. Parrott gun, and after an engagement of over three hours the flotilla, having exhausted their ammunition, were forced to retire without having produced much effect upon the battery. The Monitor was struck several times, but entirely uninjured. The Galena was not so fortunate; thirteen shot penetrated her iron sides, starting the knees, planks, and timbers, and killing several men by the splinters. One shell exploded in the steerage, but most of the balls, after breaking through the iron, stuck in the wood. Commander Morris, of the Port Royal, was wounded, and 13 men were killed and 11 wounded on the Galena, and 2 wounded on the Naugatuck.

On November 23 the gunboat Ellis, Lieut. W. P. Cushing, captured the town of Onslow on New River Inlet, N. C., destroying extensive salt works, and securing three schooners and 10 whale boats. On the way back, when 3 miles from the mouth of the river, the Ellis ran aground and the enemy opened fire on her. Despairing of saving the gunboat, Lieut. Cushing transferred the crew to one of his prizes, and blew up the Ellis on the 24th.

2. *South Atlantic Squadron.*—The beginning of the year found Com. Dupont's squadron actively employed in examining the waters and islands on the South Carolina and Georgia coasts, preparatory to their military occupation. On the first of January a combined attack was made by land and water upon a Confederate post at Port Royal ferry, S. C., the naval forces, consisting of 3 gunboats, 2 tugs, and 4 armed boats from the Wabash, being under the direction of Commander C. R. P. Rodgers. (*See* ARMY OPERATIONS.)

On January 27 a fleet of two gunboats, 4 armed steamers, and 2 armed launches under Fleet Captain C. H. Davis, accompanied by 2,400 men on transports commanded by Brig.-Gen. Wright, made a reconnoissance of Little Tybee river and the adjacent waters, with a view of preparing for the cutting off communication between Fort Pulaski and Savannah and the ultimate capture of the fort. While on this duty they were attacked by 5 Confederate vessels under Commodore Tatnall, which they repulsed after a half hour's fight, two of the enemy being driven back to Savannah, and the others running under the guns of the fort.

An expedition under Flag-Officer Dupont and Brig.-Gen. Wright, designed for the reoccupation of the principal points on the E. coast of Florida, sailed from Port Royal on the 28th of February, and captured Fort Clinch, St. Mary's, and Fernandina, March 2 and 3; Brunswick, Ga., March 7; Jacksonville, Fla., and St. Augustine, March 12, meeting with no resistance at any of these points. (*See* ARMY OPERATIONS.)

The capture of Fort Pulaski, in which the naval forces participated, being a purely military operation, has been described elsewhere.

On April 29 Lieutenant Rhind, with the steamer E. B. Hale, captured and destroyed a battery near the junction of the Dawho, Pow Pow, and South Edisto rivers.

On May 13 the Confederate steam tug Planter, an armed despatch and transportation steamer attached to the engineer department at Charleston under Brig.-Gen. Ripley, was brought out by her pilot, Robert Small, a very intelligent slave, and surrendered to the blockading squadron. She had on board 8 men, 5 women, and 3 children, all negroes, and was armed with a 32-pounder pivot gun, and a 24-pounder howitzer, besides which she had 4 large guns, one of them belonging to Fort Sumter, which she was to have transported that morning to the new fort on the middle ground. At 4 o'clock in the morning, while the captain was on shore, she left her wharf with Palmetto and Confederate flags flying, passed the forts, saluting as usual by blowing her steam whistle, and after getting out of reach of the last gun, hauled down the Confederate flags and hoisted a white one. The steamer, from her excellent machinery and light draught, proved a valuable acquisition to the blockaders.

On the 19th, Flag-Officer Dupont, having been led to believe, chiefly by the information given by Robert Small, that the Confederates were erecting batteries on Stono Inlet, caused a reconnoissance to be made which established the truth of the report. The inlet was immediately occupied by the gunboats and an important base thus secured for future operations against Charleston.

The military forces sent to occupy Jacksonville, Fla., after its capture in March were afterward withdrawn, and a battery was planted by the Confederates on St. John's river, some distance below the town, which caused considerable annoyance to the gunboats employed on the inside blockade of the river. Commander Steedman and Gen. Brannan accordingly moved on the 30th of September with a joint naval and land force, silenced and occupied the battery, capturing 9 guns, and afterward ascended the river as far as Lake Beresford, a distance of 230 miles, and captured a transport steamer.

The same officers had charge of a joint expedition, October 21–23, to destroy the railroad bridges near Pocotaligo, S. C. (*See* ARMY OPERATIONS.)

3. *Gulf Squadron and Eastern Gulf Squadron.*—In the early part of January, Flag-Officer McKeon sent the steamer Hatteras, Commander Emmons, to Cedar Keys, where about the 10th she captured or destroyed a quantity of artillery and military stores, and several schooners, the place being an important depot of the enemy.

In the latter part of March Commander Stellwagen of the Mercedita arrived off Appalachicola with that vessel and the Sagamore, and organized a boat expedition, the immediate object of which was the capture of a number of vessels understood to be at or above that city. The place, however, had already been evacuated by the Confederate troops, and the expedition met with no resistance. The inhabitants received the sailors favorably and raised the United States flag. Several vessels were brought out and others were destroyed.

On the night of April 6th a boat expedition from the bark Pursuit, under Acting Master Elnathan Lewis, surprised and captured at St. Andrew's the Confederate steamer Florida, of 500 tons, with 200 bales of cotton on board, and brought her safely out.

On the 4th of October a boat expedition from the steamer Somerset proceeded to the main land near Cedar Keys for the purpose of destroying some salt works, but was fired upon from a house on which a white flag was flying, and compelled to return without thoroughly accomplishing their purpose. On the 6th a stronger force, consisting of 4 boats from the Somerset and 4 from the gunboat Tahoma, landed at the same place, completing the destruction and dispersing a small guerilla force.

4. *Western Gulf Squadron.*—Captain D. G. Farragut sailed from Hampton Roads in the

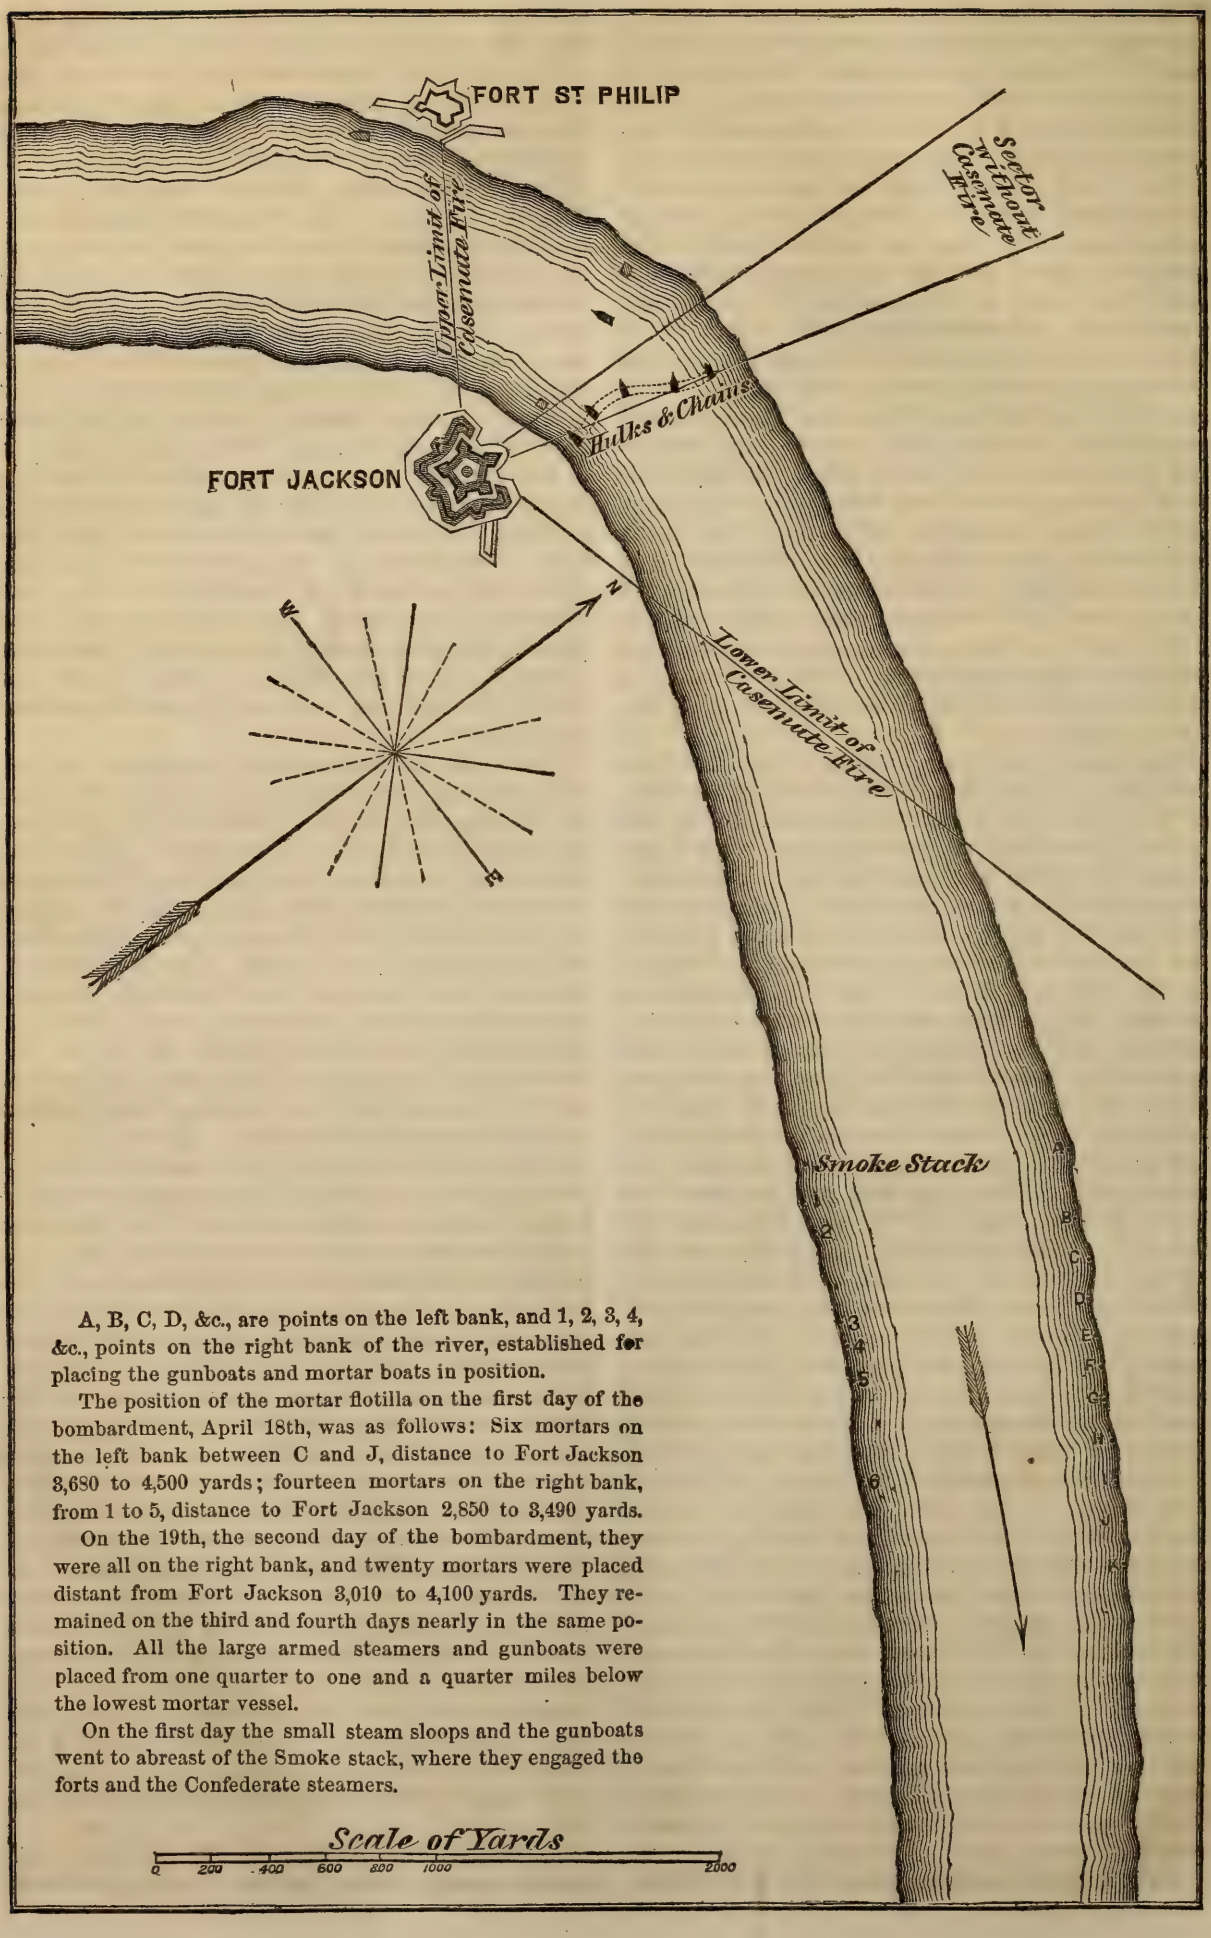
U. S. steamer Hartford on the 3d of February, to assume the duties of flag-officer of the Western Gulf blockading squadron. In addition to the ordinary duties of the blockade, he was specially charged with the reduction of the defences guarding the approaches to New Orleans. "There will be attached to your squadron," said the Secretary of the Navy in his letter of instructions, "a fleet of bomb vessels, and armed steamers enough to manage them, all under command of Commander D. D. Porter, who will be directed to report to you. * * * When these formidable mortars arrive, and you are completely ready, you will collect such vessels as can be spared from the blockade and proceed up the Mississippi river, and reduce the defences which guard the approaches to New Orleans, when you will appear off that city and take possession of it under the guns of your squadron, and hoist the American flag therein, keeping possession until troops can be sent to you. If the Mississippi expedition from Cairo shall not have descended the river, you will take advantage of the panic to push a strong force up the river to take all their defences in the rear."

Captain Farragut arrived at Ship Island on the 20th, having been detained for some time at Key West, and immediately began to organize his squadron for the important duty which had been assigned to him. There are two routes by which New Orleans may be approached by water, one through Lake Borgne and Lake Pontchartrain, and the other directly up the Mississippi river; but the former, on account of the shallowness of the water, is impracticable for any but vessels of very light draft. The Confederates had consequently devoted their labors chiefly to the fortification of the Mississippi. Some 75 miles below the city, and about 25 miles from the "passes" or mouths of the river, they had possession of two strong works constructed many years before by the U. S. Government, Fort St. Philip on the left, or N. bank, and Fort Jackson on the right. Their united armament was 126 guns, many of them of the very largest caliber. Starting opposite Fort Jackson and extending to a point a quarter of a mile below Fort St. Philip, a stout chain cable was stretched across the stream (here 700 yards wide), supported by a raft of logs and 8 hulks securely moored. Adjoining Fort Jackson was a water battery. Under cover of the forts was a fleet of 13 gunboats, the powerful iron-clad battery Louisiana, and the iron-clad ram Manassas, the naval forces being commanded by Commodore G. N. Hollins. Between New Orleans and the forts several earthworks, well armed, commanded the channel. "Our only fear," said the press of New Orleans of April 5, "is that the Northern invaders may not appear. We have made such extensive preparations to receive them that it were vexatious if their invincible armada escapes the fate we have in store for it."

To reduce these formidable defences, Captain Farragut was able to collect the following vessels: steam sloops Hartford, 24 guns (flag ship), Richmond, 26, Pensacola, 24, Brooklyn, 24, Mississippi, 12, Iroquois, 9, Oneida, 9, sailing sloop of war Portsmouth, 17, gunboats Varuna, 12, Cayuga, 6, and Winona, Katahdin, Itasca, Kineo, Wissahickon, Pinola, Kennebeck, and Sciota, 4 each. The frigate Colorado, 48, could not pass over the bar, and the entrance of some of the other large ships was only effected with the expenditure of much time and labor. The mortar fleet comprised 20 schooners, each mounting one large mortar and 2 small guns. They were accompanied by the steamers Harriet Lane, 4, the flag ship of Commander Porter, Miami, 7, Westfield 6, Clifton, 6, and Owasco, 5. Some of these were merely armed tugs, intended principally to serve the purpose of towing the bomb vessels into position. Including the coast-survey steamer Sachem, the number of vessels under Captain Farragut's command was therefore 46, and their aggregate armament, counting boat howitzers placed in the main tops, was about 300 guns and mortars. There were no iron-clads in the fleet.

Nearly three weeks were consumed in getting all the ships of the squadron over the bars at the mouths of the Mississippi. Captain Farragut found the depth considerably less than it had been laid down on the official maps; no doubt for the reason that the daily passing of large ships, before the port was blockaded, had kept the channel open. On the 28th of March Fleet Captain H. H. Bell made a reconnoissance with two gunboats from the head of the passes up toward the forts. He found the left bank quite clear of trees and bushes, but on the west side a thick wood extended about 4 miles below Fort Jackson. By the 8th of April the Mississippi and Pensacola were over the bar, and the mortar boats were moving up toward their appointed stations. On the 13th a detachment from the coast survey party set out under protection of the Owasco, and spent 3 days in making a minute boat survey of the river and banks, much of the time under fire, and marking the positions which the mortar vessels were to occupy. On the 18th two divisions of Commander Porter's flotilla were moored under the lee of the wood on the right bank of the river, screened from observation by the thick growth of trees interwoven with vines; the masts and rigging were dressed off with bushes, which were renewed as often as they were blown away. The head vessel was 2,850 yards from Fort Jackson and 3,680 from Fort St. Philip. The remaining division, composed of 6 vessels, was stationed under the opposite bank, the nearest being 3,680 yards from Fort Jackson. There was nothing on this side to screen them from observation, but their hulls were covered with reeds and willows.

The bombardment opened on the 18th, the mortar vessels taking the lead, and the gunboats



A, B, C, D, &c., are points on the left bank, and 1, 2, 3, 4, &c., points on the right bank of the river, established for placing the gunboats and mortar boats in position.

The position of the mortar flotilla on the first day of the bombardment, April 18th, was as follows: Six mortars on the left bank between C and J, distance to Fort Jackson 3,680 to 4,500 yards; fourteen mortars on the right bank, from 1 to 5, distance to Fort Jackson 2,850 to 3,490 yards.

On the 19th, the second day of the bombardment, they were all on the right bank, and twenty mortars were placed distant from Fort Jackson 3,010 to 4,100 yards. They remained on the third and fourth days nearly in the same position. All the large armed steamers and gunboats were placed from one quarter to one and a quarter miles below the lowest mortar vessel.

On the first day the small steam sloops and the gunboats went to abreast of the Smoke stack, where they engaged the forts and the Confederate steamers.

running up occasionally to draw the enemy's fire when the mortars required relief. Each boat having its precise distance from the forts marked out by the surveyors, the firing was remarkably accurate. At the given signal they opened in order, each one throwing a shell every ten minutes. Fort Jackson was the principal object of attack. On the first day the citadel was set on fire and burned until two o'clock the next morning, all the clothing and commissary stores in the fort being destroyed, and great suffering caused by the intense heat. During the night the firing ceased on both sides. Two of the mortar vessels had been injured by the enemy's fire and were accordingly moved to another position. On the 19th the mortar schooner Maria J. Carleton was sunk by a rifle shell passing down through her deck, magazine, and bottom, but nearly all her stores and arms were saved. One or two men were wounded, but very little other damage was done except to the masts and rigging of some of the schooners. On the other hand the officers' quarters in Fort Jackson were set on fire and entirely consumed, the artillerists were driven from the parapet guns, and the batteries were silenced every time the shells were concentrated on any one point. The fuzes being bad, however, a great many exploded prematurely in the air. Commander Porter accordingly gave up timing them and put in full-length fuzes, to burst after they had entered the ground. The soil being wet and soft, the shells penetrated 18 or 20 feet into the ground, and then exploded with an effect like an earthquake. The levee was broken in more than 100 places, and the water rushing into the fort flooded the parade ground and casemates. On the night of the 20th an expedition was sent up under Commander Bell to break the obstructions across the river. With the gunboats Pinola, Lieut.-Com. Crosby, and Itasca, Lieut.-Com. Caldwell, he made for the hulks, under a heavy fire, while all the mortars opened at once upon the forts to distract the enemy's attention. Petards were arranged to blow up the boom by means of a galvanic current, but they failed to ignite. Lieutenant Caldwell however, boarding one of the hulks, managed to slip the chain, and thereby made an opening sufficiently large for the fleet to pass. His vessel was swept ashore by the current, which was running with great violence, but the Pinola got her off after about half an hour's labor in full sight of the forts, the terrible fire of the mortar fleet being probably the only thing that saved the two boats from destruction. The bombardment continued with undiminished vigor for 3 days longer, with little damage to the squadron. Almost every night the Confederates sent down fire rafts, but Capt. Farragut easily avoided them, and had them towed ashore. On the 23d Commander Porter succeeded in breaking a heavy rifled gun on Fort St. Philip, which had been annoying him seriously for some time. Wth this single exception the 6 days' bombardment had not diminished the fire of the forts in any perceptible degree.

On the 23d orders were issued to the fleet to prepare for attacking and passing the forts. The mortars were to continue the bombardment while this movement was in progress, and to try to drive the garrisons from their guns. The five steamers of Porter's flotilla, assisted by the Portsmouth, were assigned the duty of enfilading the water battery of six guns, and the barbette of guns which commanded the approach to the forts. The rest of the ships and gunboats were to push on past the forts, engage the Confederate fleet, and if victorious proceed to New Orleans, leaving the final reduction of the forts to Commander Porter and the land forces under General Butler. Flag-Officer Farragut now separated his gunboats into two divisions, of six boats each, the first under Capt. Theodorus Bailey, his second in command, and the second under Fleet Capt. H. H. Bell. The first division of ships comprised the flag ship Hartford, Commander Wainwright; Brooklyn, Captain Craven; and Richmond, Commander Alden. The second was composed of the Pensacola, Captain Morris, and Mississippi, Commander Melancton Smith. "Every vessel," says Captain Farragut, "was as well prepared as the ingenuity of her commander and officers could suggest, both for the preservation of life and of the vessel, and perhaps there is not on record such a display of ingenuity as has been evinced in this little squadron. The first was by the engineer of the Richmond, Mr. Moore, by suggesting that the sheet cables be stopped up and down on the sides in the line of the engines, which was immediately adopted by all the vessels. Then each commander made his own arrangements for stopping the shot from penetrating the boilers or machinery that might come in forward or abaft, by hammocks, coal, bags of ashes, bags of sand, clothes-bags, and in fact every device imaginable. The bulwarks were lined with hammocks by some, with splinter nettings made with ropes by others. Some rubbed their vessels over with mud, to make their ships less visible, and some whitewashed their decks, to make things more visible by night during the fight." On the night of the 23d Lieut. Caldwell made a second visit to the obstructions, and ascertained that the passage was still clear. He was discovered and fired upon by the enemy, who had chosen that time to send down some of their fire rafts, and had lighted fires on the shore near the chain. At two o'clock on the morning of the 24th the signal was given to get under way, and the whole squadron moved up the river in two columns, Captain Bailey in the Cayuga leading the right, composed of the 1st division of gunboats and the second division of ships, and the Hartford, with Captain Farragut, taking the post of honor on the left. On passing the barrier chain the right column attacked Fort St. Philip, and the left Fort Jackson. They were discovered some time before they reached the barrier, and both

forts opened upon them a hot fire, to which the squadron at first could only reply with their bow guns. As soon as their broadsides were brought within range the engagement became general. "The flames," said Commander Porter, "seemed to be literally eating the vessels up." In attempting to avoid a fire raft the Hartford grounded on a shoal, and in this position was set on fire, the flames bursting through the ports and running up the rigging; but, with great exertion, they were extinguished, and the ship's guns, which had meanwhile been worked without interruption, were now brought to bear upon Fort St. Philip, and that work was almost completely silenced. In the mean time, the Brooklyn and some other vessels, owing to the darkness and smoke, became entangled in the barrier, and were exposed to a raking fire from the forts for a few minutes, but managed to extricate themselves, and the Brooklyn, finding herself unexpectedly close abreast of Fort St. Philip, poured in such a storm of grape and canister that the garrison were seen, by the flash of the bursting shrapnells, running from their guns. Before the squadron had fairly passed the forts, the Confederate fleet of gunboats and rams appeared, and took part in the fight. They were first encountered by Captain Bailey in the Cayuga, who was considerably in advance of the rest, at a moment when no supporting ship was in sight. By skilful steering he frustrated their attempts to board and butt, and had forced three to surrender, when the Oneida, Commander Lee, and Varuna, Captain Boggs, hove in sight. The Oneida, discovering a Confederate gunboat crossing her bows, ran into her with a full head of steam, and cut her down, leaving her to drift down the stream with the current. The Varuna, after passing the forts, and destroying or driving ashore a gunboat and three transports, found herself, about daylight, completely surrounded by the enemy. The Governor Moore, iron-clad about the bow, first attacked her, butting her twice, and sending a raking fire along her port gangway, killing four and wounding nine of the crew; but Captain Boggs, by a few well-directed shells, drove her off, partially disabled. While still engaged with her, another Confederate steamer, iron-clad, with a prow under water, struck the Varuna in the port gangway, doing considerable damage. She backed off for another blow, and struck again in the same place, crushing in the side; "but by going ahead fast," says Captain Boggs, "the concussion drew her bow around, and I was able, with the port guns, to give her, while close alongside, five eight-inch shells abaft her armor. This settled her and drove her ashore in flames. Finding the Varuna sinking, I ran her into the bank, let go the anchor, and tied up to the trees. During all this time, the guns were actively at work crippling the Morgan (Governor Moore), which was making feeble efforts to get up steam. The fire was kept up until the water was over the gun-trucks, when I turned my attention to getting the wounded and crew out of the vessel." Just at this moment the Oneida came up, took off some of the men from the Varuna, and completed the destruction of the Gov. Moore, which was run ashore and set on fire by the crew, part of whom afterward surrendered to Commander Lee. Three of the gunboats were obliged to put back, one having been disabled early in the action, and the others caught in the barrier chain and delayed until the day had broken and the rest of the fleet had gone past the forts. Within two hours from the commencement of the fight, nearly the whole Confederate fleet was captured or destroyed, and the victory was secured; but, "just as the scene appeared to be closing," writes Captain Farragut, "the ram Manassas was seen coming under full speed to attack us. I directed Capt. Smith, in the Mississippi, to turn and run her down. The order was instantly obeyed by the Mississippi turning and going at her at full speed. Just as we expected to see the ram annihilated, when within fifty yards of each other, she put her helm hard a-port, dodged the Mississippi, and ran ashore. The Mississippi poured two broadsides into her, and sent her drifting down the river a total wreck." As she came into the midst of Porter's flotilla, several of the mortar boats and steamers opened fire upon her; "but I soon discovered," writes Porter, "that the Manassas could harm no one again, and I ordered the vessels to save their shot. She was beginning to emit smoke from her ports, or holes, and was discovered to be on fire and sinking. Her pipes were all twisted and riddled with shot, and her hull was also well cut up. She had evidently been used up by the squadron as they passed along. I tried to save her as a curiosity, by getting a hawser around her and securing her to the bank, but just after doing so she faintly exploded. Her only gun went off, and emitting flames through her bow port, like some huge animal, she gave a plunge and disappeared under the water." About 5 o'clock the Cayuga came upon the camp of the Chalmette regiment, Col. Szymanski, on the right bank of the river. Casting anchor, Captain Bailey opened upon it with canister, and obliged the whole force to surrender, with their arms, camp equipage, &c. Soon afterward, the signal was given to cease action, and 12 vessels dropped anchor above and out of range of the forts, and began to prepare for further operations. Two of the gunboats were immediately sent ahead to cut the telegraph wires in various places, and one was sent, by way of the Quarantine bayou, to communicate with Commander Porter and General Butler. With his nine remaining vessels, Captain Farragut then proceeded up to New Orleans, meeting on the way abundant evidence of the panic which prevailed in that city. "Cotton-loaded ships, on fire, came floating down, and work-

ing implements of every kind, such as are used in shipyards." "I never witnessed such vandalism in my life," he writes to the Secretary of the Navy, "as the destruction of property; all the shipping, steamboats, &c., were set on fire and consumed." The squadron reached the English Turn about 10.30 A. M. on the 25th, and soon descried the new earthwork forts on the old lines on both shores, some 6 or 7 miles below the city; these were known as the Chalmette batteries. The fleet formed, as before, in two lines, each taking its own work, but Captain Bailey, with the Cayuga, was far in advance, not having noticed the signal for close order, and sustained alone a cross fire for about 20 minutes, at the end of which time the Hartford ranged up ahead, and gave the batteries a broadside of shells, shrapnell, and grape, the first discharge driving the men on the right bank from their guns. The Pensacola, the Brooklyn, and then the rest of the fleet, came up in quick succession, and in about 15 or 20 minutes "the forts were silenced, and those who could run were running in every direction." From this point no obstacles were encountered, except burning steamers, cotton ships, fire rafts, and the like, and at one o'clock P. M. the squadron anchored in front of New Orleans.

A terrible and melancholy spectacle was presented to the victors. The whole levee, for miles, was wrapped in smoke from the burning gun carriages and cotton which the authorities had ordered to be consumed. In the river were many hulls of burning ships, and the utmost ingenuity was required to avoid them. As the squadron neared the levee the sailors gave a cheer which was answered by some persons in the crowd on shore. Pistol shots were immediately fired at these latter by the excited multitude, and several persons were wounded. After a delay of half an hour or so, Capt. Bailey was sent ashore to demand the surrender of the city. He was received by the mob with the most violent demonstrations, but under escort of a number of citizens proceeded unmolested to the mayor's office, the mob at his heels contenting itself with furiously assaulting citizens suspected of sympathy with the Federal Union. On reaching the City Hall, Capt. Bailey demanded the surrender of the city, and the display of the United States flag over the custom house, post office, mint, and city hall. The mayor replied that he had no authority, the city being under military control, and a messenger was accordingly sent for Gen. Mansfield Lovell, the commander of the department. Gen. Lovell informed Capt. Bailey that he had already evacuated the city, and would now turn over the control to the municipal authorities, leaving them free to act as they saw fit. It was then arranged that Capt. Bailey should return to his fleet, and await the action of the common council. To the demand to haul down the flag of Louisiana from the City Hall the mayor gave an unqualified refusal. The common council was already in session, and the mayor at once sent in a message, recommending that an answer be returned to Capt. Farragut, representing that the city being incapable of offering any resistance yielded to physical force alone, without giving up its allegiance to the Confederate Government; that the custom house, post office, and mint were the property of the Confederate Government, and the municipal authorities had no control over them; and that all acts involving a transfer of authority must be performed by the invading forces themselves. The sentiments expressed in this message were unanimously adopted by the council, and on the next day the following correspondence was opened between Capt. Farragut and the mayor:

U. S. FLAG SHIP HARTFORD, off New Orleans, *April* 26, 1862.

To His Excellency the Mayor of New Orleans:

SIR: Upon my arrival before your city I had the honor to send to your honor Capt. Bailey, U. S. N., second in command of the expedition, to demand of you the surrender of New Orleans to me as the representative of the Government of the United States. Capt. Bailey reported the result of an interview with yourself and the military authorities. It must occur to your honor that it is not within the province of a naval officer to assume the duties of a military commandant. I came here to reduce New Orleans to obedience to the laws of and to vindicate the offended majesty of the Government of the United States.

The rights of persons and property shall be secured. I therefore demand of you, as its representative, the unqualified surrender of the city, and that the emblem of the sovereignty of the United States be hoisted over the City Hall, Mints, and Custom House by meridian this day; and that all flags and other emblems of sovereignty other than those of the United States be removed from all the public buildings at that hour.

I further particularly request that you shall exercise your authority to quell disturbances, restore order, and call upon all the good people of New Orleans to return at once to their vocations, and I particularly demand that no person shall be molested in person or property for sentiments of loyalty to their Government.

I shall speedily and severely punish any person or persons who shall commit such outrages as were witnessed yesterday, by armed men firing upon helpless women and children for giving expression to their pleasure at witnessing the old flag.

I am, very respectfully,
D. G. FARRAGUT,
Flag-Officer Western Gulf Squadron.

U. S. FLAG SHIP HARTFORD, at anchor off the City of New Orleans, *April* 26, 1862.

To his Honor the Mayor of New Orleans:

Your honor will please give directions that no flag but that of the United States will be permitted to fly in the presence of this fleet, so long as it has the power to prevent it; and as all displays of that kind may be the cause of bloodshed, I have to request that you will give this communication as general a circulation as possible.

I have the honor to be, very respectfully, your obedient servant,
D. G. FARRAGUT,
Flag-Officer Western Gulf Blockading Squadron.

MAYOR'S OFFICE, CITY OF NEW ORLEANS, CITY HALL, *April* 26, 1862.

To Flag-Officer D. G. Farragut, U. S. Flag Ship Hartford:

SIR: In pursuance of a resolution which we thought proper to take, out of regard for the lives of the women and children who still crowd the metropolis, Gen.

Lovell has evacuated it with his troops, and restored back to me the administration of its government and the custody of its honor.

I have, in council with the City Fathers, considered the demand you made of me yesterday of an unconditional surrender of the city, coupled with a requisition to hoist the flag of the United States on the public edifices and haul down the flag that still floats upon the breeze from the dome of this hall.

It becomes my duty to transmit to you an answer which is the universal sentiment of my constituents, no less than the promptings of my own heart on this sad and solemn occasion.

The city is without the means of defence, and is utterly destitute of the force and material that might enable it to resist the overpowering armament displayed in sight of it.

I am no military man, and possess no authority beyond that of executing the municipal laws of the city of New Orleans. It would be presumptuous in me to attempt to lead an army to the field, if I had one at command, and I know still less how to surrender an undefended place, held as this is at the mercies of your gunners and your mortars.

To surrender such a place were an idle and unmeaning ceremony. The city is yours by the power of brutal force, not by my choice or the consent of the inhabitants. It is for you to determine the fate that awaits her. As to hoisting any flag not of our own adoption or allegiance, let me say to you that the man lives not in our midst whose hand and heart would not be paralyzed at the mere thought of such an act; nor could I find in my entire constituency so desperate and wretched a renegade as would dare to profane with his hand the sacred emblem of our aspirations.

Sir, you have manifested sentiments which would become one engaged in a better cause than that to which you have devoted your sword. I doubt not that they spring from a noble though deluded nature, and I know how to appreciate the emotions which inspired them. You have a gallant people to administrate during your occupancy of this city—a people sensitive to all that can in the least affect their dignity and self-respect.

Pray, sir, do not fail to regard their susceptibilities. The obligations which I shall assume in their name will be religiously complied with. You may trust their honor, though you might not count on their submission to unmerited wrongs.

In conclusion, I beg you to understand that the people of New Orleans, while unable to resist your force, do not allow themselves to be insulted by the interference of such as have rendered themselves odious and contemptible by their dastardly desertion of our cause in the mighty struggle in which we are engaged, or such as might remind them too forcibly that they are the conquered and you the conquerors.

Peace and order may be preserved without resort to measures which I could not at this moment prevent.

Your occupying the city does not transfer allegiance from the government of their choice to one which they have deliberately repudiated, and that they yield the obedience which the conqueror has a right to extort from the conquered. Yours, respectfully,

JOHN F. MONROE, Mayor.

U. S. Flag Ship Hartford, at anchor of the City of New Orleans, *April* 28, 1862.

To His Honor the Mayor and City Council of the City of New Orleans:

Your communication of the 26th instant has been received, together with that of the City Council.

I deeply regret to see both by their contents, and the continued display of the flag of Louisiana on the court house, a determination on the part of the city authorities not to haul it down. Moreover, when my officers and men were sent on shore to communicate with the authorities, and to hoist the United States flag on the Custom House, with the strictest order not to use their arms unless assailed, they were insulted in the grossest manner, and the flag which had been hoisted by my orders on the Mint was pulled down and dragged through the streets.

All of which goes to show that the fire of this fleet may be drawn upon the city at any moment, and in such an event the levee would, in all probability, be cut by the shells, and an amount of distress ensue to the innocent population, which I have heretofore endeavored to assure you that I desire by all means to avoid.

The election, therefore, is with you. But it becomes my duty to notify you to remove the women and children from the city within forty-eight hours, if I rightly understood your determination.

Very respectfully, your obedient servant,

(Signed) D. G. FARRAGUT,

Flag-Officer, Western Gulf Blockading Squadron.

City Hall, *April* 28, 1862.

To Flag-Officer D. G. Farragut, United States Flag Ship Hartford:

Your communication of this morning is the first intimation I ever had that it was by your strict orders that the United States flag was attempted to be hoisted upon certain of our public edifices, by officers sent on shore to communicate with the authorities. The officers who approached me in your name disclosed no such orders and intimated no such design on your part, nor would I have for a moment entertained the remotest suspicion that they could have been invested with power to enter on such an errand while the negotiations for a surrender between you and the city authorities were still pending. The interference of any force under your command, as long as those negotiations were not brought to a close, could not be viewed by us otherwise than as a flagrant violation of those courtesies, if not of the absolute rights, which prevail between belligerents under such circumstances. My views and sentiments with reference to such conduct remain unchanged. You now renew the demand made in your former communication, and you insist on their being complied with unconditionally, under a threat of bombardment within forty-eight hours; and you notify me to remove the women and children from the city, that they may be protected from your shells.

Sir, you cannot but know that there is no possible exit from this city for a population which still exceeds in number one hundred and forty thousand, and you must therefore be aware of the utter inanity of such a notification. Our women and children cannot escape from your shells, if it be your pleasure to murder them on a question of mere etiquette. But if they could, there are but few among them who would consent to desert their families and their homes, and the graves of their relatives, in so awful a moment. They would bravely stand the sight of your shells tearing up the graves of those who are so dear to them, and would deem that they died not ingloriously by the side of the tombs erected by their piety to the memory of departed relatives.

You are not satisfied with the possession of an undefended city, opposing no resistance to your guns, because of its bearing its hard fate with something of manliness and dignity, and you wish to humble and disgrace us by the performance of an act against which our natures rebel. This satisfaction you cannot expect to obtain at our hands.

We will stand your bombardment, unarmed and undefended as we are. The civilized world will consign to indelible infamy the heart that will conceive the deed and the hand that will dare to consummate it.

Respectfully, JOHN T. MONROE,

Mayor of the City of New Orleans.

United States Flag-Ship Hartford, At Anchor off the City of New Orleans, *April* 29, 1862.

To His Honor the Mayor of the City of New Orleans:

Sir: The Forts St. Philip and Jackson having surrendered, and all the military defences of the city being either captured or abandoned, you are required, as the sole representative of any supposed authority in the city, to haul down and suppress every ensign and

symbol of Government, whether State or Confederate, except that of the United States. I am now about to raise the flag of the United States upon the Custom House, and you will see that it is respected with all the civil power of the city.

I have the honor to be, very respectfully, your obedient servant, D. G. FARRAGUT,
Flag-Officer, Western Gulf Blockading Squadron.

UNITED STATES FLAG SHIP HARTFORD, At Anchor off the City of New Orleans, *April* 30, 1862.

GENTLEMEN: I informed you in my communication of the 28th of April, that your determination, as I understood it, was not to haul down the flag of Louisiana on the City Hall, and that my officers and men were treated with rudeness when they landed, even with a flag of truce, to communicate with the authorities, &c., and, if such was to be the determined course of the people, the fire of the vessels might at any moment be drawn upon the city. This you have thought proper to construe into a determination on my part to murder your women and children, and made your letter so offensive that it will terminate our intercourse; and so soon as General Butler arrives with his forces I shall turn over the charge of the city to him and assume my naval duties. Very respectfully, &c.,

D. G. FARRAGUT,
Flag-Officer Western Gulf Blockading Squadron.
His Honor the Mayor and City Council of New Orleans.

Captain Farragut then seized all the steamboats which had not been destroyed,—among them the famous Tennessee, for which the blockaders had long been watching—and sent them down to Quarantine for General Butler's forces. There were several iron-clad rams building, at the time of the capture of the city, the principal one of which, the Mississippi, soon came floating by in flames. Another was sunk in front of the custom house, and there were others at Algiers, opposite New Orleans, just begun.

"I next went above the city eight miles, to Carrolton," writes Captain Farragut, "where I learned there were two other forts; but the panic had gone before me. I found the guns spiked, and the gun carriages in flames. The first work, on the right, reaches from the Mississippi nearly over to Pontchartrain, and has 29 guns; the one on the left had 6 guns, from which Commander Lee took some 50 barrels of powder, and completed the destruction of the gun carriages, &c. A mile higher up there were two other earthworks, but not yet armed.

"We discovered here, fastened to the right bank of the river, one of the most Herculean labors I have ever seen—a raft and chain to extend across the river to prevent Foote's gunboats from descending. It is formed by placing three immense logs of not less than three or four feet in diameter, and some thirty feet long: to the centre one a 2-inch chain is attached, running lengthwise the raft; and the three logs and chain are then frapped together by chains from one half to one inch, three or four layers, and there are 96 of these lengths composing the raft. It is at least three quarters of a mile long. * * *

"I sent on shore and hoisted the American flag on the custom house, and hauled down the Louisiana State flag from the city hall, as the mayor had avowed that there was no man in New Orleans who dared haul it down; and my own convictions are that if such an individual could have been found he would have been assassinated."

The operations of Commander Porter below the forts were as follows: As soon as Captain Farragut was ready to proceed, the five steamers attached to the mortar flotilla moved up and took position under the batteries, the leading vessel 500 yards off, and the others closing up as the fire commenced. As soon as the Hartford, Brooklyn, and Richmond passed they opened with shrapnell on the water battery and forts, having received the fire ten or fifteen minutes before replying to it. As the fire was high and they were close in shore, nearer the forts than the enemy supposed, they occupied, as it turned out, a safer position than the vessels farther out, there being only one killed and one wounded on board the Harriet Lane, while the other steamers remained untouched. The mortars meanwhile poured a heavy fire upon Fort Jackson. In one hour and ten minutes from weighing anchor, the fleet had passed the forts, and Commander Porter, having accomplished his part, hung out the signal to retire, and sent Lieutenant Commanding Guest with a flag of truce to demand the surrender of the forts. The flag was fired upon and put back, but a boat soon came down with an apology and received the summons, to which Lieut.-Col. Higgins, commanding the forts, replied that until he received official information of the fall of New Orleans no proposition for a surrender could be for a moment entertained. Giving the men one day to rest, Commander Porter resumed the bombardment on the 26th, but there was no response. Learning that the formidable iron-clad battery Louisiana, mounting 16 heavy guns, had escaped Captain Farragut, and with three Confederate steamers which the flotilla had also left behind them, was about to make an attack upon the mortar boats, he sent the schooners, which would have been almost defenceless against such an adversary, down the river to refit and prepare for sea, six of them having orders to pass around to the rear of Fort Jackson to prevent supplies from getting in, and two being sent to the rear of Fort St. Philip to assist in landing troops. Three of them drifted over to the mouth of Barataria Bay, and received the surrender of Fort Livingston. On the 27th, the possession of the forts being an urgent necessity, Commander Porter renewed the demand, offering honorable terms, the officers to retain their side arms, and both officers and men to be paroled, private property to be respected, the arms and munitions of war and public property to be surrendered, and no damage to be done by the garrison to the defences. These terms were accepted the next day, partly, no doubt, in consequence of the landing of General Butler at Quarantine in the rear of Fort St. Philip, which entirely cut off reënforcements; and partly, according to Command-

er Porter, on account of disaffection in the garrison. Two hundred and fifty in fact of the garrison of Fort Jackson, after spiking the guns bearing up the river, surrendered themselves to Gen. Butler's pickets on the night of the 28th, averring that they had been impressed and would fight no longer. While the capitulation was being drawn up, the Confederate naval officers towed the ram Louisiana to a point above the forts, and having set her on fire, turned her adrift, with guns shotted, in the expectation that she would explode in the midst of the fleet. The final catastrophe, however, took place sooner than they had hoped. Just as the battery got abreast of Fort St. Philip it blew up with a tremendous noise, and sunk immediately. The only injury was to a Confederate soldier in the fort, who was killed by one of the fragments. As soon as the capitulation was completed, the Harriet Lane turned her attention to the three Confederate steamers which were lying about half a mile above. One of them had already been scuttled; the others surrendered without resistance, and 14 officers, 7 engineers, the crews of the steamers, and 300 men and two companies of marine artillery belonging to the Louisiana became prisoners of war. The men were released on parole; the officers, in consequence of their conduct in setting fire to the battery, and attempting to destroy the fleet while a capitulation was in progress, were sent to the North as close prisoners. Gen. Phelps now arrived, and Porter turned over to him the forts, guns, and captured property. The loss of the Confederates during the bombardment was 14 killed and 39 wounded. The casualties in the fleet were, during the six days' bombardment, 2 killed and 24 wounded; during the passing of the forts and the engagement with the Chalmette batteries, 37 killed, and 147 wounded; on board the mortar boats, 1 killed and 6 wounded; total, 40 killed, and 177 wounded. Fort St. Philip was very little injured, only one of the mortars having fired upon it, because its fate evidently depended upon that of Fort Jackson. The latter was described by Commander Porter after the surrender as "a perfect wreck." Over 1,800 shells fell inside the work proper, 170 in the water battery, and by the estimate of the soldiers, about 3,000 in the ditches around the works. All the buildings in and near the fort were burnt; the ramparts were severely damaged on every side, and particularly on the north, but had been repaired with sand bags which were constantly sent down from New Orleans during the bombardment; the walls of the citadel were cracked in many places very badly; the casemates were cracked from end to end, several of them showing wide fissures in the roofs and sides, and their floors were three inches under water. Still there is little question that, but for the interruption of their communications with New Orleans, these works could have held out much longer, the extent of the damage being far from proportionate to the time and powder expended in the bombardment. If the formidable 13-inch mortars did not fully answer the expectations which had been formed of them, this fact must be attributed first to the softness of the soil which allowed the shells to sink 20 feet, by measurement, before they exploded, and secondly to the difficulty of getting accurate range: the forts rose but little above the surrounding bushes, and the vessels which were moored behind the wood often had to fire almost at random; the mortars could only be pointed from sights fixed to the mast heads, and the most curious expedients were resorted to for obtaining correct firing.

After the conquered forts and city had been occupied by the military forces, Commander Porter was ordered to repair to Ship Island. The Portsmouth, the Pensacola, and one gunboat were stationed at New Orleans; seven vessels were sent up the river under command of Captain Craven, "to keep up the panic;" and the smaller steamers, under command of Captain Lee, were ordered to ascend as far as Vicksburg.

Commander James S. Palmer arrived off Baton Rouge with the Iroquois, May 7, and demanded the surrender of the town and all property belonging to the Confederate Government, promising to respect the rights and property of private citizens, but requiring that the United States flag should be hoisted on the arsenal. The mayor, while admitting that the city was without the means of resistance, refused to surrender or to hoist the flag. Com. Palmer accordingly landed a force and took possession of the arsenal, and Flag-Officer Farragut arriving soon afterward took measures to secure proper respect for the national ensign, and to cause all other flags to be suppressed.

On the 12th the Iroquois anchored off Natchez in company with several other vessels, and Commander Palmer sent on shore a demand for surrender which the people at the wharf refused to receive. He then made dispositions for landing an armed force, but was met at the shore by a deputation from the common council with an apology for the previous refusal. The mayor sent a reply to the summons similar to that given by the mayor of Baton Rouge, but he issued a proclamation urging the citizens to commit no act to provoke the displeasure of the United States forces. As Natchez however had never been occupied as a military position, Commander Palmer deferred taking formal possession of it.

Commander S. P. Lee with the advance of the squadron arrived near Vicksburg, May 18, and in reply to his demand for surrender received a defiant refusal. He then gave 24 hours for the removal of women and children, after which time he declared he should consult his own judgment as to the propriety of immediately opening fire. Flag-Officer Farragut arrived a few days afterward, accompanied by a column of troops under General Williams. Subsequent-

ly an additional naval and military force was brought up, including Porter's mortar fleet, and the latter opened the bombardment on the night of June 26–27, directing their fire partly against the town and partly against some formidable batteries on the heights. On the morning of the 27th the Owasco, Lieut. Guest, ran up abreast of the town and threw in some incendiary shells, which failed to explode. At 3 o'clock on the morning of the 28th the squadron made a move to pass the batteries, the mortar fleet supporting them as at the battle of Forts Jackson and St. Philip. The Hartford and several other vessels succeeded in passing the range of batteries, which extended full 3 miles, and did this too in the face of a strong current, but as there was not a sufficient land force to coöperate in the attack, no substantial benefit resulted from the movement. The enemy were several times driven from their batteries, but returned to their guns as soon as the ships had passed. Forming a junction with the western gunboat flotilla of Flag-Officer C. H. Davis, Farragut concerted with that officer and General Williams an expedition up the Yazoo river, consisting of the gunboats Carondelet and Tyler and the ram Queen of the West, strengthened by sharpshooters from the army. They started on the morning of July 15, and near the mouth of the river encountered the Confederate ram Arkansas. A severe fight ensued, in which both the Carondelet and the Tyler were partially disabled, and the Arkansas then entered the Mississippi and passing boldly through the surprised fleets of Farragut and Davis, took refuge under the guns of Vicksburg. Farragut now determined to repass the batteries, for the double purpose of supporting the rest of his squadron and destroying the Arkansas in passing; to assist in which Flag-Officer Davis added to his force the ram Sumter, Lieutenant Commanding Erben. Toward evening Davis opened a bombardment, for the purpose of covering the movement, and Captain Farragut succeeded in getting below Vicksburg again with little loss of life, but his designs against the Arkansas were defeated by the darkness of the night. On the 22d Commander W. D. Porter with the iron-clad gunboat Essex, and Lieut.-Col. Ellet, with the ram Queen of the West, made another attempt to destroy the Confederate vessel, but the attack though executed with great gallantry under the fire of the batteries did not succeed. The Essex ran down to Farragut's fleet, and Farragut having been instructed by the navy department to drop down the river before the water got too low, it was arranged that Commander W. D. Porter should remain below Vicksburg with the Essex and Sumter.

On the 28th of July Farragut arrived at New Orleans, leaving the Katahdin and Kineo at Baton Rouge. On the 5th of August the Confederates made a vigorous land attack upon the latter place, which was repulsed after a severe contest. The gunboats were not able to assist until toward the close of the action, when they threw their shells directly into the midst of the enemy with great effect. The Arkansas had dropped down the river to take part in the attack, but was not brought into action, one of her engines having broken down. The next morning Porter who was then at Baton Rouge with the Essex, moved up to attack her, but before the fight had fairly begun her other engine gave way, and she was run ashore, abandoned, and set on fire by the crew. About an hour afterward she blew up. On the 11th Farragut sailed for Ship Island and Pensacola, which latter place, having been evacuated by the Confederates, was now made the depot of the Western Gulf squadron.

Commander W. D. Porter remained at Baton Rouge until August 23, when, the town having been evacuated by the Federal troops, he proceeded up the river to reconnoitre batteries reported to be erecting at Port Hudson, and thence ascended to Bayou Sara to obtain coal, where his boat's crew was fired upon by guerillas. Some of the buildings were thereupon burned, and a few days afterward, as the firing was repeated, the rest of the place was destroyed. Afterward, a boat's crew from the Essex, sent ashore at Natchez to procure ice for the sick, was attacked by some 200 armed citizens, one of the sailors being killed, and an officer and 5 men wounded. Commander Porter immediately opened fire on the town, set a number of houses in flames, and continued the bombardment for an hour, after which the mayor surrendered. On her way down to New Orleans, the Essex had a brisk engagement, on September 7, with the Port Hudson batteries.

In the mean time, several vessels of Captain Farragut's squadron had been employed on the coast of Texas, where acting volunteer Lieutenant J. W. Kittredge, with the bark Arthur, the little steamer Sachem, and a launch, captured Corpus Christi, after several spirited engagements with the enemy's batteries, but was unable to hold the town, and was himself made prisoner, Sept. 14, while on shore exploring.

On September 26, Acting Master Crocker, with the steamer Kensington and schooner Rachel Seaman, and Acting Master Pennington, with the mortar schooner Henry Janes, captured Sabine Pass, taking a battery of 4 guns without loss.

On the 4th of October, Commander W. B. Renshaw, with the steamers Westfield, Harriet Lane, Owasco, and Clifton, and the mortar schooner Henry Janes, captured the defences of the harbor and city of Galveston without the loss of a man. The resistance was feeble: the first shell from the Owasco burst immediately over a heavy 10-inch Columbiad mounted on Fort Point, causing a panic in the fort, and depriving the defenders of their main reliance.

Toward the end of October, Lieutenant Commander T. McKean Buchanan, with the

steamers Calhoun, Estrella, Kinsman, and Diana, and the transport St. Mary's, having on board the 21st Indiana regiment, was sent to the Atchafalaya river, La., to coöperate with a land force under General Weitzel. On Nov. 1, near Brashear City, he captured the Confederate despatch boat A. B. Seger, and the next day had an engagement with an iron-clad gunboat and some land batteries on the Bayou Téche. The batteries were silenced, but the gunboat, being behind a row of obstructions across the channel, escaped up the river. Lieutenant Commander Buchanan then returned to Brashear City to repair damages. On the 6th, the Kinsman discovered and burned two steamers in one of the small bayous in the neighborhood.

5. *Western Flotilla.*—Nearly all the operations of this squadron, which was fitted out and, until October, was controlled by the War Department, have been mentioned in the article Army Operations, and the first attack on Vicksburg has been described in the account of Captain Farragut's movements. When the attempt to reduce Vicksburg was, for the time, abandoned, Flag-Officer Davis withdrew his fleet to the mouth of the Yazoo.

On June 13, a detachment from the squadron, under Commander Kilty, with the 46th Indiana regiment, under Col. Fitch, left Memphis for White river, Ark. (*See* Army Operations.)

Early in August, an expedition was concerted between Flag-Officer Davis and General Curtis, which moved up the Yazoo, and captured a battery of heavy guns, field pieces, munitions of war, &c., besides taking the Confederate transport Fairplay, loaded with 1,200 Enfield rifles, 4,000 new muskets, 4 field guns, mounted howitzers, small arms, a quantity of fixed ammunition, &c.

On the 26th of September, the ram Queen of the West and two transports having been fired into by the Confederates at Prentiss, Miss., the town was shelled and burned.

On December 13th the gunboat Cairo, while ascending the Yazoo, was blown up by a torpedo, and sank in 15 minutes after the explosion. It is remarkable that none of the crew were killed, or even seriously hurt.

6. *Potomac Flotilla.*—The operations of this force, except in checking contraband traffic, were comparatively unimportant. On Jan. 2, the gunboats Anacostia and Yankee had an engagement with the Confederate batteries at Cockpit Point, which they silenced.

After the evacuation of the Confederate batteries on the Potomac, in March, and the removal of General McClellan's army to the peninsula, the Rappahannock was added to the waters intrusted to this squadron; but, beyond a few skirmishes with batteries on the shores, the capture of some small craft, and an attack, on December 10, upon the Confederate batteries at Port Royal, below Fredericksburg, the flotilla had little opportunity for action.

7. *James River Flotilla.*—After the removal of General McClellan's army to the James river, a new squadron was organized (July 6) for operations on that stream, and intrusted to the command of Commodore Charles Wilkes, who, on August 28, shelled and destroyed City Point, from which place the Confederates had fired upon the U. S. transports in the river. The removal of the army to the Potomac rendered the flotilla no longer necessary in the James river, and it was accordingly disbanded, August 31.

The vessels thus placed at the disposal of the Government were then organized as a flying squadron, to cruise chiefly in the West Indies in search of ships engaged in running the blockade. Commodore Wilkes was retained in the command.

Several other vessels were engaged during the year in pursuit of the privateers Sumter and Alabama, the former of which after being tracked to Gibraltar, was there blockaded by a Federal gunboat so closely that her commander was obliged to sell her.

According to the annual report of the Secretary of the Navy, Dec. 1, 1862, the blockading squadron had captured and reported to the department, since the date of the previous annual report, 390 vessels attempting to violate the blockade, a few of which were destroyed. Of the large number of prizes sent in for adjudication, in only 45 had the proceedings at that date been brought to a close.

NELSON, William, major-general of volunteers in the U. S. army, born in Maysville, Mason co., Ky., in 1825, was killed at Louisville, Ky., Sept. 29, 1862. He entered the naval school at Annapolis at the age of fifteen, and, upon graduating, was appointed a midshipman in the U. S. navy. He was first attached to the sloop-of-war Yorktown, in commission for the Pacific, and soon after joined that squadron under Commodore T. Ap Catesby Jones. In 1846 he received his commission as passed midshipman, and was ordered to the frigate Raritan, attached to the home squadron, and flag ship of Commodore Conner. In 1847 he was made acting master of the steamer Scourge, under the command of Com. Perry. At the siege of Vera Cruz, during the Mexican war, he won a high reputation in command of a navy battery. In 1854 he was promoted to the rank of master, and ordered to the frigate Independence, stationed in the Pacific. In 1858 he was ordered to the Niagara when she carried back to Africa the negroes taken from the steamer Echo. At the commencement of the present war he was on ordnance duty at the Washington navy yard, and was detailed to command the Ohio river fleet of gunboats, having received the rank of lieutenant commander, but was soon after transferred to the army for the purpose of influencing volunteers in Kentucky, his native State. He organized "Camp Dick Robinson," between Garrardsville and Danville, and another camp at Washington, in Mason co. He

fought several engagements with Humphrey Marshall, in some of which he was successful. In Sept. 1861 he was made brigadier-general, and appointed to the command of the second division of Gen. Buell's army. He won much distinction at the battle of Shiloh, was wounded at the battle of Richmond, Ky., and afterward assumed command of all the forces in Louisville, having been made major-general of volunteers, July 17, 1862. His overbearing nature made him unpopular with his associates, and he was shot in his hotel by Brigadier-General Jefferson C. Davis, in a moment of resentment for his harsh and unjust treatment of that officer.

NESSELRODE, Count Karl Robert von, a Russian statesman, born on board of a Russian frigate in the harbor of Lisbon, Dec. 14, 1770, died at St. Petersburg, March 23, 1862. His father was a Russian diplomatist though originally of German family, and at the time of his birth was ambassador to Portugal. Young Nesselrode received an excellent education and early entered the army as aide-de-camp to the Emperor Paul, but was soon made an attaché to the various embassies of his father, and subsequently served in the same capacity under M. Markoff, Russian minister at Paris. On the rupture between Russia and France, which followed the execution of the Duke d'Enghien, he was transferred to the legation at the Hague under Prince Dolgorouski, and in 1805–6, when the prince returned to Russia, remained there as *chargé d'affaires*, till the accession of Louis Bonaparte made his withdrawal necessary. In 1807, he was again sent to Paris as a councillor of legation. His diplomatic papers were very brilliant, and gained him the favor of the Emperor Alexander I. He was secretly in favor of Napoleon, though professing to be attached to the cause of the Allies. In July, 1807, he accompanied his imperial master, when he and Napoleon had their interview on the raft at Tilsit, and assisted afterward at the treaty made at that time. Soon after this event, he returned to St. Petersburg, where he married the daughter of M. (afterward Count) Gurieff, then finance minister, and was himself appointed to a subordinate position in the office of foreign affairs. His wife had been maid of honor to the empress dowager, and was supposed to possess considerable financial ability, which was exerted to increase her husband's fortune. In 1812, after the rupture with Napoleon, Von Nesselrode was made Secretary of State for Foreign Affairs, and intrusted with powers in this important department second only to the minister *en chef*, Count Razumoffski. His views of policy differed materially from those of his chief, and in 1813 a coalition was formed by which he became supreme in the direction of the foreign policy of the empire. The treaties with England, Sweden, Prussia, and Austria, which followed, were dictated by him, and the downfall of Napoleon was due in part at least to his influence. On the 31st of March, 1814, he signed the capitulation of Paris. At the Congress of Vienna, Nesselrode, Metternich, and Talleyrand were the leading spirits. Thoroughly absolutist in his views and tendencies, he was yet so remarkable for the apparent moderation and suavity of his manners, and his diplomatic skill and tact, that he maintained the superiority of Russia in the European councils for 42 years, and yet during nearly 40 years of that time, avoided involving his country in war with any of the great powers. During the reign of Alexander I., he was, with the exception of a short period in which the Count Capo d'Istria had succeeded in alienating the confidence of the emperor, the supreme authority in regard to the foreign policy of the Russian empire. On the accession of Nicholas I, in 1827, he still retained his position, though, from the stronger will and more positive character of that monarch, he was under the necessity of acting more cautiously and influencing the czar to suggest views and measures, which he had previously determined upon. He remained at the head of the Government throughout the reign of Nicholas, and in 1856, on the 30th of March, just 42 years after he had in the same city signed the capitulation of Paris, he signed on behalf of Russia the treaty of Paris. He then retired from active political life, in which he had acted a conspicuous part for more than 50 years. His wealth was immense; upward of 150,000 sheep grazed on his estates, and his personal property was so great that he was reckoned one of the wealthiest men in Europe. He was passionately fond of cookery, and invented many new and famous dishes, among which his pudding à *la Nesselrode* has had the greatest reputation. In his intercourse with his subordinates Von Nesselrode was remarkable for kindness and considerateness, and the interest he took in their prosperity.

NEW HAMPSHIRE, one of the New England States, during the ten years preceding 1860, increased in population 8,097. The population of the State at the end of that period was 326,073. For the further statistics of New Hampshire furnished by the details of the last census, so far as they are accessible, the reader is referred to the article entitled United States.

The officers of the State are elected annually at an election held on the second Tuesday in March. At the election in 1862, the candidates for governor were Nathaniel S. Berry, then governor, George Stark, and Paul J. Wheeler. The first was nominated by the republican party, the second by the democratic party, and the third by a convention representing citizens who were opposed to continuing the party lines by which the people had been divided. The Republican Convention had assembled at Concord on Jan. 1st, 1862, and made the above mentioned nomination, and adopted a series of resolutions ignoring past political topics, and avowing the unreserved purpose of supporting the Government, and urging the vigorous pros-

ecution of the war. The Democratic Convention assembled at the same place, on the 8th of January, and nominated the above mentioned candidate, and adopted a series of resolutions expressing a firm and uncompromising spirit in favor of sustaining the Union and the Constitution, and opposed to all departure from, or violation of the latter. The Independent Convention assembled at Concord, on the 6th of February, and nominated their candidate, and adopted resolutions declaring that the maintenance of political organizations at that time was out of place, and that every patriotic citizen should rally to the support of the Government.

The votes of the citizens were cast as follows: Berry, 32,150; Stark, 28,566; Wheeler, 1,709.

The majority for Lincoln over Douglas for the Presidency in 1860 was 11,638.

The vote for governor in 1861 was as follows: Berry, 35,487; Stark, 31,452; Bartlett, 181.

The votes for members of the Legislature produced the following results:

	Senate.	House.
Republicans	9	203
Democrats	3	120

This Legislature, at an extra session near the close of the year, adopted the following resolutions as expressive of the views of the majority on public affairs:

Resolved by the Senate and House of Representatives of the State of New Hampshire in General Court convened: That the contest now existing between the Government and the disloyal people that have commenced an unjustifiable and treasonable war upon its constitutional authority, should be regarded by all loyal men not as a sectional war, not an anti-slavery war, nor a war of conquest and subjugation, but simply and solely a war for the maintenance of the Government, the suppression of rebellion, and the preservation of the *magna charta* of our liberty and national unity.

Resolved, That the State of New Hampshire pledges her resources for the integrity of the Union, for the support of the Constitution, and for the enforcement of the laws of the General Government.

Resolved, That the Constitution is the supreme law of the land, and that no State has the right to secede therefrom and dissolve the Union which that Constitution was made to secure.

Resolved, That the duty of the General Government to suppress all attempts to dissolve the Union is imperative, and cannot be evaded.

Resolved, That neither the President nor Congress can constitutionally entertain any proposition which has for its object the dismemberment of the Government or the dissolution of the Union.

Resolved, That, in the language of Andrew Jackson, "The Federal Union must be preserved."

The troops which have entered the United States' service from New Hampshire amount to 18,261. Of these, one regiment volunteered under the first call for troops in April, 1861; seven regiments of infantry, one battery, three companies of sharpshooters, four companies of cavalry, and several small detachments volunteered under the call made in July, 1861. Under the call in July, 1862, for three years, six regiments of infantry volunteered, and under the call for nine months, three regiments entered the service.

The receipts into the State Treasury for the year ending June 1, 1862, with the balance of the former year on hand, were $190,649. The expenditures for civil purposes, during the same period, were $172,685. The expenditure of the State for war purposes, up to the same period, was $953,649.

The length of railroads within the limits of the State is about 656 miles, and the cost of construction over $23,268,659.

The institutions for education in the State consist of Dartmouth College, with which is connected a medical and a scientific school. There are also three theological institutions in the State; one at Gilmanton (Congregational), one at New Hampton (Free Will Baptist), and one at Concord (Methodist Episcopal). There are in the State 2,352 common-school districts, and the number of children attending school, 44,787. The amount raised by tax for the support of schools during the year was $239,014. From other sources sufficient was contributed to make the total amount $274,623. The number of incorporated academies in the State is seventy-three.

NEW JERSEY. The population of the State of New Jersey, according to the national census of 1860, was, distinguishing the leading cities, as follows:

Cities.	Population.		Increase.	Per cent.
	1850.	1860.		
Burlington	4,536	5,193	657	14.48
Jersey City	6,856	29,226	22,370	326.28
Newark	38,894	71,914	33,020	84.89
Paterson	11,334	19,588	8,254	72.53
Total	61,620	125,921	64,301	102.70
Rest of State	427,935	520,778	92,843	21.50
Total	489,555	646,699	157,144	37.27

The number of dwellings in this State was 108,144, or 1.09 to each family of 5.7 persons. The number of males 322,732, of females 323,966. There were 25,318 free blacks, and 18 slaves.

The further returns of the census of 1860 will be found under United States.

The political character of the State Government was changed during the year 1862. A considerable sensation was produced by the arbitrary arrest of James R. Wall and his incarceration in a Government prison out of the State. The people, while refraining from every form of open opposition to the Government, expressed their strong disapprobation of this action by the subsequent election of Mr. Wall to fill a vacancy in the United States Senate.

The State election is held on the 1st Tuesday of November. The election in 1862 was for State officers, members of Congress, one third of the Senate, and all of the House in the State Legislature. The voters of the State were divided into two parties, the democrats and the republicans.

The republican, or, as it was called, the

"people's convention," assembled at Trenton in the month of July, and nominated Marcus L. Ward for governor, and adopted the following resolutions, as expressive of the views of the convention on national affairs:

Whereas, this convention has assembled to nominate to the people of New Jersey a candidate for the office of governor, to be chosen by their suffrages at the ensuing election; and whereas, the delegates now met for this purpose, at a crisis in our history grave and momentous beyond all example, have been appointed to this duty upon a public and general call to all the citizens of the State who, forgetful of past party distinctions and divided opinions, are united in the sincere, unqualified purpose to support to their utmost ability the National Government in its policy, and its efforts to crush the rebellion, to maintain the Constitution, to preserve the American Union, and to restore order and peace to the land; therefore,

Resolved, That discarding all personal, partisan views, looking solely to the welfare and duty of the State, whether separately by itself, or as vitally and inseparably a part of the Union, we believe we shall best and most surely secure and fulfil them by aiming to continue in the highest executive office of our State the same principles, policy, and conduct that have marked with admirable distinction the executive term now drawing to its close; that in reviewing the vigilance, the fidelity, and the wisdom with which its duties have been discharged—the ready and vigorous responses to the requisitions of the country and the war, and the confidence inspired by its general course among ourselves and abroad, we find with grateful satisfaction the character and qualities peculiarly fitted for the exigencies of the place and the times.

Resolved, That the foremost and paramount duty of the General Government, of the States, and of the people, is to devote their utmost energies, their resources, and their lives, the most effectually and forever to subdue the rebellion now raised against the Government, the liberties, and the life of the nation; that everything in the origin and the progress of this rebellion—the vindictive pride and disappointed ambition that engendered it—the false and insidious political teachings that quickened it into birth—the delusive pretexts and cunning acts that stimulated its growth, and the lawless passions that, reckless of reason, justice, and of oaths, forced its first violent outburst upon the deluded and misguided millions now drawn under its power, all stamp it the most causeless, wicked, and infamous ever known among men.

Resolved, That the disruption, the dismemberment, or the new formation of this nation, are not subjects submitted to the discretion or choice of our people; that the causes and powers conspicuously seen through more than two hundred years, in every period of our being, determining our destiny, shaping and guiding and compacting our growth, are before and superior to such discretion or choice, and exact by inevitable law the concurrence and coöperation of both; that the influences, the agencies, and the conditions, varied and marvellous as they were, by which, in all the eras of our history, colonial, revolutionary, and constitutional, the hand of a beneficent Divinity formed and developed our national proportions and life, assure us by infallible proofs that they must be nurtured and preserved as they were bestowed, and that all efforts to divide or refashion them—alike impious and vain—must end in anarchy and remediless national decay.

Resolved, That as citizens of New Jersey we are bound to the maintenance of the Constitution and the Union by obligations of duty, of interest, of affection, and of honor, as sacred, as indissoluble at the least as can belong to any other of the sisterhood of States. Proved and experienced by us as the sources and security of all earthly good—consecrated by the sacrifices, the sufferings, and the heroisms of the past, we are bound to spare nothing upon earth to transmit them unimpared to our children and generations to come.

Resolved, That the principles adopted and the objects pursued by the President and his Administration in the conduct of the war, and in the general management of our national affairs, command our entire and cordial approval; that in the confidence, unabated and increasing, reposed without distinction of party by the loyal millions of our countrymen, in the fidelity, wisdom, firmness, and patriotism displayed in their policy and course, we find the strongest grounds of encouragement, and the most auspicious omens of the future; and that, standing as they now do on the eve of the great and final events which must result in the overthrow of rebellion, or in the utter ruin of the country, and clothed as they now are with all the powers that can be conferred by legislation, and all the instruments of war that can be furnished by the people, it is the imperative duty of the Administration to exercise all those powers, and to wield all those instruments with the most unflinching and uniform vigor, until the end shall be attained, in the absolute and universal supremacy of the Government; that their prompt and fearless discharge of that duty is demanded alike by the popular instinct of self-preservation, and by the simplest obligations of their official position; and being fully assured that they cannot in this direction outrun public sentiment, we demand that they shall keep pace with it.

Resolved, That with rebellion existing in our land, foreign governments have nothing to do—and that against all intervention by them we will wage a war as persistent and uncompromising as against the rebellion itself.

Resolved, That our lasting gratitude is due to the generals, the officers, and soldiers of our armies from our own and sister States, by whose bravery and skill so many victories have been won.

The democratic convention assembled at Trenton in September, and nominated Joel Parker for governor, and adopted the following resolutions as expressing the views of the convention:

Whereas, the democracy of New Jersey have again assembled in convention, to exercise the right of freemen to nominate a candidate for the highest office in the gift of the people; and whereas, we hold that popular conventions alone may rightfully proclaim the tenets of the party; therefore,

Resolved, That deploring the demoralizing tendency of the higher law teachings of the republican party, we feel impelled to reiterate our faith in the doctrine that constitutional law is the only true basis of executive action in peace or war.

2. That in the present exigencies of the country we extend to the National Administration our most cordial support for the suppression of the rebellion by all constitutional means, and that the party stands, as it has ever stood since the formation of the Government, for the Union, the Constitution, and enforcement of the laws.

3. That as in establishing the Constitution the people reserve to themselves all powers not delegated to the Government, therefore all assumptions of power by the Administration, whether in the suspension of the writ of *habeas corpus*, arrests and imprisonments without due course of law, or restrictions of freedom of speech and of the press, are dangerous infringements of the constitutional rights of the people, only to be patiently borne by the hopeless serfs of an irresistible despotism.

4. That, while we enter our solemn protest against the reckless extravagance, infamous peculation, and political outrages of which the party in power is guilty, and while we deprecate the horrors of the civil conflict now raging, we still hold it our duty to advocate the use of every constitutional means to the extent of the full power of the Government, for the suppression of the rebellion, the vindication of the authority of the "Constitution as it is, and the restoration of the Union as it was."

5. That we do entirely reject and abhor the idea, that, as an object of the present civil war, any purpose of emancipation of the slaves shall be thereby promoted or at all regarded; and that the language recently used in the Washington "Republican," "that the farce of restoring the Union of the States is about played out," is utterly infamous, and deserving, as it will receive, the most solemn and severe condemnation of all true patriots.

6. That we applaud our brave volunteers, who by their gallant deeds have emulated the heroism of the old "Jersey Blues," and that we extend our heartfelt sympathy to those who are bereaved by the calamities of the war.

7. That to the candidate this day nominated we pledge our entire support, believing that the political triumph of the Constitutional Democracy in the coming elections, will have a powerful effect in terminating the rebellion, and reëstablishing peace, prosperity, and happiness throughout the land.

The votes of the electors were cast as follows:

	Democrat.	Republican.
For Governor.....	61,307	46,710

The majority of the democratic candidate was 14,597.

The votes for members of Congress were cast as follows:

	Democrat.	Republican.
1st district.....	8,961	9,491
2d "	12,182	10,834
3d "	15,708	9,093
4th "	12,791	10,024
5th "	10,779	7,622

The Legislature was divided as follows:

	Senate.	House.
Democrats.....	13	45
Republicans.....	8	15

The Senate consists of 21 members, and the House of 60. The Legislature meets annually at Trenton on the second Tuesday in January.

The measures of the Legislature were almost entirely of a local nature. A bill was under consideration to forbid the immigration of negroes into the State, but it failed to become a law, although there are more free colored people in the State in proportion to the population than in any other non-slaveholding State.

Under the call for troops in 1861 the State of New Jersey was among the foremost to respond with her full quotas. She sent forward 15 regiments, and two batteries, numbering 14,870 men. These regiments lost heavily, and the events toward the close of that year caused the regiments to fall into a somewhat demoralized condition; and on the 29th of January an order was issued from the War Department, placing these regiments under the State authorities. Prompt measures were adopted to reorganize the troops under State officers, and an efficient condition was soon reached. The 1st cavalry was placed under Col. Percy Wyndham, and became very effective. On the 7th of July, under the call of the President, for 300,000 three years' men, five regiments were required from New Jersey. There was but one regiment in camp, and recruiting was dull. It was determined to establish five camps in the State under different officers, as follows:

No. 1.—Trenton.....	Brig.-Gen.	N. N. Halsted.
No. 2.—Beverly.....	" "	G. M. Robeson.
No. 3.—Freehold.....	" "	Chas. Haight.
No. 4.—Newark.....	" "	Com. Van Vorst.
No. 5.—Flemington....	" "	A. E. Donaldson.

An order was issued providing for the payment of $2 premium for each recruit, one month's pay and $25 dollars in advance of the $100 provided for by Congress for three years' service. There was also the bounty paid of $6 by the State to each family monthly, and from $2 to $4 to single men. A second lieutenant was appointed for each company to act as mustering officer. Each recruit as he appeared in camp received his money, was uniformed and put to drill. By this means the five regiments were filled in a month.

	Mustered in.	Strength.	Left the State.	Colonels.
11th..	Aug. 18.	907	Aug. 25.	R. McAllister.
12th..	Sept. 4.	979	Aug. 28.	R. C. Johnson.
13th..	Aug. 25.	880	Sept. 1.	E. A. Carman.
14th..	Aug. 26.	964	Sept. 5.	W. S. Truex.
15th..	Aug. 25.	914	Sept. 6.	Samuel Fowler.
		4,644		

Each regiment had 39 officers; there were consequently 4,248 enlisted men. Some of these regiments went immediately into action. The 13th left the State on the 1st, and on the 17th, at Antietam, lost 109 killed, wounded, and missing.

Under the President's call, August 4th, for 300,000 nine months' men, an enrollment took place of all citizens from 18 to 45 years of age. The quota of New Jersey under this call was 10,478 men. On the 14th of August an order from the War Department directed a draft to be made on the 3d of September. The commissioners, surgeons, and enrolling officers in each county were appointed, and the local quotas ready for publication, when an order was issued that counties should have credit for the volunteers before furnished. This order led to great complications. The quotas were finally ascertained by adding to the whole number of volunteers furnished by the State the number of men required by the new call. From the number thus resulting to each township was taken the number already furnished. It was then ordered that volunteers in lieu of drafted men would be taken up to September 1st. The recruits then flocked into the camps, and on September 2nd the five camps contained 10,800 men, which by medical examination was reduced to 10,714, or 236 more than the number called for. The 10,714 men were organized into 11 regiments as follows, including officers:

	Mustered in.	Strength.	Left the State.	Colonels.
21st.	Sept. 15.	966	Sept. 24.	G. Van Houten.
22d..	" 22.	937	" 29.	Com. Fornet.
23d..	" 13.	994	" 26.	J. S. Cox.
24th.	" 16.	985	" 29.	W. B. Robertson.
25th.	" 29.	984	Oct. 10.	A. Derrom.
26th.	" 18.	958	Sept. 26.	A. J. Morrison.
27th.	" 19.	1,014	Oct. 10.	Geo. W. Mindil.
28th.	" 15.	920	" 2.	M. N. Wisewell.
29th.	" 20.	949	Sept. 28.	E. F. Applegate.
30th.	" 17.	1,006	" 30.	A. E. Donaldson.
31st.	" 17.	1,001	" 26.	A. P. Berthona.
		11,314		

The field and line officers were elected under the constitutional State militia law. All these regiments were in the army of the Potomac,

and four were engaged in the battle of the Rappahannock, December 13th. Under all the requisitions the State furnished the following troops:

Requisitions.	Minimum.	Maximum.	Furnished.
1st—4 regiments militia....	3,123	3,123	3,105
2d—3 regiments volunteers.	2,598	3,138	3,120
3d—5 regiments volunteers.	4,330	5,230	7,601
4th—5 regiments volunteers	4,330	5,230	4,644
5th—Draft.....	10,478	10,478	10,714
Recruits.....	....	....	1,030
Total.....	24,859	27,199	30,214
3 months' men disbanded.....			3,105
Died, &c., in 1861.....			389
Died, &c., in 1862.....			3,678—7,172
In service January, 1863.....			23,042

A call for 3,000 men, to fill up the old regiments, was not filled, only 1,030 men having been raised for that purpose, although the State furnished more than that amount over all the quotas. The men have a great repugnance to old regiments.

The number enlisted in regiments of other States, it is estimated, carries the total to 35,000.

Of the number in service, 10,373 left families or dependent mothers. The State bounty to them, at $6, amounts to $746,856 per annum. Of single men 12,669 draw an average of $2½ per month, making $380,070. The annual charge to the State is therefore $1,126,926.

The number of men now liable to military duty is 71,697 in the State.

The State debt at the beginning of the year was about $770,000, of which $100,000 is payable annually. Excepting $95,000 it was all contracted for war purposes. A tax to defray State expenses had been unknown for some years previous to the commencement of the war. The taxes for local purposes in 1860 amounted to $1,319,299.

There are three colleges in the State, and two theological seminaries. The State appropriation for public schools exceeds $600,000, in addition to which there is in many cities and towns a local tax of two mills or less on the dollar. The number of school districts 1,563. There is also a State normal school for the education of teachers.

The miles of railroad in the State are 560, and the cost of construction $28,997,033.

NEW ORLEANS, Occupation of. On May 1, 1862, several days after the surrender of the city to Flag Officer Farragut, formal possession was taken of New Orleans by the land forces of the United States under the command of Maj.-Gen. B. F. Butler, who, after a conference with the municipal authorities and some of the principal inhabitants, issued a proclamation adapted to the circumstances of the captured city and its inhabitants. After assuring protection to all well disposed persons, natives as well as foreigners, and requiring keepers of public property and manufacturers of arms and munitions of war to make a return of the kind and quantity of material in their possession, the proclamation proceeded as follows:

All the rights of property of whatever kind will be held inviolate, subject only to the laws of the United States. All the inhabitants are enjoined to pursue their usual avocations. All shops and places of amusement are to be kept open in the accustomed manner, and services are to be held in the churches and religious houses, as in times of profound peace. Keepers of all public houses and drinking saloons are to report their names and numbers to the office of the Provost Marshal, and they will then receive a license, and be held responsible for all disorders and disturbances arising in their respective places. Sufficient force will be kept in the city to preserve order and maintain the laws. The killing of American soldiers by any disorderly person or mob is simply assassination and murder, and not war, and will be so regarded and punished. The owner of any house in which such murder shall be committed will be held responsible therefor, and the house be liable to be destroyed by the military authority. All disorders, disturbances of the peace, and crimes of an aggravated nature, interfering with the forces or laws of the United States, will be referred to a military court for trial and punishment. Other misdemeanors will be subject to the municipal authority, if it desires to act. Civil causes between party and party will be referred to the ordinary tribunals. The levy and collection of taxes, save those imposed by the laws of the United States, are suppressed, except those for keeping in repair and lighting the streets and for sanitary purposes. These are to be collected in the usual manner. The circulation of Confederate bonds, evidences of debt (except notes in the similitude of bank notes), issued by the Confederate States, or scrip, or any trade in the same, is forbidden. It has been represented to the Commanding General by the civil authorities that these Confederate notes, in the form of bank notes, in a great measure, are the only substitutes for money which the people have been allowed to have, and that great distress would ensue among the poorer classes if the circulation of such notes should be suppressed. Such circulation, therefore, will be permitted so long as any one will be inconsiderate enough to receive them until further orders. No publication of newspapers, pamphlets or handbills giving accounts of the movements of the soldiers of the United States within this department, reflecting in any way upon the United States, intending in any way to influence the public mind against the United States, will be permitted, and all articles on war news, editorial comments, or correspondence making comments upon the movements of the armies of the United States, must be submitted to the examination of an officer who will be detailed for that purpose from these headquarters. The transmission of all communications by telegraph will be under the charge of an officer from these headquarters.

Gen. Butler further requested that outrages committed by the soldiery upon the persons or property of citizens should be reported to the provost guard, prohibited the assemblage of persons in the streets, suspended the municipal authority so far as the police of the city and crimes were concerned (except that for the effective promotion of order an armed body of foreigners known as the European Legion, which was employed subsequent to the evacuation of the city by Gen. Lovell to protect the lives and property of the citizens, was invited to coöperate with the military authorities), and in general imposed upon the city the ordinary conditions of martial law. Copies of the proclamation were sent to all the newspaper offices; and upon the editors unanimously refusing to print it, forcible possession was taken of the

"True Delta" office, and by the aid of Northern printers, selected from the different regiments of national troops, the document was speedily set up, and was worked off in the edition of the paper for May 2.

The landing of troops at New Orleans and at Algiers, on the opposite side of the Mississippi, meanwhile went vigorously on, and, by the direction of Gen. Shipley, the military governor, the principal points of approach to the city were occupied in force, with pickets thrown out as far as the crossing of the Jackson and Jefferson railroad. Gen. Butler established his headquarters at the St. Charles hotel, and another large hotel, the Evans House, on Poydras street, was converted into a hospital. A sufficient force of gunboats remained in front of the city to oppose any sudden rising of the inhabitants or attack by a Confederate army, while the remainder with a portion of the mortar fleet proceeded up the river to Carrollton, Baton Rouge, and other places. Whether, on account of the hopelessness of opposition, or of the indifference with which the large foreign element in the population (about 40 per cent.) regarded the fate of the city, or because perhaps the inhabitants were satisfied with the immense destruction of cotton and sugar which had already been accomplished, the city remained comparatively tranquil. "Our streets," says the "Delta" of May 1, "are remarkably quiet. Most of the stores have been closed since Friday last (April 25), and remain closed, with a few exceptions. The principal hotels are closed, and there is some difficulty among those who have been in the habit of making these establishments their homes in effecting other arrangements. The bar rooms have all been closed since Friday last. For some days there was great difficulty in passing the miserable currency we are cursed with, but, thanks to the judicious measures taken by the authorities, confidence in it has been partially restored. The markets are still very meagrely furnished, and, to provide regular supplies of food for this large population, will require all the wisdom of those who have our welfare in their keeping, for the ordinary intercourse between the city and country must, to a considerable extent, continue broken up.

* * * * *

"The movements in financial circles during the past week have been of the most restricted character ever witnessed in the Crescent City. The banks kept their doors open for a few hours daily to pay depositors' checks and renew maturing obligations; but they peremptorily refused to receive deposits or transact any other kind of business. Their presidents also held one or more informal meetings with the view of adopting some uniform policy in their future management; but no definite conclusion was arrived at, and each one is still at liberty to adopt such action as circumstances may suggest."

The first consideration brought to the notice of the military and municipal authorities was the destitute condition of a large portion of the population, who were literally at the point of starvation; and in accordance with a recommendation from the mayor and common council Gen. Butler gave orders, on May 2 and 3, for the safe conduct of cargoes of flour, live stock, and other necessaries from Mobile and various places in the interior. These proving ineffectual to relieve the prevailing distress, he issued on the 9th of the month a proclamation, known as General Order No. 25, the purport of which can be best understood by quoting the document in full:

HEADQUARTERS, DEPARTMENT OF THE GULF,
NEW ORLEANS, *May* 9, 1862.

The deplorable state of destitution and hunger of the mechanics and working classes in this city has been brought to the knowledge of the Commanding General.

He has yielded to every suggestion made by the city government, and ordered every method of furnishing food to the people of New Orleans that that government desired. No relief by those officials has yet been afforded. This hunger does not pinch the wealthy and influential, the leaders of the rebellion, who have gotten up this war, and are now endeavoring to prosecute it, without regard to the starving poor, the working man, his wife and child. Unmindful of their suffering fellow citizens at home, they have caused or suffered provisions to be carried out of the city for the Confederate service since the occupation by the United States forces.

Lafayette square, their home of affluence, was made the depot of stores and munitions of war for the rebel armies, and not of provisions for their poor neighbors. Striking hands with the vile, the gambler, the idler and the ruffian, they have destroyed the sugar and cotton which might have been exchanged for food for the industrious and good, and regrated the price of that which is left, by discrediting the very currency they had furnished while they sloped with the specie, as well as that stolen from the United States, as the banks, the property of the good people of New Orleans, thus leaving them to ruin and starvation—fugitives from justice many of them, and others, their associates, staying because too puerile and insignificant to be objects of punishment by the clement Government of the United States.

They have betrayed their country.

They have been false to every trust.

They have shown themselves incapable of defending the State they have seized upon, although they have forced every poor man's child into their service as soldiers for that purpose, while they made their sons and nephews officers.

They cannot protect those whom they have ruined, but have left them to the mercies and assassinations of a chronic mob.

They will not feed those whom they are starving.

Mostly without property themselves, they have plundered, stolen, and destroyed the means of those who had property, leaving children penniless and old age hopeless.

Men of Louisiana, working men, property holders, merchants and citizens of the United States, of whatever nation you may have had birth, how long will you uphold these flagrant wrongs, and by inaction suffer yourselves to be made the serfs of these leaders?

The United States have sent land and naval forces here to fight and subdue rebellious armies in array against her authority. We find, substantially, only fugitive masses, runaway property owners, a whiskey-drinking mob, and starving citizens with their wives and children. It is our duty to call back the first, to punish the second, root out the third, feed and protect the last.

Ready only for what we had not prepared ourselves,

to feed the hungry and relieve the distressed with provisions. But to the extent possible within the power of the Commanding General it shall be done.

He has captured a quantity of beef and sugar intended for the rebels in the field. A thousand barrels of those stores will be distributed among the deserving poor of this city, from whom the rebels had plundered it; even although some of the food will go to supply the craving wants of the wives and children of those now herding at Camp Moore and elsewhere, in arms against the United States.

Capt. John Clark, Acting Chief Commissary of Subsistence, will be charged with the execution of this order, and will give public notice of the place and manner of distribution, which will be arranged as far as possible so that the unworthy and dissolute will not share its benefits.

By command of Major-General BUTLER,
GEO. C. STRONG, Assistant Adjt.-Gen., Chief of Staff.

In accordance with this proclamation, a public distribution of the captured stores was commenced on the 13th, by which means, together with the subsequent revival of traffic, all apprehensions of immediate distress were dispelled. In reply to the severe strictures of Gen. Butler, several of the city newspapers in the Confederate interest stated, that since the preceding August the poor had been gratuitously supplied twice a week with provisions, that millions of dollars had been subscribed by private individuals for similar purposes, and that the existing suffering was due to two causes: first, the blockade, or non-intercourse with the country from which provisions had previously been drawn, and, secondly, the derangement of the currency, the United States commander having, in his proclamation, warned the people of the danger of receiving the only currency in circulation, or rather the basis of the only currency in circulation.

With a view to procure a remedy for the latter evil, a committee of the Associated Banks of New Orleans requested permission to restore to their vaults the specie which had been conveyed from the city previous to its occupation by the national forces; to which Gen. Butler replied that the specie should have safe conduct through his lines and be protected, so long as it should be used in good faith to make good the obligations of the banks to their creditors by bills and deposits. "In order," he added, "that there may be no misunderstanding, it must be further observed that I by no means pledge myself that the banks, like other persons, shall not return to the United States authorities all the property of the United States which they may have received. I came to "retake, repossess, and occupy all and singular the property of the United States of whatever name and nature. Further than that I shall not go, save upon the most urgent military necessity."

Acting in the spirit of these words, Gen. Butler had on the 10th of the month taken forcible possession of a large amount of specie deposited in the office of M. Conturié, consul of the Netherlands, and which, it was supposed, belonged to the Confederate Government, or was to be expended in their behalf. The proceeding drew forth a formal protest from the entire consular body of New Orleans, as being in contravention of treaties between their governments and the United States. In reply Gen. Butler expressed his regret that the consuls should have acted without investigating the facts of the case, and stated that it would be demonstrated at the proper time, that the flag of the Netherlands had been used to cover and conceal property of an incorporated company of Louisiana, secreted under it, from the operation of the laws of the United States. "No person," he concluded, "can exceed me in the respect I shall pay to the flags of all nations and to the consular authority, even while I do not recognize many claims made under them; but I wish it to be most distinctly understood, that, in order to be respected, the consul, his office, and the use of his flag, must each and all be respected."

The rigor and decision which marked Gen. Butler's conduct in this instance characterized his administration from the moment of his arrival in New Orleans, and by a prompt and sometimes severe exercise of the rules of martial law, particularly in the matter of arrests and imprisonments, he kept the city in an orderly condition, although the inhabitants, distrusting his ability to maintain his authority for any considerable period, at first manifested no enthusiasm at the restoration of the national supremacy, and carefully abstained from committing themselves in favor of the Union. A notable exception was found in the conduct of a portion of the female population, who availed themselves of the license usually permitted to their sex, to offer gross insults and indignities to the national soldiers while in the orderly discharge of their duties. Apprehending that, if this conduct should be unrebuked, the soldiery might be induced to retaliate, or brought into such contempt as to provoke open assaults from the disaffected portions of the populace, Gen. Butler issued on May 15 the following order, known as General Order No. 28:

HEADQUARTERS, DEPARTMENT OF GULF, NEW ORLEANS.

As officers and soldiers of the United States have been subject to repeated insults from women, calling themselves ladies, of New Orleans, in return for the most scrupulous non-interference and courtesy on our part, it is ordered hereafter, when any female shall by mere gesture or movement insult, or show contempt for any officers or soldiers of the United States, she shall be regarded and held liable to be treated as a woman about town plying her avocation.

By command of Major-General BUTLER.

Its publication excited violent opposition from disloyal citizens, and the mayor of the city, John T. Monroe, made it the subject of an angry communication to the municipal government, and of a letter to Gen. Butler, placing an exceedingly offensive construction upon the order. The latter immediately directed him to be deprived of his official functions, and committed to Fort Jackson until further orders. At a subsequent interview with the commander-in-chief, at headquarters, the mayor was

informed that a withdrawal of his letter, and an apology for the language which it contained, would alone relieve him from incarceration; whereupon he made the annexed apology and retraction, and was allowed to resume the functions of his office:

GEN. BUTLER: This communication, having been sent under a mistake of fact, and being improper in language, I desire to apologize for the same, and to withdraw it. JOHN T. MONROE, Mayor.
May 16, 1862.

In explanation of the meaning and intent of the order, Gen. Butler, at the same time, addressed the following letter to the mayor, which was published together with the apology of the latter, in the daily papers of New Orleans:

HEADQUARTERS, DEPARTMENT OF THE GULF.
NEW ORLEANS, *May* 16, 1862.

SIR: There can be, there has been, no room for misunderstanding of General Order No. 28.

No lady will take any notice of a strange gentleman, and *a fortiori* of a stranger, simply in such form as to attract attention. Common women do.

Therefore, whatever woman, lady or mistress, gentle or simple, who, by gesture, look, or word, insults, shows contempt for, thus attracting to herself the notice of my officers and soldiers, will be deemed to act as becomes her vocation as a common woman, and will be liable to be treated accordingly. This was most fully explained to you at my office.

I shall not, as I have not, abated a single word of that order; it was well considered; if obeyed, will protect the true and modest women from all possible insult. The others will take care of themselves.

You can publish your letter, if you publish this note and your apology. Respectfully,

BENJ. F. BUTLER,
Major-General Commanding.

JOHN T. MONROE, Mayor of New Orleans.

The agitation consequent upon the publication of Order No. 28 was not confined to New Orleans or its neighborhood, but throughout all the States, loyal and disloyal, the language of Gen. Butler was made the subject of comments varying with the feelings or circumstances of the writer. Gen. Beauregard read it at the head of his army, as an incitement to renewed efforts against the "Northern hordes;" the Confederate journals denounced it with all the resources of the language at their command; and even in the North many editors and public speakers expressed themselves strongly against the order, and called upon the President to disavow it publicly and rebuke its author. In the European journals unfriendly to the national cause, and in some also of opposite views, it was criticized with characteristic asperity. The order was nevertheless tolerated by the President, and, in spite of the obloquy sought to be associated with it, was, in the opinion of persons competent to judge, in no respect oppressive in its operation, but rather productive of substantial good by preventing an indulgence in wanton insults, by any class of the population. In a private letter written in July, Gen. Butler has given the following account of his motives in acting as he did, and of the presumed necessity for such action:

What was the state of things to which the woman order applied?

We were two thousand five hundred men in a city seven miles long by two to four wide, of a hundred and fifty thousand inhabitants, all hostile, bitter, defiant, explosive, standing literally on a magazine; a spark only needed for destruction. The devil had entered the hearts of the women of this town (you know seven of them chose Mary Magdalen for a residence) to stir up strife in every way possible. Every opprobrious epithet, every insulting gesture was made by these bejewelled, becrinolined, and laced creatures, calling themselves ladies, toward my soldiers and officers, from the windows of houses and in the streets. How long do you suppose our flesh and blood could have stood this without retort?

That would lead to disturbances and riot; from which we must clear the streets with artillery—and then a howl that we murdered these fine women. I had arrested the men who hurrahed for Beauregard. Could I arrest the women? No. What was to be done? No order could be made, save one, that would execute itself. With anxious, careful thought I hit upon this: "Women who insult my soldiers are to be regarded and treated as common women plying their vocation."

Pray how do you treat a common woman plying her vocation in the streets? You pass her by unheeded. She cannot insult you! As a gentleman you can and will take no notice of her. If she speaks, her words are not opprobrious. It is only when she becomes a continuous and positive nuisance that you call a watchman and give her in charge to him.

* * * * * * *

Why, these she adders of New Orleans themselves were at once shamed into propriety of conduct by the order, and from that day no woman has either insulted or annoyed any live soldier or officer, and of a certainty no soldier has insulted any woman.

When I passed through Baltimore, on the 23d of February last, members of my staff were insulted by the gestures of the ladies (?) there. Not so in New Orleans.

I can only say, I would issue it again under like circumstances.

On May 29, the further circulation of Confederate money, which had been permitted for a limited period, ceased, in accordance with an order from the commander-in-chief, and on June 1, the port of New Orleans was declared, by a proclamation of the President, again open to commerce. Charles L. Lathrop, a former resident of the city, was appointed collector, and steam communication was almost immediately resumed with the Northern States. So beneficial were the results of reviving commerce and of the strict attention to police and sanitary measures which was exacted, that the "Delta" of June 1, commenting upon the sullen and deserted aspect of the city at the entrance of the national troops, observed:

One short month has elapsed. The streets are filled with smiling faces, business attracts with open doors, thugs have left for summer watering places, property is secure, and Abraham Lincoln, by the grace of God and the electoral vote of the people President of the United States of America, might walk, unarmed and unaccompanied, at any time through these streets, in full security, and to the joy and delight of numbers who have heretofore been accustomed to link his name with curses and execrations.

This change was not effected without a resort to measures which were denounced as arbitrary and tyrannical. Arrests of suspected persons had constantly to be made, at the dis-

cretion of the commander-in-chief, including among others, Pierre Soulé, who was sent North; the "thugs," gamblers, and other desperate characters who had long dominated in the city, were dispersed or intimidated into silence; the newspapers were on one occasion temporarily suppressed for advocating the burning of cotton and produce; and the bakers and other venders of food, who had taken advantage of the scarcity of provisions to charge exorbitant prices, were compelled to conform to the tariff fixed by the city ordinances. For the further protection of the citizens, stringent orders were issued on May 27, and June 5, prohibiting officers and soldiers from taking private property or forcibly entering and searching private dwellings without written authority from the proper officers.

On June 7, took place the first military execution since the occupation of the city, the sufferer being one William B. Mumford, who was arrested for hauling down, on the morning of April 26, an American flag hoisted on the mint by a boat's crew from Flag Officer Farragut's fleet, and subsequently assisting in tearing it into shreds, and otherwise insulting it in the presence of a large and riotous crowd of citizens. The act, if unnoticed, was deemed to offer so pernicious a precedent for future offences, that Mumford was directed to be tried before a military commission, by whom he was convicted and sentenced to be hung. The sentence was approved by Gen. Butler, and carried into effect in the presence of an immense throng of citizens, who made no demonstration and dispersed quietly to their homes. A universal cry of indignation at what was denounced as an act of murder went up from the seceded States, the hoisting of the flag, pending the formal surrender of the city, being deemed an unauthorized and unjustifiable proceeding on the part of the United States authorities, and one against which the mayor had protested in a written communication to Flag Officer Farragut. On the other hand, it was claimed that the flag had been hoisted on a public building of the United States, and that the tearing of it down was an overt act of treason, done for the purpose of exciting other evil-minded persons to further resistance to the laws and arms of the United States.

To the deep feeling of revenge which this execution aroused was due the vindictive retaliatory order subsequently issued by Jefferson Davis, and the rewards for the assassination of Gen. Butler, which have from time to time appeared in the Southern papers. The clemency of Gen. Butler had, however, a few days previous, been successfully invoked in favor of six Confederate soldiers paroled at Fort Jackson, and subsequently sentenced by a court martial to be shot for being engaged in a conspiracy to raise a company to serve in Gen. Beauregard's army; and on another occasion he manifested his desire to administer justice impartially, by causing sentence of death against two soldiers of the garrison, convicted of robbery by a court martial, to be carried into effect. These were the only military executions which have taken place in New Orleans during its occupation by the national forces.

In a speech delivered in Philadelphia, after his return from New Orleans, Gen. Butler defended the course pursued by the military authorities in the case of Mumford. Referring to the indignity offered by him to the American flag, he said:

> That act, in its consequences, might have been most calamitous. The commander of the Federal fleet and the army, then coming up the river, had a right to suppose that the city authorities had come to the conclusion to renew the contest, and the evidence of that renewal was the hauling down of the flag. The commander of the fleet had no means of knowing that this was done by a mob, and the act might and ought, as a military proposition, to have brought down upon the city an instant bombardment. But, through the very proper precaution of Commander Farragut, but a shot or two were fired, and, no resistance following, no special damage was done, it resulting in the wounding of a single person.
>
> But, mark you, sir, it was not the fault of Mumford that New Orleans was not laid in ashes, and the women and children crushed beneath the shells of the Federal fleet. We were about taking other towns and cities on the Mississippi river. If every drunken ruffian, by tearing down our flag, could bring bombardment upon every city along the Mississippi river, there was no safety to the non-combatants from the operations of war, nor in the surrender of places. And it was in mercy to the towns that we should take hereafter, and their inhabitants, that I felt it necessary to punish, according to the just laws of war, after a fair trial and full confession of guilt, William B. Mumford. To save human life and ameliorate the horrors of war, it became necessary exemplarily to punish this crime. I have a right to say here that, in no unauthorized manner, in the Department of the Gulf, has any other flag of the nation been taken from the place where it has been put by loyal hands. And whether rightfully or wrongfully done, that act still commends itself to my judgment.
>
> And seeing the utter worthlessness of the man that treason has attempted to exalt into a patriot, I was inclined to spare Mumford, but that was not permitted to me. His associates, the thugs, roughs, rowdies, and gamblers, assembled in New Orleans on the night before his execution, and solemnly voted that Mumford should not be executed. It then became a question whether the mob should rule New Orleans, as it had done for fifteen years previously, or the commanding general of the United States forces. From that day, however, there has never been any question on that subject.

The difficulties with which Gen. Butler had become involved at the very outset of his administration, with the foreign consuls in New Orleans, foreshadowed a long series of complications with that body, embodying several grave questions of international comity. The news of the proceeding in the case of the consul of the Netherlands made some stir in the Northern States, and the subject having been brought to the notice of Mr. Seward by the British minister in the latter part of May, orders were issued from the War Department directing Gen. Butler to refrain from practising any severities or strictness of doubtful right toward consuls or the subjects of any foreign

power. M. Mercier also laid before the Secretary of State the substance of a letter from Count Mejan, the French consul at New Orleans, who complained that domiciliary visits, without the authority of written orders, were made at all hours of the day and night; that arbitrary arrests and imprisonments were frequent and unseasonable; and that several keepers of bars, restaurants, billiard rooms, and similar establishments, had been compelled by Gen. Butler, who claimed to act by virtue of martial law, to take out annual licenses in addition to those previously paid by them. In view of these representations, the Hon. Reverdy Johnson was early in June appointed a special commissioner to proceed to New Orleans and inquire into the transactions, involving any question of the violation of consular privileges, which had taken place there, and to report his decision to the Government.

The case of M. Conturié was the most important which came under Mr. Johnson's notice, and soon after his arrival in New Orleans a complaint was preferred by the French consul that he had been interrogated by Gen. Butler with respect to a large amount of coin deposited at the consulate for safe keeping, and had been compelled to promise not to part with it until the matter could be investigated. As both transactions were similar in character, they were examined together, and the following statement of facts was reported by the commissioner:

The sum in the hands of the consul of the Netherlands, amounting to $800,000, was, under a resolution of the Board of Directors of the Citizens' Bank of New Orleans, of Feb. 24, 1862, paid to Mr. Edward J. Forstall of that city, the agent of Messrs. Hope & Co. of Amsterdam, to be transmitted at the first opportunity to that house, to enable it to protect the credit of the bank and of the State of Louisiana, by paying, as it accrued, the interest on certain bonds of the State, long before loaned to the bank, under an agreement that, before disposing of them, the bank should indorse them, and stipulate to meet punctually the interest and principal. The bonds were negotiated in Europe many years since by the bank, through the agency of the Amsterdam house, and the interest that had fallen due from time to time, up to the period of the advance to Mr. Forstall, had been regularly paid through the same agency. Mr. Forstall, having no safe place of his own for so large an amount of coin, deposited it for security with the consul of the Netherlands, taking his receipt for it at the time of the deposit. The transaction on the part of the bank was in no respect a secret one. The resolution which determined upon it was unanimously adopted at a full meeting of the Board of Directors, and inserted in their journal of proceeedings, and all the corresponding and necessary entries were made in their appropriate places in the books of the bank.

The same bank, having occasion for a further credit in Europe on which to draw exchange, purchased of Messrs. Dupasseur and Co., a French house in the city, bills on Paris for about $750,000, paying for them as agreed in coin. The amount was delivered to the house by the bank and deposited by them, they being French subjects, with the French consul, until it could be shipped to Paris, to cover the bills. At the same time the bills were handed to the bank, which transmitted them as soon as it could to its correspondent in Europe, to be at the proper period presented for acceptance and payment. It was a part of the understanding that the Paris bankers were not to accept until they were advised of the shipment of the coin. Before that could be effected, Maj.-Gen. Butler, hearing that the coin was in possession of the consul, and conjecturing that the transaction was illegal, requested him to retain it.

From these facts Mr. Johnson concluded that the transaction was a purely mercantile one, in perfect good faith, and that the United States could have no interest in the coin except upon the ground of forfeiture, for which there had never been any pretence. "If it be alleged," he observed, "as matter of suspicion (the proof is all the other way) that the purpose of the bank was to place so much of its funds beyond the control of the United States, that, if true, would be no cause of forfeiture, there being no law, State or Congressional, to prohibit it. If it be alleged that the purpose was to place the fund in Europe for the advantage of the rebels, the answer is, there is not only no proof of the fact, but the proof actually before me wholly contradicts it." In a published card in reply to statements in the newspaper press as to the ultimate destination of the money, he denied emphatically that it had been sent in whole or in part to Havana to purchase arms and clothing for the Confederate Government, or that it had been employed for any purpose connected with secession. His report was approved by the President, and in the latter part of August instructions were sent to Gen. Butler to relinquish all claims on behalf of the United States upon the funds in question.

On two other occasions Gen. Butler was brought into conflict with the consuls under circumstances which produced an unusually acrimonious correspondence. In a communication dated June 11, the British, French, and Greek consuls complained that certain sugars bought by Covas & Co. and Ralli, Benachi & Co., foreign houses in New Orleans, on foreign account, in the usual manner in which such business is carried on, were prohibited by the commander-in-chief to be removed. "But," they added, "as the undersigned are disposed to waive all past proceedings, they beg that the order not permitting the removal of the produce in question be rescinded and the sugars left at the disposal of the purchasers."

In reply Gen. Butler stated that he had information that Covas had sold sterling exchange for Confederate treasury notes, with which he

had purchased the sugars, for which reason he had directed the latter to be detained until the matter could be investigated. In allusion to the offer by the consuls "to waive all past proceedings," he used the following strong language:

> What "proceedings" have you, or either of you, to "waive" if you do feel disposed so to do? What right have you in the matter? What authority is vested in you by the laws of nations or of this country, which gives you the power to use such language to the representative of the United States in a *quasi* official communication? Commercial agents merely of a subordinate class, consuls have no power to waive or condone any proceeding, past or present, of the Government under whose protection they are permitted to reside so long as they behave well. If I have committed any wrong to Mr. Covas, you have no power to "waive" or pardon the penalty or prevent his having redress. If he has committed any wrong to the United States, you have still less power to shield him from punishment. I take leave to suggest, as a possible explanation of this sentence, that you have been so long dealing with a rebel Confederation, which has been supplicating you to make such representations to the Governments whose subjects you are, as would induce your sovereigns to aid it in its traitorous designs, that you have become rusty in the language proper to be used in representing the claims of your fellow citizens to the consideration of a great and powerful Government, entitled to equal respect with your own. In order to prevent all misconception, and that, for the future, you, gentlemen, may know exactly the position upon which I act in regard to foreigners resident here, permit me to explain to you that I think a foreigner resident here has not one right more than an American citizen, but at least one right less, that is, that of meddling or interfering, by discussion, vote, or otherwise, with the affairs of government.

A few days subsequent to this correspondence the consuls of Spain, France, and several other countries presented an elaborate protest against those clauses in General Order No. 41, which prescribed a form of oath to be taken by all foreigners resident 5 years in the city, and who had not received a protection from their Government within 60 days previous to the publication of the order. The reply of Gen. Butler was similar in style and tone to that above given. "Were it not," he said, "that some of the expressions of the document show that it was composed by some one born in the English togue, I should have supposed that many of the misconceptions of the purport of the order, which appear in the protest, arose from an imperfect acquaintance with the peculiarities of our language. As it is, I am obliged to believe that the faithlessness of the Englishman who translated the order to you, and wrote the protest, will account for the misapprehensions under which you labor in regard to its terms." He then showed that the order was intended to reach a large class of foreign born residents who by their acts had lost their nationalities; that the limitation of the time in which protection must be given was necessary to secure good faith, some of the consuls having gone into, and being then actually in rebel service; that foreigners declining to take the oath were not prohibited, as was alleged, from leaving the city on application to the proper officers, and that those taking it did not necessarily become naturalized. He requested, in conclusion, that "no more argumentative protests" against his orders should be sent to him by the consuls as a body, that being no part of their duties or rights, but that they should make application for redress in the customary manner.

Business meanwhile began to assume some activity; a degree of order previously unknown in the city was maintained, and, owing to the stringent quarantine regulations enforced by the commander-in-chief, the sanitary condition of all classes of the inhabitants was unusually good. On June 14, the first of a series of Union meetings was held, at which several of the old residents were present and made speeches, and the papers of the 17th announced a gratifying increase of Union sentiment among the population at large.

During the summer no material change in the condition of things was experienced, the attention of Gen. Butler being directed toward the gradual weakening of the latent disunion power which still existed to a considerable extent among the wealthy classes. By an order issued July 25th, all negroes leaving New Orleans by direction of their masters, and who joined the national forces, were declared free; and early in the succeeding month a tax of $312,716 for the relief of the poor was levied on disloyal corporations and firms, being 25 per cent. of their contributions in aid of the Southern Confederacy. Confiscations of the property of prominent secessionists, as Gen. Twiggs and John Slidell, were also ordered. Subsequent to August 11, all the inhabitants of New Orleans were disarmed by order of the military commandant of the city, a proceeding which elicited a remonstrance from the French consul in behalf of French subjects. In reply, Gen. Butler stated that he "could see no just cause for complaint against the order," and promised the protection of the United States troops against any attempts at violence upon disarmed persons, no matter by whom attempted. To the Spanish consul, who protested against the stringency of the quarantine laws, he replied that his object in enforcing these laws in their strictness was "to save the inhabitants of New Orleans, as well Spanish as others, from the epidemic of yellow fever." In the latter part of August, the initiatory step in the formation of a negro soldiery was taken by reorganizing the "Native Guards," a colored corps of the Louisiana State militia, raised under the certificate issued by the former governor of the State, and placing them in the service of the United States. Other organizations of a similar kind followed, and by the close of the year this branch of the service was established on a permanent footing.

On Sept. 24, Gen. Lewis G. Arnold assumed command of all the national troops at New Orleans and Algiers, and on the same day Gen. Butler created a panic among the secession sympathizers, by ordering all Americans, male

and female, in his department, to renew their allegiance to the United States Government, under pain of fine and imprisonment at hard labor, and at the same time to submit a return of the amount of their real and personal property. The native population consequently flocked *en masse* to register their allegiance, and within a comparatively short time upward of 60,000 persons had complied with the order. Soon afterward an order was issued prohibiting all persons in New Orleans holding moneys or other property in trust for persons in or sympathizing with the Confederate service; or from paying over the same without an order from the military headquarters, under penalty of having to refund a similar amount to the United States; and on Oct. 22 the relief commission, whose labors had been regularly prosecuted since the previous May, was directed to supply no family where there was an able-bodied male member over 18 and under 45 years of age, who was either not employed, or had not enlisted in the United States army.

The month of November was distinguished by a further series of orders. The most important of these was one, framed in accordance with the provisions of the confiscation act of July, 1862, declaring sequestered all the property in the district called La Fourche, on the west side of the Mississippi, and all in that part of the State lying east of the Mississippi, except the parishes of Orleans, St. Bernard, and Plaquemines. Within these portions of the State sales or transfers of property were prohibited, and a commission was appointed to take possession of the districts in question, under whose direction the sugar plantations were worked in the absence of their owners, and the property of disloyal persons inventoried and sold for the benefit of the Government. From these sales, which continued until the middle of December, considerable sums were realized. Another order suppressed distilleries and other manufactories of intoxicating liquors; another announced that any officer, found drinking intoxicating liquors in any public drinking place, would be recommended to the President for dismissal from the service; and a third prohibited the arrest of any slave unless known to be owned by a Union citizen, or the imprisonment of a slave unless his expenses should be prepaid, the slave to be released when the money was exhausted. Gen. Butler also ordered a list of slaves confined in the police jail in the month of November to be published, and all whose jail fees were not paid within ten days to be discharged, adding: "This is the course taken in all countries with debtors confined by creditors, and slaves have not such commercial value in New Orleans as to justify their being held and fed by the city, relying upon any supposed lien upon the slave."

A prominent feature in the history of this month was a Union meeting, held on the 15th, which was terminated by a grand torchlight procession through the principal streets. On the same day the "National Advocate" newspaper, established a few months previous, by Jacob Barker, and suppressed by order of Gen. Butler, for an improper publication, was allowed to be resumed, the editor having made a public apology. On December 3, in compliance with an order from Gen. Shepley, the military governor of Louisiana, an election for members of Congress was held, at which Benjamin F. Flanders and Michael Hahn were chosen to represent the first and second districts of the State, the elective franchise being accorded to all citizens who had taken the oath of allegiance.

The next event of importance was the arrival, on the evening of December 14, of Gen. Banks, who had been appointed to supersede Gen. Butler in command of the Department of the Gulf. The news excited surprise among all classes, and not a few of those opposed to the restoration of the national supremacy were sorry to part with an officer who, if obnoxious from his zeal in the discharge of his duties, had brought unexampled order and security to the city. A meeting of the two generals took place on the 15th, at which Gen. Butler tendered a cordial welcome to his successor, assuring him that the troops would render a cheerful obedience to his orders, and, on the 16th, General Banks issued a general order assuming command of the Department of the Gulf and of the State of Texas. Another order required all military and civil officers in the department to report to him, and a third suspended all public sales of property on account of the United States until further orders. On the 15th, Gen. Butler took leave of the troops lately under his command, alluding in glowing terms to their success in the field, to the restoration of order and quiet to New Orleans, to the feeding of starving wives and children of enemies, and stating that the expedition had cost the Government less by four fifths than any other. He said that the speaking of the word "farewell" was the only sorrowful thought he had, and commended them to their new commander as one worthy of their esteem. The following address to the people of New Orleans was issued on the succeeding day:

Citizens of New Orleans: It may not be inappropriate, as it is not inopportune in occasion, that there should be addressed to you a few words at parting, by one whose name is to be hereafter indissolubly connected with your city. I shall speak in no bitterness, because I am not conscious of a single personal animosity. Commanding the Army of the Gulf, I found you captured, but not surrendered; conquered, but not orderly; relieved from the presence of an army, but incapable of taking care of yourselves. So far from it, you had called upon a foreign legion to protect you from yourselves. I restored order, punished crime, opened commerce, brought provisions to your starving people, reformed your currency, and gave you quiet protection, such as you had not enjoyed for many years. While doing this, my soldiers were subjected to obloquy, reproach, and insult. And now, speaking to you, who know the truth, I here declare that whoever has quietly remained about his business, affording neither aid nor comfort to the enemies of the United States, has never been interfered with by the soldiers

of the United States. The men who had assumed to govern you and to defend your city in arms having fled, some of your women flouted at the presence of those who came to protect them. By a simple order (No. 28) I called upon every soldier of this army to treat the women of New Orleans as a gentleman should deal with the sex, with such effect that I now call upon the just-minded ladies of New Orleans to say whether they have ever enjoyed so complete protection and calm quiet for themselves and their families as since the advent of the United States troops. The enemies of my country, unrepentant and implacable, I have treated with merited severity. I hold that rebellion is treason, and that treason persisted in is death, and any punishment short of that due a traitor gives so much clear gain to him from the clemency of the Government. Upon this thesis have I administered the authority of the United States, because of which I am not unconscious of complaint. I do not feel that I have erred in too much harshness, for that harshness has ever been exhibited to disloyal enemies of my country, and not to loyal friends. To be sure, I might have regaled you with the amenities of British civilization, and yet been within the supposed rules of civilized warfare. You might have been smoked to death in caverns, as were the covenanters of Sotland, by the command of a general of the royal house of England; or roasted like the inhabitants of Algiers during the French campaign; your wives and daughters might have been given over to the ravisher, as were the unfortunate dames of Spain in the Peninsula war; or you might have been scalped and tomahawked as our mothers were at Wyoming, by savage allies of Great Britain, in our own Revolution; your property could have been turned over to indiscriminate "loot," like the palace of the Emperor of China; works of art which adorned your buildings might have been sent away, like the paintings of the Vatican; your sons might have been blown from the mouths of cannon, like the sepoys of Delhi; and yet all this would have been within the rules of civilized warfare as practised by the most polished and the most hypocritical nations of Europe. For such acts the records of the doings of some of the inhabitants of your city toward the friends of the Union, before my coming, were a sufficient provocative and justification. But I have not so conducted. On the contrary, the worst punishment inflicted, except for criminal acts punishable by every law, has been banishment, with labor, to a barren island, where I encamped my own soldiers before marching here. It is true, I have levied upon the wealthy rebels, and paid out nearly half a million of dollars to feed forty thousand of the starving poor of all nations assembled here, made so by this war. I saw that this rebellion was a war of the aristocrat against the middling men; of the rich against the poor; a war of the landowner against the laborer; that it was a struggle for the retention of power in the hands of the few against the many; and I found no conclusion to it save in the subjugation of the few and the disenthralment of the many. I therefore felt no hesitation in taking the substance of the wealthy, who had caused the war, to feed the innocent poor who had suffered by the war. And I shall now leave you with the proud consciousness that I carry with me the blessings of the humble and loyal under the roof of the cottage and in the cabin of the slave, and so am quite content to incur the sneers of the salon or the curses of the rich. I found you trembling at the terrors of servile insurrection. All danger of this I have prevented by so treating the slave that he had no cause to rebel. I found the dungeon, the chain, and the lash your only means of enforcing obedience in your servants. I leave them peaceful, laborious, controlled by the laws of kindness and justice. I have demonstrated that the pestilence can be kept from your borders. I have added a million of dollars to your wealth in the form of new land from the battue of the Mississippi. I have cleansed and improved your streets, canals, and public squares, and opened new avenues to unoccupied land. I have given you freedom of elections, greater than you have ever enjoyed before. I have caused justice to be administered so impartially that your own advocates have unanimously complimented the judges of my appointment. You have seen, therefore, the benefit of the laws and justice of the Government against which you have rebelled. Why, then, will you not all return to your allegiance to that Government—not with lip service, but with the heart? I conjure you, if you desire to see renewed prosperity, giving business to your streets and wharves—if you hope to see your city become again the mart of the Western world, fed by its rivers for more than three thousand miles, draining the commerce of a country greater than the mind of man hath ever conceived—return to your allegiance. If you desire to leave to your children the inheritance you received of your fathers—a stable constitutional government—if you desire that they should in the future be a portion of the greatest empire the sun ever shone upon—return to your allegiance. There is but one thing that stands in the way. There is but one thing that this hour stands between you and the Government, and that is slavery. The institution, cursed of God, which has taken its last refuge here, in His providence will be rooted out as the tares from the wheat, although the wheat be torn up with it. I have given much thought to this subject. I came among you, by teachings, by habit of mind, by political position, by social affinity, inclined to sustain your domestic laws, if by possibility they might be with safety to the Union. Months of experience and of observation have forced the conviction that the existence of slavery is incompatible with the safety either of yourselves or of the Union. As the system has gradually grown to its present huge dimensions, it were best if it could be gradually removed; but it is better, far better, that it should be taken out at once than that it should longer vitiate the social, political, and family relations of your country. I am speaking with no philanthropic views as regards the slave, but simply of the effect of slavery on the master. See for yourselves. Look around you and say whether this saddening, deadening influence has not all but destroyed the very framework of your society. I am speaking the farewell words of one who has shown his devotion to his country at the peril of his life and fortune, who in these words can have neither hope nor interest, save the good of those whom he addresses; and let me here repeat, with all the solemnity of an appeal to Heaven to bear me witness, that such are the views forced upon me by experience. Come, then, to the unconditional support of the Government. Take into your own hands your own institutions; remodel them according to the laws of nations and of God, and thus attain that great prosperity assured to you by geographical position, only a portion of which was heretofore yours.

BENJAMIN F. BUTLER.

To the address of the retiring commander-in-chief succeeded the following proclamation of Gen. Banks:

HEADQUARTERS, DEPARTMENT OF THE GULF,
NEW ORLEANS, *Dec.* 16, 1862.

In obedience to orders from the President of the United States, I assume command of the Department of the Gulf, to which is added, by his special order, the State of Texas.

The duty with which I am charged requires me to assist in the restoration of the Government of the United States. It is my desire to secure to the people of every class all the privileges of possession and enjoyment consistent with public safety, or which it is possible for a beneficent and just government to confer.

In execution of the high trust with which I am charged, I rely upon the coöperation and counsel of all loyal and well-disposed people, and upon the manifest interest of those dependent upon the pursuits of peace, as well as upon the support of the naval and land forces.

My instructions require me to treat as enemies those

who are enemies, but I shall gladly treat as friends those who are friends. No restrictions will be placed upon the freedom of individuals which is not imperatively demanded by considerations of public safety; but, while their claims will be liberally considered, it is due also to them to state that all the rights of the Government will be unflinchingly maintained. Respectful consideration and prompt reparation will be accorded to all persons who are wronged in body or estate by those under my command.

The Government does not profit by the prolongation of the civil contest, or private or public sufferings which attend it. Its fruits are not equally distributed. In disloyal States desolation has its empire, both on sea and on land. In the North the war is an abiding sorrow, but not yet a calamity. Its cities and towns are increasing in population, wealth, and power. Refugees from the South alone compensate in great part for the terrible decimations of battle.

The people of this department who are disposed to stake their fortunes and lives upon resistance to the Government, may wisely reflect upon the immutable conditions which surround them. The valley of the Mississippi is the chosen seat of population, product, and power on this continent. In a few years twenty-five millions of people, unsurpassed in material resources, and capacity for war, will swarm upon its fertile rivers. Those who assume to set conditions upon their exodus to the Gulf count upon power not given to man. The country washed by the waters of the Ohio, Missouri, and Mississippi can never be permanently severed. If one generation basely barters away its rights, immortal honors will rest upon another that reclaims them.

Let it never be said either that the East and the West may be separated. Thirty days' distance from the markets of Europe may satisfy the wants of Louisiana and Arkansas, but it will not answer the demands of Illinois and Ohio. The valley of the Mississippi will have its deltas upon the Atlantic. The physical force of the West will debouch upon its shores with power as resistless as the torrents of its giant river.

This country cannot be permanently divided. Ceaseless wars may drain its blood and treasure; domestic tyrants or foreign foes may grasp the sceptre of its power; but its destiny will remain unchanged. It will still be united. God has ordained it. What avails, then, the destruction of the best Government ever devised by man, and the self-adjusting, self-correcting Constitution of the United States?

People of the Southwest, why not accept the conditions imposed by the imperious necessities of geographical configuration and commercial supremacy, and reëstablish your ancient prosperity and renown? Why not become founders of States, which, as entrepots and depots of your own central and upper valleys, may stand in affluence of their resources without a superior, and in the privileges of the people without a peer among the nations of the earth?

N. P. BANKS,
Major-General Commanding.

The commencement of Gen. Banks's administration was marked by a leniency which seemed to indicate that the severity Gen. Butler had thought it necessary to exercise was either distasteful to the new commander or contrary to the policy of the Government, and among other conciliatory measures adopted was one releasing a number of political prisoners. But a portion of the people abused his clemency by various demonstrations, which brought out the following significant warning:

HEADQUARTERS, DEPARTMENT OF THE GULF,
NEW ORLEANS, *Dec.* 21, 1862.

Information has been received at these headquarters that publications, injurious to the character of soldiers of the United States, are circulated in the streets, and that anonymous and threatening letters are sent to officers connected with the public service. Such practices are indecent, offensive, and criminal, and must be suppressed. The troops of this department are instructed to observe a respectful deportment to all persons, and the same deference will be exacted from all persons in their favor. Any attempt on the part of any person whatever by offensive personal conduct to excite passion, or which tends to personal altercation or controversy and the disturbance of the public peace, will be punished with the sharpest severity known to the military laws. The Commanding General requests that any violation of this order may be reported to these headquarters or to the Provost Marshal General. By command of Maj.-Gen. BANKS.

That this did not immediately produce the effect intended was shown by the riotous conduct of several citizens, who, on Christmas Day, cheered in the public streets for President Davis, and used threatening language toward the military authorities. Prompt measures were taken to prevent the repetition of such acts, and the close of the year found the city excited and exhilarated at having escaped from the iron rule of Gen. Butler, and apparently confident of its ability to disconcert a commander in every respect competent to rule with harshness, should his moderation be despised. The population of New Orleans in 1860 was 168,675.

NEW YORK, the most populous State in the Union, increased in population 783,331 during the ten years preceding 1860. The largest percentage of this increase has been in the cities of the State, which was 58.39 per cent. The additional details of the census of 1860, which were made up in 1862, relative to New York, will be found under UNITED STATES, to which the reader is referred.

The political aspect of the State of New York underwent a remarkable change during the year 1862. This was not apparent at the spring elections of the towns and counties, when the local officers were chosen of the same political character as at the presidential election in 1860. As the year progressed, however, it became apparent that the popular opinion was undergoing a change, and this became more manifest when the general war policy of the Federal Adminstration assumed a new phase. The Administration party went into the canvass with the most radical men in nomination. Gen. James S. Wadsworth, as candidate for governor, represented the most extreme views of the republicans. Horatio Seymour, once before governor, was again placed in nomination as the democratic candidate, together with members for the 38th Congress. The election, after a very exciting canvass, resulted in a complete change of parties in the State. The Legislature had passed the bill districting the State for the choice of members of Congress under the census of 1860. This State had forty representatives under the census of 1830, thirty-four under that of 1840, thirty-three under that of 1850, and now thirty-one under that of 1860. She will of course have but thirty-three electors of President in the next three presidential elections.

New York has thus lost three members in 20 years. The rule was established, in 1850, of limiting the number of representatives in Congress to 233.

The great mass of the citizens of the State were divided into only two political parties, the democratic and the republican. A small number of voters however associated themselves in a third party, which, in the election, coöperated with the democratic party. Their views were comprised in the phrase "The Constitution, the Union, and the enforcement of the laws." They had been the most active members of what had been formerly called the "American party." These voters held a convention at Troy, and nominated Horatio Seymour for governor, and adjourned.

A few days afterward the convention representing the democratic voters assembled in Albany, and nominated the following candidates for State officers:

For Governor—Horatio Seymour.
For Lieutenant Governor—David R. Floyd Jones.
For Canal Commissioner—W. J. Skinner.
For Inspector of State Prisons—Gaylord J. Clark.
For Clerk of Court of Appeals—Frederick A. Tallmadge.

The views of this convention on national affairs were unanimously expressed in the following resolutions:

Resolved, That the democracy of New York, waiving the expression of their views upon questions not rendered imperative by the imperilled condition of their country, hereby declare—

First. That they will continue to render the Government their sincere and united support in the use of all legitimate means to suppress the rebellion and restore the Union as it was and maintain the Constitution as it is—believing that that sacred instrument, founded in wisdom by our fathers, clothes the constituted authorities with full power to accomplish such purpose.

Second. That by the following resolution, unanimously passed by Congress in July, 1861, the Government was pledged to the policy inculcated therein, and which cannot be departed from without violation of public faith, viz:

Resolved, That the present deplorable civil war has been forced upon the country by the disunionists of the Southern States, now in arms against the Constitutional Government, and in arms around the capital; that in this national emergency Congress, banishing all feelings of mere passion or resentment, will recollect only its duty to the whole country; that this war is not waged, on their part, in any spirit of oppression, or for any purpose of conquest or subjugation, or purpose of overthrowing or interfering with the rights or established institutions of those States, but to defend and maintain the supremacy of the Constitution and to preserve the Union, with all the dignity, equality, and rights of the several States unimpaired; and that as soon as these objects are accomplished the war ought to cease.

Third. That we, having confidence in the loyalty of citizens of New York, reiterate the sentiments heretofore expressed by the democratic party—that the illegal and unconstitutional arrests and imprisonment of citizens of this State are without the justification of necessity, and we denounce such arrests as a usurpation and a crime, and that the freedom of the press, equally protected by the Constitution, ought to be maintained.

Fourth. That we are willing to act in the coming election with any class of loyal citizens who agree with us in the principles herein expressed; that we hereby invite the coöperation of all citizens in giving the most emphatic expression to these principles by supporting the ticket nominated by the convention.

A convention representing the views of the republican party assembled at Syracuse on the 24th of September, and nominated the following candidates for State officers:

For Governor—James S. Wadsworth.
For Lieutenant Governor—Lyman Tremain.
For Canal Commissioner—Oliver Ladue.
For Prison Inspector—Andreas Willmann.
For Clerk of Appeals—Charles Hughes.

The views of the convention on national affairs were expressed by the following resolutions:

1. *Resolved*, That in the midst of the gigantic and perilous civil war which the slaveholders of the South have forced upon the nation all minor party distinctions are to be forgotten, and all minor political questions to be suspended until the rebellion is entirely crushed.

2. *Resolved*, That we commend the candidates nominated by this convention to the cordial, undivided support of all friends of the Union as men of incorruptible integrity, of the highest capacity, and approved and devoted patriotism.

3. *Resolved*, That we urge upon the National Government the prosecution of the war with the utmost vigor and energy in the field, and with the utmost unity and decision in the Cabinet, and by all the means that the God of Battles has placed in its power, bearing ever in mind that a revolt so wanton, so malignant, so pernicious is only to be overcome by the strong arm of force.

4. *Resolved*, That we hail with the profoundest satisfaction the recent proclamation of the President of the United States, enforcing the laws of the land against the property of traitors in arms, and declaring his intention to emancipate the slaves of all rebels who do not return to their allegiance by the 1st of January, 1863.

5. *Resolved*, That our heartfelt gratitude is due to the gallant officers and men of our loyal armies and fleets, wherever they may be; that we offer to them our highest admiration for their heroic courage, patient endurance, and indomitable zeal, and we promise them our earnest and unceasing efforts to relieve their distresses, strengthen their arms, fortify their hearts, and provide for the future well-being of themselves and their families.

6. *Resolved*, That the promptitude and enthusiasm with which the people of the State of Pennsylvania and Ohio sent one hundred thousand armed men each to repel the rebel invader from the soil of freedom entitle them to the thanks of the loyal men of every State, while it shows the spirit in which the loyal men of every State are prepared to meet the foe, come when he may.

7. *Resolved*, That measures should be taken immediately by the proper authorities of the State for enrolling, arming, and disciplining its militia.

8. *Resolved*, That our young and noble free republic should be proud of the distinction that her only enemies are the savages of the West, and the rebels of the South, their sympathizers and supporters at the North, and the despots of Europe.

In addition to the State officers thirty-one members of Congress were to be chosen, and members of the State Legislature, being one half the Senate, and all the members of the Assembly.

The election was held on the first Tuesday in November, being the 4th, and the results were as follows:

Office.	Elected.	Votes.	Defeated.	Votes.	Total votes.
Governor	*Horatio Seymour	306,649	James S. Wadsworth	295,897	603,038
Lieutenant Governor	*D. R. F. Jones	306,705	L. Tremain	296,593	603,405
Canal Commissioner	*W. J. Skinner	307,316	Oliver Ladue	296,101	603,656
Prison Inspector	*Gaylord J. Clark	306,422	Andreas Willmann	296,945	603,655
Clerk Court of Appeals	*F. A. Tallmadge	305,467	Charles Hughes	296,798	602,505

31st "	R. B. Fenton	11,950	S. D. Caldwell	6,982	18,940

* On the democratic ticket.

The first fourteen of the Congressional districts gave majorities for Seymour, and the other 17 districts gave majorities for Wadsworth. The vote in these districts, as compared with the vote of 1860, was as follows:

	1860.		1862.	
	Repub.	Dem.	Wads.	Seym.
Fourteen districts	110,249	149,796	86,459	141,041
Seventeen districts	252,397	162,714	209,438	165,608
Total	362,646	312,510	295,897	306,649

In the interior of the State there was an actual gain of 2,894 on the side of the democrats, while there was a decline of 40,665 in the number of votes cast. The votes for members of the Legislature divided that body as follows:

	Republican.	Democrat.
Senate	23	9
House	64	64

The revenue of the State of New York for the year 1862 was greatly improved, through the increased receipts from the canals, derived as well from enlarged tonnage as from higher tolls, which in gross reached the large sum of $5,180,000, of which $4,854,989.67 were net receipts, an excess of $946,254 over the previous year. The whole receipts of the treasury were as follows:

Receipts from all sources October 1, 1861, to September 30, 1862	$20,840,918 20
Payments same period	18,165,233 86
Excess receipts	$2,675,684 34
Balance October 1, 1861	3,074,941 85
In treasury October, 1862	5,750,626 19

The operation of the canal department was as follows:

Receipts.		Expenses.	
On hand October 1, 1861	$2,604,621 25	Stock paid	$2,120,000 00
Canal tolls for fiscal year	4,854,989 67	Interest of debt	1,429,859 36
Proceeds from taxes for fiscal year	2,769,623 00	Repairs, &c., on canals	1,758,621 33
Other sources	168,881 61	Miscellaneous objects	509,332 10
Total	$10,393,115 62	Total	$5,808,811 79
Balance on hand September 30, 1862			4,589,303 83

The sum of the principal and interest of the debt paid during the year, $3,549,857.36, was paid in specie, at considerably increased expense to the State, since none of its revenues were paid in coin, which was at a high premium. With the depreciation of the Federal paper, this charge is likely to prove onerous. The tolls and canal dues are payable in the bankable currency of the State, and the State deposits in banks are payable in the legal tender of the Government. The State honor and credit were held to require the payment of its debts in the currency, specie, in which they were contracted. When the Federal Government, therefore, imposed upon the State a depreciated currency for its revenues, it subjected it to a tax of over $1,000,000 to buy coin with which to pay interest. This was not the only mode, however, in which the Federal Government absorbed the means of the State. An act of

Congress exempts United States stocks from State taxation, and the New York banks held $125,000,000 of the various Federal stocks. Thus that large sum was withdrawn from the operation of State taxes, diminishing the State revenue nearly $600,000, in addition to the sums held by individuals. The commissioners of internal revenue also claimed that the stamps and other taxes were applicable to the transactions of the State treasury. The House of Representatives passed a bill to exempt State Governments from taxation. This was rejected in the Senate—thus intimating on the part of that body a purpose to absorb State revenues into the Federal treasury; since, the right to tax being admitted, there is no limit to the rate, which may comprise the whole.

The debt of the State, Oct. 1, 1862, was as follows:

Of canal debt	$23,981,610 25
Of general fund debt	6,505,654 37
Total State debt	$30,487,264 62

By abstaining from further borrowing, and by depositing the usual annual contributions to the credit of the sinking funds, the comptroller estimates that the above debt will be substantially extinguished within 12 years.

The canal debt at that time was held as follows:

On United States account	$22,528,782 89
On foreign account	1,452,827 36
Total canal debt	$23,981,610 25

The canal debt was nearly all held by the bank department, as security for bank circulation, as follows:

Statement of New York State Canal Stock, held by Banking and Insurance Corporations in the State of New York.

By whom held.	Amount.	Interest per annum.
Banks 5's	$5,200,106 13	$260,005 31
Do. 6's	11,094,656 00	665,679 36
Do. 7's	225,000 00	15,750 00
	$16,519,762 13	$941,434 67
Savings Banks 5's	$445,667 00	$22,283 35
Do. 6's	2,060,700 00	123,642 00
Do. 7's	104,000 00	7,280 00
Insurance Companies 5's	$152,400 00	$7,620 00
Do. 6's	220,000 00	13,200 00
Do. 7's	570,000 00	39,900 00
	$942,400 00	$60,720 00
	$20,072,529 13	$1,155,360 02

The State paying the interest on these stocks at a time when gold was at 30 per cent. prem. for the United States legal tender, raised the amount of interest to be paid to nearly $1,500,000. The operation of the banking law framed by Congress was intended to cause a substitution of United States bonds for the New York stocks thus held as security for circulation. The tax is imposed upon banks organized under the new law as well as upon the old banks, but not to so great an extent.

The banks of the State of New York underwent some change during 1862. Of the old banks 7 charters expired, as follows:

Banks.	Capital.	Authoriz. circula'n.	Circula'n Sept. 1862.
Bank of Orange County, Goshen.	$105,660	$178,000	$280,300
Bank of Rome, Rome	100,000	150,000	.....
Bank of Salina, Syracuse	150,000	175,000	.....
Essex County Bank, Keeseville	100,000	150,000	.....
Schenectady Bank	150,000	175,000	161,000
Steuben County Bank, Bath	150,000	175,000	22,000
Leather Manuf. Bank, N. Y. City	600,000	450,000	297,000

Of these, three—the Bank of Rome, Bank of Salina, and the Essex County Bank—ceased business, and are winding up their affairs. The four others, with six new associations, and six individual bankers, deposited securities and commenced business under the general law, raising the number of banks doing business in the State to 305. There are also 53 in process of liquidation at the close of the fiscal year.

There had been a substitution of United States stock for other securities during the year. The circulation in 1862 increased $9,541,625, as follows:

	New York City Banks.	Other banks.	Total circulation.
September, 1861	$8,540,119	$20,475,629	$28,015,748
September, 1862	9,710,016	27,847,357	37,557,373
Increase	$1,179,897	$7,371,728	$9,541,625

This large increase was compelled to some extent by the withdrawal of the metals from circulation, causing an urgent demand for small notes, which the banks alone could supply. This demand was the more urgent as the United States issued none under $5, and the larger the issues of those the more small notes were required to make change. Hence, notwithstanding the increased circulation, the redemptions were less, and also the number of notes returned upon the department.

The amount of Federal stocks held by the New York banks at the close of the year was as follows:

United States stocks	$31,631,708
Treasury Notes, 7.30's	25,383,505
Indebtedness certificates	14,941,679
Certificates bearing interest	37,047,370
Certificates payable in gold	6,774,612
Demand and Legal Tender Notes	20,189,098
Total of Banks	$135,968,044
Savings Banks funded	10,392,102
" " unfunded	7,626,428
Total	$153,986,574

The entire funded debt of the Government being at the same time $500,978,142. The New York banks held about 30 per cent. of it, or an amount double the sum of their aggregate capital, and were not in a position to make further advances to the Government.

The number of railroads in the State of New York, is 82; of these 16 made their annual reports for 1862 to the State engineer at Albany. The aggregate of the reports shows the following results:

Amount of capital stock authorized	$102,054,400
Amount of capital stock paid in	87,404,685
Amount of funded debt	69,067,983

Amount of floating debt	$1,670,270
Amount of funded and floating debt	70,738,254
Total cost of construction and equipment of roads	145,186,963
Total cost excluding city roads	136,559,727
Length of roads in miles	3,319
" " " laid	2,800
" " " in operation, &c., excluding city roads	2,700
Miles run by passenger trains	10,850,907
" " " " city	6,448,777
Total	17,299,684
Number of passengers of all classes carried in cars	59,690,601
Same, excluding city cars	12,870,455
Number of miles travelled by passengers, city roads not included	344,380,369
Miles run by freight trains	9,596,696
Number of tons carried	6,506,183
Total earnings	$29,507,180
Of city roads	2,344,051
Total payments, including dividends, amount to surplus funds, &c.	26,221,180
Of which city roads	2,431,007
Number of passengers killed	22
Of which on city roads	6
Number of passengers injured	45
Of which by city roads	21
Number of employés killed	51
Others than employés and passengers killed	80
" " " " injured	42
Total killed (city roads, 12)	153
" injured (city roads, 31)	115
Average cost per mile of road and equipment, excluding city roads	$50,396 04
Do. of single track	32,386 52

Of the 82 companies 26 are passenger roads employing horse power only. Seven of these, being Buffalo, Syracuse, Brooklyn, and Troy roads, are formed under the general law and are therefore not required to report to the State engineer. The business of the two Grand Trunk roads for the year was comparatively as follows:

	Erie Railroad.	Central Railroad.	Total.
Passengers	$1,200,451	$2,389,724	$3,590,175
Freights	7,065,363	6,607,330	13,672,693
Miscellaneous	134,521	359,772	494,293
Total 1862	$8,400,335	$9,356,827	$17,757,161
" 1861	6,214,181	7,309,042	13,523,223
Increase	$2,186,154	$2,047,785	$4,253,938

The gain on the Erie in freight is very large, and in both roads the aggregate for the year is 25 per cent. in excess of the previous year, showing not only the effect of the war in sending produce East, but also the large share which New York gets of the business.

A report of a Senate committee on the manufacture of salt, states that, allowing nothing for the use of the salt works, which are private property, nor for the lands on which the salt works stand, the wells, pump-houses, machinery, aqueducts, &c., all of which belong to the State, the cost of producing salt did not exceed 11½ cents per bushel for fine or boiled, and 5 cents per bushel for coarse or solar.

The amount of salt inspected was 5,315,694 bushels of fine, and 1,884,697 bushels of coarse, making 7,200,391 bushels, producing, at 19 cents per bushel, $1,368,074.29, the cost of which was, for 5,315,694 bushels fine at 11½ cents, $606,304.81; for 1,884,697 bushels coarse at 5 cents, $94,234.70. Total, $700,539. 51. Showing that it sold for $667,534.78 more than it cost to produce it, leaving out of the estimate all compensation for the use of the property, public or private, which contributed to its production.

The State of New York continued its gigantic exertions in support of the Federal Government and appropriated men and money with a lavish hand. It sent 120 regiments into the field in 1862, when the President made two successive calls, one for 300,000 men for the war, and the other for 300,000 men for nine months. New York offered and paid a bounty of $50 per head to each volunteer, and the disbursements for 73,000 men amounted to $3,650,000, carrying the State war expenditure to nearly $10,000,000, making with town and county subscriptions fully $20,000,000, paid by the people of the State of New York for bounties and for the support of the families of the troops. The entire number of regiments sent to the field was as follows:

23 infantry regiments, 3 months	15,838	
38 " " 2 years	30,131	
123 " " 3 years	112,411	
Recruits for old regiments	29,690	188,070
11 cavalry regiments, 1 battalion		9,642
Artillery: 5 regiments, 6 battalions, 13 batteries		9,679
Engineers: 1 regiment		855
Ricketts' battalion		163
Total		208,409
Recruits in the State		10,650
Total		219,059

The recruits made for the regular army and for the regiments of other States may raise these figures to 225,000 men. Of the regiments raised, about 70 had their headquarters in New York City.

The Legislature passed a militia law, to enrol the citizens of the State, under State officers in accordance with the Federal Constitution. So far as it relates to the enrolment of persons subject to military duty, it differs but little from the old law. All persons in the army or navy or volunteer force of the United States, ministers of the Gospel, public officers and their official employés, Shakers and Quakers, professors, teachers and pupils in all institutions of education, firemen, and all persons who are by laws of the State or United States exempt from military duty, are exempted by this bill. So are all idiots, lunatics, paupers, habitual drunkards and persons convicted of infamous crimes. All other white male citizens shall be enrolled at least once in two years, by the commandant of the company district. Such enrolment shall be divided into two reserves. The first reserve comprises all white males between the ages of 18 and 30 years. The second reserve all between the ages of 30 and 45. This force, as enrolled, constitutes the reserve militia of the State.

There must be an annual inspection; fine for absence, $1. The bill provides for the organization of a national guard. This includes the present uniformed militia of the State, and all volunteer companies that shall hereafter be organized in the several company districts of the

State. It consists of eight divisions, 32 brigades, and 128 regiments and battalions—the latter divisions to conform as nearly as possible to the Assembly districts; each company not less than 32, nor more than 100 men. The National Guard is to be uniformed at the expense of the State. All major-generals and the commissary-general are nominated by the governor, and confirmed by the Senate. Brigadier-generals and brigade inspectors are to be elected by the votes of the field officers of each brigade; field officers of each regiment by the votes of the commissioned line officers of the regiment; and captains and lieutenants by the votes of the company. No commissioned officer can be removed from office but by the Senate, on the recommendation of the governor, by a courtmartial, or a retiring or examining board. The supervisors of each county in which a company of the National Guard shall be fully organized, are required to construct or rent a suitable armory for a drillroom, and place of deposit of the arms, uniforms, equipments and camp equipage of said company or companies, the expense of which is made a county charge. If the supervisors of the county neglect to do this, the commandant of the regiment is authorized to procure said armory, the annual rent of which shall not exceed $250 for each company, which rent shall be a county charge and paid by the supervisors. There will be one annual brigade parade, and eleven drills in each year, and a monthly parade of each company. Second enlistment 7 years. The members are exempt from jury duty, highway taxes, &c. Camps of instruction are established in each division. Privates get $1 each day of service. The power of the commander-in-chief is very ample; and although the selection of none of the officers except major-generals devolves upon him, yet the provisions of the bill give him almost absolute power as to their subsequent disposition. In May, under the call of the President for 50,000 troops, new regiments were organized and recruiting offices opened to fill up the old regiments. The enrolment that took place consequent upon the order from Washington for a draft of men was completed in Sept., and the whole number between 18 and 45 was as follows:

Places.	Number enrolled.	Exempt.	Liable to duty.
New York	207,186	41,236	165,900
Brooklyn	66,841	13,967	52,874
Rest of State	629,774	83,945	545,825
Total	903,801	139,198	764,603

The charter election for the city of New York was held Dec. 2, and the results were nearly the same as to the position of parties as at the November election. The number of votes polled was 64,280, or 12,551 less than in November. The results were as follows by wards for corporation counsel and comptroller:

Wards.	Comptroller.		Corporation Counsel.	
	Haws, Republican.	Brennan, Democratic Union.	Bradford, Republican.	Devlin, Democratic Union.
1st Ward	328	1,216	195	906
2d "	182	201	150	217
3d "	213	288	170	281
4th "	387	1,390	161	1,525

Total disbursements	$229,195	$535,282	$344,666	$344,419	$71,543

The length includes double track. The 2d avenue and 6th avenue began running in 1853. The 3d and 8th avenues in 1854, and the 9th in 1858. The number of passengers carried annually on each and all other routes was as follows:

YEARS.	Second Avenue.	Third Avenue.	Sixth Avenue.	Eighth Avenue.	Ninth Avenue.	Total.
1853	354,000	....	5,120,500	....	....	5,474,500
1854	2,500,000	....	5,195,581	....	....	7,695,581
1855	3,547,660	5,770,078	4,237,583	4,311,676	....	17,866,997
1856	3,367,371	7,131,881	4,757,108	6,097,299	....	21,353,659
1857	3,936,008	8,105,515	5,240,978	6,829,452	....	24,111,983
1858	4,504,645	7,945,462	5,612,357	6,768,203	....	24,730,667
1859	5,182,011	9,974,101	6,479,127	7,589,997	170,440	29,395,678
1860	5,196,602	12,109,417	7,398,908	7,775,040	1,984,341	34,464,398
1861	4,640,751	11,824,928	6,890,801	7,413,905	1,906,086	32,676,471
1862	4,711,119	11,432,892	6,955,647	7,399,696	1,789,963	32,289,317

These figures do not embrace the Harlem or 4th avenue railroad, nor include the omnibus travel. The number carried in each year increased annually until 1860, when it culminated. The war seems to have produced a diminution of the number carried. The population of the city increased during the ten years ending with 1860, nearly 300,000—but a large proportion of the passengers carried were strangers in the city. The number for 1860 exceeded by a few millions the whole population of the Union.

The colleges and academies of the State showed the usual degree of prosperity in the year 1862. There were 17 colleges in the State in operation, and three more in progress for females only. There are three others in course of organization. There are also 10 theological seminaries. Three are Roman Catholic. The number of medical schools is eleven—of law schools 5 are in operation, including the law school of Columbia College. Three colleges have first graduate scientific courses. There is also an agricultural college at Ovid, and the Polytechnic Institute at Troy.

The report of the regents of the university give the number of incorporated academies at 226; of them 220 made reports. The capital and investment were $2,929,083, and debt 323,-681. The cash receipts were $646,623. Teachers' salaries $436,920—number of teachers, 1,043. The number of volumes in the libraries, 129,275. The number of students in attendance was 35,748, against 37,929 in the previous year. The existence of the war seemed to have an influence in diminishing the attendance.

NORTH CAROLINA, one of the original thirteen States of the Union, increased in population 23,583 during the ten years terminating in June, 1860. The further details furnished by the census of 1860 respecting North Carolina will be found under UNITED STATES, to which the reader is referred.

At the approach of Gen. Burnside's command upon the coast of North Corolina much confidence was felt on the part of the authorities that they would be able to make a successful resistance. A few days served to dispel these delusions, and change the aspect of their situation. The entire coast was exposed to the invasion of the Federal troops. This change quenched a spirit of dissatisfaction with the Confederate Government, which was beginning to prevail under grievances that the State had suffered. Efforts, however, were now made to prevent the advance of the Federal troops into the interior, and to make as successful opposition to their movements as might be possible.

On the 13th of February the adjutant-general of the State, by order of the governor, issued a call for five regiments of volunteers for the war to make up the quota of the State in the Confederate army. A bounty of fifteen dollars was offered to each volunteer—to be paid by the State, and fifty dollars by the Confederate States.

When the subject of conscription was under consideration in the Confederate Congress, the people and the press of North Carolina generally took most decided grounds against it, as looking to a military despotism, as subverting the constitution and as destructive of personal liberty. It was said, "a panic prevails in the country, and those in authority have but to ask for power on the ground of military necessity, and the oldest and most sacred safeguards of freedom are yielded without a question." At the same time the Confederate Government sent an agent into the State to borrow, purchase, or, if necessary, impress all the arms in the hands of the citizens. This whole action was looked upon as, on the one hand, calling into the field, as hireling soldiers, all the fighting men between eighteen and thirty-five, and, on the other hand, disarming the remainder of the population. The governor, on the 15th of April, issued a proclamation to the citizens, stating that they would be protected in preserving from seizure their private arms as a means of self-defence, but requesting them to give information of all public arms.

By the action of the Legislature in encouraging private enterprise, an establishment was put in operation at Raleigh at the beginning of the year, which manufactured about two thousand pounds of powder daily. It bore a satisfactory trial in comparison with the Dupont powder.

The State convention, called into existence in 1861, for the purpose of passing the ordinance of secession, assembled at an adjourned session on the 21st of April. It was thought that such circumstances had occurred as to dispose many of its members to repeal that ordinance if it had been practicable.

The election for State officers in North Carolina takes place on the second Thursday in August. Some months before this election the person who should be the next governor of the State became a subject of active discussion. One party desired a man who was not a

proscriptive secessionist, and the other desired one who was radical and thorough on secession, and who would sustain the Confederate Government, even at the expense of State rights. Both parties sustained the war. The candidates nominated for the office were William Johnson, of Mecklenberg county, and Zebulon B. Vance, of Buncombe county. The grounds of opposition to Mr. Johnson were thus set forth:

Who is William Johnson of Mecklenberg, the democratic nominee for the high and responsible position of governor, is a question which is daily asked. Mr. Johnson is nominally a resident of Charlotte, Mecklenberg county, where he owns a considerable property. He is president of the Charlotte and South Carolina railroad, which runs from Charlotte to Columbia, the capital of South Carolina, where the business office of the road is located, and where Mr. Johnson resides, in which city he has made large investments and becomes thoroughly identified with the interests of South Carolina, and more especially is he identified with her political heresy of secession, in which he is most completely indoctrinated, and is what might be called a forward student in this new school of political science. He is a lawyer by profession, but has never risen above the sphere of a county practitioner in reputation. He has been a member of the Legislature, is a member of the sovereign convention of this State, and was among the first to vote in favor of secession.

Col. Vance, on the other hand, was opposed as "failing to enjoy the confidence of the friends of the Confederacy," and was thus spoken of:

Unfortunately, there appears to exist a belief (doubtless obtained from the course of the "Standard") among the troops that the election of Vance will bring peace, which will give him (Vance) all the votes of those who have been pressed into the ranks, which, including the votes from the opposition regiments, made up wholly as they are from the opposite party, may elect Vance.

The friends of Mr. Vance thus described their position: "We belong to the people's war party. Vance is the leader of it. It is for the war, and, at the same time, for liberty, conservatism, and reform at home."

The following is an appeal made by the friends of Mr. Johnson to the electors, urging them to vote against Col. Vance:

A governor and Legislature of North Carolina are to be elected Thursday, August 7. It will be the most important election held in the State. The duration of the war, and the faith of the South, hang upon the results. Whether Col. Vance or Mr. Johnson, as individuals, shall be elected, is a matter of small importance; but it is of great importance for the South to triumph in this war, and for North Carolina to continue true to the cause to the end of it, without manifesting the smallest signs of backing out and deserting the sisterhood of the Confederate States, after all their united sacrifices, when success is almost ready to crush the common foe, rendering independence and a nationality won by stout arms and brave hearts certain. Mr. Johnson, emphatically, is the Confederate or Southern candidate—the issue having been placed upon that ground by the press in the interest of Col. Vance, and likewise by political meetings held in his behalf and stump orators that have spouted around during the canvass. That is the issue which has been placed before the people of the State by the advocates of Col. Vance. And the question which the people will have to decide in this election, as thus presented, is, shall the State recede from the position which she assumed to her Southern sisterhood when she withdrew from the United States, and again join the Yankee nation? The election of Col. Vance would indicate the popular will of the people of North Carolina to reenter the old Union, and we desire that they will vote upon the question understandingly.

Then, of what avail will be the sacrifices which the people have made in prosecuting the war, of life and treasure? What will be thought of the State by the world? Can the people pay the State's share of the immense Yankee debt, amounting to more than all the property in the State would sell for? How could they wipe out the disgrace which such an event would entail upon the State? Have the people pondered the demoralizing effect which it would have upon our army. Consider well these things and vote accordingly.

The result of the election was the choice of Col. Vance as governor by a large majority. In forty-three of eighty-nine counties his majority exceeded 19,000. A majority of the members elected to the Legislature were of the same party with the governor.

On the 17th of November the Legislature assembled at Raleigh, and the governor delivered his Message. He urged a vigorous prosecution of the war, but complained of the bad faith of the Confederate Government in sending agents into the State to obtain clothing and supplies, after agreeing not to do so, if the State undertook to clothe her own troops. He condemned the conscription law; stated that the soldiers were suffering greatly for want of shoes and clothing. (*See* ARMY, CONFEDERATE). The debt of the State at the beginning of the year was $2,098,361. Flour and corn commanded such prices as to be used only by wealthy persons.

The Legislature adopted the following resolutions on the 27th of November:

Resolved, That the Confederate States have the means and the will to sustain and perpetuate the Government they have established, and that to that end North Carolina is determined to contribute all her power and resources.

Resolved, That the separation between the Confederate States and the United States is final, and that the people of North Carolina will never consent to a reunion at any time or upon any terms.

Resolved, That we have full confidence in the ability and patriotism of his Excellency President Davis, and that his administration is entitled to the cordial support of all patriotic citizens.

Resolved, That we heartily approve of the policy for the conduct of the war set forth by his Excellency Gov. Vance to the General Assembly, and that he ought to be unanimously supported in the manly and patriotic stand he has taken for our independence.

The number of men obtained in the State by the conscription law was stated to exceed forty thousand, three fourths of whom were reported by the examining physicians as unfit for military duty. The destitution of the people in the interior of the State was very great, especially of salt, shoes, clothing, and corn. The exportation of the former from the State was forbidden by the governor. The removal of the conscripts did not leave men enough in some parts to gather a crop. In the seven days' battles before Richmond, North Carolina had in the field forty-two regiments of infantry; one of cavalry, and one company of artillery; the

number of wounded among them was 3,468, who were taken to the hospitals, without including several hundred who went home. For military affairs in North Carolina, (*see* ARMY OPERATIONS.)

On the 15th of May, Edward Stanley, formerly a distinguished citizen of North Carolina, arrived at New York from California, for the purpose of entering upon the office of temporary governor of North Carolina, which had been tendered to him by President Lincoln. The part of Carolina placed under his jurisdiction was that in which the Federal arms held control. The instructions of the Federal Government to Gov. Stanley were similar to those given to Gov. Andrew Johnson in Tennessee, and were as follows:

WAR DEPARTMENT, WASHINGTON, D. C., *May* 2, 1862.

Hon. Edward Stanley, Military Governor of North Carolina:

SIR: The commission you have received expresses on its face the nature and extent of the duties and power devolved on you by the appointment of military governor of North Carolina. Instructions have been given to Maj.-Gen. Burnside to aid you in the performance of your duties and the exercise of your authority. He has been instructed to detail an adequate military force for the special purpose of a governor's guard, and to act under your direction. It is obvious to you that the great purpose of your appointment is to reëstablish the authority of the Federal Government in the State of North Carolina, and to provide the means of maintaining peace and security to the loyal inhabitants of that State until they shall be able to establish a civil government. Upon your wisdom and energetic action much will depend in accomplishing that result. It is not deemed necessary to give any specific instructions, but rather to confide in your sound discretion to adopt such measures as circumstances may demand. You may rely upon the perfect confidence and full support of this department in the performance of your duties.

With great respect, I am your obedient servant,
EDWIN M. STANTON, Secretary of War.

On the 26th of May he arrived at Newbern, and entered upon his duties. On the 17th of June he made an address to the people at Washington, N. C. Permission had been given to the citizens to enter the Federal lines for the purpose of hearing this address, and they were present from seventeen counties. The speech was a review of the past, an examination of present affairs, and an urgent appeal to the citizens to resume their allegiance to the Federal Government. The result showed that so long as the Confederate Government retained its organization and power, the citizens could not be expected to turn against it; especially as the fortune of war might soon place them under its control again.

At all the military posts of the Federal Government in the State, the slaves from the interior who had run away collected. This was especially the case at Newbern, where five thousand had come in. When Gov. Stanley arrived there he found schools established for their instruction, but expressed the opinion that it was injudicious, as contrary to the laws of the State, and if upheld by him it must destroy his influence with the people. The schools were temporarily suspended. The course pursued by the governor was designed to restore the confidence and good will of the people, which had been lost by the belief that it was the purpose of the Federal Administration to destroy their institutions and subjugate the people. A conference was proposed by Gov. Stanley to Gov. Vance, for the purpose of restoring peace in the State. The latter refused to meet, but referred the former to the Confederate Government at Richmond. Apparently little has been gained for the Federal cause thus far by the military organization on the borders of the State.

O

OBITUARIES, AMERICAN.—*Jan.* 8.—WATERMAN, THOMAS G., died in Binghamton, N. Y., in the 74th year of his age. He graduated at Yale College in 1806, studied law, and settled in Binghamton in 1812. From 1826 to 1832 he was in the State Legislature either as assemblyman or senator, and during that time assisted in revising the statutes of the State. He was judge of the court of common pleas in his own county, and a brigadier-general of the State militia by appointment of the governor. In 1828 he published a volume on the "Powers and Duties of Justices of the Peace."

Jan. 10.—COLT, Col. SAMUEL. (*See* COLT.)

Jan. 14.—INGERSOLL, CHARLES JARED. (*See* INGERSOLL.)

Jan. 18.—TYLER, JOHN. (*See* TYLER.)

Jan. 25.—DWIGHT, Rev. HARRISON GRAY OTIS, D.D., a missionary of the American Board of Commissioners of Foreign Missions, killed by a railroad accident on the Northern Vermont railroad. He was born in Conway, Mass., Nov. 22, 1803, graduated at Harvard University in 1825, and completed his theological course at Andover in 1828. In January, 1830, he sailed for the East, and after spending two years in exploring the field, settled as a missionary at Constantinople in 1832, and labored there nearly thirty years, preaching, superintending schools, and editing a religious paper. He had published during his long missionary career several works, one of them, "Christianity brought Home from the East," having met with a large sale.

Jan. 27.—PEET, EDWARD, professor in the New York Institution for the Deaf and Dumb, died in New York. He was born in Hartford, Conn., May 28, 1826, and graduated at the University of New York in 1847. The winter after his graduation he visited France, and upon his return studied law for one year in the office of James W. Gerard, Esq. In the fall of

1849 he was chosen professor in the New York Institution for the Deaf and Dumb; and soon after commenced his duties. Here he entered the Union Theological Seminary, and upon the completion of his course received the usual degrees, though he never preached. He pubblished several text books for the use of deaf mutes.

Jan. 29.—Eliot, Hon. Samuel Atkins, died in Cambridge, Mass. He was born in Boston, March 5, 1798, graduated at Harvard College in 1817; served in the Legislature and State Senate, and was mayor of Boston from 1837 to 1839. He was treasurer of Harvard College, and connected with the corporation from 1842 to 1853. He was also a representative in Congress from 1850–'51, and an officer of several literary and scientific associations.

Feb. 1.—Bongars, Gen. Theodore Xavier Thomas, Count de, died in New York, aged about 70 years. He was formerly an officer of high rank in the French army, and during the Mexican war commanded a regiment of New York volunteers. He belonged to a noble family in his native country, and was esteemed as a man of uncommon ability.

Feb. 3.—Larned, William Augustus, Professor of Rhetoric and English Literature in Yale College, died of apoplexy in New Haven, Conn. He was born in Thompson, Conn., June 23, 1806, graduated at Yale College in 1826, and spent the two following years in teaching at Salisbury, N. C. From 1828 to 1831 he was a tutor in Yale College, and at the close of this period devoted himself to the study of theology. In 1834 he was ordained pastor of the Congregational church in Millbury, Mass., but his health soon after failing, he resigned, and accepted proposals from the Rev. Dr. Beman and Rev. Mr. Kirk to engage with them in the instruction of a theological school in Troy, N. Y. In 1839 he was appointed professor of rhetoric and English literature in Yale College, as successor to Prof. C. A. Goodrich, and until his death discharged the duties of his office with faithfulness and success. He was a constant contributor to "The New Englander," his articles embracing a wide range of topics, and in 1854 and 1855 acted as its editor. In the later years of his life he prepared and printed, but did not publish, a valuable edition of the "Oration of Demosthenes on the Crown," with philological and rhetorical notes.

Feb. 11.—Bell, Luther V., M.D., died in camp near Budd's Ferry, Md. He was born in Francestown, N. H., in 1806, and was a son of the late Gov. Samuel Bell. He graduated with distinction from Bowdoin College before completing his 16th year, and while yet under 20, received his degree of M.D. from the Hanover Medical School, and commenced the practice of his profession in New York, but at the earnest solicitation of his friends returned to New Hampshire, and established himself in his native town, where he soon achieved professional distinction. His writings on medical subjects, and especially on the treatment of the insane, attracted considerable attention, and his exertions in 1834 and 1835 ultimately led to the establishment of an asylum in his native State. In the mean time he was elected, without his knowledge, to the superintendency of the McLean Insane Asylum at Somerville, Mass., in which position he maintained a high reputation for nearly 20 years. He was a member of the Executive Council of Massachusetts, and candidate for governor in 1850. In 1845, the trustees of the Butler Hospital, Providence, R. I., procured his services to visit Europe and ascertain what improvements could be made in the plan of their new hospital. This mission was accomplished to their full satisfaction. At the time of his death he was medical director of Hooker's division of the army of the Potomac. Dr. Bell was the author of several able professional works, and some political essays. He also published a narrative of a careful and protracted investigation which he made into the alleged spiritual manifestations, which at the time excited much attention.

Feb. 16.—Pennington, Hon. William, died at Newark, New Jersey, in the 65th year of his age. He was a native of the State; began life as a lawyer, and for some time filled the office of chancellor of the State. In 1837 he was appointed governor of the State, and served seven terms. In 1858 he represented the fifth New Jersey district in Congress, and after a severe contest was chosen Speaker. In 1860 he was again nominated for Congress, but was defeated.

Feb. 19.—White, Hon. Joel W., died at his residence in New York, aged 64. He was born in Connecticut, and was connected with the banking institutions of that State, either as cashier or president, for more than 40 years. He was for many years president of the Norwich and Worcester railroad; was appointed consul at Liverpool in 1843, and in 1857 accepted the position of consul at Lyons, France.

Feb. 20.—Appleton, Hon. William, died in Boston, Mass. He was born in 1786; was a prominent merchant in Boston, and served several terms in Congress.

Feb. 26.—Felton, Cornelius Conway, LL.D. (*See* Felton.)

March 2.—Lander, Brig.-Gen. Frederick Wm. (*See* Lander.)

March 5.—Smith, Rev. David, D.D., died in New Haven, Conn. He was born in Bozrah, New London county, Conn., Dec. 13, 1767; graduated at Yale College in 1795; studied theology, and in 1799 was ordained pastor of the Congregational church in Durham, Conn., succeeding the Rev. Elizur Goodrich, D.D. In 1821 he was elected one of the fellows of Yale College, and held this position forty years, when he tendered his resignation.

March 7.—McCulloch, Gen. B. (*See* McCulloch.)

March 8.—Boone, Enoch, died in Meade

county, Ky., aged 84 years. He was a son of Daniel Boone, and the first white male child born in Kentucky.

March 9.—De Wolf, John, died in Bristol, R. I., aged 76 years. From 1817 to 1834 he was professor of chemistry in Brown University, Providence, R. I.

March 15.—Hatch, Daniel Gilman, died in Exeter, N. H. He was born in that place, Aug. 3, 1798, graduated at Harvard College in 1817, and for nearly 20 years devoted himself to the profession of teaching in Virginia. He was a member of the Virginia Convention in 1829. In 1837 he removed to Georgetown, Ky., and turned his attention to commercial pursuits, though his interest in the cause of education continued, and until his death he held offices in connection with the college in that place. He also manifested unwearied zeal in finding positions as teachers for young men and women from the east. About ten years previous to his death he was chosen cashier of the Commercial Bank at Harrodsburg, and afterward to a similar position in Covington, in each of which he displayed uncommon financial ability. His death occurred during a visit to his native place, consequent upon the loss of his parents.

March 14.—Meade, Rt. Rev. Wm., D.D. (*See* Meade.)

March 18.—Wheaton, Nathaniel Sheldon, D.D., died in Marbledale, Washington, Conn. He was born in that town, Aug. 20, 1792, graduated at Yale College in 1814, pursued a course of theological study in Maryland, and in 1818 was chosen rector of Christ Church, Hartford, Conn. In 1831 he resigned the rectorship to fill the appointment of President of Trinity, then Washington College, Hartford, succeeding Bishop Brownell, and during his administration of six years raised the sum of $40,000 for its maintenance. In 1837 he resigned the presidency to accept the rectorship of Christ church, New Orleans, where he labored with fidelity seven years. He twice visited Europe, and was the author of a volume entitled "Journal of a Residence in London, and of Tours in England, Scotland, and France." At his death he bequeathed to Trinity College the sum of $20,000.

March 25.—Coffing, Rev. Jackson G., a Presbyterian missionary in Central Turkey, died at the house of the American consul at Alexandretta from a wound received by robbers.

March 30.—Rolph, John A., a distinguished artist and landscape engraver, died in Brooklyn, E. D. (Williamsburg), N. Y., in the 64th year of his age. He was born in Essex, England, but in 1833 emigrated with his family to America, and had resided in New York most of the time since that period. Some fine specimens of his artistic ability may be found in "Wilkes's Exploring Expedition." He was an uncle of Edward Miall, M.P., the great radical writer (now editor of "The Non-Conformist"), and father of the well known singer Mrs. Clara M. Brinkerhoff.

April 1.—Edwards, Ogden, died at his residence in Staten Island, N. Y. He was born in Connecticut in 1781, and was a son of Pierpont Edwards, and grandson of Jonathan Edwards, and inherited great strength of intellect and will. He made his home in New York in the early part of this century, and was for many years surrogate of the city. He was afterward a member of the State Legislature, and in 1821 was a member of the convention to revise the Constitution of the State. He was circuit judge of the supreme court, and continued in that office until he reached the age limited by the constitution. He was at one time a candidate of the whig party for governor.

April 1.—Doheny, Col. Michael, a distinguished orator, died at his residence in Brooklyn, N. Y. He was one of the leaders of the Irish revolutionary movement of 1848, practised law in New York, and for a time edited a newspaper.

April 6.—O'Brien, Lieut. Fitz James, died in Virginia, aged 33 years. He was born in Ireland, and came to this country about 1850. He was a brilliant writer, and also a poet of much merit. In April, 1861, upon the call for troops, he enlisted in the 7th regiment New York State militia, and in Jan. 1862, accepted an appointment upon the staff of Gen. Lander, and in the short time of service prior to his death, distinguished himself as an officer of courage and daring. He was wounded in a skirmish on Feb. 16, and died from tetanus, following a severe surgical operation, which he bore with great fortitude.

April 6.—Peabody, Col. Everett, of the 25th Missouri regiment, was killed in the battle of Shiloh. He was born in Springfield, Mass., June 13, 1830, graduated at Harvard College in 1849, and adopted civil engineering as a profession, in which he rapidly distinguished himself. He was employed upon various railroads at the West, and in 1859 was chief engineer of the Platte county railroad. When the war broke out he raised a battalion, was commissioned major, and employed in repairing and defending the railway communications of northern Missouri. He commanded 1,200 men at the siege of Lexington, and received a wound, which lamed him for life, notwithstanding which he reorganized his regiment, and upon joining Gen. Grant's army was assigned the command of a brigade under Gen. Prentiss on the exposed left wing, nearest the enemy, where in the unequal conflict he was killed.

April 6.—Johnston, Gen. Albert Sidney. (*See* Johnston, A. S.)

April 7.—Tompkins, Abel, a well known publisher in Boston; was born in that city, June 22, 1810. He was by trade a bookbinder, and in 1836 purchased the "Ladies Repository," opened a small book store, and soon became an extensive publisher, especially of the denominational books of the Universalists, and of

several of their periodicals. He was a man of exquisite taste, and the "Rose of Sharon," a gift book or annual published by him, was long regarded as a model of artistic beauty in its typography and illustrations. He was much esteemed both in his public and social life.

April 7.—Pegram, Col. William, was killed at the battle of Shiloh, Tenn. He was born in Virginia, but had resided for many years in Kentucky. Though a brother of Robert Pegram, commander of the Confederate steamer Nashville, he was a staunch loyalist, and raised a regiment of cavalry which was in the engagement at Pittsburg Landing. At the time of his death he was acting brigadier-general.

April 8.—Fletcher, Prof. Miles J., of the Indiana Asbury University, Greencastle, Ind., and State Superintendent of Public Instruction, was killed while on his way to aid the wounded, after the battle of Shiloh. He was a man of superior attainments, and of earnest loyalty and patriotism. During a part of the previous year he had added to his other duties that of assistant adjutant-general. In his Message of Jan. 1863, Gov. Morton paid a tribute to his many virtues and excellencies.

April 10.—Wallace, Gen. Wm. Harvey Lamb, died at Savannah, Tenn., from a wound received at the battle of Shiloh. He was born in Urbana, Ohio, July 8, 1821, was educated for the law, served in the Mexican War, and in 1853 was elected State attorney for the ninth judicial circuit of Illinois. He held command of the 11th regiment of Illinois volunteers, and joined the depot at Cairo during the early stages of the war. He held a command in the troops sent to attack Fort Henry, and distinguished himself in the siege of Fort Donelson, where he commanded a brigade in Gen. McClernand's division of Gen. Grant's army.. For his gallantry upon that occasion he was made by Congress, on the 21st of March, a full brigadier-general, and with that rank went with the expedition up the Tennessee river.

April 12.—Frelinghuysen, Hon. Theodore, LL.D. (*See* Frelinghuysen.)

April 16.—Wheeler, John, D.D., President of the University of Vermont, died in Burlington, Vt. He was born in 1798 at Oxford, N. H., and graduated at Dartmouth College in 1816. He was twice elected president of the University of Vermont, and officiated in that capacity from 1842 to 1855.

April 18.—Peet, Dudley, M.D., died in New York city. He was born in Hartford, Conn., July 9, 1830, graduated at Yale College in 1852, studied medicine in the College of Physicians and Surgeons in New York, and for a short time pursued the practice of his profession in the city. In 1857 he removed to Burlington, Iowa, and after two years' practice returned, and became associated with his brothers as an instructor in the New York Institution for the Deaf and Dumb, under the superintendence of his father, Dr. Harvey P. Peet. He was well fitted for this work, and during the three years previous to his death was eminently successful.

April 19.—Harvey, Louis P., governor of Wisconsin, was drowned at Savannah, Tenn., while on his way to Pittsburg with supplies for the wounded after the battle of Shiloh. He was born at East Haddam, Conn., July 22, 1820, in 1828 removed with his parents to Ohio, and was educated at the Western Reserve College. In 1840 he became a resident of Kenosha, Wis., where he engaged as a teacher in the academy, and later assumed the editorship of the Whig newspaper, published in that city. In 1850 he removed to Shopiere, Rock county, where he engaged in the manufacturing business. He was a member of the first Constitutional Convention, and represented Rock county in the Senate from 1855 to 1857, when he was elected secretary of State, and in Nov. 1861, governor.

April 25.—Smith, Gen. Charles Ferguson. (*See* Smith, Gen. C. F.)

April 26.—Palmer, Robert M., United States Minister to the Argentine Confederation, died at sea aged 41 years. He was born at Mount Holly, New Jersey, in 1820, and was a son of the Hon. Strange N. Palmer, of Pennsylvania. In 1830 he removed with his father's family to Pottsville, Schuylkill county, where he was educated as a printer. He subsequently became an editor, studied law, and in 1845 was admitted to the bar. In 1850 he was elected district attorney in Schuylkill county, and subsequently was speaker in the State Senate. In May, 1861, he left home to enter upon his duties as minister at Buenos Ayres, but his health, which had for some time been failing, compelled him to resign his office, and he died on his return homeward.

April 27.—Bethune, George W., D.D. (*See* Bethune, G. W.)

April 29.—Alley, John Burroughs, M.D., died in Boston, aged 41 years. He graduated at Yale College in 1840, and at the Medical School of Harvard University in 1844, after which he spent two years in Europe, pursuing his medical studies. Upon his return he settled in Boston, and until his death was an active and useful member of his profession. He was for several years superintendent of the Boston Dispensary, and, for a time, one of the councillors of the Massachusetts Medical Society.

April 30.—Cambreleng, Hon. Churchill C., died at his residence near Huntington, Long Island. He was born in North Carolina in 1786, and was educated at Newbern. In 1802 he came to New York, and subsequently went to Providence, R. I., where he was employed as a clerk. He was next employed by John Jacob Astor, and while in his service travelled extensively. He was a member of Congress from New York, from 1821 to 1839, during which time he acted as chairman of Committees of Commerce, Ways and Means, and Foreign Affairs. In 1839 he was appointed Minister to Russia by President Van Buren, and in 1846 was a member of the State Constitutional Convention.

May 3.—Bangs, Nathan, D.D. an eminent Methodist clergyman, died in New York. He was born in Stratford, Conn., May 2, 1788. The years of his early manhood were occupied with school teaching and land surveying. In 1800 he became a member of the Methodist Episcopal Church, and in 1801 entered the itinerant ministry in that church. His first appointments were in Lower and Upper Canada, and it was not till 1808 that he received a circuit in the Albany district, in the United States; and the same year he was appointed a member of the General Conference. In 1810 he received his first appointment in New York city, and for the next ten years he was called to fill the most important appointments in the church. In 1820 he was elected to the agency of the Methodist Book Concern, and the general editorship of its publications. He served in this capacity for eight years, and then for four years editor of the church organ, the "Christian Advocate and Journal," and for the four years following, of the "Methodist Quarterly Review." In 1836 he was chosen Corresponding Secretary of the Methodist Missionary Society, and remained in that position till 1841, when he was elected President of Wesleyan University, Middletown, but resigned in 1842, and entered once more upon the active duties of the ministry, in New York and Brooklyn, in which he continued for ten years. His health becoming infirm, he took a supernumerary relation in 1852, but preached occasionally, till the last two or three years of his life. Amid his often abundant labors, Dr. Bangs found time for the preparation of numerous works for the press, some of them controversial in character. Fourteen or fifteen of these are yet in circulation. One of the most important and elaborate of these is a "History of the Methodist Episcopal Church," in 4 vols. 12mo.

May 4.—Snell, Thomas, D.D., a Congregational clergyman, died at North Brookfield, Mass., aged 88 years. He was a native of Massachusetts, graduated at Dartmouth College in 1795, and was pastor of the Congregational church at Brookfield for more than fifty years.

May 6.—Thoreau, Henry D., died at Concord, Mass. He was born in Boston, July 12, 1817, graduated at Harvard College in 1837, and spent the three following years in teaching. For some time he was a member of the family of Ralph Waldo Emerson, in Concord. He was eccentric in his habits, and nearly every year made an excursion on foot through the woods and mountains of Maine, New Hampshire, New York, and other places, and for more than two years lived in a hut about a mile and a half from Concord, built by himself at an expense of about $28, supporting himself as a surveyor, pencil maker, &c. He was well known to the public as the author of "A Week on the Concord and Merrimack Rivers," published in 1849, and "Life in the Woods," published in 1854. Early in 1863 two posthumous works from his pen were also issued.

May 8.—Bailey, Goldsmith F., a member of Congress, died at his residence, in Fitchburg, Mass. He was first elected in 1860.

May 11.—Macauley, Rev. Thomas, D.D., LL.D., a Presbyterian clergyman, died in New York city, aged 85 years. He was formerly a professor in Union College, and subsequently pastor of the Presbyterian church in Murray street, New York.

May 11.—Vinton, Hon. Samuel F., died in Washington, D. C. He was born at South Hadley, Mass., Sept. 25, 1792, graduated at Williams College in 1814, studied law, and subsequently removed to Ohio. He was for many years a member of Congress, and in 1862 was appointed one of the commissioners under the act abolishing slavery in the District of Columbia. He was a man of ability, and during his long term of service in Congress was respected and beloved.

May 12.—Meigs, Rev. Benjamin Clark, D.D., a missionary of the American Board in Ceylon, died in New York, aged 72 years. He was a native of Connecticut, graduated at Yale College in 1809, and received his theological education in the seminary at Andover. He was one of the founders of the Ceylon mission of the American Board, and having been ordained, embarked for that island in 1815, being one of the second company of missionaries sent out from this country. In 1841 he made a brief visit to his native country, and in 1858, after forty-two years' service, retired from the field.

May 15.—Tracy, Rev. E. C., a Congregational clergyman, died in Windsor, Vt., aged 66 years. He was editor of the "Vermont Chronicle," and previously, for several years, of the "Boston Recorder."

May 18.—Keim, Gen. Wm. H., died at Harrisburg, Pa., aged about 49 years. He was for several years a militia general and in 1859 was elected surveyor general of the State. At the commencement of the present war he accepted the position of major-general from Gov. Curtin, and was in Gen. Patterson's division on the Upper Potomac during the three months' service. In the fall of 1861 he was appointed a brigadier-general by the President, and joined McClellan's division, where a brigade, consisting chiefly of Pennsylvania regiments, was placed under his command. He died of a combined attack of typhoid fever and dysentery.

May 18.—Scott, William, formerly Judge of the Supreme Court of Missouri, died in Jefferson City, Mo. He had a high reputation as an able jurist.

May 20.—Baldwin, James Fowle, died suddenly in Boston, aged 80 years. He was a native of Massachusetts, where he received a thorough academical education and prepared himself for mercantile life, but imbibing from his father and brother a taste for engineering, he joined the latter in the construction of the Dry Dock at the Charlestown Navy Yard. In 1828 he was one of the State Commissioners for the survey of the Western railroad. In

1832 he surveyed the location of the Boston and Lowell railroad, and in 1837 was appointed one of the commissoners to examine and report upon the means of supplying Boston with water, and his plan, though at first rejected, was finally adopted March 30, 1846. He was elected Senator for Suffolk county, and held the office until his appointment as water commissioner. He was a member of the American Academy of Arts and Sciences.

May 20.—Sherman, James Tuttle, died in Trenton, New Jersey, aged 47 years, graduated at Yale College in 1833, studied law, and was associated with his father as editor of the "State Gazette" until 1853. He was an active friend of the State Normal School at Trenton.

May 20.—Brownell, Charles Clarence, M. D., died in Egypt. He was a native of Connecticut, graduated at Trinity College, Hartford, and at the Medical School, New Haven. At the time of his death he was connected with Mr. Petherick's expedition in search of the head waters of the Nile. He was a man of much intelligence and enthusiasm in the pursuit of science.

May 26.—Condict, Lewis, M. D., a prominent politician of New Jersey, died at Morristown, N. J. He was born in 1772, was high sheriff of Morris county, prior to the commencement of the present century, and from 1805 to 1810 served as a member of the State Legislature, officiating two terms as Speaker of the House. He was one of the commissioners for settling the boundary between New York and New Jersey. He was subsequently elected to Congress, and continued to hold his seat there for upward of twenty years.

June 1.—Rippey, Col. Oliver H, of the 61st Pennsylvania regiment, killed in the battle before Richmond. He was born in Pittsburg in 1826, studied law under Bushrod Washington, Esq., served in the Mexican War, and upon his return resumed the practice of his profession, for which he possessed talents of the first order. As a soldier he possessed every necessary element, courage, endurance, and faith.

June 1.—Miller, Col. James, of the 81st Pennsylvania regiment of volunteers, was killed in the action before Richmond. He was for many years a resident of Easton, Pennsylvania, but more recently of Yorkville, New York city. At the commencement of the Mexican War he raised a company of volunteers, who formed a part of one of the regiments with Gen. Scott in the campaign to the city of Mexico. For his gallantry during the war he was promoted to a captaincy.

June 4.—Goodrich, Rev. Charles A., died in Hartford, aged 72 years. He was descended on the paternal side from the Rev. Dr. Chauncey Goodrich, of Durham, Conn., and on the maternal from Col. John Ely, of Saybrook, well known in the Revolutionary War. He graduated at Yale College in 1812, studied theology with Dr. Yates of East Hartford, and in 1816 was ordained and installed pastor of the First Congregational church in Worcester, Mass., where he remained four years. In 1820 he returned to his native State and settled in Berlin, and in 1848 at Hartford. He was associated with his brother, S. G. Goodrich (Peter Parley), in preparing books for the young, and also published independently several volumes, among which are a "Bible History of Prayer," "Lives of the Signers of the Declaration of Independence," "Great Events of American History," "Universal Traveller," "History of the United States" and "Outlines of Geography." He was at one time a member of the Senate, and held other offices of trust.

June 5.—Goodman, Rev. Epaphras, died at his residence in Chicago. He was born in 1790, had been a pastor of several New England churches, and for several years editor of the "Christian Herald" in Cincinnati.

June 5.—Drake, Col. Albert Waldo, died in South Windsor, Conn., aged 27 years. He entered the junior class in Yale after having been a member of Williams College, and graduated in 1857, studied law in Hartford and New Haven, and was admitted to the bar in 1859, in which year he was a member of the Connecticut House of Representatives. He afterward commenced the practice of his profession in Hartford. At the beginning of the present war he was commissioned as first lieutenant of the 1st Connecticut volunteers, and distinguished himself with honor in the battle of Bull Run. He was subsequently appointed by the governor, lieut.-col. of the 10th Connecticut volunteers, and as such was engaged in the battle of Roanoke Island. He took part also in the capture of Newbern, and was then appointed colonel of his regiment.

June 6.—Ashby, Gen. Turner, an officer in the Confederate service, was killed in an engagement near Harrisonburg, Va., aged about 38 years. He was a Virginian by birth. In May, 1862, he was appointed a brigadier-general, and led the vanguard of Gen. Jackson's army in the Shenandoah Valley, during the pursuit of Gen. Banks. He was an officer of great courage and daring.

June 8.—Baldwin, Abraham Dudley, died in Greenfield, Conn. He was born in 1788, graduated at Yale College in 1807, and studied law but did not enter upon its practice, devoting himself mostly to agricultural pursuits. He was several times a member of the House of Representatives and also of the Senate of Connecticut, and while a Senator was a member of the corporation of Yale College.

June 10.—Bosworth, Hon. Alfred, one of the associate judges of the supreme court of Rhode Island, died in Warren, R. I.

June 10.—Scott, Mrs. Maria Mayo, wife of Lieut.-Gen. Winfield Scott, died at Rome, Italy, aged 73 years. She was a native of Virginia.

June 11.—Herrick, Edward Claudius, died in New Haven, Conn., aged 51 years. He was born in New Haven, and was a son of Rev. Claudius Herrick, a prominent teacher of that

city and a graduate of Yale college in the class of 1798. Young Herrick received a good academical education, and while yet a youth became a clerk in the well known book store of Gen. Hezekiah Howe, upon the death of whom he was for a short time in business as a bookseller on his own account. In 1843 he was appointed librarian of Yale College, and continued to discharge the duties of that office until his resignation in 1858. In 1852 he was appointed treasurer, which post he held until his death. His devotion to the interests of the college was ever active and thorough, and by no means confined to his official trusts. Since the death of Prof. Kingsley in 1852 he had had the chief charge of the triennial catalogue, had prepared the annual record of deceased graduates, and collected much information respecting the biographies of early graduates. The supervision of the college property also formed a portion of his cares. He held many important trusts in connection with municipal affairs, and was considered the most active man in town. Notwithstanding his many duties he made high attainments in various departments of science, devoting much attention to entomology, astronomy, and meteorology. The "American Journal of Science" contains many valuable articles from his pen. Among these an essay on the "Hessian Fly and its Parasites," the result of nine years' careful investigation, and papers on the Meteoric Showers of August and the existence of a planet between Mercury and the Sun, are the most remarkable. His knowledge of local history, general literature, and bibliography was very extensive and always at command. He received an appointment as a member of the U. S. Exploring Expedition under Capt. Wilkes, but declined the honor, mainly, it is believed, from considerations of filial duty to his aged mother.

June 18.—Perry, Col. James H., D. D., died of apoplexy at Fort Pulaski, Georgia, aged about 51 years. He was educated at West Point, served in the Texan War of Independence and through the Mexican campaign. At the commencement of the present war he was pastor of the Pacific street M. E. church at Brooklyn, N. Y., but from love of his country, and a sense of duty, resigned the pastorate of the church, and raised a regiment called the Continental Guards, which was accepted as the 48th N. Y. State volunteers. This regiment formed part of Gen. Sherman's Port Royal expedition. At the time of his death he had command of Fort Pulaski.

June 21.—Ellet, Col. Charles. (*See* Ellet, C.)

June 27.—Hopkins, Josiah, D.D., a Presbyterian clergyman, died at Geneva, N. Y. He was born in Pittsford, Vt., April 25, 1786, studied the ordinary branches of an English education, and afterward theology with the minister of his parish, and subsequently with Rev. Samuel Haynes, the celebrated colored preacher, and was licensed as a Congregational preacher in 1810, and after a year's labor as a missionary in western Vermont settled as a pastor at New Haven, Conn., in 1811, and remained there 19 years, teaching theology most of the time in addition to his pastoral duties. He prepared for his classes while residing there "The Christian Institute," a theological text book, which passed through many editions. In 1830 he accepted the pastorate of the 1st Presbyterian church in Auburn, N. Y., which he filled with great acceptancy. In 1848 he resigned in consequence of ill health, and removed to Ohio, and having after some years recovered his health, returned to the vicinity of Auburn, but his disease (asthma) returning, he sought relief at the water cure at Geneva, where he died.

June 27.—Tucker, Col. Isaac M., of the 2d New Jersey regiment, was killed in the battle of Gaines' Mill. He was a resident of Newark, N. J., a member of the legal profession, and a man of much influence throughout the State. In 1856 he was a member of the State Republican Executive Committee. He was a true patriot, and his services to his regiment were most valuable. He was shot by the enemy while being borne wounded from the field.

June 30.—Bailey, Col. Guilford D., was killed at the battle of the Seven Pines, aged 28 years. He was a native of New York, graduated at West Point in 1856, and was appointed to artillery service. Soon after his graduation he was ordered to Florida, and after a short service there was assigned to Forts Mackinaw, Snelling, and Leavenworth successively. When secession began he was in Texas, where he refused peremptorily to be included in Twiggs's surrender in 1861. Coming North, he was sent with Major Hunt's battery to reënforce Fort Pickens. Subsequently he raised a volunteer regiment in the northern part of New Jersey, and joined the army of the Potomac, participating in all the battles until as chief of artillery in Gen. Casey's division he was mortally wounded.

June —.—Merriam, Rev. W. W., a missionary of the American Board, was assassinated by robbers near Philippopolis, Turkey, upon his return from a missionary meeting at Constantinople. His wife, who accompanied him, died a few days after of typhus fever brought on by grief and overexertion in guarding and conveying home the remains of her husband.

July 6.—Susini, Mrs. Isabella Hinckley, a popular vocalist, died in New York. She was a daughter of the late Dr. Hinckley, a practising physician of Albany. She early manifested a taste for music, and her voice being an excellent soprano, great care was spent upon her education in that art. At the age of 17 she was taken to Italy, where for two years she studied under the best lyrical and dramatic masters, after which she appeared in Italian opera in several European capitals, and upon her return to this country, in several American cities, everywhere being received with great favor.

She married Signor Susini a little less than a year previous to her death.

July 6.—Mackenzie, Charles Kenneth, burned to death at the destructive fire of the Rainbow Hotel, Beekman street, N. Y., aged 74 years. He was for a time in early life aide-de-camp and military secretary to the Duke of Wellington. He was a man of good family and connections, a ripe scholar, and an excellent linguist, with great and versatile literary attainments, having been a contributor to the Edinburgh and Quarterly Reviews, and the *Encyclopædia Britannica*, and also at a later period the leading writer of editorials for the London daily conservative journals.

July 8.—Ripley, Hon. Philip, ex-mayor of Hartford, Conn., died at his residence in that city, aged 68 years. He was for many years at the head of an extensive iron foundry at the falls in the Connecticut at Windsor Locks, and had been identified with most of the great business enterprises of the city. He was twice elected mayor. A man of philanthropic disposition, he had taken an active part in the establishment of the State Normal and State Reform Schools, and had been one of the trustees of the latter from its organization.

July 11.—Foulkrod, John, died in Philadelphia. He served in the war of 1812, and at a later period in life was a member of the House of Representatives and Senate, and of the Reform Convention for the adoption of the new Constitution. He was also, by appointment of the Supreme Court, a member of the Board of Prison Inspectors.

July 24.—Van Buren, Martin. (*See* Van Buren.)

July 24.—Mudge, Prof. T. A., late of McKendree College, and pastor of Baldwin City Station, in the Kansas Conference, died in the college building while engaged in his study.

July 24.—Milnor, William Henry, M.D., surgeon in the army, died at Savage's Station, near Richmond, Va:, aged about 60 years. He was a son of the late Rev. Dr. Milnor, and at the time of his death Past Grand Master of the Masonic Order in the State of New York.

July 25.—Wallace, Benjamin J., D.D., died at Philadelphia, aged 52 years. He was a native of Philadelphia, a cadet at West Point from 1827 to 1830, passed through a theological course at Princeton, N. J., and subsequently had charge of various churches in the States of Pennsylvania and Kentucky. He was for a time professor in Delaware College, Newark, Del. In 1850 he removed to Philadelphia, and assumed the editorship of the "Presbyterian Quarterly Review" from its commencement.

July 25.—Williams, Reuel, LL.D., died at Augusta, Me., aged 79 years. He was a native of Maine, an able member of the legal profession, served in both branches of the State Legislature, and six years as a Senator in Congress.

Aug. 1.—Thornwell, James Henry, D.D., an eminent Presbyterian clergyman, died at Charlotte, N. C. He was born in Marlborough District, S. C., in 1811, graduated at South Carolina College (Columbia, S. C.), in 1829, and soon after commenced the study of law, but after a time abandoned it for theology, and having passed through the usual course of study, commenced his ministerial career as the pastor of the Waxhaw Presbyterian church. In 1836 he was elected professor of logic and belles lettres in South Carolina College; but in 1838 resigned to become pastor of the Presbyterian church in Columbia. In 1840 he accepted the professorship of the Evidences of Chistianity, and the chaplaincy of the college, and held it till May, 1852, when he accepted a call to the pastorate of the Glebe street Presbyterian church in Charleston. In December of the same year he was recalled to Columbia to take the presidency of the college, with which he had been so long connected. In 1856 he resigned at the call of the General Assembly of the Presbyterian Church (O. S.), to take the senior professorship of the Presbyterian Theological Seminary at Columbia, which he held until his death. In his native State perhaps no man wielded a more powerful influence than Dr. Thornwell. John C. Calhoun, whom, in intellectual form and character he strongly resembled, pronounced him the greatest man of his acquaintance, and the position he held in the General Assembly of his church, showed that the statesman's judgment of him was not far wrong. He was an ardent and uncompromising advocate of slavery, and encouraged the secession movement to the utmost of his power both with pen and voice. He opened the first session of the Secession Convention of South Carolina with prayer. Amid his other duties Dr. Thornwell had been a somewhat prolific writer. His published sermons, addresses, essays, and occasional pamphlets are very numerous; the latest of them was a sermon elaborately defending secession. He had also published two volumes, "Arguments of Romanists Discussed and Refuted" (New York, 1845), and "Discourses on Truth" (New York, 1854).

Aug. 5.—McCook, Brig.-Gen. Robert L., an officer in the Union service, shot by guerillas near Salem, Alabama. He was a native of Jefferson county, Ohio, born in 1827. He was a man of fine attainments, and had early chosen the legal profession. He studied law in Columbus, and opened an office in that city when he was only 21 years of age. A few years later he removed to Cincinnati, where he had acquired a large practice. At the first call for troops he raised a regiment of Germans for the war. During the two months that his regiment was in camp in Ohio, he had drilled them into a high state of perfection. In the campaign of western Virginia in the summer and autumn of 1861 McCook and his "bully Dutchmen," as his regiment was called, were constantly on the alert, and at Rich Mountain, Cheat Mountain, in the various skirmishes on and near the line of the Balti-

more and Ohio railroad, and at Carnifex Ferry, the skill, bravery, and daring of the commander, and the invincibility of the troops, were fully tested. Early in the winter Col. McCook was ordered with his command to Kentucky, and at Mill Springs the impetuosity of his regiment in their charge upon the enemy carried the day. Col. McCook was wounded in the engagement, but only remained away from his regiment long enough to recover sufficient strength to ride on horseback. For his gallant conduct at Mill Springs he was promoted to a brigadier-generalship, the Senate unanimously confirming the nomination, but he was so strongly attached to his "bully Dutchmen," and they were so unwilling to have any other commander, that he never accepted the commission. He joined Gen. Buell's command after the evacuation of Bowling Green, but was not in any of the subsequent battles. At the time of the attack on him he was very sick, and was carried in an ambulance, one regiment and part of another of his brigade being in advance, and the remainder some distance in the rear. The guerillas, who were partly residents of the vicinity, had been informed that he was to pass, and knowing his helpless condition, had lain in ambush for him while the regiments in advance passed. They came upon his escort in large force, overturned the ambulance, and shot him down in cold blood. His faithful driver and attendant bore him to the nearest house. He survived, though in terrible suffering, about 24 hours. His regiment, learning of the death of their commander, visited the scene, and seizing some of the guerillas, hung them at once, and destroyed their houses. The McCook family have contributed more men to the war, probably, than any other in the United States. Maj.-Gen. Alexander McDowell McCook was a brother of the murdered general, and sixteen members of the family have been either in the army or navy.

Aug. 5.—Williams, Brig.-Gen. Thomas, an officer of the U. S. army, killed in the battle of Baton Rouge, La. He was a native of New York, born in 1818, was appointed a cadet at West Point from Michigan in 1833, and graduated in 1837; received the appointment of brevet second lieutenant in the Fourth Artillery during the same year; in 1840–'41 was acting assistant professor of mathematics at West Point, in 1844 was appointed an aide-de-camp on Gen. Scott's staff, and in the Mexican war won the brevets of captain and major for gallantry and meritorious conduct. He was promoted to a captaincy in 1850, and commissioned major in the 5th artillery in May, 1861, and in September of the same year appointed brigadier-general of volunteers. During the autumn of 1861 he commanded the forts at Hatteras Inlet, and when the Ship Island expedition was sent out was assigned to the command of one of the brigades. He commanded the forces in the first unsuccessful attack upon Vicksburg, projected and superintended the cutting of the canal intended to turn the course of the Mississippi away from Vicksburg; on the failure of this enterprise he was placed in command at Baton Rouge. He repelled with vigor and success the attack of the Confederate general Breckinridge on that place, but just at the close of the engagement, while bringing up a Michigan regiment to charge upon the enemy he was slain. He was an able and skilful officer, and a very rigid disciplinarian.

Aug. 5.—Roberts, Col. George T., an officer in the Union service, and commander of the 7th regiment Vermont volunteers, killed at the battle of Baton Rouge, La. He was a native of Rutland, Vt., and the regiment which he commanded was one raised to form part of Gen. Butler's command on the Ship Island expedition. He was commissioned Feb. 12, 1862, and sailed for Ship Island on the 10th of the following month. Col. Roberts participated in the capture of New Orleans, and his regiment suffered severely in the battle of Baton Rouge in which he lost his life.

Aug. 8.—Grew, Rev. Henry, an American clergyman, died in Philadelphia. He was born in England in 1781, but emigrated to this country with his parents at the age of 14, subsequently graduated at Brown University, became a Baptist minister, and for some years was pastor of the First Baptist church in Hartford, Ct. Having adopted views differing from those of that denomination, he resigned the pastorate, and after a time removed to Philadelphia, where he resided the remainder of his life. He was an active friend and promoter of foreign missions, and one of his daughters, Mrs. Eliza Grew Jones, devoted herself to foreign missionary work, and died at Bangkok, Siam, after several years of zealous labor as a missionary. Mr. Grew published several works in defence of the doctrines of the Adventists, whose views he had adopted. He was a man of great benevolence and charity, and few citizens in private life have been more sincerely and generally regretted.

Aug. 9.—Crane, Lieut.-Col. L. H. D., an officer in the Union service, at the time of his death acting colonel of the 3d regiment, Wisconsin volunteers, killed at the battle of Cedar or Slaughter Mountain. He was a citizen of Ripon, Wisconsin, and had been for several years chief clerk of the Assembly of that State. He joined the regiment as major, but was soon promoted to the lieutenant-colonelcy, and at the time of the battle, owing to the illness of the colonel, was in actual command of the regiment. He was a genial, intelligent, and amiable man, beloved in his own neighborhood and State.

Aug. 9.—Sewell, William Grant, a prominent *littérateur*, died in Quebec, Lower Canada, of pulmonary consumption. He was born in Quebec in 1829, and was a grandson of the late Jonathan Sewell, chief justice of Lower Canada. Young Sewell was educated for the

bar, but preferred editorial life, and in his 24th year became connected with the New York daily press, a connection which, either as editor or correspondent, he maintained till his death. For some time he was one of the principal editors of the "N. Y. Daily Times." Some years ago his health compelled him to spend several winters in the West Indies, and as a result of his careful and thorough investigations he published a treatise entitled "The Ordeal of Free Labor in the British West Indies."

Aug. 9.—Brigham, Rev. John C., D. D., a Presbyterian clergyman, and, since 1827, secretary of the American Bible Society, died in Brooklyn, E. D. (Williamsburg). He was born in 1793 at New Marlborough, Mass., graduated at Williams College in 1819, studied theology at Andover, spent three years in South America in missionary exploration and Bible distribution, and on his return in 1825 became connected with the American Bible Society, of which he was appointed a corresponding secretary, in 1827, a post he filled with ability for thirty-five years.

Aug. 17.—Vawter, Rev. John, a Baptist minister, and one of the pioneer settlers of Indiana, died at Morgantown, Ind. He was a native of Orange (now Madison) county, Virginia, and was born Jan. 8, 1782. He was licensed as a Baptist minister in 1804, and in 1807, in company with his father, removed to the then sparsely inhabited territory of Indiana, selecting for his residence the present township of Madison, of which he was the first magistrate. He was soon after elected sheriff of Jefferson and Clark counties, and in 1810 was appointed by President Madison U. S. marshal for the State. In the Indian campaign of 1811–'13 he served as a frontier ranger, and was afterward (in 1817) elected colonel of the militia of Jennings county, to which he had removed in 1815, and where he founded the county-seat Vernon. He was ordained as pastor of the Baptist church in this place in 1821, and continued to preach there until 1848. From 1831 to 1835 he was a member of the Legislature, and in 1836 of the State Senate, where his influence caused the adoption of the policy of internal improvements by the State. In 1848 he removed to Morgan county, and founded Morgantown, erecting several public buildings, among others a neat brick church, which he presented to the Baptist congregation of the town.

Aug. 22.—Bohlen, Gen. Heinrich, an officer in the Union service, killed while opposing the attempts of the Confederate force to cross the Rappahannock. He was a native of Germany, but emigrated to this country a number of years since and settled in Philadelphia as an importer of wines. At the commencement of the war he raised a regiment of his countrymen (the 75th Pennsylvania), which was subsequently attached to Gen. Blenker's division. He was promoted to a brigadier-generalship April 28, 1862, and attached to the Mountain Department, where he served under Fremont and Sigel; distinguishing himself for bravery and daring at the battle of Cross Keys. He was a man of devout and exemplary character. His son, Mr. J. B. Bohlen, who was on a visit to his native land, died in Baden-Baden on the same day with his father.

Aug. 22.—Read, Rear-Admiral Geo. Campbell, an officer of the American navy, and at the time of his death governor of the naval asylum at Philadelphia, died in that city. He was a native of Ireland, but came to this country at an early age, and entered the navy as a midshipman April 2, 1804. He was third lieutenant on board the Constitution at the time of her fight with the Guerriere in 1812, and was appointed by Commodore Hull to receive the sword of Capt. Dacres of the Guerriere. He was promoted to a captaincy in 1825, and served for several years as commander of the African squadron. He had been placed on the reserved list under the act of 1855, and on the death of Captain Nicholson in 1861 was appointed his successor as governor of the naval asylum.

Aug. 23.—Allyn, Capt. Francis, a prominent citizen of New London, Conn., died at his residence in that city. In early life he was a shipmaster, and was honored with the special friendship of the Marquis de La Fayette, whom he brought to this country in 1824.

August 25.—Appleton, Gen. James, died in Ipswich, Mass., aged 77 years. He was a native of Ipswich, born Feb. 14, 1785. While yet a young man he was for several years elected to the General Court, at a period when Harrison Gray Otis presided over the Senate, and Josiah Quincy was the leader of the House. During the war of 1812 he was a colonel of the militia force, and was in command of the district of Gloucester, and at the close of the war was promoted to the rank of brigadier-general. He removed not long after the war to Portland, Me., and there was a member of the Legislature and for several years the candidate of his party for governor. In 1853 he returned to the home of his childhood, and there passed the remainder of his days. He had been from the beginning an earnest advocate of the temperance and anti-slavery causes, and had aided both by pen and voice.

Aug. 27.—Webster, Col. Fletcher, an officer of volunteers in the Union service, and at the time of his death colonel of the 12th regiment Massachusetts volunteers, died at Alexandria of wounds received in the second battle of Bull Run. He was the oldest son of Daniel Webster, and was born at Portsmouth, N. H., in 1812. He was educated at Dartmouth College, and served as Assistant Secretary of State under his father during the administrations of Presidents Harrison and Tyler. When Caleb Cushing went to China as American commissioner, Mr. Webster accompanied him as Secretary of Legation. Under the administrations of Presidents Pierce and Buchanan he held

a position in the Boston custom house. When the call was made for troops in the spring of 1861, he was among the first to raise a regiment for the war, and was in active service till his death. He was shot through the lungs, and died of hemorrhage in a few hours. He was the last member of his family, a brother and sister having previously deceased.

Aug. 28.—MEANS, Col. ISAAC H., ex-governor of South Carolina, killed at the second battle of Bull Run. He was a colonel in the Confederate service.

Aug. 30.—CULL, Rev. HUGH, an aged and eminent clergyman of the Methodist Church, died near Richmond, Indiana, in the 105th year of his age. He had been for nearly sixty years a local preacher.

Aug. 30.—PRATT, Col. GEORGE W., an officer of the Union service, and at the time of his death colonel of the 20th regiment N. Y. State volunteers, was killed at the battle near Gainesville, Va. He was the son of Col. Zadock Pratt, formerly M. C. from Greene county, and had entered the volunteer service in the summer of 1861. He was an excellent officer and highly esteemed in private life. He was killed while leading his men in a charge.

Aug. 30.—KOLTES, Col. JOHN A., an officer in the Union service, and at the time of his death acting brigadier-general in Gen. Steinwehr's division, killed at the battle of Gainesville, Va. He was a native of Rhenish Prussia, born in 1823, and came to this country in 1846. In Prussia, he had been a professor in one of the gymnasia, or colleges. Shortly after his arrival here he joined a regiment from Pennsylvania, which had volunteered for the Mexican War, and served throughout that war as orderly sergeant. After the close of the war he was for a time an officer of the Marine Corps, and was subsequently employed in the U. S. mint at Philadelphia. At the commencement of the present war, he appealed to his countrymen to join him in defence of the Union, and succeeded in raising a regiment of Germans, whom he led to the field. He had been for four months acting brigadier-general in Steinwehr's division, and his friends had secured his promotion to that rank and were carrying his commission to him when they met his dead body, as it was borne from the field.

Aug. 30.—CANTWELL, Col. JAMES, an officer of the Union service, and at the time of his death colonel of the 82d Ohio regiment, killed at the battle near Gainesville, while rallying the left wing of his regiment, which had given way under the attack of an overwhelming force of the Confederates. He was a citizen of Kenton, Hardin county, Ohio, and volunteered in the service at the commencement of the war, having been lieutenant-colonel of the 4th Ohio regiment of three months' troops; when they were disbanded he raised the 82d regiment for the war, and received his commission as colonel Dec. 31, 1861.

Aug. 31.—BRODHEAD, Col. THORNTON F., an officer of the Union army, and at the time of his death commander of the 1st Michigan cavalry regiment, died at Alexandria, Va., of wounds received the preceding day at the second battle of Bull Run. He was a native of New Hampshire, born in 1822, and was a son of Rev. John Brodhead, formerly a member of Congress from that State. He studied law at the Harvard Law School, and settled in his profession at Detroit, Mich. He served with distinction in the Mexican War as an officer in the 15th U. S. infantry, and was twice brevetted for gallant conduct in battle. At the close of the war he returned to the practice of his profession, and was soon after elected a member of the State Senate. In 1852 President Pierce appointed him postmaster of Detroit. At the commencement of the war he raised a cavalry regiment, at the head of which he served under Gens. Banks, Fremont and Pope.

Aug. —.—AUDUBON, JOHN W., the last of the sons of the celebrated naturalist, died in New York city. He inherited much of his father's taste and talents, and had occupied himself with zoölogical studies. When taken ill, he was preparing for the press a new and revised edition of his father's "Birds of America."

Sept. 1.—STEVENS, Gen. ISAAC INGALLS. (*See* STEVENS, I. I.)

Sept. 1.—KEARNEY, Gen. PHILIP. (*See* KEARNEY, P.)

Sept. 1.—WILLARD, Hon. JOHN, a member of the State Senate of New York, and formerly one of the justices of the supreme court of the State, died at Saratoga, N. Y., of paralysis. He was born in 1792, and in early life identified himself with the democratic party. In 1836 Gov. Marcy appointed him judge and vice chancellor of the fourth circuit court of the State, a position which he held till the adoption of the constitution of 1846. At the judicial election of 1847, he was chosen one of the justices of the supreme court for eight years. At the expiration of his term he resumed the practice of his profession. In the autumn of 1861 he was put in nomination for the State Senate, and received the votes of all parties. He was appointed a member of the Judiciary Committee, and in that capacity prepared the act of 1862 restoring the death penalty, and repealing the former statutes on that subject.

Sept. 1.—TAYLOR, Gen. GEORGE B., an officer of the Union army, died in Alexandria of wounds received at the second battle of Bull Run. He was a native of Clinton, Hunterdon county, New Jersey, and was born in 1808. At the age of 19 he entered the navy as a midshipman, but after a three years' cruise settled in New Jersey as a farmer. In the Mexican war he served first as lieutenant, and afterward as captain in the 10th infantry. After the close of that war he resided for three years in California, and then returned to his native State, where he engaged in mining and manufacturing. At the commencement of the present war he

was commissioned as colonel of the 3d New Jersey regiment, which, under Brig.-Gen. Runyon, formed a part of the reserve at Bull Run. When the three months' men were mustered out of the service, he reorganized his regiment and returned to the army, and was attached to the army of the Potomac when it went to the peninsula. After the battle of West Point Gen. Kearney was made a division commander, and Col. Taylor was placed in charge of the 1st brigade of N. J. volunteers. On the 9th of May, 1862, he received his commission as brigadier-general. In the hard fighting that followed before Richmond, he performed his part manfully, and when the army returned to the Potomac, he was prompt and ready with his brigade in the sharp battles southwest of Washington.

Sept. 6.—Larned, Col. Benjamin Franklin, paymaster general of the U. S. army, died at Washington. He was born in Massachusetts, in 1791, and on the 21st Oct. 1813, entered the army as ensign in the 21st regiment of infantry; he was promoted to a first lieutenancy in the summer of 1814, distinguished himself at the defence of Fort Erie, Aug. 13–15 of that year, and received the brevet rank of captain for his gallant conduct. In Jan. 1815, he was appointed regimental paymaster, and on the reduction of the army retained as paymaster of the 5th infantry, with rank and pay of major. In 1847, when two deputy paymaster generalships were created, Major Larned was appointed to one of them with the rank of lieutenant-colonel, and on the death of Maj.-Gen. Towson, in 1854, he succeeded to the paymaster generalship by right of seniority, with the rank of colonel. Regarding it a matter of duty to aid in the work of reorganizing the department over which he presided, for the vast labors which were thrown upon it by the war, he toiled on, though with impaired health, till the office and its duties were completely systematized, when he sunk under the load and his overtasked powers gave way. He was greatly esteemed and beloved by all his acquaintance.

Sept. 13.—Thomson, John R., U. S. Senator from New Jersey, died at Princeton, N. J., after a long illness. He was a native of Philadelphia, born Sept. 25, 1800. He was bred a merchant, and for several years was engaged in the China trade. President Monroe appointed him consul to Canton. He came home in 1825, and soon after married a sister of Commodore Stockton, and settled in Princeton. In 1835 he became a director in the Camden and Amboy railroad, which office he retained till his death. In 1842 he canvassed the State for the Constitutional Convention which met in 1844. In 1844 he was the democratic candidate for governor, but was defeated. In 1853, Com. Stockton having resigned his seat in the Senate, Mr. Thomson was elected for the remainder of the term, and in 1857 reëlected for six years. His term would have expired March 4, 1863.

Sept. 14.—Manross, Newton Spaulding, Ph. D., acting professor of chemistry at Amherst College, and captain of a company of the 16th Connecticut regiment, was killed at the battle of South Mountain, Md., while leading his company into action. He was born about 1827, graduated from Yale College in 1849, went to Europe and pursued his studies in chemistry, engineering, and mining at the University of Gottingen for the next three years, and took the degree of Ph. D., in 1852. After his return from Europe he was employed in exploring the Isthmus of Panama with reference to the proposed inter-oceanic canal, and visited the West India Islands, exploring the Pitch Lake of Trinidad and other remarkable objects, and contributed to the American "Journal of Science" the results of his observations. In 1861 he was appointed acting professor of chemistry at Amherst College in the absence of Prof. Clark, and in the summer of 1862 accepted the captaincy of a company in the 16th Connecticut volunteers.

Sept. 14.—Reno, Maj.-Gen. Jesse L. (*See* Reno, J. L.)

Sept. 15.—Twiggs, Gen. David Emanuel. (*See* Twiggs, D. E.)

Sept. 16.—Miles, Col. Dixon H., an officer of the U. S. army, mortally wounded at Harper's Ferry, Va., by a shell thrown by the enemy after his surrender of the place. He was a native of Maryland, born about 1803, and was appointed a cadet at West Point from that State in 1819. He graduated in 1824, and received an appointment as brevet second lieutenant of the 4th infantry, and the same day was made second lieutenant of the 7th infantry. He was regimental adjutant from 1831 to 1836, and in 1836 was promoted to a captaincy. In Jan. 1839, he was appointed assistant quartermaster on the staff, with rank of captain, but resigned his staff appointment in Sept. 1845. On the 9th of May he was brevetted major for gallant conduct at Fort Brown, Texas; and for his further meritorious conduct at several battles in Mexico, was brevetted lieutenant-colonel. In Feb. 1847, he was promoted as major of the 5th infantry, and in July, 1848, was civil and military governor of Jalapa, Mexico. In April, 1851, he was promoted to the lieutenant-colonelcy of the 3d infantry, and in 1857 and 1858 distinguished himself in several conflicts with the Apache and Navajoe Indians. In Jan. 1859, he was promoted to the colonelcy of the 2d infantry, and at the battle of Bull Run was in charge of the 5th division, and was ordered to cover the retreat. In Sept. 1862, he was intrusted with the command of the important post of Harper's Ferry, the retention and defence of which were essential to the complete success of the battles which followed. He asked for reënforcements, but they were not sent; one of his subordinates abandoned Maryland Heights, which commanded the main position, and finding the enemy approaching in large force,

he surrendered the post with but slight resistance, and with it nearly 14,000 men as prisoners, and an immense amount of arms, ammunition and stores. (*See* ARMY OPERATIONS.)

Sept. 17.—BRANCH, Gen. LAWRENCE O'BRIEN, an officer in the Confederate service, killed at the battle of Antietam. He was a son of Hon. John Branch, formerly governor of North Carolina, and was born in Halifax co. in that State in 1820. He graduated at Nassau Hall College, Princeton, in 1838, studied law with his father, and practised his profession in Raleigh. In 1855 he was elected to Congress from the Raleigh district, and reëlected till 1861. After North Carolina passed the ordinance of secession, he entered the Confederate army first as colonel, but was soon promoted to a brigadier-generalship. At the battle of Newbern he had command of that important position, and subsequently took part in several of the battles in that State and on the peninsula.

Sept. 17.—MATHESON, Col. RODERICK, an officer of the Union army, and commander of the 32d regiment N. Y. State volunteers (1st California regiment), killed at the battle of Antietam. He was a native of New York, but had resided for several years in California, and in May, 1861, left his home in that State and raised in New York city a regiment of Californians and those who had formerly resided on the Pacific coast. The regiment was completed about the 20th of June, 1861, and under Col. Matheson took part in the battle of Bull Run and in most of the subsequent battles in Virginia. His remains were sent to California, and buried with the honors of war at his former residence in that State.

Sept. 17.—MANSFIELD, Maj.-Gen. J. K. F. (*See* MANSFIELD.)

Sept. 17.—MCNEIL, Col. HUGH WATSON, an officer in the Union service, and commander of the Pennsylvania "Bucktail" regiment, killed at the battle of Antietam, while leading his regiment in a charge. He was a native of Seneca county, N. Y., and was of Scotch family, his father being a Cameronian clergyman; was born in 1830; was educated at Yale College, studied law at Auburn, and commenced practice in New York in 1857, but left his profession on account of ill health, removed to Pennsylvania, and engaged in banking. At the commencement of the war he joined the Bucktail regiment as a private, but was soon chosen first lieutenant, and rose by successive promotions to the command.

Sept. 17.—HINKS, Col. EDWARD W., an officer in the Union service, commanding the 19th regiment Massachusetts volunteers, killed at the battle of Antietam. He was born in Lynn, Mass., and had been prominent as a militia officer before the war, and in the spring and summer of 1861 commanded the 8th regiment of Massachusetts infantry, the regiment which so distinguished itself on the route from Annapolis to Washington by repairing the locomotives and rebuilding the railroad damaged by the secessionists. After the expiration of their term of service he returned to Massachusetts, raised the 19th regiment, and returned with it to the field. At the battle of Ball's Bluff he protected the retreat of the Federal troops, and in the battles on the peninsula and this side of the Rapidan his regiment was known as one of the "Massachusetts fighting regiments." At Antietam he was leading his troops in one of those desperate charges which won the day, when he received his death wound.

Sept. 17.—PARISEN, Lieut.-Col. PHILIP J., an officer in the Union service, at the time of his death in command of the 57th regiment New York State volunteers, killed at the battle of Antietam. He was a native of New York city and entered the service Dec. 21, 1861, as major of the 57th, and early in 1862 was promoted to a lieutenant-colonelcy. He took part in most of the battles on the peninsula and in those of August in the vicinity of Washington. He was shot through the body and instantly killed while leading his regiment at Antietam.

Sept. 17.—PERCIVAL, JOHN, a captain in the U. S. navy, died at Roxbury, Mass. He was a native of Massachusetts, and had been nearly 50 years in the navy. Under the act of February 28, 1855, he had been placed on the reserve list, and was absent from duty on leave at the time of his death.

Sept. 17.—CHILDS, Col. J. H., an officer in the Union service, colonel of the 4th Pennsylvania cavalry, and at the time of his death acting brigadier-general, killed at the battle of Antietam. He was a citizen of Pittsburg, Pa., and entered the service in July, 1861. He had distinguished himself in several battles for courage, coolness, and skill, and at Antietam was in command of a brigade of cavalry.

Sept. 17.—COLEMAN, Col. AUGUSTUS H., an officer of the Union service, commanding the 11th Ohio regiment, killed at the battle of Antietam. He entered the service as major of the 11th regiment, at the beginning of the war, and after its reorganization, on the resignation of Lieut.-Col. Frizell, in Jan. 1862, was promoted to the rank of lieutenant-colonel and soon afterward of colonel. His regiment had done service in western Virginia as a part of Cox's brigade, and Col. Coleman had a high reputation for bravery and daring.

Sept. 17.—CROASDALE, Col. SAMUEL, an officer of the Union service, commanding the 128th Pennsylvania regiment, killed at the battle of Antietam. He was a citizen of Doylestown, Pa., and had a large practice in that town as a lawyer. Immediately after the President's proclamation of April 15, 1861, he volunteered as a private in Capt. Davis's company of three months' men. On their discharge he resumed the practice of his profession, but on the governor's call for nine months' men, in the summer of 1862, he opened a recruiting office and raised a full company of the citizens of Doylestown and vicinity in a few days. The 128th regiment, composed almost entirely of citizens of

Berks, Lehigh, and Bucks counties, was organized soon after, and he was appointed its colonel. After a few weeks' service in camps of instruction near Washington, the emergencies of the invasion of Maryland required the services of Col. Croasdale's regiment in the field, and it marched with the grand army from Washington. At Antietam, though a new regiment, it was assigned an important position, and Col. Croasdale was leading it forward through a tempest of shot and shell when a musket ball passing through his brain killed him instantly.

Sept. 18.—Kingsbury, Col. Henry W., an officer of the U. S. army, commanding, at the time of his death, the 11th regiment Connecticut volunteers, died of wounds received the previous day at the battle of Antietam. He was a son of the late Major Julius J. B. Kingsbury, and was born in Connecticut in 1837. He entered West Point in 1856 and graduated in 1861, second in his class. Soon after his graduation he was assigned to the duty of drilling the volunteers at Washington, and after a short time put in command of a battery with the rank of captain. His thorough military knowledge and skill as an officer recommended him to the authorities of his native State, and he was offered the command of the 11th regiment. He acquitted himself nobly in his new position, and was regarded as an officer of great promise. In the battle of Antietam he was four times seriously wounded.

Sept. 18.—Curtis, Harvey, D. D., a Presbyterian clergyman, and at the time of his death president of Knox College, died at Galesburg, Illinois. He was a native of Adams, Jefferson county, New York, and was born in 1806. He graduated at Middlebury College, Vermont, in 1831, with the highest honors of his class, studied theology for the next three years at Princeton, N. J., and in 1835 was ordained pastor of the Congregational church in Brandon, Vermont. In 1841 he accepted an appointment from the American Home Missionary Society as their agent for Ohio and Indiana, and in 1843 received and accepted a call to the pastorate of the 2d Presbyterian church in Madison, Ind. After seven years of pastoral labor there he removed to Chicago, Illinois, to take the pastorate of the 1st Presbyterian church in that city. On the resignation of Rev. Dr. Blanchard he was elected president of Knox College, at Galesburg, in 1858.

Sept. 19. Little, Gen. Henry, an officer in the Confederate service, killed at the battle of Iuka. He was a native of Mississippi, born about 1818, graduated at West Point in 1839, appointed 2d lieutenant in the 5th infantry, and distinguished himself at Monterey and Cerro Gordo. He had been promoted in 1858 to a captaincy in the 7th infantry, and at the commencement of the war was in command of the post of Albuquerque in New Mexico. He resigned, and was appointed a brigadier-general in the Confederate service, in the army of the Southwest.

Sept. 19.—Dwight, Lieut.-Col. Wilder, an officer of the Union service, lieutenant-colonel, at the time of his death, of the 2d Massachusetts volunteers, died in the hospital at Boonsboro', Md., of wounds received in the battle of Antietam. He was a son of William Dwight, of Boston, and was born about 1832, and graduated at Harvard University in 1853. He joined the 2d regiment at its formation, and had won the reputation of a brave and skilful officer. In the retreat of Gen. Banks down the Shenandoah Valley in May, 1862, he was distinguished for his daring and the solicitude which he manifested for the safety of his men; and was taken prisoner during this retreat. At Antietam he was twice wounded. Three of his brothers are in the army.

Sept. 29.—Taber, Isaac Congdon, a prominent merchant of New Bedford, Mass., and at the time of his death mayor of that city, died at his residence in New Bedford. He was elected mayor in 1859, and continued in office by successive reëlections till his death.

Sept. 29.—Nelson, Major-Gen. William. (*See* Nelson, W.)

Sept. 29.—Rodman, Gen. Isaac Peace, a brigadier-general in the Union service, died near Hagerstown, Md., of wounds received in the battle of Antietam. He was a native of South Kingston, R. I., born Aug. 28, 1822. He received a good early education, and engaged while yet a youth in the woollen manufacture, and had attained a high reputation for the character of the goods manufactured by his firm, which were sold in all parts of the country. At the commencement of the war he was a member of the State Senate; but at once resigned his seat, recruited a company for the 2d Rhode Island regiment (Col. Slocum's), and went to the war as its captain. His company were the first to fire upon the enemy at the battle of Bull Run, and fought bravely throughout that battle. He was appointed lieutenant-colonel of the 4th Rhode Island regiment at its organization, and soon after promoted to the colonelcy of that regiment, which was detailed to the Burnside expedition. At Roanoke Island Colonel Rodman took an active part, and at Newbern his regiment made the brilliant charge which won the day. His regiment also participated in the investment and reduction of Fort Macon, but before that was accomplished, Col. Rodman had received his commission as brigadier-general. An attack of typhoid fever induced by overexertion and exposure rendered it necessary for him to come home on sick leave, and he only recovered in time to join Gen. Burnside at Fredericksburg. Here he found himself, though only a brigadier-general, in command of Gen. Parke's division. In the month of battles which followed, Gen. Rodman did his full share, quietly and unostentatiously. At South Mountain and Antietam he displayed military genius of a high order, and in the terrible conflict by which the stone bridge was carried and held, he was stricken down.

Sept. 29.—Hall, J. Prescott, a prominent member of the New York bar, died at Newport, R. I. He was born in 1795, had early attained eminence as a lawyer, and during the administrations of Presidents Tyler and Fillmore was district attorney for the southern district of New York.

Sept. 29.—Prentice, William C., at Augusta, Ky., from wounds received in the conflict at that place on Sept. 27th. He was the eldest son of Geo. D. Prentice, for many years editor of the "Louisville Journal," and a young man of remarkable powers. An intense Southern sympathy, in spite of the arguments, remonstrances, and entreaties of parents and friends, made him join the Confederate ranks, and after a brief service of five weeks, he was fatally wounded. On his departure to join the Confederate force in Kentucky, his mother is said to have followed him four or five miles, with the hope of persuading him to return, but he declined her entreaties, saying: "Mother, I implore you not to ask me to stay. Honor calls me. I have talked long enough. I must now do something else, and show myself in my true colors."

Sept. 30.—Hallett, Benjamin F., a prominent democratic politician and lawyer of Massachusetts, died in Boston. He was born at Barnstable, Mass., in 1798, graduated at Brown University in 1816, studied law, and was admitted to the bar in Boston, but not coming speedily into an extensive practice, turned his attention to editorship, at first in Providence, but after a short time in Boston, where, upon the organization of the anti-masonic party, he became editor-in-chief of the "Boston Advocate," which was started to maintain the principles of that party. In 1827 he assumed the editorship of the "Boston Daily Advertiser," and in that paper advocated, with great zeal and earnestness, anti-masonry, temperance, and the views of the emancipationists. His uncompromising avowal of his sentiments made him many and bitter enemies, and his paper became so unpopular that in 1831 he left the editorial chair. Failing to secure from Mr. Clay pledges by which he could receive the votes of anti-masons, he became and remained to his last day one of the bitterest opponents of that statesman. After the decay of the anti-masonic party, Mr. Hallett joined the democratic party. Though seldom in office (he was U. S. district attorney for Massachusetts under President Pierce), he exerted a powerful influence on the party, was a delegate at most of its national conventions, and the chairman for many years of its national committee. He aided the nomination of Franklin Pierce and James Buchanan, and was the author of the Cincinnati platform of 1856. In private life, he was one of the most amiable, genial, and agreeable of men, and a pattern husband and father.

Sept. 30.—Miller, Jacob W., ex-U. S. Senator from New Jersey, died at Morristown, New Jersey. He was born in German Valley, Morris county, in November, 1800. After enjoying the advantages of a good academical education, he studied law with his brother, W. W. Miller, and was admitted to the Morris county bar. He attained in a few years a large practice, particularly in the higher courts, and acquired distinction as a counsellor. In 1838 he was chosen, by the whigs, State Senator, and in 1840 was elected United States Senator, where he was regarded as an able and clear-headed legislator. In 1846 he was reëlected to the Senate and served until March, 1853, with entire satisfaction to his constituents. He opposed the compromise measures of 1850. In 1855 he avowed himself a republican, and lent his influence to the promotion of the measures of that party till his death. In private life few men have been more universally esteemed.

Sept. —. —Casey, Hon. Zadoc, died at Caseyville, Ill., aged about sixty-six years. He was lieutenant-governor of Illinois during Gov. Reynolds' term as governor, had been a member of Congress for two terms, and was a member of the Constitutional Convention of 1862.

Oct. 1.—Fisher, Elwood, an editor and statistical writer, died at Atlanta, Ga. He was born Oct. 1, 1808, and was of a family belonging to the Society of Friends, but has long been known as an ardent and extreme defender of slavery, and for years an open advocate of the secession of the Southern States, in favor of which he had written much. In 1850 he established in Washington a paper called the "Southern Press," having secession as its avowed object. About the commencement of the war, he went to Nashville, Tenn., and did all in his power to promote the plans and measures of the secessionists of that State. When Nashville was occupied by Federal troops he retired to Georgia.

Oct. 4.—Smith, Col. Joseph L. Kirby, of the 43d Ohio regiment, was killed at the battle of Corinth. He was born in 1836, was appointed a cadet of the Military Academy from New York, and graduated with the highest honors of his class in 1857, was at once appointed lieutenant of topographical engineers, accompanied the Utah expedition, was aide-de-camp to Gen. Patterson in 1860, and after his discharge appointed colonel of the 43d Ohio regiment, with which he served with distinction at Island No. Ten, his engineering abilities being brought almost constantly into requisition, and at the battle of Corinth, where he fell, had greatly distinguished himself for bravery and daring. He was a nephew of the Confederate general Edward Kirby Smith.

Oct. 4.—Rogers, Col.——— ———, a Confederate officer, killed at the battle of Corinth. He was from Texas, and was at that battle in command of a brigade. When, on the morning of the 4th, the Confederate troops, which had expected to capture Corinth with but a slight struggle, found themselves repulsed by the terrible fire of the Union battery Robinett, and were compelled to fall back into the timber for

protection, Gen. Van Dorn called for volunteers to carry the battery by storm. Col. Rogers at once volunteered, and 2,000 men stepped from the ranks to accompany him. After addressing them a few words of encouragement he gave the order to march, and they moved forward at a quick step, in solid column eight deep, directly in face of the battery. Before they reached it nearly one half their number had fallen; but there was no faltering, the rear ranks stepped to the front and filled the gaps; they reached the outworks, and though twice driven back, succeeded the third time in planting their flag upon the parapet, when a volley from the guns of the inner works, at short range, killed a large number, among whom was the rashly brave Rogers. Gen. Rosecrans, in his general order after the battle, rendered the homage due from a chivalric foe to the brave man who led this attack, where death was so inevitable.

Oct. 4.—Hackleman, Gen. Pleasant Adam, a brigadier-general in the Union army, killed at the battle of Corinth. He was a native of Franklin county, Indiana, born about 1817, was educated for the legal profession, and was prominent as a lawyer in the State. He became editor of the "Rushville Republican," about 1840, and continued as its editor till the commencement of the war. In 1841 he was a member of the Legislature of Indiana, and for several years afterward clerk of Rush county. In 1847 and 1858 he was a candidate for Congress, but was defeated on both occasions. In 1860 he was a member of the Republican National Convention at Chicago, and in 1861 of the Peace Conference at Washington. In 1861 he was appointed colonel of the 10th Indiana regiment, and served in Gen. Banks's corps in Virginia; his gallant and meritorious conduct there occasioned his promotion to the rank of brigadier-general, April 28, 1862, and in June, he was ordered to report to Gen. Grant, in the army of the Southwest. He took an active part in the battle of Iuka, and in the battle of Corinth was killed on the second day of the fight. He was a man of dignified and upright character and of superior abilities.

Oct. 6.—Colman, William Dean, a captain and assistant adjutant-general in the U. S. volunteers, and one of the staff of Brig.-Gen. Stanley, 2d division, army of the Mississippi, born in Salem, Mass., Sept. 15, 1827, the eldest son of Samuel Colman, publisher. On the breaking out of the war with Mexico he enlisted as a private in Walker's Mounted Rifles, and took an active part in the principal battles fought under Lieut.-Gen. Scott. When the first gun was fired by the Confederates at Fort Sumter he was assistant postmaster at New Orleans, but without stopping to count the cost, he abandoned all and hastened north to join the Union army. In the summer of 1861 he was appointed assistant quarter master, and in December a major in the Missouri State Militia, where he was actively occupied in the most hazardous parts of that State till February, 1862, when he was ordered by Major-Gen. Halleck to the staff of Brig.-Gen. Stanley. On the 5th July, he accepted from the president a commission as captain, and assistant adjutant-general of U. S. volunteers. He was in all the battles and skirmishes, with Gen. Stanley, from New Madrid and Island No. Ten to the most memorable and sanguinary battle of Corinth on the 3d and 4th October, where he received a mortal wound, and died on the 6th after two days of severe suffering. He was buried with military honors, being much beloved and esteemed by Gens. Rosecrans, Stanley, and all on the staff, for his bravery, patriotism, and strict adherence to duty.

Oct. 6.—Slamm, Levi D., a purser in the navy, died at Mamaroneck, Westchester county, N. Y., from the effects of a fall while going on board ship at Montevideo, in 1860. He was born in New York in 1812, and was for some years a leading democratic politician of the "hard money" school, and edited for a considerable time a democratic newspaper in the city. In 1846 he was appointed a purser in the navy, which office he held till his death.

Oct. 8.—Terrill, Gen. William R., a brigadier-general of the Union army, killed at the battle of Perryville. He was a native of Virginia, born about 1832, and appointed from that State a cadet at the Military Academy, where he graduated in 1853, and was immediately appointed brevet second lieutenant of the 3d artillery, from which he was transferred to the 4th artillery in November following as second lieutenant. In 1855 he was appointed assistant professor of mathematics at West Point. In 1856 he was promoted to a first lieutenancy, and in May, 1861, was appointed captain in the 5th artillery, and assigned to duty on the coast survey. He soon after raised a regiment of volunteers, was sent to Kentucky, where he commanded a battery in Gen. McCook's division, was transferred to the command of a brigade, and for his gallant and meritorious conduct at the battle of Shiloh, was appointed brigadier-general of volunteers, his commission bearing date Sept. 9, 1862. At Perryville, he was killed while urging forward his brigade against the enemy.

Oct. 8.—Jackson, Gen. James S., a brigadier-general in the Union service, killed at the battle of Perryville. He was a native of Kentucky, born about 1822, and educated for the bar. He had been some years in the practice of his profession, when at the commencement of the Mexican war he raised a regiment of volunteers, and served during the war. During his service in Mexico he had a difficulty with Col. Thomas F. Marshall, which resulted in a duel. On his return to Kentucky he resumed his practice first at Greenupsburg, and afterward at Hopkinsville, Ky., and in 1860 was elected to Congress from the 2d congressional district of that State. In the autumn of 1861 he resigned his seat in Congress, and took

command of the 3d regiment Kentucky cavalry, was an active participant in most of the battles of the winter and spring of 1861, and on the 16th of July was commissioned a brigadier-general. In the battle of Perryville he commanded a division of McCook's corps, of the army of the Ohio.

Oct. 9.—Webster, George, colonel of the 98th Ohio volunteer infantry, died of wounds received the preceding day in the battle of Perryville. He was born in Butler county, Ohio, in 1822. He volunteered in the Mexican war as a private soldier, but was promoted to be sergeant-major. After his return from Mexico he commenced the practice of law in Jefferson county, Ohio. In June, 1861, he volunteered as major of the 25th Ohio, and was promoted to a lieutenant-colonelcy in that regiment, and on the organization of the 98th regiment, in the summer of 1862, was appointed colonel. This regiment was ordered to join Gen. Buell's army, and at the battle of Perryville, Col. Webster was put in command of one the brigades of Jackson's division of McCook's corps.

Oct. 11.—Tallmadge, Capt. Greer, quartermaster-general at Fortress Monroe, died of disease of the liver, at his quarters in that fortress. He was born in Dutchess county, New York, in 1826. He was the son of Hon. N. P. Tallmadge, late U. S. Senator from New York. He graduated at West Point in 1848, and was appointed brevet second lieutenant in the 1st artillery; early the following year he sailed with a detachment of United States troops for Fort Vancouver, Oregon Territory, where he was stationed for a year; returning in 1850 he was appointed aid to Gen. Wool, and after three years' service on his staff was ordered to Fort Niagara, and subsequently to Fort Ontario. In 1853 he was promoted to a first lieutenancy in the 4th artillery, and 1857 accompanied the expedition to Utah, as an officer of Capt. (now General) Phelps's battery. In 1858 he was ordered to Fortress Monroe, and in May, 1861, promoted to the rank of captain in the quartermaster's department. The great labor of organizing the quartermaster's department for so large a force as was congregated in the military department of Fortress Monroe, and the added duties of assistant adjutant-general, which he discharged for a time, made his position one of great toil and responsibility, but they were admirably performed. The "contraband" idea put in practice by Gen. Butler, originated with him.

Oct. 11.—Cheeseman, John C., M. D., an eminent physician and surgeon, died in New York city, aged 75.

Oct. 13.—Cooper, Edward S., M. D., an eminent surgeon, died in San Francisco, Cal. He was a native of Somerville county, Ohio, and was born in 1821. After receiving a very thorough medical education at Cincinnati and St. Louis, he commenced practice in Peoria, Ill., but in 1855 removed to San Francisco, where his eminent abilities and remarkable skill as an operating surgeon, soon placed him at the head of the profession, and gained him a high reputation among his professional brethren in the Eastern States, and in Europe. He took an active part in the organization of the medical department of the University of the Pacific, and at the time of his death, was its professor of surgery and president of its faculty.

Oct. 15.—Hudson, Captain William L., U. S. navy, died of apoplexy in Brooklyn, N. Y. He was born in New York, May 11, 1794, entered the navy in 1816, and had worked his way up from a midshipman to a captaincy. He was second in command in Commodore Wilkes's exploring expedition, and was commander of the Peacock sloop of war when she was lost by her pilot's carelessness, on the rocks at the mouth of Columbia river. He was for several years commandant of the Brooklyn navy yard, in 1855 was promoted to a captaincy, and in 1857 was assigned to the command of the Niagara, on her first Atlantic cable expedition. This proving unsuccessful, the effort to lay the cable was repeated in the following year, and for his services to science on that occasion, Capt. Hudson was honored with an ovation by his fellow citizens of New York, and received from the governments of Great Britain and Russia several valuable gifts and other marks of distinction. On his return he was assigned to the command of the Charlestown navy yard. In August, 1862, he was put on the retired list, and appointed one of the board of lighthouse inspectors, which office he held at the time of his death.

Oct. 16.—Anderson, Gen. George B., an officer in the Confederate army, died in Raleigh, N. C. He was born in Wilmington, N. C., in 1827, entered West Point from that State in 1848, graduated in 1852, and was appointed brevet 2d lieutenant in the 2d dragoons, promoted to be 1st lieutenant in 1855, and in 1858 appointed adjutant of his regiment with the rank of captain. He resigned in April, 1861, entered the Confederate army, where he was soon appointed brigadier-general, and at the battle of Antietam received a wound in the foot, which eventually proved fatal.

Oct. 17.—James, Gen. Charles T., an American inventor and ex-U. S. Senator, died at Sag Harbor, L. I., from wounds received by the explosion of a shell the previous day. He was born in West Greenwich, Rhode Island, in 1804, and having a remarkable aptitude for mechanical pursuits he early learned the trade of a carpenter, and at the age of 19 began to study the science of mechanics, with a view to master the business of the cotton manufacture, proceeding at the same time as a workman, step by step, through every department of the machine shops where the machinery for the cotton mills was manufactured. This accomplished, he removed to Providence, and became superintendent of Slater's steam cotton mills, and while in this position, was chosen major-general of the Rhode Island militia. In 1838, Brown University con-

ferred on him the honorary degree of master of arts. After a few years' residence in Providence he removed to Newburyport, Mass., where he erected the Bartlett and James Mills, and subsequently erected cotton mills in Salem, Mass., and in the States of New York, Pennsylvania, Indiana, and Tennessee, and returning in 1849 to Rhode Island, he erected the Atlantic Delaine mill at Olneyville. In 1851 he was elected to the U. S. Senate, and on his retirement from the Senate, he devoted his attention to the perfection of several inventions, among which was a rifled cannon and a new projectile, in the ultimate success of which he had the utmost confidence. He was thoroughly versed in the use and philosophy of firearms, and had long been regarded as one of the best marksmen in the State. It was by the premature explosion of one of his projectiles that he met with his untimely end.

Oct. 20.—Hewitt, Major Ira L., a paymaster in the United States army, died in the city of New York. He resided for some years in Illinois, but emigrated to Texas in 1840 and had there become one of the associate justices of the supreme court of the State. At the commencement of the war, his attachment to the Union being known, his life was in danger, but he succeeded in escaping from the State by stratagem, and joining the army served at Ship Island and New Orleans under Gen. Butler, and when Col. A. J. Hamilton came north, accompanied him and was assigned to duty in New York.

Oct. 30.—Mitchel, Maj.-Gen. Ormsby McKnight. (*See* Mitchel, O. M.)

Nov. 5.—Pope, Col. Curran, commander of the 15th Kentucky regiment, died at Danville, of wounds received at the battle of Perryville, on the 8th of October previous. He was a member of one of the most distinguished families of Kentucky, and was born in Louisville about 1813. He entered West Point as a cadet in 1829 and graduated in 1834, but soon after left the army to follow the profession of civil engineer. Early in the war a number of his relatives joined the Confederate army, but he adhered firmly to the cause of the Union, and abandoning his profession, raised the regiment which he commanded at the time of his death.

Nov. 6.—Jameson, Gen. Charles Davis, died at Oldtown, Me., from camp fever, brought on by his exertions at the battle of Fair Oaks and the pestilential influence of the climate. He was born at Gorham, Me., Feb. 24, 1827; while yet very young, his parents removed to Oldtown, Me., where after receiving a limited academic education he at an early age embarked in the lumber business, and eventually became one of the largest manufacturers and shippers of lumber on the Penobscot. He had been an active adherent to the Douglas section of the democracy, and in 1860 was a Douglas delegate to the Charleston Convention, where he became convinced of the intentions of the Southern States to secede. At the commencement of the war, he was one of the first, if not the first, of the prominent democrats of the State to offer his services to the Government, and was placed by Gen. Washburn in command of the first regiment which left that State for the beleaguered capital. In the battle of Bull Run he commanded this regiment (2d Maine) and distinguished himself by his bravery, and with his regiment protected the rear in its retreat to Centreville. For his conduct on that day he was appointed brigadier-general of volunteers, on the 3d of Sept. 1861. In the autumn of 1861 he was, without his knowledge or consent, nominated by the democrats of his own State for governor, and polled a heavy vote though defeated by the republican candidate. In the spring and early summer of 1862, he took an active part in the campaign on the peninsula, in Gen. Heintzelman's corps, and by his exertions there, both before and at the battle of Fair Oaks, contracted the fever which finally terminated his life. He ranked high as a disciplinarian and as a brave and competent commander.

Nov. 7.—Pendergrast, Commodore Garrett, J., commandant of the navy yard at Philadelphia, died in that city, aged 62 years. He was a native of Kentucky, and entered the navy when only 11 years of age, and had been in the service since that time, passing through all the grades. In 1860 he was flag officer of the home squadron, and did service at the commencement of the war in the protection of the important harbor of Hampton Roads. In the autumn of 1861 he was assigned to the command of the navy yard at Philadelphia. He died of paralysis.

Nov. 7.—Berrian, Rev. William, D. D., rector of Trinity church, New York, died in that city. He was a native of New York city, born in 1787, and baptized in Trinity parish. He was educated at Columbia College, ordained deacon in 1810, and in 1811 became assistant minister of Trinity parish, his continuous connection with which was only broken by a brief settlement at Belleville, N. J., and two journeys abroad, in a period of more than 50 years. Though not a brilliant man he was earnest, conscientious, and able, and the position which he occupied as rector of the oldest and wealthiest of the metropolitan churches, never made him haughty or vain. He was much beloved by the older citizens of New York.

Nov. 9.—Collyer, Thomas, one of the most eminent ship builders of New York city, died at his residence there.

Nov. 10.—Lavalette, Rear Admiral Elie A. F., of the United States navy, died at Philadelphia, where he was waiting orders. He was a native of Virginia, and had been in the navy over 50 years, having entered it when a mere lad. The Navy Retiring Board, on the 1st of August, 1862, reported in favor of his promotion to the rank of rear admiral, and at the same time of placing him on the retired list for long and meritorious service. His last previous

appointment had been that of commandant at Sackett's Harbor, N. Y.

Nov. 11.—Morgan, Matthew, Sen., an eminent New York shipping merchant of the well known firm of Matthew Morgan and Sons, died in New York city.

Nov. 11.—Porter, Hon. James Madison, died in Easton, Penn. He was the son of Gen. Andrew Porter, of the Revolutionary War, and was born in 1792. He was educated for the bar, but served as a volunteer in the war of 1812. He was a member of the Constitutional Convention of Pennsylvania in 1838, and bore an important part in the revision of the State Constitution. In 1843 he was appointed Secretary of War in President Tyler's cabinet, and since his retirement from the cabinet had held many prominent positions. He was greatly honored and esteemed in Easton, where he had resided for more than 40 years. He was one of the founders of Lafayette College in that city, and for 25 years president of its board of trustees.

Nov. 16.—Preston, Hon. William Ballard, a senator from Virginia in the Confederate Congress, died at his residence in Montgomery county, Va. He had been a member of the Congress of the United States, and was Secretary of the Navy under President Taylor.

Nov. 22.—Patterson, Brig.-Gen. Francis E., killed himself by the accidental discharge of his pistol in his tent at Fairfax Court House during the night. He was a native of Philadelphia, born in 1827, and had entered the army from civil life as second lieutenant of the 1st artillery in June, 1847. In March, 1855, he was promoted to a captaincy in the 9th infantry, then first organized. In May, 1857, he resigned, and devoted himself to civil pursuits. On the raising of the 115th Pennsylvania volunteers, Gov. Curtin offered him the command of the regiment, which he accepted, and acquitted himself so ably in the field, that on the 11th of April, 1862, he was appointed brigadier-general, and in the subsequent battles on the peninsula rendered efficient service.

Nov. 27.—Hanchett, Hon. Luther, representative in the 37th Congress from the 2d district of Wisconsin, and representative elect in the 38th Congress from the 6th district, died at Madison, Wisconsin, of brain fever. He was, at the time he was taken ill, on his way to Washington to take his seat in Congress.

Nov. 28.—Irvin, Gen. James, storekeeper of the Philadelphia navy yard, died in Philadelphia, aged about 60 years. He was a native of Pennsylvania, and had formerly been a prominent merchant of Centre county. He represented his district in Congress from 1841 to 1845, and was at one time the whig candidate for governor. During the Fremont and Lincoln campaigns he took an active part, and in the latter contributed materially to the success of the party to which he was attached in the State. He was one of the founders of the Pennsylvania Agricultural College, and gave two hundred acres of land for a farm for it.

Nov. —.—Wilkinson, Hon. John, died in Syracuse, N. Y., aged 70 years. He was one of the founders of that city, and had been for many years a prominent man in the State of New York, both in railroad and political matters. He had been for some years a leading director of the New York Central railroad, and was at one time president of the Michigan Central railroad.

Nov. —.—Villipigue, Gen. John B., a brigadier-general of the Confederate army, died at Port Hudson, La., of pneumonia. He was born in South Carolina about 1834; it is said that his father was of French and his mother of Spanish extraction. He graduated at West Point in 1854; was appointed to a second lieutenancy in the 2d dragoons, and was promoted to a first lieutenancy in 1857, and assigned to service in the Southwest. In March, 1861, he resigned from the U. S. service, and at once accepted an appointment as colonel in the Confederate service. In Nov. 1861, he was wounded at the bombardment of Fort Pickens, and soon after was made a brigadier-general in the Confederate army. He was assigned to the command of Fort Wright, and retained it until the evacuation of that post; participated in the battle of Corinth in October, 1862, and was soon after assigned to the command of Mobile.

Dec. 6.—Jackson, Claiborne F., late Governor of Missouri, died at Little Rock, Ark., of cancer in the stomach. He was born in Fleming county, Ky., April 4, 1807, and emigrated to Missouri in 1822. In the "Black Hawk" war he raised a volunteer company, and served as captain. He was for ten or twelve terms a member of one or the other House of the Missouri Legislature, and for one term Speaker of the House. In the Session of 1848 he drew up and carried through the Legislature the famous Jackson resolutions. He was one of the prime movers in the organization of the present banking system of Missouri, and for a number of years Bank Commissioner. In 1860 he was elected Governor. His own sympathy with secession, and his determination to draw the State into it soon became evident, and having fled from the State capitol on the approach of Gen. Lyon, in July, he was deposed by the State Convention, and Gov. Gamble appointed provisional governor in his place. He acted for a short time as a general in the Confederate army, but his disease, from which he had long suffered, becoming aggravated, he retired to Little Rock, where he died after some months of suffering.

Dec. 7.—Woodbridge Timothy, widely known as "the blind minister," died at Spencertown, Columbia county, N. Y. He was born in Stockbridge, Mass., Nov. 24, 1784, and was a grandson of Jonathan Edwards, the noted theologian. While at Williams College his vision became impaired, and for most of his senior year he was entirely blind. After graduating he studied law, and in 1810 entered

Andover Theological Institution to prepare for the ministry. In 1818 he received a call from the Presbyterian church in Spencertown to become their pastor, which he accepted, and remained in that relation till 1851, when in consequence of ill health he asked for a dismission, but continued to preach occasionally till his death. In 1846 he received from Williams College the degree of D. D. Notwithstanding his infirmity he was very active and cheerful, a hard student, and an interesting preacher. In his method of conducting religious worship there was nothing to indicate to a stranger his blindness; the hymns and portions of the Scripture, though really repeated, were apparently read, and neither his appearance or manner gave indication that he was devoid of sight. In the vigor of his logic, and the clearness of his descriptions, he strongly resembled his distinguished ancestor.

Dec. 8.—Osgood, Samuel, D. D., a Congregational clergyman, died in Springfield, Mass. He was a native of Fryeburgh, Me., and was born in February, 1774. He graduated at Dartmouth College in 1805, and settled as pastor of the First Congregational church in Springfield in 1809. He continued in this relation till his death, a period of more than 53 years, though since 1854 he had a colleague, and had retired from the more laborious duties of the pastorate. He was an able preacher, and had taken an active and leading part in most of the great reforms of the day. He published a number of sermons and addresses.

Dec. 10.—Dickerson, Hon. Philemon, Judge of the United States District Court for the District of New Jersey, died at his residence in Paterson, N. J. He was born in Morris county, N. J., in 1788. After completing his college course he studied law with his brother in Philadelphia, Hon. Mahlon Dickerson, and in 1815 settled in Paterson. In 1833 he was elected to Congress, and reëlected in 1835, and again in 1839; in 1842 he was appointed judge of the U. S. district court, over which he presided with dignity and ability till his death.

Dec. 12.—Fuller, Rev. Arthur B., a Unitarian clergyman, and chaplain of the 16th regiment Massachusetts volunteers, killed while crossing the Rappahannock with a portion of his regiment, who had volunteered to cross the river, and drive off the sharpshooters who were preventing the laying of the pontoon bridges. He was born in 1824 at Cambridgeport, Mass., and was the son of Hon. Timothy Fuller, an eminent lawyer and member of Congress from 1817 to 1825, and a brother of the celebrated Margaret Fuller, Countess D'Ossoli. In his childhood the family removed to Groton, Mass., and by an accident in his boyhood Arthur lost an eye. He was fitted for college by his sister, and entered Harvard university in 1839, graduating in 1843. After studying theology at the Cambridge Divinity School, Mr. Fuller went to Illinois as a teacher and missionary, and after some years' labor there returned—first to Boston, and afterward to Watertown, Mass., where he was settled as pastor. He volunteered as a chaplain early in the war, and not only fulfilled his duties in that capacity unexceptionally, but by his earnest sympathy for the members of his regiment, and his careful solicitude for their health, their mental improvement, and their moral welfare, became the idol of his regiment, and exerted a powerful and salutary influence on other bodies of men in their vicinity. His patriotism and courage led him to risk all perils with his men, and when several companies of them volunteered as a forlorn hope in the mission of crossing the Rappahannock under a deadly fire, his prompt determination to go with them greatly stimulated their enthusiasm. He edited his sister's works, and had published several original volumes.

Dec. 13.—Jackson, Brig.-Gen. Conrad Feger, was killed at the battle of Fredericksburg, where he commanded the brigade formerly known as Gen. Ord's. He was a citizen of Pennsylvania, and previous to the war had been connected with the Pennsylvania Central and Reading railroads, where he was well and favorably known. Soon after the commencement of the war he was appointed colonel of the 9th regiment of the corps of Pennsylvania reserves, under the command of Gen. George A. McCall. The corps was ordered to Washington, July 22, 1861, and Col. Jackson's regiment entered that city on the 26th of that month with full numbers and completely equipped, and encamped near Seventh street. They were subsequently ordered to Tenallytown, and formed part of the 3d brigade then under command of Gen. E. O. C. Ord. The regiment was subsequently stationed on the heights south of the Potomac, and formed a part of the brigade which gained a victory at Dranesville. On the peninsula Col. Jackson distinguished himself at Mechanicsville and Gaines' Mills, and participated in the remaining contests of those memorable seven days. He also took an active part in the battles between the Rappahannock and Alexandria in the latter part of August; and having, on the departure of Gen. Ord to the West, been promoted to the command of the brigade, he led his troops into the action of South Mountain and Antietam. At Fredericksburg he was at the head of his troops, leading them on to a charge, when a rifle ball passed through his head, killing him instantly.

Dec. 13.—Bayard, Brig.-Gen. George D., an officer of the United States army, was killed in the battle of Fredericksburg. He was a native of New York, born about 1836; he entered West Point as a cadet in 1852, and graduated in June, 1856, receiving immediately an appointment as 2d lieutenant of the 4th cavalry. On the 20th of Aug. 1861, he was promoted to a captaincy in his regiment, and was allowed leave of absence to take command of the 1st Pennsylvania volunteer cavalry attached to

Gen. McCall's reserve corps, and participated in the various battles of that fighting corps. On the 20th of Nov. 1861, he made a most brilliant and successful dash at the head of his regiment upon Dranesville. On the 10th of June, 1862, he was nominated as brigadier-general of volunteers commanding cavalry, his commission dating from the 28th of April. During the autumn he had done excellent service with his brigade, making frequent dashes into the enemy's lines, and driving them from the gaps of the Blue Ridge. At Fredericksburg he was attached to Gen. Franklin's corps. He was buried with military honors at Princeton, N. J.

Dec. 13.—Curtis, Lieut.-Col. Joseph Bridgham, was killed at Fredericksburg while leading his regiment in a charge. He was born in New York in 1836, and was a son of the late George Curtis, president of the Continental Bank, and brother of the author, George Wm. Curtis. He had received an education as an engineer, and at the commencement of the war was a member of the engineer corps of the Central Park, and volunteered in the 7th regiment N. Y. S. M. as an engineer. Soon after that regiment was mustered out of the service he reëntered the volunteer army as adjutant of the 4th Rhode Island regiment, one of the regiments attached to the Burnside expedition. He distinguished himself at the capture of Roanoke Island for coolness and daring, and was soon after appointed by Gen. Rodman assistant adjutant-general on his staff. The ability he displayed in this position led to his promotion soon after, at Gen. Burnside's request, to the lieutenant-colonelcy of the 4th Rhode Island, and with his regiment he joined the army of the Potomac on the peninsula, and was with it in that succession of terrible battles between the Rappahannock and Washington, and at South Mountain, and Antietam. In the last-named battle his regiment was so cut up that it was by command of the general withdrawn from the field, but the lieutenant-colonel did not go with it; seizing the musket and cartridge box of a dead soldier, he joined the ranks of a Pennsylvania regiment, and did duty as a private to the close of the battle. At Fredericksburg he was in command of the regiment, the colonel being disabled by a wound.

Dec. 20.—Baker, William L., American consul at Guaymas, on the western coast of Mexico, was murdered by a band of Apache Indians while visiting some silver mines near that city. He was a native of Rhode Island, but was appointed as consul from Maryland.

Dec. 24.—Pearce, Hon. James A., U. S. Senator from Maryland, died at Charleston, Md. He was a native of Alexandria, Va., and was born Dec. 14, 1805. He graduated at Nassau Hall, Princeton, in 1822, and devoting himself to the legal profession, settled in Maryland, whence his family had emigrated. He early entered upon political life, being a member of the Legislature in 1831, and in 1835 was elected to Congress, where he served two terms, and in 1841 was reëlected for a third time. In 1843 he was chosen U. S. Senator, and continued to represent Maryland in the Senate till his death. In the Senate he did much for the promotion of science, being an earnest advocate of the coast survey, and, as one of the regents of the Smithsonian Institution, was active in carrying out its great principle of the diffusion of knowledge among men. He was a member of the democratic party, and ardently devoted to the preservation of the Constitution and the Union.

Dec. 30.—Bulkley, Justus R., died at his residence in Rye, Westchester county, N. Y. He was born in 1813 at New Haven, graduated at Yale College, and entering the legal profession in New York city, soon attained a good practice. Being a large stockholder in the New York and New Haven Railroad Company, he was elected, when the overissues of stock in 1854 had nearly ruined the company, as its president. He was annually reëlected to the presidency, which he held at the time of his death.

Dec. —.—Owsley, William, ex-Governor of Kentucky, died at Danville, Ky., aged about 70 years. He was a man of great decision, firmness, and integrity of character. In 1824 he was Judge of the Supreme Court of Kentucky, and though young, maintained with great courage the principle of anti-repudiation, which Henry Clay had so eloquently advocated. The repudiation party, who were a majority in the Legislature, attempted to get rid of the inflexible judge by abolishing the supreme court and establishing a new one, but he held his position firmly, and the act of the Legislature was by the Supreme Court of the United States declared unconstitutional. When partisan zeal expired the people honored with their confidence the man who had dared to be just. In 1844 he was elected governor of the State by the whig party, and served for two terms.

OBITUARIES, Foreign.—*Jan.*10.—Wyatt, Matthew Cotes, an eminent English sculptor, died at his residence in Paddington, London, aged 84 years. He was educated at Eton, where he was the contemporary of Lord Stuart de Rothsay. At the age of nineteen he was employed under the immediate patronage of His Majesty George III, in the design and execution of several works of art at Windsor Castle. The most remarkable of these was the cenotaph in St. George's Chapel, Windsor, to the memory of Her Royal Highness, the Princess Charlotte Augusta. He subsequently attained a high reputation by his equestrian statues, among which are those of the Duke of York, the Duke of Wellington, and the horse for the statue of King George III, at the east end of Pall Mall. One of his finest specimens of sculpture was his "Bashaw," the favorite Newfoundland dog of the late Earl of Dudley, to whom a poetical allusion was made by Lord Byron.

Jan. 10.—Borrer, William, F. R. S., an English botanist, died at his residence at Barrow-hill, Sussex, aged 80 years. In his extensive and accurate knowledge of the plants of the British Islands, he had probably no equal; and there was scarcely an important work upon British botany for the last fifty years, that had not acknowledged his assistance. In 1813 he commenced, in conjunction with the late Mr. Dawson Turner, a work on British lichens, but, owing to the death of the publisher and other adverse circumstances, it did not see the light until 1839. The "English botany" is also largely indebted to his pen for valuable contributions. He was a patron also of all the kindred sciences, and especially interested himself in the education of the poorer classes.

Jan. 27.—Hawtrey, Edward Craven, D.D., provost of Eton, died at the Lodge, Eton College. He was born at Burnham, Bucks, May 7, 1789; was educated at Eton, and admitted as a scholar of King's College, Cambridge, in 1807, and three years after became a fellow of that college. In 1814 he assumed the responsible and arduous duties of assistant master at Eton, and upon the resignation of Dr. Keate in 1834, was appointed head master. In 1853 upon the death of the Rev. Francis Hodgson, he was elected provost. As a member of the Roxburgh Club, he was well known in literary circles, and his intimate acquaintance with books enabled him to collect a library of great value. He was an accomplished scholar in the French, German, and Italian languages, and his translations were remarkable for their beauty and idiomatic propriety. His "*Il Trifoglio*" contains translations of poems, with a few original pieces in Greek, Italian, and German; the versions are from French and English into Greek,—from Latin, English, and German into Italian,—and from English into German, all executed with surprising accuracy. His administration at Eton gave evidence of superior wisdom and judgment, and restored to the college its character for classical preëminence, which for a time had seemed impaired.

Jan. 27.—Horne, Rev. Thomas Hartwell. (*See* Horne, Rev. T. H.)

Jan. 28.—Attree, W. Wakeford, an English barrister, died at Brighton, aged 55 years. He was educated at Eton, whence he proceeded to the University of Cambridge, where he graduated. In 1833 he was admitted to the bar by the Honorable Society of the Middle Temple, and at once joined the home circuit, and Sussex sessions. He was recorder of Hastings, Rye, and Seaford, and was known in legal circles as the editor of a report of the celebrated Braintree Church-rate case, and reporter of the "Law Journal" of cases decided by the House of Lords. He was a vice-president of the Brighton Royal Literary and Scientific Institution, and of the School of Art, a member of the Sussex Board of Examiners, and of the Council of Brighton College.

Jan. 28.—Symington, W., D. D., professor of theology in the seminary of the Reformed Presbyterian Church in Scotland, died at Glasgow in the 67th year of his age, and the 43d of his ministry. His works on the "Atonement and Intercession of Christ," and on the "Mediatorial Dominion of Christ," are the best known to the public. He was also the author of a volume of sermons.

Jan. 30.—Russell, John, an English barrister, died at Southbank, near Edinburgh, aged 82 years. As early as 1803 he was a member of the Society of Writers to the "signet." When the Jury Court was established, he was appointed one of the principal clerks, and continued to discharge the duties of that office until the Jury Court was merged in the Court of Sessions, when he became one of the Principal Clerks of Session. He was one of the managers of the great musical festivals held in Edinburgh more than forty years since upon the introduction of the music of Handel, Mozart, Beethoven, Rossini, and other great masters. He was one of the original founders of the Edinburgh Academy, for many years treasurer of the Royal Society, and likewise a director of the Union Bank, Edinburgh Life Assurance, and of many other associations.

Jan. 31.—Mackenzie, Rt. Rev. Bishop. (*See* Mackenzie.)

February 4.—Biot, Jean Baptiste, a celebrated French savant, died in Paris. He was born in that city, April 21, 1774. He was educated at the Lyceum of Louis le Grand, and in 1793 served as an artilleryman in the army of the North. In 1794 he entered the Polytechnic School at Paris, and after graduating, was appointed professor in the Central School of Beauvais, from whence, in 1800, he was called to the chair of Physical Science in the college of France. In 1803 he became a member of the Academy of Sciences, the year following became connected with the observatory, was soon after named a member of the bureau of longitudes, and was associated with Arago and Gay-Lussac in many important scientific researches. He accompanied the latter, in 1804, in his first balloon ascent, and from 1806 to 1809, was engaged in Spain with Arago in a series of triangulations to measure an arc of the meridian. On his return to Paris in 1809, he was elected professor of physical astronomy to the faculty of Sciences. In 1817 he visited the Orkneys to complete his labors on the arc of meridian. In 1840 the Royal Society of Great Britain awarded him the Rumford medal for his researches on the polarization of light. In 1841 he was elected a member of the French Academy of Inscriptions and Belles Letters, and in 1857 he was chosen a member of the Academie Française, in the place of Lacretelle. The death of his son, E. C. Biot, an eminent oriental scholar, in 1850, saddened his later years. Biot was the author of numerous mathematical, astronomical and philosophical works, and of two biographies of great merit, Montaigne and Gay-Lussac. His most remarkable works are

"*Astronomie des Indiens et des Chinois*," and an essay on the polarization of light.

Feb. 6.—Rosa, Francisco Martinez de la, a Spanish statesman, died, aged 73 years. He was born in Granada, and educated at the university of that city. He took an active part in the struggles which marked the reign of Ferdinand VII, and on account of the liberalism evinced in a narrative written by himself of that revolution, was imprisoned for five years in the Spanish fortress of Peñon de Velez, on the Barbary coast. After the revolution of 1820 he was liberated, and subsequently was made secretary of foreign affairs, but in 1823, after the throne had been restored by French arms, he was exiled by Ferdinand VII, and went to Paris, where he remained eight years, during which time he published several works. In 1831 he was recalled, and in 1834 became the head of a cabinet, which lasted only a few months. He was twice ambassador to Rome, and also to Paris. In 1858 he became president of the Council of State, having been for some time previous its vice-president. He was the author of several tragedies, a poem on the "Art of Poetry" a history of the French Revolution entitled "Espiritu del Sigo," "Isabel de Solis," and the "Conspiracy of Venice."

Feb. 8.—Busk, Hans, died at his residence, Great Cumberland Place, Hyde Park, aged 89 years. He was a man of high classical attainments and a true lover of literature. Having travelled much, he conversed fluently in most of the languages of Europe. In early life he resided some years in Russia, and was at one time a member of the Empress Catherine's celebrated Chevalier Guard. He had shared in the friendship of most of the political and literary celebrities of the early part of the century, among whom were Burke, Sir Philip Francis, Fox, Sheridan, Canning, Percival and Wilberforce, as well as of Byron, Moore and Scott. Since he attained his 80th year he commenced and completed a remarkable paraphrase of the Psalms entitled "Hebrew Lyrics."

Feb. 15.—Sherman, Rev. James, a well-known English clergyman, died at his residence at Blackheath, aged 65 years. He was born in London, and at an early age apprenticed to an ivory turner, but his mind was directed to the Christian ministry, and in his sixteenth year he was admitted to the Countess of Huntingdon's college at Cheshunt. In 1836 he received a call to Surrey Chapel as the immediate successor of the Rev. Rowland Hill, and from his first appearance in the pulpit was very popular. In 1854, ill-health induced him to resign the pastoral office there, and take charge of a new chapel at Blackheath, where with a few interruptions he continued to minister until about a year previous to his death.

Feb. 15.—Somerset, Lieut.-Gen. Sir Henry, K. C. B., K. H., died at Gibraltar. He was a son of Lord Charles Somerset, governor of the Cape of Good Hope, was born in 1794, entered the army in 1811, served in the campaigns of 1813 and 1814 under the Duke of Wellington in the Peninsula, and was present at the battles of Vittoria, Orthes, and Toulouse, besides minor contests. He was also in the campaign of the Netherlands in 1815. In 1817 he went to the Cape of Good Hope, where he was for many years in service under the successive governors. He took an active part in all the Kaffir wars, with his regiment, the Cape Mounted Rifles, and during the several commands ably distinguished himself. In 1834 he was made a knight of the Hanoverian Order, and subsequently a companion of the Order of the Bath. After the conclusion of the Kaffir war in 1853 he was made a knight commander of that order. The same year he left the Cape and was placed as major-general on the staff at Bombay, and in 1855 was made commander-in-chief. After serving the customary period in that capacity he returned home.

Feb. 19.—Tierney, Rev. Canon Mark Aloysius, died at Arundel, aged 66 years. He was born at Brighton, educated under the Franciscan fathers in Warwickshire, and at the college of St. Edmund near Ware, and at the end of his philosophical and theological courses was ordained priest in 1818. His first appointment was assistant chaplain at Warwick street, whence he was removed to Lincoln's Inn Fields; but ill-health rendering it necessary that he should be transferred to a country mission, he was appointed to Slindon, in Sussex, where he remained for two or three years. In 1824 he became the chaplain of Bernard Edward, duke of Norfolk, and from that time resided at Arundel. His taste for historic research led him to devote the leisure of several years to the study of English history, and he freely gave to writers of eminence the benefit of his learning and research. Among his historic works is a new edition of Dodd's "Church History of England from the year 1500 to the year 1688." In 1833, he was elected a fellow of the Society of Antiquaries, London; and in 1841, a fellow of the Royal Society. On the formation of the Sussex Archæological Society in 1846, he became its local secretary, and showed his zeal for the Society's collections by supervising many papers, and contributing in 1849 to vol. iii, "Notices of recent Excavations in the Collegiate Church of Arundel;" and in 1860, to vol. xii, "An account of the Discovery of the Remains of John, 17th Earl of Arundel, in a Letter addressed to Wm. Durrant Cooper, Esq., F. S. A."

Feb. 22.—Pillersdorf, Baron, died at Vienna, aged 75 years. In 1848 he was Minister of the Interior and afterward President of the Council. When the Austrian Parliament was closed, he lived in retirement, excluded from the court circle and took no share in public life until the last year, when his position was restored to him by the emperor, and he became the President of the Finance Committee of the Lower Chamber of the Diet.

*Feb.*25.—Reed, Rev. Andrew, D.D., died at

Cambridge-heath, Hackney, aged 75 years. He was born in London, and being the son of humble trades people, was apprenticed to a business, but having a taste for study, attracted the attention of the Rev. Matthew Wilks, through whose influence he obtained admission to a dissenting college at Hackney. In 1811, he became the minister of Wycliffe Chapel, Stepney, where he preached for fifty years. In 1834 the Independents sent a deputation to their brethren in the United States, and Mr. Reed and Mr. Matheson were associated in this tour, upon their return embodying the result of their observations in volumes which made a valuable addition to English knowledge of American institutions and society. In 1813 he founded the London Orphan Asylum; in 1827, the Infant Orphan Asylum; and in 1847, the Asylum for Fatherless Children at Croydon. While engaged in these works of mercy his attention was called to the neglect of any provision in England for idiots, and after travelling abroad and spending some time in investigation upon the subject, he returned home and founded the Royal Asylum for Idiots, and subsequently the Royal Hospital for Incurables. In all these objects of benevolence he was himself emphatically a worker, and while he freely gave his hundreds to the cause of charity, he made it a principle through life never to receive in any form a recompense for his services. By his will, he bequeathed a certain sum—the interest to be applied forever to "the purchase of toys for the Infant Orphans" at Wanstead; a larger sum for "Winter Scientific Lectures to the Orphan Children at Chapton," £1,000 to the Asylum for Idiots, £1,000 to the Asylum for Fatherless Children at Reedham; and then bequeathed these institutions and the Royal Hospital, since founded, to the care of his beloved country.

March 1.—Barlow, Peter, F. R. S., died at his residence at Old Charlton, aged 85 years. He was born in Norwich, and was educated in that city. In 1806 he was appointed one of the mathematical professors at the Royal Military Academy at Woolwich, which office he held until 1847. He was the author of numerous works, among which are his well-known treatises on the "Theory of Number," the "Strength of Materials," and his "Essay on Magnetism." His discovery of the means of correcting the local attractions on the compasses of ships brought him into great notice. He received the Copley medal, was elected to the Council of the Royal Society, and the Board of Longitude conferred upon him the reward provided for useful nautical discoveries. The Emperor of Russia also presented him with a diploma of the Imperial Academy of Science at St. Petersburg; he was elected a corresponding member of the Institute of France and the Royal Society of Brussels. In 1836 he was appointed one of the Irish Railway Commissioners, and subsequently served on other royal commissions relating to railways in England. In 1847 he retired from the Royal Military Academy, when the Government awarded him full pay in consideration of his eminent services.

March 3.—Gurney, Rev. John Hampden, rector of St. Mary's, Bryanstone Square, died at his residence in his 60th year. He was the eldest son of Sir John Gurney, one of the Barons of the Exchequer, was a member of Trinity College, Cambridge, where he graduated in 1824, his name appearing both in the Classical and Mathematical Tripos. He was for some time curate of Lutterworth in Leicestershire, and in 1848 was presented by the Crown with the rectory of St. Mary's in Marylebone. He was a most earnest and popular preacher, and among his published sermons are: "A Pastor's Warning," suggested by the death of Sir Robert Peel, 1850; "The Lost Chief and a Mourning People," a Sermon on the death of the Duke of Wellington, 1852; "The Grand Romish Fallacy, and Dangers and Duties of Protestants," 1854; "Better Times and Worse," 1856; and several series of sermons. His lectures were published under the titles of: "Historical Sketches, illustrating some important Epochs from A. D. 1400 to A. D. 1546;" "St. Louis and Henri IV," and "God's Heroes and the World's Heroes," 1858. Mr. Gurney was also the author of several psalm and hymn books, and of "Four letters to the Bishop of Exeter on Scripture Readers."

March 6.—Douglas, Sir James Dawes, G.C.B., col. of the 42d Royal Highlanders, died at Clifton, aged 77 years. He entered the army in 1799, accompanied Gen. Crawford's expedition to South America on the quartermaster-general's staff, and was engaged in the attack on Buenos Ayres. He subsequently accompanied the expedition to Portugal under Sir Arthur Wellesley, and was present at several important battles. In 1809 he joined the peninsular army in command of a Portuguese regiment, and engaged in several battles, in one of which he was wounded. Being promoted to the command of the 7th Portuguese brigade, he served in a number of engagements and in that of Toulouse lost a leg. After the termination of the war, Sir James Douglas was employed on the staff of the army at home—first at the head of the quartermaster-general's department in Scotland, and afterward in the same post in Ireland. At the expiration of this command he was appointed governor of Guernsey, and received the honor of the Grand Cross of the Bath and the colonelcy of the 42d regiment.

March 13.—Sewell, Gen. Sir William, K. C. B., col. of the 79th regiment, died at Florence. He commenced his military career in 1806, and in the following year, having been appointed aide-de-camp to Gen. Beresford, accompanied him to the Peninsula, and joined the Duke of Wellington's army in Portugal in 1808. He was at the battles of Corunna, Talavera, and Busaco, the sieges of Ciudad Rodrigo, Badajos, and St. Sebastian, also the battles of Nivelle, Nive, Bayonne, Orthes, and Toulouse.

Having returned from the Peninsula, he proceeded to India, where he served for a period of twenty-eight years, and was appointed to a colonelcy of the 79th Foot in 1854, an appointment which he held until his death.

March 17.—Halévy, Jacques, Élie Fromental, the favorite pupil of Cherubini, died at Nice, aged 62 years. He was born in Paris where, in his 12th year, he won the grand prize for harmony at the Conservatoire. After two years of instruction in this public school of music he was placed under the care of Cherubini, and made such proficiency that within the space of two years more he was intrusted by his master with the charge of his class while the latter visited London. He was sent to Rome by the French Academy, and during his residence there, wrote his first opera, *Pygmalion*. In 1827 he published his *Phidias*, the popularity of which had not decreased when it was followed by *The Artisan*. In 1835 he produced at the Académie de Musique the opera *La Juive*, which was immediately brought out in every capital in Europe. He composed several comic operas which met with great favor, among which are his *Guido et Genevra* and *Charles VI*. His other productions were: *Le Roi et le Batélier*; the *Val d'Andorre*, which ran continuously for 165 nights; *Guitarero*, *Les Mousquetaires de la Reine*, *La Fée aux Roses*, and *La Magicienne*. His last opera was "*Noé ou le Déluge*." In 1854 he was elected perpetual secretary of the Academy of Fine Arts.

March 19.—Don, Sir Wm. Henry, Bart., died at Hobart Town, Tasmania, aged 36 years. He was for a short time in the army, and was extra aide-de-camp to the lord lieutenant of Ireland in 1844. In 1845 he became lieutenant in the 5th dragoon guards, but retired the same year and took up the profession of an actor. His admiration of his art was intense, and his success as an actor appeared to afford him more unalloyed satisfaction than his relationship to earls and duchesses.

March 23.—Nesselrode, Count. (See Nesselrode.)

March 24.—Windischgratz, Alfred, Prince. (*See* Windischgratz.)

March 26.—White, Rev. James, a clergyman of the Church of England, died at Bonchurch in the Isle of Wight. He was born in 1804, educated at Glasgow and Oxford, took orders in the Church of England, and was presented by Lord Brougham to a living in Suffolk, which he afterward gave up for another in Warwickshire. On ultimately succeeding to a considerable patrimony, he retired from the Church and devoted a large share of his time to literary pursuits. He was a contributor to Blackwood's Magazine. Among his later works are "The Eighteen Christian Centuries" and the "History of France."

March 30.—Vanderburch, M. Emile, a popular dramatist, died at Reuil, aged 67 years. He commenced life as an officer in the army of La Vendée, and passed through several of Napoleon's campaigns, but finding that he had some taste for dramatic composition, and no desire for military glory, he abandoned his profession and commenced writing for the Paris theatres. In the space of forty years he produced one hundred dramas, most of which were well received by the public. Among the most popular of his dramatic works were: *Les Camarades du Ministre*, *Le Camarade du Lit*, *Cotillion III*, *Jacques II*, and *Les Gamins de Paris*.

April 2.—Elmes, James, an English author and architect, died at Greenwich, aged 79 years. He studied architecture under Mr. George Gibson, and gained the silver medal at the Royal Academy in 1804; his name, however, was best known as a professional author, and one of his most useful and popular works was that on Dilapidations, published in 1826. He was the editor of several periodical publications. Among his literary productions are several on Architecture and the Arts; "Memoirs of the Life and Works of Sir Christopher Wren," 1823; "Horæ Vacivæ, a Thought-Book of the Wise Spirits of all Ages and all Countries, fit for all Men and all Hours," 1851; and "Thomas Clarkson, a Monograph: being a Contribution towards the History of the Abolition of the Slave Trade and Slavery," 1854. Mr. Elmes was for many years surveyor to the port of London.

April 3.—Ross, Sir James Clarke. (*See* Ross, Sir J. C.)

April 5.—Houston, Gen. Sir Robert, K.C.B., died at Torquay, aged 81 years. He entered the army of the East India Company at an early age, and proceeded to Bengal in 1795, where he continued to serve for twenty-five years. In 1854 he became a general, and was for ten years governor of the Military College at Addiscombe.

April 8.—Carroll, Sir Wm. Farebrother, K.C.B., died at his residence, Greenwich Hospital, aged 77 years. He was born at Glencarrig, Wicklow, entered the navy in 1795 on board the "Diamond," then commanded by Sir Wm. Sidney Smith, under whom he served many years, and with whom he was taken prisoner in 1796. A year from the following August he was released and sent to the West Indies in the "Syren," in which he served at the capture of Surinam. He was present at the sieges of Gaeta and Scylla, and the storming of Capri, and in 1807 commanded the seamen and marines in the engagement in the Sea of Marmora. He had command of the Cadiz flotilla, and afterward coöperated in the defence of Tarifa. He was commander of the "Volcano" on the coast of Catalonia, and subsequently of the "Cyrus," on the coast of France. He had been sixty-seven times in action with the enemy upon sea and land, and had aided in the capture of nineteen sail of the line, eighteen frigates, and a vast number of smaller vessels.

April 11.—Chetham-Strode, Admiral Sir Edward, K.C.B., K.C.H., died at his residence, Southill, Somersetshire, aged 87 years. He

entered the navy in 1786, and distinguished himself at Genoa, Toulon, Dantzig, and Algiers. He was captain superintendent of the Royal Naval Hospital at Hasler, and of the Royal Clarence Victualling-yard at Portsmouth from 1838 to 1841; was made K.C.B. in 1845.

April 15.—Wyse, Right Hon. Sir John, K.C.B., H. M.'s Envoy Extraordinary, and Minister Plenipotentiary at the Court of Athens, died at Athens, aged 70 years. He received his education at Stonyhurst, and graduated with honor at Trinity College, Dublin; entered as a student at Lincoln's Inn, but was not called to the bar. He represented Tipperary in Parliament from 1830 to 1832, and Waterford city from 1835 to 1847, was subsequently lord of the treasury, and a privy councillor. He was known in the literary world as the author of "Walks in Rome," "Oriental Sketches," and other works. He married a daughter of Prince Lucien Bonaparte, from whom he was separated in 1828.

April 15.—Hope, Rev. Frederick W. (*See* Hope, Rev. F. W.)

April 18.—West, Sir John, G.C.B., Admiral of the Fleet, died at his residence in Eaton Square, aged 88 years. He was born at Twickenham, entered the navy in 1788, as midshipman, in the "Pomona," and after seeing much service off the coast of Africa, West Indies, North America, the Mediterranean, and the Channel, was promoted in 1793 to a lieutenancy in the "Saturn." In the following year he was appointed to the "Royal George," in which ship he took part in Lord Howe's victory of June, 1794, and subsequently was in the action with the French fleets off the L'Orient. In 1795 he proceeded to the West Indies in command of the "Diligence," and returned to England in 1798, in charge of a convoy of 150 sail. In 1808 he was detached with His Majesty's ship "Excellent," and two bomb vessels, to the Bay of Rosas, coast of Catalonia, and occupied the castle of Trinity, which he held, with the assistance of the Spaniards, against repeated attacks of the French. In 1809 he was detached with three sail of the line to the Adriatic, to blockade the enemy's force lying under the batteries of Trieste, and while in this service captured a large convoy, proceeding from Venice to Trieste, protected by six heavy gunboats. On his return from the Adriatic he was sent with a squadron of six vessels for the defence of the Island of Sicily. He afterward conducted certain operations on the coasts of Sardinia and Tunis, and still later joined the channel fleet blockading the ports of Brest and Toulon. In 1830 he was commissioned vice-admiral, admiral in 1841, commander-in-chief in 1845; knight commander of the bath, 1840; grand cross, 1860, and admiral of the fleet in 1858.

April 22.—Kincaid, Capt. Sir John, died at Hastings, aged 75 years. He was born at Dalbeath, near Falkirk, entered the army in 1809, and served throughout the Peninsular War with the Rifle Brigade, from which he retired as captain in 1831. In 1845, upon the occurrence of a vacancy in one of the exonships of H.M.'s Royal Body Guard, the appointment was conferred upon him by the Duke of Wellington. In 1852, on becoming senior exon, he was knighted, according to the usual custom. In 1847 he was appointed Government Inspector of Prisons in Scotland, and in 1850 received the conjoined appointment of Inspector of Prisons and Factories. He was the author of "Adventures in the Rifle Brigade," and "Random Shots from a Rifleman."

April 22.—Capua, Charles Ferdinand, Prince of, died at Turin, aged 50 years. He was the son of Francis I, King of the Two Sicilies, and brother of Ferdinand II, who banished him from the court, being displeased at his marriage. Since the expulsion of his brother, Francis II, from Naples, he resided in Turin, being engaged in soliciting of King Victor Emanuel and the Italian Parliament, the restoration of his patrimony.

April 27—Livingstone, Mary, wife of Dr. Livingstone, died in Central Africa. She was a daughter of Rev. Dr. Robert Moffat, and had accompanied her husband in many of his explorations. She had joined him on the Zambesi as he reached the coast from his adventurous journey up the Shire to the Lake Nyassa, but was soon attacked with fever, which, upon a relapse, proved fatal.

April 30.—Dickson, Mrs. Elizabeth, died at Tripoli, Barbary, in the 70th year of her age. She was a daughter of Archibald Dalzell, Esq., governor-general of Cape Coast Castle, and widow of John Dickson, Esq., surgeon R.N. When but sixteen years of age she made an eloquent appeal through the leading English journals, in behalf of the Christian captives who were suffering such inhuman treatment in Barbary, thereby arousing such a feeling in Europe as forced the subject upon the attention of the Government, and led to the final overthrow of that system of piracy which had so long been the disgrace of Europe. For her labors in this benevolent cause, she was made a member of the "Anti-piratical Society of Knights and Noble Ladies," receiving a gold medal, and a unanimous vote of thanks for her labors in that cause. The universal grief at her death, among all classes of people in Tripoli, is the best tribute to her benevolence and worth.

May 2.—Wolff, Rev. Joseph, D.D. (*See* Wolff, Rev. Joseph.)

May 15.—Hawes, Sir Benjamin, K.C.B., Under Secretary of State for the War Department, died at his house in Queen Square, Westminster, aged 65 years. He was born in London, educated in Dr. Carmalt's school at Putney, and began life as a soap manufacturer. His first public office was that of magistrate of Surrey, in which capacity he took an active part in the quarter sessions, and, by various public services, acquired so much influence that,

upon the passage of the Reform Act, he was elected to Parliament for the newly-created borough of Lambeth, and sat for that borough until 1847, when some dissatisfaction occurring among the electors of Lambeth, relative to one of their representatives holding office (he had been appointed, in 1846, Under Secretary of State for the Colonies), he was defeated, but was elected in 1848 for the Government borough of Kinsale. In 1851 he was transferred to the War Department; and at the beginning of the session of 1852 gave up his seat, and turned his attention entirely to the duties of his office. While in Parliament he was one of the most strenuous advocates of the repeal of the corn laws, and exerted himself successfully in behalf of the penny postage scheme. Through a motion of his, the Fine Arts' Commission was appointed, and many other important measures were carried. He was deeply interested in scientific subjects generally: the electric telegraph, the ventilation of public buildings, and Babbage's calculating machine, all received his advocacy. He was the author of several political pamphlets, and the adoption of the Armstrong gun was mainly due to his influence.

May 16.—Wakefield, Edward Gibbon, Esq., an English writer on political and social science, died at Wellington, New Zealand, aged 66 years. He was educated as a land-surveyor. Being left, while still quite young, a widower with a young family, he was induced to enter into a plot for elopement with a young heiress of fifteen whom he forcibly took to Gretna Green and married; but her relatives interfering, he was tried for abduction, and sentenced to three years' imprisonment. A special act of Parliament was subsequently passed, to make void any pretence of marriage. A book which he wrote upon his experiences in prison was the first step toward those reforms of the penal law which are due to him. From the criminal at home, he extended his inquiries to the convict in the Australian settlements, and he became so familiar with every detail of the subject, that reference is often made to his "Letters from Sidney," as having been written upon the spot. His book on "England and America," published in 1833, was written to illustrate the different sources of wealth which the two countries commanded—the one in its wide-spread lands, and the other in its abundant population and accumulated capital. The views promulgated in this work, together with previous efforts, led to the formation of an association to found the colony of South Australia. In 1837 he strongly urged the occupation of the islands of New Zealand by the English, and when the New Zealand Association was established, became a director, and a valuable colony was thus added to the British dominions. His attention was next turned to the causes of the many political troubles in Canada, and in the results which followed the investigations made by Lord Durham, in the establishment of a more responsible government, may be traced the influence of his private secretary, Wakefield. Some years since he removed to the south of France for the benefit of his health, and subsequently to New Zealand, where he died.

May 17.—Protet, Rear Admiral, Auguste-Leopold, killed in action against the Taepings, in China, aged 53 years. He was born at St. Servan, France, and early showed a decided taste for the naval profession. At sixteen years of age he was admitted into the naval school of Angoulême, and after passing through the inferior ranks, at 38 years received the commission of captain in the royal navy. At this time the English and French Governments combined their efforts to put an end to the slave trade on the African coast, and Captain P. was employed in that service. After cruising three years on the coast of Africa he was appointed governor of Senegal, where he remained from 1850 to 1855, during which time he exerted himself to promote geographical explorations in that part of Africa. He served during the war with China, and for his services was promoted to the rank of rear-admiral. He subsequently joined the expedition against the Taepings, who threatened an attack upon Shanghai, and during the engagement at Nan-Jao lost his life.

May 28.—Buckle, Henry Thomas. (*See* Buckle.)

May 29.—San Miguel, Evaristo, Duke de. (*See* San Miguel.)

May 31.—Willshire, Gen. Sir Thomas, Bart., G.C.B., died at Hill-house, Windsor Forest, aged seventy-two years. He was born at Halifax, North America, and while still a child was enrolled on the list of officers of the 38th regiment, of which his father was paymaster. He received his early education at Lynn, in Norfolk, and subsequently attended a school at Kensington. In 1802 he accompanied the 38th regiment to the West Indies, where the corps remained for three years, and was then ordered to Buenos Ayres, to join the expedition of the Rio de la Plata. The attack on Buenos Ayres took place July, 1807, and the 38th, of which he was now captain, bore a conspicuous part upon that occasion. In 1808 he served with his regiment in the Peninsula. In 1812 he returned to Spain, where he served till the end of the war. In 1818 he led his regiment to the wilds of South Africa, where, during four years, he held a responsible command on the frontiers of Kaffir-land, opening roads through the jungle, and constructing bridges over the rivers; he likewise built a fort, which is called, in his honor, Fort Willshire. He held Grahamstown against a desperate attack by ten thousand Kaffirs; repulsing them with great slaughter, and following them into their own country, would listen to no proposals of peace until the abandonment by the Kaffirs of the territory between the Keiskamma and Great Fish rivers. In 1822 he proceeded to Bengal, and being pro-

moted, was removed to the Madras Presidency, and served against the Mahrattas. In 1839 he was placed in command of the Bombay column of the army of the Indus, in which he served during the whole Affghan campaign. He commanded the force that captured the fortress of Khelat, in 1839, and for this brilliant exploit was made a baronet, and received the thanks of both Houses of Parliament. In 1840 he was obliged to return to England for the recovery of his health, after which he accepted the command of Chatham, which he held five years, and resigned on attaining the rank of major-general.

June 17.—Montanelli Giuseppe, an Italian statesman, scholar and reformer, died at Florence, Italy. He was born in 1813, at Zucecchio, in Tuscany, and at an early age gave evidence of the possession of rare talents. While yet a boy he attained a very high reputation as an organist and musical composer. Turning his attention to the study of law, he obtained, at the age of eighteen, the degree of Doctor of Laws. He also occupied a portion of his time with literature, engaged with great zeal in philosophical studies, and, at the age of twenty-three, published a volume of poems of very remarkable merit. Entering upon the practice of his profession, he took the first rank as a pleader, and, at the age of twenty-seven, was chosen professor of Tuscan and commercial law in the University of Pisa. While occupying this chair he published numerous works on subjects connected with the study of law, one of which, "A philosophical Introduction to the Study of Commercial Law," is still considered the ablest treatise published on the subject. He was, from early youth, deeply imbued with liberal and republican sentiments, and in 1844 organized a secret association called the "Italian Brothers," whose fundamental principle was "the elevation and moral improvement of the individual as the necessary basis of the regeneration of the nation." In 1847 he established a journal called "Italy," in which he openly propagated the liberal views he had previously disseminated by his circulars among the "Brotherhood." In the revolution of 1848 he volunteered, and led the University Legion, composed of his brother professors and students, to join the Tuscan contingent, and on the 29th of May encountered Radetzki and the Austrians on the bloody field of Mantua. In this battle he was severely wounded, and left upon the field for dead. The intelligence of his supposed death caused great grief throughout Italy, and in all the principal cities of the peninsula imposing funeral services were held in honor of the "martyr of the national cause." He had been, however, taken from the field by the Austrians, and sent to the Lower Tyrol as a prisoner, where he recovered from his wounds, and, in August, was set free by the armistice, and returned to Tuscany, where he was received with enthusiasm. The Grand Duke, who had been compelled to grant a constitutional government to the people, appointed Montanelli governor of Livourna, then in a state of insurrection. He quieted the people, and the Grand Duke next called him to form a ministry, and made him Minister of Foreign Affairs and President of Council. The reactionary tendencies of the Grand Duke were so evident, however, that the people were with difficulty restrained from insurrection, and in January, 1849, he fled from his capital. The people at once, and by acclamation, nominated a triumvirate, composed of Montanelli, Mazzini, and Guerrazzi. They at first governed in the name of the Grand Duke, but, as he protested against this, they determined to proclaim a republic, and a constituent assembly was organized, and the Florentine republic was preparing to unite with the Roman republic when the battle of Novara changed the face of affairs. Guerrazzi was proclaimed dictator, and Montanelli hastened to France to raise a legion of troops and to secure the aid of Louis Napoleon, but on his arrival found him determined to interfere on behalf of the reactionary movement. The Grand Duke was restored, and Montanelli remained an exile in Paris, and relieved the tedium of his banishment by writing tragedies for Madame Ristori, and, after a time, his "Recollections," which met with a large sale, and were translated into several languages. After the new revolution in Italy, Montanelli lost caste with his Italian friends and admirers by his strenuous advocacy of a confederation of States rather than a United Kingdom of Italy. His views on this subject seem to have been the result of a conviction that, under the complications which existed, this was the only future possible for Italy, and not, as was charged by some, the effect of imperial influence.

June 17.—Canning, Rt. Hon. Charles John. (*See* Canning).

June 27.—Bruce, Hon. Robert, Maj.-Gen., governor of the Prince of Wales, died at St. James's Palace, aged forty-nine years. He was the second son of Thomas, seventh earl of Elgin; entered the guards at the age of seventeen; was military secretary to his brother, Lord Elgin, in Jamaica, from 1841 to 1847, and again, in Canada, from 1847 to 1854, when he returned to England, and was for a short time surveyor general of the ordnance. In 1858 he accepted the appointment of governor to the Prince of Wales, and in that capacity attended His Royal Highness upon his tour to Canada and the United States in 1860, and during his residence in the two universities from 1859 to 1861. On his return from a tour with the prince to the East he contracted a fever which terminated fatally. His public and private life alike evinced his thorough qualification for the important and responsible trust he held.

June 29.—Lindsay, James B., an eminent linguist, died at Dundee, aged sixty-two years. He was a native of Carmylie, and studied at the University of St. Andrews for the ministry,

but was never ordained. He was passionately fond of scientific pursuits, and there was hardly a branch of learning that he was not capable of teaching; he was a frequent contributor to the local journals on scientific subjects, and published several learned works, among which was the Lord's Prayer and the Creed in 50 different languages; he also invented a chrono-astrolabe, which attracted the attention of the most eminent astronomers. For many years he labored in the prisons, instructing the inmates. He was a member of the British Association, and, his learning having attracted the attention of Her Majesty, he was offered a pension of £100 yearly, and subsequently gave up his appointment as teacher in the prisons, devoting himself entirely to literary and scientific pursuits. He was a member of the Free Church until 1861, when his views upon the subject of baptism underwent a change, and he joined the Baptist Congregation at Meadowside, publishing soon after an able treatise on baptism in explanation of his views. His library embraced all periods of history, in all languages. For many years he had been specially interested in the possibility of electrical communication through water without wires, and in the preparation of a dictionary in fifty languages, which, at the time of his death, was nearly completed.

July 5.—Pasquier, Duke. (*See* Pasquier.)

July 18.—Beresford, Lord J. G. (*See* Beresford.)

July 19.—Beckwith, Major-General John Charles. (*See* Beckwith.)

July 22.—Blight, Rear Admiral William, died at Stonehouse, aged 77 years. He entered the navy in 1793, and after a few months' service as acting-lieutenant of the Prince George, was transferred to the Britannia, in which he served at the battle of Trafalgar. He was next employed on the Santa Anna, and successively on the Dreadnaught, Nereide, Powerful, and the Queen Charlotte. In October, 1808, he assisted at the destruction of two powerful pirate vessels, in the Persian Gulf, having seven hundred men on board, and the recapture of the H. E. I. C.'s war cruiser, Sylph. In 1821 he was promoted to the rank of commander, and in 1828 was appointed to the Britannia. In 1830 he attained post-rank, accepted the retirement, 1850, and was advanced to the rank of rear-admiral on the retired list, Sept. 27, 1855.

July 30.—Traill, Dr. Thomas Stewart, professor of Medical Jurisprudence in the University of Edinburgh, died at his residence, in Rutland Square, Edinburgh, aged 80 years. He was a native of Kirkwall, in which parish his father was a minister; studied at the University of Edinburgh; took his degree in 1801, and in 1832 was appointed to the chair which he held at his death. During his long incumbency he was enabled to deliver his lectures regularly till within a few days of his death. He fulfilled the duty of editor of the last edition of the "*Encyclopædia Britannica.*"

Aug. 8.—McNab, Sir Allan. (*See* McNab.)

Aug. 10.—Corr, M. Erin, member of the Royal Academy of Belgium, died at Paris, aged 59 years. He was born at Brussels, and was the son of an expatriated Irishman, who had taken a part in the rebellion of 1798. As an engraver he had obtained the highest European reputation. His principal works are: the "Saviour," from Leonardo da Vinci; "Christ upon the Cross," from Vandyke; the "Queen of Holland," from Scheffer; and "King Leopold," from Woffers. He had but just completed his magnificent engraving on copper-plate of Rubens' celebrated picture, "The Descent from the Cross," after ten years' severe labor, and had gone to Paris to superintend the first impressions, when he died.

Aug. 16.—Nugent, Marshal, a distinguished officer in the Austrian service, died at Croatia, Austria, aged 85 years. He was a native of Ireland, but many members of his family had long been settled in Austria, and his father, Count Nugent, was a well-known diplomatist. He entered into the army quite young, and served in the wars between Austria and France almost from the beginning of the French Revolution. He was long employed in Italy, under Radetsky, also against the Hungarians in 1848-9, and closed his military career at Solferino, after upward of sixty years' service. He was highly honored by the successive sovereigns, and made magnate of Hungary, a Roman prince, knight of the Golden Fleece, Councillor of State, Austrian field marshal, &c.

Aug. 20.—Ricardo, John Lewis, M. P. for Stoke-upon-Trent, died in Lowndes Square, aged 50 years. He was born in 1812, and entered Parliament in 1841. He was one of the earliest advocates for free trade, and aided materially in carrying the repeal of the corn laws. In 1847 he moved for a committee upon Navigation Laws, and warmly supported the repeal of the restrictions upon shipping; was the author of a work on that subject, "The History and Anatomy of the Navigation Laws," and devoted much attention to the question of maritime rights in time of war. It was mainly due to his efforts that the electric telegraph was established on so firm and successful a footing in England. For upward of ten years he was chairman of the Electric Telegraph Company, and during that time worked with untiring zeal and energy in developing all its resources, and rendering it of greater benefit to the civilized world, receiving upon his retirement from the chair a valuable addition to to his library of 1,000 volumes, as a testimony of the attachment and respect of the officers and employés of the company. He was also chairman of several other companies, and for many years a director of the London and Westminster Bank.

Aug. 25.—Berkley, James John, chief engineer of the Great Indian Peninsular Railway, died at Sydenham, aged 42 years. He was an intimate friend and associate of the late Robert

Stephenson, and through him was at an early age intrusted with the responsible office of chief resident engineer of the Churnet Valley and Trent Valley railways. Under the advice of Mr. Stephenson he was appointed to the responsible position he held at the time of his death; and in January, 1850, he commenced the important work of laying out and making nearly 1,300 miles of railway. He designed the two great inclines over the lofty mountains of western India, known as the Bhore and Thall Ghauts, and by which an uninterrupted communication will shortly be opened from Bombay, and eventually from Calcutta and Madras. Without sacrificing efficiency and durability in the execution of his works, he was decidedly an economical engineer, making all interests subordinate to those of the shareholders, and it is not therefore surprising that his line—the Great Indian Peninsular—bids fair to be the most profitable line in India.

Aug. 27.—Hogg, Thomas Jefferson. (*See* Hogg, T. J.)

Aug. 27.—Williams, Rev. John (ap Ithel), died at Llanenddwyn, Merionethshire. He was born at Llangynhafel, Denbighshire, April 7, 1811, and graduated from Jesus College, Oxford, 1834, and had been in succession vicar of the parishes of Llanfawr in Denbighshire, Nerquis in Flintshire, and Llangmowddwy in Merionethshire, and a few months before his death was preferred to the Rectory of Llanenddwyn by the Bishop of Bangor. Mr. Williams was one of the most profound scholars in Wales, and was especially well versed in the language and literature of his native country, and labored most untiringly and successfully in elucidating the various branches of Celtic Archæology. He was a voluminous author, and besides nine or ten archælogical works, some of them requiring protracted and extensive research, he had written in Welsh and English a number of religious books.

Sept. 1.—Orton Reginald, M. D., an eminent English surgeon, died at his residence, Ford North Farms, Sunderland, aged 52 years. In 1833 he received the diploma of the Royal College of Surgeons, in 1834 that of licentiate of Apothecaries, and in 1835 took up his residence in Sunderland, as partner with the late Mr. Fothergill, surgeon, succeeding to the practice of the latter on his death, which occurred soon after. He held the offices of surgeon to the Sunderland Eye Infirmary, and consulting surgeon to Seaham Infirmary. He possessed a philanthropic disposition, and did much toward elevating the social and moral condition of the working classes, taking an active part in the establishment of local sanitary reforms, and in the support of local literary and scientific institutions. He had also attained distinction as a medical writer: an essay of his in the "Lancet" on "The Effects of Arsenic on the Animal System, and the Utility of the Hydroxide of Iron as an Antidote," attracted much attention. He invented a new "ether inhaling apparatus," and made some experiments in inducing spontaneous generation by means of electricity; his alleged discoveries on this subject gave rise to a protracted aud somewhat heated controversy. He took also a lively interest in maritime affairs, and invented a new and valuable life boat and some ingeniously contrived self-acting life buoys. The latter part of his life was mostly devoted to scientific farming.

Sept. 6.—Sumner, Rt. Rev. John Bird, Archbishop of Canterbury. (*See* Sumner, J. B.)

Sept. 16.—Castellane, Marshal Count, governor of Lyons, died in that city. He was born at Paris, March 21, 1788; entered the army in 1804, and in 1806 was a sub-lieutenant of dragoons in the Italian army. The following year he became lieutenant, and went to Spain with Count Lobau as his aide-de-camp. He afterward served in Germany, and distinguished himself in the Russian campaign. At the Restoration in 1815 he was for a while unemployed, but toward the end of that year was charged with the organization of the hussars of the Bas-Rhin. In 1831–32 his gallant conduct at the siege of Antwerp procured him the rank of lieutenant-general. In 1837 he was raised to the peerage after good service at Algeria. He was in command of the military division of Rouen when the Revolution of 1848 broke out, and his firmness saved his division entire. In 1852 he was appointed to the important post of governor of Lyons, which he held until his death. He was a rigid disciplinarian and very eccentric in his character.

Sept. 18.—Alves, Maj.-Gen. John, died at King street, St. James, aged 75 years. He was born at Elgin; studied law, but having a fondness for military life, obtained a commission in a Scottish militia regiment, from thence exchanging into the 74th regiment, in which he served in the Peninsular War, and afterward in almost every quarter of the world. In 1851 he was promoted to the rank of lieutenant-colonel and appointed to the chief command of the depot battalion at Preston, in the north of England, where he was actively engaged during the Russian war in training troops for that service. At the close of the Crimean war he acquired the rank major-general, retired on full pay, and was also appointed sergeant-at-arms to the Queen, which made it necessary for him to reside at London.

Sept. 19.—Ellesmere, George G. F. Egerton, Earl of, died at Balbirnie, Fifeshire, aged 39 years. He was born in London, and upon the death of his father, Francis, first earl of Ellesmere, in February, 1857, he succeeded to the earldom and extensive family estates in Lancashire and Surrey. From 1847 to his removal to the House of Peers in 1851, he had a seat in the House of Commons as one of the representatives for the northern division of Staffordshire. During the few years he was in the lower House of Parliament, he warmly supported Lord John Russell's administration, and was strongly opposed to the endowment of

the Roman Catholic clergy. In 1851 he resigned his seat on account of the failure of his health. In 1857 he was appointed lieut.-col. commandant of the Duke of Lancaster's Own Yeomanry Militia. One of his latest acts was the gift of £1,000 for the relief of the prevailing distress in Lancashire and Cheshire, owing to the "cotton famine."

Sept. 22.—Jomard, Edmé François, surnamed *de l'Institut*, died at Paris, aged 85 years. He was one of the earliest pupils of the Polytechnic School, and was appointed a member of the scientific commission which accompanied Bonaparte to Egypt in 1798. Upon his return to France he was sent on a topographical mission to the Upper Palatinate, but returned to Paris in order to aid and superintend the preparation of the Description de l'Égypte, upon which he was engaged nearly eighteen years. He was mainly instrumental in introducing into France the Lancasterian system of education, though he had to contend with much opposition. Having obtained the favor of Mehemet Ali, he induced the pasha to send a number of young Egyptians to study in Paris, forming thus what was called the *Institut des Égyptiens*, which was placed under his particular direction. For his services the successor of Mehemet Ali appointed him his scientific correspondent and granted him the honorary title of bey. He was the author of many works on geography, archæology, education, &c.

Sept. 22.—Hamel, Dr. Joseph, member of the Imperial Academy of Sciences, St. Petersburg, died at his residence in Duke street, St. James, aged 74 years. He was born in Sarepta on the Volga, in Russia. In 1807 he distinguished himself by the invention of an electrical machine, and in 1813, after having completed his studies, he was named by the Emperor Alexander member of the Academy of Medicine. Having made a tour through England, he was afterward appointed to accompany the Grand Duke Nicholas, during his visit to England in 1815, and in 1818 discharged the same duties toward the younger brother, the Grand Duke Michael. In 1820 he made the well-known ascent of Mont Blanc, where he lost several of his guides. In 1821 he returned to Russia and was attached to the suite of the governor-general of Moscow. In 1828 he was elected a member of the Imperial Academy. It was through his exertions that the Lancasterian system of education was introduced into Russia, and also that the first industrial exhibition took place at Moscow. He took a lively interest in the progress of the arts, and visited all the great exhibitions in France and England, and also that in New York in 1854. He was the author of a history of the steam engine and of the electric telegraph—both of which are very complete and full of interest in a scientific point of view.

Sept. 25.—Thompson Pishey, an English author, died at Stoke Newington, aged 78 years. He was born at Boston, Lincolnshire, Eng. In 1820 he published his "Collections for a Topographical and Historical Account of Boston, and the Hundred of Skirbeck." He afterward emigrated to this country, where he resided for many years—obtaining the friendship and esteem of several of the most eminent literary men in the New England States and Washington. Upon his return to England he commenced the preparations for his complete History of Boston, which was published about six years since. He was also the author of several pamphlets, and was a frequent contributor to newspapers both in England and in this country. He was thoroughly conversant with almost every branch of science and art, but so modest in his estimate of his own acquirements that none but those who knew him well could form any idea of the extent of his research and knowledge.

Oct. 3.—Dundas, Admiral Sir James W. Deans, G. C. B., died at Weymouth, aged 76 years. He entered the navy in 1799, as first-class volunteer on board the "Kent." In Nov. 1802, he was present at a skirmish with the French 74 gun ship "Duguay Trouin," also at the blockade of Rochefort; served successively on the "Monarch" and "Cambrian," and in 1806, was promoted as commander of the "Rosamond," employed in attendance on the British ambassador to the King of Sweden at the siege of Stralsund. He subsequently distinguished himself in the command of the "Stately," "Venerable" and "Pyramus," in the latter of which he captured two privateers. In 1815, he joined the "Tagus" in the Mediterranean, and afterward served under Rear-Admiral Sir William Parker on the Lisbon station. In Dec. 1852, he became vice-admiral and was appointed to the "Britannia" as commander-in-chief of the Mediterranean and Black Sea fleet. He was a whig in politics, and the first representative of the borough of Greenwich after the passing of the Reform Act.

Oct. 6.—Smith, Capt. William, R. N., died at Berwick-on-Tweed, aged 71 years. He entered the navy in 1806, and served on the "Shannon." In the memorable action between that ship and the "Chesapeake" he was stationed with five men in the maintop of the "Shannon" and at their head, ran along the main yard, which was braced, and boarded the foretop of the "Chesapeake." For this he obtained the rank of lieutenant. He distinguished himself again in the Burmese war in 1825-26, when serving in the "Boadicea." In 1826, he was appointed commander, and subsequently had command of the "Philomel" and "Syren," in the latter serving in the East Indies from 1841 to 1844.

Oct. 7.—Ward, Frederick Townsend, Admiral Gen., was killed during an engagement near Ningpo between the Taepings and the European allied army. He was born in Salem, Mass., in Nov. 1831, and was educated at the Salem High School. During the Crimean war he was a lieutenant in the French service.

Oct. 8.—Walker, James, Esq., C. E., F. R. S., died in Great George street, Westminster, aged 80 years. He was for many years president of the Institution of Civil Engineers, and his name was brought into great distinction in connection with bridge building and marine and hydraulic engineering. In these latter departments of his profession, he was for a long period consulting engineer to the Board of Admiralty.

Oct. 10.—Thorp, Charles, D. D., F. R. S., Archdeacon of Durham, and formerly Warden of the University, died at Ryton Rectory, Durham, aged 79 years. He was born at Gateshead Rectory, Oct. 13, 1783; educated at the Cathedral School, and at Oxford, where he obtained a fellowship, and subsequently was appointed tutor of University College, then under the headship of Dr. Griffith. In 1807, he was presented with the rectorship of Ryton, where he spent several years of active service. He took a deep interest in the establishment of Sabbath Schools, and made house to house visitations throughout his large parish, the records of which visitations are still extant. In 1829, he was presented with a prebendal stall in the Cathedral of Durham. In 1831, he was offered the valuable living of Stanhope, which he declined, and not long afterward was promoted by Bishop Van Mildert to the archdeaconry of Durham. At this time he was elected one of the Lord Crewe Trustees, in which capacity he exerted himself to the utmost in carrying out the donor's intentions for the benefit of the Church at large, and his firmness and judgment led to the establishment of the Convocation of York on a firm and intelligible basis. All the improvements made in the village, where most of the property was situated, were effected mainly through his exertions. His love of the fine arts was proverbial, and his gallery of pictures surpassed any other in the north of England. He was a man of rare benevolence. He gave £400 per annum to endow the parish of Winlaton, and erected at his own expense a church at Greenside, to the memory of his parents; also as a thank-offering, the Jubilee School at Ryton. More recently, he fitted out at great expense a beautiful chapel on the Feroe Islands, inside of which is a tombstone in memory of Grace Darling. Divine service is conducted in the chapel on Sundays during the summer months, and is attended by the lighthouse keepers and their families. On the establishment of the University of Durham, he became its first Warden, and did much toward the support of the new institution. His resignation took place a short time previous to his death.

Oct. 15.—Keiser, Dr., a distinguished military surgeon, died at Breslau, Germany, aged 83 years. He entered France after the battle of Waterloo, at the head of the medical staff of the German army, and the military hospital at Versailles was placed under his direction. On his return to Germany, he was appointed to the professor's chair at the University of Jena. He was a large contributor to the German literary reviews, and was the author of some well received works. He represented the University of Jena in the Parliament of Weimar, and also at Frankfort.

Oct. 21.—Brodie, Sir Benjamin Collins. (*See* Brodie.)

Oct. 23.—Moore, Sir W. G., Lieut.-Gen., K.C.B. died at Montrosehouse, Petersham, aged 66 years. He was a son of Francis Moore, Under Secretary of War, and educated at Harrow, entered the army at fifteen as a member of the 52nd regiment, and embarked at once for the Peninsula. He was present at the sieges of Ciudad Rodrigo, Badajos, and St. Sebastian, and at the battles of Salamanca, Vittoria, Nivelle and Nive. He was wounded at the siege of Bayonne, and was present at the battle of Waterloo. He was appointed col.-commandant in Jan. 1856, and the same year was made a K. C. B.

Nov. 5.—Jervois, Gen. William, K. H., died at his residence, Portland-place, Bath, aged 79 years. He had served in the army nearly sixty years, having received his first commission in 1804, as ensign in the 89th regiment, which he accompanied to Hanover the following year. In 1810, he accompanied the expedition to Malaga, and was slightly wounded in the attack on the fortress of Frangerola. In 1813 he was appointed to the staff of Sir Gordon Drummond, with whom he embarked for Canada, where he was present at nearly all the actions fought with the American army. He was appointed to the colonelcy of the 76th Foot in 1853, and was commissioned general in 1860.

Nov. 9.—Bird, Rev. Charles, Smith, M. A., F. L. S., chancellor of Lincoln Cathedral, and late fellow of Trinity College, Cambridge, died at the Chancery, Lincoln, aged 67 years. He was born at Everton, near Liverpool; studied law, but at the age of twenty-two, resolved to qualify himself for the Church, and entered Trinity College in 1817. In 1823 he was ordained priest; in 1843, became vicar of Gainsborough, and in 1859, was appointed chancellor of Lincoln cathedral. He was a fellow of the Linnæan Society, and author of a "Plea for the Reformed Church," "Defence of the English Reformation," "Lenten Lectures on the Decalogue," "Romanism not Primitive," "Strictures on Archdeacon Wilberforce's Works on the Incarnation and Eucharist," also of several pamphlets on Convocation, Visitation Sermons, &c. During the visitations of the cholera, particularly that of 1849, he devoted himself entirely to the bodily and spiritual wants of his parishioners. He also procured the erection of two new churches, and the Girls' National School and the Literary Institute owe their origin mainly to his exertions.

Nov. 10.—Webb, James, an eminent agriculturist, died at his estate of Babraham, England, aged 66 years. He had done much for the improvement of the short-horn Durham cattle, but his extensive reputation (and few agricul-

turists were better known in all quarters of the globe) rested on his improvement in the Southdown breed of sheep. The Webb Southdown was indeed almost his creation, so many years of thoughtful and intelligent care had he bestowed in bringing all its best points to perfection. For thirty-four years he had held an annual sale of his improved stock, and these sales had latterly been attended by sheep-breeders from every portion of Great Britain, and from France, Germany, Spain, Sweden, Italy, Turkey, Russia, the United States, and Australia. His last sale, in June, 1862, realized about $80,000.

Nov. 13.—Uhland, Ludwig. (*See* Uhland.)

Nov. 14.—Stewart, Rev. Alexander, LL.D., died at the manse of Douglas, Scotland, aged 81 years. He had been for many years one of the best writers of Scotland, and had published a large number of educational works. He was one of the principal contributors to the Edinburgh Encyclopædia, and, in many instances, works which subsequently obtained a high popularity, owed to him that polish of diction and symmetry of arrangement, without which they would have fallen dead from the press.

Nov. 19.—Wodderspoon, John, Esq., assistant editor of the "Norwich Mercury," died at Norwich, England. He was born at Bath, in 1806, and was first engaged in that city on the "Bath Chronicle," and subsequently for two years at Birmingham, upon the "Birmingham Journal." After removing to London, he was engaged upon the "Suffolk Chronicle," edited by Mr. King, with whom he remained ten years, during which time he published some of the works which have won for him considerable antiquarian and literary fame. The first work of any importance was "Sketches of the Suffolk Bar," which was succeeded by "The Historic Sites of Suffolk." In 1845 he edited "The Antiquarian and Architectural Year-Book," which was "intended to gather into one view all discoveries and proceedings for the year, both in primæval and mediæval antiquities." In this work he was aided by some of the most eminent scholars and antiquaries of the country. He wrote and published, between 1847 and 1850, the "Memorials of Ipswich," in two volumes, illustrated with great care. He subsequently was engaged for a time on the "Morning Post," but his health obliged him to resign, and he soon after accepted the situation of subeditor of the "Norwich Mercury." He has left a large collection of MSS. on art and archæology, also many sketches and drawings of great value.

Nov. 20.—Kinnear, David, senior editor of the "Montreal Herald and Daily Commercial Gazette," died at Montreal, aged 55 years. He was a native of Edinburgh, the son of a banker, and a lineal descendant of the celebrated Col. Gardiner. He was admitted to the Scotch bar, but was engaged in mercantile business in London, where he had connections in the highest branches of commerce. He came to America in 1835, and employed some time in various travels throughout the United States and Canada. In 1837 he was among the first to take up arms for the preservation of the province to the British Crown during the rebellion. Soon after, he became connected with the "Montreal Gazette," which position he relinquished to become a partner in the "Montreal Herald," of which paper he was chief proprietor at the time of his death.

Nov. 30.–Knowles, Sheridan. (*See* Knowles.)

Dec. 17.—Thomson, Mrs. Katharine (widow of the late Dr. Anthony Todd Thomson), died at Dover, England. She was well known to the public as an authoress, her first production being a "Life of Wolsey," written for the "Society for the Diffusion of Useful Knowledge," and much commended by Lord Brougham. A novel called "Constance"—her first venture in fiction—was very successful. "The Life of Raleigh," and the "Memoirs of the Court of Henry the Eighth," were followed by "Memoirs of Sarah, Duchess of Marlborough," and gave her a high position in literature. Her researches, and the reading requisite for these works, furnished her material for a series of historical novels, as "Anne Boleyn," "Ragland Castle," "The White Mask," "The Chevalier." In addition to these she published "Lives of the Jacobites," "Tracy, or the Apparition," and "Widows and Widowers," one of the most popular of her novels. After Dr. Thomson's death, in 1849, she resided on the Continent for some years, and upon her return to England, published "Court Secrets," "Faults on Both Sides," and the "Life of Villiers, Duke of Buckingham." The most popular of her later works were written conjointly with her son: the "Queens of Society," and "Wits and Beaux," published under the pseudonyms of Grace and Philip Wharton. The third and last of this series, "The Literature of Society," was entirely her own. During a long residence in London, her house was the resort of those who were eminent in science, letters and the arts. In 1860, her son and fellow-worker, John Cockburn Thomson, was accidentally drowned at Tenby—a shock from which his mother never recovered.

Dec. 17.—Monson, Hon. William John, sixth baron, died at Paddington, England. He was born in Tanjore, Presidency of Madras, May 14, 1796, and at an early age was sent to England for his education, and entered Christ Church College, Oxford, in 1814, graduating in 1818. Before taking his Bachelor's and his Master's degrees, he made two tours to the East, the results of which were published in 1817 and 1820, under the modest title of "Extracts from my Journal." Istria, Dalmatia, Sicily, Malta, and Calabria, were among the countries visited and described in these tours. Though admitted to the bar, he did not practise his profession, but devoted himself to literary and scientific pursuits, and especially to archæology and antiquarian studies. He succeeded

to the peerage in October, 1841, and in 1846 was appointed deputy-lieutenant of Lincolnshire. He had given much attention to the local history of Lincolnshire, and published several monographs on the subject.

Dec. 18.—Weale, John, an English publisher, died at Canterbury Villas, Maida-vale, aged about 70. He had, in a business career of more than 40 years, made it his great object to suggest, create, and mature works of acknowledged value and service to professional men and others. His rudimentary series of scientific works, many of them edited by himself, have contributed largely to the popularization of science, and he had also compiled and edited several works of greater size on scientific topics. Among these were "Divers Works of Early Masters," published in 1841; "Weale's Drawing Books for Engineers and Architects," 1834; "Weale on the Making of American Railways, with Illustrations," 1843; "Weale's Papers of Architecture and Archæology," 500 plates, 1844; "Weale's Survey of London," 1852.

Dec. 18.—Stonehouse, Rev. Wm. Brocklehurst, D.C.L., archdeacon of Stowe, and vicar of Owston, died at Owston Ferry, aged 69. He was educated at Brasennose College, Oxford, became B.A. 1816, M.A. 1819, D.C.L. 1845. He was advanced priest in 1816, appointed vicar of Owston in 1821, and archdeacon of Stowe in 1844. He had restored the church at Owston at a heavy expense, and rebuilt the church at West Butterwick, and in every way contributed to the benefit and happiness of his parishioners. He was the author of five or six religious works, one of which, "The Crusade of Fidelis," was very popular; and had also published several valuable archæological works.

Dec. 19.—Solomon, Abraham, an eminent English painter, died at Biarritz, of pleuropneumonia, aged 39. Among his paintings, which had attained a high reputation, may be mentioned, "Waiting for the Verdict;" two companion pictures, "Second Class" and "First Class," in which a sailor lad's departure from home and return as a midshipman are set forth in two scenes in railway carriages; "The Lion in Love," a plethoric old general threading the needle of a pretty young coquette; and the "Lost Found."

Dec. 27.—Chapman, Rev. John, B.D., secretary of the Church Missionary Society, died at Islington, England, aged 49. He was educated at St. John's College, Cambridge, graduating in 1836, and was subsequently elected to a fellowship in that college, which he resigned in 1840, and went out as a missionary of the Church Missionary Society to take charge of the Cottayam College in Travancore. After 10 years' efficient service there, during which he had greatly elevated the character of the college, he removed in 1850 to Madras to take charge of the Church Missionary Seminary in that city. In 1853 he was compelled to return on account of the state of his health, and soon after his return was appointed secretary of the society, which position he held till his death. Aside from the manifold and arduous labors of this position, he contributed largely to the theological literature of the day. His "Answer to the Essays and Reviews," published in 1861, received high commendation as one of the ablest defences of the truth called out by the controversy.

Dec. 29, 1862.—Morlot, Francis Nicholas Madeleine, cardinal of the order of priests, archbishop of Paris, died in Paris. He was born at Langres, department of Haute Marne, Dec. 28, 1795, of humble parentage. He early showed a decided vocation for the clerical profession, and entered, as a student, the Ecclesiastical College of Dijon. After teaching for a while as a private tutor, he received priest's orders, and was soon after appointed grand vicar of the diocese of Dijon. In 1839 he was raised to the see of Orleans. In 1841 he received the decoration of the legion of honor, and in 1842 was appointed archbishop of Tours. In 1853 he was created cardinal, and in that capacity took his place in the Senate. In 1857, on the murder of Archbishop Siboux, of Paris, he was translated to that see, and the same year made grand almoner of the empire, and in 1858, member of the council of regency and privy council. Soon after, he was promoted to the rank of commander of the legion of honor. He was the author of several works mostly on church topics.

OHIO, the most populous of the Western States, increased in population 359,182 during the ten years ending in June, 1860. The further details of the census relative to Ohio, which have been made up, will be found under United States, to which the reader is referred.

The governor of the State is David Tod, whose term of office commenced Jan. 1, 1862, and continues during two years. The governor, lieut.-gov., treasurer, and Legislature are elected for two years, and on the alternate years, the secretary of State, attorney general, State librarian, &c., are chosen. The judges of the Supreme Court are elected by the people for five years. The term of office of one expires in each year.

The electors of the State have been divided into two political parties—the republican and the democratic. The election is held on the second Tuesday in October. The officers to be chosen in 1862 were, a judge of the Supreme Court, a secretary of State, attorney general, school commissioner, and members of the Board of public works; also nineteen members of Congress. A convention of the democratic party assembled at Columbus, on the 4th of July, and nominated the following officers: For judge of the Supreme Court, —— Ranney; secretary of State, W. W. Armstrong; superintendent of public works, James Gamble; school commissioner, C. W. Cathcart. The views of the convention on national affairs were expressed in the following resolutions;

1. *Resolved*, That we are, as we ever have been, the devoted friends of the Constitution and the Union, and we have no sympathy with the enemies of either.

2. *Resolved*, That every dictate of patriotism requires that, in the terrible struggle in which we are engaged for the preservation of the Government, the loyal people of the Union should present an unbroken front; and therefore all efforts to obtain or perpetuate party ascendency by forcing party issues upon them, that necessarily tend to divide and distract them, as the Abolitionists are constantly doing, are hostile to the best interests of the country.

3. *Resolved*, That the Abolition party, by their denunciation of the President whenever he has manifested a conservative spirit, by their atrocious defamation of our Generals who were exposing their lives for their country, and who needed and merited its hearty support, by their acts and declarations tending to promote insubordination in our armies, and a want of confidence in their commanders, and by their persistent representations of all conservative men in the loyal States as sympathizers with the rebels, have given immense aid and comfort to the rebel cause, and encouraged them to hope for ultimate success.

4. *Resolved*, That we have seen with indignation the intimation of the Governor of Massachusetts, that that State will be slow in furnishing her quota of troops, unless the war be carried on for purposes of emancipation. When the Nation is straining every nerve, and pouring out its blood and treasure like water, to preserve its existence, it is monstrous that a conditional Unionism that places Abolitionism above the Constitution, and the success of a party above the integrity of the Republic, should thus rear its head in high places and seek to dictate the conduct of the war.

5. *Resolved*, That while we would mete out merited and legal punishment to the plotters of, and leaders in, the rebellion, we are opposed to the contemplated sweeping and indiscriminate acts of confiscation and emancipation, by Congressional legislation or Executive proclamation, because:

I. We do not believe that such acts would be constitutional.

II. We believe that by driving the rebels to desperation, and converting Union men at the South into rebels, they would have the effect to indefinitely prolong the war, afford a pretext for foreign intervention, and render the restoration of the Union next to, or quite, impossible.

III. Because, if practicable and carried out, they would engender a feeling of bitterness between the different sections of the Union that would not be allayed for generations to come, and that would be an ever-present cause of danger and disturbance to the public peace, a source of perpetual weakness in the Government, and an ever-present incentive to foreign Powers to interfere in our domestic concerns, and to promote a disruption and overthrow of the Republic.

IV. Because they would destroy, in a great degree, if not entirely, for many years to come, the industrial interests of a large section of the country, and most injuriously affect the interests of the whole people.

V. Because the immediate and indiscriminate emancipation of the slaves would be an act of inhumanity to them.

VI. Because such an emancipation would throw upon the border free States, and especially upon Ohio, an immense number of negroes to compete with and underwork the white laborers of the State, and to constitute, in various ways, an almost or quite unbearable nuisance, if suffered to remain among us. And we would deem it unjust to our gallant soldiers to see them compelled to free the negroes of the South and thereby fill Ohio with a degraded population to compete with these same soldiers upon their return to the peaceable avocations of life.

[No. 7 condemns the Legislature for not prohibiting the immigration of negroes into Ohio; No. 8 opposes taxation for the purchase of the freedom of slaves, and denounces the frauds and corruptions of the Federal Administration; No. 9 praises the bravery and devotion of the Ohio troops; No. 10 condemns the refusal of the Legislature to let the soldiers vote; No. 11 protests against all violations of the Constitution:]

Resolved, That we hold sacred, as we do all other parts of that instrument, the following provisions of the Constitution of the United States:

"The trial of all crimes, except in cases of impeachment, shall be by jury; and such trial shall be held in the State where the said crimes shall have been committed."

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble, and to petition the Government for a redress of grievances."

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people."

"The right of the people to be secure in their persons, houses, papers and effects against unreasonable searches and seizures, shall not be violated, and no warrant shall issue but upon probable cause, supported by oath or affirmation, and particularly describing the place to be searched and the persons and things to be seized."

"No person shall be held to answer for a capital or otherwise infamous crime, unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces, or in the militia, when in active service, in time of war and public danger; nor to be deprived of life, liberty, or property, without due process of law; nor shall private property be taken for public use without just compensation."

"In all criminal prosecutions the accused shall enjoy the right to a speedy and public trial by an impartial jury of the State and District wherein the crime shall have been committed, which District shall have been previously ascertained by law; and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defence."

And we utterly condemn and denounce the repeated and gross violation by the Executive of the United States, of the said rights thus secured by the Constitution; and we also utterly repudiate and condemn the monstrous dogma that in time of war the Constitution is suspended, or its powers in any respect enlarged beyond the letter and true meaning of that instrument.

Resolved, That we view with indignation and alarm the illegal and unconstitutional seizure and imprisonment, for alleged political offences, of our citizens without judicial process, in States where such process is unobstructed, but by Executive order by telegraph or otherwise, and call upon all who uphold the Union, the Constitution, and the laws, to unite with us in denouncing such flagrant violation of the State and Federal Constitutions and tyrannical infraction of the rights and liberties of American citizens; and that the people of this State cannot safely and will not submit to have the freedom of speech and freedom of the press, the two great and essential bulwarks of civil liberty, put down by unwarranted and despotic exertion of power.

The republican electors were represented in a convention designated "Union State Convention," which assembled at Columbus, August 21, and organized by the election of Benj. F. Stanton as president. The following candidates were nominated: secretary of State, William S. Kennon; attorney general, Chauncey N. Olds; school commissioner, Wm. D. Henkle; board of public works, Ira B. Gregory. The views of the convention were expressed by the following resolutions:

Resolved, That we adhere to the opinions and principles put forth at the Union Convention held in Columbus, Sep. 5, 1861.

Resolved, That we have undiminished confidence in the National Executive in the conduct and prosecution of the war, and we pledge to his support all the moral and physical power of the State.

Resolved, That the conduct of the Executive of Ohio, in his efforts to aid in the vigorous prosecution of the war, merits and receives our unqualified approbation.

Resolved, That the unexampled promptness of our volunteer army in their enlistment in the service of their country, and the high courage with which they have borne themselves in the field, merits and receives the confidence and gratitude of the country.

The votes of the electors were cast as follows:

Democrat.		Union.	
Armstrong	184,332	Kennon	178,755
Ranney	185,078	Backus	178,115

The vote for members of Congress was as as follows:

	Democrat.	Republican.
1st. Dist.	7,445	6,418
2d. "	7,212	7,081
3d. "	11,770	13,027
4th. "	10,218	9,435
5th. "	10,561	6,202
6th. "	10,087	9,320
7th. "	10,372	10,100
8th. "	9,012	8,642
9th. "	11,765	10,523
10th.* "	5,232	6,908
11th. "	8,605	6,702
12th. "	13,721	8,087
13th. "	12,763	9,699
14th. "	10,490	10,454
15th. "	10,332	9,183
16th. "	12,299	9,999
17th. "	9,085	10,018
18th. "	4,183	9,293
19th. "	6,763	13,288

The result was the choice of democratic members of Congress in the 1st, 2d, 4th, 5th, 6th, 7th, 8th, 9th, 11th, 12th, 13th, 14th, 15th, 16th districts; and republican members in 3d, 10th, 17th, 18th, 19th districts.

The Legislature elected in 1861 was divided as follows:

	Senate.	House.
Democrats	8	24
Republican & Union	26	73

This Legislature, at its first session, on the 14th of March, adopted the following resolutions:

Whereas wicked and ambitious traitors have, without cause, plunged our nation into civil war, disregarding all fraternal obligations; falsifying the most sacred injunctions that can be applied to the conscience —their solemn oaths; forcing upon us an expense of millions of money and incalculable loss in the prostration of business, and untold miseries in the sacrifice of human life; and whereas recent developments manifest a disposition on the part of some of the leaders of the rebellion to ask terms and sue for peace: Therefore,

Be it resolved by the General Assembly of the State of Ohio, That in view of the loss of loyal blood and treasure, our Government cannot, without loss of character and injustice to the noble dead that have fallen in defence of its authority and the rights of humanity, except less than an unconditional submission to the supremacy of the Constitution and the laws.

Resolved, That the future peace of the United States and the permanency of the Government, as well as the best interests of humanity throughout the world, demand the speedy trial and summary execution of all leading conspirators in the attempt to destroy the Government; and in the name of the people of Ohio, who have given their money and lives without stint for the preservation of our liberties, we protest against the entertainment of any proposition for settlement other than unconditional submission to rightful authority and the condign punishment of the authors of the rebellion.

* Union, 5,781.

At many points on the Ohio river, above Cincinnati, the State was for many weeks threatened with invasion by Confederate guerillas. Most of the summer and fall the people were in a state of alarm. The unusually low stage of water in the river caused it to become but a slight protection to the citizens of Ohio. Early in October, however, the War Department concentrated a sufficient force in western Virginia to drive out the Confederates. Upon the approach of the Confederate troops, under Gen. Bragg, into Kentucky, the southern portion of Ohio was threatened, and the governor appealed to the citizens to arm themselves and repair to the border. From the fields, workshops, stores, offices, and pulpits, both old and young very generally turned out armed with their own weapons. The numbers were unknown, but multitudes were sent home for lack of transportation.

Under the two calls of the President for three hundred thousand men each, the quota of Ohio was 74,000. At the time when these calls were made the State had raised, by voluntary enlistment, 115,200. Of the quota of the State 37,000 were, by an act of Congress passed July 17, and the President's order issued August 4, liable to be drafted on failing to volunteer. The total militia strength of the State was 425,147. Subsequent to the President's order a day was fixed for drafting, and during this interval 62,000 volunteered, leaving about 12,000 to be drafted. Of this number, about 4,800, either in person or by substitute, volunteered for three years; 2,900 were discharged for various reasons; 1,900 failed to respond to the draft, thus leaving 2,400 for the number actually sent to the field for service under the draft. The deficiencies have been made good by voluntary enlistments since the draft.

The number of inmates of the benevolent institutions of the State during the year was as follows:

Lunatic Asylums (one omitted)	562
Blind Asylum	120
Deaf and Dumb	150
Idiotic Asylum	57
	889

Their total expense to the State during the year was $135,487.

The number of children in attendance at the common schools for the year 1862 was 723,669; male teachers, 10,559; female do. 10,931; number of school houses, 10,422; value, $4,649,903; receipts for school purposes, $2,765,866: expenditures, $2,501,068.

There are twenty-three colleges in the State,

of which three are female, and two admit students of both sexes; six are under the charge of the Methodists, five under the Presbyterians, three Roman Catholic, two Lutheran, and one Episcopal, Baptist, Congregationalist, New Jerusalem, Unitarian, and United Brethren, each. There is also a low school at Cincinnati, and three or four medical schools in the State.

The receipts of the State treasury for the year ending Nov. 15th, 1862, were $6,239,323; payments therefrom, $5,890,043; balance, $478,456.

The State debt, on Nov. 15, was $14,141,666. The interest due out of the State has been paid in coin, which was furnished by the banks in redemption of their own notes at one half of one per cent. premium. This was made a condition of their suspension of specie payments being legalized by the Legislature.

The length of the railroads of the State completed and in progress is 3,230 miles, at a cost of $150,166,949.

OREGON, situated in the northwestern extremity of the United States, on the Pacific Ocean, had a population in 1860 of 52,465, which is an increase during the preceding ten years of 39,171. For the details of the census relative to this State, the reader is referred to the article on the UNITED STATES.

The governor of the State is Addison C. Gibbs, whose term of office expires Sept. 1866. The governor, secretary of State, treasurer, and State printer are elected for four years. The last election was held on June 2, 1862. The citizens were divided into two parties at the election: one known as Douglas democrats and republicans; the other regular democrats, or, as they were called, Breckinridge democrats, having voted for John C. Breckinridge for the presidency in 1860.

The vote for governor cast at the election was for Gibbs, Union, 7,039; Miller, democrat, 3,450. For McBride, Union, for Congress, 6,809; for Miller, democrat, 3,632. The Legislature contained a majority of the Union party, and elected Benj. F. Harding to the United States Senate by 9 majority over all others.

The Legislature assembles biennially on the second Monday of September. The Senate consists of sixteen members elected for four years, and the House of thirty-four members elected for two years.

The Supreme Court consists of five judges, who are chosen in districts by the electors and who hold the courts for those districts. They are elected for six years.

The receipts into the State treasury for two years ending September 8, 1862, were $91,788, and the expenses during the same period were $55,831. The State tax payable in 1861 was $48,475 on a valuation of property at $23,886,951; and the tax for 1862 was $43,117, on a valuation of $21,288,931.

Four colleges have been incorporated in the State, one of which is an agricultural college, and very liberal grants of land have been made by Congress for common schools.

Western Oregon is well adapted to agricultural pursuits. It has extensive valleys, where the growth of various fruits is unsurpassed. The valleys in eastern Oregon have a rich soil and hot summers. The climate is comparatively mild and not particularly moist, except in that portion lying west of the coast range of mountains. In eastern Oregon it is dry with little or no rain except in autumn. This part of the State is rich in mineral wealth.

No troops have been called from Oregon during the war, but many of the citizens have joined the troops raised in California. A regiment raised in the State is also performing garrison duty at posts where United States troops were formerly stationed.

P

PASQUIER, ETIENNE, DENIS, Duke, a French statesman, born in Paris, April 22, 1767, died in that city, July 5, 1862. He was educated at the College of Juilly by the Oratorians, became a councillor in the Parliament of Paris before he was of age, and as such was one of the parties exiled to Troyes in the last years of the old monarchy. His father perished on the scaffold in 1794, and young Pasquier exerted himself so energetically to save him that he was near sharing the same fate. He occupied several important posts under the empire, was councillor of state and procureur general, a baron, commander of the legion of honor, and, finally, was appointed prefect of police. It was while he held this office that Malet made his daring attempt to overthrow the government during Napoleon's absence in Russia. Pasquier's presence of mind defeated the plan, and the emperor retained him in his post. After the abdication of Fontainebleau, he recognized the new government and did his best to induce the Parisian population to submit to the authority of the Bourbons. On their restoration he withdrew from political affairs, but accepted the post of director general of the ponts et chaussées. On the return of the emperor from Elba, he resigned, and exercised no public function during the Hundred Days. On the second restoration he was offered the post of keeper of the seals in the first cabinet formed by Prince Talleyrand in 1815. He was elected deputy for Paris in 1816, joined the ministry of 1817, and in 1819 was associated with M. Decazes in the formation of a new cabinet, in which he held the portfolio of foreign affairs.

After the resignation of M. Decazes, M. Pasquier became the real head of the government, and through his courage and superior judgment was enabled to pass safely through that stormy period. He adhered to the revolution of July, 1830, and was treated with favor by Louis Philippe, who made him president of the Chamber of Peers—and as such he presided at the trial of Prince Louis Napoleon (now emperor of the French), and his associates, for the Boulogne attempt. In 1844 he received from Louis Philippe the title of duke. He was elected member of the French Academy in 1842. His public career ended with the revolution of 1848.

PATENTS. During the year 1861, and early part of 1862, there was a falling off in the business of the Patent Office, mainly resulting from the effects of secession in taking off a large number of inventors and mechanics from their workshops to swell the ranks of the Federal army; and the general depression of the business in the country also tended to the same result.

The operations of the Patent Office, compared with the previous years, have been as follows:

	1860.	1861.	1862.
Number of applications filed.....	7,653	4,643	5,038
Number of patents issued, including reissues and designs.....	4,819	3,340	3,521

During the last quarter of 1862, and first quarter of 1863, the business of the Patent Office increased considerably.

The financial condition of this branch of the public service is as follows:

Balance of patent fund, January 1, 1862.....	$5,416 55
Total receipts of patent office for 1862, including an appropriation of $50,855 49.....	215,754 99
Total	$221,171 54
Total expenditures for the year 1862.....	182,810 39
Balance of patent fund, January 1, 1863.	$38,361 15

The patent law of March, 1861, has proved a benefit to inventors, and was the means of establishing many important changes in the mode of granting patents, most of which have been fully laid before the public.

The decisions of the board of examiners-in-chief (created by that law) have shown marked ability, and led to a more uniform and liberal policy in the issue of patents, as will be seen from the fact that about seven tenths of the patents applied for are granted: this is a large advance on the proportion for many former years.

By this law of March, 1861, fifteen dollars was required on filing each application, and twenty dollars additional before the patent was allowed; but there was no time specified in which this additional sum was to be paid, hence many inventors left their applications for a year or more before making this additional payment, for the purpose of prolonging the term of their protection. This manifest error and wrong has been rectified by a recent act of Congress, requiring said additional fee to be *paid within six months, or the patent would be considered abandoned*, unless shown to the satisfaction of the commissioners that the delay was unavoidable.

In the following brief synopsis of some of the patents granted in the year 1862, sufficient space cannot be devoted to the subject to mention all the inventions that appear to have special value, and besides this it often happens that months, or even years, elapse before the real merits of an invention become known, and hence it is impossible to form an accurate judgment as to what will ultimately prove of special value and importance.

In future volumes it is proposed to extend these notices of inventions to a greater length than can be done in this volume.

Beer Cooling.—The brewing of ale, porter, and beer has been much improved during the few years past by the aid of scientific appliances that have transformed the manufacture into a regular chemical process, instead of being dependent on the skill and judgment of the brewer. Perhaps nothing has effected a greater change than the cooling apparatus invented by J. L. Baudelot, of Paris, and patented in this country, Nov. 1, 1859, and reissued Jan. 28, 1862.

The cooling of beer upon the old plan was effected in a deep narrow vessel, so that the atmosphere might come in contact with the same as little as possible, the cooling being effected by water circulating through pipes within this vessel. The improvement above mentioned consists in a vertical range of horizontal pipes. The beer runs from a trough upon the top pipe of the range, and thence trickles down upon the next pipe, and so on to the bottom pipe, so that it runs in thin film over the entire surface of the pipes. These pipes contain water, which enters the bottom pipe of the range, and circulates upward and flows away from the top pipe; hence the conditions of heat are inverted in the respective liquids, the beer in a heated state trickling downward becomes entirely cool, while the water entering cold, and running upward, passes away at the top in a heated state. Besides being much more rapid than the coolers heretofore made, this apparatus improves the quality of the beer by exposure to the atmosphere.

Ballast Boxes.—Steamboats require ballast boxes that are moved from place to place to keep the boat level in the water as the passengers may go from side to side, or as the deck load may be removed. Heretofore these ballast boxes have required the combined strength of several persons to move them, and the necessity for their removal often arises when the deck hands are otherwise occupied.

The invention patented Feb. 11, 1862, by T. Fowler, consists in a crank and gearing applied to the castor wheel of the ballast box, by which device one man can with ease move the said box from place to place as required, with as

much speed as is necessary, although the motion is comparatively slow.

Canteens.—Anything that will promote the health of the soldier should receive consideration, especially while so many valuable citizens have left the comforts of home for untried exposure and hardship. Pure water is of vital importance to health, and yet the soldiers' canteens usually employed impart, to many kinds of water, a poison, arising from the action of the water on the metal of which they are made. L. Cantel patented (Oct. 11, 1862) a canteen made of sole leather, saturated with a peculiar varnish, and pressed up in moulds to form the halves of the canteen; the insides are lined with pure tin foil, and then the halves united with rivets. The canteen is light and strong, and at the same time is not affected by liquids carried in it.

Dredging Machine.—A patent was granted in 1848 to E. Morris for a scoop and elevator for dredging, which was extended in 1862 for seven years.

This invention is one of those that has earned an enviable reputation. The old style of dredging machine scrapes the mud up from the bottom of slips and basins, and in so doing raises a large amount of water unnecessarily with the mud, and it is very difficult to work down into the corners of slips.

The machine above named is composed of a scoop formed of two quarters of a cylinder worked by chains, and attached to vertical poles; the scoop is lowered down, and when it rests upon the mud the said quarter cylinders are drawn together, cutting down into and enclosing the mud within the half cylindrical scoops thus formed; the scoop is then raised, swung over a scow, and opened to deliver its contents.

This character of dredging machine effects a great saving in the cost of excavation, and does work that no other machine has been able to perform.

In obtaining the extension, it was shown that slips and basins had been excavated to a depth of thirty feet, and the mud and earth swung across the bulkhead in the machine and delivered on the inside for filling in the land. This machine has also been used for tearing to pieces and removing sunken vessels, and for drawing up old piles and removing piers, in which case the stones used for filling in the crib-work have been taken up and the crib-work itself broken to pieces and removed.

Fusee or Safety Train.—Blasting rocks, both under water and upon land, is always attended with danger from premature explosion, and also from defects in the fuse, causing the same to smoulder for a long time, instead of burning regularly, and from this cause blasts sometimes explode just as the workmen commence to examine and remove the defective fuse.

The above-named invention, patented Jan. 7, 1862, removes the risk entirely, for the explosion will be instantaneous, or, if the fuse is broken or defective, there is no possibility of an explosion. A composition, in a moist state, is applied in a thin line on a strip of paper, and this paper is then folded and coated with gutta percha, or varnish, and cords are applied longitudinally, to give the necessary strength; these are kept in place by a winding of string. The composition employed is of an explosive, but not a detonating nature, and will ignite at the rate of a mile in the space of five seconds of time, thus approaching the velocity of electricity. The speed of the explosion is such that the paper, although torn to pieces, is not ignited; hence the explosion of the gunpowder, to which this fuse connects, is instantaneous, or, in case of failure from improper management, there is no danger from immediately inserting a new fuse, because there is no fire left in the defective fuse.

Firearms and Implements of War.—The war which the country is engaged in at present, has caused many improvements to be made in firearms and implements of warfare, in fact the art of war has been changed radically within the past two years. The perfection of cannon and projectiles has inaugurated a perfection in armor for resisting them, and so each side has alternately triumphed; all have heard of the iron-plated monster the "Merrimac," with her iron prow making sad havoc with the Federal fleet off Fortress Monroe, in March last, and of the invulnerable Monitor that arrived in time to check her career and cause her retreat to Norfolk; and then mention is made of such projectiles as those invented by C. W. Stafford (patented Jan. 27, 1863), capable of penetrating the iron turrets of these Monitors.

Justice cannot be done in this article to those inventors who have devoted time, thought and money to devising implements of war, hence but few of these inventions can be mentioned.

Accelerating Projectiles.—The sudden starting of a cannon or musket ball from a state of rest to a velocity nearly equalling that of sound causes a great strain on the musket or cannon, hence the breech has to be the strongest part. The powder, being, ordinarily, all in one mass when ignited, produces great pressure at the breech; but the pressure of the gases decreases, in consequence of the expansion, before the projectile leaves the barrel, hence said projectile is not acted upon with as much power at the time of leaving the barrel as when it was started. The conditions of pressure should be reversed, so that the ball would be started gradually, and its velocity increased and followed up by an increase of pressure. This result is attained in a cartridge patented by Alexander Shannon, March 4, 1862, in which a given charge of powder, instead of being in one mass, is divided by diaphragms of perforated felt, or other materials, the section of powder next the ball being the largest,

that next to the rear smaller, and the extreme rear section being still less; on being fired, the ball and forward sections of powder are started by the explosion of the first section of powder, and the ball is accelerated by the explosion of the successively larger charges of powder, the last explosion taking place just before the ball leaves the gun, so that its velocity is accelerated by a constantly increasing pressure. The experiments with this improvement show a much greater range and penetration than was ever before attained with the same amount of powder. The recoil of the gun with this mode of acceleration is very much lessened.

Revolving-chambered pistols have also been improved and simplified; in letters patent granted to D. Moore, Jan, 7, 1862, the forward part of each chamber is rifled, and coincides with the rifling of the barrel, the ball is entered, in a metallic cartridge case, at the open rear end of the chamber, so that the act of slugging the ball in the rifle grooves tends to force the cylinder of chambers forward against the rear end of the barrel, and prevent the escape of gases at this point.

Revolving guns have been made and used that fire over a hundred shots per minute, and an accelerating gun has been invented in which the penetration of the projectile has been truly wonderful, such as a half-inch steel bolt driven through two iron plates, each of which was more than two inches thick. Another invention of a rifle battery capable of firing over four hundred shots per minute has also been made; but of these, for prudential reasons, no farther description can now be given. Various valuable improvements have been made in breech-loading firearms, and in projectiles, also in armor plates and iron-clad vessels, for which, *see* NAVY, U. S.

Hay Elevator.—The hard labor of the farmer is gradually being done away with, and the power of horses and of steam are being introduced for the relief of human labor. Any improvement in this direction should be hailed with joy, for agriculture is the most noble and honorable employment, and many are kept from engaging therein in consequence of the excessive bodily labor connected therewith.

In former years, the most laborious work on the farm was throwing the hay from the wagon upon the mow in the hot and close barn; several attempts were made to unload by means of a fork drawn up by a rope passing through a block overhead, and thence through a block on the floor to a horse. These forks were all cumbersome, and more or less difficult to operate.

A Baptist minister in Greene co., N. Y., who found that the labor of pitching hay during the week rather incapacitated him for preaching on Sunday, thought he would devise a horse-pitchfork, and, after it was made, its operation exceeded the most sanguine expectations of himself and friends, and he patented the same Sept. 30, 1862, and the fork has since taken several premiums at the various fairs where it has been exhibited.

This invention consists in curved tines extending downward and forward from the head of the fork; a short handle is connected to this head on the opposite side to the tines. A bail is hinged to the head of the fork, by which the same is lifted, and a rule-joint brace between the bail and handle keeps the handle down while the hay is being raised and conveyed away to its place on the mow; a rope drawn up by a horse is employed as before. The pulling of a cord by the attendant raises this rule-joint brace and handle, and draws the tines away from under the hay, and the further movement pulls the fork back to the attendant on the cart as the horse backs. This fork, though small, will raise about four hundred pounds of hay at once.

Lamps.—The introduction of coal oil has opened a new field for the inventive faculty, and it has been so thoroughly cultivated that it is difficult to select the most important of the inventions connected with lamps. The lamps that were in use when coal oil was first introduced were not adapted to burning the same, in consequence of the preponderance of carbon in such oils, but inventors have stepped in to supply the deficiency, and now lamps are constructed to burn the oil without smoke or smell, and with a very brilliant light. This result has been the most perfectly attained in lamps that employ a glass chimney, although several have been made, patented, and introduced that burn without any chimney or shade. *See* ILLUMINATION.

Locomotives.—With heavy trains and in ascending grades the driving wheels of engines are apt to slip. Sand has been used to prevent this, but that is only partially effective, and produced a grinding operation that wears flat places upon the wheels. An ingenious mode of giving adhesion to locomotive wheels was patented by T. Selleck, Sept. 16, 1862, in which the metal known as "Franklinite" is used in place of sand. This metal is very hard, and, when properly prepared, can be pounded up into small lumps or grains. By allowing a small stream of this granulated "Franklinite" pig metal to run on the rails for twenty or thirty feet, the slipping of the wheels will be prevented for a long distance, because these metallic grains are, by the weight, imbedded in the tires of the driving wheels, and act like fine cog teeth upon the surface of the rails to prevent slipping.

Locomotive Trucks.—If the railroads of our country were perfectly straight there would be but few instances of running off the track, but as curves are necessary, many different devices have been made and patented for ensuring greater safety in travelling over them. The most recent and effective device for ensuring safety in running over curves, as well as preventing accidents by contact with obstructions

or broken rails, has been invented by Alba F. Smith, superintendent of the Hudson river railroad, and by him patented Feb. 11, 1862.

This invention consists in introducing pendent links between the truck frame and the locomotive, in such a manner that the truck can move laterally under the forward end of the engine. The importance and necessity of this will be understood from the following:

Locomotives generally have four or six driving wheels; if these are placed on a curved track, and a line projected forward from the plane in which these wheels stand, it will be found that the curved track diverges either one way or the other from that line; now if the front of the engine itself were pulled around, so that the truck wheels (standing in the same plane as the drivers) could set upon the track, the flanges of the respective wheels would press against the sides of the track, producing great friction and wear, and always tending to make the locomotive run off the outer rail of the curve; this is substantially the case in the ordinary locomotive, but by allowing the truck to traverse laterally under the forward end of the engine, as well as to turn on its centre bolt, the drivers are allowed to retain their proper position on the track and travel freely around the curve, while the truck wheels also travel as freely around the curve as they would do if on the ordinary cars.

This improvement has been introduced on some of the best railroads in the country, and gives great satisfaction.

The patent in question, and some others granted in previous years for accomplishing the same general objects by different mechanism, are owned by the Locomotive Safety Truck Company of New York.

Machine for Planing Wood Mouldings.—The casual observer cannot help noticing the large amount of wood mouldings that are now used in buildings, in comparison with what was used fifteen or twenty years since. This arises from the fact that mouldings are produced by machinery at a much less cost than was possible when planed by hand. A machine for planing mouldings was patented by A. T. Serrell, May 16, 1848, and extended for seven years from May, 1862, in which a strip of wood sawed diagonally, so as to save material, is fed into the machine by a roller that only acts upon the parts where most wood has to be cut away, thereby not injuring the portion of the wood required for the moulding itself. A rotary cutter gives shape to the moulding, and a stationary plane smooths off the surface. This machine is in extensive use in many parts of the country.

Shoes.—The benefit resulting from the application of scientific principles to this branch of industry is apparent by examining the light and handsome rubber shoes now used in comparison with the shapeless article formerly made, with the top part as thick or thicker than the soles.

The same remark applies to leather shoes; they have not been made on scientific principles; in ready-made shoes this is particularly the case, and almost every person knows that a boot or shoe has to be worn for a long time before it becomes as easy as an old shoe. This results mainly from the fact that the lasts have not been properly shaped, and the shoe has to become wrinkled on the top, in consequence of the sole bending upward at the toe. An improvement was patented Sept. 16, 1862, by N. Jones, in which the sectional last is made of a peculiar shape and measure, so that the shoe will be easy to the foot, and much more durable, because the parts take their proper strain, and the leather does not wrinkle and crack. This style of last and shoe is being extensively adopted.

Skeleton Skirts.—Since ladies adopted the skeleton skirt to keep the dress sufficiently distended for convenience in walking, many improvements have been made in the mode of construction, and it is to be hoped that these skirts will eventually be so perfectly made that all objections to them will be removed, for by their use the health of females is much improved, because the heavy weight of skirts formerly worn around the hips is removed.

An improvement that adds much to the durability of the skirts was patented Jan. 21, 1862, in which a piece of thin leather is introduced beneath each of the clasps that fasten the tapes to the hoops, whereby the cutting of the tapes by the metal of the clasps is prevented.

Sewing Machines.—The attention devoted by inventors to this branch of manufacture, has developed many important and valuable improvements. Among the improvements recently introduced by many of the sewing machine manufacturers, is a device for braiding; a small hole is made in the cloth presser near the opening for the needle, and the braid is led through this from a spool, so that the said braid can be stitched to the fabric in any configuration desired; the fabric being guided to the figure or pattern mark upon it.

The sewing machine of Messrs. Wilcox and Gibbs has also been improved so that it runs without being heard; the noise in sewing machines arises almost entirely from the feeding device where the metallic surfaces come suddenly together. In this machine the noise is prevented by the introduction of compressed leather at certain places in the feeding mechanism, and in practice this feed is found to be much more durable than those heretofore in use.

In the same machine a simple device is employed for determining the position of the hemmer; this consists of a small pin entering a hole in the bed, so that the hemmer cannot be misplaced and the stitching will always be on the proper part of the folded hem.

An important improvement in sewing machines was patented Nov. 11th, 1862, by J. A. & H. A. House, which is now the property of

the Wheeler & Wilson Sewing Machine Co. It is designed specially for the working of button and eyelet holes, although the range of the invention easily adapts the peculiar stitch claimed to various other purposes, in fact it may fairly be said to supply the link which was needed to make the chain of automatic movements in all classes of sewing complete.

For many years it has been the constant study of inventors to produce a machine which would throw a stitch over the edge of any fabric, so as to cover or bind it. The great sewing machine corporations of this country had expended many thousands of dollars in vain attempts to realize what was finally voted by almost all an impossibility, though acknowledged to be a necessity.

There had previously been several partially successful machines designed for this purpose invented and patented, but as the inventors always appeared to entertain the idea that the fabric must be moved under or around stationary needles, the machines, though ingenious, were of no practical value, it being found impracticable to form a perfect eyelet or rounded end of the button hole.

The idea of holding the fabric stationary and moving the needles around it, at the same time throwing what may be termed a double loop interlacing stitch over the edge of the hole, finally occurred to the Messrs. House, and they, after several attempts, succeeded in producing the machine mentioned.

The motive power or machinery to move the needles, one of which is straight and pierced with three eyes at the point, while the other is curved and has two eyes, is entirely below the bed plate. The straight needle is attached to an arm or shank which projects through a slot, above the bed plate, and this is fastened to a mandrel working from below; underneath the bed plate is a disk upon which are placed the spools, tensions, &c., and working through which in a slot is the curved needle or finger as it is called.

The cloth or garment in which the button or eyelet hole is to be worked, being punched, is placed upon the bed plate, the hole being directly over the slot, and the end of the needle shank projecting through it. The cloth is then pressed down upon the plate by what is called a foot or lever, and securely confined. On turning the crank, the needle shank rises, and then in its downward motion carries the straight needle directly through the edge of the fabric. The curved needle or finger which works through the hole brings its thread up over the edge of the cloth. This thread is caught by the straight needle in its downward course, then the finger draws down below the fabric and takes a loop from the straight needle, and ascending gives a loop again to the straight needle, thus forming a double interlacing stitch.

The disk, which is the most important portion of the machine, is mounted on a travelling carriage moved backward and forward by a screw.

When the operator starts the machine, the needles being at the lower end of the button hole are moved along the edge or straight side, by the screw feed; on reaching the end, the screw feed is disconnected from the disk by a switch, and a gripe or rotating movement carries the needle around the end of the hole, forming a perfect crescent; so soon as this half circle is complete, the switch again pushes the screw into position, and this by a reverse motion drives the needles down the other side of the hole to the point of departure, forming a complete button hole. The size of the button hole is readily regulated by an index attached to the machine, and it will work a hole two inches in length, or an eyelet of less than an eighth.

An ordinary skilful operator will, with the assistance of two girls to finish or tie the ends, work one thousand fine button holes an inch and a quarter in length in ten hours, and all exactly alike. By the hand not more than forty can be made by the most accomplished operator in the same time.

As stated, the range of this stitch is not confined to button-hole making, but includes the sewing of sails, tents, awnings, indeed all classes of work requiring two straight or selvage edges to be bound securely and smoothly together.

PENNSYLVANIA, the second State in population in the Union, increased 594,329 in the number of inhabitants during the ten years ending June 1860. (*See* UNITED STATES.) The governor is elected for three years. The present incumbent is Andrew G. Curtin, whose term of office expires on the 1st of January, 1864. The State election is held on the second Tuesday of October. The officers to be chosen in 1862 were an auditor-general and a surveyor-general.

A convention, representing the democratic party of the State, assembled at Harrisburg on the 4th of July, and nominated for auditor-general Isaac Slenker, and for surveyor-general John P. Barr. The views of the convention on national affairs were expressed in the following series of resolutions:

Whereas, The American Constitution was ordained and established by our fathers in order to form a more perfect union, to establish justice, to insure domestic tranquillity, to provide for the common defence, promote the general welfare, and secure the blessings of liberty to posterity; therefore,

1. *Resolved*, That the only object of the democratic party is the restoration of the Union as it was, and the preservation of the Constitution as it is.

2. That to the end that the Union may be restored, and the Constitution and laws enforced throughout its whole extent, we pledge our hearty and unqualified support to the Federal Government in the energetic prosecution of the existing war.

3. That the true and only object of the war is to restore the Union, and to enforce the laws; such a purpose alone is worthy of the awful sacrifice which it costs us of life and of treasure, and with such a purpose alone can we hope for success, and those who from sectional

feeling or from party or private motives, would give any other direction to the efforts of our arms are unjust and unworthy to be intrusted with power, and would cause all our exertions, extraordinary and unparalleled as they are, to prove futile in the end.

4. That we justly view with alarm the reckless extravagance which pervades some of the departments of the Federal Government; and that a return to rigid economy and accountability is indispensable to arrest the systematic plundering of the public treasury by favorite partisans; and in view of the recent startling developments of fraud and corruption at the Federal metropolis and throughout the country, that we hold an entire change in the Administration to be imperatively demanded.

5. That the party of fanaticism or crime, whichever it may be called, that seeks to turn the slaves of the Southern States loose, to overrun the North, and to enter into competition with the white laboring masses, thus degrading and insulting their manhood by placing them on an equality with negroes in their occupations, is insulting to our race, and merits our most emphatic and unqualified condemnation.

6. That we denounce Northern abolitionism and Southern secession as the coöperating sources of our present calamities—alike treasonable to the Constitution and inimical to the Union. The only way to a restored Union and a respected Constitution, with returnig peace and prosperity, is through the overthrow of both.

7. That the democracy of Pennsylvania is equally opposed to all sectional legislation and geographical parties, which base their hopes for continued partisan success on the agrarianism of emancipation and hypercritical philanthropy, abolition, because neither is known to the Constitution, and both are intended to aid disunion and subvert the Constitution, and to prevent the restoration of unity, peace, and concord among the States and the people.

8. That the Constitution and the laws are sufficient for any emergency, and that the suppression of the freedom of speech and of the press, and the unlawful arrest of citizens, and the suspension of the writ of *habeas corpus*, in violation of the Constitution in States where the civil authorities are unimpeded, is most dangerous to civil liberty, and should be resisted at the ballot box by every freeman in the land.

9. That this is a Government of white men, and was established exclusively for the white race; that the negro race are not entitled to and ought not to be admitted to political or social equality with the white race, but that it is our duty to treat them with kindness and consideration as an inferior, but dependent race; that the right of the several States to determine the position and duty of the race is a sovereign right, and the pledges of the Constitution require us as loyal citizens not to interfere therewith.

10. That Congress has no power to deprive any person of his property for any criminal offence unless that person has first been duly convicted of the offence by the verdict of a jury, and that all acts of Congress like those lately passed by the House of Representatives, which assume to forfeit or confiscate the estates of men for offences of which they have not been convicted by due trial by jury, are unconstitutional, and lead to oppression and tyranny. It is no justification for such acts that the crimes committed in the prosecution of the rebellion are of unexampled atrocity, nor is there any such justification as state necessity known to our Government or laws.

11. That the Constitution and the Union and the laws must be preserved in all their proper and rightful supremacy, and that the rebellion now in arms against us must be suppressed and put down, and that it is our duty to use all constitutional measures necessary and proper to that end.

The republican, or, as it was called, "Union" State convention, assembled at Harrisburg on the 17th of July, and nominated Thomas E. Cochran for auditor-general, and ——— ——— for surveyor-general. The views of the convention on national affairs were expressed by the following resolutions:

Resolved, That the convention, representing as it does the loyal citizens of Pennsylvania, without distinction of party, reaffirm the sentiments embodied in the resolution adopted at the meeting of the loyal members of Congress at the national capitol, July 12, 1862: That we hold it to be the duty of all loyal men to stand by the Union in this hour of its trial, to unite their hearts and hands in earnest patriotic efforts for its maintenance against those who are in arms against it, to sustain with determined resolution our patriotic President and his Administration in their energetic efforts for the prosecution of the war and the preservation of the Union against enemies at home and abroad, to punish traitors and treason with fitting severity, and to crush the present wicked and causeless rebellion, so that no flag of disunion shall ever again be raised over any portion of the republic; that to this end we invite the coöperation of all men who love their country in the endeavor to rekindle throughout all the States such a patriotic fire as shall utterly consume all who strike at the Union of our fathers, and all who sympathize with their treason or palliate their guilt.

Resolved, That we have continued confidence in the honesty, capacity, and patriotism of President Lincoln and his constitutional advisers; that we approve the principles on which his policy, both foreign and domestic, has been conducted; that we sanction and sustain all the measures that he has found it necessary to adopt to guard the Government against the assaults of traitors, their sympathizers and abettors; and we esteem it eminently fortunate that, in this most trying crisis of our cherished Union, we have at the helm of public affairs one so upright, temperate, prudent, and firm as he has proved himself to be.

Resolved, That we cordially approve of the administration of Andrew G. Curtin, governor of this commonwealth, marked as it has been by extraordinary vigor in the discharge of all public duties, by untiring zeal in the cause of the country, and especially in recruiting forces for the national army, by enlarged and liberal care for the sick and wounded soldiers of the State, by a wise and prudent economy in the expenditures of the funds committed to his care, and by the unsparing devotedness of all its members, and in particular the governor himself, to the constant harassing, complicated, and novel labors which the exigencies of the great rebellion has imposed.

Resolved, That we acknowledge but two divisions of the people of the United States in this crisis, those who are loyal to its Constitution and every inch of its soil, and are ready to make every sacrifice for the integrity of the Union and the maintenance of civil liberty within it, and those who openly or covertly endeavor to sever our country, or to yield to the insolent demands of its enemies; that we fraternize with the former and detest the latter; and that, forgetting all former party names and distinctions, we call on all patriotic citizens to rally for one undivided country—one flag—one destiny.

Resolved, That the Government of the United States and its people, with an occasional exception among the reckless inhabitants, where this rebellion was fostered, have wisely and studiously avoided all interference with the concerns of other nations, asking and usually enjoying alike non-interference with their own, and that such is and should continue to be its policy. That the intimations of a contemplated departure from this sound rule of conduct on the part of some of the nations of Europe, by an intervention in our present struggle, is as unjust to them as it would be to us, and to the great principles for which we are contending; but we assure them, with a solemnity of conviction which admits of no distrust or fear, and from a knowledge of and a firm reliance upon the spirit and forti-

tude of twenty millions of freemen, that any attempt thus to intervene will meet a resistance unparalleled in its force, unconquerable in its persistence, and fatal to those whom it is intended to aid; and that it will tend only to strengthen and elevate the republic.

Resolved, That the skill, bravery, and endurance exhibited by our army and navy have elicited our admiration and gratitude; that we behold in these qualities assurances of sure and speedy success to our arms, and of rout and discomfiture to the rebels. That we urge the Government to aid and strengthen them by all the means in its power, and carefully to provide for sick, wounded, and disabled soldiers, and their families, to prosecute the war with increased vigor and energy until the rebellion is utterly crushed, the integrity of the Union in all its borders restored, and every rebel reduced to submission, or driven from the land, and that to accomplish these we pledge to our rulers our faith, our fortunes, and our lives.

Resolved, That the course of the Hon. David Wilmot in the United States Senate is manly, consistent, and eminently patriotic, and we hereby endorse him as a true and faithful representative of the loyal people of this State, and monuments shall be raised to teach posterity to honor the patriots and heroes who offered their lives at their country's altar; their widows and orphans shall be adopted by the nation, to be watched over and cared for as objects truly worthy a nation's guardianship.

The votes of the citizens were cast as follows:

	1862.	1361.
Democrat	219,140	230,239
Republican	215,616	262,403

The democratic candidates were thus elected.

The vote for members of Congress in the several districts was as follows:

	Democrat.	Republican.
1st. Dist.	7,720	6,273
2d. "	6,068	8,614
3d. "	8,243	8,285
4th. "	8,118	8,946
5th. "	9,543	9,605
6th. "	11,316	8,092
7th. "	6,445	9,891
8th. "	10,022	4,898
9th. "	6,650	11,174
10th. "	9,239	8,518
11th. "	11,676	2,592
12th. "	11,408	9,641
13th. "	7,703	9,520
14th. "	10,630	10,109
15th. "	9,746	11,965
16th. "	10,963	10,426
17th. "	8,328	7,556
18th. "	9,272	8,855
19th. "	9,462	9,954
20th. "	11,586	12,404
21st. "	10,234	10,009
22d. "	5,678	8,037
23d. "	7,635	8,989
24th. "	9,984	9,847

The democrats elected their candidates in the 1st, 6th, 8th, 10th, 11th, 12th, 14th, 16th, 17th, 18th, 21st, 24th districts, and the republicans in the 2d, 3d, 4th, 5th, 7th, 9th, 13th, 15th, 19th, 20th, 22d, 23d districts.

The members of the Legislature elected were as follows:

	Senate.	House.
Democrats	12	55
Republican	21	45

The financial condition of the State is as follows:

The balance in Treasury Nov. 30, 1861, was		$1,551,605 72
Receipts during fiscal year ending Nov. 30, 1861, were as follows:—		
Ordinary sources	$4,047,822 39	
6 per cent. loan act May 15, 1861	387,850 00	
From various banks as an equivalent for coin for the payment of interest on public debt	140,768 30	
Refunded cash, military	29,566 42	
United States Government	605,740 52	
		5,211,747 63
Total into Treasury for fiscal year ending Nov. 30, 1861		$6,763,353,35
The payments were as follows:		
For ordinary purposes	$3,083,110 06	
Paid on State interest as an equivalent for coin	146,631 22	
Military expenses, act April 12, 1861	7 62	
Military expenses, act May 15, 1861	460,548 68	
Military expenses, act May 16, 1861	1,217 26	
Military expenses, act April 16, 1862	20,607 04	
Military pensions, act May 15, 1861	400 54	
Commissioners of Sinking Fund	427,881 51	
Domestic creditors	105 32	
Temporary loan redeemed	100,000 00	
U. S. Government direct tax	350,000 00	
		4,590,509 25
Leaving balance in Treasury Nov. 30, 1862		$2,172,844 10
Of which amount $195,576 27 was the balance of unexpended military loan, as follows:		
Balance of said fund Nov. 30, 1861	$390,507 41	
Receipts under act May 15, 1861	387,850 00	
		778,357 41
Paid for military expenses as above	482,781 14	
Paid for redemption of temporary loan	100,000 00	
		582,781 14
		$195,576 27
Receipts from ordinary sources:		
For year ending Nov. 30, 1862		$4,047,822 29
Do. do. do. 1861		3,017,645 57
Excess of receipts for 1862		$1,030,176 82
Payments for ordinary purposes, excepting interest:		
For year ending Nov. 30, 1861		$1,118,662 93
Do. do. do. 1862		1,023,345 77
Decrease in expenditures of 1862		$95,317 16

The receipts from ordinary sources of revenue for the year 1862 were in excess of the receipts of the year 1861, $1,030,176 82 [the excess of interest paid in 1862 over that in 1861 being $144,095 37], and the ordinary expenditures for 1862 were $95,317 16 less than the year previous.

Amount of public debt of Pennsylvania, as it stood on Dec. 1, 1861		$40,580,666 08
Additional amount received at the State Treasury during the fiscal year ending Nov. 30, 1862, on Military loan, authorized per act of May 15, 1861		387,850 00
		$40,968,516 08
Deduct amount redeemed at the State Treasury during the fiscal year ending Nov. 30, 1862, viz.:		
5 per cent. State stocks	$268,809 49	
4½ per cent. State stocks	50,000 00	
4 per cent. State stocks	100,000 00	
Interest certificates	17 25	
Relief notes	1,411 00	

Domestic creditors' certificates.	$64 52	
Military loan, per act of April 12, 1861 redeemed.....	100,000 00	
		520,302 26
Public debt December 1, 1862.....		$40,448,213 82

Towards the extinguishment of the public debt, the Sinking Fund holds securities amounting to $10,781,000, as follows:

Bonds of Sunbury and Erie Railroad Co....	$3,500,000 00
Bonds of Pennsylvania Railroad Co.....	7,000,000 00
Bonds of Wyoming Canal Co.....	281,000 00
	$10,781,000 00

Should there be no extraordinary demand on the treasury, there can be appropriated from the large balance on hand and the increasing revenues, at least $1,500,000 during 1863, toward the payment of the public debt.

The quota of the State of the direct tax of the United States was $1,946,719, which was paid on the 14th of June, 1862, partly by a relinquishment of a portion of the sums claimed by the State from the Federal Government and partly in cash after deducting 15 per cent. for prompt payment. There is still due to the state, for advances to equip volunteers, about $300,000.

The interest on the debt of the State was paid in August in specie at the cost of $146,631, for the difference between specie and paper currency. This amount was refunded to the State by the banks under the act legalizing their suspension of specie payments.

Previous to the first call for volunteers on the 7th of July, the State had sent forward nearly 110,000 men. Liberal bounties were offered by municipal authorities throughout the State, and 38 regiments and three unattached companies of infantry were soon raised. On the 4th of August a draft of 300,000 militia was ordered by the President to serve for nine months. The enrolment and draft were conducted throughout the State under the laws of Congress, the State militia law being too defective for that object. The draft generally took place on the 16th of October. In some counties, a degree of resistance was manifested, but on the whole it was quite successful. Including the three months volunteers, Pennsylvania has furnished to the Federal Government more than 200,000 men since the commencement of the war, besides some 50,000 who were in service, or actually ready for it, as volunteer militia under a call made on Sept. 11, making in the whole more than 250,000 men.

Early in September the Confederate army under General Lee crossed the Potomac into Maryland, with the design, as was supposed, of invading Pennsylvania. On the 4th of Sept. the Governor issued a proclamation, calling upon the people to organize into companies, and to hold themselves in readiness to be ordered into actual service for the defence of the State. On the 11th he issued orders for 50,000 of the volunteer militia to rendezvous at Harrisburg. The call was promptly responded to, and a large force was immediately sent forward to the Cumberland valley. Fifteen thousand of this volunteer militia were pushed forward to Hagerstown and Boonsboro' in the State of Maryland; ten thousand were posted in the vicinity of Greencastle and Chambersburg, and about twenty-five thousand were at Harrisburg, on their way to Harrisburg, or in readiness and waiting transportation to proceed thither. On the 24th of Sept. the entire force was disbanded, as the Confederate army had withdrawn from Maryland. For further details see ARMY OPERATIONS.

The following is the letter of Gen. McClellan to the Governor of Pennsylvania, acknowledging the services of the militia of that State:

"HEADQUARTERS ARMY OF THE POTOMAC,
SHARPSBURG, Sept. 27, 1862.

GOVERNOR: I beg to avail myself of almost the first moment of leisure I have had since the recent battles to tender to you my thanks for your wise and energetic action in calling out the militia of Pennsylvania for its defence when threatened by a numerous and victorious army of the enemy. Fortunately circumstances rendered it impossible for the enemy to set foot upon the soil of Pennsylvania; but the moral support rendered to my army by your action was none the less mighty. In the name of my army, and for myself, I again tender to you our acknowledgment for your patriotic course. The manner in which the people of Pennsylvania responded to your call, and hastened to the defence of their frontier, no doubt exercised a great influence upon the enemy. I am, very respectfully and sincerely, yours,

GEORGE B. McCLELLAN,
Major General, United States Army.

In October a body of Confederate cavalry, with a battery of artillery, suddenly crossed the Potomac and made their way as far as Chambersburg, seizing such supplies as were useful to them, and committing other depredations. They went out of the State by crossing the South Mountain, and thus reaching the Potomac below Harper's Ferry. This march was made with so much celerity that the Confederates did not encounter any of the troops sent against them.

By an act of the Legislature, passed on March 29, 1813, it was provided that citizens absent from home in actual military service might exercise their right of suffrage as if they were present at the usual places of election. This act was substantially reënacted in a general election law passed July 2, 1839. The subject of permitting the volunteers absent to vote was made a question before the Supreme Court of the State, which decided that, by reason of a phrase in the constitutional amendments adopted in 1838, such proceeding had become unconstitutional.

The number of banks in the State is about 90, and their circulation, at the close of the year, was $22,500,000; specie, $11,500,000. There are 12 savings banks, and 36 insurance companies, chiefly of New York, doing business in the State.

The length of the railroads of the State is 3,050 miles, cost $155,472,278. In the cities of the State there are 175 miles of city pas-

senger railroads, costing $4,446,377. There are 10 colleges in the state, and 15 theological seminaries, 5 medical, and 1 law, besides numerous educational institutions of a high order. The common school system was adopted in 1834, and has made rapid progress. There are also 12 Normal school districts, in which provision has been made for the establishment of a school. In Philadelphia the schools are unsurpassed by those of any other city.

The charitable institutions of the State are on a scale of the first magnitude.

In mineral wealth Pennsylvania is unsurpassed by any other State on the Atlantic coast. To these treasures is now to be added an immense product of petroleum, of which the flow in one region—that of Oil Creek—is estimated at 75,000 barrels monthly.

The Lehigh valley region of the State was visited in autumn by a most destructive freshet which swept everything before it.

PRESBYTERIANS. In 1861, at the beginning of the civil war, there were the following Presbyterian denominations in the United States: 1. Old School Presbyterian Church, with 176 presbyteries, 2,767 ministers, 300,874 members (in 1862, 303,289); 2. New School Presbyterian Church, with 105 presbyteries, 1,558 ministers, 134,760 members (in 1862, 135,454); 3. The Cumberland Presbyterian Church, with 97 presbyteries, 1,150 ministers, and about 103,000 communicants; 4. The United Presbyterian Church of North America, with 43 presbyteries, 444 ministers, and 57,567 members; 5. United Synod of the Presbyterian Church, with 31 Presbyteries, 411 ministers, 50,295 communicants; 6. Reformed Presbyterian Church (General Synod), with 7 presbyteries, 56 ministers, about 70,000 members; 7. Reformed Presbyterian Church (Synod), with 9 presbyteries, 59 ministers, 6,650 communicants; 8. Associate Reformed Synod of the South, with 75 ministers, 9,500 members; 9. Associate Synod of North America, with 49 ministers, and 1,130 members; 10. Associated Reformed Synod of New York, with 14 ministers, 1,631 members; 11. Free Presbyterian Synod of the U. S., with 41 ministers, about 4,000 members; 12. The Independent Presbyterian Church (in South and North Carolina), with 4 ministers and about 1,000 communicants.

Of all these twelve organizations, only two, the Old School Presbyterians and the Cumberland Presbyterians, had a numerous membership, both in the free and in the slave States. The former was rent in consequence of the General Assembly, in 1861, passing resolutions, moved by Rev. Dr. Spring, and expressive of loyalty to the Constitution of the United States, and of the obligation to promote the integrity of the United States. The churches of the seceded States declared at once in favor of forming an independent church organization. In December, 1861, a convention of delegates from the Southern presbyteries met at Augusta, Georgia, to adopt a constitution, and take other measures necessary for the establishment of a separate church. It was determined that the title of the new body should be, "The General Assembly of the Presbyterian Church in the Confederate States of America," and that "the Standing Committees" (in lieu of the former church "boards") should be located at Columbia, S. C., New Orleans, Memphis, and Richmond. The convention also adopted an address (drawn up by Dr. Thornwell) to the Church of Christ throughout the world, on the reasons of their separate organization. The first general assembly of the church was held in Montgomery, Ala., in May, 1862, and was attended by only 31 ministers and 16 ruling elders. The committee of foreign missions had received $14,946; that of domestic missions $8,984. The committee on the state of religion stated that not a few congregations had been entirely disbanded.

The Cumberland Presbyterian Church was not formally dissolved by the war, though it was actually dismembered. Those church boards which were located in Tennessee, and under the control of men sympathizing with secession, were broken up. As, however, many Cumberland Presbyterians in the seceded States, especially in East Tennessee, were supposed to be loyal to the United States, and equally opposed to secession from the church, it was hoped that, in the case of a restoration of the Union, the unity of the church would also be preserved. The General Assembly of the church met at Owensboro', Ky., and was attended by about 60 commissioners. The assembly declined to pass any Union resolutions, in order to give no offence to any political party, and, in the hope of seeing a reunion of the church, did not appoint any new church boards, but preferred to leave, for one year, the wants of the church unprovided.

The Old School Presbyterian General Assembly met, in 1861, at Columbus, Ohio, and elected Rev. Dr. Beatty, of Steubenville, Ohio, moderator. A series of declarations were submitted by Rev. Dr. Breckenridge, of Danville Theological Seminary, severely denouncing secession, and enjoining the necessity of upholding the Federal and State Governments, and all persons in authority, in all their lawful and proper acts for the suppression of the insurrection. After a long and animated debate, the declarations were adopted by a vote of 199 ayes against 20 noes. The meetings of the synods and presbyteries which were held during the year gave, almost unanimously, an emphatical endorsement to the Spring resolutions of 1861, and the Breckenridge declarations of 1862. Many synods also passed strong anti-slavery resolutions. The opinion in the border States was divided. The Synod of Baltimore expressed a cordial approbation of the Breckenridge declarations, while in the Synod of Kentucky, a considerable party, headed by Dr.

Robinson, of Louisville, the editor of the "True Presbyterian," denounced these declarations as a perversion of the true Presbyterian doctrine of the relation between church and state. The paper of Dr. Robinson was, in the course of the year, suppressed by the military authorities, on the charge of disloyalty. That party of the Kentucky Presbyterians which agreed with the majority of the General Assembly of 1862 had an able organ in the quarterly "Danville Review."

The New School General Assembly met at Cincinnati, and elected Rev. Dr. George Duffield, of Detroit, moderator. It was attended by 104 ministers and 86 elders. Strong Union and anti-slavery resolutions were presented by the special committee on the state of the country, through Rev. Dr. Beman, of Troy, and were passed by a vote entirely unanimous. They denounced, in strong terms, the instigators of secession, all who sympathized with it, those in the North who fail to support vigorously the Federal Government, and expressed the opinion that this whole insurrectionary movement could be traced to one primordial root, and one only—African slavery, the love of it and determination to make it perpetual. The New School General Assembly has some churches in Missouri, Delaware, and the District of Columbia, all of which fully approve of the anti-slavery position of the church.

The secession of most of the Southern churches of the Old School Presbyterian Church, and the growth of anti-slavery sentiment in the northern part of the church, suggested the plan of a reunion of the Old and New School Presbyterian Churches in the Federal States. On Jan. 14 the Old School presbytery of Ogdensburgh, and the New School presbytery of St. Lawrence, both of which met at Ogdensburgh, N. Y., held a joint meeting, and unanimously passed a resolution expressive of their desire to be united in one presbytery, one synod, and one general assembly. The plan of a union was strongly advocated by the Philadelphia "Standard" and Cincinnati "Presbyter" of the Old School, and the "American Presbyterian" of the New School Presbyterian Church, and petitions were sent to both the general assemblies for that end. The New School General Assembly passed, with regard to this subject, the following resolution: "That it would give us pleasure to unite in closest fellowship with all persons who can stand with us upon the basis of our confession of faith and book of discipline, and who substantially agree with us on the great moral questions of the day, especially in the matter of loyalty to the Government, and in the views of slavery set forth prior to the division in 1836." The Old School General Assembly, which had been addressed in favor of the subject by four presbyteries, showed itself less favorable to this plan, and passed a resolution declaring it inexpedient to take action upon the subject at present.

In the seceded States the plan of a union between the United Synod, which originated several years ago by separation from the New School General Assembly on account of this latter having passed anti-slavery resolutions, and the newly seceded Old School Presbyterian Synod of the South, was likewise proposed on the part of the United Synod, and advocated by the "Christian Observer," which, after the beginning of the war, had been transferred from Philadelphia to Richmond, and Dr. Boyd, of Winchester, one of the leading men of the church. It was, however, received with little favor by the Old School Presbyterians, who declared their determination to stand by the act of the General Assembly of 1836, by which the New School party was exscinded. The plan of a union was, consequently, dismissed.

The United Synod suffered, probably, more from the war than any other body of Presbyterians. A considerable portion of its territory was, for a shorter or longer period, in the possession of Union troops, and, while the majority of the church, like nearly all the other religious denominations, strongly favored the cause of secession, some leading men, as Mr. Maynard, member of the United States Congress from East Tennessee, were strongly in favor of the Union.

The General Assembly of the United Presbyterian Church convened at Pittsburg on May 21, and elected Rev. Dr. Cooper, of Philadelphia, moderator. Strong anti-slavery resolutions were unanimously passed, and it was resolved to memorialize Congress, conjointly with the Reformed Presbyterian Church, in favor of emancipation. It was also resolved to establish missions in the South, and a committee was appointed to designate the points to which missionaries were to be sent.

The Reformed Presbyterians, who are split into two parties, generally denominated the General Synod, and the Synod of Reformed Presbyterians, are among the most determined anti-slavery churches in this country. The latter branch still refrains from acknowledging the Constitution of the United States, on the ground that it tolerates slavery. The former branch, the General Synod, has one solitary congregation in the slaveholding States—at Fayetteville, Tenn. After the beginning of the war, great efforts were made to induce the members of this congregation to sign an oath of allegiance to the Confederate Government, but all refused. Subsequently, the congregation has suffered a great deal of persecution, and most of its members have been obliged to flee to the free States. The annual assemblies of both bodies passed resolutions expressive of their conviction "that, so long as slavery lives, no permanent peace can be enjoyed," and warning the nation "that a compromise with slavery would be no less dangerous to the stability of our Government than to the cause of human freedom."

A portion of the Free Presbyterian Synod,

which, some years ago, originated by separation from the New School Presbyterian General Assembly, because the stand taken by the latter body against slavery appeared to them to be not sufficiently decided, has reunited during the year with the New School Presbyterian Church, which, it is believed, will soon absorb the entire Free Synod.

The Presbyterian churches in the British Provinces of North America had been reduced, at the end of 1861, by the union of the branches of the Free and the United Presbyterian bodies to six, viz: 1. The Canada Presbyterian Church, with 14 presbyteries, 336 churches, 34,000 communicants; 2. Church of Scotland in Canada, with 9 presbyteries, 126 churches, 18,500 communicants; 3. Church of the Lower Provinces, with 9 presbyteries, 95 churches, 9,617 communicants; 4. Church of Scotland in Nova Scotia and Prince Edward's Island, 3 presbyteries, 26 churches, 2,100 communicants; 5. Church of New Brunswick, 3 presbyteries, 27 churches, 1,600 communicants; 6. Church of Scotland in New Brunswick, with 3 presbyteries, 16 churches, 1,500 communicants. At their assemblies, held in 1861, the Canada Presbyterian Church, the Church of the Lower Provinces, and the Church of New Brunswick, had under deliberation the project of uniting into one organization the Presbyterian Church of the British Provinces, and even the three branches of the Church of Scotland in Canada, New Brunswick, and the lower provinces (Nova Scotia and Prince Edward's Island), did not declare themselves altogether opposed to a union of all the Presbyterian bodies, although they refused to join it for the present.

In Europe, Presbyterianism is mainly restricted to the British Isles. The reformed churches of the continent of Europe, however—though designated by a different name—are substantially the same. The chief seat is Scotland, where one of the Presbyterian organizations, the Church of Scotland, is the recognized state church, whose General Assembly is every year opened, in the name of the Government, by a lord high commissioner, and which accepts its status and emoluments from the state. The other churches considerably differ in their relation to the state. The Free Church would accept the aid of the state on condition that the church should be left perfectly free and self-regulative. The Reformed Presbyterians would not accept an alliance with the state unless the character of the state was wholly Christian, and the church left perfectly free. The United Presbyterians would not accept an alliance with the state on any terms, believing such an alliance to be wrong and mischievous.

The General Assembly of the Established Church of Scotland met at Edinburgh on May 22, and elected Dr. Bisset Bourtrie, moderator. The church has 16 synods, 84 presbyteries, and 1,204 congregations. The Lay Association, in support of the schemes of the church, reported an income of £1,181; the committee for colonial missions £6,000; the committee on Jewish missions £3,961.

The Free Church General Assembly met likewise at Edinburgh on May 22, and elected Dr. Guthrie moderator. The church has 16 synods, 71 presbyteries, 843 churches, 3 colleges for the education of theological students. The funds raised during the year were as follows:—sustentation of ministers, £112,887; building fund, £38,518; congregational fund, £105,341; missions and education, £59,815; total, £337,204.

The United Presbyterian Church, composed of a union, constituted in 1847, of the Secession (formed in 1732) and Relief (originated in 1752) Churches, commenced its General Assembly at Edinburgh on May 5. The returns from congregations showed a membership of 167,558, and an aggregate amount of £205,167 collected for congregational, missionary, and benevolent purposes. The church has 31 presbyteries in England and Scotland, 540 ministers, 1 theological hall at Edinburgh.

The Reformed Presbyterian Synod, which originated in 1706 (also called Cameronians or Covenanters), held its annual meeting in Glasgow. The synod was chiefly occupied with the question, which for some years has been agitating the Reformed Presbyterian Church, whether discipline should be exercised against members who, contrary to the testimony of the church against the evils of the British Constitution, had taken the oath of allegiance or exercised elective franchise. The synod formally resolved, by a majority of 42 to 11, that, as the construction of the oath of allegiance hitherto generally accepted is now called in question by many in the church, "and having regard to the apostolical injunction, that no matter of doubtful disputation should be made the ground of church censure, the synod, while they abstain from any judicial censure of the opinions given in, feel that they have no warrant to visit members taking the oath in this sense, or exercising the franchise, with the infliction of ecclesiastical penalties, or suspension or expulsion from the church." The Reformed Presbyterian Church had, in 1862, 6 presbyteries, 44 churches, and 36 ministers.

The Synod of United Original Seceders was dissolved in 1852 and united to the Free Church. 25 congregations, however, refused to join that church, and still continue a separated body, divided into 4 presbyteries.

The Presbyterian Church in England, which was instituted in 1836, has now 7 presbyteries and 105 churches. A movement has been begun for a union between this body and the United Presbyterian congregations of England.

The Presbyterian Church of Ireland had, in 1861, 37 presbyteries, 530 churches, 57,000 communicants; the Reformed Presbyterian Church in Ireland, 9 presbyteries, 55 churches, 4,000 communicants.

The offshoots of the several British Presbyterian denominations in Australia have also commenced, after the example of Canada and England, to unite into one body. Victoria led the way in 1860. New South Wales consummated the union in November, 1862, when a conference, held to that end in Sidney, unanimously adopted a basis of union, consisting of 5 articles. The first two declare the word of God to be supreme, and the confession of faith, catechisms, &c., to be the subordinate standards of the united church. The third article is in the following terms: "That, with regard to the doctrines contained in these subordinate standards relative to the power and duty of the civil magistrate in matters of religion, the office bearers of this church, in subscribing these standards, are not to be held as countenancing any persecuting or intolerant principles, or as professing any views in reference to the power and duty of the civil magistrate inconsistent with the spiritual independence of the church and the right of private judgment. The two concluding articles refer to the independence of the church and the reception of ministers. The Presbyterians in New Zealand have also formed themselves into one body. The General Assembly of the New Zealand Presbyterian Church was formed in Auckland in November, 1862. There is no intermediate court between the presbyteries and General Assembly.

PRISONERS, EXCHANGE OF. Although, at the close of 1861, the prisoners captured on both sides since the commencement of the war amounted to a considerable number, no proceedings had been instituted to procure a general exchange, and the partial exchanges, as well as the correspondence on the subject between the national and Confederate generals, could hardly be cited as precedents for future action. A few wounded or convalescent men had been released on parole on either side; but, in the absence of definite instructions from the United States Government, which was loth to acknowledge the Confederates as belligerents by treating with them, the Federal generals declined to receive any communication on the subject from the other side. A notable illustration of this was the refusal of Gen. Grant, in October, to treat with Gen. Polk for an exchange, after the action at Belmont.

As prisoners, however, began to accumulate on either side, and accounts of the hardships and cruelties to which Union soldiers were subjected in Confederate prisons reached the Union States, public opinion demanded a more liberal policy, and in the latter part of December, 1861, in accordance with a report from the Military Committee of both Houses of Congress, a joint resolution was adopted requesting the President to take immediate steps for a general exchange. Similar resolutions soon after passed the New York Legislature.

Acting under instructions from the President, Secretary Stanton accordingly issued, on January 20, an order for the appointment of two commissioners to "visit the city of Richmond, in Virginia, and wherever else prisoners belonging to the army of the United States may be held, and there take such measures as may be needful to provide for the wants and contribute to the comfort of such prisoners, at the expense of the United States, to such extent as may be permitted by the authorities under whom such prisoners are held."

During the month preceding the issue of this order, several hundred Confederate prisoners, captured principally at Fort Hatteras, had arrived at Fortress Monroe, and been exchanged for an equal number of Union soldiers, brought down the James river from Richmond, and, as that place seemed to be the principal depot of prisoners, besides being the seat of the Confedrate Government, it was determined that the commissioners should proceed there first. The following additional order designated the commissioners and the powers conferred upon them:

WAR DEPARTMENT, WASHINGTON, *Jan.* 27, 1862.

Ordered, that the Rev. Bishop Ames, of the Methodist Episcopal Church, and the Hon. Hamilton Fish, of New York, be and they are hereby appointed commissioners to visit the prisoners belonging to the army of the United States, now in captivity at Richmond, in Virginia, and elsewhere, and, under such regulations as may be prescribed by the authorities having custody of such prisoners, relieve their necessities and provide for their comfort, at the expense of the United States, in pursuance of the order heretofore made on this subject; and that said commissioners be requested immediately to signify by telegraph to the department their acceptance or refusal of this appointment, and report in person at Washington without delay.

EDWIN M. STANTON, Secretary of War.

The commissioners at once signified their acceptance of the appointment, and, within a few days, proceeded, in company with a quota of Confederate prisoners, under a flag of truce, from Fortress Monroe, to make known to the Confederate authorities at Norfolk the object of their mission. By the latter the matter was referred to Richmond, and, pending the decision arrived at in that city, the comments of the Confederate journals showed how unpalatable was the proposition to admit the commissioners within the territory of the seceded States. "The exquisite modesty," said one, "of this proposition to send official inspectors of our defences and general condition entitles Mr. Stanton to the reputation of being the most impudent man among all King Lincoln's proverbially impudent subjects;" and another added: "We could not suppose it possible that the authorities of the Confederate States would for one moment entertain a proposition so absurd and ridiculous. We are informed that our Government will not only refuse temporarily to allow Bishop Ames and Mr. Fish to come here for the purpose of investigating our prison system, or for any other purpose, but will henceforth exercise a rigid surveillance over any communication, by person or letter, between this country and the North."

In accordance with these views, a reply soon came from Richmond, refusing to the commissioners admission within the Confederate lines, but expressing readiness to negotiate for a general exchange of prisoners. Negotiations were accordingly opened at Norfolk, which resulted in an agreement for an equal exchange; and the Confederates, having about 300 prisoners in excess of those taken by the national troops, proposed to release them also, on parole, provided the United States Government would agree to release 300 Confederates who might thereafter fall into their hands. On Feb. 14, the commissioners returned to Washington, and the arrangement entered into by them having been approved by the War Department, Gen. Wool was directed to inform the Confederate general Huger, commanding at Norfolk, that he had full authority to settle the terms of the proposed exchange. Gen. Howell Cobb was designated by the Confederate Government to confer with Gen. Wool, and a permanent plan was settled between them on the basis previously established. By the terms of this plan it was agreed that the prisoners of war in the hands of each Government should be exchanged, man for man, the officers being assimilated as to rank, &c.; that the privateersmen captured by the United States forces during the previous year, and who had been held as having lost the rights of war, should be exchanged on the footing of ordinary prisoners of war; that any surplus remaining on either side after these exchanges should be released; and that hereafter, during the continuance of the war, prisoners taken on either side should be paroled. The clause relating to the privateersmen was considered an important concession on the part of the National Government, public opinion in the North having demanded that exemplary punishment should be inflicted on this class of prisoners, for which reason they had been for a number of months held in strict confinement in the city prison at Washington. As a retaliatory measure, the Confederates selected a number of Union prisoners, including Cols. Corcoran and Wilcox, and other high officers, whom they declared hostages for the safety of the privateersmen.

The exchanges commenced in the latter part of February, but had proceeded but a short time when they were interrupted, on March 18, by a message from President Davis to the Confederate Congress, recommending that all the Confederate prisoners who had been paroled by the United States Government be released from the obligations of their parole, so as to bear arms in the defence of the Confederate Government. The reason assigned for this action was an "infamous and reckless breach of good faith on the part of the Northern Government," in neglecting to exchange the privateersmen, and in sending the prisoners captured at Fort Donelson into the interior, instead of releasing them on parole. But, according to their own confession, the Confederates took the first step toward the interruption of the exchange, by questioning, without sufficient cause alleged, the integrity of the United States Government. "At the time of sending North the hostages we had retained for our privateersmen," said a Richmond journal, commenting upon President Davis's message, "Gen. Cobb had reason to suspect the good faith of the Northern Government, and telegraphed in time to intercept the release of a portion of these hostages (among them Col. Corcoran), who were *en route* from points further South than Richmond, to go North under a flag of truce to Norfolk."

The progress of events immediately previous to and succeeding the agreement between Gens. Wool and Cobb had materially changed the relative positions of the belligerents, and the captures of Roanoke Island and Fort Donelson left the North not merely an excess of prisoners, but an excess numbering many thousands. The 3,000 prisoners captured at Roanoke Island, Feb. 8, were, nevertheless, released on parole, in accordance with the agreement, and the privateersmen were placed on the footing of other prisoners, by being removed from Washington to Fort Lafayette, in New York harbor. The latter, indeed, were temporarily withheld from exchange until information should be received from the Confederate authorities that Col. Corcoran and the other officers retained as hostages were on their way to Norfolk; but in all other respects the terms of the cartel were faithfully observed by the United States Government, until after the capture of the Fort Donelson prisoners, and measures were taking to release these, when the message of President Davis was delivered.

As a consequence of the receipt of this communication by the Confederate Congress, the exchange of prisoners ceased at Craney Island, the point at which the flags of truce from Fortress Monroe and Norfolk were accustoned to meet; and the Confederates having failed, on several succeeding days, to meet the United States officers at this rendezvous, Secretary Stanton issued an order, March 27, prohibiting the release on parole of the Fort Donelson prisoners. Here the matter rested for several weeks, the prisoners in the hands of the Federal authorities meanwhile reaching a formidable number, very largely in excess of those taken by the Confederates.

In order, however, not to shut the door entirely to negotiation on a subject of deep interest to the inhabitants of both the Union and the seceded States, Gen. Wool informed Gen. Huger, on May 2, that the privateersmen were held as prisoners of war, and that he was empowered to effect their exchange. On the succeeding day, Gen. Huger replied as follows:

HEADQUARTERS, DEPARTMENT OF NORFOLK,
NORFOLK, *May* 3, 1862.

GENERAL: I have your letter of the 2d instant. On faith of your statement that our privateersmen are prisoners of war, and will be exchanged, the officers heretofore held as hostages will be exchanged on the same terms as any others.

As it is but fair those longest in captivity should be released first, I request you will let the privateersmen be released, and I will reciprocate, and release those longest confined.

I have requested Gen. Winder to send prisoners from Richmond to Newport News on Monday, the 5th inst.

Very respectfully, your obedient servant,
BENJ. HUGER, Maj.-Gen. Commanding.

Maj.-Gen. J. E. Wool,
Commanding Department of Virginia.

On the 19th, Gen. Wool wrote that he was prepared to make exchange on the terms proposed by Gen. Huger in the above communication, adding, "I will have the privateersmen sent to this post (Fortress Monroe), to be forwarded to you at any place you designate on James river, provided you will send forward, at the same time, the hostages, Cols. Corcoran, Wilcox," &c.; and, on the succeeding day, Gen. Huger replied from Petersburg:

If you will release upon parole the privateersmen, and send them to me at City Point, I will return you such number of your officers, heretofore retained as hostages for them, as would be their equivalent, according to the rates of exchange prescribed by the cartel between the United States and Great Britain in 1813—the captains of privateersmen to rank as lieutenants of the navy, and the mates of the privateers as master's mates. If you will have the rank and number of the privateersmen made out, and their equivalent of officers now retained as hostages for them, such officers will be released unconditionally and returned to you. Any of the other hostages that may not be required for exchange for the privateersmen will be released upon parole, to be exchanged for officers of equal rank, or their equivalent, according to the cartel above alluded to.

On the 21st, Gen. Wool despatched another letter to Gen. Huger, requesting him to appoint a time for the exchanges to take place, and received the following reply:

HEADQUARTERS, DEPARTMENT OF APPOMATTOX,
PETERSBURG, VA., *May* 23, 1862.

GENERAL: I have detained your boat until to-day, expecting an answer from Richmond as to the time when the prisoners to be exchanged for the privateersmen could reach here. I have not yet received an answer, and I am not aware of the location of these officers, or when they could reach here; but I can assure you I consider the War Department have fully agreed to the terms stated in my letter of the 3d instant to you, and which have been accepted by yourself. I must be responsible that on the delivery of all the privateersmen all the officers retained as hostages will be released upon parole, the details of the exchanges to be arranged between us according to the cartel referred to, and such of the officers as are not exchanged in this way to remain on parole until exchanged for others. If not interrupted by movements in the field, I will promise to have the officers forwarded as soon as possible, and will send notice to any of your vessels, and request you may be notified to send for them.

Very respectfully, your obedient servant,
BENJ. HUGER, Maj.-Gen. Commanding.

Supposing the matter to be definitely settled, Gen. Wool, on June 1, sent the privateersmen, 85 in number, to City Point, on the James river, with instructions to deliver them up on receiving the hostages on parole. The latter not being on the spot, the privateersmen were withheld, and a communication was sent to the Confederate authorities demanding an explanation. An answer came back that Gen. Huger had exceeded his authority, and that further conference would be necessary before the exchange could be effected. With a view to the holding of such a conference, the flag of truce boat remained at the Point until the 6th, when, learning that nothing further was expected from Richmond, she returned to Fortress Monroe.

The following letter from the Confederate Secretary of War, of which a copy was transmitted by Gen. Huger to Gen. Wool, gives his reasons for refusing to abide by Gen. Huger's communication of May 23:

C. S. A. WAR DEPARTMENT, RICHMOND, *June* 3, 1862.

GENERAL: I have received your letter of the 28th ultimo, in which you give a construction in your agreement with Gen. Wool for the exchange of the privateersmen and the persons formerly held as hostages, which requires us to return *all* of the latter for all of the former, and to parole such of the so-called hostages as are not exchanged, and to support this construction you refer me to your letter of May 23 to Gen. Wool.

Upon examining that letter I find that you use the following language: "I must be responsible that on the delivery of *all* the privateersmen all the officers detained as hostages will be released upon parole." If this were the agreement, there could be no doubt of your promise to return all the "officers retained as hostages;" but in the same letter you state that the agreement was contained in your letter of May 3, and you say, "I consider the War Department has fully agreed to the terms stated in my letter of the 3d inst."

The letter of May 3, so far from promising "to return all the officers, as hostages," as you apparently suppose, confines the proposed exchange to such as Gen. Wool might name, and as would be equivalent to the privateersmen according to the tariff agreed upon by the cartel between Great Britain and the United States in 1813, and consents that when that exchange had been made the other officers held as hostages might be exchanged "as usual." There can be no doubt about the agreement; your language is perfectly explicit. You say to Gen. Wool, "I will return such officers as you may name in exchange according to the tariff agreed upon by the cartel between Great Britain and the United States in 1813. As soon as these men are exchanged, any other officers that have been held as hostages will be exchanged as usual."

I am willing to perform the agreement which you stated to Gen. Wool that the department had fully agreed to perform, but I cannot consent to carry out a palpable misconstruction of it, much more disadvantageous to the Government of the Confederate States than the agreement itself, and evidently the result of mere inadvertence on your part. Even this erroneous interpretation of your promise is founded on the supposition that "officers were still retained as hostages," when, in fact, they had all been restored to the condition of prisoners of war, and a colonel and three captains were actually then on parole. It is therefore not only erroneous in its construction of the agreement actually made, but is founded upon such a misconception of facts that it would not bind you as an independent agreement.

You will, therefore, inform Gen. Wool that the War Department will execute faithfully your agreement with him of May 3, without considering whether you were authorized to make it or not; that we will exchange such officers recently held as hostages as he may name for the privateersmen, according to the cartel agreed on, but that we shall hold others to be exchanged hereafter.

I might justly complain that Gen. Wool, after being informed by Gen. Cobb that the "officers hitherto held as hostages for the privateersmen had been placed on the same footing as other prisoners of war," and knowing that a number of them, more than equivalent to the

privateersmen, had actually been paroled, should yet negotiate with you as if they were all still held as hostages, apparently taking advantage of the circumstance that you were not so well informed as himself.

Very respectfully, your obedient servant,

G. W. RANDOLPH, Secretary of War.

Major-General B. HUGER,
Commanding Department of the Appomattox.

Accompanying this letter was the following personal explanation of Gen. Huger:

HEADQUARTERS HUGER'S DIVISION, *June* 5, 1862.

SIR: I enclose you a copy of a letter I received from the War Department. I have heard from private persons that the privateersmen whom you promised to send for exchange had arrived at City Point, but no letter to me has as yet been forwarded. As I had charge of the correspondence with yourself on the subject, I hasten to send you this communication, which I must confess I do not clearly understand. The language of one of my letters may not have been the same as another; but I did intend not to give you all the officers once retained as hostages in exchange for all the privateersmen, but to give you such numbers of them in exchange as would be required by the cartel exchanging the equivalent of rank, and the other officers to be exchanged as usual. As you agreed to these terms, and had a sufficient number of our officers, there was no reason why the exchange should not be made at once; and I shall insist, if the privateers have been sent, as I hear, that all the officers referred to above be given in exchange. I think it but fair we should name the officers to be exchanged on our side; and as the most equitable way, I propose to exchange those who have been longest prisoners, including navy officers.

I am, General,

Very respectfully, your obedient servant,

BENJ. HUGER,
Major-General Commanding.

Major-Gen. JOHN E. WOOL,
or Officer Commanding Department of Virginia.

Here the matter rested, and for upward of a month nothing seems to have been done toward a general exchange, notwithstanding in the mean time prisoners had accumulated in large numbers on either side. The Confederates had indeed made certain overtures, by sending to Washington Col. Miller and Major Stone, who had been captured in the battle near Pittsburg Landing, to induce the National Government to adopt some general plan. This the latter declined to do, claiming that certain Confederate officers of rank, as Gen. Buckner, captured at Fort Donelson, had, in consequence of acts done previous to the war, forfeited their right to be considered prisoners of war, and ought to be excepted from any cartel entered into by the belligerents, and to be held amenable for treason. The Confederates, on the other hand, insisted that the rule should be general, although from the reluctance which they had manifested in releasing Col. Corcoran and other prisoners demanded by the people of the Northern States, it was evident that they had been themselves inclined to make exceptions.

In obedience to a very general popular demand the National Government finally decided to yield its point, and on July 17, Gen. Dix, who had meanwhile succeeded Gen. Wool in command at Fortress Monroe, met the Confederate general D. H. Hill, in conference, at Turkey Island Creek on the James river, where on the 22d was signed the following agreement for the exchange of prisoners, based upon the cartel of 1812 between the United States and Great Britain, and which was claimed by the Richmond papers to mark an important era in the war, by acknowledging the quasi nationality of the Confederate Government:

HAXALL'S LANDING, ON JAMES RIVER, VA.
July 22, 1862.

The undersigned, having been commissioned by the authorities they respectively represent to make arrangements for a general exchange of prisoners of war, have agreed to the following articles:

ARTICLE 1.—It is hereby agreed and stipulated that all prisoners of war held by either party, including those taken on private armed vessels, known as privateers, shall be discharged upon the conditions and terms following:

Prisoners to be exchanged man for man and officer for officer; privates to be placed on the footing of officers and men of the navy.

Men and officers of lower grades may be exchanged for officers of a higher grade, and men and officers of different services may be exchanged according to the following scale of equivalents:

A general commander-in-chief or an admiral shall be exchanged for officers of equal rank, or forty-six privates or common seamen.

A flag officer or major-general shall be exchanged for officers of equal rank, or for forty privates or common seamen.

A commodore carrying a broad pennant, or a brigadier-general, shall be exchanged for officers of equal rank, or twenty privates or common seamen.

A captain in the navy, or a colonel, shall be exchanged for officers of equal rank, or for fifteen privates or common seamen.

A lieutenant-colonel, or a commander in the navy, shall be exchanged for officers of equal rank, or for ten privates or common seamen.

A lieutenant commander or a major shall be exchanged for officers of equal rank, or eight privates or common seamen.

A lieutenant or a master in the navy, or a captain in the army or marines, shall be exchanged for officers of equal rank, or six privates or common seamen.

Masters' mates in the navy, or lieutenants and ensigns in the army, shall be exchanged for officers of equal rank, or four privates or common seamen.

Midshipmen, warrant officers in the navy, masters of merchant vessels, and commanders of privateers, shall be exchanged for officers of equal rank, or three privates or common seamen: second captains, lieutenants, or mates of merchant vessels or privateers, and all petty officers in the navy and all non-commissioned officers in the army or marines, shall be severally exchanged for persons of equal rank, or for two privates or common seamen; and private soldiers and common seamen shall be exchanged for each other, man for man.

ART. 2.—Local, State, civil, and militia rank held by persons not in actual military service will not be recognized, the basis of exchange being of a grade actually held in the naval and military service of the respective parties.

ART. 3.—If citizens held by either party on charge of disloyalty or any alleged civil offence are exchanged, it shall only be for citizens, captured sutlers, teamsters, and all civilians in the actual service of either party, to be exchanged for persons in similar position.

ART. 4.—All prisoners of war to be discharged on parole in ten days after their capture, and the prisoners now held and those hereafter taken to be transported to the points mutually agreed upon at the expense of the capturing party. The surplus prisoners not exchanged shall not be permitted to take up arms again, nor to serve as military police or constabulary force in any fort, garrison, or field work held by either of the respective parties, nor as guards of prisoners, depots, or stores, nor to discharge any duty usually performed by

soldiers, until exchanged under the provisions of this cartel. The exchange is not to be considered complete until the officer or soldier exchanged for has been actually restored to the lines to which he belongs.

ART. 5.—Each party, upon the discharge of prisoners of the other party, is authorized to discharge an equal number of their own officers or men from parole, furnishing at the same time to the other party a list of their prisoners discharged and of their own officers and men relieved from parole, enabling each party to relieve from parole such of their own officers and men as the party may choose. The lists thus mutually furnished will keep both parties advised of the true condition of the exchanges of prisoners.

ART. 6.—The stipulations and provisions above mentioned to be of binding obligation during the continuance of the war, it matters not which party may have the surplus of prisoners, the great principle involved being:

1. An equitable exchange of prisoners, man for man, officer for officer, or officers of higher grade exchanged for officers of lower grade or for privates, according to the scale of equivalents.

2. That privates and officers and men of different services may be exchanged according to the same rule of equivalents.

3. That all prisoners, of whatsoever arm of service, are to be exchanged or paroled in ten days from the time of their capture, if it be practicable to transfer them to their own lines in that time; if not, as soon thereafter as practicable.

4. That no officer, soldier, or employé in the service of either party is to be considered as exchanged and absolved from his parole until his equivalent has actually reached the line of his friends.

5. That the parole forbids the performance of field, garrison, police, or guard or constabulary duty.

JOHN A. DIX, Major-General.
D. H. HILL, Major-General, C. S. Army.

Supplementary Articles.

ART. 7.—All prisoners of war now held on either side, and all prisoners hereafter taken, shall be sent with all reasonable despatch to A. H. Aikens, below Dutch Gap, on the James river, in Virginia, or to Vicksburg, on the Mississippi river, in the State of Mississippi, and there exchanged, or paroled until such exchange can be effected, notice being previously given by each party of the number of prisoners it will send, and the time when they will be delivered at those points respectively; and in case the vicissitudes of war shall change the military relations of the places designated in this article to the contending parties, so as to render the same inconvenient for the delivery and exchange of prisoners, other places, bearing as nearly as may be the present local relations of said places to the lines of said parties, shall be, by mutual agreement, substituted. But nothing in this article contained shall prevent the commanders of two opposing armies from exchanging prisoners or releasing them on parole at other points mutually agreed on by said commanders.

ART. 8.—For the purpose of carrying into effect the foregoing articles of agreement, each party will appoint two agents, to be called Agents for the Exchange of Prisoners of War, whose duty it shall be to communicate with each other by correspondence and otherwise, to prepare the list of prisoners, to attend to the delivery of the prisoners at the places agreed on, and to carry out promptly, effectually, and in good faith, all the details and provisions of the said articles of agreement.

ART. 9.—And in case any misunderstanding shall arise in regard to any clause or stipulation in the foregoing articles, it is mutually agreed that such misunderstanding shall not interrupt the release of prisoners on parole, as herein provided, but shall be made the subject of friendly explanations, in order that the object of this agreement may neither be defeated nor postponed. JOHN A. DIX, Major-General.
D. H. HILL, Major-General C. S. A.

Acting in the humane spirit which characterized this agreement, the adjutant-general of the United States a few days afterward issued an order that chaplains should not be held as prisoners of war, and directing the immediate and unconditional release of all chaplains so held.

In accordance with the terms of the cartel, an exchange of prisoners commenced forthwith, and by the middle of August most of the officers of rank on either side, who had been for any lengthened period in captivity, were released. So far as the case of prisoners of this class was concerned, matters worked harmoniously enough; but new complications, the result of circumstances happening subsequent to the cartel, soon occurred, which gave rise to an acrimonious correspondence between the belligerent parties, and a series of retaliatory orders from the Confederate authorities.

Previous to the adoption of the cartel of July 22, however, the Confederate general, R. E. Lee, had written to the authorities at Washington, under date of July 6, requesting information respecting the alleged execution by the national authorities of John Owens and William B. Mumford, citizens of the seceded States, and on certain other points, indicated in the following reply of Gen. Halleck, the general-in-chief of the United States army:

HEADQUARTERS OF THE ARMY, WASHINGTON, *Aug.* 7, 1862.

Gen. R. E. Lee, Commanding, &c.:

GENERAL: Your letter of July 6 was received at the Adjutant-General's office on the 14th, but supposing from the endorsement that it required no further reply, it was filed without being shown to the President or Secretary of War. I learned to day, for the first time, that such letter had been received, and hasten to reply.

No authentic information has been received in relation to the execution of either John Owens or ——— Mumford, but measures will be immediately taken to ascertain the facts of these alleged executions, of which you will be duly informed.

I need hardly assure you, general, that, so far as the United States authorities are concerned, this contest will be carried on in strict accordance with the laws and usages of modern warfare, and that all excesses will be duly punished.

In regard to the burning of bridges, &c., within our lines by persons in disguise as peaceful citizens, I refer you to my letter of the 22d of January last to Gen. Price.* I think you will find the views there expressed as most materially differing from those stated in your letter.

In regard to retaliation, by taking the lives of innocent persons, I know of no modern authority which justifies it except in the extreme case of a war with any uncivilized foe, which has himself first established such a barbarous rule. The United States will never countenance such a proceeding unless forced to do so by the barbarous conduct of an enemy who first applies such a rule to our own citizens.

Very respectfully, your obedient servant,
H. W. HALLECK,
General-in-Chief of U. S. Army.

* In this letter Gen. Halleck, then commanding the department of Missouri, reiterated his intention to subject persons, other than soldiers, accused of burning or destroying railroads, bridges, and similar property, to trial by court-martial, notwithstanding such persons had been authorized and instructed by Gen. Price to commit such acts. Armed men, in the garb of soldiers, destroying bridges as a military act, would, if captured, be treated as ordinary prisoners of war.

On July 21, Gen. Lee addressed a communication to Gen. McClellan, then in command at Harrison's Landing, stating that he was informed that many Confederate citizens, engaged in peaceful vocations, had been arrested and imprisoned because they refused to take the oath of allegiance to the United States; while others, by harsh treatment, had been compelled to take an oath not to bear arms against the National Government; adding:

This Government refuses to admit the right of the authorities of the United States to arrest our citizens, and extort from them their parole not to render military service to their country under the penalty of incurring punishment in case they fall into the hands of your forces.

I am directed by the Secretary of War to inform you that such oaths will not be regarded as obligatory, and persons who take them will be required to render military service. Should your Government treat the rendition of such service by these persons as a breach of parole, and punish it accordingly, this Government will resort to retaliatory measures as the only means of compelling the observance of the rules of civilized warfare.

The matter was referred by Gen. McClellan to Gen. Halleck, who in reply to that officer, dated August 13, made the following statement of the policy which the Government would pursue:

The Government of the United States has never authorized any extortion of oaths of allegiance or military paroles, and has forbidden any measures to be resorted to tending to that end. Instead of extorting oaths of allegiance and paroles, it has refused the applications of several thousand prisoners to be permitted to take them and return to their homes in the rebel States.

At the same time this Government claims and will exercise the right to arrest, imprison, or place beyond its military lines any persons suspected of giving aid and information to its enemies, or of any other treasonable act. And if persons so arrested voluntarily take the oath of allegiance, or give their military parole, and afterward violate their plighted faith, they will be punished according to the laws and usages of war.

You will assure Gen. Lee that no unseemly threats of retaliation on his part will deter this Government from exercising its lawful rights over both persons and property, of whatsoever name or character.

On July 22 an important order was issued by Secretary Stanton, acting under instructions from the President, by which military commanders in Virginia and other parts of the seceded States were empowered "in an orderly manner to seize and use any property, real or personal, which may be necessary or convenient for their several commands, for supplies or for other military purpose;" to employ at reasonable wages persons of African descent when needed; and requiring that "as to both property and persons of African descent, accounts shall be kept sufficiently accurate and in detail, to show quantities and amounts, and from whom both property and such persons shall have come, as a basis upon which compensation can be made in proper cases." In accordance with the terms of this document Gen. Pope, then recently appointed to the command of the army of Virginia, directed his division generals to seize all horses and mules in their vicinity, and all stores not absolutely needed by the inhabitants for their maintenance or subsistence; and his General Order No. 11, dated July 23, required all officers of his army holding independent commands to arrest all disloyal male citizens within their lines or within their reach. "Such as are willing to take the oath of allegiance to the United States," &c., the order continued. (*See* ARMY OPERATIONS.)

These several orders did not fail to create excitement among the Confederate authorities at Richmond, and ultimately led to the retaliatory action suggested by the two following documents, of which the first was addressed by President Davis to Gen. Lee:

RICHMOND (VA.), *July* 31, 1862.

SIR: On the 22d of this month a cartel for the general exchange of prisoners of war was signed between Maj.-Gen. D. H. Hill, in behalf of the Confederate States, and Maj.-Gen. John E. Dix, in behalf of the United States. By the terms of this cartel it is stipulated that all prisoners of war hereafter taken shall be discharged on parole till exchanged.

Scarcely had that cartel been signed when the military authorities of the United States commenced a practice changing the whole character of the war from such as becomes civilized nations into a campaign of indiscriminate robbery and murder.

The general order issued by the Secretary of War of the United States, in the city of Washington, on the very day the cartel was signed in Virginia, directs the military commanders of the United States to take the private property of our people for the convenience and use of their armies, without compensation.

The general order issued by Maj-Gen. Pope on the 23d day of July, the day after the signing of the cartel, directs the murder of our peaceful inhabitants as spies, if found quietly tilling the farms in his rear, even outside of his lines; and one of his brigadier-generals, Steinwehr, has seized upon innocent and peaceful inhabitants to be held as hostages, to the end that they may be murdered in cold blood, if any of his soldiers are killed by some unknown persons whom he designates as "bushwhackers."

Under this state of facts, this Government has issued the enclosed general order, recognizing Gen. Pope and his commissioned officers to be in the position which they have chosen for themselves—that of robbers and murderers, and not that of public enemies, entitled, if captured, to be considered as prisoners of war.

We find ourselves driven by our enemies by steady progress toward a practice which we abhor and which we are vainly struggling to avoid.

Some of the military authorities of the United States seem to suppose that better success will attend a savage war in which no quarter is to be given, and no age or sex to be spared, than has hitherto been secured by such hostilities as are alone recognized to be lawful by civilized men in modern times.

For the present we renounce our right of retaliation on the innocent, and shall continue to treat the private enlisted soldiers of Gen. Pope's army as prisoners of war; but if, after the notice to the Government at Washington of our confining repressive measures to the punishment only of the commissioned officers who are willing participants in these crimes, these savage practices are continued, we shall be reluctantly forced to the last resort of accepting the war on the terms observed by our foes, until the outraged voice of common humanity forces a respect for the recognized rules of war.

While these facts would justify our refusal to execute the generous cartel by which we have consented to

liberate an excess of thousands of prisoners held by us beyond the number held by the enemy, a sacred regard to plighted faith, shrinking from the mere semblance of breaking a promise, prevents our resort to this extremity.

Nor de we desire to extend to any other forces of the enemy the punishment merited alone by Gen. Pope and the commissioned officers who choose to participate in the execution of his infamous orders.

You are hereby instructed to communicate to the commander-in-chief of the United States the contents of this letter, and a copy of the enclosed general order, to the end that he may be notified of our intention not to consider the officers hereafter captured from Gen. Pope's army as prisoners of war.

Very respectfully yours, &c.,
JEFFERSON DAVIS.

To Gen. R. E. Lee, Commanding.

The substance of this letter was communicated by Gen. Lee, according to President Davis's request, to Gen. Halleck on Aug. 2, with the accompanying General Order No. 54:

Confederate General Order No. 54.

ADJUTANT AND INSPECTOR-GENERAL'S OFFICE, RICHMOND, *August* 1, 1862.

First. The following orders are published for the information and observance of all concerned.

Second. Whereas, by a general order dated the 22d of July, 1862, issued by the Secretary of War of the United States, under the order of the President of the United States, the military commanders of that Government within the States of Virginia, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Texas and Arkansas, are directed to seize and use any property, real or personal, belonging to the inhabitants of this Confederacy, which may be necessary or convenient for their several commands, and no provision is made for any compensation to the owners of private property thus seized and appropriated by the military commands of the enemy.

Third. And whereas, by General Order No. 11, issued by Major-General Pope, commanding the forces of the enemy in Northern Virginia, it is ordered that all commanders of any army corps, divisions, brigades, and detached commands, will proceed immediately to arrest all disloyal male citizens within their lines or within their reach in the rear of their respective commands. Such as are willing to take the oath of allegiance to the United States, and shall furnish sufficient security for its observance, will be permitted to remain in their houses, and pursue in good faith their accustomed avocations; those who refuse shall be conducted south beyond the extreme pickets of the army, and be notified if found again anywhere within our lines, or at any place in the rear, they will be considered spies and subjected to the extreme rigor of military law. If any person, having taken the oath of allegiance as above specified, be found to have violated it, he shall be shot, and his property seized and applied to the public use.

Fourth. And whereas, by an order issued on the 13th of July, 1862, by Brigadier-General A. Steinwehr, Major William Steadman, a cavalry officer of his brigade, has been ordered to arrest five of the most prominent citizens of Page county, Virginia, to be held as hostages, and to suffer death in the event of any of the soldiers of said Steinwehr being shot by bushwhackers, by which term are meant the citizens of this Confederacy who have taken up arms to defend their lives and families.

Fifth. And whereas it results from the above orders that some of the military authorities of the United States, not content with the unjust and aggressive warfare hitherto waged with savage cruelty against an unoffending people, and exasperated by the failure of their efforts to subjugate them, have now determined to violate all the rules and usages of war, and to convert the hostilities, hitherto waged against armed forces, into a campaign of robbery and murder against innocent citizens and peaceful tillers of the soil.

Sixth. And whereas this Government, bound by the highest obligations of duty to its citizens, is thus driven to the necessity of adopting such just measures of retribution and retaliation as shall seem adequate to repress and punish these barbarities. And whereas the orders above recited have only been published and made known to this Government since the signature of a cartel for the exchange of prisoners of war, which cartel, in so far as it provides for an exchange of prisoners hereafter captured, would never have been signed or agreed to by this Government, if the intention to change the war into a system of indiscriminate murder and robbery had been made known to it. And whereas a just regard to humanity forbids that the repression of crime, which this Government is thus compelled to enforce, should be unnecessarily extended to retaliation on the enlisted men of the army of the United States who may be unwilling instruments of the savage cruelty of their commanders, so long as there is hope that the excesses of the enemy may be checked or prevented by retribution on the commissioned officers, who have the power to avoid guilty action by refusing service under a Government which seeks their aid in the perpetration of such infamous barbarities.

Seventh. Therefore it is ordered that Major-General Pope, Brigadier-General Steinwehr, and all commissioned officers serving under their respective commands, be and they are hereby expressly and especially declared to be not entitled to be considered as soldiers, and therefore not entitled to the benefit of the cartel for the parole of future prisoners of war.

Ordered, further, That in the event of the capture of Major-General Pope or Brigadier-General Steinwehr, or of any commissioned officers serving under them, the captive so taken shall be held in close confinement, so long as the orders herein expressed shall continue in force, and until repealed by the competent military authorities of the United States, and that in the event of the murder of any unarmed citizen or inhabitant of this Confederacy, by virtue or under the pretext of any of the orders hereinbefore recited, whether with or without trial, whether under the pretence of such citizen being a spy or hostage, or any other pretence, it shall be the duty of the commanding General of the forces of this Confederacy to cause immediately to be hung, out of the commissioned officers prisoners as aforesaid, a number equal to the number of our own citizens thus murdered by the enemy.

By order. S. COOPER,
Adjutant and Inspector-General.

On the same day, August 2, Gen. Lee addressed the following communication on a different subject, but one involving similar principles, to Gen. Halleck:

HEADQUARTERS OF THE CONFEDERATE STATES, NEAR RICHMOND, VA., *Aug.* 2, 1862.

To the General Commanding Army of the United States, Washington:

GENERAL: On the 29th of June last I was instructed by the Secretary of War to inquire of Maj.-Gen. McClellan as to the truth of alleged murders committed on our citizens by officers of the United States army.

The case of Wm. B. Mumford, reported to have been murdered at New Orleans by order of Maj.-Gen. B. F. Butler, and of Col. John Owens, reported to have been murdered in Missouri by order of Maj.-Gen. Pope, were those referred to. I had the honor to be informed by Maj.-Gen. McClellan that he had referred these inquiries to his Government for a reply. No answer has as yet been received.

The President of the Confederate States has since been credibly informed that numerous other officers of the army of the United States within the Confederacy have been guilty of felonies and capital offences which are punishable by all laws, human and divine. I am

directed by him to bring to your notice a few of those best authenticated.

Newspapers received from the United States announce as a fact that Maj.-Gen. Hunter has armed slaves for the murder of their masters, and has thus done all in his power to inaugurate a servile war, which is worse than that of the savage, inasmuch as it superadds other horrors to the indiscriminate slaughter of all ages, sexes, and conditions.

Brig.-Gen. Phelps is reported to have initiated at New Orleans the example set by Maj-Gen. Hunter on the coast of South Carolina.

Brig.-Gen. G. N. Fitch is stated in the same journals to have murdered in cold blood two peaceful citizens, because one of his men, while invading our country, was killed by some unknown person while defending his home.

I am instructed by the President of the Confederate States to repeat the inquiry relative to the cases of Mumford and Owens, and to ask whether the statements in relation to the action of Gens. Hunter, Phelps, and Fitch are admitted to be true, and whether the conduct of these generals is sanctioned by their Government.

I am further directed by his Excellency the President to give notice that, in the event of not receiving a reply to these inquiries within fifteen days from the delivery of this letter, it will be assumed that the alleged facts are true, and are sanctioned by the Government of the United States. In such an event, on that Government will rest the responsibility of the retribution or retaliatory measures which shall be adopted to put an end to the merciless atrocities which now characterize the war against the Confederate States.

I am, most respectfully, your obedient servant,
R. E. LEE, General Commanding.

To both communications but one answer was returned, and that was given in the following brief note, with which, for the time, all correspondence on the subject between the parties ended:

HEADQUARTERS OF THE ARMY, WASHINGTON, *Aug.* 9, 1862.

Gen. R. E. Lee, Commanding, &c.:

GENERAL: Your two communications of the 2d instant, with enclosure, are received. As these papers are couched in language insulting to the Government of the United States, I most respectfully decline to receive them. They are returned herewith.

Very respectfully, your obedient servant,
H. W. HALLECK,
General-in-Chief U. S. Army.

The Confederates, however, not receiving what they considered a satisfactory answer to the allegations contained in the last quoted letter of Gen. Lee, of August 2, proceeded to issue two vindictive orders in the nature of retaliatory measures against officers of the United States army. The first, dated August 20, threatened retaliation for the lives of peaceable citizens said to have been taken by Gen. (Colonel) Fitch in Arkansas, and the second, dated on the succeeding day, and known as General Order No. 60, was to the following effect:

Whereas Maj.-Gen. Hunter, recently in command of the enemy's forces on the coast of South Carolina, and Brig.-Gen. Phelps, a military commander of the enemy in the State of Louisiana, have organized and armed negro slaves for military service against their masters, citizens of this Confederacy:

And whereas the Government of the United States has refused to answer an inquiry whether said conduct of its officers meets its sanction, and has thus left to this Government no other means of repressing said crimes and outrages than by the adoption of such measures of retaliation as shall serve to prevent their repetition:

Ordered that Maj.-Gen. Hunter and Brig.-Gen. Phelps be no longer held and treated as public enemies of the Confederate States, but as outlaws; and that in the event of the capture of either of them, or that of any other commissioned officer employed in drilling, organizing or instructing slaves, with a view to their armed service in this war, he shall not be regarded as a prisoner of war, but held in close confinement for execution as a felon, at such time and place as the President may order.

The retaliatory orders against Gen. Pope's command were for several weeks enforced with a considerable degree of strictness; but when he retired from command, they were rescinded.

An event occurring in Missouri in October gave occasion for further retaliatory action on the part of the Confederate authorities. Andrew Allsman, a loyal citizen of Palmyra, in the northeastern part of the State, and a non-combatant, having been forcibly abducted by a band of guerillas under the command of one Porter, the latter was notified by Gen. McNeil, commanding a portion of the Missouri State militia, that unless Allsman was returned unharmed to his family by the 18th of October, ten of the captured guerillas would be summarily shot. Allsman not appearing on the day specified, the death penalty was inflicted on ten men selected from Porter's band, in the presence of a large concourse of citizens. Intelligence of this event reached the Confederate capital in due season, and produced the following order from President Davis:

EXECUTIVE OFFICE, RICHMOND, *Nov.* 17, 1862.

Lieut.-Gen. T. J. Holmes, Commanding Trans-Mississippi Department:

GENERAL: Enclosed you will find a slip from the Memphis "Daily Appeal" of the 3d instant, containing an account, purporting to be derived from the Palmyra (Missouri) "Courier," a federal journal, of the murder of ten Confederate citizens of Missouri by order of Gen. McNeil of the United States army.

You will communicate by flag of truce with the Federal officer commanding that department, and ascertain if the facts are as stated. If they be so, you will demand the immediate surrender of Gen. McNeil to the Confederate authorities, and, if this demand is not complied with, you will inform said commanding officer that you are ordered to execute the first ten United States officers who may be captured and fall into your hands. Very respectfully, yours,
JEFFERSON DAVIS.

Whether from inability, on the part of Gen. Holmes, to capture the requisite number of United States officers, or in consequence of subsequent instructions received by him, he seems never to have fulfilled the requirements of the order.

The retaliatory order of President Davis, of Dec. 23, elicited by the execution of Mumford in New Orleans, and by various administrative acts of Gen. Butler, and directed against that general, and the officers and negro slaves under his command, will be found among the Public Documents published in this volume.

PROTESTANT EPISCOPAL CHURCH. This church is one of the few religious denominations of the United States which maintained

a national organization embracing all the States of the Union until the outbreak of the civil war. After the organization of a government for the seceded States, and the interruption of all communications between the seceded and the Federal States, the Bishops of the former thought it necessary to provide for an independent church organization. A preliminary meeting of the Bishops determined to unite the dioceses of the seceded States into "the Protestant Episcopal Church of the Confederate States." The first "General Council" of the church (this name was adopted for the general assemblies of the church instead of General Synods) met at Augusta, Georgia, on November 12, 1862. A pastoral letter was issued by the House of Bishops. No complaint was raised against the church of the United States, but the abolition movement in the northern States was styled "that hateful and infidel pestilence." Although the bishops accept the doctrine of the perpetuation of slavery, and announce that the "national life of the Confederate States is to be planted upon it," they acknowledge that hitherto the slavery system, in the southern States, has had some "unchristian features," and they, therefore, urge upon the masters of the country "their obligations as Christian men, so to arrange this institution as not to necessitate the violation of those sacred relations which God has created, and which man cannot, consistently with Christian duty, annul," and, in particular, to prevent all necessity for the separation of parents and children, of husbands and wives. The bishops claim to know "that the public sentiment is rapidly becoming sound upon this subject, and that the Legislatures of several of the Confederate States have already taken steps toward this consummation."

The triennial general convention of the Protestant Episcopal Church of the United States met in the city of New York, on Oct. 1, 1862. It was not attended by any bishops or delegates from the seceded dioceses. At the opening of the convention, it was thought that a majority of the House of Delegates would be opposed to any resolutions on the state of the country; but a series was brought in by a special committee of nine, to which all the proposed resolutions of this class had been referred, declaring that the church is teaching the duty of loyalty to the civil authority, regularly and legitimately constituted; that in a spirit of forbearance, the convention refrains from employing any terms of condemnation or reproach toward the ministers or laymen who have arrayed themselves in open and armed resistance to the regularly constituted government of the church; that as individuals and as citizens the members of the convention acknowledge their duty in sustaining and defending the country in the great struggle in which it is engaged, but that as an ecclesiastical body, the convention can pledge to the National Government only earnest and devout prayers for a speedy and complete success. After a long and animated discussion the resolutions were adopted by a large majority. The convention was closed by a pastoral address, which referred to secession in much stronger terms than the resolutions passed by the lower house, calling secession a sin and a crime against the laws of God and man. Through a debate concerning the authorship of the pastoral address in the denominational organs it was ascertained that the draft of the pastoral letter had been originally prepared by Bishop Hopkins, of Vermont. Bishop McIlvaine of Ohio, not considering the draft sufficiently explicit on the great question involved in the war, proposed a counter-draft. In the committee charged with submitting a draft to the House of Bishops, two bishops (those of Wisconsin and Michigan) voted for the draft of Bishop Hopkins; two (the Bishop of Kentucky and Bishop McIlvaine) for the counter-draft of Bishop McIlvaine. Bishop Hopkins refrained from voting. Thus both drafts came before the House of Bishops, which, on motion of the Bishop of Maryland, gave the preference to the address prepared by Bishop McIlvaine.

The general convention also inaugurated a movement that may become of great importance for the future of the Anglican Church, by appointing a committee to consider the question of "establishing intercommunion with the Russo-Greek Church." The English convocation of Canterbury which met on February 10, 1863, had also a discussion on the same subject and unanimously declared in favor of it. A particular interest in the promotion of the scheme is taken by Rev. George Williams, of King's College, Cambridge, England, who is in correspondence with prominent members of the Russian Church, who have assured him that the prospects for a realization of the plan are good. In former years, the Protestant Episcopal Church had already expressed its desire to establish an official intercourse with the Church of Sweden, which, although Lutheran, is yet strictly Episcopal in its form of government. The Bishop of Illinois, in 1862, received into his diocese an ordained minister of the Church of Sweden upon his letters of orders and other papers. This is believed to be the second case when the Protestant Episcopal Church has expressly acknowledged the validity of the Swedish orders.

The Church has a bishop in each of the United States. The State of New York is divided into 2 dioceses, New York and Western New York; and there is besides a missionary bishop of the Northwest, residing in Nebraska City. The *Church Calender*, for 1863, gives the following statistics of the church (including the seceded States): clergy, 2,270; parishes, 2,327; communicants, 160,612.

In the British provinces of North America there are sees at Montreal (Metropolitan), Quebec, Toronto, Nova Scotia, Newfoundland, Fredericton, Huron, Rupert's Land, Columbia, and Ontario; in the West Indies, at Barbadoes,

Antigua, Guiana, Jamaica, Kingston, Nassau. The Episcopalian population, according to the official census taken in 1861, was 63,322 in Lower Canada, 311,565 in Upper Canada, 47,744 in Nova Scotia, 44,285 in Newfoundland, 6,787 in Prince Edward's Island.

The most important subject discussed by the provincial synod of the Episcopal Church in Canada was the mode of electing a metropolitan of the Canadian dioceses. Both houses expressed themselves in favor of permanently connecting the dignity of metropolitan with the Episcopal See of Montreal. A committee was appointed to examine how justice could be done to the claims of the Diocese of Montreal as well as to those of the other dioceses of the province, and to make a report to the next provincial synod.

Identical with the Protestant Episcopal Church of this country, is the established Church of England and Ireland, and the Episcopal Church of Scotland, and it is, therefore, common to comprise them together under the name of Anglican Church. The Church of England and Ireland has, in England 2 archbishops and 26 bishops, in Ireland 2 archbishops and 10 bishops. The Episcopal Church of Scotland is a comparatively small body, which has 7 bishops, but not more than about 157 churches and 166 clergy. The Church of England is governed by the two convocations of Canterbury and York, which are regularly convened with Parliament. From the time of George the First until the reign of Victoria the powers of the convocations have been suspended by the Crown and Parliament, but they are now gradually returning, and the proceedings of both become from year to year more interesting and important. The bishops of Ireland will also take steps for having their convocation revived.

One of the most important questions which the convocations of England were called to act upon, during the year 1862, was the doctrinal controversy which had been kindled by that famous volume of theological writing, called, "The Essays and Reviews." In the course of the year, two of the authors, Dr. Williams and Rev. H. B. Wilson, had a suit brought against them, and on June 25th, the Court of Arches gave judgment in their cases, some of the charges against them were rejected, others were ordered to be modified. In accordance with the order of the judge, the charges were altered, and the cause came up again on Dec. 15th. Both the essayists were declared to have taught doctrines contravening some of the articles of the Church of England, and were therefore sentenced to one year's suspension from their livings and the offices and benefits belonging thereto. In both instances, notice of appeal to the privy council was given. The great excitement which the *Essays and Reviews* had produced in the entire theological world, received new fuel by the publication of a work of one of the colonial bishops—Bishop Colenso of Natal,—who deviated even more than any of the essayists from the old doctrine of the church on inspiration. The organs of the church generally demanded his resignation, but in his case a new difficulty arose. The Bishop appeared to be unwilling to resign, and there seemed to be no law to compel him. Toward the close of the year, notice was given by Archdeacon Denison, that he would move at the first meeting of the convocation of Canterbury, in 1863, an inquiry into the Bishop's case.

As no official census is taken of the membership of the religious denominations in England and Scotland, it is not known how large a portion of the population belongs to the Anglican Church. From a careful comparison of the marriage, educational, and other statistics, it is, however, probable, that in England proper from 65 to 70 per cent. of the population (which, in 1861, amounted to 20,061,725) are connected with the Established Church. In Ireland, the number of the Episcopalian population, according to the official census of 1861, was 687,661, out of a total population of 5,764,543.

Outside of Great Britain the Anglican Church has only one Episcopal See in Europe, at Gibraltar, the bishop of which place has jurisdiction over the churches in Malta, Constantinople, and the Mediterranean.

In Asia, there are bishops in connection with the Church of England at Calcutta, Madras, and Bombay in India, at Colombo in Ceylon, at Labuan in Borneo, at Victoria in Hongkong, at Jerusalem; and one bishop in connection with the Protestant Episcopal Church of America, at Amoy, China.

In the British possessions in Africa, there are bishops at Capetown, Grahamstown, Sierra Leone, Natal, St. Helena and Mauritius. For countries outside of the British possessions, missionary bishops have been appointed for Zambezi (1862) and the Orange Territory (1863). The Protestant Episcopal Church of America has sent a missionary bishop to Liberia.

A considerable number of Episcopal Sees have been established in Oceanica; in Australia, there are bishops at Sydney (the bishop of which is the metropolitan of the Australian dioceses), Tasmania, New Castle, Adelaide, Melbourne, Perth, Christ Church, Brisbane and Goulburn (established in 1863). New Zealand has a metropolitan called the Bishop of New Zealand, and the bishops of Christ Church, Nelson, Waiaqua, Wellington. A missionary bishop, who has the title of Bishop of Melanesia, was appointed in 1861, for the islands of Polynesia, most of which are not under British rule.

In 1861, at the request of the king of the Sandwich Islands, the diocese of Honolulu was erected, and in 1862, the king, the queen, and the ministers received the rite of confirmation, and the Anglican Church now bears the character of the state church.

PUBLIC DOCUMENTS.—*Message of President* LINCOLN *on the Emancipation of Slaves and Compensation to their owners.*

WASHINGTON, *March* 6, 1862.

Fellow Citizens of the Senate and House of Representatives:

I recommend the adoption of a joint resolution by your honorable body which shall be, substantially, as follows:

Resolved, That the United States, in order to coöperate with any State which may adopt gradual abolition of slavery, give to such State pecuniary aid, to be used by such State, in its discretion, to compensate it for the inconvenience, public and private, produced by such change of system.

If the proposition contained in the resolution does not meet the approval of Congress and the country, there is an end of it. But if it does command such approval I deem it of importance that the States and people immediately interested should be at once distinctly notified of the fact, so that they may begin to consider whether to accept or reject it.

The Federal Government would find its highest interest in such a measure as one of the most important means of self-preservation. The leaders of the existing rebellion entertain the hope that this Government will ultimately be forced to acknowledge the independence of some part of the disaffected region, and that all the Slave States north of such part will then say, "The Union for which we have struggled being already gone, we now choose to go with the Southern section." To deprive them of this hope substantially ends the rebellion; and the initiation of emancipation deprives them of it, and of all the States initiating it.

The point is not that all the States tolerating slavery would very soon, if at all, initiate emancipation, but while the offer is equally made to all, the more Northern shall, by such initiation, make it certain to the more Southern that in no event will the former ever join the latter in their proposed Confederacy. I say initiation, because, in my judgment, gradual and not sudden emancipation is better for all.

In the mere financial or pecuniary view, any member of Congress, with the census or an abstract of the Treasury report before him, can readily see for himself how very soon the current expenditures of this war would purchase, at a fair valuation, all the slaves in any named State.

Such a proposition on the part of the General Government sets up no claim of a right by the Federal authority to interfere with slavery within State limits—referring as it does the absolute control of the subject, in each case, to the State and the people immediately interested. It is proposed as a matter of perfectly free choice to them.

In the annual Message, last December, I thought fit to say "the Union must be preserved, and hence all indispensable means must be employed." I said this not hastily, but deliberately. War has been made, and continues to be an indispensable means to this end. A practical reacknowledgment of the national authority would render the war unnecessary, and it would at once cease. But resistance continues, and the war must also continue; and it is impossible to foresee all the incidents which may attend, and all the ruin which may follow it. Such as may seem indispensable, or may obviously promise great efficiency toward ending the struggle, must and will come.

The proposition now made (though an offer only), I hope it may be esteemed no offence to ask whether the pecuniary consideration tendered would not be of more value to the States and private persons concerned than would the institution and property in it, in the present aspect of affairs. While it is true that the adoption of the proposed resolution would be merely initiatory, and not within itself a practical measure, it is recommended in the hope that it would lead to important practical results.

In full view of my great responsibility to my God and my country, I earnestly beg the attention of Congress and the people to the subject.

ABRAHAM LINCOLN.

Proclamation of President LINCOLN *countermanding the Emancipation order of General David Hunter, in the Department of the South:*

Whereas, There appears in the public prints what purports to be a proclamation of Maj. Gen. Hunter, in the words and figures following:

HEADQUARTERS DEPARTMENT OF THE SOUTH,
Hilton Head, S. C., *May* 9, 1862.

General Order No. 11.

The three States of Georgia, Florida, and South Carolina, comprising the Military Department of the South, having deliberately declared themselves no longer under the United States of America, and having taken up arms against the United States, it becomes a military necessity to declare them under martial law.

This was accordingly done on the 25th day of April, 1862. Slavery and martial law in a free country are altogether incompatible. The persons in these States—Georgia, Florida, and South Carolina—heretofore held as slaves, are therefore declared forever free.

[OFFICIAL.]

Signed, DAVID HUNTER,
Major-General Commanding.

ED. W. SMITH, Acting Assistant Adj't.-Gen.

And, whereas, the same is producing some excitement and misunderstanding, therefore I, Abraham Lincoln, President of the United States, proclaim and declare that the Government of the United States had no knowledge or belief of an intention on the part of General Hunter to issue such proclamation, nor has it yet any authentic information that the document is genuine; and, further, that neither General Hunter nor any other commander or person has been authorized by the Government of the United States to make proclamation declaring the slaves of any State free, and that the supposed proclamation now in question, whether genuine or false, is altogether void so far as respects such declaration. I further make known that, whether it be competent for me, as Commander-in-Chief of the Army and Navy, to declare the slaves of any State or States, free; and whether at any time, or in any case, it shall have become a necessity indispensable to the maintenance of the Government to examine such supposed power, are questions which, under my responsibility, I reserve to myself, and which I cannot feel justified in leaving to the decision of commanders in the field.

These are totally different questions from those of police regulations in armies in camps.

On the 6th day of March last, by a special Message, I recommended to Congress the adoption of a joint resolution, to be substantially as follows:

Resolved, That the United States ought to coöperate with any State which may adopt a gradual abolishment of slavery, giving to such State earnest expression to compensate for its inconveniences, public and private, produced by such change of system.

The resolution in the language above quoted was adopted by large majorities in both branches of Congress, and now stands an authentic, definite, and solemn proposal of the Nation to the States and people most interested in the subject matter. To the people of these States now, I mostly appeal. I do not argue—I beseech you to make the arguments for yourselves. You cannot, if you would, be blind to the signs of the times.

I beg of you a calm and enlarged consideration of them, ranging, if it may be, far above partisan and personal politics.

This proposal makes common cause for a common object, casting no reproaches upon any. It acts not the Pharisee. The change it contemplates would come gently as the dews of Heaven, not rending or wrecking anything. Will you not embrace it? So much good has not been done by one effort in all past time, as in the Providence of God, it is now your high privilege to do. May the vast future not have to lament that you have neglected it.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be hereunto affixed.

Done at the City of Washington this 19th day of May, in the year of our Lord one thousand eight hundred and sixty-two, and of the independence of the United States the eighty-sixth.

(Signed) ABRAHAM LINCOLN.

By the President:

W. H. SEWARD, Secretary of State.

Appeal of President LINCOLN *to the Border States on Emancipation.*

The Representatives and Senators of the Border Slaveholding States having, by special invitation of the President, been convened at the Executive Mansion on Saturday morning, July 12, President LINCOLN addressed them as follows from a written paper held in his hands:

GENTLEMEN: After the adjournment of Congress, now near, I shall have no opportunity of seeing you for several months. Believing that you of the Border States hold more power for good than any other equal number of members, I feel it a duty which I cannot justifiably waive to make this appeal to you.

I intend no reproach or complaint when I assure you that, in my opinion, if you all had voted for the resolution in the gradual emancipation Message of last March the war would now be substantially ended. And the plan therein proposed is yet one of the most potent and swift means of ending it. Let the States which are in rebellion see definitely and certainly that in no event will the States you represent ever join their proposed Confederacy, and they cannot much longer maintain the contest. But you cannot divest them of their hope to ultimately have you with them so long as you show a determination to perpetuate the institution within your own States. Beat them at elections, as you have overwhelmingly done, and, nothing daunted, they still claim you as their own. You and I know what the lever of their power is. Break that lever before their faces, and they can shake you no more forever.

Most of you have treated me with kindness and consideration, and I trust you will not now think I improperly touch what is exclusively your own, when, for the sake of the whole country, I ask, Can you, for your States, do better than to take the course I urge? Discarding *punctilio* and maxims adapted to more manageable times, and looking only to the unprecedentedly stern facts of our case, can you do better in any possible event? You prefer that the constitutional relation of the States to the nation shall be practically restored without disturbance of the institution: and if this were done, my whole duty, in this respect, under the Constitution and my oath of office, would be performed. But it is not done, and we are trying to accomplish it by war. The incidents of the war cannot be avoided. If the war continues long, as it must if the object be not sooner attained, the institution in your States will be extinguished by mere friction and abrasion—by the mere incidents of the war. It will be gone, and you will have nothing valuable in lieu of it. Much of its value is gone already. How much better for you and for your people to take the step which at once shortens the war, and secures substantial compensation for that which is sure to be wholly lost in any other event! How much better to thus save the money which else we sink forever in the war! How much better to do it while we can, lest the war ere long render us pecuniarily unable to do it! How much better for you, as seller, and the nation, as buyer, to sell out and buy out that without which the war could never have been, than to sink both the thing to be sold and the price of it in cutting one another's throats!

I do not speak of emancipation at once, but of a decision at once to emancipate gradually. Room in South America for colonization can be obtained cheaply, and in abundance, and when numbers shall be large enough to be company and encouragement for one another, the freed people will not be so reluctant to go.

I am pressed with a difficulty not yet mentioned—one which threatens division among those who, united, are none too strong. An instance of it is known to you. Gen. Hunter is an honest man. He was, and I hope still is, my friend. I valued him none the less for his agreeing with me in the general wish that all men everywhere could be free. He proclaimed all men free within certain States, and I repudiated the proclamation. He expected more good and less harm from the measure than I could believe would follow. Yet, in repudiating it, I gave dissatisfaction, if not offence, to many whose support the country cannot afford to lose. And this is not the end of it. The pressure in this direction is still upon me and is increasing. By conceding what I now ask you can relieve me, and, much more, can relieve the country in this important point.

Upon these considerations I have again begged your attention to the Message of March last. Before leaving the Capitol, consider and discuss it among yourselves. You are patriots and statesmen, and as such I pray you consider this proposition; and at the least commend it to the consideration of your States and people. As you would perpetuate popular government for the best people in the world, I beseech you that you do in no wise omit this. Our common country is in great peril, demanding the loftiest views and boldest action to bring a speedy relief. Once relieved, its form of government is saved to the world; its beloved history and cherished memories are vindicated, and its happy future fully assured and rendered inconceivably grand. To you, more than to any others, the privilege is given to assure that happiness and swell that grandeur, and to link your own names therewith forever.

At the conclusion of these remarks some conversation was had between the President and several members of the delegations from the Border States, in which it was represented that these States could not be expected to move in so great a matter as that brought to their notice in the foregoing address while as yet the Congress had taken no step beyond the passage of a resolution, expressive rather of a sentiment than presenting a substantial and reliable basis of action.

The President acknowledged the force of this view, and admitted that the Border States were entitled to expect a substantial pledge of pecuniary aid as the condition of taking into consideration a proposition so important in its relations to their social system.

It was further represented, in the conference, that the people of the Border States were interested in knowing the great importance which the President attached to the policy in question, while it was equally due to the country, to the President, and to themselves that the representatives of the Border Slaveholding States should publicly announce the motives under which they were called to act and the considerations of public policy urged upon them and their constituents by the President.

With a view to such a statement of their position, the members thus addressed, met in council to deliberate on the reply they should make to the President, and, as the result of a comparison of opinions among themselves, they determined upon the adoption of a majority and a minority answer.

REPLY OF THE MAJORITY.

The following paper was sent to the President, signed by the majority of the representatives from the Border Slaveholding States. It was prepared by J. W. Crisfield, of Maryland:

WASHINGTON, *July* 14, 1862.

To the President:

The undersigned, Representatives of Kentucky, Virginia, Missouri, and Maryland, in the two Houses of Congress, have listened to your address with the profound sensibility naturally inspired by the high source from which it emanates, the earnestness which marked its delivery, and the overwhelming inportance of the subject of which it treats. We have given it a most respectful consideration, and now lay before you our response. We regret that want of time has not permitted us to make it more perfect.

We have not been wanting, Mr. President, in respect to you, and in devotion to the Constitution and the Union. We have not been indifferent to the great difficulties surrounding you, compared with which all former national troubles have been but as the summer cloud; and we have freely given you our sympathy and support. Repudiating the dangerous heresies of the secessionists, and believing, with you, that the war on their part is aggressive and wicked, and the objects for which it was to be prosecuted on ours, as defined by your Message at the opening of the present Congress, to be such as all good men should approve, we have not hesitated to vote all supplies necessary to carry it on vigorously. We have voted all the men and money you have asked for, and even more; we have imposed onerous taxes on our people, and they are paying them with cheerfulness and alacrity; we have encouraged enlistments and sent to the field many of our best men; and some of our number have offered their persons to the enemy as pledges of their sincerity and devotion to the country. We have done all this under the most discouraging circumstances and in the face of measures most distasteful to us and injurious to the interests we represent, and in the hearing of doctrines avowed by those who claim to be your friends most abhorrent to us and our constituents. But, for all this, we have never faltered, nor shall we as long as we have a Constitution to defend and a Government which protects us. And we are ready for renewed efforts, and even greater sacrifices, yea, any sacrifice, when we are satisfied it is required to preserve our admirable form of government and the priceless blessings of constitutional liberty.

A few of our number voted for the resolution recommended by your Message of the 6th of March last; the greater portion of us did not, and we will briefly state the prominent reasons which influenced our action.

In the first place, it proposed a radical change of our social system, and was hurried through both Houses with undue haste, without reasonable time for consideration and debate, and with no time at all for consultation with our constituents, whose interests it deeply involved. It seemed like an interference by this Government with a question which peculiarly and exclusively belonged to our respective States, on which they had not sought advice or solicited aid. Many of us doubted the constitutional power of this Government to make appropriations of money for the object designated, and all of us thought our finances were in no condition to bear the immense outlay which its adoption and faithful execution would impose upon the National Treasury. If we pause but a moment to think of the debt its acceptance would have entailed, we are appalled by its magnitude. The proposition was addressed to all the States, and embraced the whole number of slaves. According to the census of 1860, there were then very nearly four million slaves in the country; from natural increase they exceed that number now. At even the low average of three hundred dollars, the price fixed by the emancipation act for the slaves of this District, and greatly below their real worth, their value runs up to the enormous sum of twelve hundred millions of dollars; and if to that we add the cost of deportation and colonization, at one hundred dollars each, which is but a fraction more than is actually paid by the Maryland Colonization Society, we have four hundred millions more! We were not willing to impose a tax on our people sufficient to pay the interest on that sum, in addition to the vast and daily increasing debt already fixed upon them by the exigencies of the war; and, if we had been willing, the country could not bear it. Stated in this form the proposition is nothing less than the deportation from the country of sixteen hundred million dollars' worth of producing labor, and the substitution in its place of an interest-bearing debt of the same amount!

But, if we are told that it was expected that only the States we represent would accept the proposition, we respectfully submit that even then it involves a sum too great for the financial ability of this Government at this time. According to the census of 1860—

Kentucky had	225,490	slaves.
Maryland	87,188	"
Virginia	490,887	"
Delaware	1,798	"
Missouri	114,965	"
Tennessee	275,784	"
		"
Making in the whole	1,196,112	"
At the same rate of valuation these would amount to		$358,833,600
Add for deportation and colonization $100 each		119,244,533
And we have the enormous sum of		$478,078,133

We did not feel that we should be justified in voting for a measure which, if carried out, would add this vast amount to our public debt at a moment when the Treasury was reeling under the enormous expenditures of the war.

Again, it seemed to us that this resolution was but the annunciation of a sentiment which could not, or was not likely to be, reduced to an actual, tangible proposition. No movement was then made to provide and appropriate the funds required to carry it into effect; and we were not encouraged to believe that funds would be provided. And our belief has been fully justified by subsequent events. Not to mention other circumstances, it is quite sufficient for our purpose to bring to your notice the fact, that, while this resolution was under consideration in the Senate, our colleague, the Senator from Kentucky, moved an amendment appropriating $500,000 to the object therein designated, and it was voted down with great unanimity. What confidence, then, could we reasonably feel that if we committed ourselves to the policy it proposed, our constituents would reap the fruits of the promise held out; and on what ground could we, as fair men, approach them and challenge their support?

The right to hold slaves is a right appertaining to all the States of this Union. They have the right to cherish or abolish the institution, as their tastes or their interests may prompt, and no one is authorized to question the right, or limit its enjoyment. And no one has more clearly affirmed that right than you have. Your inaugural address does you great honor in this respect, and inspired the country with confidence in your fairness and respect for the law. Our States are in the enjoyment of that right. We do not feel called on to defend the institution, or to affirm it is one which ought to be cherished; perhaps, if we were to make the attempt, we might find that we differ even among ourselves. It is enough for our purpose to know that it is a right; and, so knowing, we did not see why we should now be expected to yield it. We had contributed our full share to relieve the country at this terrible crisis; we had done as much as had been required of others, in like circumstances; and we did not see why sacrifices should be expected of us from which others, not more loyal, were exempt. Nor could we see what good the nation would derive from it. Such a sacrifice submitted to by us would not have strengthened the arm of this Government or weakened that of

the enemy. It was not necessary as a pledge of our loyalty, for that had been manifested beyond a reasonable doubt, in every form, and at every place possible. There was not the remotest probability that the States we represent would join in the rebellion, nor is there now; or of their electing to go with the Southern section in the event of a recognition of the independence of any part of the disaffected region. Our States are fixed unalterably in their resolution to adhere to and support the Union; they see no safety for themselves and no hope for constitutional liberty but by its preservation. They will under no circumstances consent to its dissolution, and we do them no more than justice when we assure you that while the war is conducted to prevent that deplorable catastrophe, they will sustain it as long as they can muster a man or command a dollar. Nor will they ever consent, in any event, to unite with the Southern Confederacy. The bitter fruits of the peculiar doctrines of that region will forever prevent them from placing their security and happiness in the custody of an association which has incorporated in its organic law the seeds of its own destruction.

We cannot admit, Mr. President, that if we had voted for the resolution in the emancipation Message of March last the war would now be substantially ended. We are unable to see how our action in this particular has given, or could give, encouragement to the rebellion. The resolution has passed; and if there be virtue in it, it will be quite as efficacious as if we had voted for it. We have no power to bind our States in this respect by our votes here; and whether we had voted the one way or the other, they are in the same condition of freedom to accept or reject its provisions. No, sir; the war has not been prolonged or hindered by our action on this or any other measure. We must look for other causes for that lamented fact. We think there is not much difficulty, not much uncertainty, in pointing out others far more probable and potent in their agencies to that end.

The rebellion derives its strength from the union of all classes in the insurgent States; and while that union lasts the war will never end until they are utterly exhausted. We know that at the inception of these troubles Southern society was divided, and that a large portion, perhaps a majority, were opposed to secession. Now the great mass of Southern people are united. To discover why they are so we must glance at Southern society, and notice the classes into which it has been divided, and which still distinguish it. They are in arms, but not for the same objects; they are moved to a common end, but by different and even inconsistent reasons. The leaders, which word comprehends those who were previously known as the State Rights party, and which party is much the lesser class, seek to break down national independence and set up State domination. With them it is a war against nationality. The other class is fighting, as it supposes, to maintain and preserve its rights of property and domestic safety, which it has been made to believe are assailed by this Government. This latter class are not disunionists *per se*; they are so only because they have been made to believe that this Administration is inimical to their rights, and is making war on their domestic institutions. As long as these two classes act together they will never assent to a peace. The policy, then, to be pursued is obvious. The former class will never be reconciled, but the latter may be. Remove their apprehensions; satisfy them that no harm is intended to them and their institutions; that this Government is not making war on their rights of property, but is simply defending its legitimate authority, and they will gladly return to their allegiance as soon as the pressure of military dominion imposed by the Confederate authority is removed from them.

Twelve months ago both Houses of Congress, adopting the spirit of your Message, then but recently sent in, declared with singular unanimity the objects of the war, and the country instantly bounded to your side to assist you in carrying it on. If the spirit of that resolution had been adhered to, we are confident that we should before now have seen the end of this deplorable conflict. But what have we seen? In both Houses of Congress we have heard doctrines subversive of the principles of the Constitution, and seen measure after measure founded in substance on those doctrines proposed and carried through, which can have no other effect than to distract and divide loyal men, and exasperate and drive still further from us and their duty the people of the rebellious States. Military officers, following these bad examples, have stepped beyond the just limits of their authority in the same direction, until in several instances you have felt the necessity of interfering to arrest them. And even the passage of the resolution to which you refer has been ostentatiously proclaimed as the triumph of a principle which the people of the Southern States regard as ruinous to them. The effect of these measures was foretold, and may now be seen in the indurated state of Southern feeling.

To these causes, Mr. President, and not to our omission to vote for the resolution recommended by you, we solemnly believe we are to attribute the terrible earnestness of those in arms against the Government, and the continuance of the war. Nor do we (permit us to say, Mr. President, with all respect for you) agree that the institution of slavery is 'the lever of their power,' but we are of the opinion that 'the lever of their power' is the apprehension that the powers of a common Government, created for common and equal protection to the interests of all, will be wielded against the institutions of the Southern States.

There is one other idea in your address we feel called on to notice. After stating the fact of your repudiation of Gen. Hunter's proclamation, you add:

> Yet, in repudiating it, I gave dissatisfaction, if not offence, to many whose support the country cannot afford to lose. And this is not the end of it. The pressure in this direction is still upon me and is increasing. By conceding what I now ask, you can relieve me, and, much more, can relieve the country in this important point.

We have anxiously looked into this passage to discover its true import, but we are yet in painful uncertainty. How can we, by conceding what you now ask, relieve you and the country from the increasing pressure to which you refer? We will not allow ourselves to think that the proposition is, that we consent to give up slavery, to the end that the Hunter proclamation may be let loose on the Southern people, for it is too well known that we would not be parties to any such measure, and we have too much respect for you to imagine you would propose it. Can it mean that by sacrificing our interest in slavery we appease the spirit that controls that pressure, cause it to be withdrawn, and rid the country of the pestilent agitation of the slavery question? We are forbidden so to think, for that spirit would not be satisfied with the liberation of seven hundred thousand slaves, and cease its agitation, while three millions remain in bondage. Can it mean that by abandoning slavery in our States, we are removing the pressure from you and the country, by preparing for a separation on the line of the Cotton States? We are forbidden so to think, because it is known that we are, and we believe that you are, unalterably opposed to any division at all. We would prefer to think that you desire this concession as a pledge of our support, and thus enable you to withstand a pressure which weighs heavily on you and the country. Mr. President, no such sacrifice is necessary to secure our support. Confine yourself to your constitutional authority; confine your subordinates within the same limits; conduct this war solely for the purpose of restoring the Constitution to its legitimate authority; concede to each State and its loyal citizens their just rights, and we are wedded to you by indissoluble ties. Do this, Mr. President, and you touch the American heart and invigorate it with new hope. You will, as we solemnly believe, in due time restore peace to your country, lift it from despondency to a future of glory; and preserve to your countrymen, their posterity, and man, the inestimable treasure of constitutional government.

Mr. President, we have stated with frankness and

candor the reasons on which we forbore to vote for the resolution you have mentioned; but you have again presented this proposition, and appealed to us, with an earnestness and eloquence which have not failed to impress us, to "consider it, and at the least to commend it to the consideration of our States and people." Thus appealed to by the Chief Magistrate of our beloved country, in the hour of its greatest peril, we cannot wholly decline. We are willing to trust every question relating to their interest and happiness to the consideration and ultimate judgment of our own people. While differing from you as to the necessity of emancipating the slaves of our States as a means of putting down the rebellion, and while protesting against the propriety of any extra territorial interference to induce the people of our States to adopt any particular line of policy on a subject which peculiarly and exclusively belongs to them, yet when you and our brethren of the loyal States sincerely believe that the retention of slavery by us is an obstacle to peace and national harmony, and are willing to contribute pecuniary aid to compensate our States and people for the inconveniences produced by such a change of system, we are not unwilling that our people shall consider the propriety of putting it aside.

But we have already said that we regarded this resolution as the utterance of a sentiment, and had no confidence that it would assume the shape of a tangible practical proposition, which would yield the fruits of the sacrifice it required. Our people are influenced by the same want of confidence, and will not consider the proposition in its present impalpable form. The interest they are asked to give up is to them of immense importance, and they ought not to be expected even to entertain the proposal until they are assured that when they accept it their just expectations will not be frustrated. We regard your plan as a proposition from the Nation to the States to exercise an admitted constitutional right in a particular manner and yield up a valuable interest. Before they ought to consider the proposition it should be presented in such a tangible, practical, efficient shape as to command their confidence that its fruits are contingent only upon their acceptance. We cannot trust anything to the contingencies of future legislation. If Congress, by proper and necessary legislation, shall provide sufficient funds and place them at your disposal to be applied by you to the payment of any of our States or the citizens thereof who shall adopt the abolishment of slavery, either gradual or immediate, as they may determine, and the expense of deportation and colonization of the liberated slaves, then will our States and people take this proposition into careful consideration, for such decision as in their judgment is demanded by their interests, their honor, and their duty to the whole country. We have the honor to be, with great respect,

C. A. WICKLIFFE, Chairman, of Kentucky.

REPLY OF THE MINORITY.

WASHINGTON, *July* 15, 1862.

MR. PRESIDENT: The undersigned, Members of Congress from the Border States, in response to your address of Saturday last, beg leave to say that they attended a meeting on the same day the address was delivered for the purpose of considering the same. The meeting appointed a committee to report a response to your address. That report was made on yesterday, and the action of the majority indicated clearly that the response reported, or one in substance the same, would be adopted and presented to you.

Inasmuch as we cannot, consistently with our own sense of duty to the country, under the existing perils which surround us, concur in that response, we feel it to be due to you and to ourselves to make you a brief and candid answer over our own signatures.

We believe that the whole power of the Government, upheld and sustained by all the influences and means of all loyal men in all sections, and of all parties, is essentially necessary to put down the rebellion and preserve the Union and the Constitution. We understand your appeal to us to have been made for the purpose of securing this result. A very large portion of the people in the Northern States believe that slavery is the "lever power of the rebellion." It matters not whether this opinion is well-founded or not. The belief does exist, and we have to deal with things as they are, and not as we would have them be. In consequence of the existence of this belief, we understand that an immense pressure is brought to bear for the purpose of striking down this institution through the exercise of military authority. The Government cannot maintain this great struggle if the support and influence of the men who entertain these opinions be withdrawn. Neither can the Government hope for early success if the support of that element called "conservative" be withdrawn.

Such being the condition of things, the President appeals to the Border State men to step forward and prove their patriotism by making the first sacrifice. No doubt like appeals have been made to extreme men in the North to meet us half way, in order that the whole moral, political, pecuniary, and physical force of the nation may be firmly and earnestly united in one grand effort to save the Union and the Constitution.

Believing that such were the motives that prompted your address, and such the results to which it looked, we cannot reconcile it to our sense of duty, in this trying hour, to respond in a spirit of fault-finding or querulousness over the things that are past. We are not disposed to seek for the cause of present misfortunes in the errors and wrongs of others who now propose to unite with us in a common purpose. But, on the other hand, we meet your address in the spirit in which it was made, and, as loyal Americans, declare to you and to the world that there is no sacrifice that we are not ready to make to save the Government and institutions of our fathers. That we, few of us though there may be, will permit no men, from the North or from the South, to go farther than we in the accomplishment of the great work before us. That, in order to carry out these views, we will, so far as may be in our power, ask the people of the Border States, calmly, deliberately, and fairly to consider your recommendations. We are the more emboldened to assume this position from the fact, now become history, that the leaders of the Southern rebellion have offered to abolish slavery amongst them as a condition to foreign intervention in favor of their independence as a nation.

If they can give up slavery to destroy the Union, we can surely ask our people to consider the question of emancipation to save the Union.

With great respect, your obedient servants,

JOHN W. NOELL, of Missouri.
SAM. S. CASEY, of Kentucky.
GEORGE P. FISHER, of Delaware.
A. J. CLEMENTS, of Tennessee.
WM. G. BROWN, of Western Virginia.
JACOB B. BLAIR, of Western Virginia.
W. F. WILLEY, of Western Virginia.

REPLY OF MR. MAYNARD, OF TENNESSEE.

HOUSE OF REPRESENTATIVES, *July* 16, 1862.

SIR: The magnitude and gravity of the proposition submitted by you to Representatives from the Slave States would naturally occasion diversity, if not contrariety of opinion. You will not, therefore, be surprised that I have not been able to concur in view with the majority of them. This is attributable, possibly, to the fact that my State is not a Border State, properly so called, and that my immediate constituents are not yet disenthralled from the hostile arms of the rebellion. This fact is a physical obstacle in the way of my now submitting to their consideration this or any other proposition looking to political action, especially such as, in this case, would require a change in the organic law of the State.

But do not infer that I am insensible to your appeal. I am not. You are surrounded with difficulties far greater than have embarrassed any of your predecessors. You need the support of every American citizen, and you ought to have it, active, zealous, and honest. The union of every Union man to aid you in preserving the Union is the duty of the time. Differences as to policy and methods must be subordinated to the common purpose.

In looking for the causes of this rebellion, it is natural that each section and each party should ascribe as little blame as possible to itself, and as much as possible to its opponent section and party. Possibly you and I might not agree on a comparison of our views. That there should be differences of opinion as to the best mode of conducting our military operations, and the best men to lead our armies, is equally natural. Contests on such questions weaken ourselves and strengthen our enemies. They are unprofitable and possibly unpatriotic. Somebody must yield, or we waste our strength in a contemptible struggle amongst ourselves.

You appeal to the loyal men of the Slave States to sacrifice something of feeling and a great deal of interest. The sacrifices they have already made and the sufferings they have endured give the best assurance that the appeal will not have been made in vain. He who is not ready to yield all his material interests, and to forego his most cherished sentiments and opinions for the preservation of his country, although he may have perilled his life on the battle-field in her defence, is but half a patriot. Among the loyal people that I represent there are no half patriots.

Already the rebellion has cost us much, even to our undoing; we are content, if need be, to give up the rest to suppress it. We have stood by you from the beginning of this struggle, and we mean to stand by you, God willing, till the end of it.

I did not vote for the resolution to which you allude, solely for the reason that at the time I was absent at the capital of my own State. It is right.

Should any of the Slave States think proper to terminate that institution, as several of them, I understand, or at least some of their citizens propose, justice and a generous comity require that the country should interpose to aid it in lessening the burden, public and private, occasioned by so radical a change in its social and industrial relations.

I will not now speculate upon the effect, at home or abroad, of the adoption of your policy, nor inquire what action of the rebel leaders has rendered something of the kind important. Your whole administration gives the highest assurance that you are moved, not so much from a desire to see all men everywhere made free, as from a far higher desire to preserve free institutions for the benefit of men already free; not to make slaves freemen, but to prevent freemen from being made slaves; not to destroy an institution which a portion of us only consider bad, but to save institutions which we all alike consider good. I am satisfied that you would not ask from any of your fellow citizens a sacrifice not, in your judgment, imperatively required by the safety of the country.

This is the spirit of your appeal, and I respond to it in the same spirit.

I am, very respectfully, your obedient servant,

HORACE MAYNARD.

To the PRESIDENT.

Proclamation of President LINCOLN *on the Emancipation of the Slaves.*

I, ABRAHAM LINCOLN, President of the United States of America, and Commander-in-Chief of the army and navy thereof, do hereby proclaim and declare that hereafter, as heretofore, the war will be prosecuted for the object of practically restoring the constitutional relation between the United States and each of the States, and the people thereof, in which States that relation is or may be suspended or disturbed.

That it is my purpose, upon the next meeting of Congress, to again recommend the adoption of a practical measure tendering pecuniary aid to the free acceptance or rejection of all Slave States, so called, the people whereof may not then be in rebellion against the United States, and which States may then have voluntarily adopted, or thereafter may voluntarily adopt, immediate or gradual abolishment of slavery within their respective limits; and that the effort to colonize persons of African descent, with their consent, upon this continent or elsewhere, with the previously obtained consent of the governments existing there, will be continued.

That on the first day of January, in the year of our Lord one thousand eight hundred and sixty-three, all persons held as slaves within any State, or designated part of a State, the people whereof shall then be in rebellion against the United States, shall be then, thenceforward, and forever free; and the Executive Government of the United States, including the military and naval authority thereof, will recognize and maintain the freedom of such persons, and will do no act or acts to repress such persons, or any of them, in any efforts they may make for their actual freedom.

That the Executive will, on the first day of January aforesaid, by proclamation, designate the States and parts of States, if any, in which the people thereof respectively shall then be in rebellion against the United States; and the fact that any State, or the people thereof, shall on that day be in good faith represented in the Congress of the United States, by members chosen thereto at elections wherein a majority of the qualified voters of such State shall have participated, shall, in the absence of strong countervailing testimony, be deemed conclusive evidence that such State, and the people thereof, are not then in rebellion against the United States.

That attention is hereby called to an act of Congress entitled "An Act to make an additional Article of War," approved March 13, 1862, and which act is in the words and figures following:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That hereafter the following shall be promulgated as an additional article of war for the government of the army of the United States, and shall be obeyed and observed as such:

ARTICLE.—All officers or persons in the military or naval service of the United States are prohibited from employing any of the forces under their respective commands for the purpose of returning fugitives from service or labor who may have escaped from any persons to whom such service or labor is claimed to be due; and any officer who shall be found guilty by a court martial of violating this article shall be dismissed from the service.

SEC. 2. *And be it further enacted*, That this act shall take effect from and after its passage.

Also, to the ninth and tenth sections of an act entitled "An Act to Suppress Insurrection, to Punish Treason and Rebellion, to Seize and Confiscate Property of Rebels, and for other Purposes," approved July 17, 1862, and which sections are in the words and figures following:

SEC. 9. *And be it further enacted*, That all slaves of per-

sons who shall hereafter be engaged in rebellion against the Government of the United States, or who shall in any way give aid or comfort thereto, escaping from such persons and taking refuge within the lines of the army; and all slaves captured from such persons, or deserted by them and coming under the control of the Government of the United States; and all slaves of such persons found *on* [or] being within any place occupied by rebel forces and afterward occupied by the forces of the United States, shall be deemed captives of war, and shall be forever free of their servitude, and not again held as slaves.

SEC. 10. *And be it further enacted*, That no slave escaping into any State, Territory, or the District of Columbia, from any other State, shall be delivered up, or in any way impeded or hindered of his liberty, except for crime, or some offence against the laws, unless the person claiming said fugitive shall first make oath that the person to whom the labor or service of such fugitive is alleged to be due is his lawful owner, and has not borne arms against the United States in the present rebellion, nor in any way given aid and comfort thereto; and no person engaged in the military or naval service of the United States shall, under any pretence whatever, assume to decide on the validity of the claim of any person to the service or labor of any other person, or surrender up any such person to the claimant, on pain of being dismissed from the service.

And I do hereby enjoin upon and order all persons engaged in the military and naval service of the United States to observe, obey, and enforce, within their respective spheres of service, the act and sections above recited.

And the Executive will in due time recommend that all citizens of the United States who shall have remained loyal thereto throughout the rebellion shall (upon the restoration of the constitutional relation between the United States and their respective States and people, if that relation shall have been suspended or disturbed) be compensated for all losses by acts of the United States, including the loss of slaves.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, this twenty-second day of September, in the year of our
[SEAL.] Lord one thousand eight hundred and sixty-two, and of the Independence of the United States the eighty-seventh.

ABRAHAM LINCOLN.

By the President:
WILLIAM H. SEWARD, Secretary of State.

Message of President LINCOLN *at the third session of the Thirty-seventh Congress, Dec.* 1, 1862.

Fellow Citizens of the Senate and House of Representatives:

Since your last annual assembling another year of health and bountiful harvests has passed. And while it has not pleased the Almighty to bless us with a return of peace, we can but press on, guided by the best light he gives us, trusting that, in his own good time and wise way, all will yet be well.

The correspondence touching foreign affairs which has taken place during the last year is herewith submitted, in virtual compliance with a request to that effect made by the House of Representatives near the close of the last session of Congress.

If the condition of our relations with other nations is less gratifying than it has usually been at former periods, it is certainly more satisfactory than a nation so unhappily distracted as we are might reasonably have apprehended. In the month of June last there were some grounds to expect that the maritime Powers which, at the beginning of our domestic difficulties, so unwisely and unnecessarily, as we think, recognized the insurgents as a belligerent, would soon recede from that position, which has proved only less injurious to themselves than to our own country. But the temporary reverses which afterward befell the national arms, and which were exaggerated by our own disloyal citizens abroad, have hitherto delayed that act of simple justice.

The civil war which has so radically changed, for the moment, the occupations and habits of the American people, has necessarilly disturbed the social condition, and affected very deeply the prosperity of the nations with which we have carried on a commerce that has been steadily increasing throughout a period of half a century. It has, at the same time, excited political ambitions and apprehensions which have produced a profound agitation throughout the civilized world. In this unusual agitation we have forborne from taking part in any controversy between foreign states, and between parties or factions in such states. We have attempted no propagandism, and acknowledged no revolution. But we have left to every nation the exclusive conduct and management of its own affairs. Our struggle has been, of course, contemplated by foreign nations with reference less to its own merits, than to its supposed and often exaggerated effects and consequences resulting to those nations themselves. Nevertheless, complaint on the part of this Government, even if it were just, would certainly be unwise.

The treaty with Great Britain for the suppression of the slave trade has been put into operation with a good prospect of complete success. It is an occasion of special pleasure to acknowledge that the execution of it, on the part of her Majesty's Government, has been marked with a jealous respect for the authority of the United States and the rights of their moral and loyal citizens.

The convention with Hanover for the abolition of the stade dues has been carried into full effect, under the act of Congress for that purpose.

A blockade of three thousand miles of seacoast could not be established and vigorously enforced, in a season of great commercial activity like the present, without committing occasional mistakes, and inflicting unintentional injuries upon foreign nations and their subjects.

A civil war occurring in a country where foreigners reside and carry on trade under treaty stipulations is necessarily fruitful of complaints of the violation of neutral rights. All such collisions tend to excite misapprehensions, and possibly to produce mutual reclamations between nations which have a common interest in preserving peace and friendship. In clear cases of these kinds I have, so far as possible, heard and redressed complaints which have been presented by friendly Powers. There is still, however, a large and an augmenting number of doubtful cases upon which the Government is unable to agree with the Governments whose protection is demanded by the claimants. There are, moreover, many cases in which the United States, or their citizens, suffer wrongs from the naval or military authorities of foreign nations, which the Governments of these states are not at once prepared to redress. I have proposed to some of the foreign states thus interested, mutual conventions to examine and adjust such complaints. This proposition has been made especially to Great Britain, to France, to Spain, and to Prussia. In each case it has been kindly received, but has not yet been formally adopted.

I deem it my duty to recommend an appropriation in behalf of the owners of the Norwegian bark Admiral P. Tordenskiold, which vessel was, in May, 1861, prevented by the commander of the blockading force off Charleston from leaving that port with cargo, notwithstanding a similar privilege had, shortly before, been granted to an English vessel. I have directed the Secretary of State to cause the papers in the case to be communicated to the proper committees.

Applications have been made to me by many free Americans of African descent to favor their emigration, with a view to such colonization as was contemplated in recent acts of Congress. Other parties, at home and abroad—some from interested motives, others upon patriotic considerations, and still others influenced by philanthropic sentiments—have suggested similar measures; while, on the other hand, several of the Spanish-American Republics have protested against the sending of such colonies to their respective territories. Under these circumstances I have declined to move any such colony to any state without first obtaining the consent of its Government, with an agreement on its part to receive and protect such emigrants in all the

rights of freemen: and I have, at the same time, offered to the several states situated within the tropics, or having colonies there, to negotiate with them, subject to the advice and consent of the Senate, to favor the voluntary emigration of persons of that class to their respective territories, upon conditions which shall be equal, just, and humane. Liberia and Hayti are, as yet, the only countries to which colonists of African descent from here could go with certainty of being received and adopted as citizens; and I regret to say such persons, contemplating colonization, do not seem so willing to migrate to those countries as to some others, nor so willing as I think their interest demands. I believe, however, opinion among them in this respect is improving; and that ere long there will be an augmented and considerable migration to both these countries from the United States.

The new commercial treaty between the United States and the Sultan of Turkey has been carried into execution.

A commercial and consular treaty has been negotiated, subject to the Senate's consent, with Liberia; and a similar negotiation is now pending with the Republic of Hayti. A considerable improvement of the national commerce is expected to result from these measures.

Our relations with Great Britain, France, Spain, Portugal, Russia, Prussia, Denmark, Sweden, Austria, the Netherlands, Italy, Rome, and the other European states remain undisturbed. Very favorable relations also continue to be maintained with Turkey, Morocco, China, and Japan.

During the last year there has not only been no change of our previous relations with the Independent States of our own continent, but more friendly sentiments than have heretofore existed are believed to be entertained by these neighbors, whose safety and progress are so intimately connected with our own. This statement especially applies to Mexico, Nicaragua, Costa Rica, Honduras, Peru, and Chili.

The commission under the convention with the Republic of New Granada closed its session without having audited and passed upon all the claims which were submitted to it. A proposition is pending to revive the convention, that it may be able to do more complete justice. The joint commission between the United States and the Republic of Costa Rica has completed its labors and submitted its report.

I have favored the project for connecting the United States with Europe by an Atlantic telegraph, and a similar project to extend the telegraph from San Francisco to connect by a Pacific telegraph with the line which is being extended across the Russian Empire.

The Territories of the United States, with unimportant exceptions, have remained undisturbed by the civil war; and they are exhibiting such evidence of prosperity as justifies an expectation that some of them will soon be in a condition to be organized as States, and be constitutionally admitted into the Federal Union.

The immense mineral resources of some of those Territories ought to be developed as rapidly as possible. Every step in that direction would have a tendency to improve the revenues of the Government and diminish the burdens of the people. It is worthy of your serious consideration whether some extraordinary measures to promote that end cannot be adopted. The means which suggests itself as most likely to be effective, is a scientific exploration of the mineral regions in those Territories, with a view to the publication of its results at home and in foreign countries—results which cannot fail to be auspicious.

The condition of the finances will claim your most diligent consideration. The vast expenditures incident to the military and naval operations required for the suppression of the rebellion have been hitherto met with a promptitude and certainty unusual in similar circumstances; and the public credit has been fully maintained. The continuance of the war, however, and the increased disbursements made necessary by the augmented forces now in the field, demand your best reflections as to the best modes of providing the necessary revenue, without injury to business, and with the least possible burdens upon labor.

The suspension of specific payments by the Banks, soon after the commencement of your last session, made large issues of United States notes unavoidable. In no other way could the payment of the troops, and the satisfaction of other just demands, be so economically or so well provided for. The judicious legislation of Congress, securing the receivability of these notes for loans and internal duties, and making them a legal tender for other debts, has made them a universal currency, and has satisfied partially at least, and for the time, the long felt want of an uniform circulating medium, saving thereby to the people immense sums in discounts and exchanges.

A return to specie payments, however, at the earliest period compatible with due regard to all interests concerned, should ever be kept in view. Fluctuations in the value of currency are always injurious, and to reduce these fluctuations to the lowest possible point will always be a leading purpose in wise legislation. Convertibility, prompt and certain convertibility into coin, is generally acknowledged to be the best and surest safeguard against them; and it is extremely doubtful whether a circulation of United States notes, payable in coin, and sufficiently large for the wants of the people, can be permanently, usefully, and safely maintained.

Is there, then, any other mode in which the necessary provision for the public wants can be made, and the great advantages of a safe and uniform currency secured?

I know of none which promises so certain results, and is, at the same time, so unobjectionable as the organization of banking associations, under a general act of Congress, well guarded in its provisions. To such associations the Government might furnish circulating notes, on the security of United States bonds deposited in the Treasury. These notes, prepared under the supervision of proper officers, being uniform in appearance and security, and convertible always into coin, would at once protect labor against the evils of a vicious currency, and facilitate commerce by cheap and safe exchanges.

A moderate reservation from the interest on the bonds would compensate the United States for the preparation and distribution of the notes, and a general supervision of the system, and would lighten the burden of that part of the public debt employed as securities. The public credit, moreover, would be greatly improved, and the negotiation of new loans greatly facilitated by the steady market demand for Government bonds which the adoption of the proposed system would create.

It is an additional recommendation of the measure, of considerable weight, in my judgment, that it would reconcile as far as possible all existing interests, by the opportunity offered to existing institutions to reorganize under the act, substituting only the secured uniform national circulation for the local and various circulation, secured and unsecured, now issued by them.

The receipts into the Treasury, from all sources, including loans, and balance from the preceding year, for the fiscal year ending on the 30th June, 1862, were $583,885,247 06, of which sum $49,056,397 62 were derived from customs; $1,795,331 73 from the direct tax; from public lands, $152,203 77; from miscellaneous sources, $931,787 64; from loans in all forms, $529,692,460 50. The remainder, $2,257,065 80, was the balance from last year.

The disbursements during the same period were for Congressional, Executive, and Judicial purposes, $5,939,009 29; for foreign intercourse, $1,339,710 35; for miscellaneous expenses, including the mints, loans, post office deficiencies, collection of revenue, and other like charges, $14,129,771 50; for expenses under the Interior Department, $3,102,985 52; under the War Department, $394,368,407 36; under the Navy Department, $42,674,569 69; for interest on public

debt, $13,190,324 45; and for payment of public debt, including reimbursement of temporary loan, and redemptions, $96,096,922 09; making an aggregate of $570,841,700 25, and leaving a balance in the Treasury on the 1st day of July, 1862, of $13,043,546 81.

It should be observed that the sum of $96,096,922 09, expended for reimbursements and redemption of public debt, being included also in the loans made, may be properly deducted, both from receipts and expenditures, leaving the actual receipts for the year $487,788,324 97, and the expenditures, $474,744,778 16.

Other information on the subject of the finances will be found in the report of the Secretary of the Treasury, to whose statements and views I invite your most candid and considerate attention.

The reports of the Secretaries of War and of the Navy are herewith transmitted. These reports, though lengthy, are scarcely more than brief abstracts of the very numerous and extensive transactions and operations conducted through those Departments. Nor could I give a summary of them here, upon any principle which would admit of its being much shorter than the reports themselves. I therefore content myself with laying the reports before you, and asking your attention to them.

It gives me pleasure to report a decided improvement in the financial condition of the Post Office Department, as compared with several preceding years. The receipts for the fiscal year 1861 amounted to $8,349,296 40, which embraced the revenue from all the States of the Union for three quarters of that year. Notwithstanding the cessation of revenue from the so-called seceded States during the last fiscal year, the increase of the correspondence of the loyal States has been sufficient to produce a revenue during the same year of $8,299,820 90, being only $50,000 less than was derived from all the States of the Union during the previous year. The expenditures show a still more favorable result. The amount expended in 1861 was $13,606,759 11. For the last year the amount has been reduced to $11,125,364 13, showing a decrease of about $2,481,000 in the expenditures as compared with the preceding year, and about $3,750,000 as compared with the fiscal year 1860. The deficiency in the Department for the previous year was $4,551,966 98. For the last fiscal year it was reduced to $2,112,814 57. These favorable results are in part owing to the cessation of mail service in the insurrectionary States, and in part to a careful review of all expenditures in that department in the interest of economy. The efficiency of the postal service, it is believed, has also been much improved. The Postmaster General has also opened a correspondence, through the Department of State, with foreign Governments, proposing a convention of postal representatives for the purpose of simplifying the rates of foreign postage, and to expedite the foreign mails. This proposition, equally, important to our adopted citizens and to the commercial interests of this country, has been favorably entertained and agreed to by all the Governments from whom replies have been received.

I ask the attention of Congress to the suggestions of the Postmaster General in his report respecting the further legislation required, in his opinion, for the benefit of the postal service.

The Secretary of the Interior reports as follows in regard to the public lands:

> The public lands have ceased to be a source of revenue. From the 1st July, 1861, to the 30th September, 1862, the entire cash receipts from the sale of lands were $137,476 26—a sum much less than the expenses of our land system during the same period. The homestead law, which will take effect on the 1st of January next, offers such inducements to settlers that sales for cash cannot be expected, to an extent sufficient to meet the expense of the General Land Office, and the cost of surveying and bringing the land into market.

The discrepancy between the sum here stated as arising from the sales of the public lands, and the sum derived from the same source as reported from the Treasury Department, arises, as I understand, from the fact that the periods of time, though apparently, were not really coincident at the beginning point—the Treasury report including a considerable sum now which had previously been reported from the Interior—sufficiently large to greatly overreach the sum derived from the three months now reported upon by the Interior, and not by the Treasury.

The Indian tribes upon our frontiers have, during the past year, manifested a spirit of insubordination, and, at several points, have engaged in open hostilities against the white settlements in their vicinity. The tribes occupying the Indian country south of Kansas renounced their allegiance to the United States, and entered into treaties with the insurgents. Those who remained loyal to the United States were driven from the country. The chief of the Cherokees has visited this city for the purpose of restoring the former relations of the tribe with the United States. He alleges that they were constrained, by superior force, to enter into treaties with the insurgents, and that the United States neglected to furnish the protection which their treaty stipulations required.

In the month of August last, the Sioux Indians, in Minnesota, attacked the settlements in their vicinity with extreme ferocity, killing, indiscriminately, men, women, and children. This attack was wholly unexpected, and therefore no means of defence had been provided. It is estimated that not less than eight hundred persons were killed by the Indians, and a large amount of property was destroyed. How this outbreak was induced is not definitely known, and suspicions, which may be unjust, need not to be stated. Information was received by the Indian Bureau, from different sources, about the time hostilities were commenced, that a simultaneous attack was to be made upon the white settlements by all the tribes between the Mississippi River and the Rocky Mountains. The State of Minnesota has suffered great injury from this Indian war. A large portion of her territory has been depopulated, and a severe loss has been sustained by the destruction of property. The people of that State manifest much anxiety for the removal of the tribes beyond the limits of the State as a guarantee against future hostilities. The Commissioner of Indian Affairs will furnish full details. I submit for your especial consideration whether our Indian system shall not be remodelled. Many wise and good men have impressed me with the belief that this can be profitably done.

I submit a statement of the proceedings of commissioners, which shows the progress that has been made in the enterprise of constructing the Pacific railroad. And this suggests the earliest completion of this road, and also the favorable action of Congress upon the projects now pending before them for enlarging the capacities of the great canals in New York and Illinois, as being of vital and rapidly increasing importance to the whole nation, and especially to the vast interior region hereinafter to be noticed at some greater length. I purpose having prepared and laid before you at an early day some interesting and valuable statistical information upon this subject. The military and commercial importance of enlarging the Illinois and Michigan canal, and improving the Illinois river, is presented in the report of Col. Webster to the Secretary of War, and now transmitted to Congress. I respectfully ask attention to it.

To carry out the provisions of the act of Congress of the 15th of May last, I have caused the Department of Agriculture of the United States to be organized.

The Commissioner informs me that within the period of a few months this department has established an extensive system of correspondence and exchanges, both at home and abroad, which promises to effect highly beneficial results in the development of a correct knowledge of recent improvements in agriculture, in the introduction of new products, and in the collection of the agricultural statistics of the different States. Also, that it will soon be prepared to distribute largely seeds, cereals, plants and cuttings, and has already published and liberally diffused much valuable in-

formation in anticipation of a more elaborate report, which will in due time be furnished, embracing some valuable tests in chemical science now in progress in the laboratory.

The creation of this department was for the more immediate benefit of a large class of our most valuable citizens; and I trust that the liberal basis upon which it has been organized will not only meet your approbation, but that it will realize, at no distant day, all the fondest anticipations of its most sanguine friends, and become the fruitful source of advantage to all our people.

On the 22d day of September last a proclamation was issued by the Executive, a copy of which is herewith submitted.

In accordance with the purpose expressed in the second paragraph of that paper, I now respectfully recall your attention to what may be called "compensated emancipation."

A nation may be said to consist of its territory, its people, and its laws. The territory is the only part which is of certain durability. "One generation passeth away and another generation cometh, but the earth abideth forever." It is of the first importance to duly consider and estimate this ever enduring part. That portion of the earth's surface which is owned and inhabited by the people of the United States is well adapted to the home of one national family; and it is not well adapted for two or more. Its vast extent and its variety of climate and productions are of advantage in this age for one people, whatever they might have been in former ages. Steams, telegraphs, and intelligence have brought these to be an advantageous combination for one united people.

In the Inaugural Address I briefly pointed out the total inadequacy of disunion as a remedy for the differences between the people of the two sections. I did so in language which I cannot improve, and which, therefore, I beg to repeat:

"One section of our country believes slavery is right, and ought to be extended, while the other believes it is wrong, and ought not to be extended. This is the only substantial dispute. The fugitive slave clause of the Constitution, and the law for the suppression of the foreign slave trade, are each as well enforced, perhaps, as any law can ever be in a community where the moral sense of the people imperfectly supports the law itself. The great body of the people abide by the dry legal obligation in both cases, and a few break over in each. This, I think, cannot be perfectly cured; and it would be worse in both cases after the separation of the sections than before. The foreign slave trade, now imperfectly suppressed, would be ultimately revived without restriction in one section; while fugitive slaves, now only partially surrendered, would not be surrendered at all by the other.

"Physically speaking, we cannot separate. We cannot remove our respective sections from each other, nor build an impassable wall between them. A husband and wife may be divorced and go out of the presence and beyond the reach of each other; but the different parts of our country cannot do this. They cannot but remain face to face; and intercourse, either amicable or hostile, must continue between them. Is it possible, then, to make that intercourse more advantageous or more satisfactory after separation than before? Can aliens make treaties easier than friends can make laws? Can treaties be more faithfully enforced between aliens than laws can among friends? Suppose you go to war, you cannot fight always; and when, after much loss on both sides, and no gain on the other, you cease fighting, the identical old questions, as to terms of intercourse, are again upon you."

There is no line, straight or crooked, suitable for a national boundary upon which to divide. Trace through, from east to west, upon the line between the free and slave country, and we shall find a little more than one third of its length are rivers, easy to be crossed, and populated, or soon to be populated, thickly upon both sides; while nearly all its remaining length are merely surveyors' lines, over which people may walk back and forth without any consciousness of their presence. No part of this line can be made any more difficult to pass by writing it down on paper, or parchment, as a national boundary. The fact of separation, if it comes, gives up, on the part of the seceding section, the fugitive slave clause, along with all other constitutional obligations upon the section seceded from, while I should expect no treaty stipulation would ever be made to take its place.

But there is another difficulty. The great interior region, bounded east by the Alleghanies, north by the British dominions, west by the Rocky Mountains, and south by the line along which the culture of corn and cotton meets, and which includes part of Virginia, part of Tennessee, all of Kentucky, Ohio, Indiana, Michigan, Wisconsin, Illinois, Missouri, Kansas, Iowa, Minnesota, and the Territories of Dakota, Nebraska, and part of Colorado, already has above ten millions of people, and will have fifty millions within fifty years if not prevented by any political folly or mistake. It contains more than one third of the country owned by the United States—certainly more than one million of square miles. Once half as populous as Massachusetts already is it would have more than seventy-five millions of people. A glance at the map shows that, territorially speaking, it is the great body of the Republic. The other parts are but marginal borders to it, the magnificent region sloping west from the Rocky Mountains to the Pacific being the deepest and also the richest in undeveloped resources. In the production of provisions, grains, grasses, and all which proceed from them, this great interior region is naturally one of the most important of the world. Ascertain from the statistics the small proportion of the region which has as yet been brought into cultivation, and also the large and rapidly increasing amount of its products, and we shall be overwhelmed with the magnitude of the prospect presented. And yet this region has no seacoast, touches no ocean anywhere. As part of one nation, its people now find, and may forever find, their way to Europe by New York, to South America and Africa by New Orleans, and to Asia by San Francisco. But separate our common country into two nations, as designed by the present rebellion, and every man of this great interior region is thereby cut off from some one or more of these outlets, not perhaps by a physical barrier, but by embarrassing and onerous trade regulations.

And this is true, wherever a dividing or boundary line may be fixed. Place it between the now free and slave country, or place it south of Kentucky or north of Ohio, and still the truth remains that none south of it can trade to any port or place north of it, and none north of it can trade to any port or place south of it, except upon terms dictated by a Government foreign to them. These outlets, east, west, and south, are indispensable to the well-being of the people inhabiting and to inhabit this vast interior region. Which of the three may be the best is no proper question. All are better than either, and all of right belong to that people and to their successors forever. True, to themselves, they will not ask where a line of separation shall be, but will vow rather that there shall be no such line. Nor are the marginal regions less interested in these communications to and through them to the great outside world. They too, and each of them, must have access to this Egypt of the West, without paying toll at the crossing of any national boundary.

Our national strife springs not from our permanent part; not from the land we inhabit; not from our national homestead. There is no possible severing of this, but would multiply and not mitigate evils among us. In all its adaptations and aptitudes, it demands union and abhors separation. In fact it would ere long force reunion, however much of blood and treasure the separation might have cost.

Our strife pertains to ourselves—to the passing generations of men; and it can without convulsion be hushed forever with the passing of one generation.

In this view, I recommend the adoption of the following resolution and articles amendatory to the Constitution of the United States:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two thirds of both Houses concurring), That the following articles be proposed to the Legislatures (or Conventions) of the several States as amendments to the Constitution of the United States, all or any of which articles when ratified by three fourths of the said Legislatures (or Conventions) to be valid as part or parts of the said Constitution, viz.:

ARTICLE — Every State wherein slavery now exists which shall abolish the same therein at any time or times before the first day of January, in the year of our Lord one thousand and nine hundred, shall receive compensation from the United States, as follows, to wit:

The President of the United States shall deliver to every such State bonds of the United States, bearing interest at the rate of —— per cent. per annum, to an amount equal to the aggregate sum of ——— for each slave shown to have been therein by the eighth census of the United States, said bonds to be delivered to such State by instalments, or in one parcel, at the completion of the abolishment, accordingly as the same shall have been gradual, or at one time, within such State; and interest shall begin to run upon any such bond only from the proper time of its delivery as aforesaid. Any State having received bonds as aforesaid, and afterward reintroducing or tolerating slavery therein, shall refund to the United States the bonds so received, or the value thereof, and all interest paid thereon.

ARTICLE — All slaves who shall have enjoyed actual freedom by the chances of the war, at any time before the end of the rebellion, shall be forever free; but all owners of such who shall not have been disloyal shall be compensated for them, at the same rates as is provided for States adopting abolishment of slavery, but in such way that no slave shall be twice accounted for.

ARTICLE — Congress may appropriate money, and otherwise provide, for colonizing free colored persons, with their own consent, at any place or places without the United States.

I beg indulgence to discuss these proposed articles at some length. Without slavery the rebellion could never have existed; without slavery it could not continue.

Among the friends of the Union there is great diversity of sentiment and of policy in regard to slavery, and the African race amongst us. Some would perpetuate slavery; some would abolish it suddenly and without compensation; some would abolish it gradually and with compensation; some would remove the freed people from us, and some would retain them with us; and there are yet other minor diversities. Because of these diversities we waste much strength in struggles among ourselves. By mutual concession we should harmonize and act together. This would be compromise; but it would be compromise among the friends and not with the enemies of the Union. These articles are intended to embody a plan of such mutual concessions. If the plan shall be adopted, it is assumed that emancipation will follow at least in several of the States.

As to the first article the main points are: first, the emancipation; secondly, the length of time for consummating it—thirty-seven years; and, thirdly, the compensation.

The emancipation will be unsatisfactory to the advocates of perpetual slavery; but the length of time should greatly mitigate their dissatisfaction. The time spares both races from the evils of sudden derangement—in fact from the necessity of any derangement—while most of those whose habitual course of thought will be disturbed by the measure will have passed away before its consummation. They will never see it. Another class will hail the prospect of emancipation, but will deprecate the length of time. They will feel that it gives too little to the now living slaves. But it really gives them much. It saves them from the vagrant destitution which must largely attend immediate emancipation in localities where their numbers are very great; and it gives the inspiring assurance that their posterity shall be free forever. The plan leaves to each State choosing to act under it to abolish slavery now or at the end of the century, or at any intermediate time, or by degrees, extending over the whole or any part of the period; and it obliges no two States to proceed alike. It also provides for compensation, and generally the mode of making it. This, it would seem, must further mitigate the dissatisfaction of those who favor perpetual slavery, and especially of those who are to receive the compensation. Doubtless some of those who are to pay and not to receive will object. Yet the measure is both just and economical. In a certain sense, the liberation of slaves is the destruction of property—property acquired by descent or by purchase, the same as any other property. It is no less true for having been often said, that the people of the South are not more responsible for the original introduction of this property than are the people of the North; and when it is remembered how unhesitatingly we all use cotton and sugar, and share the profits of dealing in them, it may not be quite safe to say that the South has been more responsible than the North for its continuance. If, then, for a common object this property is to be sacrificed, is it not just that it be done at a common charge?

And if with less money, or money more easily paid, we can preserve the benefits of the Union by this means than we can by the war alone, is it not also economical to do it? Let us consider it, then. Let us ascertain the sum we have expended in the war since compensated emancipation was proposed last March, and consider whether, if that measure had been promptly accepted by even some of the Slave States, the same sum would not have done more to close the war than has been otherwise done. If so, the measure would save money, and, in that view, would be a prudent and economical measure. Certainly it is not so easy to pay something as it is to pay nothing; but it is easier to pay a large sum than it is to pay a larger one. And it is easier to pay any sum when we are able than it is to pay it before we are able. The war requires large sums, and requires them at once. The aggregate sum necessary for compensated emancipation of course would be large. But it would require no ready cash, nor the bonds even, any faster than the emancipation progresses. This might not, and probably would not, close before the end of the thirty-seven years. At that time we shall probably have a hundred millions of people to share the burden, instead of thirty-one millions, as now. And not only so, but the increase of our population may be expected to continue for a long time after that period as rapidly as before; because our territory will not have become full. I do not state this inconsiderately.

At the same ratio of increase which we have maintained, on an average, from our first national census, in 1790, until that of 1860, we should, in 1900, have a population of 103,208,415. And why may we not continue that ratio far beyond that period? Our abundant room—our broad national homestead—is our ample resource. Were our territory as limited as are the British Isles, very certainly our population could not expand as stated. Instead of receiving the foreign born as now, we should be compelled to send part of the native born away. But such is not our condition. We have two millions nine hundred and sixty-three thousand square miles. Europe has three millions and eight hundred thousand, with a population averaging seventy-three and one third persons to the square mile. Why may not our country at some time average as many? Is it less fertile? Has it more waste surface, by mountains, rivers, lakes, deserts, or other causes? Is it inferior to Europe in any natural advantage? If then we are, at some time, to be as populous as Europe, how soon? As to when this may be, we can judge by the past and the present; as to when it will be, if ever, depends much on whether we maintain the Union. Several of our States are already above the average of Europe—seventy-three and a third to the square mile. Massachusetts has 157; Rhode Island 133; Connecticut 99; New York and New Jersey, each 80. Also two other great States, Pennsylvania and Ohio, are not far below, the former having 63 and the latter 59. The States already above the European average, except New York, have increased in as rapid a ratio, since passing that point, as ever before; while no one of them is equal to some other parts of our country in natural capacity for sustaining a dense population.

Taking the nation in the aggregate, and we find its population and ratio of increase, for the several decennial periods, to be as follows:

1790....	3,929,827				
1800....	5,305,937	35.02	per cent.	ratio	of increase.
1810....	7,239,814	36.45	"	"	"
1820....	9,638,131	33.13	"	"	"
1830....	12,866,020	33.49	"	"	"
1840....	17,069,453	32.67	"	"	"
1850....	23,191,876	35,87	"	"	"
1860....	31,443,790	35.58	"	"	"

This shows an average decennial increase of 34.60 per cent. in population through the seventy years, from our first to our last census yet taken. It is seen that the ratio of increase, at no one of these two periods, is either two per cent. below or two per cent. above the average; thus showing how inflexible, and consequently how reliable, the law of increase in our case is. Assuming that it will continue, it gives the following results:

1870.....	42,323,341
1880.....	56,967,216
1890.....	76,677,872
1900.....	103,208,415
1910.....	138,918,526
1920.....	186,984,335
1930.....	251,680,914

These figures show that our country may be as populous as Europe now is at some point between 1920 and 1930—say about 1925—our territory, at seventy-three and a third persons to the square mile, being of capacity to contain 217,186,000

And we will reach this, too, if we do not ourselves relinquish the chance, by the folly and evils of disunion, or by long and exhausting wars springing from the only great element of national discord among us. While it cannot be foreseen exactly how much one huge example of secession, breeding lesser ones indefinitely, would retard population, civilization, and prosperity, no one can doubt that the extent of it would be very great and injurious.

The proposed emancipation would shorten the war, perpetuate peace, insure this increase of population, and proportionately the wealth of the country. With these, we should pay all the emancipation would cost, together with our other debt, easier than we should pay our other debt without it. If we had allowed our old national debt to run at six per cent. per annum, simple interest, from the end of our Revolutionary struggle until to-day, without paying anything on either principal or interest, each man of us would owe less upon that debt now than each man owed upon it then; and this because our increase of men, through the whole period, has been greater than six per cent.; has run faster than the interest upon the debt. Thus, time alone relieves a debtor nation, so long as its population increases faster than unpaid interest accumulates on its debt.

This fact would be no excuse for delaying payment of what is justly due; but it shows the great importance of time in this connection—the great advantage of a policy by which we shall not have to pay until we number a hundred millions, what, by a different policy, we would have to pay now, when we number but thirty-one millions. In a word, it shows that a dollar will be much harder to pay for the war than will be a dollar for the emancipation on the proposed plan. And then the latter will cost no blood, no precious life. It will be a saving of both.

As to the second article, I think it would be impracticable to return to bondage the class of persons therein contemplated. Some of them, doubtless, in the property sense, belong to loyal owners; and hence provision is made in this article for compensating such.

The third article relates to the future of the freed people. It does not oblige, but merely authorizes Congress to aid in colonizing such as may consent. This ought not to be regarded as objectionable on the one hand or on the other, in so much as it comes to nothing unless by the mutual consent of the people to be deported, and the American voters, through their representatives in Congress.

I cannot make it better known than it already is that I strongly favor colonization. And yet I wish to say there is an objection urged against free colored persons remaining in the country which is largely imaginary, if not sometimes malicious.

It is insisted that their presence would injure and displace white labor and white laborers. If there ever could be a proper time for mere catch arguments, that time surely is not now. In times like the present men should utter nothing for which they would not willingly be responsible through time and in eternity. Is it true, then, that colored people can displace any more white labor by being free than by remaining slaves? If they stay in their old places they jostle no white laborers; if they leave their old places they leave them open to white laborers. Logically, there is neither more nor less of it. Emancipation even without deportation, would probably enhance the wages of white labor, and, very surely, would not reduce them. Thus the customary amount of labor would still have to be performed—the freed people would surely not do more than their old proportion of it, and very probably for a time would do less, leaving an increased part to white laborers, bringing their labor into greater demand, and consequently enhancing the wages of it. With deportation, even to a limited extent, enhanced wages to white labor is mathematically certain. Labor is like any other commodity in the market—increase the demand for it and you increase the price of it. Reduce the supply of black labor, by colonizing the black laborer out of the country, and by precisely so much you increase the demand for and wages of white labor.

But it is dreaded that the freed people will swarm forth and cover the whole land! Are they not already in the land? Will liberation make them any more numerous? Equally distributed among the whites of the whole country, and there would be but one colored to seven whites. Could the one, in any way, greatly disturb the seven? There are many communities now having more than one free colored person to seven whites; and this, without any apparent consciousness of evil from it. The District of Columbia and the States of Maryland and Delaware are all in this condition. The District has more than one free colored to six whites; and yet, in its frequent petitions to Congress, I believe it has never presented the presence of free colored persons as one of its grievances. But why should emancipation South send the freed people North? People of any color seldom run unless there be something to run from. Heretofore colored people to some extent have fled North from bondage; and now, perhaps, from bondage and destitution. But if gradual emancipation and deportation be adopted they will have neither to flee from. Their old masters will give them wages at least until new laborers can be procured, and the freed men in turn will gladly give their labor for the wages till new homes can be found for them in congenial climes and with people of their own blood and race. This proposition can be trusted on the mutual interests involved. And in any event, cannot the North decide for itself whether to receive them?

Again, as practice proves more than theory, in any case, has there been any irruption of colored people northward because of the abolishment of slavery in this District last spring?

What I have said of the proportion of free colored persons to the whites in the District is from the census of 1860, having no reference to persons called contrabands, nor to those made free by the act of Congress abolishing slavery here.

The plan consisting of these articles is recommended, not but that a restoration of national authority would be accepted without its adoption.

Nor will the war, nor proceedings under the proclamation of September 22, 1862, be stayed because of the recommendation of this plan. Its timely adoption, I doubt not, would bring restoration, and thereby stay both.

And, notwithstanding this plan, the recommendation that Congress provide by law for compensating any State which may adopt emancipation before this plan

shall have been acted upon, is hereby earnestly renewed. Such would be only an advance part of the plan, and the same arguments apply to both.

This plan is recommended as a means, not in exclusion of, but additional to, all others for restoring and preserving the national authority throughout the Union. The subject is presented exclusively in its economical aspect. The plan would, I am confident, secure peace more speedily, and maintain it more permanently, than can be done by force alone; while all it would cost, considering amounts, and manner of payment, and times of payment, would be easier paid than will be the additional cost of the war, if we rely solely upon force. It is much—very much—that it would cost no blood at all.

The plan is proposed as permanent constitutional law. It cannot become such without the concurrence of, first, two-thirds of Congress, and afterward three-fourths of the States. The requisite three-fourths of the States will necessarily include seven of the Slave States. Their concurrence, if obtained, will give assurance of their severally adopting emancipation, at no very distant day, upon the new constitutional terms. This assurance would end the struggle now, and save the Union forever.

I do not forget the gravity which should characterize a paper addressed to the Congress of the nation by the Chief Magistrate of the nation. Nor do I forget that some of you are my seniors; nor that many of you have more experience than I in the conduct of public affairs. Yet I trust that, in view of the great responsibility resting upon me, you will perceive no want of respect to yourselves in any undue earnestness I may seem to display.

Is it doubted, then, that the plan I propose, if adopted, would shorten the war, and thus lessen its expenditure of money and of blood? Is it doubted that it would restore the national authority and national prosperity, and perpetuate both indefinitely? Is it doubted that we here—Congress and Executive—can secure its adoption? Will not the good people respond to a united and earnest appeal from us? Can we, can they, by any other means, so certainly or so speedily assure these vital objects? We can succeed only by concert. It is not "can any of us imagine better?" but "can we all do better?" Object whatsoever is possible, still the question recurs, "can we do better?" The dogmas of the quiet past are inadequate to the stormy present. The occasion is piled high with difficulty, and we must rise with the occasion. As our case is new, so we must think anew, and act anew. We must disenthral ourselves, and then we shall save our country.

Fellow citizens, we cannot escape history. We of this Congress and this Administration will be remembered in spite of ourselves. No personal significance or insignificance can spare one or another of us. The fiery trial through which we pass will light us down in honor or dishonor to the latest generation. We say we are for the Union. The world will not forget that we say this. We know how to save the Union. The world knows we do know how to save it. We—even we here—hold the power and bear the responsibility. In giving freedom to the slave we assure freedom to the free—honorable alike in what we give and what we preserve. We shall nobly save or meanly lose the last best hope of earth. Other means may succeed; this could not fail. The way is plain, peaceful, generous, just—a way which, if followed, the world will forever applaud and God must forever bless.

DECEMBER 1, 1862. ABRAHAM LINCOLN.

Inaugural Address of JEFFERSON DAVIS *on entering upon his duties as President of the Confederate States under the "Permanent Constitution," Feb.* 22, 1862.

FELLOW CITIZENS: On this the birthday of the man most identified with the establishment of American independence, and beneath the monument erected to commemorate his heroic virtues and those of his compatriots, we have assembled to usher into existence the permanent Government of the Confederate States. Through this instrumentality, under the favor of Divine Providence, we hope to perpetuate the principles of our Revolutionary fathers. The day, the memory, and the purpose seem fitly associated.

It is with mingled feelings of humility and pride that I appear to take, in the presence of the people and before high Heaven, the oath prescribed as a qualification for the exalted station to which the unanimous voice of the people has called me. Deeply sensible of all that is implied by this manifestation of the people's confidence, I am yet more profoundly impressed by the vast responsibility of the office, and humbly feel my own unworthiness.

In return for their kindness I can only offer assurances of the gratitude with which it is received, and can but pledge a zealous devotion of every faculty to the service of those who have chosen me as their Chief Magistrate.

When a long course of class legislation, directed not to the general welfare but to the aggrandizement of the Northern section of the Union, culminated in a warfare on the domestic institutions of the Southern States—when the dogmas of a sectional party, substituted for the provisions of the constitutional compact, threatened to destroy the sovereign rights of the States, six of those States, withdrawing from the Union, confederated together to exercise the right and perform the duty of instituting a Government which would better secure the liberties for the preservation of which that Union was established.

Whatever of hope some may have entertained that a returning sense of justice would remove the danger with which our rights were threatened, and render it possible to preserve the Union of the Constitution, must have been dispelled by the malignity and barbarity of the Northern States in the prosecution of the existing war. The confidence of the most hopeful among us must have been destroyed by the disregard they have recently exhibited for all the time-honored bulwarks of civil and religious liberty. Bastiles filled with prisoners, arrested without civil process or indictment duly found; the writ of habeas corpus suspended by Executive mandate; a State Legislature controlled by the imprisonment of members whose avowed principles suggested to the Federal Executive that there might be another added to the list of Seceded States; elections held under threats of a military power; civil officers, peaceful citizens, and gentle women incarcerated for opinion's sake, proclaimed the incapacity of our late associates to administer a Government as free, liberal, and humane as that established for our common use.

For proof of the sincerity of our purpose to maintain our ancient institutions we may point to the Constitution of the Confederacy and the laws enacted under it, as well as to the fact that through all the necessities of an unequal struggle there has been no act on our part to impair personal liberty, or the freedom of speech, of thought, or of the press. The courts have been open, the judicial functions fully executed, and every right of the peaceful citizen maintained as securely as if a war of invasion had not disturbed the land.

The people of the States now confederated became convinced that the Government of the United States had fallen into the hands of a sectional majority, who would pervert that most sacred of all trusts to the destruction of the rights which it was pledged to protect. They believed that to remain longer in the Union would subject them to a continuance of disparaging discrimination, submission to which would be inconsistent with their welfare, and intolerable to a proud people. They therefore determined to sever its bonds and establish a new Confederacy for themselves.

The experiment instituted by our Revolutionary fathers, of a voluntary union of sovereign States for purposes specified in a solemn compact, had been perverted by those who, feeling power and forgetting

right, were determined to respect no law but their own will. The Government had ceased to answer the ends for which it was ordained and established. To save ourselves from a revolution which, in its silent and rapid progress, was about to place us under the despotism of numbers, and to preserve in spirit, as well as in form, a system of government we believed to be peculiarly fitted to our condition, and full of promise to mankind, we determined to make a new association, composed of States homogeneous in interest, in policy, and in feeling.

True to our traditions of peace and our love of justice, we sent Commissioners to the United States to propose a fair and amicable settlement of all questions of public debt or property which might be in dispute. But the Government at Washington, denying our rights to self-government, refused even to listen to any proposals for a peaceful separation. Nothing was then left to us but to prepare for war.

The first year in our history has been the most eventful in the annals of this continent. A new Government has been established, and its machinery put in operation over an area exceeding seven hundred thousand square miles. The great principles upon which we have been willing to hazard everything that is dear to man, have made conquests for us which could never have been achieved by the sword. Our confederacy has grown from six to thirteen States, and Maryland, already united to us by hallowed memories and material interests, will, I believe, when able to speak with unstifled voice, connect her destiny with the South. Our people have rallied with unexampled unanimity to the support of the great principles of constitutional government, with firm resolve to perpetuate by arms the rights which they could not peacefully secure. A million of men, it is estimated, are now standing in hostile array and waging war along a frontier of thousands of miles. Battles have been fought, sieges have been conducted, and although the contest is not ended, and the tide for the moment is against us, the final result in our favor is not doubtful.

The period is near at hand when our foes must sink under the immense load of debt which they have incurred—a debt which in their effort to subjugate us has already attained such fearful dimensions as will subject them to burdens which must continue to oppress them for generations to come.

We, too, have had our trials and difficulties. That we are to escape them in the future is not be hoped. It was to be expected when we entered upon this war that it would expose our people to sacrifices and cost them much, both of money and blood. But we knew the value of the object for which we struggled, and understood the nature of the war in which we were engaged. Nothing could be so bad a failure, and any sacrifice would be cheap as the price of success in such a contest.

But the picture has its lights as well as its shadows. This great strife has awakened in the people the highest emotions and qualities of the human soul. It is cultivating feelings of patriotism, virtue, and courage. Instances of self-sacrifice and of generous devotion to the noble cause for which we are contending are rife throughout the land. Never has a people evinced a more determined spirit than that now animating men, women, and children in every part of our country. Upon the first call the men fly to arms; and wives and mothers send their husbands and sons to battle without a murmur of regret.

It was perhaps in the ordination of Providence that we were to be taught the value of our liberties by the price which we pay for them.

The recollections of this great contest, with all its common traditions of glory, of sacrifice, and of blood, will be the bond of harmony and enduring affection among the people, producing unity in policy, fraternity in sentiment, and joint effort in war.

Nor have the material sacrifices of the past been made without some corresponding benefits. If the acquiescence of foreign nations in a pretended blockade has deprived us of our commerce with them, it is fast making us a self-supporting and an independent people. The blockade, if effectual and permanent, could only serve to divert our industry from the production of articles for export, and employ it in supplying commodities for domestic use.

It is a satisfaction that we have maintained the war by our unaided exertions. We have neither asked nor received assistance from any quarter. Yet the interest involved is not wholly our own. The world at large is concerned in opening our markets to its commerce. When the independence of the Confederate States is recognized by the nations of the earth, and we are free to follow our interests and inclinations by cultivating foreign trade, the Southern States will offer to manufacturing nations the most favorable markets which ever invited their commerce. Cotton, sugar, rice, tobacco, provisions, timber, and naval stores will furnish attractive exchanges. Nor would the constancy of those supplies be likely to be disturbed by war. Our confederate strength will be too great to tempt aggression; and never was there a people whose interests and principles committed them so fully to a peaceful policy as those of the Confederate States. By the character of their productions they are too deeply interested in foreign commerce wantonly to disturb it. War of conquest they cannot wage, because the constitution of their Confederacy admits of no coerced association. Civil war there cannot be between States held together by their volition only. This rule of voluntary association, which cannot fail to be conservative, by securing just and impartial government at home, does not diminish the security of the obligation by which the Confederate States may be bound to foreign nations. In proof of this it is to be remembered that, at the first moment of asserting their right of secession, these States proposed a settlement on the basis of a common liability for the obligations of the General Government.

Fellow citizens, after the struggles of ages had consecrated the right of the Englishman to constitutional representative Government, our Colonial ancestors were forced to vindicate that birthright by an appeal to arms. Success crowned their efforts, and they provided for their posterity a peaceful remedy against future aggression. The tyranny of an unbridled majority, the most odious and least responsible form of despotism, has denied us both the right and the remedy. Therefore we are in arms to renew such sacrifices as our fathers made to the holy cause of constitutional liberty. At the darkest hour of our struggle the provisional gives place to the permanent Government. After a series of successes and victories, which covered our arms with glory, we have recently met with serious disaster. But in the heart of a people resolved to be free, these disasters tend but to stimulate to increased resistance. To show ourselves worthy of the inheritance bequeathed to us by the patriots of the Revolution, we must emulate that heroic devotion which made reverse to them but the crucible in which their patriotism was refined.

With confidence in the wisdom and virtue of those who will share with me the responsibility and aid me in the conduct of public affairs; securely relying on the patriotism and courage of the people, of which the present war has furnished so many examples, I deeply feel the weight of the responsibilities I now, with unaffected diffidence, am about to assume; and, fully realizing the inadequacy of human power to guide and sustain, my hope is reverently fixed on Him whose favor is ever vouchsafed to the cause which is just. With humble gratitude and adoration, acknowledging the Providence which has so visibly protected the Confederacy during its brief but eventful career, to Thee, O God, I trustingly commit myself, and prayerfully invoke Thy blessing on my country and its cause.

JEFFERSON DAVIS.

Message of President DAVIS *to the Confederate Congress at its first Session under the "Permanent Constitution," Feb.* 25, 1862.

To the Senate and House of Representatives of the Confederate States:

In obedience to the constitutional provision requiring the President from time to time to give to Congress information of the state of the Confederacy, and recommend to their consideration such measures as he shall judge necessary and expedient, I have to communicate that, since my Message at the last session of the Provisional Congress, events have demonstrated that the Government had attempted more than it had power successfully to achieve. Hence in the effort to protect by our arms the whole territory of the Confederate States, seaboard and inland, we have been so exposed as recently to encounter serious disasters.

When the Confederacy was formed the States comprising it were, in the peculiar character of their pursuits and a misplaced confidence in their former associates, to a great extent destitute of the means for the prosecution of the war on so gigantic a scale as that which it has attained. The workshops and artists were mainly to be found in the Northern States, and one of the first duties which devolved upon this Government was to establish the necessary manufactories, and in the mean time to obtain, by purchase from abroad, as far as practicable, whatever was required for the public defence. No effort has been spared to effect both these ends, and, though the results have not equalled our hopes, it is believed that an impartial judgment will, upon full investigation, award to the various departments of the Government credit for having done all which human power and foresight enabled them to accomplish. The valor and devotion of the people have not only sustained the efforts of the Government, but have gone far to support its deficiencies.

The active state of military preparations among the nations of Europe in April last, the date when our agents first went abroad, interposed unavoidable delays in the procurement of arms, and the want of a navy has greatly impeded our efforts to import military supplies of all sorts.

I have hoped for several days to receive official reports in relation to our discomfiture at Roanoke Island and the fall of Fort Donelson. They have not yet reached me, and I am, therefore, unable to communicate to you such information of the late events and the consequences resulting from them as would enable me to make recommendations founded upon the changed condition which they have produced. Enough is known of the surrender of Roanoke Island to make us feel that it was deeply humiliating, however imperfect may have been the preparations for defence. The hope is still entertained that our reported losses at Fort Donelson have been greatly exaggerated, inasmuch as I am not only unwilling but unable to believe that a large army of our people have surrendered without a desperate effort to cut their way through the investing forces, whatever may have been their numbers, and to endeavor to make a junction with other divisions of the army. But, in the absence of that exact information which can only be afforded by official reports, it would be premature to pass judgment, and my own is reserved, as I trust yours will be, until that information is received.

In the mean time, strenuous efforts have been made to throw forward reënforcements to the armies at the positions threatened, and I cannot doubt that the bitter disappointments we have borne, by nerving the people to still greater exertions, will speedily secure results more accordant with our just expectations, and as favorable to our cause as those which marked the earlier periods of the war.

The reports of the Secretaries of War and Navy will exhibit the mass of resources for the conduct of the war which we have been enabled to accumulate, notwithstanding the very serious difficulties against which we have contended. They afford cheering hope that our resources, limited as they were at the beginning of the contest, will, during its progress, become developed to such an extent as fully to meet our future wants.

The policy of enlistment for short terms, against which I have steadily contended from the commencement of the war, has, in my judgment, contributed in no immaterial degree to the recent reverses which we have suffered, and even now renders it difficult to furnish you an accurate statement of the army. When the war first broke out many of our people could with difficulty be persuaded that it would be long or serious. It was not deemed possible that anything so insane as a persistent attempt to subjugate these States could be made; still less that the delusion would so far prevail as to give to the war the vast proportions which it has assumed. The people, incredulous of a long war, were naturally averse to long enlistments, and the early legislation of Congress rendered it impracticable to obtain volunteers for a greater period than twelve months. Now that it has become probable that the war will be continued through a series of years, our high-spirited and gallant soldiers, while generally reenlisting, are, from the fact of having entered the service for a short term, compelled, in many instances, to go home to make the necessary arrangements for their families during their prolonged absence.

The quotas of new regiments for the war, called for from the different States, are in rapid progress of organization. The whole body of new levies and reenlisted men will probably be ready in the ranks within the next thirty days. But in the mean time it is exceedingly difficult to give an accurate statement of the number of our forces in the field. They may in general terms be stated at four hundred regiments of infantry, with a proportionate force of cavalry and artillery, the details of which will be shown by the report of the Secretary of War. I deem it proper to advert to the fact that the process of furloughs and reenlistments in progress for the last month had so far disorganized and weakened our forces as to impair our ability for successful defence; but I heartily congratulate you that this evil, which I had foreseen and was powerless to prevent, may now be said to be substantially at an end, and that we shall not again during the war be exposed to seeing our strength diminished by this fruitful cause of disaster—short enlistments.

The people of the Confederate States, being principally engaged in agricultural pursuits, were unprovided at the commencement of hostilities with ships, ship yards, materials for ship building, or skilled mechanics and seamen in sufficient numbers to make the prompt creation of a navy a practical task, even if the required appropriations had been made for the purpose. Notwithstanding our very limited resources, however, the report of the Secretary will exhibit to you a satisfactory proportion in preparation, and certainty of early completion of vessels of a number and class on which we may confidently rely for testing the vaunted control of the enemy over our waters.

The financial system devised by the wisdom of your predecessors has proved adequate to supplying all the wants of the Government, notwithstanding the unexpected and very large increase of expenditures resulting from the great augmentation in the necessary means of defence. The report of the Secretary of the Treasury will exhibit the gratifying fact that we have no floating debt; that the credit of the Government is unimpaired; and that the total expenditure of the Government for the year has been, in round numbers, one hundred and seventy millions of dollars —less than one-third of the sum wasted by the enemy in his vain effort to conquer us; less than the value of a single article of export—the cotton crop of the year.

The report of the Postmaster-General will show the condition of that Department to be steadily improving, its revenues increasing, and already affording the assurance that it will be self-sustaining at the date required by the Constitution, while affording ample mail facilities for the people.

In the Department of Justice, which includes the

Patent Office and Public Printing, some legislative provision will be required, which will be specifically stated in the report of the head of that department. I invite the attention of Congress to the duty of organizing a Supreme Court of the Confederate States, in accordance with the mandate of the Constitution.

I refer you to my Message, communicated to the Provisional Congress in November last, for such further information touching the condition of public affairs as it might be useful to lay before you, the short interval which has since elapsed not having produced any material changes in that condition other than those to which reference has already been made.

In conclusion, I cordially welcome representatives who, recently chosen by the people, are fully imbued with their views and feelings, and can so ably advise me as to the needful provisions for the public service. I assure you of my hearty coöperation in all your efforts for the common welfare of the country.

JEFFERSON DAVIS.

Message of President DAVIS *at the second or adjourned Session of the Confederate Congress —August* 15, 1862.

To the Senate and House of Representatives of the Confederate States:

It is again our fortune to meet for devising measures necessary for the public welfare, whilst our country is involved in a desolating war. The sufferings endured by some portions of the people excite the deepest solicitude of the Government, and the sympathy thus evoked has been heightened by the patriotic devotion with which these sufferings have been borne. The gallantry and good conduct of our troops, always claiming the gratitude of the country, have been further illustrated on hard-fought fields, marked by exhibitions of individual prowess which can find but few parallels in ancient or modern history. Our army has not faltered in any of the various trials to which it has been subjected, and the great body of the people have continued to manifest a zeal and unanimity which not only cheer the battle-stained soldier, but give assurance to the friends of constitutional liberty of our final triumph in the pending struggle against despotic usurpation. The vast army which threatened the capital of the Confederacy has been defeated and driven from the lines of investment, and the enemy, repeatedly foiled in his efforts for its capture, is now seeking to raise new armies on a scale such as modern history does not record to effect that subjugation of the South so often proclaimed as on the eve of accomplishment.

The perfidy which disregarded rights secured by compact, the madness which trampled on obligations made sacred by every consideration of honor, have been intensified by the malignity engendered by defeat. These passions have changed the character of the hostilities waged by our enemies, who are becoming daily less regardful of the usages of civilized war and the dictates of humanity. Rapine and wanton destruction of private property, war upon non-combatants, murder of captives, bloody threats to avenge the death of an invading soldiery by the slaughter of unarmed citizens, orders of banishment against peaceful farmers engaged in the cultivation of the soil, are some of the means used by our ruthless invaders to enfore the submission of a free people to foreign sway. Confiscation bills of a character so atrocious as to insure, if executed, the utter ruin of the entire population of these States, are passed by their Congress and approved by their Executive. The moneyed obligations of the Confederate Government are forged by citizens of the United States, and publicly advertised for sale in their cities with a notoriety that sufficiently attests the knowledge of their Government, and its complicity in the crime is further evinced by the fact that the soldiers of the invading armies are found supplied with large quantities of these forged notes as a means of despoiling the country people, by fraud, out of such portions of their property as armed violence may fail to reach. Two, at least, of the generals of the United States are engaged, unchecked by their Government, in exciting servile insurrection, and in arming and training slaves for warfare against their masters, citizens of the Confederacy. Another has been found of instincts so brutal as to invite the violence of his soldiery against the women of a captured city.

Yet, the rebuke of civilized men has failed to evoke from the authorities of the United States one mark of disapprobation of its acts; nor is there any reason to suppose that the conduct of Benjamin F. Butler has failed to secure from his Government the sanction and applause with which it is known to have been greeted by public meetings and portions of the press of the United States. To inquiries made of the Commander-in-Chief of the armies of the United States, whether the atrocious conduct of some of their military commandants met the sanction of that Government, answer has been evaded on the pretext that the inquiry was insulting, and no method remains for the suppression of these enormities but such retributive justice as it may be found possible to execute. Retaliation in kind for many of them is impracticable, for I have had occasion to remark in a former Message, that under no excess of provocation could our noble-hearted defenders be driven to wreak vengeance on unarmed men, on women, or on children. But stern and exemplary punishment can and must be meted out to the murderers and felons, who, disgracing the profession of arms, seek to make of public war the occasion for the commission of the most monstrous crimes. Deeply as we regret the character of the contest into which we are about to be forced, we must accept it as an alternative which recent manifestations give us little hope can be avoided. The exasperation of failure has aroused the worst passions of our enemies, a large portion of their people, even of their clergymen, now engage in urging an excited populace to the extreme of ferocity, and nothing remains but to vindicate our rights and to maintain our existence by employing against our foe every energy and every resource at our disposal.

I append for your information a copy of the paper exhibiting the action of the Government, up to the present time, for the repression of the outrages committed on our people. Other measures, now in progress, will be submitted hereafter. In inviting your attention to the legislation which the necessities of our condition require, those connected with the prosecution of the war command almost undivided attention.

The acts passed at your last session intended to sesure the public defence by general enrolment, and to render uniform the rule governing troops in the service, have led to some unexpected criticism that is much to be regretted. The efficiency of the law has been thus somewhat impaired, though it is not believed that in any of the States the popular mind has withheld its sanction from either the necessity or propriety of your legislation. It is only by harmonious as well as zealous action, that a Government as new as ours, ushered into existence on the very eve of a great war, and unprovided with the material necessary for conducting hostilities on so vast a scale, can fulfil its duties. Upon you, who are fully informed of the acts and purposes of the Government, and thoroughly imbued with the feelings and sentiments of the people, must reliance be placed to secure this great object. You can best devise the means for establishing that coöperation of the State and Confederate Governments which is essential to the well-being of both at all times, but which is now indispensable to their very existence. And if any legislation shall seem to you appropriate for adjusting differences of opinion, it will be my pleasure as well as duty to coöperate in any measures that may be devised for reconciling a just care for the public defence with a proper deference for the most scrupulous susceptibilities of the State authorities.

The report of the Secretary of the Treasury will exhibit in detail the operations of that department. It will be seen with satisfaction that the credit of the Government securities remains unimpaired, and that

this credit is fully justified by the comparatively small amount of accumulated debt, notwithstanding the magnitude of our military operations. The legislation of the last session provided for the purchase of supplies with the bonds of the Government, but the preference of the people for Treasury notes has been so marked that the legislation is recommended to authorize an increase in the issue of Treasury notes, which the public service seems to require. No grave inconvenience need be apprehended from this increased issue, as the provision of law by which these notes are convertible into eight per cent. bonds, forms an efficient and permanent safeguard against any serious depreciation of the currency. Your attention is also invited to the means proposed by the Secretary for facilitating the preparation of these notes, and for guarding them against forgery. It is due to our people to state that the manufacture of counterfeit notes exists within our limits, and that they are imported also from the Northern States.

The report of the Secretary of War, which is submitted, contains numerous suggestions for the legislation deemed desirable in order to add to the efficiency of the service. I invite your favorable consideration especially to those recommendations which are intended to secure the proper execution of the conscript law, and the consolidation of companies, battalions, and regiments, when so reduced in strength as to impair that uniformity of organization which is necessary in the army, while an undue burden is imposed on the Treasury. The necessity for some legislation for controlling military transportation on the railroads, and improving their present defective condition, forces itself upon the attention of the Government, and I trust that you will be able to devise satisfactory measures for attaining this purpose. The legislation on the subject of general officers involves the service in some difficulties which are pointed out by the Secretary, and for which the remedy suggested by him seems appropriate.

In connection with this subject I am of opinion that prudence dictates some provision for the increase of the army, in the event of emergencies not now anticipated. The very large increase of force recently called into the field by the President of the United States may render it necessary hereafter to extend the provisions of the conscript law, so as to embrace persons between the age of thirty-five and forty-five years. The vigor and efficiency of our present forces, their condition, and the skill and ability which distinguish their leaders, inspire the belief that no further enrolment will be necessary, but a wise foresight requires that if a necessity should be suddenly developed during the recess of Congress requiring increased forces for our defence, means should exist for calling such forces into the field, without awaiting the reassembling of the legislative department of the Government.

In the election and appointment of officers for the provisional army, it was to be anticipated that mistakes would be made, and incompetent officers of all grades introduced into the service. In the absence of experience, and with no reliable guide for selection, executive appointments, as well as elections, have been sometimes unfortunate. The good of the service, the interests of our country, require that some means be devised for withdrawing the commissions of officers who are incompetent for the duties required by their position, and I trust that you will find means for relieving the army of such officers by some mode more prompt and less wounding to the sensibility than judgment of court martial.

Within a recent period we have effected the object so long desired, of an arrangement for the exchange of prisoners, which is now being executed by delivery at the points agreed upon, and which will, it is hoped, speedily restore our brave and unfortunate countrymen to their places in the ranks of the army, from which, by the fortune of war, they have for a time been separated. The details of this arrangement will be communicated to you in a special report when further progress has been made in their execution.

Of other particulars concerning the operations of the War Department you will be informed by the Secretary in his report and the accompanying documents.

The report of the Secretary of the Navy embraces a statement of the operations and present condition of this branch of the public service, both afloat and ashore; the construction and equipment of armed vessels at home and abroad, the manufacture of ordnance and ordnance stores, the establishment of workshops and the development of our resources of coal and of iron. Some legislation seems essential for securing crews for vessels. The difficulties now experienced on this point are fully stated in the Secretary's report, and I invite your attention to providing a remedy.

The report of the Postmaster-General discloses the embarrassments which resulted in the postal service from the occupation by the enemy of the Mississippi river and portions of the territory of the different States. The measures taken by the department for relieving these embarrassments, as far as practicable, are detailed in the report. It is a subject of congratulation, that during the ten months which ended on the 31st of March last, the expenses of the department were largely decreased, whilst its revenue was augmented, as compared with a corresponding period ending on the 30th June, 1860, when the postal service for these States was conducted under the authority delegated to the United States. Sufficient time has not yet elapsed to determine whether the measures heretofore devised by Congress will accomplish the end of bringing the expenditures of the department within the limit of its own revenues by the first of March next, as required by the Constitution.

I am happy to inform you that, in spite both of blandishments and threats, used in profusion by the agents of the Government of the United States, the Indian nations within the Confederacy have remained firm in their loyalty and steadfast in the observance of their treaty engagements with this Government. Nor has their fidelity been shaken by the fact that, owing to the vacancies in some of the offices of agents and superintendents, delay has occurred in the payments of the annuities and allowances to which they are entitled. I would advise some provision authorizing payments to be made by other officers, in the absence of those especially charged by law with this duty.

We have never-ceasing cause to be grateful for the favor with which God has protected our infant Confederacy. And it becomes us reverently to return our thanks and humbly to ask of his bounteousness that wisdom which is needful for the performance of the high trusts with which we are charged.

JEFFERSON DAVIS.

Emancipation Proclamation of President LINCOLN, *issued January 1st*, 1863.

Whereas on the 22d day of September, in the year of our Lord one thousand eight hundred and sixty-two, a proclamation was issued by the President of the United States, containing, among other things, the following, to wit:

"That on the first day of January, in the year of our Lord one thousand eight hundred and sixty-three, all persons held as slaves within any States or designated part of a State, the people whereof shall then be in rebellion against the United States, shall be then, thenceforward, and for ever free; and the Executive Government of the United States, including the military and naval authority thereof, will recognize and maintain the freedom of such persons, and will do no act or acts to repress such persons, or any of them, in any efforts they may make for their actual freedom.

"That the Executive will, on the first day of January aforesaid, by proclamation, designate the States and parts of States, if any, in which the people thereof, respectively, shall then be in rebellion against the United States; and the fact that any State, or the people thereof, shall on that day be in good faith represented in the Congress of the United States, by members chosen thereto at elections wherein a majority of

the qualified voters of such State shall have participated, shall, in the absence of strong countervailing testimony, be deemed conclusive evidence that such State, and the people thereof, are not then in rebellion against the United States."

Now, therefore, I, Abraham Lincoln, President of the United States, by virtue of the power in me vested as Commander-in-Chief of the Army and Navy of the United States in time of actual armed rebellion against the authority and Government of the United States, and as a fit and necessary war measure for suppressing said rebellion, do, on this first day of January, in the year of our Lord one thousand eight hundred and sixty-three, and in accordance with my purpose so to do, publicly proclaimed for the full period of one hundred days, from the day first above mentioned, order and designate as the States and parts of States wherein the people thereof respectively are this day in rebellion against the United States, the following, to wit:

Arkansas, Texas, Louisiana (except the parishes of St. Bernard, Plaquemines, Jefferson, St. John, St. Charles, St. James, Ascension, Assumption, Terre Bonne, Lafourche, Ste. Marie, St. Martin, and Orleans, including the city of New Orleans), Mississippi, Alabama, Florida, Georgia, South Carolina, North Carolina, and Virginia (except the forty-eight counties designated as West Virginia, and also the counties of Berkeley, Accomac, Northampton, Elizabeth City, York, Princess Ann, and Norfolk, including the cities of Norfolk and Portsmouth), and which excepted parts are for the present left precisely as if this proclamation were not issued.

And by virtue of the power and for the purpose aforesaid, I do order and declare that all persons held as slaves within said designated States and parts of States are and henceforward shall be free; and that the Executive Government of the United States, including the military and naval authorities thereof, will recognize and maintain the freedom of said persons.

And I hereby enjoin upon the people so declared to be free to abstain from all violence, unless in necessary self-defence; and I recommend to them that, in all cases when allowed, they labor faithfully for reasonable wages.

And I further declare and make known that such persons, of suitable condition, will be received into the armed service of the United States to garrison forts, positions, stations, and other places, and to man vessels of all sorts in said service.

And upon this act, sincerely believed to be an act of justice, warranted by the Constitution upon military necessity, I invoke the considerate judgment of mankind, and the gracious favor of Almighty God.

In testimony whereof I have hereunto set my name, and caused the seal of the United States to be affixed.

Done at the city of Washington this first day of January, in the year of our Lord one thousand [L. S.] eight hundred and sixty-three, and of the independence of the United States the eighty-seventh. ABRAHAM LINCOLN.

By the President:
WILLIAM H. SEWARD, Secretary of State.

Retaliatory Proclamation by JEFFERSON DAVIS, *President of the Confederate States.*

WHEREAS a communication was addressed on the 6th day of July last, 1862, by Gen. Robert E. Lee, acting under the instructions of the Secretary of War of the Confederate States of America, to Gen. H. W. Halleck, Commander-in-Chief of the United States army, informing the latter that a report had reached this Government that Wm. B. Mumford, a citizen of the Confederate States, had been executed by the United States authorities at New Orleans, for having pulled down the United States flag in that city before its occupation by the United States forces, and calling for a statement of the facts, with a view of retaliation if such an outrage had really been committed under the sanction of the United States; and whereas (no answer having been received to said letter) another letter was on the 2d of August last (1862), addressed by Gen. Lee, under my instructions, to Gen. Halleck, renewing the inquiries in relation to the execution of the said Mumford, with the information that in the event of not receiving a reply within fifteen days, it would be assumed that the fact was true, and was sanctioned by the Government of the United States; and whereas an answer, dated on the 7th of August last (1862), was addressed to Gen. Lee by Gen. W. H. Halleck, the said General-in-Chief of the armies of the United States, alleging sufficient causes for failure to make early reply to said letter of the 6th of July, asserting that "No authentic information had been received in relation to the execution of Mumford, but measures will be immediately taken to ascertain the facts of the alleged execution," and promising that Gen. Lee should be duly informed thereof; and whereas, on the 25th of November last (1862), another letter was addressed, under my instructions, by Robert Ould, Confederate agent for the exchange of prisoners, under the cartel between the two Governments, to Lieut.-Col. W. H. Ludlow, agent of the United States under said cartel, informing him that the explanation promised in the said letter of Gen. Halleck, of the 7th of August last, had not yet been received, and that if no answer was sent to the Government within fifteen days from the delivery of this last communication, it would be considered that an answer is declined; and whereas, in a letter dated on the 3d day of the present month of December, the said Lieut.-Col. Ludlow apprized the said Robert Ould that the above-recited communication of the 19th of November had been received and forwarded to the Secretary of War of the United States, and whereas this last delay of fifteen days allowed for answer has elapsed, and no answer has been received; and whereas, in addition to the tacit admission resulting from the above refusal to answer, I have received evidence fully establishing the truth of the fact that the said Wm. B. Mumford, a citizen of the Confederacy, was actually and publicly executed in cold blood by hanging, after the occupation of New Orleans by the forces under Gen. Benjamin F. Butler, when said Mumford was an unresisting and non-combatant captive, and for no offences even alleged to have been committed by him subsequent to the date of the capture of said city; and whereas the silence of the Government of the United States, and its maintaining of said Butler in high office under its authority for many months after his commission of an act that can be viewed in no other light than as a deliberate murder, as well as of numerous other outrages and atrocities hereafter to be mentioned, afford evidence too conclusive that the said Government sanctions the conduct of the said Butler, and is determined that he shall remain unpunished for these crimes;

Now, therefore, I, Jefferson Davis, President of the Confederate States of America, and in their name do pronounce and declare the said Benjamin F. Butler a felon, deserving capital punishment. I do order that he be no longer considered or treated simply as a public enemy of the Confederate States of America, but as an outlaw and common enemy of mankind, and that in the event of his capture, the officer in command of the capturing force do cause him to be immediately executed by hanging, and I do further order that no commissioned officer of the United States taken captive shall be released on parole before exchange until the said Butler shall have met with due punishment for his crimes. And whereas the hostilities waged against this Confederacy by the forces of the United States, under the command of said Benjamin F. Butler, have borne no resemblance to such warfare as is alone permitable by the rules of international law or the usages of civilization, but have been characterized by repeated atrocities and outrages;

The following are examples:

Peaceful and aged citizens, unresisting captives, and non-combatants have been confined at hard labor with chains attached to their limbs, and are so held in dungeons and fortresses; others have been submitted to a

like degrading punishment for selling medicine to the sick soldiers of the Confederacy. The soldiers have been incited and encouraged by general orders to insult and outrage the wives, the mothers, and the sisters of our citizens, and helpless women have been torn from their homes and subjected to solitary confinement, some in fortresses and prisons, especially one, on an island of barren sand, under a tropical sun, have been fed with loathsome rations, and have been exposed to the vilest insults. Prisoners of war who surrendered to the naval forces of the United States on the agreement that they should be released on parole have been seized and kept in close confinement; and repeated pretexts have been sought or invented for plundering the inhabitants of the captured city by fines levied and collected under threat of imprisonment at hard labor with ball and chain. The entire population of New Orleans have been forced to elect between starvation by the confiscation of all their property, and taking an oath against their conscience to bear allegiance to the invader of their country. Egress from the city has been refused to those whose fortitude withstood the test, and even to lone and aged women, and to helpless children, and after being ejected from their houses and robbed of their property, they have been left to starve in the streets or subsist on charity. The slaves have been driven from the plantations in the neighborhood of New Orleans, until their owners consent to share their crops with the Commanding General, his brother Andrew J. Butler, and other officers, and when such consent had been extorted the slaves have been restored to the plantations, and then compelled to work under the bayonets of the guard of United States soldiers. Where that partnership was refused armed expeditions have been sent to the plantations to rob them of everything that was susceptible of removal, and even slaves too aged and infirm for work have, in spite of their entreaties, been forced from the homes provided by their owners and driven to wander helpless on the highway. By a recent order, No. 91, the entire property in that part of Louisiana, west of the Mississippi river, has been sequestrated for confiscation, and officers have been assigned to the duty, with orders to gather up, collect the personal property, and turn over to the proper officers, upon their receipts, such of said property as may be required for the use of the United States army; to collect together all the personal property and bring the same to New Orleans, and cause it to be sold at public auction to the highest bidders. An order, which, if executed, condemns to punishment by starvation, at least a quarter of a million of all ages, sexes, and conditions, and of which the execution, although forbidden to military officers by orders of President Lincoln, is in accordance with the confiscation law of our enemy, which he has enforced through the agency of cruel officials; and finally the African slaves have not only been incited to insurrection by every license and encouragement, but numbers of them have actually been armed for a servile war—a war in its nature far exceeding the horrors and most merciles atrocities of savages. And whereas the officers under the command of the said Butler have been in many instances active and zealous agents in the commission of these crimes, and no instance is known of the refusal of any one of them to participate in the outrages above narrated. And whereas the President of the United States has by public and official declaration signified, not only his approval of the effort to excite servile war within the Confederacy, but his intention to give aid and encouragement thereto if these independent States shall continue to refuse submission to a foreign power after the 1st day of January next, and he has thus made known that all the appeals to the law of nations, the dictates of reason and instincts of humanity would be addressed in vain to our enemy, and that they can be deterred from the commission of these crimes only by the horrors of just retaliation. Now, therefore, I, Jefferson Davis, President of the Confederate States, and acting by their authority, appeal to divine justice in altering my conduct that I am not guided by the passion of revenge, but reluctantly yield to the solemn duty of redressing by necessary severity the crimes of which their citizens are the victims, and thus issue my proclamation, and by virtue of my authority as Commander-in-Chief of the army of the Confederate States, do order:

1st. That all commissioned officers in the command of the said Benjamin F. Butler be declared not entitled to be considered as soldiers engaged in honorable warfare, but as robbers and criminals deserving death, and that they and each of them be, whenever captured, reserved for execution.

2d. That the private soldiers and non-commissioned officers of the army of said Butler be considered as only the instruments for the commission of crimes perpetrated by his orders, and not as free agents, and that they, therefore, be treated, when captured, as prisoners of war, with kindness and humanity, and be sent home on the usual parol that they will in no manner aid or serve the United States in any capacity during the continuance of this war, unless duly exchanged.

3d. That all negro slaves captured in arms be at once delivered over to the executive authorities of the respective States to which they belong, to be dealt with according to the laws of said States.

4th. That the like orders be executed in all cases with respect to all commissioned officers of the United States, when found serving in company with said slaves in insurrection against the authorities of the different States of this Confederacy.

In testimony whereof, I have signed these presents and cause the seal of the Confederate States of America to be affixed thereto, at the city of Richmond, on the 23d day of December, in the year of our Lord one thousand eight hundred and sixty-two.

(Signed) JEFFERSON DAVIS.

By the President,
J. H. BENJAMIN, Sec. of State.

The overtures of France and the replies of Great Britain and Russia on mediation in the affairs of the United States:

The following is the despatch of the French Minister of Foreign Affairs addressed to the Ambassadors of France at London and St. Petersburg:

PARIS, *Oct.* 30, 1862.

Europe watches with painful interest the struggle which has been raging more than a year upon the American continent. The hostilities have provoked sacrifices and efforts certainly of a nature to inspire the highest idea of the perseverance and energy of the two populations. But this spectacle, which does so much honor to their courage, is only given at the price of numberless calamities and a prodigious effusion of blood. To these results of civil war, which from the very first assumed vast proportions, there is still to be added the apprehension of servile war, which would be the culminating point of so many irreparable disasters.

The suffering of a nation toward which we have always professed a sincere friendship would have sufficed to excite the sincere solicitude of the Emperor, even had we ourselves not suffered by the counterblow of these events. Under the influence of intimate relations which extensive intercourse has multiplied between the various regions of the globe, Europe itself has suffered from the consequences of the crisis which has dried up one of the most fruitful sources of public wealth, and which has become, for the great centres of labor, a cause of the most sad trials.

As you are aware, when the conflict commenced, we held it our duty to observe the most strict neutrality in concert with other maritime Powers, and the Washington Cabinet has repeatedly acknowledged the honorable manner with which we adhered to that line of conduct. The sentiments dictated to us have undergone no change, but of a benevolent character. That

neutrality, instead of imposing upon the Powers the attitude which might resemble indifference, ought rather to make them of service to the two parties by helping them out of a position which seems to have no issue. From the commencement of the war an armed force was set on foot by the belligerents, which since then has almost constantly been kept up. After so much bloodshed, they are now, in that respect, nearly in the same position—nothing authorizing the presumption that more decisive military operations will shortly occur, according to the last news received in Europe. The two armies, on the contrary, were in a condition that would not allow either party to hope, within a brief delay, for any decided advantage to turn the balance and accelerate the conclusion of a peace.

All these circumstances, taken together, point to the opportunity of an armistice, to which, moreover, under the present circumstances, no strategical objection can be made. The favorable dispositions toward peace which are beginning to manifest themselves in the North, as well as in the South, might, on the other hand, second steps that might be made to recommend the idea of truce.

The Emperor has, therefore, thought that the occasion has presented itself of offering to the belligerents the support of the good offices of the maritime Powers; and his Majesty has charged me to make the proposition of this Government to her Britannic Majesty, as well as to the Court of Russia. The three Cabinets would exert their influence at Washington, as well as with the Confederates, to obtain an armistice for six months, during which every act of war, direct or indirect, should provisionally cease on sea as well as on land, and it might be, if necessary, ulteriorly prolonged.

The overtures, I need not say, sir, would not imply, on our part, any judgment on the origin or issue of the struggle, nor any pressure upon the negotiations which might, it is to be hoped, ensue in favor of an armistice. Our task would consist solely in smoothing down obstacles, and in interfering only in a measure determined upon by the two parties. We should not, in fact, believe ourselves called upon to decide, but to prepare the solution of difficulties which hitherto have opposed reconciliation between the belligerent parties. Would not, moreover, an agreement between the three Courts respond sufficiently to their intentions? Would it not give to their step the character of evident impartiality? Acting in concert, they would combine the conditions best suited to inspire confidence—the Government of the Emperor, by the constant tradition of French policy toward the United States; England, by the community of race; Russia, by the marks of friendship she has never ceased to show to the Washington Cabinet.

Should the event not justify the hope of the three Powers, and should the ardor of the struggle overrule the wisdom of their councils, this attempt would not be the less honorable for them. They would have fulfilled a duty of humanity, more especially indicated in a war which has excited passions which render all direct attempts at negotiation more difficult. It is the mission which international law assigns neutrals; at the same time it prescribes to them a strict impartiality, and they could never make a nobler use of their influence than by endeavoring to put an end to a struggle which causes so much suffering, and compromises such great interests throughout the whole world.

Finally, even without immediate results, these overtures would not be entirely useless, for they might encourage public opinion to views of conciliation, and thus contribute to hasten the moment when the return of peace might become possible.

I request you, sir, in the name of his Majesty, to submit these considerations to Lord Russell or to Prince Gortchakoff, begging him to state the views of the Government of her Britannic Majesty or the Court of Russia. DROUYN DE L'HUYS.

In reply to the above despatch the following despatch was addressed by Earl Russell to Earl Cowley, her Majesty's Ambassador at Paris:

FOREIGN OFFICE, *Nov.* 18, 1862.

MY LORD: The Count de Flahault came to the Foreign Office by appointment on Monday, 10th instant, and read to me a despatch from M. Drouyn de L'Huys relating to the civil war in North America.

In this despatch the Minister of Foreign Affairs states that the Emperor has followed with painful interest the struggle which had now been going on for more than a year on the American continent. He does justice to the energy and perseverance which have been displayed by both sides, but he observes that these proofs of their courage have been given at the expense of innumerable calamities and immense bloodshed; to these accompaniments of the civil conflict is to be added the apprehension of servile war, which would be the climax of so many irreparable misfortunes.

If these calamities affected America only, these sufferings of a friendly nation would be enough to excite the anxiety and sympathy of the Emperor; but Europe also has suffered in one of the principal branches of her industry, and her artisans have been subjected to most cruel trials. France and the maritime Powers have, during the struggle, maintained the strictest neutrality, but the sentiments by which they are animated, far from imposing on them anything like indifference, seem, on the contrary, to require that they should assist the two belligerent parties in an endeavor to escape from a position which appears to have no issue. The forces of the two sides have hitherto fought with balanced success, and the latest accounts do not show any prospect of a speedy termination of the war.

These circumstances taken together would seem to favor the adoption of measures which might bring about a truce. The Emperor of the French, therefore, is of the opinion that there is now an opportunity of offering to the belligerents the good offices of the maritime Powers. He, therefore, proposes to her Majesty, as well as to the Emperor of Russia, that the three Courts should endeavor, both at Washington and in communication with the Confederate States, to bring about a suspension of arms for six months, during which time every act of hostility, direct or indirect, should cease, at sea as well as on land. This armistice might, if necessary, be renewed for a further period.

This proposal, Drouyn de L'Huys proceeds to say, would not imply on the part of the three Powers any judgment on the origin of the war, or any pressure on the negotiations for peace, which, it is hoped, would take place during the armistice. The three Powers would only interfere to smooth the obstacles, and only within the limits which the two interested parties would prescribe. The French Government is of the opinion that, even in the event of a failure of immediate success, these overtures might be useful in leading the minds of men now heated by passion to consider the advantages of conciliation and peace.

Such is in substance the proposal of the Government of the Emperor of the French, and I need hardly say that it has attracted the serious attention of her Majesty's Government. Her Majesty is desirous of acting in concurrence with France upon the great questions now agitating the world, and upon none more than on the contingencies connected with the great struggle now going on in North America. Neither her Majesty the Queen, nor the British nation, will ever forget the noble and emphatic manner in which the Emperor of the French vindicated the laws of nations and assisted the cause of peace in the instance of the seizure of the Confederate Commissioners on board the Trent.

Her Majesty's Government recognizes with pleasure the design of arresting the progress of war by friendly measures, the benevolent views and humane intentions of the Emperor. They are also of the opinion that if the steps proposed were to be taken, the concurrence of Russia would be extremely desirable.

Her Majesty's Government have, however, not been informed up to the present time that the Russian Government have agreed to coöperate with England and France on this occasion, although that Government may support the endeavors of England and France to attain the end proposed.

But is the end proposed attainable at the present moment by the course suggested by the Government of France? Such is the question which has been anxiously and carefully examined by her Majesty's Government. After weighing all the information which has been received from America, her Majesty's Government are led to the conclusion that there is no ground at the present moment to hope that the Federal Government would accept the proposal suggested, and a refusal from Washington at the present time would prevent any speedy renewal of the offer.

Her Majesty's Government think, therefore, that it would be better to watch carefully the progress of opinion in America, and if, as there appears reason to hope, it may be found to have undergone, or may undergo hereafter, any change, the three Courts might then avail themselves of such change to offer their friendly counsel with a greater prospect than now exists of its being accepted by the two contending parties.

Her Majesty's Government will communicate to that of France any intelligence they may receive from Washington or Richmond bearing on this important subject.

Your Excellency may read this despatch to M. Drouyn de L'Huys, and give him a copy of it.

RUSSELL.

The following is the reply of the Russian Government to the French proposal of mediation in America:

Despatch of Prince Gortchakoff to M. D'Oubril, Chargé d'Affaires of Russia at Paris.

ST. PETERSBURG, *Oct.* 27 (*Nov.* 8), 1862.

SIR: I herewith enclose you a copy of a despatch from M. Drouyn de L'Huys, which the Duke of Montebello has been charged to communicate to us.

It concerns the affairs of North America, and its object is to invite us to an *entente* with France and England to take advantage of the present lassitude of the parties to propose, in common, a suspension of hostilities.

In reply to this overture I reminded the French Ambassador of the solicitude which our august master has never ceased to feel in the American conflict from its very onset, a solicitude caused by the amicable relations existing between the two countries, and of which the Imperial Cabinet has given public proofs. I have assured him that nothing could better respond to our wishes than to see approach the termination of a struggle which we deplore, and that to this effect our Minister at Washington has instructions to seize every favorable opportunity to recommend moderation and conciliation, so as to appease conflicting passions and lead to a wise settlement of the interests at stake. I admitted that such counsels would certainly have greater weight if presented simultaneously and in the same friendly manner by the Great Powers who take an interest in the issue of this conflict.

But I added that, in our opinion, what ought specially to be avoided, was the appearance of any pressure whatsoever of a nature to wound public opinion in the United States, and to excite susceptibilities very easily aroused at the bare idea of foreign intervention. Now, according to the information we have hitherto received, we are inclined to believe that a combined step between France, England, and Russia, no matter how conciliatory and how cautiously made, if it were taken with an official and collective character, would run the risk of causing precisely the very opposite of the object of pacification, which is the aim of the wishes of the three Courts.

We have, therefore, drawn the conclusion that if the French Government should persist in deeming a formal and collective step opportune, and that if the English Cabinet shares that opinion, it would be impossible for us, at the distance we are at, to anticipate the manner in which such a measure would be received. But if in that case our Minister should not participate officially, his moral support is not the less acquired beforehand to any attempt at conciliation.

By giving it to his colleagues of France and of England, under the friendly form (*forme officieuse*) which he might deem best suited to avoid the appearance of pressure, M. de Stoeckl will only be continuing the position and language which, by order of our august master, he has never ceased to observe since the commencement of the American quarrel.

It is in this sense that I request you to explain yourself to the French Minister of Foreign Affairs, in reply to the communication he has made to us.

GORTCHAKOFF.

The following letter is from the French Minister of Foreign Affairs, M. Drouyn de L'Huys, to M. Mercier, the representative of France at Washington, relative to the preceding overtures:

PARIS, *Nov.* 23, 1862.

SIR: The proposition we made to London and to St. Petersburg, the text of which I despatched to you by the last mail, has not met with the immediate acquiesience we had some reason to expect. Although we have received but summary information on that subject, I do not hesitate to look upon the common demand, in which we had reason to suppose Great Britain and Russia would associate themselves, as being impossible to be realized.

Convinced as we were that an understanding between the three Powers in the sense presented by us would answer as much the interests of the American people as our own; that even that understanding was in the present circumstances a duty of humanity, you will easily form an idea of our regret at seeing the initiative we have taken, after mature reflection, remain without results. Being also desirous of informing Mr. Dayton of our project, I confidentially communicated it to him, and even read in his presence the despatch sent to London and St. Petersburg.

I could not be surprised that the Minister of the United States should oppose his objections to the project I communicated to him, and to hear him express personally some doubts as to the reception which would be given by the Cabinet at Washington to the joint offers of the good offices of France, Russia, and Great Britain. But whatever might have been the answer of the Federal Government to our overtures, we have not now to solicit or discuss it since the evident dispositions of the two latter Courts were to observe an absolute neutrality. We will return, like them, to the passive attitude which we had also made our duty to observe—an attitude from which we would never have departed had we remained indifferent to the present evils and the fatal consequences of the endless continuation of a devastating war.

The rumors reëchoed by the press on this occasion having seemed to us calculated to deceive public opinion, or at least to leave it in uncertainty about the true character of our movements, we have deemed it proper to cut short all hazardous conjectures to place before the eyes of the world the plain terms of our proposition, confident of the approbation which the country will accord to our motives. We have thought that by giving open publicity to our intentions we would besides establish, against all contrary suppositions, the friendly and conciliatory spirit attending the offer of our good offices, and the respect which, however pressing, we would have manifested for the independence of the United States. In respect to this, sir, we believe that there will be no misunderstanding concerning the incentive of our conduct and of our sentiments, and we desire the Cabinet of Washington to discern in all that has just passed the proof that it

will find us always disposed to lend it, if it should desire at some future time, the assistance we should have been happy to have seen accepted at the present time in the interest of peace and conciliation.

DROUYN DE L'HUYS.

Treaty between the United States of America and Her Majesty the Queen of the United Kingdom of Great Britain and Ireland for the suppression of the African slave trade. Ratified, April 25, 1862.

The United States of America and her Majesty the Queen of the United Kingdom of Great Britain and Ireland, being desirous to render more effectual the means hitherto adopted for the suppression of the slave trade carried on upon the coast of Africa, have deemed it expedient to conclude a treaty for that purpose, and have named as their Plenipotentaries, that is to say: the President of the United States of America, William H. Seward, Secretary of State; and her Majesty the Queen of the United Kingdom of Great Britain and Ireland, the right honorable Richard Bickerton Pemell, Lord Lyons, a peer of her United Kingdom, a knight grand cross of her most honorable order of the Bath, and her Envoy Extraordinary and Minister Plenipotentiary to the United States of America, who, after having communicated to each other their respective full powers, found in good and due form, have agreed upon and concluded the following articles:

Article 1. The two high contracting parties mutually consent that those ships of their respective navies which shall be provided with special instructions for that purpose, as hereinafter mentioned, may visit such merchant vessels of the two nations as may, upon reasonable grounds, be suspected of being engaged in the African slave trade, or of having been fitted out for that purpose; or of having, during the voyage on which they are met by the said cruisers, been engaged in the African slave trade, contrary to the provisions of this treaty; and that such cruisers may detain, and send or carry away such vessels, in order that they may be brought to trial in the manner hereinafter agreed upon.

In order to fix the reciprocal right of search in such a manner as shall be adapted to the attainment of the object of this treaty, and at the same time avoid doubts, disputes, and complaints, the said right of search shall be understood in the manner and according to the rules following:

First. It shall never be exercised except by vessels of war, authorized expressly for that object, according to the stipulations of this treaty.

Secondly. The right of search shall in no case be exercised with respect to a vessel of the navy of either of the two Powers, but shall be exercised only as regards merchant vessels; and it shall not be exercised by a vessel of war of either contracting party within the limits of a settlement or port, nor within the territorial waters of the other party.

Thirdly. Whenever a merchant vessel is searched by a ship of war, the commander of the said ship shall, in the act of so doing, exhibit to the commander of the merchant vessel the special instructions by which he is duly authorized to search, and shall deliver to such commander a certificate, signed by himself, stating his rank in the naval service of his country, and the name of the vessel he commands, and also declaring that the only object of the search is to ascertain whether the vessel is employed in the African slave trade, or is fitted up for the said trade. When the search is made by an officer of the cruiser who is not the commander, such officer shall exhibit to the captain of the merchant vessel a copy of the before-mentioned special instructions, signed by the commander of the cruiser; and he shall in like manner deliver a certificate signed by himself, stating his rank in the navy, the name of the commander by whose orders he proceeds to make the search, that of the cruiser in which he sails, and the object of the search, as above described. If it appears from the search that the papers of the vessel are in regular order, and that it is employed on lawful objects, the officer shall enter in the log-book of the vessel that the search has been made in pursuance of the aforesaid special instructions; and the vessel shall be left at liberty to pursue its voyage. The rank of the officer who makes the search must not be less than that of lieutenant in the navy, unless the command, either by reason of death or other cause, is at the time held by an officer of inferior rank.

Fourthly. The reciprocal right of search and detention shall be exercised only within the distance of two hundred miles from the coast of Africa, and to the southward of the thirty-second parallel of north latitude, and within thirty leagues from the coast of the island of Cuba.

Art. 2. In order to regulate the mode of carrying the provisions of the preceding article into execution, it is agreed—

First. That all the ships of the navies of the two nations which shall be hereafter employed to prevent the African slave trade, shall be furnished by their respective governments with a copy of the present treaty, of the instructions for cruisers annexed thereto (marked A), and of the regulations for the mixed courts of justice annexed thereto, marked B, which annexes respectively shall be considered as integral parts of the present treaty.

Secondly. That each of the high contracting parties shall, from time to time, communicate to the other the names of the several ships furnished with such instructions, the force of each, and the names of their several commanders. The said commanders shall hold the rank of captain in the navy, or at least that of lieutenant; it being nevertheless understood that the instructions originally issued to an officer holding the rank of lieutenant of the navy, or other superior rank, shall, in case of his death or temporary absence, be sufficient to authorize the officer on whom the command of the vessel has devolved, to make the search, although such officer may not hold the aforesaid rank in the service.

Thirdly. That, if at any time, the commander of a cruiser, of either of the two nations, shall suspect that any merchant vessel under the escort or convoy of any ship or ships-of-war of the other nation carries negroes on board, or has been engaged in the African slave trade, or is fitted out for the purpose thereof, the commander of the cruiser shall communicate his suspicions to the commander of the convoy, who, accompanied by the commander of the cruiser, shall proceed to the search of the suspected vessel; and in case the suspicions appear well founded, according to the tenor of this treaty, then the said vessel shall be conducted or sent to one of the places where the mixed courts of justice are stationed, in order that it may there be adjudicated upon.

Fourthly. It is further mutually agreed that the commanders of the ships of the two navies, respectively, who shall be employed on this service, shall adhere strictly to the exact tenor of the aforesaid instructions.

Art. 3. As the two preceding articles are entirely reciprocal, the two high contracting parties engage, mutually, to make good any losses which their respective subjects or citizens may incur by an arbitrary and illegal detention of their vessels; it being understood that this indemnity shall be borne by the Government whose cruiser shall have been guilty of such arbitrary and illegal detention; and that the search and detention of vessels specified in the first article of this treaty shall be effected only by ships which may form part of the two navies, respectively, and by such of those ships only as are provided with the special instructions annexed to the present treaty, in pursuance of the provisions thereof. The indemnification for the damages of which this article treats shall be paid within the term of one year, reckoning from the day in which the mixed court of justice pronounces its sentence.

Art. 4. In order to bring to adjudication, with as little delay and inconvenience as possible, the vessels

which may be detained according to the tenor of the first article of this treaty, there shall be established, as soon as may be practicable, three mixed courts of justice, formed of an equal number of individuals of the two nations, named for this purpose by their respective Governments. These courts shall reside, one at Sierra Leone · one at the Cape of Good Hope; and one at New York.

But each of the two high contracting parties reserves to itself the right of changing, at its pleasure, the place of residence of the court or courts held within its own territories.

These courts shall judge the causes submitted to them according to the provisions of the present treaty, and according to the regulations and instructions which are annexed to the present treaty, and which are considered an integral part thereof, and there shall be no appeal from their decision.

ART. 5. In case the commanding officer of any of the ships of the navies of either country, duly commissioned according to the provisions of the first article of this treaty, shall deviate in any respect from the stipulations of the said treaty, or from the instructions annexed to it, the Government which shall conceive itself to be wronged thereby shall be entitled to demand reparation; and in such case the Government to which such commanding officer may belong binds itself to cause inquiry to be made into the subject of the complaint, and to inflict upon the said officer a punishment proportioned to any wilful transgression which he may be proved to have committed.

ART. 6. It is hereby further mutually agreed that every American or British merchant vessel which shall be searched by virtue of the present treaty may lawfully be detained, and sent or brought before the mixed courts of justice established in pursuance of the provisions thereof, if, in her equipment, there shall be found any of the things hereinafter mentioned, namely:

First. Hatches with open gratings, instead of the close hatches, which are usual in a merchant vessel.

Second. Divisions or bulk heads in the hold or on deck in greater number than are necessary for vessels engaged in lawful trade.

Third. Spare plank fitted for laying down as a second or slave deck.

Fourth. Shackles, bolts, or handcuffs.

Fifth. A larger quantity of water in casks or in tanks than is requisite for the consumption of the crew of the vessel as a merchant vessel.

Sixth. An extraordinary number of water casks or of other vessels for holding liquid, unless the master shall produce a certificate from the custom-house at the place from which he cleared outward, stating that a sufficient security had been given by the owners of such vessel that such extra quantity of casks or of other vessels should be used only to hold palm oil, or for other purposes of lawful commerce.

Seventh. A greater number of mess tubs or kids than requisite for the use of the crew of the vessel as a merchant vessel.

Eighth. A boiler, or other cooking apparatus, of an unusual size, and larger, or capable of being made larger, than requisite for the use of the crew of the vessel as a merchant vessel; or more than one boiler, or other cooking apparatus, of the ordinary size.

Ninth. An extraordinary quantity of rice, of the flour of Brazil, of manioc or cassada, commonly called farinha, of maize, or of Indian corn, or of any other article of food whatever, beyond the probable wants of the crew; unless such rice, flour, farinha, maize, Indian corn, or other article of food, be entered on the manifest as part of the cargo for trade.

Tenth. A quantity of mats or matting greater than is necessary for the use of the crew of the vessel as a merchant vessel; unless such mats or matting be entered on the manifest as part of the cargo for trade.

If it be proved that any one or more of the articles above specified is or are on board, or have been on board during the voyage in which the vessel was captured, that fact shall be considered as *prima facie* evidence that the vessel was employed in the African slave trade, and she shall in consequence be condemned and declared lawful prize, unless the master or owners shall furnish clear and incontrovertible evidence, proving to the satisfaction of the mixed court of justice that at the time of her detention or capture the vessel was employed in a lawful undertaking, and that such of the different articles above specified as were found on board at the time of detention, or as may have been embarked during the voyage on which she was engaged when captured, were indispensable for the lawful object of her voyage.

ART. 7. If any one of the articles specified in the preceding article as grounds for condemnation should be found on board a merchant vessel, or should be proved to have been on board of her during the voyage on which she was captured, no compensation for losses, damages, or expenses consequent upon the detention of such vessel, shall, in any case, be granted either to the master, the owner, or any other person interested in the equipment or in the lading, even though she should not be condemned by the mixed court of justice.

ART. 8. It is agreed between the two high contracting parties that in all cases in which a vessel shall be detained under this treaty by their respective cruisers as having been engaged in the African slave trade, or as having been fitted out for the purposes thereof, and shall consequently be adjudged and condemned by one of the mixed courts of justice to be established as aforesaid, the said vessel shall immediately after its condemnation be broken up entirely, and shall be sold in separate parts, after having been so broken up, unless either of the two Governments should wish to purchase her for the use of its navy, at a price to be fixed by a competent person chosen for that purpose by the mixed courts of justice, in which case the Government whose cruiser shall have detained the condemned vessel shall have the first option to purchase.

ART. 9. The captain, master, pilot, and crew of any vessel condemned by the mixed courts of justice shall be punished according to the laws of the country to which such vessel belongs, as shall also the owner or owners and the persons interested in her equipment or cargo, unless they prove that they had no participation in the enterprise.

For this purpose the two high contracting parties agree that, in so far as it may not be attended with grievous expenses and inconvenience, the master and crew of any vessel which may be condemned by a sentence of one of the mixed courts of justice, as well as any other persons found on board the vessel, shall be sent and delivered up to the jurisdiction of the nation under whose flag the condemned vessel was sailing at the time of capture; and that the witnesses and proofs necessary to establish the guilt of such master, crew, or other persons, shall also be sent with them.

The same course shall be pursued with regard to subjects or citizens of either contracting party who may be found by a cruiser of the other on board a vessel of any third Power, or on board a vessel sailing without flag or papers, which may be condemned by any competent court for having engaged in the African slave trade.

ART. 10. The negroes who are found on board of a vessel condemned by the mixed courts of justice, in conformity with the stipulations of this treaty, shall be placed at the disposal of the Government whose cruiser has made the capture; they shall be immediately set at liberty, and shall remain free, the Government to whom they have been delivered guaranteeing their liberty.

ART. 11. The acts or instruments annexed to this treaty, and which it is mutually agreed shall form an integral part thereof, are as follows:

(A.) Instructions for the ships of the navies of both nations, destined to prevent the African slave trade.

(B.) Regulations for the mixed courts of justice.

ART. 12. The present treaty shall be ratified, and the ratifications thereof shall be exchanged at London in six months from this date, or sooner if possible. It

shall continue and remain in full force for the term of ten years from the day of exchange of the ratifications, and further, until the end of one year after either of the contracting parties shall have given notice to the other of its intention to terminate the same, each of the contracting parties reserving to itself the right of giving such notice to the other at the end of said term of ten years. And it is hereby agreed between them that, on the expiration of one year after such notice shall have been received by either from the other party, this treaty shall altogether cease and determine.

In witness whereof the respective plenipotentaries have signed the present treaty, and have thereunto affixed the seal of their arms.

Done at Washington the seventh day of April, in the year of our Lord one thousand eight hundred and sixty-two. WILLIAM H. SEWARD. [L. S.]
LYONS. [L. S.]

An additional article to the preceding treaty was subsequently agreed upon, which extends the right of visit and detention, by providing that it may be exercised within thirty leagues of the Island of Madagascar, within thirty leagues of the Island of Puerto Rico, and within the same distance of the Island of San Domingo. Benjamin Pringle was appointed judge at Cape Town, and —— Avery, arbitrator, under this treaty, by the President; also Thomas V. Dyer and M. Hibbard, judge and arbitrator respectively, at Sierra Leone. The respective ratifications of this article were exchanged at London on April 1st, 1863, and made public by the President on the 22d of April.

R

REFORMED CHURCHES. This is the collective name of those churches in Switzerland, Germany, France, Belgium, and Holland which followed the Reformation of Calvin and of Zuingli, and of their offshoots in the United States of America. Of the latter there are two, the Dutch Reformed and the German Reformed Church.

In the Dutch Reformed Church there were, in 1862, 31 classes, answering to the Presbyteries in Presbyterian churches, including the Missionary Classis of Arcot in India. To these was soon to be added a classis in China, where, as in India, the missions are prosperous and where native pastors will soon be placed over the mission churches. With a view to meet this exigency, the constitution, in its application to such churches, is to be so modified as to dispense with the attendance of a deputation from another classis, when a candidate for license, or for a pastorate, is examined. These classes —the 31 in the whole church—have 429 churches and 419 ministers, an average of nearly 14 ministers and 14 churches in each, and each classis is entitled to a representation of 3 ministers and 3 elders in the Particular Synods (answering to the synods in the Presbyterian Church), and to the same number in the General Synod. Hence a full general synod would have nearly two hundred members. The churches have an average of about 80 families, and 120 communicants each, and raise about 3 dollars for benevolent objects, and more than 7 dollars for congregational purposes, yearly, to each communicant. The contributions for domestic missions the past year exceeded by about 2,600 dollars those of the previous year, while those for foreign missions showed a slight falling off.

The annual union of the General Synod of the Dutch Reformed Church, in 1862, commenced in Syracuse, New York, on June 4, and was attended by about 150 delegates. Rev. John Garretson, D.D., was elected president. On motion of Rev. Romeyn Berry a series of resolutions on the state of the country were adopted by a large majority, pledging "an earnest and unqualified support to the Government in its efforts to suppress this disastrous and most wicked rebellion" and declaring that their prayers shall continually be that "God in infinite wisdom will guide us in a way by which in the best manner every yoke may in his own time be broken and the oppressed go free." The General Synod also resolved to celebrate in an appropriate manner the adoption of the Belgic Confession of Faith, one of the doctrinal standards of the Reformed churches, in 1563, and appointed to that end the second Sabbath in September, requesting all the churches of the denomination to hold a special service at their usual hour of morning worship.

Since the great split in the Presbyterian church in 1837, the Dutch Reformed Church has held correspondence only with the Old School body, but at its session of 1862, the General Synod adopted a resolution proposing to open correspondence with the New School Assembly. The New School Presbyterian papers complained, however, that inasmuch as the General Synod said in substance that the proposal was not made on the ground that the New School Church was *sound in the faith*, the New School Assembly could not with any regard to its own dignity or self-respect entertain it.

The German Reformed Church of the United States reported, in 1862, the following statistics: synods, 2, classes, 25, ministers, 421, congregations, 1,122, members, 100,691, baptisms, 11,894. Compared with the report of the previous year, this shows the following increase: ministers 7, congregations 69, members 3,284, baptisms 81. Of the members about 70,000 belong to the Eastern Synod, and about 30,000 to the Western. The two synods are represented in general synod, which meets once in three years, and is the highest judicatory of the church. The German Reformed Church has only a feeble representation in the slave States, only three of its classes—Maryland, Virginia, and North Carolina—being located there. The connection of the North Carolina classis with

the church has been for several years very loose, yet, as far as is known, no effort has yet been made to organize an independent church.

For the last twelve years, the German Reformed Church has been considerably agitated by the liturgical question, some of the leading men of the Eastern Synod—as Dr. Nevin, Dr. Schaff, Dr. Gerhard—favoring a more strictly ritualistic or altar worship than has before been in use in the church; while the Western Synod and a minority of the Eastern Synod have taken ground against the liturgical change. Six years ago, the draft of a liturgy was presented to the Eastern Synod by a liturgical committee, and ordered to be printed for provisional use. In 1862, the synod had another long discussion on the Provisional Liturgy, a version of which has been demanded by most of the classes. It was finally resolved to allow the liturgy to remain in the church provisional use for five years longer.

In Switzerland the great majority of the Protestant population, which, according to last census of 1860, numbered 1,476,982 souls, belongs to the Reformed State Church, which in every canton has an independent organization. For several years, a kind of union between the cantonal churches has been established by means of an Annual Helvetic Conference, an assembly of delegates from the the church governments of the several cantons. Its resolutions are, however, merely advisory. Conformity with the old Confessions of Faith is nowhere insisted upon in the Reformed State churches, and there prevails therefore the greatest possible divergence of theological opinions. Besides the State churches there are a number of independent Reformed churches, which have, however, generally only a small membership.

In Germany, a considerable portion of the Reformed churches has been absorbed by the United Evangelical Church, which was formed out of a union of the Reformed and the Lutheran churches. There are, however, still Reformed churches in a number of states, especially in Hanover (97,018 souls); Bavaria, Hesse-Cassel, Hesse-Darmstadt (29,200 souls), Bremen, and several others. Several years ago, annual conferences of the German Reformed churches began to be held, but the participation in them has not yet become general, and there is as yet no kind of official communication between them. Of the theological faculties of the German universities none is exclusively Reformed.

In Austria, the Reformed Church, which is officially called the Evangelical Church of Helvetic Confession, is divided into three independent bodies, whose condition was, in 1862, as follows: 1. The Evangelical Church of Helvetic Confession in Hungary had 4 superintendentships (synods), called the superintendentships on the Danube, beyond the Danube, this side of the Theiss, and beyond the Theiss; 38 "Seniorats" (presbyteries), 1,427 congregations, and a population of 1,511,842 souls. 2. The Evangelical Church of H. C. in Transylvania, had 1 superintendentship, 18 districts, 559 congregations, and a population of about 300,000 souls. 3. The Reformed churches in the German and Slavic countries of Austria, are comprised with the Lutherans into one organization, in which the Lutherans form 5, and the Reformed 3 superintendentships (Vienna, Prague, and Ingrowitz in Moravia). The latter have the following statistics: 1. Vienna, 3 congregations, 6,810 souls; 2. Prague, 3 "Seniorats," 38 congregations, 56,832 souls; 3. Ingrowitz, 2 "Seniorats," 19 congregations, 34,797 souls.

The Reformed State Church of France had, in 1862, 105 consistories, 477 parishes with 682 stations, 889 churches and oratories, 1,293 schools, 567 official pastors, 82 assistant pastors and chaplains. The mixed consistory of Algiers (comprising under its jurisdiction both the Lutheran and Reformed churches of Algeria) had 18 parishes, 30 stations, 42 places of worship, 15 pastors.

Holland has an established and a free Reformed church. In the former liberal (rationalistic) principles prevail, while the later adheres strictly to the old standards of the church. To the former belongs a population of about 1,900,000, to the latter about 55,000 souls.

Belgium has likewise a Reformed church which is recognized and supported by the state, and free Reformed churches. The former had, in 1859, 16 preachers; the latter, likewise, 16 preachers and 4 evangelists. Both together are supposed to have a population of about 25,000 souls.

Russia had in 1860 1,045 German Reformed in the Baltic provinces, 3,772 in St. Petersburg, 11,911 in Lithuania and the adjoining Polish provinces, 36,000 in the interior of the empire. Many of them were, however, in connection with the Lutheran Church.

In Asia, the Dutch Reformed Church of the United States has a number of missionary congregations in India and China, which in the former country have been organized into a regular classis. The same church has also commenced a mission in Japan. The State Church of Holland has a number of flourishing missions in the large Dutch possessions in the Archipelago.

In Africa, the Dutch Reformed Church has still the character of State Church in the Cape colony. The Dutch language has been hitherto used in all the churches, but the synod of the church, held in 1862, made provision for the use of the English language, where there was a sufficient demand for it.

RHODE ISLAND, one of the New England States, and the smallest of the Union excepting Delaware, had in 1860 a population of 174,620, which was an increase of 27,075 during the ten years ending June, 1860. The industrial and commercial statistics of this enterprising little State will be found under UNITED STATES.

The governor of the State in 1862 was Wm. Sprague. The election takes place on the first

Wednesday of April. The citizens of the State were divided into three parties, the republican, the democratic, and Union. The democratic and Union parties united at the election in 1861, and elected Governor Sprague. The Union party was comparatively small in numbers. On the 20th of February, 1862, the democratic electors of the State assembled by their representatives in convention at Providence, and nominated William Sprague for reëlection as governor; Samuel G. Arnold for lieut. governor; John R. Bartlett, secretary of State; Walter S. Burgess, attorney general, and Samuel A. Parker, treasurer. The views of the convention on national affairs were expressed by the following resolutions:

Resolved, That the Democracy of Rhode Island stand to-day upon their ancient platform; that they are for the country, and nothing less than the country —for the Union and the Constitution, without conditions or higher law reservations—for peace with all men and all nations, when it can be honorably secured or preserved, and for war when peace is no longer consistent with national dignity or the preservation of the people's just rights—for a strict construction of the Constitution of the country, and a sacred regard, at all times and under all circumstances, by ruler as well as people, by servant as well as citizen, for all its guaranties and provisions—for the preservation of the freedom of speech, and the liberty of the press,—for an honest and economical administration of the Government, the faithful guardianship of the public credit, and the prompt punishment of treasury plunderers; and against all encroachments upon State or individual rights—against the irresponsible exercise, by public servants, of powers not delegated in the Constitution—against oppression of every description—against sectionalism in all its aspects—against underground railroads and John Brown raids, and, finally and especially, against all attempts by the Federal Government to subjugate States or divest their governments or people of any of the powers or privileges which they have heretofore exercised or enjoyed.

Resolved, That the so-called "Right of Secession," claimed by many politicians and citizens of States now in arms against our Federal Government, is inconsistent with all government, and a denial of the fundamental principles of all democratic republics. It is just as false to-day as it was only a few years or months ago, when it was claimed by Northern abolitionists and at least one Northern Legislature, and should be condemned and opposed by all good men, at all times, as tending to the abrogation of law and the inauguration of civil war. And, denying the right of secession, we declare that the present rebellion against Federal authority, and the attempt to overthrow, by a resort to force, the best government which the sun ever shone upon, is both unreasonable and criminal—an indefensible violation of all the pledges which citizenship implies, and such an outrage against humanity and civilization as even the aggressions and menaces of Northern abolitionists, during thirty years of vengeful warfare upon Southern institutions, cannot justify or palliate.

Resolved, That while this civil war continues, it is our duty and the duty of all loyal citizens to render to the Government a cheerful and earnest support; to stand by it in the enforcement of all constitutional measures tending to the suppression of armed rebellion; to give its officers, so far as they are true to the trusts reposed in them, the aid and comfort which may be derived from our moral influence and physical resources. And that we extend to those citizens of our own and other States who have responded to the call of the Government for that protection which arms alone can give, our hearty commendation and warmest sympathies. We congratulate them upon the recent brilliant victories which their valor has achieved, and bespeak for them, when their work shall have been accomplished and their purpose consummated in the restoration of the Union, the warm gratitude of all true patriots.

Resolved, That the effort now being made to divert this war from its original purpose, as proclaimed by the President and Congress of the United States seven months ago—the maintenance of the Federal Constitution and the preservation of the Union's integrity—and to turn it into a war for the emancipation of slaves and the subjugation of the Southern States, or their return to a territorial condition, is an effort against the Union, against the Constitution, against justice, and against humanity, and should be promptly frowned upon by all the friends of democratic institutions. It is unworthy of loyal citizens, and can find support only with sectional fanatics, who have no love for the Union or desire for its restoration, and whose highest patriotism is an unnatural and unrighteous hatred of the citizens of sister States. And whereas we perceive gratifying indications that President Lincoln is resisting and will continue to resist this treasonable effort, it is further resolved, that in such patriotic resistance he is entitled to and does and shall continue to receive our cordial sympathy and unfaltering support.

Resolved, That to bring the present war to a final and happy conclusion, and secure a union of hearts as well as a union of hands, it is absolutely necessary to reassure the misguided people of the South that we mean no warfare upon their rights, and are actuated by no spirit of revenge; to disavow, in the language of Gov. Sprague, "any other wish than that of bringing together these now belligerent States, without the loss to any one of them of a single right or privilege which it has heretofore enjoyed;" to show, by our acts as well as by our professions, that our whole purpose is to preserve our Government just as it came to us from the hands of our fathers—to regard all the guaranties of the Constitution, whether to States or to people of the States—and to become once more a powerful and prosperous nation, and a harmonious and happy people. And that, to this end, it is the duty of the Democratic party, not only to preserve its distinctive organization, but to demonstrate by honorable and patriotic measures, both its determination and its power to withstand and render harmless the assaults of Northern sectionalists upon constitutional liberty.

Resolved, That the effort now being made to secure to adopted citizens in this State their just political rights, meets with our hearty sympathy and is entitled to and shall receive our cordial support; that the purpose of this effort is especially commended to us at this time by the promptness and unanimity with which this class of our citizens are rallying to the support of our institutions; and that we urge upon the present General Assembly of our State to take such measures as are necessary to bring their claims to an equality of political privileges directly before the people.

The course pursued by the governor and other State officers during the previous year had been so satisfactory to the citizens, that the other parties made no nominations for these offices, although their party organization was preserved.

The votes of the electors which were given to Sprague were 11,195, scattering 62.

For members of Congress the vote was as follows:

	Democratic Union.	Republican.
1st Dist.	6,998	6,656
2d "	4,545	4,004

The members of the Legislature were elected as follows:

	Senate.	House.
Dem. Union	21	50
Republican	11	22

The Legislature, at its subsequent session, elected Governor Sprague a senator in the Federal Congress.

The debt of the State has been contracted within the last two years to meet the expenses of organizing, equipping, and paying the bounty to its troops. Bonds to the amount of $1,800,000 at 6 per cent. were authorized to be issued, of which $1,200,000 were sold at a premium of 11 per cent.

The banking capital of the State amounts to $20,862,979—divided among 88 banks.

The length of the railroads of the State is 283 miles, costing $11,670,523.

There is one college in the State, and a Friends' boarding school of a high grade, and many flourishing academies. The public school fund amounts to $243,000, of which the income is $14,442 per annum. The average attendance on the schools exceeds 21,691.

Under the calls for troops in 1862, the State filled her quota without a resort to a draft, making all the troops raised by her for the war amount to thirteen regiments consisting of 14,326 officers and men. About 1,500 men were also furnished by the State to the United States navy. Of the troops sent to the war, one regiment was light artillery and one cavalry.

The militia of the State is composed of 2,339 active militia and 17,944 enrolled militia. Of the active militia, 43 belong to the general staff, 77 to the cavalry, 423 to the artillery, 1,574 to the infantry, and 222 to the riflemen.

An unsuccessful attempt was made by Gov. Sprague to enlist a regiment of free colored persons, for which he issued the following order:

STATE OF RHODE ISLAND AND PROVIDENCE PLANTATIONS, ADJ'T-GENERAL'S OFFICE, PROVIDENCE, *Aug.* 4, 1862.

General Orders No. 36.—The Sixth Regiment, authorized by the Secretary of War, under date Oct. 23, 1861, and orders issued therefor from this Department, No. 103, Dec. 28, 1861, will consist entirely of colored citizens. Enlistment will commence immediately. Camp will be established under direction of Gen. Robbins, who is directed to organize the regiment.

The quartermaster-general will furnish rations and equipments on requisition.

Our colored fellow-citizens are reminded that the regiment from this State in the Revolution, consisting entirely of colored persons, was pronounced by Washington equal, if not superior, to any in the service. They constitute a part of the quota from this State, and it is expected they will respond with zeal and spirit to this call.

The commander-in-chief will lead them into the field, and will share with them, in common with the patriotic soldiers of the army of the republic, their trials and dangers, and will participate in the glories of their successes.

By order of the Commander-in-Chief.

EDWARD C. MAURAN, Adjutant-General.

The deposits in the savings institutions of the State, at the beginning of 1862, amounted to $9,282,879.

RICHARDSON, ISRAEL B., a major-general of volunteers in the United States service, born at Burlington, Vt., in 1819, died at Sharpsburg, Md., Nov. 3, 1862. He was a descendant of the Revolutionary hero, Gen. Israel Putnam, graduated at West Point in 1841, was appointed 2d lieutenant in the 3d infantry, and 1st lieutenant Sept. 21, 1846. He distinguished himself in nearly every important battle during the Mexican war; was brevetted captain for gallant and meritorious conduct at Contreras and Churubusco, and major for gallantry at Chapultepec—and so distinguished himself for bravery that he was known in the army by the sobriquet of "Fighting Dick." In March, 1851, he was promoted to a captaincy. In 1855, he left the army and retired to private life in Michigan. Upon the commencement of the present war he promptly offered himself again to the Government, organized a regiment, the 2d Michigan volunteers, of which he was made colonel, and soon after was placed in command of a brigade with which he covered the retreat of the army at Bull Run. His commission as brigadier-general dated back to May 12, 1861. At the battle of the Chickahominy he commanded a division of Gen. Sumner's corps and won much honor upon that occasion. He received his commission of major-general July 4, 1862, distinguished himself at the battles of South Mountain and Antietam, in the latter of which he received the wound causing his death.

ROMAN CATHOLIC CHURCH. At the end of the year 1862 the Roman Catholic church counted 902 dioceses with a population of about 182,000,000 souls. They were distributed as follows: America had 148 dioceses, and a Roman Catholic population of about 38,759,000 souls; Europe 603 dioceses, with about 138,103,000; Asia (inclusive of the Archipelago) 102 dioceses, with about 4,167,000; Africa 38 dioceses, with about 1,113,000; Australasia and Polynesia 17 dioceses, with about 280,000 souls.

In America, Central (2,227,000) and South America (21,278,000), Mexico (7,660,000), the French (301,000) and Spanish (2,032,000) possessions have an almost entirely Roman Catholic population. British North America has 19 dioceses, with about 2,590,000 Catholics. The United States has 46 dioceses and 4 Apostolic vicariates, divided into 7 provinces, Baltimore, New York, New Orleans, Cincinnati, St. Louis, Oregon City, and San Francisco, and a Roman Catholic population estimated at from three to four millions.

The statistics of the Roman Catholic population in the countries of Europe was as follows: Italy, 263 dioceses, 24,000,000 Roman Catholics; France, 81 dioceses, 35,734,000 Catholics; Austria (exclusive of Venetia),58 dioceses, 25,000,000 Catholics; Spain, 58 dioceses, 16,550,000 Catholics; Prussia and the other German states, 24 dioceses, 12,450,000 Catholics; Great Britain, 45 dioceses, 6,000,000 Catholics; Russia, 16 dioceses, 7,020,000 Catholics; Belgium, 6 dioceses, 4,600,000 Catholics; Portugal, 17 dioceses, 3,900,000 Catholics; Turkey, 15

dioceses, 640,000 Catholics; Holland, 6 dioceses, 1,250,000 Catholics; Switzerland, 5 dioceses, 1,023,000 Catholics; Greece, 5 bishoprics, 15,000 Catholics; Scandinavia, 3 dioceses, 6,000 Catholics.

The only country in Asia, in which the Roman Catholic church prevails, is the Philippine Isles. There is, however, a considerable Roman Catholic population also in India (1,033,000), Farther India (520,000), China (337,000), and Turkey (260,000). In Farther India, in consequence of the treaty of peace concluded between France and Cochin China, six provinces of the latter country have been annexed to France, and are likely to become ere long Catholic territory.

In Africa the Catholic church has a stronghold in the Portuguese, Spanish, and French possessions, in some of which the entire population is connected with the church. France is constantly extending her possessions in Northern Africa, where now a territory of 7,107 geographical square miles, and a population of 2,999,124 souls are under her rule, and in Senegambia, where she owns a country of about 5,000 geographical square miles and 252,000 inhabitants.

During the years 1861 and 1862, seventeen new dioceses have been established. Four bishoprics have been organized in America, viz., Marysville and Quincy in the United States, Chatham in New Brunswick, and Puno in Peru; besides two apostolical vicariates, that of the Rocky Mountains in the United States, and Sandwich in British America. In Europe, a new diocese has been organized in Bulgaria (for the United Bulgarians), and the apostolical vicariate, Stockholm, has been made a bishopric. In Asia, episcopal sees have been established at Madiat (for the United Syrians), at Sebaste (for the United Armenians), and at Su-tchuen in China. In Africa, an apostolical prefecture has been established in Senegambia and Zanguebar, and apostolical vicarships in Madagascar and for central Africa. Congo has been separated from Angola, and made a separate bishopric, and a mission has also been commenced in Dahomey.

The present number of secular priests is estimated at about 320,000, of whom about 2,800 belong to the United States, 115,000 to Italy, 50,000 to France, 31,800 to Spain, 30,000 to Germany, 4,000 to the British Isles. There were in 1862 about 8,000 male convents with 120,000 monks, the most numerous orders being the Franciscans (50,000), the brothers of the Christian schools (16,000), the Jesuits (8,000), Benedictines (5,000), Dominicans (4,000), Augustines (4,000). The female religious orders had about 190,000 members, of whom about 10,000 belonged to North America, 10,000 to South America, 100,000 to France, 30,000 to Italy, 10,000 to Belgium.

The most important event in the history of the Roman Catholic church during the year 1862, was the great council in Rome, to which all the Roman Catholic bishops of the world had been specially invited by the Pope. The primary object of the council, according to the circular by which the presence of the bishops was solicited, was the canonization of some Japanese martyrs; but even before the council met, it was generally known that the most important subject of deliberation would be a joint and solemn declaration of the assembled episcopate on the temporal power of the Pope. The council was held on Sunday, June 8th, and Monday, June 9th. On Sunday the Japanese martyrs were canonized in the most solemn manner in the Basilica of St. Peter. The ceremony lasted 6 hours, and was attended by an immense concourse of bishops, priests, and people. On Monday, June 9th, the Pope held a consistory at which all the foreign bishops were present. He pronounced an allocution, in which he deplored the errors spread by the revolutionary spirit against the authority of the Catholic church, as well as against divine and human laws. In reply to this allocution, the bishops signed an address to the Pope, in which they declare that the temporal power is necessary for the independence of the papal power. They approve all that the Pope has done in defence of his power, and exhort him to continue firm in his resistance. The address is signed by 21 cardinals and two hundred and forty-four bishops. An authentic history of the proceedings of the council has not yet been published, but a series of articles in a daily newspaper of Paris, "*La Patrie*," which claimed to give the minutest accounts of all the proceedings, called out letters from the bishop of Montauban and Cardinal Wiseman, which established at least some important points of the history of the council. Prominent among the great number of bishops were Cardinal Wiseman and Bishop Dupanloup of Orleans. The bishops did not appoint themselves a committee for preparing an address to the Pope, because as the bishop of Montauban says, "no one had the right of taking the initiative in such a grave question" and the Pope was therefore asked to designate the members of the committee. The committee consisted of eighteen members, and the great Roman Catholic nations, Spain, France, Italy, Austria, were each represented by one archbishop and one bishop. Cardinal Wiseman was selected as president, in order to avoid a jealousy of these four Catholic nations against each other. One of the most active and prominent members of the committee was Bishop Dupanloup of Orleans. The address, before its adoption, underwent several changes. A vote of thanks to the French Government for its support of the temporal power was proposed, but rejected at the demand of the non-French bishops. Whether, as the "*La Patrie*" had asserted, a passage in favor of liberalism was proposed, the bishop of Montauban says he does not know, but considers it probable, "as the liberal principles were represented at Rome by a certain number of foreign

pilgrims." If it really was proposed, the bishop says, it had to be rejected, because the church cannot express a preference for any form of society. The bishops had no opportunity to examine the address before signing it, but as the bishop of Montauban says, they felt no hesitation, because they knew what its general character would be, and that it had received the approval of the Pope. Nearly every country of the world was represented at the council, only the governments of Italy and Portugal had forbidden their bishops to take part in it. All, or nearly all of the bishops of these two countries, as well as such bishops of other countries as had been absent, signed an address to the Pope, expressing their concurrence with this declaration of the council. It may therefore be said, that the episcopate of the Roman Catholic church, with almost perfect unanimity, has declared in favor of maintaining the temporal power.

The Italian parliament replied immediately to the declaration of the episcopate, by pledging unwavering fidelity to the principle of Italian unity, involving, as it does, the abolition of the temporal power, for which also a number of the lower clergy declared themselves. One of the leading men of this party among the clergy, Father Passaglia, drew up an address to the Pope, requesting him to abandon voluntarily the temporal power, and he claimed to have obtained for this address the signatures of about ten thousand priests, whose names he published in his journal, *Il Mediatore*. The correctness of this list was denied by the organs of the other party, although it was generally admitted that there were associations of priests in Milan, Florence, Naples, and elsewhere, who sympathized with Passaglia, and a part of whom demanded, besides the abolition of the temporal power, the introduction of other changes.

Outside of Italy this movement found but little support. In Paris, two papers are published, *L'Observateur Catholique* and *l'Unité Chrétienne*, which, while claiming to remain Catholic, strongly reject the temporal power, the infallibility of the Pope, the doctrine of the immaculate conception, and other doctrines and views generally held by the church, and advocate a union with other churches holding the apostolical succession of bishops; but it does not seem that they represent a considerable party.

The Roman Catholic church has for some time made considerable progress among the eastern churches of Turkey, and during the past year large accessions have been again reported to each of the united eastern churches, which, while retaining the language and rites of their former communions, have adopted the doctrines of the Roman Catholic church. Of the most recent origin among these united churches is the United Bulgarian church, which originated in 1859, and received in 1860 the first bishop, Sokolski. This bishop, after some time, suddenly and mysteriously disappeared, and it was asserted that he had been carried off from Constantinople against his will by the Russians, and was now retained by them in a Russian convent. The United Bulgarian church has since received from the Pope a patriarch at Constantinople, and an archbishop at Philippopolis. They have been recognized by the Turkish Government as a political community, but they cannot take with them to the new church the edifices in which they formerly worshipped. These remain to the Greek church, and the Bulgarian congregations that wish to join the new United Bulgarian church have to build new chapels. On Dec. 9th, 1862, the Bulgarian archbishop of Sophia applied for admission to the communion of the Roman Catholic church, and the same application was made a few days after by the assistant bishop of Adrianople, but according to the statement of Roman Catholic papers, both applications were refused because it was found out that they had been made from mercenary motives. The United Bulgarians are chiefly numerous in the province of Adrianople, where their total number in April, 1862, was stated to be 2,612 families.

It is also reported that numerous congregations of the Greek church have entered during the year 1862 into communion with the Roman Catholic church in the plain of Damascus, and in the country between Lebanon and Balbeck. At the head of this movement is the former Greek bishop of the town of Holms. He has solemnly joined the Roman Catholic church, and as he is a man of great influence in Syria, it is believed that many will follow his example. A particular zeal for the interests of the Roman Catholic church in Syria is displayed by the Paris "Association for establishing Christian schools in the East." The bulletin of this society claims that more than four thousand schismatics, among whom were several priests, have already joined the communion of Rome, and that many others are on the point of following them.

While thus, according to all accounts, the Roman Catholic church is making considerable progress among the Bulgarians, Greeks, Armenians, and other Eastern churches, it is reported by a missionary of the English church missionary society, that nearly the whole United Syrian church in Travancore, India, has seceded from the communion of the Roman Catholic church. This body, which counts about 97 churches and a population of 96,000 souls, is reported to have sent a deputation to the Jacobites (Monophysites) of Syria. The bishops of the latter sect consecrated one of the delegates a bishop, who on his return to Travancore declared for a separation from Rome. With but few exceptions, writes the English missionary, the members of the Syrian church gave in their adherence to the new bishop, and the Roman Catholic bishop was left with no more than 10 or 12 parishes. No account of this

movement had, however, up to the end of the year been received from Roman Catholic sources.

ROSS, Admiral Sir James Clark, D.C.L., F.R.S., F.L.S., an English naval officer and polar voyager, born in London, April 15, 1800, died at Aston Abbott's House, Aylesbury, April 3, 1862. He was a nephew of the late Sir John Ross, and entered the navy in 1812, as a volunteer on his uncle's ship, and between 1818 and 1827 accompanied his uncle and Commodore Parry in 5 voyages of exploration to the arctic regions. In 1827 he was made a commander, and in 1829 joined Sir John Ross's arctic expedition, which was detained for four years in the polar regions. During this expedition, in 1831, he discovered the north magnetic pole, and planted the British flag upon it, and on his return in 1834 was raised to the rank of post-captain. In 1836, he crossed the Atlantic to search for and relieve some missing whale ships, and after his return was engaged for two or three years on a magnetic survey of Great Britain and Ireland. In 1839 he took command of the antarctic expedition, and in his four years' cruise approached within 160 miles of the South magnetic pole. In 1844 the University of Oxford bestowed on him the honorary degree of D.C.L. He had been elected a fellow of the Linnean Society in 1823, and of the Royal Society in 1827, and was also a corresponding member of many of the foreign scientific societies. For his discoveries in his antarctic expedition he received the gold medals of the London and Paris Geographical Societies. He made an independent discovery of the antarctic continent, though a few months later than Com. Wilkes. In 1844 he was knighted. In 1848 he was appointed to the Enterprise and made a voyage to Baffin's Bay in search of Sir John Franklin. He published in 1847 a narrative of his antarctic explorations under the title of "A Voyage of Discovery and Research in the Southern and Antarctic Regions." (2 vols. 8vo, London.)

RUSSIA, an autocratic empire of Europe and Asia, having in Europe a territory of 2,120,397 square miles, and a population in 1861 of 66,891,493 inhabitants. Emperor, or Czar, Alexander II, born in 1818, ascended the throne in 1855. Estimated revenues for 1862, $245,571,150, including about $75,000,000 to be derived from a loan; estimated expenditure for the same year, $231,771,150.

At the beginning of 1862, two topics occupied the thoughts of the Russian people, and of the nations adjacent who were interested in Russian affairs; viz., the condition of Poland, and the effects of the promised emancipation of the serfs. Other topics allied to one or the other of these, became prominent in the course of the year, which has been for Russia one of the most eventful of her history.

The Poles, who had resolved to assemble at Warsaw on the 15th of Oct. 1861, to celebrate the memory of Kosciusko, were prevented from making the demonstration they had intended by the Russian authorities, who on the day preceding declared the city in a state of siege, and stationed a large body of troops in the streets. The people nevertheless assembled in the churches peaceably. When they were filled, the soldiers surrounded them and commanded the people to go to their homes; this was refused quietly but steadily, unless the soldiers would first withdraw; and for 17 hours they remained in the churches, singing national hymns; finally, the Russian general Gerstenweig, a Russian of the old type, gave the order to the soldiers to take them out of the churches by force at 4 o'clock in the morning. The soldiers obeyed and dragged away more than 2,000, many of them women and children, to the citadel. This order of the general, given without consultation with the Governor of Warsaw, Count Lambert, led to a violent altercation between the latter and the general, which terminated in the latter committing suicide, and the former leaving Warsaw the next day, on the plea of ill health.

The proceedings of the 15th were followed by other arrests, and by the imprisonment, banishment, and condemnation to death of prominent Poles, and the Russian Government, as it has often done, alternated acts of mildness and severity, in such a way as to lose the confidence of all parties of Warsaw, and to give the impression of a vacillating and timid policy, cruel when it was safe to be so, and only gentle when the threatened uprising of the whole people inspired it with alarm. In the appointment of a new archbishop, the former archbishop having died in the summer of 1861, the emperor, who nominated the new incumbent, showed a desire to gratify the Poles, and to efface the remembrance of his past despotic acts; as he did also in the appointment of his brother the Archduke Constantine as his lieutenant of Poland, in May, 1862; but the Poles had been too often cajoled, and then treated with cruelty, to be readily placated. The Russian general, Luders, Count Wialopolski, the Governor of Warsaw, and the archduke himself were repeatedly attacked by assassins, and the general and the archduke severely wounded. These assailants were arrested, tried, and executed. After some months quiet seemed in a fair way of being restored, when the Russian Government was again guilty of one of those acts of tyranny which every few months excite the Poles to insurrection and resistance. The conscription for the ensuing year was to be made in November, 1862, and instead of proceeding as the law required, and as was practised in Russia, throughout Poland the citizens of the towns, who had been more active than the peasants of the country in their opposition to the Government, were seized for the army, and every man who had united in singing the national hymns, whether beyond military age or not, and without regard to his social position or circumstances, was put at once into the ranks,

as a common soldier, and informed that the Polish contingent was to be sent to Siberia for military service. This gratuitous cruelty led at once to a general insurrection, which in April, 1863, had not been fully repressed.

The promised emancipation of the serfs, announced by the Czar in his proclamation of February, 1861, to be consummated in two years, was a measure which, though reflecting much credit on its projectors, and fraught with future benefits for Russia, was involved in great difficulties of detail. The serfs comprised considerably more than one half of the population of the European portion of the empire, and were, the agricultural portion of them at least, attached to the soil, and could only be sold with it. Hence they had come to regard the soil as belonging to them, while they acknowledged themselves the serfs of their masters. Among the provisions of the code drawn up for the regulation of the future relations between masters and serfs, was one which required the serf to work for his master on low wages till the expiration of the two years, and previous to that time to negotiate with the landholders for the purchase at a certain price (to be fixed by disinterested appraisers) of the fee simple of the land, which they were henceforth to own themselves. The serfs, who, though ingenious in mechanical inventions, are very slow to understand legal or constitutional matters, in many districts refused to work for the boyars or landed proprietors, or to make provision for the payment for the lands, alleging that they already belonged to them, or that the Emperor would pay for them. On the other hand the boyars, who by the refusal of the serfs to work or to purchase their lands were likely to be reduced to poverty, were disposed to resist the decree. In some of the governments armed bodies of the serfs assembled and committed violence, and were only reduced to order by considerable loss of life. The serfs who were not attached to landed estates, also had their difficulties, and in some instances engaged in *emeutes*, but on the whole, there was perhaps less trouble than was to be expected. The freedom of the serfs was to date from February, 1863, but they were not to come into full possession of their lands, in most instances, free from incumbrance till the expiration of seven or nine years. The serfs of the crown, whose condition had been much superior to that of the serfs on private estates, were also to be liberated by the Emperor at the same time with the others and to pay for the lands in instalments, the Government giving them liberal terms both as to time of payment and the price of their lands.

The feeling pervaded all classes in Russia, on the announcement of the Emperor's determination to emancipate the serfs, that a measure involving such changes in the principles on which the Government was founded, was but a preliminary step to other and equally radical changes in the political management of the empire, which should transform it into a limited and constitutional monarchy. The Emperor, if he had formed any such plans, did not immediately reveal them, and, indeed, repressed, though with an apparently vacillating purpose, any manifestations of a desire for greater freedom.

The students of the universities of St. Petersburg, Moscow, and Kasan, and the academy of military engineering at St. Petersburg, had since the accession of Alexander II to the throne, enjoyed greater liberty than under the stern and despotic rule of his father; and they had improved their opportunities to establish libraries, aside from those of the universities, mutual aid societies to help the poorer students, and to discuss the questions of state policy. The minister of public instruction, M. Kovalefsky, was supposed to favor these developments of youthful freedom, and he was removed, and the Admiral Putiatin, a reactionary officer, put in his place. His first acts were the closing of all the female seminaries, the advance of the charges at the universities to $160 per year, in order to exclude the poorer students; and the dismission of the ablest and most liberal professors. By the second of these measures over 600 students were at once excluded from the university of St. Petersburg, and a larger number from the other universities. The dismission of the professors led to protests on the part of the students, for which many of them were imprisoned, their libraries confiscated, and the universities closed. The Polish students, affected by the condition of Poland, and the massacres at Warsaw, chanted requiems for the dead, and the Polish national hymn, "Poland is not Dead," and many of the Russian students sympathized with them. The Poles were arrested and imprisoned, and 600 of the Russian students petitioned the Emperor to be allowed to share their fate, but received no reply. M. Putiatin, not satisfied with having closed the female seminaries and the universities, proceeded to shut up also the scientific schools, and the private schools and Sunday schools of the empire. In Moscow the conflicts between the students and the authorities led to some bloodshed, and many of the students were banished or consigned to unwholesome prisons at Perm, Archangel, Viatka, Vologda, and Olonetz, where they died of typhus fever. Admiral Putiatin was finally removed by the Emperor, and M. Golownin appointed in his place, who, though not fully a liberal in his views, reopened the universities and schools, and undid a part of the mischiefs of his predecessor.

But it was not the students alone who were thus excited by the radical changes proposed by the Emperor. The press also demanded a relief from censorship, and a liberty of utterance befitting a free people, and was disposed to take, ere the Emperor was ready to grant, that which it asked for. The Constituent Assemblies of the different governments, which

met in the latter part of January, 1862 (the Russian empire is divided into 88 governments and provinces), whose discussions had usually been confined to local matters of finance, the management of the communes, or sanitary topics, at their sessions at this time took up questions of greater importance, and voted addresses to the Emperor, demanding local self-government, publicity of legal processes, the yearly publication of the budget, the liberty of the press, and the assembling of the General Assembly at Moscow, composed of representatives of all classes, which should be charged with the preparation of a plan of reform for the Government, or, in other words, a constitution. The Constituent Assembly of Moscow adopted this address by a vote of 300 out of 362 members. The Assembly of Twer went farther; they declared that the official regulations concerning emancipation were impracticable, and should be modified; that the liberated serfs should immediately become proprietors, by means of purchase of lands, in which they should be assisted by the Government; that the nobility of that Government (the Constituent Assembly was mainly composed of nobles) renounced its privileges of freedom from taxation, and asked to be taxed in the same way and on the same principles as the peasants, and urged the necessity of calling a National Assembly, composed of representatives of all classes to form a constitution.

The Government was not prepared for such demonstrations on the part of the people, and did not respond very cordially to them, although the Emperor was undoubtedly deeply impressed with the sentiments of the addresses. On the 29th of September, O. S. (October 11), the Emperor promulgated a decree, in which, while withholding as yet the asked for National Assembly, he grants other reforms of a very important character, and even some which had not been directly sought. Among these are the taking away from the police all judicial power (which has hitherto been one of the greatest of abuses), and vesting the judicial authority, in petty cases, civil and criminal, in civil magistrates or justices of the peace, elected every three years by the people; more important cases are to be decided by district tribunals, composed of judges appointed by the Emperor, at the nomination of the minister of justice, of whom three at least must be present at the trial of every cause. All civil and criminal cases are tried before a jury taken from all classes of the population, eligibility depending upon age, residence, property, and general intelligence and morality. The state is represented by a prosecuting attorney, and both plaintiff and defendant may employ advocates. A majority of the jury decide the case. In cases where the judges unanimously consider a person innocent, whom the jury pronounce guilty, they have the right to refer the case to another jury; but the verdict of the second jury shall be final. The directing senate constitutes the high court of appeal, which may refer the case back for trial to another tribunal of equal rank, whose decision shall be final in all cases. Imprisonment for debt for sums less than $80 (100 rubles) is abolished, and in no case can a debtor be imprisoned over five years. All legal distinctions, resulting from social conditions, are abolished, all domiciliary visits, searches under warrant, and seizures must be made in the presence of witnesses. All persons arrested, upon whatever charge, must positively be examined within 24 hours, and the classes who would suffer from personal detention are exempted from it. Crimes against the state, against religion, or committed by government officers in the exercise of their functions, are not tried by the courts above described, but by special courts, and the mode of procedure is so arranged that the Emperor is relieved from the personal examination of these cases, and the necessity of a system of espionage, which has hitherto been the curse of Russian society, is obviated. These measures, if honestly and fully carried out, will be the beginning of a new era in the history of Russia, and will fully entitle her, as she enters upon the second thousand years of her history (the thousandth anniversary of the founding of the empire was celebrated in 1862) to a high rank among the civilized nations of the world.

S

SAN MIGUEL, Evaristo, a Spanish general and statesman, born in the Asturias in 1780, died in Madrid, May 29, 1862. He volunteered in the war against the French in 1808, and from his energy and military ability was soon promoted to the rank of lieutenant-colonel, and elected a member of the Cortes from Cadiz. After the restoration of Ferdinand VII, he was placed on the retired list, and not long after founded the *Espectador* newspaper, in which he advocated with great ability a constitutional government. In 1820, when the tyranny of Ferdinand had utterly extinguished the hopes of all the friends of a constitutional government in Spain, and Riego raised his Andalusian expedition, San Miguel joined him as chief of staff, and at that time composed the "Hymn of Riego," one of the most popular of Spanish war songs. The expedition was unsuccessful, and in 1821 San Miguel was exiled to Zamora. But the tyrant found himself unable to stem the tide of public feeling, and in 1822 was compelled to accept a liberal ministry. The exile was recalled and offered the post of Minister of Foreign Affairs in the new cabinet, which he accepted. The time was a critical one. Austria,

France, Prussia, and Russia had each bound themselves in the Congress of Verona to put down all liberal movements among the monarchies of the Continent; and each power addressed a note to the Madrid cabinet, summoning it to return to the old system. To these notes San Miguel replied in a manner which indicated alike the strength of his devotion to liberal principles and his intellectual ability in defending them. He gave the history of the liberal movement, showed that the present constitution had been recognized by the Emperor of Russia in 1812, that they professed the right to manage their own affairs, and denied the right of other powers to intermeddle, and concluded with the declaration that his Majesty's Government would not deviate a hair's breadth from the line which national honor and its unvarying adhesion to the constitution of 1812, which it had sworn to observe, had traced out for it. The Holy Alliance was astonished; but it had gone too far to recede. The ambassadors of the four powers were withdrawn, and France took the lead in the work of attempting to crush out constitutional freedom. A long war ensued, and San Miguel, as brave in the field as in the cabinet, joined the army in Catalonia, and greatly distinguished himself in almost every engagement of the next three years. He was repeatedly wounded, in 1826 so severely that his recovery seemed almost a miracle, and finally taken prisoner, but soon after released on condition of quitting Spain. The next 8 years of his life were spent in honorable exile in England, and he did not return to his own country till the amnesty proclaimed by the queen regent in 1834 restored him to his rights. Soon after his return, he was appointed by the queen Captain-General of Aragon, and elected a Deputy to the Cortes. In 1842, under the regency of Espartero, he was appointed Captain-General of the Basque Provinces, and after the fall of the regent in 1843, retired into private life, and resided chiefly in Madrid. In 1847, he published a History of Philip II, on which he had been for some years engaged. In 1854, he was again called into public life, on the overthrow of the Sartorius Ministry, being named by the queen Captain-General of Madrid and Minister of War. For some time he was in effect universal minister, Espartero not having arrived, and none of his colleagues being efficient. In July he was named President of the Junta, and in that position controlled and held in check both O'Donnell and Espartero. He was, at the close of the revolution, raised to the rank of field marshal, and having been elected to the constitutional Cortes, was for some time its president. In 1856, he was made a grandee of the first class, and appointed Commandant General of the Household Guard. As a grandee, he took his seat in the Senate in 1857, when he supported a liberal government to the last. He was greatly esteemed in private life for his probity and amiability. Beside the History above named, he was the author of several other works, mostly relating to the wars of his time.

SLAVES. The questions relative to the political, civil, and social position of negroes, or "colored persons of African descent," as they were designated by Congress and the executive officers of the Federal Government, became more prominent during 1862 than in any previous period. An elaborate opinion was prepared by the U. S. Attorney-General, Mr. Bates, on the question "are colored men citizens of the United States?" The chief points of the opinion were—that the Constitution does not define the word citizen, the Attorney General therefore examines history and the civil law from the existence of the Roman Empire to the present day to discover its meaning. His conclusion is—that all free persons, without distinction of race or color, if native born, are citizens. A distinction is made between the inherent rights of citizens and the political privileges of certain classes. All citizens have a right to protection, but only certain classes enjoy the privileges of voting and holding office. Hitherto not only the public but jurists have often confounded the two. A child or a woman is a citizen, though not always privileged to vote or hold office. The Dred Scott opinions are pronounced void and of no authority, since the province of the Supreme Court was only to settle the questions of the jurisdiction of the Circuit Court. They are simply entitled to the respect due to the views of eminent gentlemen, and no more. The paper concludes as follows:

"And now, upon the whole matter, I give it as my opinion that the free man of color mentioned in your letter, if born in the United States, is a citizen of the United States, and, if otherwise qualified, is competent, according to the acts of Congress, to be master of a vessel engaged in the coasting trade."

The same general question was raised by the Secretary of State in referring an application for a passport by a negro to the Attorney General.

In Massachusetts the governor, Andrew, ordered negroes to be enrolled as well as white persons for the purpose of drafting soldiers. The Attorney General of the State justified the order on the ground that—"Congress and the war department both leave out the word *white* from the description of the class to be enrolled." He further adds: "The only possible question now open is whether colored men are citizens of Massachusetts, which no one, I presume, will have the hardihood to deny, inasmuch as they are tax-payers, voters, jurors, and eligible to office, and there is no inequality founded on distinction of races known to our laws."

On the other hand the Circuit Court of Illinois sitting in Montgomery county decided that negroes were not citizens. In this case the complainant filed his bill to enjoin the payment to

the defendant, W. C. Lowry, who was alleged to be at least one fourth negro, by the trustees of a school district, the sum of one hundred and fifty dollars, which a majority of them agreed to pay him as compensation for teaching a common school in the district for six months. The trustees admitted the charges of the bill, but stated that they had no knowledge of the fact charged and did not believe it.

The defendant Lowry denied under oath that he was of African descent or that he had any African blood in his veins, but declined to offer evidence that he was not a mulatto, and made no attempt to sustain his answer by proof. The complainant and others refused to send their children to said Lowry, and offered a number of witnesses who stated they were well acquainted with the African race, and believed the defendant mixed with African blood. The evidence, in the absence of any testimony to the contrary, being in the opinion of the Court sufficient to establish the allegation in the bill that the defendant, Lowry, was at least one fourth negro blood, the simple question remained, is it competent for directors of schools, under their common school system, to appropriate the common school fund raised by taxation to the payment of persons of color as teachers in the public schools? In the opinion of the Court no such use could be made of the common school fund by the agents of the corporations created for school purposes. The Court said:

While it is admitted that persons of color are capable of contracting, and further, that there is by statute no express prohibition as to the employment of persons of that class as teachers in the public schools of the State, we think it clear that the spirit of legislation in this State, with reference to negroes, as well as good taste and sound public policy, forbid it.

The Constitution of this State, and the statutes adopted in pursuance thereto, forbid the migration to and settlement in this State of such persons. They are forbidden to vote, sit upon juries, hold office, and to testify in causes where white persons are parties. Especially by the common school law of this State are negro children prohibited from attending as pupils and enjoying the benefits of schools established for the benefit of white children. No doubt, had the Legislature conceived it probable that an attempt would ever be made to place negroes in the delicate and almost parental relation of teachers of the white children of the country in the public schools, they would have inserted an *express* provision against it. We think, however, enough is shown to demonstrate the fact that the Legislature intended that the races should be separate in the public schools beyond any reasonable doubt. It would also seem that any attempt to appropriate the public school funds to sueh a use is an abuse, and an assumption of power wholly unwarranted, against which the tax-payers interested ought to have relief.

A decree is therefore granted according to the prayer of the bill.

In the same State indictments were found in the Jersey County Court against officers of the State troops who returned from the army at the South and brought negroes with them. The penalty was a fine of from one to five hundred dollars and imprisonment in the county jail not more than one year.

The manner in which the Navy Department regarded the negro is shown by the following order:

NAVY DEPARTMENT, *April* 30, 1862.

"Sir—The approach of the hot and sickly season upon the Southern coast of the United States renders it imperative that every precaution should be used by the officers commanding vessels to continue the excellent sanitary condition of their crews. The large number of persons known as 'contrabands' flocking to the protection of the United States flag affords an opportunity to provide in every department of a ship, especially for boats' crews, acclimated labor. The flag-officers are required to obtain the services of these persons for the country by enlisting them freely in the navy, with their consent, rating them as boys, at eight, nine, or ten dollars per month, and one ration. Let a monthly return be made of the number of this class of persons employed on each vessel under your command.

"I am, respectfully, your obedient servant,
"GIDEON WELLES."

On an application by a citizen of North Carolina to the naval commander Rowan for a favorite servant supposed to be with the United States forces, the Secretary gave the following instructions:

As similar applications may frequently be made, it is proper to remind you that persons who have enlisted in the naval service cannot be discharged without the consent of the Department, and that no one should be "given up" against his wishes.

The social position of the negro is illustrated by many facts which occurred. The following correspondence will serve to show their position in the army:

TRENTON (TENN.), *August* 12, 1862.

Geo. W. Deitzler, Col. Com'ding First Regt. Kan. Vols.

We, the undersigned, non-commissioned officers and privates of Company G, First Regiment Kansas Volunteers, respectfully request that Francisco Adalger, of the above company, be transferred to the original company to which he was assigned or be mustered out of the service. Our reasons are—firstly, we believe him to be a "nigger;" secondly, that he never was properly assigned to our company, but, after being refused in several other companies, he was placed in Company G. We have no objection to giving our services to our country, to endure all the privations that we may be called on to endure, but to have one of the company, or even one of the regiment, pointed out as a nigger while on dress parade or guard, is more than we like to be called upon to bear.

We hope that the above will meet your hearty approval.

[Signed by thirty-six of the company, and endorsed as follows:]

HEADQUARTERS UNITED STATES TROOPS,
TRENTON (TENN.), *August* 14, 1862.

Brig.-Gen. G. M. Dodge, Commanding Division.

GENERAL: The person referred to in the within protest was transferred, together with eighty-four others, to the regiment from the First Kansas and New Mexico Regiment, by order of the Governor of Kansas, and assigned to Company G. He is full two thirds "nigger"—too black to serve upon terms of equality with white soldiers. I respectfully recommend that he be mustered out of service, or transferred to Jim Lane's nigger brigade. The recommendation is not made out of disrespect for the nigger.

GEORGE W. DEITZLER,
Col. First Kansas Vols., Commanding Post.

In the month of July disturbances broke out in various parts of the country, arising from apprehensions that the negroes who have in-

creased largely in numbers in all the Northern states since the commencement of the war, were about to be put upon a footing of equality. In Chicago, at a public meeting of the workmen of the leading slaughter and packing houses, the following preamble and resolution were adopted:

Whereas it has come to the knowledge of this meeting that it is the intention of one or more of the leading packers of this town to bring negro labor into competition with that of the white men, for the purpose of reducing the wages of the latter to the lowest possible standard:

Resolved, That we, the packing-house men of the town of South Chicago, pledge ourselves not to work for any packer, under any consideration, who will, in any manner, bring negro labor into competition with our labor.

In Brooklyn, N. Y., on the 4th of August, a disturbance took place between Irish laborers and negroes, in which the former demanded that the latter should be discharged from the tobacco manufactories. This was done. The military on this occasion were called to aid the police. It was stated that the facility with which negroes gained employment at the navy yard, custom house and other public places, increased the ire of the assailants. Similar disturbances took place at Cincinnati and Toledo, Ohio, and New Albany, Indiana.

The social position of the negro in all the Northern or free States is similar to his position in Ohio as described by the Senator from that State in Congress—Sherman—in these words:

"The negro race is looked upon by the people of Ohio as a class to be kept by themselves; to be debarred of social intercourse with the whites; *to be deprived of all advantages which they cannot enjoy in common with their own class.* They have always been deprived of the elective franchise in this State; and no party among our citizens has ever contemplated that they should be given that right of citizenship; and, for aught that appears to the contrary, the colored man in Ohio will not, *in all future time that he may remain an inhabitant of the State, attain any material improvement in the social or political rights over what he now enjoys.* Deprived of the advantages here enumerated, it could not be expected that he should attain any great advancement in social improvement. Generally, the negro in Ohio is *lazy, ignorant, and vicious.* But it is only fair to acknowledge *that almost any race, in similar circumstances, would be reduced to about the same level.* Deprived of liberty, social and political rights, for centuries, it is unreasonable to expect an improved state of society."

The operations of the Federal forces within slaveholding States necessarily released many slaves from the restraints of their masters. The mass of them took advantage of this circumstance to escape from servitude. Their presence within the Federal lines led to the adoption of various measures by the Commanding officers and by the Federal Government relative to them, all looking toward their ultimate freedom. For the action of the Government on the subject of emancipation *see* UNITED STATES.

In January the Marshal of the District of Columbia was instructed by order of the President "not to receive into custody any persons claimed to be held to service or labor within the District, or elsewhere, and not charged with any crime or misdemeanor, unless upon arrest or commitment, pursuant to law, as fugitives from such service or labor, and not to retain any such fugitives in custody, beyond a period of thirty days from their arrest and commitment, unless by special order from the civil authority." The effect of this order was to relieve from any fears of apprehension all the fugitives that had escaped to the District from Virginia. Thousands of slaves flocked to the District and were sustained throughout the year by rations furnished by the Government.

In Missouri, General Halleck had, previous to this time, issued an order that fugitive slaves should not be permitted to enter the lines of any camp, or any forces on the march. This order occasioned much discussion, especially in Congress, as it cut off an opportunity for escape to thousands of slaves. It was explained by Gen. Halleck in these words, "unauthorized persons, black or white, free or slave, must be kept out of our camps, unless we are willing to publish to the enemy every thing we do, or intend to do."

In Arkansas, Gen. Curtis issued orders of immediate emancipation under confiscation of a number of slaves who had been at work for the Confederate Government by the consent of their masters.

Similar orders were issued by Gen. Hunter, under like circumstances in the Department of South Carolina. These were extended until he at length issued an order confiscating and emancipating all the slaves in his military district, embracing South Carolina, Georgia, and Florida. This was countermanded by the President. (*See* PUBLIC DOCUMENTS.)

At Baton Rouge, in Louisiana, Brig.-Gen. Williams issued an order that, in consequence of the demoralizing and disorganizing tendencies to the troops of harboring runaway negroes, the commanders should turn all such fugitives beyond the limits of their respective guards and sentinels. Col. Paine of this brigade refused obedience and justified himself by the following act of Congress:

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That hereafter the following shall be promulgated as an additional article of war for the government of the Army of the United States, and shall be obeyed and observed as such:

"ART. —. All officers or persons in the military or naval service of the United States are prohibited from employing any of the forces under their respective commands for the purpose of returning fugitives from service or labor who may have escaped from any person to whom such service or labor is claimed to be due, and any officer who shall be found guilty, by a court-martial, of violating this article shall be dismissed from the service.

"SEC. 2. *And be it further enacted*, That this act shall take effect from and after its passage."

In North Carolina an appeal was made to Gov. Stanley by some masters for the restora-

tion of their slaves. In one instance this was granted, but the slave was rescued by the soldiers, and the master's property destroyed. It occasioned so much censure of the conduct of Gov. Stanley among the friends of the Administration, that the Secretary of War found it necessary to deny that the act was in accordance with the instructions to the governor.

The effect of all the regulations adopted, except in Missouri and Baton Rouge, was to secure freedom to every slave that would make the effort to obtain it. Wherever permanent headquarters for Federal troops were established within slaveholding States, they soon became crowded with hundreds and thousands of fugitive slaves. The Government was immediately obliged to feed them or starvation would ensue. At Washington, at Fortress Monroe, Newbern, and Port Royal were large numbers furnished with quarters and fed at the national expense. Various schemes were devised for the occupation of these negroes, particularly in the department of South Carolina. The following were the instructions originally issued to the commander of that department:

WAR DEPARTMENT, *Oct.* 14, 1861.

SIR: In conducting military operations within States declared by the proclamation of the President to be in a state of insurrection, you will govern yourself, so far as persons held to service under the laws of such States are concerned, by the principles of the letters addressed by me to Maj.-Gen. Butler on the 30th of May and the 8th of August, copies of which are herewith furnished to you. As special directions, adapted to special circumstances, cannot be given, much must be referred to your own discretion as commanding general of the expedition. You will, however, in general, avail yourself of the services of any persons, whether fugitives from labor or not, who may offer them to the National Government. You will employ such persons in such services as they may be fitted for, either as ordinary employés, or, if special circumstances seem to require it, in any other capacity, in such organization, in squads, companies, or otherwise, as you may deem most beneficial to the service. This, however, not to mean a general arming of them for military service. You will assure all loyal masters that Congress will provide just compensation to them for the loss of the services of the persons so employed. It is believed that the course thus indicated will best secure the substantial rights of loyal masters and the benefit to the United States of the services of all disposed to support the Government, while it avoids all interference with the social systems or local institutions of every State beyond that which insurrection makes unavoidable, and which a restoration of peaceful relations to the Union, under the Constitution, will immediately remove.

Respectfully, SIMON CAMERON,
Secretary of War.

On the 6th of February, Gen. Sherman, then in command, issued an order relative to the fugitive slaves, in which he said:

Until proper legislation on the subject, or until orders from higher authority, the country in occupation of the forces of this command will be divided off into districts of convenient size for proper superintendence. For each of these districts a suitable agent will be appointed to superintend the management of the plantations by the blacks, to enroll and organize the willing blacks into working parties, to see that they are well fed, clad, and paid a proper remuneration for their labor; to take charge of all property on the plantations, whether found there, provided by the Government, or raised from the soil, and to perform all other administrative duties connected with the plantations that may be required by the Government. A code of regulations on this subject, as well as a proper division of districts, will be furnished in due time.

In the mean while, and until the blacks become capable themselves of thinking and acting judiciously, the services of competent instructors will be received—one or more for each district—whose duties will consist in teaching them, both young and old, the rudiments of civilization and Christianity—their amenability to the laws of both God and man—their relation to each other as social beings, and all that is necessary to render them competent to sustain themselves in social and business pursuits.

Subsequently the Secretary of War, without any authority from Congress, and without the knowledge of the people, issued orders, which developed the following plan for a social experiment with the negroes:

HEADQUARTERS, E. C., HILTON HEAD, S. C., *March* 3, 1862.

General Order, No. 17.

1. Mr. Edward L. Pierce having been appointed by the Hon. Secretary of the Treasury General Superintendent and Director of all persons engaged in the cultivation of the land and the employment of the blacks, he is hereby announced as such.

2. The following instructions to the general commanding are hereby published for the information of all concerned; and commanding officers of all posts and stations within the limits of this command, will be governed in strict conformity thereto.

WAR DEPARTMENT, *Feb.* 13, 1862.

To Gen. T. W. Sherman, Commanding at Port Royal, S. C.:

GENERAL: You are hereby directed to afford protection, subsistence, and facilities, so far as may be consistent with the interests of the service and the duties and objects of your command, to all persons who may present to you written permits, issued to them under the authority of the Secretary of the Treasury, setting forth that said persons have proceeded to Port Royal under the sanction of the Government, for the collection, safe keeping, and disposition of cotton, rice, and other property abandoned by the possessors within your military department, and for the regulation and employment of persons of color lately held to service or labor by enemies of the United States, and now within the occupying lines and under the military protection of the army.

Such permits, signed by the Collector of Customs at New York city, will be considered by you as emanating from the Treasury Department.

Under the head of subsistence will be included rations to such persons as may be employed under the direction of the Treasury Department, in the tem porary charge of the abandoned plantations; or, with its sanction, to labor for the instruction and improvement of the laboring population.

EDWIN M. STANTON, Secretary of War.

To L. H. Pelouze, Captain 15th Infantry, Acting Assistant Adjutant-General:

3. No quarters, hospitals, storehouses, or other public buildings, however temporary, will be erected within the limits of this command, without previous sanction and order of the general commanding.

When any temporary building is proposed to be erected, a plan and specification of the same will be sent to the chief quartermaster for the examination and consideration of the general commanding.

Brig.-Gen. T. W. SHERMAN.

NOMINATION OF INSTRUCTORS AND MANAGERS.

To Hiram Barney, Esq., Collector of the Port of New York.

NEW YORK, ——, 186 .

SIR: On the nomination of ——, I, the undersigned, do hereby recommend ——— as suitable persons to receive your permit to proceed to Port Royal, in the State of South Carolina, for the purpose of assisting in the instruction and management of the negroes within the lines of the United States army, at Port Royal and its vicinity.

Respectfully, yours,

PERMIT OF THE COLLECTOR FOR KEEPING OF COTTON.

CUSTOM HOUSE, NEW YORK, COLLECTOR'S OFFICE, ——, 186 .

In pursuance of authority vested in me by the Secretary of the Treasury, I, Hiram Barney, Collector of the Port of New York, do hereby permit —— ——— to proceed from the city of New York to Port Royal, in the State of South Carolina, on board of any vessel in the employment of the United States, carrying passengers to the latter place.

The said —— —— proceeds to Port Royal under the sanction of the Government of the United States, upon business relating to the collection, safe keeping, and disposition of cotton, rice, and other property abandoned by persons inhabiting any district within the late territorial limits of States declared by proclamation of the President to be in insurrection against the United States; and also upon business relating to the condition and employment of persons of color at Port Royal and its vicinity, lately held to service or labor by the enemies of the United States, and now within the limits and under the military protection of the army of the United States.

The transportation of the said —— —— is to be in ——— of the vessel on which he may sail, and it will cover all baggage belonging to him; and also ——— ———.

This permit is given upon the express condition, that the holder is to obey all rules and regulations established by the Treasury Department, or the military or naval authorities at Port Royal, and its vicinity; and also all other rules and regulations established by the aforesaid authorities at any and all places he may visit. This permit is to become void if transferred by the holder to any other person, either permanently or temporarily.

On receiving this permit, the said —— ——— took the oath of allegiance as prescribed by the act of Congress.

For the purpose of identification, and as proof that he receives this permit for the above mentioned purpose, and on the above named conditions, the said ——— —— has written his name hereon.

In witness whereof, I have hereunto set my hand the day and year above written.

Signature of holder. —— ——, Collector.

PERMIT FOR INSTRUCTING NEGROES.

CUSTOM HOUSE, NEW YORK, COLLECTOR'S OFFICE, ——, 186 .

In pursuance of authority vested in me by the Secretary of the Treasury, on the 24th day of February, 1862, I, Hiram Barney, Collector of the Port of New York, do hereby permit ——— to proceed as a ——— passenger, with his baggage, from the city of New York to Port Royal, in the State of South Carolina, on board of any vessel in the employment of the United States, carrying passengers to the latter place.

This permit is given upon the express understanding and condition, that the said ——— proceeds to Port Royal for the purpose of assisting in the instruction and management of the negroes within the lines of the United States army at Port Royal and its vicinity; and upon the further condition that he shall obey all rules and regulations established by the Treasury Department or the military or naval authorities at Port Royal and its vicinity, in regard to said negroes, and the persons engaged in their instruction and management; and all other rules and regulations established by the aforesaid authorities at any and all places which he may visit. This permit is to become void if it is transferred by the holder to any other person, either permanently or temporarily.

For the purpose of identification, and as a proof that he receives this permit upon the conditions above mentioned, the said —— has appended his name hereto.

On receiving this permit, the said ——— took the oath of allegiance as prescribed by act of Congress.

In witness whereof, I have hereunto set my hand, the day and year first above written.

Signature of holder. —— ——, Collector.

Several societies undertook to take charge of the matter, and seventy-two persons, farmers, mechanics, physicians, and teachers, were sent out by the Government, receiving each one ration a day from the commissariat, and paid salaries by the affiliated societies. They were "to teach Christianity and civilization to the freed men of the colored race, to imbue them with notions of order, industry, and economy, and self-reliance, and to elevate them in the scale of humanity, by inspiring them with self-respect." The cost of rations to the Government, a part of which were consumed in this experiment, was estimated at $100,000 per day. Educational associations were formed in Boston and other places, by whom the teachers were procured. On the 2d of June, the Agent, E. L. Pierce, made a report to the Secretary of the Treasury, Mr. Chase, in which he stated that seventy men, and sixteen women, were engaged in missionary work among the negroes, under the auspices of the Treasury Department. The number of plantations under the care of these persons was 189, having on them 9,050 Africans, classified as follows: 309 mechanics and house servants, 693 old, sickly, and unable to work, 3,619 children, not useful for field labor, 4,429 field hands, of whom 3,202 were full hands, 295 three-quarter hands, 597 half hands, and 335 quarter hands. The amount of labor performed was as follows:

"The aggregate result makes (adding the negro patches to the cornfields of the plantations) 8,314.12 acres of provisions (corn, potatoes, &c.) planted, 5,489.11 acres of cotton planted—in all, 13,795.23 acres of provisions and cotton planted. Adding to these the 2,394 acres of late corn, to a great extent for fodder, cowpens, &c., to be planted, and the crop of this year presents a total of 16,189.2 acres. The crops are growing, and are in good condition."

"The sum of $5,479 has been distributed among 4,030 negroes in payment for labor on the plantations. The rate is $1 per acre for cotton."

After the novelty had passed away very little was accomplished by the slaves. A report in September, makes the effective hands 3,817, non-effective 3,110; acres of corn, 6,444, potatoes, 1,407, cotton, 3,384—which was considered more than enough for their own support, but not sufficient to reimburse the Government. The whole experiment finally failed, and was abandoned by order of Gen. Hunter, and the negroes fell upon the Government for support.

The following order, issued by the Commanding General, would indicate that the moral state

of the negroes had also become deplorable. The General is entitled to much credit for his motives, although the attempt to reform the inveterate conjugal habits of the negro, by a military order, may prove a task beyond his power.

HEADQUARTERS, BEAUFORT, S. C., *August*, 22, 1862.

I. In the hope of correcting a wide-spread and deplorable evil, the following regulations are announced:

1st. Any negro claiming to have or charged with having more than one wife, is required to confine himself to, and, if need be, support that one to whom he has been lawfully married. If no such marriage has ever been celebrated, he will select that one of his so-called wives who is the mother of his children, if any he have; and, after a marriage service duly performed by some minister of the Gospel, take her to himself as his own sole lawful wife.

2d. Hereafter any of the colored people wishing to be united in holy wedlock will apply to Rev. M. French, chaplain U. S. Army, or other minister, who will keep a register of marriages and furnish the parties with a marriage certificate duly authenticated.

3d. All negroes, male or female, hereafter living in a state of concubinage, or found unfaithful to their marriage vows, will be liable to arrest and imprisonment.

II. There being on every plantation more or less persons unable to support themselves, and having no near relative to whom the duty can be assigned of providing for their wants, a charitable fund will be established on each plantation, by deducting from the amount due for labor thereon such percentage as may be found, upon trial, sufficient for the purpose.

The fund thus created will be placed in the hands of the superintendent, to be expended by him for the benefit of the helpless and friendless, in providing them with suitable food and clothing, either according to the directions of the surgeon in attendance, or in obedience to the suggestions of his own common sense and experience. A proper account of the expenditures under this head will be furnished monthly to the assistant quartermaster at these headquarters.

III. This order will be read by the superintendents to the negroes on every plantation, and care taken to explain its provisions so that they may be fully understood as designed to secure and regulate the performance of duties which are enjoined by the plainest dictates of a mere worldly experience as well as by the sublimer teachings of a living Christianity.

By order of Brig.-Gen. SAXTON, Commanding.

The efforts in North Carolina were equally unsuccessful.

The negroes near Fortress Monroe, made a better use of their advantages. The military commission to examine into their condition, stated that by the report of the provost marshal at Camp Hamilton, it appears that for the five months ending 1st January, 1862, he had drawn rations amounting to about 383 per day, which were issued to about 650 women and children, and old infirm men, all of whom returned little or no equivalent to the Government. But since the 1st of January, the rations issued there have not exceeded seventy, and for part of the time were less than forty per day. As a consequence the negroes have been thrown very much upon their own exertions to provide for themselves; and the commission of inquiry do not find that any amount of suffering has ensued; but in many instances the effort at self-support has been successful and improving.

Schools have been in successful operation at Camp Hamilton under the charge of clergymen, assisted by other teachers, black and white, where children and adults were daily instructed in reading, writing, and the elements of arithmetic; also religious instruction, and meetings were regularly held on Sunday and stated evenings during the week.

Another measure undertaken, in order to put the negroes to a useful purpose, was to organize the ablebodied ones into regiments of soldiers. The most conspicuous friends of the negroes, who have long urged the measure, have doubtless hoped that so much military spirit might thereby be infused into a considerable number as to qualify them to strike for the emancipation of their race.

On the 9th of June resolutions of inquiry relative to the organization of a negro regiment in South Carolina were offered in the House of Representatives in Congress, and adopted soon after. The resolution was referred to Gen. Hunter by the secretary, who replied as follows:

HEADQUARTERS, DEPARTMENT OF THE SOUTH, PORT ROYAL (S. C.), *June* 23, 1862.

Hon. Edwin M. Stanton, Secretary of War, Washington:

SIR: I have the honor to acknowledge the receipt of a communication from the adjutant general of the army, dated June 13, 1862, requesting me to furnish you with the information necessary to answer certain resolutions introduced in the House of Representatives, June 9, 1862, on motion of the Hon. Mr. Wickliffe, of Kentucky, their substance being to inquire—

1st. Whether I had organized or was organizing a regiment of "fugitive slaves" in this department?

2d. Whether any authority had been given to me from the War Department for such organization? and

3d. Whether I had been furnished by order of the War Department with clothing, uniforms, arms, equipments, &c., for such a force?

To the first question, therefore, I reply that no regiment of "fugitive slaves" has being or is being organized in this department. There is, however, a fine regiment of persons whose late masters are "fugitive rebels"—men who everywhere fly before the appearance of the national flag, leaving their servants behind them to shift as best they can for themselves. So far indeed are the loyal persons composing this regiment from seeking to avoid the presence of their late owners, that they are now, one and all, working with remarkable industry to place themselves in a position to go in full and effective pursuit of their fugacious and traitorous proprietors.

To the second question I have the honor to answer that the instructions given to Brig.-Gen. T. W. Sherman, by the Hon. Simon Cameron, late Secretary of War, and turned over to me by succession for my guidance, do distinctly authorize me to mploy all loyal persons offering their services in defence of the Union and for the suppression of this rebellion, in any manner I might see fit, or that the circumstances might call for. There is no restriction as to the character or color of the persons to be employed, or the nature of the employment, whether civil or military, in which their services should be used. I conclude, therefore, that I have been authorized to enlist "fugitive slaves" as soldiers, could any such be found in this department. No such characters, however, have yet appeared within view of our most advanced pickets; the loyal slaves everywhere remaining on their plantations to welcome us, aid us, and supply us with food, labor, and information. It is the masters who have in every instance been the "fugitives," running away from loyal slaves as well as loyal soldiers, and whom we have only par-

tially been able to see—chiefly their heads over ramparts, or, rifle in hand, dodging behind trees—in the extreme distance. In the absence of any "fugitive master law," the deserted slaves would be wholly without remedy, had not the crime of treason given them the right to pursue, capture, and bring back those persons of whose protection they have been thus suddenly bereft.

To the third interrogatory it is my painful duty to reply that I never have received any specific authority for issues of clothing, uniforms, arms, equipments, and so forth to the troops in question—my general instructions from Mr. Cameron to employ them in any manner I might find necessary, and the military exigencies of the department and the country being my only, but, in my judgment, sufficient justification. Neither have I had any specific authority for supplying these persons with shovels, spades, and pickaxes when employing them as laborers, nor with boats and oars when using them as lightermen; but these are not points included in Mr. Wickliffe's resolutions. To me it seemed that liberty to employ men in any particular capacity implied with it liberty also to supply them with the necessary tools; and acting upon this faith I have clothed, equipped, and armed the only loyal regiment yet raised in South Carolina.

I must say, in vindication of my own conduct, that had it not been for the many other diversified and imperative claims on my time a much more satisfactory result might have been hoped for; and that in place of only one, as at present, at least five or six well-drilled, brave, and thoroughly acclimated regiments should by this time have been added to the loyal forces of the Union.

The experiment of arming the blacks, so far as I have made it, has been a complete and even marvellous success. They are sober, docile, attentive, and enthusiastic, displaying great natural capacities for acquiring the duties of the soldier. They are eager beyond all things to take the field and be led into action; and it is the unanimous opinion of the officers who have had charge of them, that in the peculiarities of this climate and country they will prove invaluable auxiliaries, fully equal to the similar regiments so long and successfully used by the British authorities in the West India Islands.

In conclusion, I would say it is my hope—there appearing no possibility of other reënforcements owing to the exigencies of the campaign in the Peninsula—to have organized by the end of next fall, and to be able to present to the Government, from forty-eight to fifty thousand of these hardy and devoted soldiers.

Trusting that this letter may form part of your answer to Mr. Wickliffe's resolutions, I have the honor to be, most respectfully, your very obedient servant,

D. HUNTER,
Major-General Commanding.

On the 18th of October Gen. Saxton, in command of the Department, issued an order to organize the First Regiment of South Carolina Volunteers as soon as possible. The enlisting of the negroes had proceeded very slowly. Thirteen dollars a month, with army rations and clothing, was to be the pay of the soldier. By the close of the year the regiment was completed.

The attempt was made in Kansas by Gen. Lane to enlist negroes, but it failed of success. His order for their enlistment was as follows:

RECRUITING COMMISSION, DEPARTMENT OF KANSAS,
LEAVENWORTH CITY, *August* 6, 1862.

General Orders—No. 3.—1. That persons of African descent who may desire to enter the service of the United States in this Department, shall fully understand the terms and conditions upon which they will be received into such service, recruiting officers who are authorized, under instructions from this office, to receive such persons, shall, before receiving them, read to them and in their presence, the following sections of an act entitled "An act to amend the act calling for the militia to execute the laws of the Union, suppress and repel invasion," approved February 28, 1795, and the acts amendatory thereof and for other purposes, approved July 17, 1862, as follows:

Section 12. And be it further enacted, That the President be, and he is hereby authorized to receive into the service of the United States, for the purpose of constructing intrenchments or camp service, or any other labor, or any military or naval service for which they may be found competent, persons of African descent, and such persons shall be enrolled and organized under such regulations, not inconsistent with the constitution and laws, as the President may prescribe.

Section 13. And be it further enacted, That when any man or boy of African descent, who, by the laws of any State, shall owe service or labor to any person who, during the present rebellion, has levied war or has borne arms against the United States, or adhered to their enemies by giving them aid and comfort, shall render any such service as is provided for in this act, he, his mother, and his wife and children, shall forever thereafter be free, any law, usage or custom whatsoever to the contrary notwithstanding. Provided, That the mother, wife, and children of such man or boy of African descent shall not be made free by the operation of this act, except where such mother, wife, or children owe service or labor to some person who, during the present rebellion, has borne arms against the United States, or adhered to their enemies by giving them aid and comfort.

By order of JAS. H. LANE,
Commissioner of Recruiting.
T. J. WEED, Major and A. A. A. G.

An attempt was made by Gen. Sprague, of Rhode Island, to raise a regiment of free negroes, but it met with no success. An attempt was also made at New Orleans to organize negro troops, but at the close of the year it was still an experiment.

Another measure proposed relative to the slaves was their colonization in Chiriqui in Central America. For this purpose Senator Pomroy, of Kansas, who had been very successful in organizing "Emigrant Aid Expeditions" from Massachusetts at the time of the Kansas disturbances, received a kind of general permission from the President to settle at any suitable point within the tropics, being charged "to maintain the honor of the republic abroad." Some progress was made in organizing this enterprise, but it was abandoned.

Another measure proposed relative to the slaves was the removal of a portion of those at Fortress Monroe to Massachusetts and other Northern States, both for "humane and military reasons." (*See* MASSACHUSETTS.)

Notwithstanding all the measures proposed, the Southern slaves still remain a great burden on the hands of the Government, excepting those who have pressed forward to the free States, already well supplied with white labor.

SMITH, CHARLES FERGUSON, a major-general of volunteers in the United States service, born in Pennsylvania about 1806, died at Savannah, Tennessee, April 25, 1862. He was a son of the late Dr. Samuel B. Smith, U. S. A., graduated with honor at West Point in 1825, and was made second lieutenant of artillery on the 1st of July in the same year. In 1829 he was

appointed assistant instructor in infantry tactics at West Point; in 1831 was promoted to the adjutancy, and in 1832 was made a first lieutenant. In 1838 he was appointed instructor in infantry tactics and commandant of cadets, and the same year was promoted to a captaincy. He took an important part in most of the battles during the Mexican war; in 1847 was brevetted major for gallant conduct in the battles of Palo Alto and Resaca de la Palma, in Texas, and at the battles of Monterey, Contreras, and Churubusco, won the successive brevets of lieutenant-colonel and colonel. In the same year he was appointed acting inspector-general in Mexico. On the 25th of November, 1854, he was made major of the 1st artillery, and the following year lieutenant-colonel of the 10th infantry. In Sept. 1861, he was promoted to the colonelcy of the 3d infantry, having the previous month been appointed brigadier-general of volunteers and taken charge of the troops at Paducah, Ky. At the attack on Fort Donelson, the most brilliant charge was made by the troops under his command and had much to do with the surrender. For his gallantry on that memorable occasion he was promoted to a major-generalship, and ordered to take possession of Savannah, Tenn., where he died of chronic dysentery contracted during the Mexican war, and fatally aggravated by his exposures in the campaign of the West.

SOUTH CAROLINA, the first of the Southern States to pass an ordinance of secession from the Union, increased in population 35,201 in the ten years ending June, 1860, when her entire population was 703,708. (*See* UNITED STATES.)

On the last week in December, 1861, the State Convention assembled at Columbia. Its term of existence would have expired some time previous, but by its own act it extended the term. This was done in consequence of the invasion of the State at Port Royal, and the exigencies which arose. Apprehensions were entertained of the ability and competency of the State Government to cope successfully with the unusual affairs, and for this reason the final adjournment was postponed. Its sessions were conducted with closed doors, and none of its acts were made public. An advisory council was instituted, to whom, in conjunction with the governor, extraordinary powers were granted.

The sessions of the Legislature are convened on the second Monday in October. At the last session in 1861 an act was passed authorizing a draft to be made in the districts near the sea coast to make up a strong military force for twelve months to be engaged in the coast defence. Two thirds of all the men capable of bearing arms were to be placed in the field. At the beginning of 1862 these forces were obtained and brought into the field without a draft. At the same time, all persons who had removed their slaves from the seaboard to the interior were required to place them under the control of white masters. The command of the sea coast defences was vested in General R. E. Lee, who was assisted by Brigadier-Generals Ripley, Lawton, Drayton, and Trapier of the Confederate army, Generals Capers, Harrison, and Walker of Georgia, and Gonzales, De Saussure, and others of South Carolina. The department embraced South Carolina, Georgia, and Eastern Florida. The force in command was regarded as sufficient to repel any invasion of the Federal troops into the interior. The citizens of Charleston had joined the army to such an extent that business was nearly suspended. Seven distinct regiments had at this time taken the field from the city, besides numerous companies and individuals who had entered the army. The cotton on the coast that was exposed to seizure by Federal troops was either entirely removed or destroyed.

In some instances the troops raised for the defence of the State refused to go beyond her borders. This was particularly the case with the 18th regiment of volunteers, which being ordered to the West, after reaching the Georgia railroad, flatly refused to obey the orders of their officers. They alleged that they were enlisted to serve the State, and were willing to fight in her defence, but that they would not go out of the State. Some declared that they would have gone if they had been consulted before starting, but that their officers had not notified them that they were to leave the State; others had furloughs, and desired to see their families. The officers urged in vain the stigma that would rest upon them for refusing to go where their country most needed their services, and the reproach they would bring upon the State of South Carolina, which had been foremost in the work of resistance. Their appeals were unavailing, and the malcontents returned. On the first of May South Carolina had in the field 39,274 men, of whom 22,000 were in the Confederate service. The excess above her quota was 4,064. The State quota at this time was about one fourth of her free white male population.

A very large amount of land in the State was planted in corn, and it was supposed that an enormous crop capable of supplying that species of food in superabundance and at a low price would be the result. But the season was marred by a drought, and in many parts of the State the corn crop was seriously injured, so that there was scarcely more than was produced in the previous year, when much less land was planted. The production of rice also was curtailed to a considerable extent by the removal of the planters from the tide water region. Still the season for rice was good, and those who planted generally made good crops. Apprehensions were entertained that sufficient efforts would not be made to secure the crop.

In October the Legislature convened in Columbia, and the message of Governor F. Pickens was delivered. He urged the support

of the Confederate authorities in measures of the common defence. He withheld all objections to the conscript law, though he regarded all such acts as against the spirit of the Constitution; and recommended that a State guard of citizens under eighteen and over forty-five years of age be formed to counteract the effects of President Lincoln's emancipation proclamation. The State had at that date furnished forty-two thousand troops to the Confederate army, besides eight regiments for coast defence.

At this time General Beauregard was ordered to the command of the Confederate forces at Charleston, and immense fortifications were commenced for the defence of that city against the anticipated attack of the Federal forces.

The attempt to blockade the harbor by the sinking of hulks proved a failure. Numerous passages in the water-front of six miles which the harbor had were left unobstructed, and more vessels ran the blockade and reached the city than at any other Southern port. The force of the west winds, the heave of the sea, and the action of the quicksands soon began to dissipate the obstructions.

STEVENS, Isaac Ingalls, a major-general of volunteers in the United States service, born in Andover, Mass., in 1817, killed in the battle near Chantilly, Fairfax co., Va.. Sept. 1, 1862. He graduated at West Point in 1839, ranking first in his class, and was commissioned second lieutenant of engineers. In 1840 he became first lieutenant, and was employed upon the fortifications of the New England coast until the Mexican war, at that time being adjutant of engineers. He was attached to Gen. Scott's staff, and for gallant and meritorious conduct at the battles of Contreras and Churubusco was brevetted captain, and major for his heroic conduct at the storming of Chapultepec, and the city of Mexico, where he received a severe wound from which he never fully recovered. His profound knowledge of the principles of war, attracted the attention of his general, who spoke of him as "the most promising officer of his age." Upon his return to the United States he was selected by Prof. Bache to perform the duties of chief of the Coast Survey at Washington. In 1853 he resigned his commission and accepted the appointment of Governor of Washington Territory, where he became known as an able executive officer, displaying the most unremitting devotion to the interests of the Territory. During the administration of Pres. Buchanan, he represented Washington Territory as delegate in Congress for two terms. He was the chairman of the Breckinridge executive committee in the presidential campaign of 1860; but when the leaders of the party declared for secession he openly denounced them and stood by the Union, strongly urging President Buchanan to remove Secretaries Floyd and Thompson from the cabinet, and trust to the counsels of Gen. Scott. At the close of the session of Congress Gov. Stevens proceeded to Washington Territory, but upon hearing of the attack on Fort Sumter, returned to Washington and offered his services to the Government. He was appointed colonel of the 79th New York Highlanders. He was commissioned brigadier-general of volunteers, Sept. 28, 1861, and accompanied Gen. Sherman to South Carolina, where he bore a prominent part in all the battles near Port Royal. He was then transferred to North Carolina, whence he came to Virginia in the corps of Gen. Reno, and was promoted to the rank of major-general, his commission bearing date July 4, 1862. He was in all the skirmishes along the Rappahannock under Gen. Pope, and fought most gallantly in the battle near Bull Run. As he was bearing aloft the colors of one of his regiments, cheering on his men, he fell fatally wounded by a Minie ball passing through his head. In 1851 he published a work entitled "Campaigns of the Rio Grande and Mexico, with Remarks on the recent Work of Major Ripley."

SUMNER, John Bird, D. D., Archbishop of Canterbury, Primate of all England and Metropolitan, born in 1780 at Kenilworth, Warwickshire, died at Lambeth palace Sept. 6, 1862. He was the eldest son of Rev. Robert Sumner, Vicar of Kenilworth, Stoneleigh, was educated at Eton and at King's College, Cambridge, where he graduated B. A. in 1803, obtaining university honors as Browne's Medallist and Hulse's Prizeman. Having been successively Assistant Master and Fellow of Eton College, he became Rector of Mapledurham, Oxon, and was appointed a Canon of Durham in 1820. In 1828 he was consecrated Bishop of Chester, and during the 20 years he held that see, he gave a remarkable impulse to the building of churches and the promotion of education, especially primary education. In 1848 he was translated to the archbishopric of Canterbury, having an annual income of £15,000, and the patronage of the archdeaconries of Canterbury and Maidstone, of two canonries, six preacherships in Canterbury Cathedral, and 168 benefices. Dr. Sumner was a prolific theological writer. His first work, "Apostolic Preaching," was published in 1815, and was followed soon after by the "Records of Creation," which obtained the 2d Burnett prize of £400. He was also the author of "Chester Charges," "Evidences of Christianity," "Expository Lectures" on the whole of the New Testament except the Apocalypse, in nine separate volumes, and several volumes of sermons. He belonged to what is termed the Evangelical School in the established Church, and his term of office will be memorable in the Church history of England by the revival of the synodical power of the two Convocations of England, and the violent controversy arising out of the publication of the work entitled "Essays and Reviews."

T

TAE-PING REBELLION, The. As the principal interest in Chinese matters centres in this rebellion, it will, perhaps, be more gratifying to the readers of the Annual Cyclopædia, to have a clear and connected account of this protracted and extensive insurrection than to read a mere summary of the prominent events which have transpired in China during the year 1862.

The Government of China, though seemingly so immobile, has yet passed through numerous changes. Its vast area has been at some periods divided into two, three, and even four independent kingdoms, and after years of civil war again and again reunited in a single empire; its rulers have been native Chinese, Mongol Tartars, Chinese again, and lastly, since 1644, Mantchoo Tartars. In the 4,000 years of its history, there have been few periods when, either from Tartar invasion, or native insurrection, from religious feuds, or conflicts of race, there has not been, in one or other of its populous provinces, a rebellion of some sort. At the present time, under the feeble and corrupt rule of the late Mantchoo emperor, there have been and are now in existence four distinct insurrections; the Tae-ping rebellion, occupying a territory of over 30,000 square miles on the lower Yang-Tsze; the Tu-feh rebellion, in the vast western province of Sz'chuan, on the upper Yang-Tsze and its affluents; the Chinese Mussulman insurrection, in the S. W. province of Yu-nan, and a formidable and powerful band of insurgents in the north-eastern province of Shan-Tung.

All of these have native Chinese leaders, and all are alike hostile to the Mantchoo dynasty; but beyond this they have little in common, except that cowardly cruelty, which delights in profuse slaughter, under circumstances of terrible atrocity, of all their captives. The last three of these insurrections, though, perhaps, counting nearly as many followers as the first, have not for a variety of reasons excited so much attention or remark abroad as the Tae-ping rebellion.

Hung-Siu-Tsuen, the leader of the Tae-ping rebellion, or as he styles himself the *Tien-Wang* (king of Heaven), is a native of an insignificant village, 30 miles from Canton, and was born in 1813. His parents were very poor, so poor that they were unable to give him sufficient education to compete successfully at the state examinations, which every one who seeks to become an officer of Government in China must pass. From his 19th year, he repaired annually for half a dozen years to Canton to these examinations, but each time failed of success. At one of these visits, in 1833, an American missionary, Rev. I. J. Roberts, gave him a package of tracts in Chinese, which he put in his pocket and for the time thought no more of them. Four years after, again meeting with his accustomed ill fortune, he returned home, was attacked with a violent sickness, during which he saw visions, and uttered inflated rhapsodies in regard to his future; on his recovery he engaged in menial occupations for his support, and once more passed an unsuccessful examination. On his return home the tracts he had received five years before, fell under his notice, and he read them with avidity. He declared that they gave him the key to the visions he had had in his sickness, and abandoning the religion of Confucius, he left his native place, and, betaking himself to the mountains, set about making converts to his new religion. His views were very crude; he at first worshipped the name of God instead of the idols, to which he had formerly burned incense and gold paper, but after a few months, becoming more enlightened, he abandoned this and adopted some forms nearer to those of Christian worship, though modified to suit the sensuous ideas of the Chinese. In 1840 he had made a considerable number of converts, who were called God-worshippers, and not long after, there were nearly 2,000 of his adherents in the single district of Kevei. He now sallied forth with his followers to destroy the idolatrous temples of the Buddhists and Lao-tze. This provoked disturbance, and two of his disciples were thrown into prison, where one of them died. Alarmed, perhaps, at this result of his iconoclastic mission, Hung-Sin-Tsuen (or as he now called himself Sin-Tsuen, *i. e.* elegant and perfect) abandoned his public teachings, and lived a quiet life as a cattle herd for some years. He seems still, however, to have kept up his connection with the God-worshippers, and to have been regarded as their leader. Up to this time, his views and teachings seem to have been those of an ill-instructed but sincere convert to Christianity, but a change for the worse took place in 1850. A rebellion had sprung up in the districts of Kwang-si and Kwang-rung, in the province of Canton, resulting primarily from the restless and wretched condition of the people, who had been visited by famine and pestilence during that year. Bands of robbers infested the country, and being hard pressed by the imperial soldiers, joined the God-worshippers, to enlist their influence in protecting them. The authorities sought to arrest Siu-Tsuen as their leader, but he, calling all his followers together, seized and fortified a market town, and thus in December, 1850, commenced the Tae-ping (peace) rebellion. He selected from among the most intelligent and bold of his followers, leaders for the numerous adherents who now began to flock to his standard, and gave them the title of *Wang* (king). In four months' time he had, accord-

ing to Chinese ideas, a powerful and well-disciplined army, strongly attached to him personally, and ready to fight to the death for their creed. The rebel chief now commenced issuing proclamations, in which the influence of flattery in producing arrogance and intolerable conceit were very evident. He assumed the title of Tien-Wang (king of Heaven), and soon began to claim divine honors; at first he declared himself the brother and equal of Christ, and required the same homage, but of late he has grouped in his manifestoes God the Father, Jesus Christ, himself, and his son, whom he styles the junior Lord, as the co-equal rulers of the Universe; and at one time he conferred the title of the third person of the Trinity upon Tung-Wang, the most bloodthirsty of his subordinate kings, but subsequently withdrew it, and now admits no other divine personages but those we have mentioned. He professes to have often visited heaven, and of late declares that his favorite wife (he has 108 in his harem) has also been permitted to ascend to the celestial regions. His proclamations, whatever may be their principal topic, are always interlarded with theological disquisitions, and as he has read extensively theological and religious books, they often present a singular medley of truth and error, presented in a most arrogant and grandiloquent style.

But with all his religious vagaries, he showed a considerable amount of administrative ability. In August, 1851, he captured the city of Yung-an, and held it until April 7, 1852, when, at the head of a large force, he traversed and ravaged the province of Hoo-nan, destroying many of its finest cities; he next descended the Yang-tsze river, visited Hankow and other cities on its banks, and early in 1853 sat down before the great city of Nanking, which surrendered to him on the 19th of March, 1853, after a feeble resistance, and whose inhabitants to the number of more than 20,000 he put to death. One hundred only of those who fell into his hands were saved. This ferocity he justified by some of the examples of the Old Testament. The people, he said, were idolaters, whom it was his right, as king of Heaven, to destroy.

Nanking, thus captured, was made his capital, and instead of moving forward, as he could have done, upon Pekin, he retired into complete seclusion, forbidding the admission even of most of his officers to his presence, and spending his whole time in his harem, in theological studies, and in the composition of prayers and proclamations. The imperial forces soon commenced the siege of the city, but did not for several years close the river, and the Tae-pings were not distressed; finally a fleet of junks blockaded the river, and starvation began to threaten the Tien-Wang and his followers. In the emergency he composed a doxology, which all the officers and soldiers were required to commit to memory, the purport of which was that the power of God would be exerted for their relief, day after day as the rations grew more scanty, this doxology was shouted by the Tae-ping army, till at last two of the kings, who were at some distance, attacked the imperial force from the rear, while the besieged made a sortie which broke up the siege. Shanghae was subsequently attacked by the Tae-pings, but the English naval force defended it, and made terrible havoc among the rebel troops with their artillery.

During the war between the allied forces (England and France) and the Chinese emperor, which terminated in the treaty of Tien-tsin in Oct. 1860, the Tae-pings contented themselves with plundering the region about Nankin, and attempted no great enterprises; but since that time they have been more active, and on the 9th Dec. 1861, captured the city of Ningpo, one of the free ports, at which the Western powers traded. They respected the lives and property of the foreign residents, but butchered without mercy the native inhabitants. They next announced their determination to attack Shanghae; but the allied forces notified them that that city was under their protection. The Tae-pings paid no attention to this notice, but approached the city, and prepared to assault it. Thus defied, the allied forces attacked them in April, 1862, and between the 17th of that month, and the 19th of May, had captured six large cities, and among them Ningpo, which were occupied by the rebels. These successes were not obtained without considerable losses both from the fire of the Tae-pings and the climate, and though they were able to protect Shanghae from invasion, they could not act further on the offensive. The imperial Government, meantime, had signified its willingness to undertake the putting down of the rebellion if it could be supplied with ships of war and artillery, which the European powers have agreed to furnish.

The changes which have taken place in the imperial Government of China since August, 1861, give some reason to hope that the period of misrule there is past, and that a wiser policy is to be pursued in the future. The emperor, Hien-fung, on the approach of the allied forces to Pekin in 1860, had gone to his country palace of Jehoh or Jehol, in Chinese Tartary, where he remained, refusing to return after the treaty of peace had been concluded between the allies and his brother, Prince Kung. At this palace he died on the 22d August, 1861, at the age of 30, after a reign of of a little more than ten years. He was the fourth son of Tao-Kouang, whom he succeeded, but had been chosen by his father as his successor, in the belief that he possessed high capacities for the ruler of a great nation. He was but 19 years of age when he ascended the throne, and he was surrounded by artful courtiers, who soon persuaded him to give himself up to the pleasures of the harem, and leave to

them the labor of governing. Under the management of these councillors, the people were outrageously plundered and robbed, and all real knowledge of their condition was kept from him. At his death, his son Tsai-Chun, 7 years old, was proclaimed emperor under the regency of these same corrupt councillors and the empress mother, and remained at Jehoh. The prince Kung, who had shown himself a man of more ability, integrity, and enlightened views than any other of the imperial family, and through whom the treaty with the allied forces had been concluded and ratified, was left out of the regency. As the nearest relative, except the empress, of the young emperor, he was not disposed to submit to this exclusion. He accordingly visited Jehoh, and in October returned to Pekin with the young emperor and his mother, proclaimed a joint regency of the empress mother and himself, the late emperor having, as he declared, made no appointment of regents; caused the late councillors to be arrested, and summoned a high court of members of the imperial family to try them. The three who had usurped the regency were condemned to death, and the others were degraded and exiled. The prince Kung has since turned his attention to the reformation of the Chinese Government, to a more vigorous and honest administration of the laws, and the putting down of the various rebellions in progress. He has carefully and faithfully observed the treaties made with the allies, and has requested them to procure for him, at the expense of the Government, ships of war, artillery, and ammunition, to enable him to suppress the insurrections. He has opened a considerable number of the interior ports to foreign trade, and seems determined to encourage commercial and social progress. Foreign missionaries are to be allowed to instruct the people in Christianity without hindrance. There is, however, much to be done to make the Chinese a really civilized nation.

TENNESSEE, the first Confederate State occupied by the Federal armies, and one of the most populous of the Southern States, increased in population 107,084 during the ten years ending in June, 1860. The full details given by the census returns thus far made up, relative to the State, will be found under UNITED STATES, to which the reader is referred.

Nothing of special importance occurred in the State at the commencement of the year 1862, while under Confederate control, previous to the advance of the Federal army under Gen. Grant—for which *see* ARMY OPERATIONS, and also NASHVILLE.

The great Federal victories at Forts Henry and Donelson, and the consequent evacuation of Bowling Green, rendered Nashville no longer tenable.

The Legislature and executive officers of Tennessee had made preparations for such a contingency, and lost no time in removing to Memphis, where, on the 20th of February, Governor Harris addressed a message to the senate and house of representatives, in which he said:

> I deemed it my duty to remove the records of the Government to and convene the Legislature at this city, for the following reasons: The disaster to our arms at Fishing Creek [Mill Spring or Webb's Crossroads] had turned the right flank of our army, and left the country from Cumberland Gap to Nashville exposed to the advance of the Union army. The fall of Fort Henry had given the enemy the free navigation of the Tennessee river, through which channel he had reached the southern boundary of Tennessee, and the fall of Fort Donelson left the Cumberland river open to his gunboats and transports, enabling him to penetrate the heart of the State, and reach its capital at any time within a few hours, when he should see proper to move upon it.

The message, after enumerating the measures previously taken by the executive in support of the Confederate cause, and reminding the Legislature that at the time of the capture of Fort Donelson there was not a single organized and armed company in the State subject to the governor's command, recommended the amendment of the militia system, the organization of a part of the militia as cavalry and artillery, and the passing of a bill to authorize the raising, arming, and equipping of a provisional army of volunteers, and to appropriate ample means for this purpose. Governor Harris immediately took the field in person, having on the previous day issued a proclamation calling upon the people to arm themselves, and a general order to the militia, appointing places of rendezvous, and designating their commanders. On the 22d, Gen. U. S. Grant issued the following order from Fort Donelson:

> Tennessee, by her rebellion, having ignored all laws of the United States, no courts will be allowed to act under State authority, but all cases coming within the reach of the military arm, will be adjudicated by the authorities the Government has established within the State.
>
> Martial law is therefore declared to extend over West Tennessee. Whenever a sufficient number of citizens return to their allegiance to maintain law and order over the territory, the military restriction here indicated will be removed.

On the next day (the 23d), the Confederate troops evacuated Nashville; and on the 25th the city was occupied by the advance of the Federal army under Gen. Nelson. A large portion of the State having now been reconquered to the Union, President Lincoln nominated Andrew Johnson Military Governor of Tennessee, with the rank of brigadier-general of volunteers, and the nomination was confirmed by the Senate on the 5th of March. Governor Johnson, a native of North Carolina, had been 5 times a representative in Congress, and twice Governor of Tennessee, and at the time of his appointment was U. S. Senator from that State. He reached Nashville March 12th, in company with Emerson Etheridge, Clerk of the House of Representatives, and Horace Maynard, Member of Congress from Tennessee, and the next evening, in response to a serenade, he made an address, which he afterward published as an "Appeal to the People of Tennessee." After briefly recounting the

history of the secession movement, and the measures adopted by the Federal Government, he proceeded as follows:

The President has conducted this mighty contest, until, as commander-in-chief of the army, he has caused the national flag again to float undisputed over the Capitol of our State. Meanwhile, the State Government has disappeared. The executive has abdicated; the Legislature has dissolved: the judiciary is in abeyance. The great ship of state, freighted with its precious cargo of human interests and human hopes, its sails all set, and its glorious old flag unfurled, has been suddenly abandoned by its officers and mutinous crew, and left to float at the mercy of the winds, and to be plundered by every rover upon the deep. Indeed, the work of plunder has already commenced. The archives have been desecrated, the public property stolen and destroyed; the vaults of the State Bank violated, and its treasures robbed, including the funds carefully gathered and consecrated for all time to the instruction of our children.

In such a lamentable crisis, the Government of the United States could not be unmindful of its high constitutional obligation to guarantee to every State in this Union a republican form of government, an obligation which every State has a direct and immediate interest in having observed toward every other State; and from which, by no action on the part of the people in any State, can the Federal Government be absolved. A republican form of government, in consonance with the Constitution of the United States, is one of the fundamental conditions of our political existence, by which every part of the country is alike bound, and from which no part can escape. This obligation the national Government is now attempting to discharge. I have been appointed, in the absence of the regular and established State authorities, as Military Governor for the time being, to preserve the public property of the State, to give the protection of law actively enforced to her citizens, and, as speedily as may be, to restore her Government to the same condition as before the existing rebellion.

In this grateful but arduous undertaking, I shall avail myself of all the aid that may be afforded by my fellow citizens. And for this purpose I respectfully but earnestly invite all the people of Tennessee, desirous or willing to see a restoration of her ancient Government, without distinction of party affiliations or past political opinions or action, to unite with me, by counsel and coöperative agency, to accomplish this great end. I find most, if not all of the offices, both State and Federal, vacated either by actual abandonment, or by the action of the incumbents in attempting to subordinate their functions to a power in hostility to the fundamental law of the State, and subversive of her national allegiance. These offices must be filled temporarily, until the State shall be restored so far to its accustomed quiet, that the people can peaceably assemble at the ballot box and select agents of their own choice. Otherwise anarchy would prevail, and no man's life or property would be safe from the desperate and unprincipled.

I shall, therefore, as early as practicable, designate for various positions under the State and county Governments, from among my fellow citizens, persons of probity and intelligence, and bearing true allegiance to the Constitution and Government of the United States, who will execute the functions of their respective offices, until their places can be filled by the action of the people. Their authority, when their appointments shall have been made, will be accordingly respected and observed.

To the people themselves, the protection of the Government is extended. All their rights will be duly respected, and their wrongs redressed when made known. Those who through the dark and weary night of the rebellion have maintained their allegiance to the Federal Government will be honored. The erring and misguided will be welcomed on their return. And while it may become necessary, in vindicating the violated majesty of the law, and in reasserting its imperial sway, to punish intelligent and conscious treason in high places, no merely retaliatory or vindictive policy will be adopted. To those, especially, who in a private, unofficial capacity have assumed an attitude of hostility to the Government, a full and complete amnesty for all past acts and declarations is offered, upon the one condition of their again yielding themselves peaceful citizens to the just supremacy of the laws. This I advise them to do for their own good, and for the peace and welfare of our beloved State, endeared to me by the associations of long and active years, and by the enjoyment of her highest honors.

The address was listened to with respect and some favor; but the Union feeling developed in Nashville, and other parts of Middle Tennessee, after their occupation by the Federal forces, was far from answering the expectations of the North, or even of the Tennessee Unionists themselves. On the 9th of March, the citizens of Shelbyville, in Bedford county, burned a quantity of Confederate stores, to prevent them from falling into the hands of the Confederates; and soon afterward the people of Gallatin, a place in which the Southern party had before been strongly in the ascendant, held a town meeting, and expressed a readiness to return to their allegiance; but these were exceptional instances, and the Federal occupation did not become popular until there seemed reason to think it would be permanent.

On the 25th, the governor required the Common Council and other city officials of Nashville, to take the oath of allegiance to the United States, and on their refusal to do so, he issued a proclamation declaring vacant the offices of most of them, and appointing persons to act in their places until a new election could be held by the people. The mayor of Nashville, and some other citizens, were arrested on the 29th, on the charge of "disloyal practices." The newspaper press was placed under military supervision; several papers suspended publication, and on April 10th, the "Daily Nashville Union" was commenced by S. C. Mercer, a refugee from Kentucky. Affairs soon began to wear a more flattering aspect. "For several days," says the "Union" of April 11th, "the office of Governor Johnson in the Capitol has been thronged with secession men and women from the city, and adjacent country, earnestly interceding for their sons who have been, or are now, in the rebel army, and expressing the utmost willingness and even anxiety, to take the oath of allegiance to the good old Government, and faithfully discharge the duties of law-abiding, and loyal citizens." On the 12th, the editor of the "Nashville Banner" was arrested, and placed in confinement, on the charge of uttering treasonable and seditious language; and on the 15th, J. C. Guild, of Gallatin, judge of the Chancery Court, was arrested on charge of treason, by an officer of Governor Johnson's staff, and conveyed to Nashville.

On the 20th the following letter was addressed to the governor by seven Confederate officers confined at Camp Chase, near Columbus, on behalf of themselves and "a great

many others whose names were not subscribed: "

To Andrew Johnson, Governor, &c., of the State of Tennessee:

We the undersigned citizens of Columbia, Tenn., having gone into service, under the last call of Gov. Harris, the circumstances of which call, and our enlistment, you have by this time become fully aware of, are very desirous of returning to loyalty by taking the oath of allegiance to the Federal Government, and will ever feel grateful to you for our deliverance from our present confinement.

Several other letters of like import, from Tennesseeans who had served in the Southern army, were published about the same time.

Trade, for some time after the occupation of Nashville, gave no sign of reviving. Northern merchants had followed the national armies into Tennessee, in the expectation of buying cotton, and obtaining markets for their own commodities; but there was little or no cotton at Nashville and other river ports, and the planters of the interior showed no disposition to send it forward. Northern products of nearly all sorts were in great demand, and quoted at high prices; but the people had no money except the currency of the Southern Confederacy, which the Northern speculators, of course, refused to take. In a few weeks' time, however, U. S. money became comparatively plentiful throughout Middle Tennessee; confidence in the depreciated bills of Tennessee banks was restored; and cotton gradually found its way to the ports of outlet.

Buyers began to scour the country in all directions, within, and sometimes even beyond the Federal lines. The reluctance of the cotton planters to sell was soon entirely overcome. Good middling brought in April, 16 and 17 cents in specie, or U. S. Treasury notes, and 22 and 25 cents in current Tennessee paper. The following extract from the "Nashville Union" of May 10, shows the state of the Tennessee cotton traffic at that date:

Upon enquiry we have ascertained that down to the 1st of this month permits were granted for the shipment from Nashville of 2,918 bales of cotton. The requirement of permits for the shipment of goods from this to the loyal States having been abrogated, it is not easy to ascertain the precise number of bales of cotton that have been shipped since the 30th ult. Upon enquiry we have ascertained that since that date there have been shipped 634 bales. To this amount may be added from 50 to 100 bales shipped by outsiders, who are unknown to us. The whole amount shipped since the 11th of March, when trade was opened, may be set down as not less, and probably something over, 3,600 bales. The price it now commands readily is 20 cents in gold or U. S. Treasury notes—at times lots are sold at 21 cents, and at others at 19 cents. The entire amount which it may be expected will be shipped from this place during the season is estimated to be about 18,000 bales. From two to three thousand bales have been burned by the Confederate troops—chiefly in Giles county. The cotton already sold at this point has brought into the country $360,000 of good currency, either in specie or U. S. Treasury notes. If no obstacle shall be placed in the way of trade by the further operations of rebel marauding parties composed of worthless and irresponsible vagabonds, the cotton already shipped and to be shipped at this point will bring $1,800,000. That burned by the rebels is estimated at $800,000, the average value of the bales being $100 each.

Rice was also shipped to some extent, and the quantity of both these staples sent into the loyal States would have been much greater but for guerilla bands, who made it their object to prevent the crops from being sold. A proclamation was issued by the governor, threatening to imprison five or more secessionists of the neighborhood where such things occurred.

On May 12, in pursuance of a call signed by a number of prominent citizens, requesting "their fellow citizens of the State of Tennessee, who are in favor of the restoration of the former relations of this State to the Federal Union, to be present at a public meeting to be held at the capitol, in the city of Nashville," a large gathering of persons from different parts of the State took place in the Hall of Representatives. Ex-Gov. Wm. B. Campbell (now brigadier-general) was chosen president of the convention, and on taking the chair made a few remarks, in the course of which he said:

We invite all to help us in restoring the supremacy of law over Tennessee, and reinstating her in all the privileges and immunities of the Union. We wish to welcome back all our deluded fellow citizens cordially. The Government intends no sweeping confiscation, nor wild turning loose of slaves, against the revolted States. It designs no infringement on the rights of property. All will be protected who will be loyal to the Government. We bear no malice toward any one, but deep sympathy for the deluded. He had dear friends and dear relations who had gone astray, and his heart yearned for their return. The Federal Government will pursue a kind, liberal, and benevolent policy toward the people of the South, to bring them to the Union.

Addresses were made by W. H. Wiseman, Hon. W. B. Stokes, Edmund Cooper, Col. W. H. Polk, Gov. Johnson, Col. L. D. Campbell, Gen. Dumont, and others.

At the request of many persons present at this convention, the chairman appointed Allen A. Hall, John Lellyett, Russell Houston, Horace H. Harrison, and M. M. Brien, a "State Central Union Committee," for the purpose of communicating with the friends of Union in various parts of the State.

The United States circuit court opened at Nashville on the 13th, and in his charge to the Grand Jury, Judge Catron instructed them to ferret out and indict all persons guilty of aiding and abetting the marauding parties who infested the State.

On the 14th ex-Gov. Neil S. Brown, one of the leaders of the secession party in Tennessee, was arrested, by order of Gov. Johnson, on charge of treason, but was afterward released on parole. He took the oath of allegiance, and became a prominent advocate of the Union.

The following notice was issued at Nashville on May 18:

After this date no shipment of merchandise from this city or State will be allowed, except upon permits therefor issued by the proper constituted officers of the Government of the United States.

On the 21st, D. F. Carter, president, and John Herriford, cashier of the Bank of the Union at Nashville, were arrested on charge of treason, and placed in confinement.

An election for judge of the circuit court of Nashville, held on the 22d, resulted in the choice of Turner S. Foster, secessionist, by a majority of about 190. The Union vote was about 1,000; the vote against separation in Nashville in June, 1861, was only 300.

Judge Foster received his commission from the provisional governor on the 26th of July, and the same day was arrested and sent to the penitentiary.

On the 24th of May a Union meeting was held at Murfreesboro', at which speeches were made by Gov. Johnson and others, and the resolutions of the Nashville Union Convention of the 12th were unanimously adopted. Thirty-four soldiers of a Tennessee regiment in the Southern army came before the provost marshal on that occasion, and took the oath of allegiance.

On the same day, under the provisions of the general confiscation act of August 6, 1861, the United States Marshal for the Middle District of Tennessee seized at Nashville the offices of the "Republican Banner," "Union and American," and "Gazette" newspapers, and the Southern Methodist Publishing House, and on the 26th the Baptist Publishing House, and "Patriot" newspaper office, all having been active supporters of the secession movement. He also seized two gun factories in South Nashville, belonging to stock companies.

The address of the committee appointed by the Nashville Union Convention to draw up a paper setting forth the purposes of that meeting was published, June 4th. After reviewing the prosperity of Tennessee before the civil war broke out, it thus depicts the condition to which the State had been reduced by secession:

We are without representation in the national Legislature, and laws touching our most vital interests are enacted without our participation or consent. War in its most terrible form is at our doors—civil war, the scourge of nations and of the human race; here it is with all its horrors. And look at its effects upon the interests of our people! Our schools, academies, colleges, and universities as places of education and instruction are closed, and are only used as barracks for troops or as hospitals for sick and wounded soldiers. Our common school fund, for the education of the poor and helpless, has been abstracted and carried off by unauthorized and irresponsible persons beyond the control of the legitimate authorities of the State or even their own control. The funds of our State bank, our only financial agent and place of safe-keeping of the money of the State, have been seized and carried within the control of men at war against the Government. Our State debt is increased by millions without a dollar consideration. Our credit is dishonored and our currency ruined. Our commerce is cut off and our manufactures shut up. Our fences are destroyed, bridges burned, private property taken, and crops consumed under the plea of military necessity. Our fields are uncultivated and the hand of industry is still. Our cities, towns and country, are crowded with troops, and our public highways and street corners blockaded with military guards. Our Governor, Secretary of State, Comptroller, and Treasurer, with the public records of the State, are missing. Our courts are suspended, and we are without a regular government. Our sons and brothers, and our relations and friends are on the eve of battles, probably the most destructive to be recorded in history. And at a time when most needed, our churches are closed, our ministers of religion absent from their duties or in the army, and instead of "Peace on earth; good will to men," it is war to extermination.

The address discusses the abstract right of secession, defends the conduct of the Federal Government, shows the advantages of adhering to the North and the certain misery to follow a union with the Southern Confederacy.

Governor Johnson, about the same time, issued an order providing that all persons who should be arrested for using treasonable and seditious language, and who should refuse thereafter to take the oath of allegiance and give bonds in the sum of $1,000 for future good behavior, should be sent South beyond the Federal lines, with the distinct understanding that if they returned they were to be treated as spies.

Memphis was captured by the river fleet on the 6th, and West Tennessee was thus brought under the control of the Federal Government. (*See* MEMPHIS.)

On the 7th a Union meeting was held at Shelbyville, Governor Johnson, Col. May of Kentucky, and James L. Scudder, formerly a prominent secessionist and assistant inspector general of State troops under Governor Harris, being among the orators.

On June 17th Governor Johnson summoned six prominent secession clergymen of Nashville to meet him at the capitol, and requested them to take the oath of allegiance to the Federal Government. At their urgent desire, a few days were granted them for deliberation. On the 28th, as they refused to take the oath, five were sent to the penitentiary, to be kept in close confinement until arrangements could be made for escorting them beyond the lines: the sixth, being in feeble health, was paroled. On the same day Dr. J. P. Ford, and on the next day the Rev. C. D. Elliott, principal of a girls' boarding-school, and Dr. Cheatham, superintendent of the State Lunatic Asylum, were arrested at Nashville and similarly disposed of. At a Union meeting held in Pulaski, June 17, Mr. George Baber, formerly identified with the Southern party as editor of the Nashville "Banner," delivered an address in which he disavowed his past course. Another meeting of the people of Giles county was held at the same place on the 21st, when resolutions were passed whereby the citizens pledged themselves to use their influence for the speedy restoration of the State to her federal relations. Giles county is one of the most flourishing in Middle Tennessee. It is largely engaged in cotton growing, and works over 5,000 negroes. On the 23d five of the most prominent secessionists of Pulaski, including the Rev. Mr. Mooney, a Methodist clergyman, were arrested

and sent beyond the Federal lines under an escort of cavalry.

A Union meeting was held at Valley Springs Meeting House, Dickson county, on the 21st.

The anniversary of American independence was celebrated with great enthusiasm, and Union speeches were delivered at the capital and in other parts of the State.

Arrests continued frequent, and in the early part of July twenty-eight persons were arrested at Goodlettsville, but were all released on taking the oath of allegiance.

In the mean time, the Union citizens of the State had been almost incessantly harassed by roving bands of guerillas and marauders, of whom the cavalry forces of Cols. Forrest and Morgan acquired the greatest notoriety. Scarcely a day passed which did not bring a report of their seizing horses, cattle, and stores, burning bridges, tearing up railroad tracks, destroying telegraphic communications, and not unfrequently killing prominent Union men or falling unexpectedly upon small detachments of Federal troops. On the 1st of May a party of Col. Morgan's horsemen entered Pulaski and destroyed the goods of a shop keeper of that place. A military commission examined the case on the 20th, and ordered the provost marshal to collect from the secession authorities of the town, or failing in that, from certain well-known Confederate citizens, a sum sufficient to cover all the damages. As soon as Memphis had fallen the Confederate cavalry began to infest the line of the Memphis and Charleston railroad, burning cotton, carrying off Union citizens, and threatening to seize the person and destroy the property of any one who attempted to enter Memphis upon whatever pretext. On the 7th of July the pickets of a Minnesota brigade were attacked near Murfreesboro' by a party of civilians, and two of the soldiers were killed. The next day 90 guerillas were captured between Gallatin and Hartsville. On the 9th a wagon master and a sutler were fired upon from an ambush near Franklin, the the latter being killed and the former severely wounded. Similar murders were perpetrated near Memphis. On the 13th Colonels Forrest and Warner, with a regiment of Texan Rangers and a strong force of other Confederate troops, captured Murfreesboro'; and on the 21st a party of Forrest's guerillas captured the Federal pickets on the Lebanon road.

The greatest excitement now existed at Nashville, and the loyal citizens proceeded to enroll themselves in anticipation of an attack upon the city, but in a few days reënforcements arrived and the guerillas fell back toward McMinnville. On the 17th an attack was made by about 60 guerillas upon a small scouting party belonging to Gen. Negley's command, between Mount Pleasant and Columbia. The Federal soldiers, only 8 in number, took refuge in a house and defended themselves for 6 hours, the guerillas finally retiring. On the 19th a party of 11 guerillas entered Brownsville and destroyed a large quantity of cotton. On the 2d of August Gen. Nelson occupied McMinnville, the Confederates falling back before his arrival. Gen. Negley about the same time led an expedition against the guerillas in the direction of Columbia, dispersing a large assemblage of the marauders at Williamsport, and engaging them again with success at Kinderhook. On the 12th a detachment of Col. Morgan's guerillas surprised Gallatin, on the Louisville and Nashville railroad, making 130 prisoners and capturing a quantity of government stores, with a train of grain and 65 horses on the way from Louisville to Nashville. A force was immediately sent from Nashville to intercept them, but arrived only in time to capture a wagon load of arms, and exchange shots with stragglers on the outskirts of the town. On the 16th a party of workmen sent to repair the railroad which had been injured by Morgan near Gallatin were captured by guerillas, and the same day two Federal couriers were made prisoners a few miles south of Nashville. Railroad communication with the latter place was now entirely cut off on every side, bridges being burned and the track torn up for considerable distances, but the interruption lasted only a short time. On the 18th a railroad train was fired into near Columbia, a woman and child and two Federal soldiers being killed. The day afterward Clarksville was captured by a guerilla force, assisted by the disunion inhabitants of the town, Col. Mason of the 71st Ohio and about 300 men surrendering without resistance.

On the 20th a guard of 20 men under Captain Atkinson of the 50th Indiana volunteers, being attacked at Edgefield junction by an overwhelming force of guerillas under Col. Morgan, defended themselves for 3 hours behind a stockade, repulsing their assailants three times, and saving the train to Bowling Green which it seems to have been Morgan's intention to capture.

A second engagement with Morgan at Gallatin on the 22d proved a much more disastrous affair than the raid on the 12th. Gen. R. W. Johnson was taken prisoner, and more than half his command of 800 men were killed or captured. The guerillas emboldened by success now became more than ever troublesome. Travel ceased to be safe even within a few miles of the capital; the mails were robbed; Union citizens were seized and sent to the South, and small detachments of Federal troops were frequently surprised by these daring horsemen, whose rapid movements generally set pursuit at defiance. At McMinnville they attacked the stockade, but the little guard repulsed them with heavy loss; and on the 28th Col. Forrest's band had a severe engagement with a Federal Kentucky regiment near Woodbury, losing 8 killed, 30 wounded, and 15 prisoners. On the 10th of September some Federal officers were captured by guerillas while dining at a house two or three miles

from Nashville. At Covington, Tipton county, in the western part of the State, where such raids had been common, the citizens gave bonds in the sum of $50,000 to protect Union residents, and declared their purpose of hanging all guerillas who fell into their hands. The interior of the State was not only harassed by organized bands, such as those of Forrest and Morgan, who held regular commissions in the Confederate army, but were also ravaged by marauders of the worst description, who had no object but plunder, and robbed both parties alike. The guerillas also gathered in considerable force in the counties bordering on the Mississippi, and attacked transports and other vessels on the river, generally with musketry alone, but sometimes with light field artillery. On the 23d of September a party of twenty-five or thirty men at Randolph, armed with rifles, muskets, and shot-guns, signalled the steamer Eugene to land. As the boat had two passengers and some freight for that point, she rounded to, none of the officers perceiving the guerilla band, who in fact had kept in the background up to that time. It was now apparent, as the guerillas sprang from their hiding place, that the intention was to seize the boat; and the captain, regardless of the demand to surrender, boldly pushed back into the stream amid several volleys of musketry. There were a great many passengers on board, including women and children, but no one was killed or hurt.

The outrage having been reported the next day to Gen. Sherman, at Memphis, he sent the forty-sixth regiment of Ohio volunteers and a section of Willard's Chicago battery to destroy the town. These troops took passage on the steamers Ohio Belle and Eugene, which arrived at Randolph on the 25th. The inhabitants seemed to have been impressed with the conviction that the town would be destroyed, and consequently most of them had left the place. The quartermaster of the regiment went through the town and took an inventory of the buildings and their probable worth, with their owners' names, as far as they could be learned. This having been done, and everything in each house having been removed, every house in the town was burnt to the ground, except the Methodist church, which was left standing for the accommodation of the few persons turned out of doors by the fire. All the cotton and other property of value as merchandise was brought away.

The town of Randolph, thus destroyed, contained about ninety houses, said to be mostly in a dilapidated condition. It is situated about sixty miles above Memphis, and was the site of extensive Confederate fortifications before the Mississippi river was opened.

To prevent similar occurrences in future, General W. T. Sherman, commanding at Memphis, ordered that for every boat fired upon ten disloyal families should be expelled the city.

On Oct. 21st the President recommended an election for members of Congress to be held in several districts of Tennessee, and instructed the military commanders to take measures to facilitate the execution of the order.

The progress of the campaign had now brought the Confederate forces almost within sight of Nashville, and the guerillas, hovering over the route of the regular forces, carried off stragglers from the Federal columns and rendered important service to their cause by burning bridges, skirmishing with pickets, and threatening the Union supply trains. On the 19th of October, Col. Forrest was defeated on the Gallatin turnpike about 7 miles from Nashville by a Union brigade under Col. Miller. On Nov. 5th Morgan made a dash at a Federal camp north of the Cumberland, but was repulsed with some loss. The same active chieftain on the 9th was driven out of Gallatin by a detachment of Gen. Crittenden's corps, and the next day was beaten at Lebanon, where the Federalists captured a quantity of stores and some prisoners. On the following morning Morgan returned and carried off thirty men from the Union camp, soon after which exploit he joined the rebel army near Murfreesboro'.

Col. Forrest's cavalry was also active in the same part of the State, but the vigorous measures of the Federal generals soon succeeded in checking this species of irregular warfare.

Some of the Federal soldiers, however, had been guilty of excesses hardly less outrageous than those of the guerillas, and rigid orders were issued by Gen. Grant to prevent it.

On the 7th of November, a portion of one of the Illinois regiments broke open a shop at Jackson, Tenn., and plundered and destroyed property to the value of some $1,242. Gen. Grant ordered that sum to be assessed against the regiment, and such of its officers as were absent without leave at the time when the depredations were committed, the money when collected to be paid to the persons who had suffered by the outrage; and two officers who had failed to prevent it were mustered out of the service.

Toward the close of the same month, a plan was matured by the governor and Gen. Rosecrans for requiring bonds and sureties for good behavior from persons suspected as disunionists, or known to have been formerly secessionists.

On the 7th, a brigade of Gen. Dumont's division was captured by Col. Morgan, at Hartsville, near Nashville, having been surprised in their camp, and forced to surrender after a short and desultory resistance. The Confederate military authorities proclaimed a general conscription in Tennessee, and proceeded to draft into the Confederate army all able-bodied men under 40, in the portions of the State under their control. The Union men made a determined resistance, but in general, as might be supposed, with little effect. Even in Middle and West Tennessee, where the na-

tional arms were nominally paramount, the guerillas were employed to drive conscripts into the ranks. East Tennessee suffered still more severely, and it is stated that particular care was had to draft into the Confederate ranks those persons who were most conspicuous for their devotion to the Union.

In accordance with the President's order of October 21st, Governor Johnson, in the early part of December, issued a proclamation, calling for an election of representatives to the 37th Congress, to be held on the 29th, in the Ninth and Tenth Districts of Tennessee. The Ninth District embraces the counties of Henry, Weakly, Dyer, Oberon, Lauderdale, Tipton, Gipson, Carroll, and Henderson, and the Tenth includes the counties of Haywood, Madison, Hardeman, Fayette, and Shelby. The governor ends his proclamation with the notice that "no person will be considered an elector qualified to vote who, in addition to the other qualifications required by law, does not give satisfactory evidence to the judges holding the election, of his loyalty to the Government of the United States."

About the same time, Gov. Johnson published an order assessing the wealthy secessionists of Nashville and the vicinity to the amount of $60,000, for the support of the poor during the winter.

On the 20th, a body of Confederate horsemen made a raid on the railroad near Jackson, in the western part of the State, burned a long trestle work, and tore up the track for a considerable distance. The day following, a small guerilla force entered the suburbs of Memphis, pillaged several shops, and carried off 100 cattle and 180 mules. As the armies of Gens. Bragg and Rosecrans began to prepare for battle, the guerilla raids became more numerous and more destructive; Nashville was again almost isolated, and the situation of the Union troops, in continual danger of having their supplies cut off, became extremely precarious. Soon after the close of the year, the Chattanooga "Rebel" published the following from an official source:

Gen. Morgan's report of his expedition shows that 2,000 prisoners were paroled, and several hundred of the enemy killed and wounded, and an immense quantity of arms and property destroyed.

Forrest's report shows 1,500 prisoners taken, 1,000 of the enemy killed and wounded, an immense quantity of arms, ammunition, and stores destroyed, and his whole command splendidly equipped from their captures.

Our operations at Murfreesboro', including the capture of 5,000 prisoners and the capture of 2,000 at Hartsville and around Nashville, sum up 10,000 prisoners in less than a month.

We have also captured and sent to the rear 30 cannon, 60,000 small arms, with 2,000 more in the hands of our troops; 1,500 wagons destroyed, and the mules and harnesses secured. The enemy's loss in killed and wounded is estimated at 20,000, including 7 generals.

The exploits of Cols. Forrest and Morgan referred to in this summary were performed principally in the latter half of December, but the greater part of the figures set down in the subsequent part of the article should be credited to the year 1863. For the more extensive military movements, and the battles in Tennessee, *see* ARMY OPERATIONS.

TERRITORIES OF THE UNITED STATES. The Territories of the United States are constantly changing their form, by the admission of some of them into the Union as States, and the division and new organization of others in Territorial governments. The third session of the 37th Congress admitted Nevada, hitherto a Territory (organized in 1860), as a State, and organized two new Territories, Idaho, from the eastern part of Washington Territory, including the recently discovered gold regions of the Salmon, John Day, and Powder rivers; and Arizona, formerly the southern portion of New Mexico.

The Territories now existing (April, 1863) are Nebraska, Dakota, Idaho, Washington, Utah, Colorado, New Mexico, Arizona, and the Indian Territory.

NEBRASKA was organized in 1854, and the vote for its admission into the Union as a State passed one House and was lost by only a few votes in the other, at the second session of the 37th Congress. Its capital is Omaha City. Estimated area over 100,000 square miles. Population in 1860, 28,541, besides over 5,000 Indians. The governor, appointed by the President with the advice and consent of the Senate, is Alvin Saunders, whose official residence is at Omaha City. The Territorial secretary is Algernon S. Paddock, also residing at Omaha City. An election was held in the autumn for a delegate from the Territory to Congress, and Samuel G. Daly, republican, the delegate in the 37th Congress, was elected, receiving 2,333 votes, a majority of 153 over ——— Kenney, the democratic candidate. Nebraska raised two regiments of volunteers for the war, and at the time of the Indian invasion in Minnesota in Sept., 1862, a third regiment was called into the field for home service by the acting governor, A. S. Paddock, one of the other regiments from the Territory being also recalled for that service. There was some doubt whether the new mining region at the base of the Wind River Mountains, and on the headwaters of Grasshopper Creek, concerning which more will be said under Dakota, was not partly within the limits of Nebraska; it is probable at all events that the gold region extends into Nebraska. The new Territory of Idaho takes a long narrow strip from Nebraska, embracing the space between the 42d and 43d degrees of latitude from its western boundary to the 27th degree of west longitude.

DAKOTA is one of the three Territories organized by the 36th Congress in 1861. Its area is estimated at 325,000 square miles, and its population in 1860 was 44,501, of whom 39,664 were tribal Indians. Since its organization it has received a considerable addition to its white population. The capital is Yankton

on the Missouri river, about due west from Chicago, and 60 miles from the Iowa line. The governor to March, 1863, was Wm. Jayne, who was elected, in the autumn of 1862, delegate to the 38th Congress. The Territorial secretary was John Hutchinson. Both have their official residence at Yankton. The white population of the Territory was too small and too much scattered to permit of its furnishing any contingent for the war, but at the time of the Indian raid in Minnesota, some of the whites in the settlements bordering on that State were massacred, and all who were able volunteered for the punishment of the marauders. In the election for delegate to the 38th Congress, in Oct., 1862, William Jayne, republican, received 386 votes, a majority of 151 over J. B. S. Todd, democrat. On the official canvass the votes of Charles Mix and Bonhomme counties were thrown out for informality, and Gov. Jayne's majority was thus reduced to 16. Union Territorial officers (auditor and treasurer) were also chosen by a small majority. About the 1st of August, 1862, John White and ——— D'Orsay, miners from Colorado, who had started for the Salmon river mines in Washington co., commenced prospecting on Grasshopper creek or river (an affluent of the Yellowstone), near the summit of the Wind River Mountains, a spur of the Rocky Mountains, in the southwest corner of Dakota near the line of Nebraska. They soon found gold in great abundance, and other miners making discoveries of the precious metal in the vicinity, a government was organized by the miners, then about 250 in number, on the 27th of August, and the region named the Northwestern District. Subsequently two settlements were established, viz., Bannock City and Grasshopper Diggings, each of which, in Dec. 1862, contained over 1,000 inhabitants. The gold, mostly in the form of scales, proved very abundant, and the earnings of the miners were very large. It is supposed that gold deposits exist all along the eastern slope of the Rocky Mountains to the northern line of Dakota. Most of this region is now included in the new Territory of Idaho.

Idaho is the name given to the new Territory organized by the 37th Congress at its late session. It extends from the eastern boundary of Oregon to the 27th degree of longitude west from Washington, and from the 42d to the 46th parallel of north latitude, and will have an area of about 125,000 square miles. Its capital will probably be Bannock City in the new gold region on the eastern slope of the Rocky Mountains, as it is most centrally situated, though Florence, in Idaho county, a village of 3,000 or 4,000 inhabitants in the Salmon river mining region, is now the largest town in the Territory. The discovery of extensive gold deposits on the Salmon and Nez Percé rivers (tributaries of the Snake river) in 1861 and 1862, has led to a rapid influx of population into this region. A good wagon road was completed in August last, by the Government, under the superintendence of Lieut. Mullan, from Fort Benton, the head of navigation on the Missouri, to Fort Walla Walla on the Columbia river; it is 624 miles in length and passes through a country well watered and easily traversed.

Washington Territory was organized in 1853. Its capital is Olympia. The area was 176,141 square miles before Idaho was set off, and the estimated population in 1861, 14,249, aside from about 31,000 tribal Indians. Wm. Pickering is the governor, appointed by the President, and Elwood Evans secretary. The official residence of both is at Olympia. The Territory has a university at Seattle, for which buildings have been erected at a cost of about $30,000, and which has received from the General Government an endowment of 46,080 acres of land. The Territory was too sparsely settled and too remote from the seat of war to be able to send any considerable number of troops to the army, though some volunteers have united with the contingent sent from the Pacific States. Extensive gold mines were discovered in 1861 on the tributaries of the Upper Columbia, known as the Wenatchee, O'Kanagon, Kettle river, and Colville mines, and in the autumn of the same year others on the Salmon and Nez Percé rivers, now included in Idaho. It was estimated that the gold sent to market from the Washington mines in 1862 was about $5,000,000.

Nevada, though now admitted into the Union, was a Territory during the whole of 1862. It was organized March 2, 1861, and has an estimated area of 80,000 square miles. Its population in 1860 was 50,568, of whom 23,811 were Indians. Its present population is said considerably to exceed 100,000. The capital is Carson City. The Territorial governor was James W. Nye, and the Territorial secretary Orion Clemens. The official residence of both is at Carson City.

Silver mining was the all-engrossing topic in this Territory during the year 1862. In the spring there was for a short period a lull in the speculation in mining stocks, but the discovery of numerous new lodes and veins, some of them very rich in silver, gave it a fresh impulse, and from August to December new companies with capital amounting in the aggregate to more than $100,000,000 were organized in San Francisco and in Nevada Territory, three or four being often formed in a day. The Legislature of the Territory at its November session, 1862, passed a general incorporation bill requiring a majority of the trustees of these mining companies to be residents of the Territory, and protecting the stockholders and creditors against frauds, &c. The yield of the silver mines during the year was very large, amounting to nearly $15,000,000, and would have been double or triple this amount could sufficient machinery and labor have been procured to extract the ore. The Ophir, Gould and Curry, and Comstock leads have been known favorably for two or three years for

their large yield of ore containing a heavy percentage of silver and some gold, and to these have been added the Monterey, Simpson's Park, Rerse river, and numerous other leads equally valuable. The yield of several of these is from $335 to $1,093 worth of silver to each ton of ore, besides a small percentage of gold. The Territorial Government subscribed liberally to the Central Pacific Railroad to be constructed from Sacramento to Washoe, and to form a part of the line of the great Pacific Railway. The boundary line between Nevada and California had never been carefully run, and the attempt to define it led to some difficulty and collision, although the governors of California and Nevada endeavored to come to an amicable agreement in regard to it.

Utah.—This Territory was organized in 1850. Its capital is Great Salt Lake City. Its area is 120,000 square miles, and its estimated population in 1862, 79,193, of whom about 20,000 are Indians; fully 50,000 of the whites are Mormons, or, as they term themselves, members of the "Church of Jesus Christ of the Latter Day Saints." The Territorial governor is Stephen S. Harding, and the Territorial secretary, Frank Fuller, both residing at Great Salt Lake City. The principal topic of interest in Utah during the year has been the organization by the citizens of the Territory of a State Government, and their urgent request to be admitted into the Union. On the 20th of January a convention, called in accordance with a resolution of the Territorial Legislature, met, and, on the 23d of January, had reported a State constitution, in its provisions essentially similar to those of most of the States. On the 3d of March the constitution was submitted to the people for ratification, and at the same time an election for State officers and member of Congress took place. The name of the State was to be "Deseret." The constitution was adopted by a vote of 9,879. Brigham Young was elected governor, receiving 9,980 votes (the whole number cast), Heber C. Kimball, lieut.-governor, receiving 9,880 votes, and John Bernhisel (delegate from the Territory in the 37th Congress) representative in Congress, receiving 9,862 votes. The entire board of State officers and the State Legislature, elected at the same time, were Mormons, and bound to support the Mormon creed and practices, while the head of the Mormon Church was elected their chief magistrate. Senators were elected by the Legislature, which commenced its session April 14. Congress did not take action on their application during the session further than to refer it to the proper committee. A law "to punish and prevent polygamy" was passed by Congress, July 1, 1862, which was evidently intended for Utah, and a strip of land, the whole length of the Territory, and one degree in width, was taken from Utah, and annexed to Nevada. These measures did not please the authorities of Deseret, and loud threats were uttered in public and private by the leaders of what they would do unless the State should be admitted without restriction. On the second Monday of December, 1862, the Territorial Legislature assembled, and Gov. Harding sent them a long Message, in which he avowed his determination to enforce the law of Congress for the punishment of polygamy, and discussed in very free and decided terms some of the derelictions of the Legislature and citizens of the Territory. There was manifested on both sides a considerable bitterness of feeling, which might at any time result in an outbreak. The 37th Congress did not at its third and final session admit the State of Deseret, and there were indications in the spring of 1863 of a collision between the Territorial and State authorities.

Colorado.—This Territory, like Nevada and Dakota, was organized in March, 1861. Its capital is Denver City. Its area is about 100,000 square miles, and its estimated population in 1862 was about 70,000, of whom about 6,000 were tribal Indians. The Territorial governor is John Evans, and the Territorial secretary Samuel H. Elbert. The official residence of both is at Denver City. At the election, on the 1st Tuesday of October, Hiram P. Bennet, republican, was elected delegate to Congress by a plurality vote, receiving 3,655 votes, while William Gilpin, also republican, had 2,312, and ——— Francisco, democrat, 2,754. Colorado has raised for the war two regiments of cavalry, one of infantry, and a battery of artillery, besides a volunteer militia force organized at home to repel anticipated invasions from the Indians. The inhabitants of Colorado have shown themselves thoroughly loyal throughout the war. The gold mines of Colorado are very rich, and of a peculiar character, the gold being mostly deposited in connection with pyrites (sulphuret of iron, in a rotten quartz,) and these deposits grows richer the deeper they are mined. The gold raised in the Territory in 1862 amounted to about $12,000,000, and could have been easily doubled with a sufficiency of labor and machinery. On the western slopes of the Snowy Mountains there are extensive silver deposits, as well as some gold mines; lead and quicksilver ores of great extent and value have also been discovered in the Territory, and immense beds of coal of good quality near Denver City—an important discovery, as the proposed route of the Pacific Railroad is directly past these coal beds, which will furnish the needed fuel, the want of which has hitherto been the greatest difficulty apprehended in the working of that gigantic enterprise.

Indian Territory.—Under the head of Kansas the only incidents of interest in connection with this Territory, those relating to the expedition of the force of Gen. Blunt, have been mentioned. The capital of the Indian Territory is Tahlequah. The Territory contains 65,171 square miles, and had in 1860 a population of Indians and negroes of 65,380 persons.

New Mexico.—This Territory was organized in 1850. Its capital is Santa Fé. Area, before Arizona was separated from it, 256,300 square miles; population, in 1860, 83,009, besides 55,100 tribal Indians. Territorial governor, Henry Connelly; Territorial secretary, W. F. M. Arny. Both have their official residence at Santa Fé. The slave laws of the Territory were repealed in December, 1861. New Mexico, during the year 1862, was the theatre of some of the most desperate and hard-fought battles of the war. On the 4th of Jan., 1862, it was ascertained that a Texan force 1,500 strong, under command of the Confederate general Sibley, were approaching Fort Craig, 200 miles south of Santa Fé, which Col. E. R. Canby held with about 1,000 regular troops, and 1,500 volunteers. Finding the Federal force too strong to be attacked, Sibley and his Texans fell back, and did not again approach Fort Craig till they had been largely reënforced. In the last days of January, having received reenforcements, which brought his force up to fully 3,500, the Confederate general again advanced slowly and cautiously, in two columns, toward the fort. Col. Canby, hearing, on the 13th of February, from scouts and deserters, that the enemy were within 30 miles from Fort Craig, sallied out with a large force to meet and attack them, but could find no trace of them, and returned to the fort. On the 18th the Confederates appeared in front of the fort, about 2,000 strong, but retired the same day, and it was supposed commenced a retreat. Col. Canby despatched Major Duncan, with a squadron of dragoons and mounted men, to follow and harass them. The Texans retreated down the valley of the Rio Grande to a ravine about eight miles below the fort, where they had a battery of eight guns strongly planted. From this, after a sharp skirmish, Major Duncan was recalled. On the 19th and 20th the Texans attempted to cross the Rio Grande, in order to take possession of the heights opposite Fort Craig, but were driven back by the Federal forces without material loss on either side. On the 21st a desperate battle was fought, lasting most of the day, at a place called Valverde, about 10 miles below Fort Craig. Early in the morning the Federal forces captured 200 mules belonging to the Texans, and burned many of their wagons, and soon crossed the Rio Grande to attack them, with a battery of six pieces and two mountain howitzers. Both parties fought with the greatest desperation, the Texans, to capture the battery, the deadly execution of which cut them off from access to water, for want of which they and their animals were near perishing, and the Federal troops to hold the ground they had gained. The two howitzers were under command of Lieut. Hall, who successfully, and with great carnage, repulsed their attempts to capture them; the six-gun battery was commanded by Capt. McRae, and to the capture of this the main efforts of the Texans were directed. They would not have succeeded, however, had not the New Mexican volunteers (Col. Pino's regiment) been panic-stricken and fled in great disorder, and the regulars refused to obey their commander. The Texans, repeatedly repulsed by the terrible fire of the battery, which was admirably served by Capt. McRae, finally came up to the charge, armed with only their long bowie knives and Colt's revolvers, and though more than half their number fell before they reached it, they finally succeeded in killing all the gunners, and capturing the battery. The brave McRae and his two lieutenants, Michler and Bell, stood at their guns when all the rest had fled, and defended themselves with their revolvers till they were killed. The loss of this battery compelled Col. Canby to fall back to Fort Craig. His loss was 62 killed and 140 wounded; that of the Confederates was very much greater, and effectually crippled their subsequent operations. They did not attempt to capture Fort Craig, but proceeded up the Rio Grande to Albuquerque and Santa Fé, both of which towns were evacuated by our forces, which fell back to Fort Union, 100 miles east of Santa Fé, a strong position, where the Government stores for the department were concentrated. Col. Canby intercepted and captured a force of 400 Texans on their way north to reënforce Gen. Sibley. Col. Slough, in command of a force of 1,300 Colorado mounted volunteers, reached Apache Pass, on the 26th of March, on his way to reënforce Col. Donelson at Fort Union, and there met a considerable force of Texans, whom, after a severe action, he routed, capturing 100 men and officers, killing and wounding between 300 and 400, and burning 50 loaded wagons. The Federal loss was less than 150 killed and wounded. On the 28th he had another battle at Pigeon's Ranche, 25 miles north of Sante Fé, and captured more prisoners and supplies. He then fell back to Fort Union, and there received orders from Col. (now General) Canby to form a junction with his forces at Galesto, which he accomplished on the 9th of April, and there learned that the Texans were retreating from the Territory. Major Duncan, commanding the advance guard of Gen. Canby's forces, had a battle with a body of Texans in the early part of April, and defeated them. Finding themselves hard pressed in their retreat, the Texans took a strong position at Parillo, on the Rio Grande, and fortifying it hastily, awaited an attack there about the middle of April; Gen. Canby attacked them in front, and sent Major Paul, in command of the Colorado troops, to assail them in the rear. After a sharp action, in which the Federal forces lost 25 killed and wounded, the Texans were defeated with great slaughter, and compelled to fly to the mountains. From this point their retreat was a succession of disasters; the destruction of the greater part of their train reduced them to the verge of starvation, and more than one half of the original number

were left in New Mexico, as killed, wounded, or prisoners. They reached Nusilla with five pieces of artillery and seven wagons, and even this scanty supply, the small remainder of the magnificent train with which they had invaded the Territory, was destined to be still further diminished before they reached El Paso. With bitter curses on their leaders, who had gone on in advance, and left them to take care of themselves, the half-starved and wretched remnant of the Texan troops, once the flower of the Texas chivalry, made their way, sadly and slowly, homeward, and every point which they left, as for instance, Nussilla, Fort Fillmore, Fort Bliss, and El Paso, was immediately occupied by loyal troops, under the efficient movements of Gen. Carleton.

ARIZONA.—This new Territory, organized in March, 1863, comprises about two fifths of the former territory of New Mexico, being all that portion lying S. of the line of 34° N. lat. The eastern portion, forming a part of the *Llano Estacado* or Staked Plains, is arid and not desirable for settlers; the western portion, watered by the Colorado and the Gila and its tributaries, has many fertile valleys and abundant mines of gold, silver, quicksilver, and copper of great productiveness. Many new mines, rivalling in richness the best of those in California, Idaho, or Colorado, were discovered in the summer of 1862. A new port, with a good harbor, near the head of the gulf of California, has been opened, and bids fair to open this region abounding in mineral wealth to the commerce of the world.

TEXAS, the most south-western of all the States, was so completely cut off from communication outside of the Confederacy, during the year 1862, that but little is known of the internal affairs of the State. The increase in the population of the State during the ten years ending June, 1860, was 391,622, of whom 131,405 were slaves. For the further details of the census of 1860 relative to this State the reader is referred to UNITED STATES.

The crops of the State in 1862 were good, and that of grain was the largest ever known. Beef, mutton, corn, and wheat were plentiful and cheap. Thousands of cattle were sent across the Mississippi to feed the Confederate army, and immense supplies of grain. In addition to these supplies, Texas furnished as many men to the army, in proportion to the population, as any other State. In July she had furnished forty-eight regiments, or forty-five thousand men, out of a voting population of sixty-four thousand. This number of troops was increased to sixty-four regiments. The conscript act was also fully enforced. Even many churches were abandoned by their pastors for the army. In the Confederate Congress, on a motion to authorize the President to receive into service any regiments of conscripts organized by any commanding officer west of the Mississippi, Mr. Oldham, the Senator from Texas, thus spoke of affairs there:

> The section west of the Mississippi was as important as any part of the Confederacy; but regiments after regiments have been transported east of the Mississippi, and far beyond the Alleghany mountains, to fight battles in Virginia. I am proud of the fact that they were brought here, inasmuch as they were not needed at the time and were an enormous expense to the Government. The enemy are going to make one convulsive movement, and I think it will be their last. My impression is, that they will make an effort soon west of the Mississippi. I have received information from an officer in the Engineer Department that the enemy has obtained a footing upon the Gulf coast; they have possession of the Aransas Pass. They are building gunboats of light draft which they can run up the little streams and take possession of the entire coast. The troops of Arkansas are united with us by fate—the same destiny pertains to the one as to the other; and Missouri is linked in the same chain of good or ill fortune. The best troops of Texas you have transported east of the Mississippi, brought to Virginia, put into the hottest part of the contest, where they have been decimated, and now three fourths of each regiment from Texas sleep in their graves or have been discharged on account of sickness. Let this Government continue to draw on the fighting population of Texas to keep up these regiments and Texas will be ruined, irretrievably ruined. I think it is wrong and impolitic and unjust. My constituents have families, property, and homes to defend, and I protest against the men west of the Mississippi being transferred east of it, leaving their country open to the incursions of the enemy north, east, west, and south.
>
> On the wild goose Sibley expedition thirty-five hundred of the very best troops of Texas were sent to perish on the arid plains of New Mexico, and they have only drawn the enemy upon our frontier, ready to come down upon us this winter. If the Government had sent these troops with other troops in Arkansas, and struck into Missouri, and there raised a hundred thousand men, which she would have furnished, seizing St. Louis, and made a diversion in favor of Tennessee and Kentucky, what would not have been accomplished that now remains to be done at the sacrifice of oceans of blood! I do not think it is just to deplete those States west of the Mississippi of their protective forces, that their troops should be brought away to fight the battles of the populous States.

Some military movements of interest took place on the coast. On the 17th of May the commander of the Federal naval forces before Galveston, Henry Eagle, summoned the place to surrender "to prevent the effusion of blood and the destruction of property which would result from the bombardment of the town," also stating that the land and naval forces would appear in a few days. The reply was that "when the land and naval forces made their appearance the demand would be answered." The city, however, was finally taken on the 8th of October. The military and the municipal authorities retired, and the inhabitants appointed a temporary mayor. On the morning of that day Commander Renshaw, with four steamers, approached so as to command the city with the guns of his vessels, and upon a signal the mayor came off to the flag ship. The mayor requested Commander Renshaw to communicate to him his intentions in regard to the city, informing him at the same time of its abandonment by the military, of the absence of the mayor and city council, and of his appointment as mayor pro tem. by a meeting of citizens.

Commander Renshaw replied that he had come for the purpose of taking possession of the city; that it was at his mercy under his guns; that he should not interfere in the municipal affairs of the city; that the citizens might go on and conduct their business as heretofore; that he did not intend to occupy the city for the present, or until the arrival of a military commander; but that he intended to hoist the United States flag upon the public buildings, and that his flag should be respected. Whereupon the mayor pro tem. answered that he could not guarantee to him the protection of the flag; that he would do everything in his power, but that persons over whom he had no control might take down the flag and create a difficulty.

Commander Renshaw replied that, although in his previous communications with the military commander he had insisted that the flag should be protected by the city, still he thought it would be onerous upon the good citizens; and, to avoid any difficulty like that which occurred in New Orleans, he would waive that point, and when he sent the flag ashore he would send a sufficient force to protect it, and that he would not keep the flag flying for more than a quarter or half an hour—sufficient to show the absolute possession.

Commander Renshaw further said that he would insist upon the right for any of his men in charge of an officer to come on shore and walk the streets of the city, but that he would not permit his men to come on shore indiscriminately or in the night; that, should his men insult citizens, he gave the mayor the right to arrest and report them to him, when he would punish them more rigidly than the mayor possibly could; but, on the other hand, should any of his men be insulted or shot at in the streets of Galveston, or any of his ships or boats be shot at from the land or wharves, he would hold the city responsible and open his broadsides on the same instantly; that his guns were kept shotted and double shotted for that purpose; that it was the determination of his Government to hold Galveston at all hazards until the end of the war.

Commander Renshaw thus held the city, in which a small military force was placed, until the 1st of January, when it was captured by the Texans. The Federal naval force in possession at this time consisted of the gunboats Westfield, Harriet Lane, Clifton, Owasco, Corypheus, and Sachem, the latter being broken down. The troops on shore were two hundred and fifty men under Col. Burnel, of the Massachusetts 42d regiment. On the night previous, information was received by the commanding officers of both the land and naval forces that such an attack would be made. At 1 30 A. M. on the night of the 1st two or three Confederate steamers were discovered in the bay by the Clifton and Westfield. Soon after the force on shore was informed by their pickets that the Confederate artillery was in possession of the market place, about one quarter of a mile distant from the wharf on which they were quartered.

The attack commenced on shore about 3 A. M., by the enemy, upon the Federal troops, which were defended by the Sachem and Corypheus, with great energy, the troops only replying with musketry, having no artillery. About dawn the Harriet Lane was attacked, or, rather, attacked two Confederate steamers, one of which, the Bayou City, was armed with 68-pounder rifle guns, had 200 troops, and was barricaded with cotton bales, some twenty feet from the water line. The other, the Neptune, was similarly barricaded, and was armed with two small brass pieces and 160 men—(both were common river steamers). The Harriet Lane was under way in time, and went up to the attack, firing her bow gun, which was answered by the Confederates, but their 68-pounder burst at the third fire.

The Harriet Lane then ran into the Bayou City, carrying away her whole guard, passed her and gave her a broadside that did her little or no damage. The other Confederate steamer then ran into the Harriet Lane, but was so disabled by the collision that she was soon afterward obliged to back in on the flats, where she sunk in about eight feet of water, near to the scene of action. The Bayou City turned into the Harriet Lane, and she remained secured to her by catching under her guard, pouring in incessant volleys of musketry, as did the other steamer, which was returned by the Harriet Lane, with musketry. This drove the Harriet Lane's men from her guns, and probably wounded Commander Wainwright and Lieutenant Commander Lee—the latter mortally. She was then carried by boarding, by the Bayou City; her commander was summoned to surrender, which he refused to do, gallantly defending himself with his revolver until killed. But five of the Harriet Lane's men were killed, and five wounded. One hundred and ten, inclusive of officers and wounded men, were landed on shore, prisoners.

The Owasco, which had been anchored below the town, moved up at the commencement of the attack, and engaged the Confederate artillery on shore. When it was light enough for her to observe the two Confederate steamers alongside of the Harriet Lane, she moved up to her assistance, grounding several times, owing to the narrowness of the channel. Occasionally she brought her 11-inch gun to bear, but was soon driven off by the fire of the Confederate musketry. Soon the howitzers of the Harriet Lane opened on her, and she backed down below, continuing her engagement on shore. All her rifle gun crew were wounded.

The Clifton, before the action commenced, went around into Bolivar Channel to render assistance to the steamer Westfield, which had got under weigh when the Confederate steamers were first discovered. Soon after, she got

hard and fast ashore, at high water, and made a signal for assistance. When the Clifton was in the act of rendering this assistance, the flashes of the Confederate guns were first seen in the town. Commander Renshaw then directed Lieutenant Commander Law to leave him and to return to the town.

The moon had now gone down, and it became quite dark, yet the Clifton, with some difficulty, got around in the other channel, opening her batteries upon Fort Point, which the Confederates now had possession of, shelling them out and driving them up the beach as she neared the town. Here she anchored, and continued the engagement, but did not proceed up to the rescue of the Harriet Lane, owing to the failure of the Owasco, the intricacy of the channel, and the apprehension of killing the crew of the Harriet Lane, who were then exposed upon her upper deck. It was now about half past seven A. M. A white flag was hoisted on the Harriet Lane. A boat bearing a flag of truce, with a Confederate officer and an acting master of the Harriet Lane, came down to the Clifton, informing her commander of the capture of the Harriet Lane, the death of her commander and first lieutenant, and the killing and wounding of two thirds of her crew.

The proposition was made by the Confederate officer that all the Federal vessels should surrender, and one be allowed, with the crews of all, to leave the harbor, or they would proceed to capture them with the Harriet Lane and all their steamers, three more of which were in sight. These were neither armed nor barricaded. Upon being informed of this proposition, Commander Renshaw refused to consent, and directed Lieutenant Law to return and get all the vessels out of port as soon as possible, and, as he could not get the Westfield afloat, he should blow her up, and go on board the army transports Saxon and M. A. Bardman, then near him. Lieut. Law returned to execute these directions. Meanwhile, the Confederates had hauled the Harriet Lane alongside the wharf, and had made prisoners of the troops on shore, although it had been understood that all should remain in *statu quo* until the answer was returned. When the Clifton was half way toward the bar, her commander was informed by a boat from the Westfield, that, in the explosion of that vessel (which they observed some half an hour before), Commander Renshaw, Lieutenant Zimmerman, Engineer Green, and some ten or fifteen of the crew, had perished, the explosion being premature. Lieutenant Commander Law, now being commanding officer, proceeded to cross his vessel over the bar, and finally concluded to abandon the blockade altogether, considering the Owasco as his only efficient vessel, and regarding her as not equal to resist an attack from the Harriet Lane, should she come out for that purpose.

The vessels which were left in possession of the Confederates were the Harriet Lane and two coal barks, the Caralto and Elias Pike. The only injury sustained by the Harriet Lane appears to have been from a twelve-inch shell under her counter, fired by the Owasco, and the damage to her guard from the collision.

TWIGGS, David Emanuel, a major-general in the Confederate service, born in Georgia, in 1790, died in Augusta, Ga., Sept. 15, 1862. He entered the army as a captain in the 8th infantry in 1812, served throughout the war, and was afterward retained in service as captain in the 7th infantry, with the brevet rank of major. In the Mexican war he held the rank of colonel of the 2d dragoons, but acted as brigadier, commanding the right wing in the battles of Palo Alto and Resaca de la Palma, and in the same month was made brigadier-general. He was subsequently brevetted major-general for gallant and meritorious conduct at Monterey, and presented with a sword by Congress. In 1847 he was in command of a division under Gen. Scott, and the following year was military governor of Vera Cruz. At the commencement of the present war, he was in command of the Union troops in Texas, and through complicity with the Confederate leaders surrendered great quantities of military stores and material into the hands of the State authorities, and betrayed the troops under his charge to the Confederate authorities. For a short time he was in command at New Orleans, but very soon resigned, and after a retirement of a few months upon his estate in Mississippi, becoming alarmed at the approach of the Union troops, he removed to Augusta, Ga., where he died.

TYLER, John, Ex-President of the United States, born in Charles City Co., Virginia, March 29, 1790, died in Richmond, Va., Jan. 18, 1862. He graduated at William and Mary College in 1807, studied law and was admitted to the bar in 1809 when but 19 years of age, and soon obtained a large and lucrative practice. In 1811 he was elected by an almost unanimous vote to the State Legislature, and continued in that body 5 years where he vigorously supported the war policy. He was elected to Congress in 1816 to fill a vacancy, and reëlected in 1817 and 1819. He resigned in 1820 on account of ill health. In 1823–1825, he was again a member of the Legislature and in 1825 was elected by that body governor by a large majority over John B. Floyd. In 1826 he was again elected governor almost unanimously. He 1827 he was elected to the United States Senate, his competitor being the famous John Randolph, and both candidates avowing the same principles. At the expiration of his first term in the Senate in 1833 he was reëlected. While in the Senate he opposed the administration of John Quincy Adams, though he had voted for him for the Presidency. He at first supported Gen. Jackson, but favored the nullification movement in South Carolina, and voted alone against the "Force Bill." He voted for the resolution of censure against Gen.

Jackson, for removing the deposits, as an arbitrary and illegal act, though he regarded the United States Bank as an unconstitutional institution. The Legislature of Virginia in 1836 instructed their Senators to vote for the expunging this resolution, and Mr. Tyler in consequence resigned his seat. In the Presidential campaign of 1836, he was supported in Maryland by the Whigs, and in other States by the friends of Judge White for the Vice Presidency, and thenceforward became identified with the Whig party, which in 1840 nominated him for the Vice Presidency on the ticket with General Harrison. He was elected, and in April, 1841, by the death of Gen. Harrison became President. His vetoes of two successive bank bills at the extra session of Congress which followed, and his seeking the support and counsel of leading democrats, lost him the confidence of the Whigs, and before the close of his administration he had become in a degree identified with the democratic party, and finally selected his cabinet (of which John C. Calhoun was premier) wholly from that party. The most important measures of his administration were the general bankrupt act of 1841, the protective tariff of 1842, and the annexation of Texas, March 1, 1845. At the close of his administration he retired to private life, and held no public position again till February, 1861, when he was president of the Peace Conference at Washington. The measures he advocated there failing of success, he soon avowed himself a secessionist, and was elected a Senator from Virginia in the Confederate Congress at Richmond, which position he held at the time of his death. For a more full account of his political career and measures *see* NEW AMERICAN CYCLOPÆDIA, Vol. XV, p. 683, Art. TYLER, JOHN.

U

UHLAND, JOHANN LUDWIG, an eminent German poet, born in Tübingen, April 26, 1787, died in that city Nov. 13, 1862. He graduated at the University in Tübingen, receiving the degree of doctor of laws, and in 1810 visited Paris, where he applied himself to the study of the old French poets. He began the practice of law in Stuttgart, in which city he also held for some time a position in the office of the minister of justice. He was one of the noblest champions of the cause of liberty and democratic progress, and in 1814 published a volume of poems, the national songs of which became immensely popular during the great political excitement which resulted in the overthrow of the French rule in Germany. In 1819 and 1820 he was elected from Tübingen, and subsequently from Stuttgart, to the representative assembly of Wurtemberg. In 1829, having given up his legal practice, he became professor in the university of his native city, but resigned his post in consequence of not being able to attend the sittings at the Chamber. In 1839 he declined being a candidate for reëlection and retired for several years to private life. After the crisis of 1848, the Wurtemberg ministry having sent him as a delegate to Frankfort, he took part in the reorganization of the Congress, where he sat on the left side, assisted at all the sessions, and migrated with the remainder of that body to Stuttgart, where, shortly afterward, the Wurtemberg Government dissolved the conference by force. From that period he withdrew from public life, living among his numerous friends, and giving himself up wholly to study. As a lyric poet, Uhland is one of the greatest Germany has ever produced, nor was his fame confined to his own country; he has been widely known and admired in England and America.

In 1815 he issued the first collection of his *Gedichte.* In 1836 appeared his work entitled *Ueber den Mythus der nordischen Sagenlehre von Thor*, which was followed in 1845 by a collection of popular songs entitled, *Alter hochund niederdentscher Volkslieder*, each being the result of profound researches into the history of the middle ages. Among his finest ballads are "Graf Eberhard der Greiner," and the legends from Suabian history.

UNITED STATES. The prosperity and growth of the United States during the ten years ending in June, 1860, exceeded in proportion that of any previous period of ten years since the organization of the Government. The labors of compiling the census returns have become so arduous that portions are published from time to time as the work progresses. The enumeration of the people and the collection of the other statistics required the services of sixty-four marshals, and 4,417 assistants. The compensation paid to them was $1,045,206, less $207,000 still due officers in the seceded States. In the compilation of the returns there are employed in the Census Bureau 168 clerks and 16 messengers, laborers, and watchmen.

Though the number of States has increased during the ten years ending in 1860, from thirty-one to thirty-four, and five new Territories were organized, the United States received no accessions of territory within that period except a narrow strip to the southward of the Colorado river, along the Mexican line, not yet inhabited. Good health generally prevailed, peace reigned, and there was no apparent interruption to the natural progress of the population. The increase was greater by more than one million of souls than the whole population in 1810, and nearly as great as the entire number of people in 1820. The gross returns of the population are to be found in this "Cyclopædia" for 1861. The returns, by sexes, and other details, are as follows:

POPULATION, DISTINGUISHED BY COLOR, CONDITION, AND SEX, 1850 AND 1860.

Value of live stock	$544,180,516	$1,107,490,216	Water-rotted hemp, tons	1,678	3,943
Value of animals slaughtered	$111,703,142	$212,871,653	Other prepared hemp, tons	....	17,300
Wheat, bushels	100,485,944	171,183,381	Flax, lbs.	7,709,676	3,783,079
Rye, bushels	14,188,813	20,976,286	Flaxseed, bushels	562,312	611,927
Indian corn, bushels	592,071,104	830,451,707	Silk cocoons, lbs.	10,843	6,562
Oats, bushels	146,584,179	172,554,688	Maple sugar, lbs.	34,253,436	38,863,884
Rice, lbs.	215,313,497	187,140,173	Cane sugar, hhds. of 1,000 lbs.	237,133	302,205
Tobacco, lbs.	199,752,655	429,390,771	Molasses, gallons	12,700,991	25,516,699
Ginned cotton, bales of 400 lbs. each	2,469,493	5,198,077	Maple molasses, gallons	....	1,944,594
Wool, lbs.	52,516,959	60,511,343	Cane molasses, gallons	....	16,337,080
Peas and beans, bushels	9,219,901	15,188,013	Sorghum molasses, gallons	....	7,235,025
Irish potatoes, bushels	65,797,896	110,571,201	Beeswax and honey, lbs.	14,853,790	26,386,855
Sweet potatoes, bushels	38,268,148	41,606,302	Beeswax, lbs.	....	1,357,864
Barley, bushels	5,167,015	15,635,119	Honey, lbs.	....	25,028,991
			Val. of home-made manufactures	$27,493,644	$24,358,222

* Cane and maple molasses are returned together in the census of 1850, and separately in that of 1860. The product of Delaware and Missouri in 1860 was all cane molasses; of that of North Carolina, 12,494 gallons was cane, and 17,759 maple; of Mississippi, 3,445 cane; of Louisiana, 66,470 maple; of Texas, 3,600 maple; and of Tennessee, 6,754 maple. In all other cases the kind of molasses, with slight exceptions, corresponds with that of the sugar produced. The culture of sorghum has been introduced since 1850.

CONDENSED TABULAR STATEMENT OF THE AGGREGATE OF MANUFACTURES IN EACH STATE AND TERRITORY, 1860.

Such are the important facts furnished by the census of 1860, so far as they have been compiled. The political action of the United States in 1862 is the next topic to be considered.

Perhaps a brief summary of the opinions which had existed, the declarations which had been made, and the measures which had been adopted up to the close of 1861, will greatly assist in forming a correct view of the course of the Government in 1862, relative to the war, which was the great and absorbing subject of its action. The measures and disputes which resulted in war, all had reference to the existence of slavery in the Southern States. The Federal Government was conducted by those who were mixed up in these measures and disputes on the one side, and the Confederate Government by those involved in them on the other. The opinion entertained by Southern statesmen previous to the difficulties was that the Constitution of the United States protected the institution of slavery in the States, in so far as it withheld from the Government all power to interfere with the institutions of the States, as it required the Government to restore fugitives, as it gave a representation in Congress based upon their numbers, and as all direct taxes were to be estimated on a basis including this population.

Those known as radical abolitionists in the Northern States held the same opinion relative to the Constitution of the United States, and for this reason they denounced it as "a covenant with death and a league with hell." In their view disunion immediate and complete was the only feasible means by which to be released from its obligations. Those known as anti-slavery men had a distinct political organization, and took a position in the rear of the former. They held a similar opinion relative to the powers of the Federal Government over the institutions of the States, but de-

voted their efforts to defeat the operations of the law for the recovery of fugitives, to aid the slave in escaping from his servitude, to thwart on every occasion, if possible, all measures tending to promote the interests of slaveholders, and to persuade persons tenderly conscientious, that slavery was a sin which it was their duty to exterminate, and that the black man was the equal of the white man. The remainder of the people held the same opinion on the powers of the Federal Government over the institutions of the States. Indeed, it may be said there was not a dissentient opinion on that subject. But while the great mass of the people in the Northern States held these views they also considered that slavery was an institution abolished as profitless at the North, and, therefore, one in which they had no concern.

The thoughtful reader will see that here were the seeds of a dissolution of the Union of the States. So long as the persons of anti-slavery or abolition views were few and insignificant, they remained in obscurity, but if the hour should ever come in which they should hold the control of the Federal Government, it would involve a concession on their part, or on that of the slaveholders, or a rupture. There was nothing to encourage the patriotic citizen to hope that concessions would be made if this hour of fate should ever come. The anti-slavery men of the Northern States and the slaveholding citizens of the Southern States quickly grew to be antagonists, and their differences and disputes were conducted with the most bitter and vindictive denunciations to be found in human language. On the floor of Congress members from the Northern States, holding high positions for intelligence and piety, denounced the slaveholding citizens of the Southern States as "bartering their own children," as "dealing in the image of God," as "buying and selling the souls of men," as "making merchandise of the Holy Ghost."* The reply to such expressions was "contemptible fanatic," &c., &c.

Meanwhile the anti-slavery sentiment grew apace, and there became enough who held those views to control State elections, by acting as a third party, and thus in one instance to control the vote of a great State at a Presidential election, which was thereby decided. The progress of these views now was more rapid; slavery was attacked in both Senate and House of Congress at every assailable point. To satisfy the scruples of the citizen who knew his duty of non-interference under the Constitution, and the stings of a conscience called to act under a belief that citizenship with a slaveholder was sin, the principle of a "higher law" was proclaimed which relieved the conscience from the obligations of the Federal Constitution. The progress of anti-slavery views now was rapid. One of the great political parties of the country was demoralized and broken up, and an anti-slavery candidate for the Presidency brought forward who carried every free State but four, and thus was almost successful. Four years of bitter anti-slavery contests ensued in which the object was to defeat the extension of slavery to any Territory by preventing the creation of any authority for its existence there. This was to be done by a direct prohibition by Congress, as some urged, or by absolute non-interference by Congress, but by the decision of the settlers. Meantime the slaveholders were told that the contest was "irrepressible," that it would go on, from the very nature of the question, until all the States became free, or all became slaveholding. At length, by the Presidential election of 1860, the administration of the Federal Government was put into the hands of the anti-slavery party. Such had been the bitterness of the contest that seven of the extreme Southern States took steps immediately to withdraw from the Union. The reason on which they attempted to justify their acts was that, in their opinion, it was the determined purpose of the Republican or anti-slavery party to so interfere with their domestic institutions as to render it unsafe for them longer to continue in the Union. (*See* ANNUAL CYCLOPÆDIA, 1861, CONGRESS, U. S.) Such, however, was the attachment of the mass of the people in those seven states to the Union, and such their indifference to these movements—that if the Republican President and party had not entertained such designs of interference, and had boldly, promptly, and fully denied it, the people would have been satisfied and secession would have been a failure from the start. On the other hand, this great party after a struggle of years had won the rightful possession to the sceptre of the nation, and were indignant at these proceedings. They preserved a moody silence, and defied the consequences. But it was the design of a portion of them to interfere with the institution of slavery and destroy it if possible. The radical abolitionists of the party preferred disunion to a longer continuance under the Constitution as it was and the Union as it had been. The anti-slavery men of the party hoped for some way to be opened to remove this institution which they regarded as a national sin. Others were determined if possible to divorce the Government from all connection with the institution, and secure "its administration on the side of freedom." Notwithstanding these were the views of considerable portions of the friends of the incoming administration, yet the great mass of them had the highest attachment to the Constitution and the Union. President Lincoln, representing their views, in his inaugural said—"the property and peace of no section are to be in no wise endangered by the now incoming Administration." In all his messages of the year 1861—in the despatches of the State Department, and in the resolutions of Congress at the extra session,

*See speeches of Horace Mann, successor to Ex-President John Quincy Adams, and others.

the maintenance of the Constitution and the preservation of the Union, with all the dignity, equality, and rights of the several States unimpaired, was declared to be the only object of the Government. In addition a proclamation by Gen. Fremont of emancipation to slaves in Missouri was countermanded by the President; and that portion of the report of the Secretary of War, Cameron, at the commencement of the session of Congress in Dec. 1861, which contained the following among other remarks, was suppressed: "If it shall be found that the men who have been held by the rebels as slaves are capable of bearing arms, and performing efficient military service, it is the right and may become the duty of this Government to arm and equip them, and to employ their services against the rebels, under proper military regulation, discipline, and command."

Such was the declared position of the Government at the close of 1861, and it was understood to be its policy not to interfere with the institutions of the States, or their domestic and local policy. These views received the approval of the great mass of the people in the States remaining in the Union, and they were producing a paralyzing effect upon the hostile elements in the seceded States. No evidence to sustain the charges which had led to secession was to be found in the acts of the Government, nor were there any indications of a purpose to approve of or adopt any distinctive anti-slavery measures in the conduct of public affairs. It may have been true that the sudden and unusual state of affairs into which the Government was thrown, demanded all its energies for the emergency, and no opportunity was given to introduce or develop any particular policy beyond its reference to present events. In the single instance of fugitives or "contrabands" as they were called, the whole action of the Government, however, was in favor of the freedom of the slaves.

At this time the first regular session of the 37th Congress commenced, Dec. 1861, and it soon appeared to differ widely from the Government. The position was assumed by the majority that slavery was the cause of the war with all its evils, and therefore it was the duty of the Government in all its branches to strive to remove this cause. Measures were at once introduced to emancipate the slaves in the district of Columbia, to prohibit the existence of slavery in all the Territories, and to abolish slavery in the seceded States by confiscation; also to remove every obstacle to the successful escape of the slave from his master in those States (*see* CONGRESS, U. S.) The introduction and discussion of these measures indicated that the legislative branch of the Government was rapidly adopting anti-slavery views. The difficulties presented by the Constitution to some of the measures proposed were avoided on the ground that under the "war power," as it was called, Congress could adopt any measures necessary to sustain the existence of the Government. The way was thus cleared for the enforcement of the most thorough anti-slavery measures, if the administrative officers of the Government came up to the necessary point for their execution. Those who had struggled for so many years under obloquy and reproach, as the friends of the slave, to whom it was necessary to give freedom, whether in the Divine order of events or not, now conceived that the day of universal emancipation through their efforts would soon dawn.

On the 6th of March President Lincoln sent a message to Congress recommending an expression by that body, that the United States ought to coöperate with any State which might adopt gradual emancipation by giving them pecuniary aid. (*See* PUBLIC DOCUMENTS, page 720). This was a great step. It was a direct and positive interference with the domestic institutions of the States. It was justified on the ground, that to deprive the leaders of secession of the hope that they would ultimately be joined by the border slave States would end the contest. It admitted the absolute right of the States to control their domestic institutions; it admitted the property of the master in the slave, but it was a preliminary step to get rid of the institution. In Congress even those who had heretofore denounced such suggestions on the ground that the "body and soul" of man could not be made the subject of pecuniary purchase or compensation, except at the sacrifice of admitting the rightfulness of the slaveowner's "claim," approved of the measure and suggested "the deportation of the institution over a bridge of gold." On the 10th of April the following resolution having passed Congress was approved:

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the United States ought to co-operate with any State which may adopt gradual abolishment of slavery, giving to such State pecuniary aid, to be used by such State in its discretion, to compensate for the inconveniencies, public and private, produced by such a change of system.

Approved, *April* 10, 1862.

Among the people, those classed as extreme conservatives said, with regard to the proposition, "the intervention which it calls for is a violation of all the pledges of the previous year, and its influence must be to undo the good effected by the few conservative measures of that year." On the other hand, those of extreme anti-slavery views objected to the measure, as it offered a bounty to all the States that were in Confederate secession as much as to any so called loyal slave States, which could not be done with any sort of propriety, justice, or consistency. It held out no inducement for immediate emancipation, whereas slavery ought not to exist for one moment, and special inducements ought to be held out for its instant abolition, as against a lingering process. Ethically and pecuniarily immediate emancipation was better for all parties; and the President was culpable for keeping up the old delusion

of "gradualism." Their views of the position of affairs were thus emphatically expressed:

The President, as well as Congress, in consequence of this slaveholding rebellion, and the dire extremity to which it has brought the nation, has now the constitutional right, power, and opportunity to "proclaim liberty throughout all the land to all the inhabitants thereof;" and neither the President nor Congress must be allowed to evade this solemn duty by any dodge of this kind. "Now is the accepted time;" and now let it be "the day of salvation." Multitudes of petitions from all the free States, signed by tens of thousands of estimable citizens, are before Congress, asking for the immediate abolition of slavery under the war power; and are these to be satisfied by proposing such a will-o'-the wisp as a substitute? Why wait for the dealers in human flesh to determine when they will deem it advisable to cease from their villainy as a matter of pecuniary advantage and cunning speculation with the Government, when the Government is clothed with the constitutional power to dispose of the whole matter at once, without any huckstering or delay? "Let justice be done, though the heavens fall." President Lincoln, delay not at your peril! "Execute judgment in the morning—break every yoke—let the oppressed go free."

In a word, the proclamation was regarded by them as a "dodge" which must not be allowed to succeed.

The views of the President respecting the importance of emancipation with compensation are stated more fully and earnestly in a proclamation issued on the 19th of May, countermanding an emancipation order of General Hunter. (*See* PUBLIC DOCUMENTS.) He said:

"The resolution was adopted by large majorities in both branches of Congress, and now stands an authentic, definite, and solemn proposal of the nation to the States and people most interested in the subject matter. To the people of these States now I mostly appeal. I do not argue—I beseech you to make the arguments for yourselves. You cannot, if you would, be blind to the signs of the times. I beg of you a calm and enlarged consideration of them, ranging, if it may be, far above partisan and personal politics.

"This proposal makes common cause for a common object, casting no reproaches upon any. It acts not the Pharisee. The change it contemplates would come gently as the dews of Heaven, not rending or wrecking anything. Will you not embrace it? So much good has not been done by one effort in all past time as, in the Providence of God, it is now your high privilege to do. May the vast future not have to lament that you have neglected it."

The measure had frequently been suggested by public men before, but not in an official form.

On the 16th of April the President approved of the bill for the emancipation of the slaves in the District of Columbia, with compensation to the owners. At the same time he sent a message to Congress stating the fact, and adding:

"I have never doubted the constitutional authority of Congress to abolish slavery in the District, and I have ever desired to see the national capital freed from the institution in some satisfactory way. Hence there has never been, in my mind, any question upon the subject, except those of expediency, arising in view of all the circumstances. If there be matters within and about this act which might have taken the course or shape more satisfactory to my judgment, I do not attempt to specify them. I am gratified that the two principles of compensation and colonization are both recognized and practically applied in the act."

On the 9th of May Gen. Hunter, in the department of South Carolina, issued an order, stating that the States of South Carolina, Georgia, and Florida were declared, on the 25th of April preceding, to be under martial law. He then added: "Slavery and martial law in a free country are altogether incompatible. The persons in these States heretofore held as slaves are, therefore, declared forever free." The President immediately afterward issued his proclamation, as above stated, disavowing, on the part of the Government, any previous knowledge of this proceeding, and denying the authority of any general to take such a step, also stating that it was a question reserved to himself for decision.

This measure of Gen. Hunter served as a new occasion to call forth the sentiments of the people relative to the policy of the Government. In the course which it had thus far pursued, especially in countermanding this act, it was regarded as proceeding in the manner prescribed by the Constitution and the law. The act itself was almost universally regretted or condemned. It was apprehended that it would tend to alienate the sympathies of Unionists residing in these States, and in the other slaveholding States, and that it would be used by the Confederates to add fresh fuel to the flames by which the hearts of the Southern people had been fired, and to extinguish which more blood must necessarily flow. By some it was condemned on the great principle that each State had exclusive jurisdiction of the subject, as it had of all its internal or domestic affairs; some opposed it because of its manifest injustice in punishing, without discrimination, those who were Unionists as well as those who were disunionists; others were against it because of its direct and violent antagonism to the often declared policy of the Administration, viz., so to conduct the war as not to render the reconstruction of the Union impossible.

Emancipation with compensation still continued to be the favorite measure of the President, and, in pursuance of that object, he specially invited the Representatives and Senators from the border slaveholding States to meet him in conference on the 12th of July. On that occasion he urged, as motives for the States which they represented to resolve upon such a measure, that it would divest the Confederate States of all hope that they would ultimately join the Confederacy; the incidents of the war might extinguish the institution in their States without compensation; such a step would also shorten the war and save the money otherwise expended. He said: "How much better for you, as seller, and the nation, as buyer, to sell out and buy out that without which the war could never have been, than to sink both the thing to be sold and the price of it in cutting one another's throats!" Mr. Lincoln then appealed to them with personal considerations, representing himself under a

constraint, from which he could escape by their approval of emancipation in this form. He thus stated it:

"I am pressed with a difficulty not yet mentioned—one which threatens division among those who, united, are none too strong. An instance of it is known to you. Gen. Hunter is an honest man. He was, and I hope still is, my friend. I valued him none the less for his agreeing with me in the general wish that all men everywhere could be free. He proclaimed all men free within certain States, and I repudiated the proclamation. He expected more good and less harm from the measure than I could believe would follow. Yet, in repudiating it, I gave dissatisfaction, if not offence, to many whose support the country cannot afford to lose. And this is not the end of it. The pressure in this direction is still upon me, and is increasing. By conceding what I now ask you can relieve me, and, much more, can relieve the country in this important point."

The remarks of the President were brought to a close with appeals, extremely urgent and almost pathetic, to the border State members, to induce them to act upon the measure. Thus:

"Before leaving the capitol, consider and discuss it among yourselves. You are patriots and statesmen, and as such I pray you consider this proposition, and, at the least, commend it to the consideration of your States and people. As you would perpetuate popular government for the best people in the world, I beseech you that you do in no wise omit this. Our common country is in great peril, demanding the loftiest views and boldest action to bring a speedy relief. Once relieved, its form of Government is saved to the world; its beloved history and cherished memories are vindicated, and its happy future fully assured and rendered inconceivably grand. To you, more than to any others, the privilege is given to assure that happiness and swell that grandeur, and to link your own names therewith forever."

The delegation, which consisted of Senators and Representatives from Maryland, Western Virginia, Kentucky, and Missouri, retired to consult upon the proposition and prepare their answer to the President. Two replies, a majority and a minority, were made. The majority stated their reasons for declining to support the measure. The minority promised to recommend the measure to the consideration of the people. (*See* PUBLIC DOCUMENTS.) Replies were also made by individuals.

The answer of the majority contains also a statement of the posture of public affairs at the time and of the conduct of the war, which expressed the views of a large mass of the citizens of the Northern States. It was in these words:

The rebellion derives its strength from the union of all classes in the insurgent States; and while that union lasts the war will never end until they are utterly exhausted. We know that at the inception of these troubles Southern society was divided, and that a large portion, perhaps a majority, were opposed to secession. Now the great mass of Southern people are united. To discover why they are so we must glance at Southern society, and notice the classes into which it has been divided, and which still distinguish it. They are in arms, but not for the same objects; they are moved to a common end, but by different and even inconsistent reasons. The leaders, which word comprehends those who were previously known as the State Rights party, and which party is much the lesser class, seek to break down national independence and set up State domination. With them it is a war against nationality. The other class is fighting, as it supposes, to maintain and preserve its rights of property and domestic safety, which it has been made to believe are assailed by this Government. This latter class are not disunionists *per se;* they are so only because they have been made to believe that this Administration is inimical to their rights, and is making war on their domestic institutions. As long as these two classes act together they will never assent to a peace. The policy, then, to be pursued is obvious. The former class will never be reconciled, but the latter may be. Remove their apprehensions: satisfy them that no harm is intended to them and their institutions; that this Government is not making war on their rights of property, but is simply defending its legitimate authority, and they will gladly return to their allegiance as soon as the pressure of military dominion imposed by the Confederate authority is removed from them.

Twelve months ago both Houses of Congress, adopting the spirit of your Message, then but recently sent in, declared with singular unanimity the objects of the war, and the country instantly bounded to your side to assist you in carrying it on. If the spirit of that resolution had been adhered to, we are confident that we should before now have seen the end of this deplorable conflict. But what have we seen? In both Houses of Congress we have heard doctrines subversive of the principles of the Constitution, and seen measure after measure founded in substance on those doctrines proposed and carried through, which can have no other effect than to distract and divide loyal men, and exasperate and drive still further from us and their duty the people of the rebellious States. Military officers, following these bad examples, have stepped beyond the just limits of their authority in the same direction, until in several instances you have felt the necessity of interfering to arrest them. And even the passage of the resolution to which you refer has been ostentatiously proclaimed as the triumph of a principle which the people of the Southern States regard as ruinous to them. The effect of these measures was foretold, and may now be seen in the indurated state of Southern feeling.

To these causes, Mr. President, and not to our omission to vote for the resolution recommended by you, we solemnly believe we are to attribute the terrible earnestness of those in arms against the Government, and the continuance of the war. Nor do we (permit us to say, Mr. President, with all respect for you) agree that the institution of slavery is "the lever of their power," but we are of the opinion that "the lever of their power" is the apprehension that the powers of a common Government, created for common and equal protection to the interests of all, will be wielded against the institutions of the Southern States.

It will be seen by this statement that in the opinion of its authors the anti-slavery character of the Government was the cause of the bitterness of the war, and that the indications of an extreme anti-slavery policy served to divide the Northern people and exasperate the Southern. This, therefore, was the charge made against the Government at the time: that by an extreme anti-slavery course it would violate the Constitution and ultimately destroy, instead of restoring, the Union, which was the desire of all. There was truth in this charge. The expression of Congress at the session of July, 1861, had passed away, and the Government was advancing step by step to a proclamation of emancipation. Still an apparent or real reluctance thus to advance was manifest on the part of the President. His own declarations show that a most extreme pressure was put upon him to cause the use of his power for the destruction of slavery. The extreme anti-

slavery men were resolved to control the Government and wield it to their purposes, and by them the pressure was made to achieve their object. The answer of the delegates presents the various views relative to this point. They say:

How can we, by conceding what you now ask, relieve you and the country from the increasing pressure to which you refer? We will not allow ourselves to think that the proposition is, that we consent to give up slavery, to the end that the Hunter proclamation may be let loose on the Southern people, for it is too well known that we would not be parties to any such measure, and we have too much respect for you to imagine you would propose it. Can it mean that by sacrificing our interest in slavery we appease the spirit that controls that pressure, cause it to be withdrawn, and rid the country of the pestilent agitation of the slavery question? We are forbidden so to think, for that spirit would not be satisfied with the liberation of seven hundred thousand slaves, and cease its agitation, while three millions remain in bondage. Can it mean that by abandoning slavery in our States, we are removing the pressure from you and the country, by preparing for a separation on the line of the cotton States? We are forbidden so to think, because it is known that we are, and we believe that you are, unalterably opposed to any division at all. We would prefer to think that you desire this concession as a pledge of our support, and thus enable you to withstand a pressure which weighs heavily on you and the country. Mr. President, no such sacrifice is necessary to secure our support. Confine yourself to your constitutional authority; confine your subordinates within the same limits; conduct this war solely for the purpose of restoring the Constitution to its legitimate authority; concede to each State and its loyal citizens their just rights, and we are wedded to you by indissoluble ties.

Such were the views entertained of the policy of the Government by those who sustained it in the conduct of the war, but who were opposed to its political and anti-slavery principles. (*See* PUBLIC DOCUMENTS.)

This measure of emancipation with compensation soon proved a failure. Kentucky refused to act upon it. Maryland gave it no heed. Missouri was disposed to adopt it, but Congress expired without making any appropriation for the purpose. The next Congress will be less disposed to approve it than the last, as many of the States have protested against being taxed for any such purpose.

Bills were passed by Congress and approved by the Executive to open diplomatic relations with Hayti and Liberia. All the other measures of the same character at this session were likewise approved. At the same time military governors had been appointed in North Carolina, Tennessee, and Louisiana, on the principle that the State still lived and was a part of the Union, while some of its citizens were in a condition of hostility to the Federal Government. It was the duty of the governors to protect those loyal to the Constitution, who were considered as composing the State.

Near the 1st of July the following singular method was adopted to furnish the Government with new levies of troops. A letter was drawn up by the Governor of New York, with the concurrence of one or two others, and copies sent to all the governors of the Federal States for their signatures. It was addressed to the President, and suggested that he had better call more troops into the field. The President replied, saying that he thought so too. The correspondence was as follows:

To the President: The undersigned, governors of States of the Union, impressed with the belief that the citizens of the States which they respectively represent are of one accord in the hearty desire that the recent successes of the Federal arms may be followed up by measures which must ensure the speedy restoration of the Union, and believing that in view of the important military movements now in progress, and the reduced condition of our effective forces in the field, resulting from the usual and unavoidable casualties of the service, that the time has arrived for prompt and vigorous measures to be adopted by the people in support of the great interests committed to your charge, we respectfully request, if it meets with your entire approval, that you at once call upon the several States for such number of men as may be required to fill up all the military organizations now in the field, and add to the armies heretofore organized such additional number of men as may, in your judgment, be necessary to garrison and hold all the numerous cities and military positions that have been captured by our armies, and to speedily crush the rebellion that still exists in several of the Southern States, thus practically restoring to the civilized world our great and good Government. All believe that the decisive moment is near at hand, and to that end the people of the United States are desirous to aid promptly in furnishing all reënforcements that you may deem needful to sustain our Government.

ISRAEL WASHBURNE, Jr., Gov. of Maine.
N. S. BERRY, Gov. of New Hampshire.
FREDERICK HOLBROOK, Gov. of Vermont.
WM. A. BUCKINGHAM, Gov. of Connecticut.
E. D. MORGAN, Gov. of New York.
CHAS. S. OLDEN, Gov. of New Jersey.
A. G. CURTIN, Gov. of Pennsylvania.
A. W. BRADFORD, Gov. of Maryland.
F. H. PIERPONT, Gov. of Virginia.
AUSTIN BLAIR, Gov. of Michigan.
J. B. TEMPLE, Pres. Mil. Board of Kentucky.
ANDREW JOHNSON, Gov. of Tennessee.
H. R. GAMBLE, Gov. of Missouri.
C. P. MORTON, Gov. of Indiana.
DAVID TOD, Gov. of Ohio.
ALEXANDER RAMSEY, Gov. of Minnesota.
RICHARD YATES, Gov. of Illinois.
EDWARD SALOMON, Gov. of Wisconsin.

REPLY OF THE PRESIDENT.

EXECUTIVE MANSION, WASHINGTON, *July* 1.—*Gentlemen:* Fully concurring in the wisdom of the views expressed to me in so patriotic a manner by you in the communication of the 28th day of June, I have decided to call into the service an additional force of three hundred thousand men. I suggest and recommend that the troops should be chiefly of infantry. The quota of your State would be ———. I trust that they may be enrolled without delay, so as to bring this unnecessary and injurious civil war to a speedy and satisfactory conclusion. An order fixing the quota of the respective States will be issued by the War Department to-morrow.

(Signed) ABRAHAM LINCOLN.

This was the first call for three hundred thousand men.

In August charges were made against the President in the name of "twenty millions of people," in the most radical anti-slavery press, stating "that a great proportion of those who triumphed in his election are sorely disappointed and deeply pained by the policy he seems

to be pursuing with regard to the slaves of the rebels." "You are strangely and disastrously remiss in the discharge of your official and imperative duty with regard to the emancipation provisions of the new confiscation act." It was further added:

We complain that the Union cause has suffered, and is now suffering immensely, from mistaken deference to rebel slavery. Had you, sir, in your inaugural address, unmistakably given notice that, in case the rebellion already commenced were persisted in, and your efforts to preserve the Union and enforce the laws should be resisted by armed force, you would recognize no loyal person as rightfully held in slavery by a traitor, we believe the rebellion would therein have received a staggering if not fatal blow.

President Lincoln took notice of these charges, and replied by explaining the policy he was pursuing in these words:

As to the policy I "seem to be pursuing," as you say, I have not meant to leave any one in doubt.

I would save the Union. I would save it the shortest way under the Constitution. The sooner the national authority can be restored the nearer the Union will be "the Union as it was." If there be those who would not save the Union unless they could at the same time save slavery, I do not agree with them. If there be those who would not save the Union unless they could at the same time destroy slavery, I do not not agree with them. My paramount object in this struggle is to save the Union, and is not either to save or to destroy slavery. If I could save the Union without freeing any slave I would do it, and if I could save it by freeing all the slaves I would do it; and if I could save it by freeing some and leaving others alone, I would also do that. What I do about slavery and the colored race, I do because I believe it helps to save this Union; and what I forbear, I forbear because I do not believe it would help to save the Union. I shall do less whenever I shall believe what I am doing hurts the cause, and I shall do more whenever I shall believe doing more will help the cause. I shall try to correct errors when shown to be errors; and I shall adopt new views so fast as they shall appear to be true views.

I have here stated my purpose according to my view of official duty; and I intend no modification of my oft-expressed personal wish that all men everywhere could be free. Yours, A. LINCOLN.

This letter of the President, expressing a purpose to effect the restoration of the Union without regard to incidental consequences to the slaves, was in accordance with the sentiments of the great mass of the people in the Federal States, including a large portion of his own political party. It had the effect for the moment of reviving the confidence of that portion of the people not adherents to abolitionism as such, that in spite of the "pressure" the war would yet be conducted for the sole purpose of restoring the Union of the States. The anti-slavery men were hushed. Their bitter and unsparing denunciation of all Northern citizens who stood aloof, through patriotic or conscientious motives, from the strictly anti-slavery views and measures of the Government, as "secessionists" and "traitors," was silenced—only, however, to break out again with the renewed effort to give another turn to the screws under which the President was writhing. Nevertheless the education of the people up to emancipation was becoming more complete every day. A second call for three hundred thousand men was made, but the enlistments were slow. Threats of draft and most liberal bounties were required. This reluctance among the people to enter the ranks of the army was ascribed to the policy of the Government in not adopting bold emancipation measures. It was declared by the advocates of such measures that the streets and byways would be crowded with volunteers to fight for the freedom of the "loyal blacks," and thrice three hundred thousand could be obtained easily for that object. Still the Federal Government kept aloof. It was now urged by the advocates of emancipation that slavery in the seceded States should be treated by the Government as a military question. It was contributing nearly all the subsistence by which the enemy in arms was supported; it built the greater part of their fortifications; it dug the greater number of trenches; it alone enabled nearly all the able-bodied whites to join the Confederate army, &c. The watchword now was "the abolition of slavery by the force of arms for the sake of the Union." Those who objected to such a measure as at least futile, if not likely to be disastrous to the cause of the country, were put to silence by epithets of "disunionists," "traitors," "Southern sympathizers," and threats of imprisonment by their fellow citizens as enemies in disguise. But the Government made no proclamation. As late as the 13th of September the President was visited by a deputation representing the Christians in the city of Chicago, Illinois, with a memorial requesting him to issue a proclamation of emancipation. The deputation presented the memorial with such reasons in its favor as occurred to their minds, to which Mr. Lincoln replied as follows:

The subject presented in the memorial is one upon which I have thought much for weeks past, and I may even say for months. I am approached with the most opposite opinions and advice, and that by religious men, who are equally certain that they represent the Divine will. I am sure that either the one or the other class is mistaken in that belief, and perhaps in some respect both. I hope it will not be irreverent for me to say that if it is probable that God would reveal his will to others, on a point so connected with my duty, it might be supposed he would reveal it directly to me; for, unless I am more deceived in myself than I often am, it is my earnest desire to know the will of Providence in this matter. And if I can learn what it is I will do it! These are not, however, the days of miracles, and I suppose it will be granted that I am not to expect a direct revelation. I must study the plain physical facts of the case, ascertain what is possible and learn what appears to be wise and right. The subject is difficult, and good men do not agree. But we will talk over the merits of the case.

What good would a proclamation of emancipation from me do, especially as we are now situated? I do not want to issue a document that the whole world will see must necessarily be inoperative, like the Pope's bull against the comet! Would my word free the slaves, when I cannot even enforce the Constitution in the rebel States? Is there a single court, or magistrate, or individual that would be influenced by it there? And what reason is there to think it would have any greater effect upon the slaves than the late law of Congress, which I approved, and which offers

protection and freedom to the slaves of rebel masters who come within our lines? Yet I cannot learn that that law has caused a single slave to come over to us. And suppose they could be induced by a proclamation of freedom from me to throw themselves upon us, what should we do with them? How can we feed and care for such a multitude? Gen. Butler wrote me a few days since that he was issuing more rations to the slaves who have rushed to him than to all the white troops under his command. They eat, and that is all; though it is true Gen. Butler is feeding the whites also by the thousand; for it nearly amounts to a famine there. If, now, the pressure of the war should call off our forces from New Orleans to defend some other point, what is to prevent the masters from reducing the blacks to slavery again; for I am told that whenever the rebels take any black prisoners, free or slave, they immediately auction them off! They did so with those they took from a boat that was aground in the Tennessee river a few days ago. And then I am very ungenerously attacked for it! For instance, when, after the late battles at and near Bull Run, an expedition went out from Washington under a flag of truce to bury the dead and bring in the wounded, and the rebels seized the blacks who went along to help and sent them into slavery, Horace Greeley said in his paper that the Government would probably do nothing about it. What could I do!

Now, then, tell me, if you please, what possible result of good would follow the issuing of such a proclamation as you desire?

The conference continued for an hour and then closed with the following remarks by the President:

Do not misunderstand me, because I have mentioned these objections. They indicate the difficulties that have thus far prevented my action in some such way as you desire. I have not decided against a proclamation of liberty to the slaves, but hold the matter under advisement. And I can assure you that the subject is on my mind, by day and night, more than any other. Whatever shall appear to be God's will I will do.

On the 22d of September, nine days after the preceding conference, the President issued his proclamation, declaring "that hereafter, as heretofore, the war will be prosecuted for the object of practically restoring the constitutional relation between the United States and each of the States and the people thereof in which States that relation is or may be suspended or disturbed;" that at the next session of Congress the proposition of emancipation with compensation in the Union slaveholding States would be again recommended; and that on January 1st, 1863, "all persons held as slaves within any State or designated part of a State the people whereof shall then be in rebellion against the United States, shall be then, thenceforward, and forever free; and the Executive Government of the United States, including the military and naval authority thereof, will recognize and maintain the freedom of such persons, and will do no act or acts to repress such persons, or any of them, in any efforts they may make for their actual freedom." (*See* PUBLIC DOCUMENTS).

This declaration was received with great joy by the anti-slavery portion of the people. Those of different views took decided grounds against the measure. Their views were expressed at the State conventions held in the different States preparatory to an approaching election. (*See* the States respectively.) In the Confederate States attempts were made by some to use this act for the purpose of exasperating the spirit of the Southern people, but there were others who declared it a *brutum fulmen*, which had been exacted of the Federal Government, and powerless to injure them. The Administration was now completely on an anti-slavery platform. The extreme abolitionists had grown from a small handful to a mighty host, and held the sword and the purse of the nation in their hands. The republican party, as such, could only follow the footsteps of their leader, and give to his measures their hearty support. Or, rather, the fact was that the President followed the footsteps of the party. As is usual, in all parties the men of extreme views finally rule, unless they are seasonably sloughed off. So the republican party furnished no exception. They were in advance of the President in adopting extreme anti-slavery views. On the 13th of March, Congress passed an act making an additional "article of war," which practically made all the camps of the army "cities of refuge" to the flying slave. On the 17th of July it passed another act, declaring forever free the slaves of all disloyal persons who escaped or came under the control of the Federal Government, &c. These acts were expressive of the views of the citizens by whom the members of Congress were elected. They show the change of views which had taken place in the minds of a majority of the members, when it is remembered that the same body of men in July, 1861, adopted a resolution, a part of which was as follows: "That this war is not prosecuted upon our part in any spirit of oppression, nor for any purpose of conquest or subjugation, nor for the purpose of overthrowing or interfering with the rights or established institutions of those States; but to defend and maintain the supremacy of the Constitution and all laws made in pursuance thereof, and to preserve Union, with all the dignity, equality, and rights of the several States unimpaired," &c. The vote in favor of the resolution, in the Senate, was, ayes 30, noes 4; in the House, ayes 117, noes 2. On the same day on which the proclamation was issued a convention of governors from most of the free States assembled in Altoona, in Pennsylvania. The sessions of this extraordinary assemblage were held in secret, and its designs and proceedings were never directly known. It was charged that their purpose was to press the Administration to place in the hands of persons of strict anti-slavery views the execution of military affairs. However this may have been, an address was prepared and presented in person to the President, which thus spoke of the emancipation proclamation:

We hail with heartfelt gratitude and encouraged hope the proclamation of the President, issued on the 22d instant, declaring emancipated from their bondage all persons held to service or labor as slaves in the rebel

States, whose rebellion shall last until the first day of January now next ensuing. The right of any persons to retain authority to compel any portion of the subjects of the national Government to rebel against it, or to maintain its enemies, implies in those who are allowed possession of such authority the right to rebel themselves; and, therefore, the right to establish martial law or military government in a State or Territory in rebellion, implies the right and duty of the Government to liberate the minds of all men living therein by appropriate proclamations and assurances of protection, in order that all who are capable, intellectually and morally, of loyalty and obedience, may not be forced into treason as the unwilling tools of rebellious traitors. To have continued indefinitely the most efficient cause, support, and stay of the rebellion, would have been, in our judgment, unjust to the loyal people whose treasures and lives are made a willing sacrifice on the altar of patriotism—would have discriminated against the wife who is compelled to surrender her husband, against the parent who is to surrender his child to the hardships of the camp and the perils of battle, in favor of rebel masters permitted to retain their slaves. It would have been a final decision alike against humanity, justice, the rights and dignity of the Government, and against sound and wise national policy. The decision of the President to strike at the root of the rebellion will lend new vigor to the efforts and new life and hope to the hearts of the people. Cordially tendering to the President our respectful assurances of personal and official confidence, we trust and believe that the policy now inaugurated will be crowned with success, will give speedy and triumphant victories over our enemies, and secure to this nation and this people the blessing and favor of Almighty God, We believe that the blood of the heroes who have already fallen, and those who may yet give their lives to their country, will not have been shed in vain.

This address was signed by the following governors of States: A. G. Curtin, Penn.; John A. Andrew, Mass.; Richard Yates, Ill.; Israel Washburne, jr., Me.; Edward Salomon, Wis.; Samuel J. Kirkwood, Iowa; O. P. Morton, Ind., by D. G. Rose, his representative; Wm. Sprague, R. I.; F. H. Pierpont, Western Va.; David Tod, Ohio; N. S. Berry, N. H.; and Austin Blair, Mich.

The only ground upon which the Government could rest for authority to adopt this measure was, that it was a military necessity. Whether it was so or not, this is not the place to argue. In estimating public measures, however, in the light of history, facts should be considered. The white male population of the Federal States was 13,690,364. The white male population of the Confederate States was 5,449,463. The number of troops which the Federal Government had called into the field was upward of 1,000,000. (*See* ARMY, UNITED STATES.) The number of troops which the Confederate Government had in the field was 400,000. (*See* ARMY, CONFEDERATE.) The Federal Government had a navy which was only third in rank in the world, and more ironclads than any other nation. (*See* NAVY, UNITED STATES.) The Confederate Government had a navy, which at that time consisted of a single ship on the ocean. (*See* NAVY, CONFEDERATE.) The people of the Federal States had a commerce afloat all over the world. The people of the Confederate States had not a single commercial vessel that dared to venture freely upon the ocean. The people of the Federal States were the rivals of the greatest nations in manufactures of every kind. The people of the Confederate States had few manufactures, and those of inferior articles. The Government of the Federal States possessed the Treasury of the United States, a nation of eighty years, with its vast resources. The Confederate States had no treasury nor financial resources. The ambassadors and representatives of the former were welcomed at every court in the world. The representatives of the latter were not recognized anywhere.

Five days before the proclamation was issued, the battle of Antietam was fought, which was the turning point of the war, and decided it in favor of the Federal States.

The Secretary of War, in his report at the commencement of the session of Congress, December, 1862, thus describes the military necessity which rendered emancipation necessary:

It is seen that a force has been placed by the people of the United States at the command of the Government to maintain its authority more mighty in all the elements of warlike power than was ever before arrayed under one banner. How shall that force be employed? To smite the enemy on every hand, to attack his armies and strongholds, to occupy his ports, clear the great rivers of the West of his obstructions, and pause not until he is subdued, is our plain duty. Above all, it is our duty to disdain no legitimate aid that may save the lives of our gallant soldiers, diminish their labors, provide for their wants, and lessen the burdens of our people. No aphorism is more universally received than that "the sole object of a just war is to make the enemy feel the evils of his injustice, and by his sufferings amend his ways; he must, therefore, be attacked in his most accessible quarter."

The power of the rebels rests upon their peculiar system of labor, which keeps laborers on their plantations to support owners who are devoting their time and strength to destroy our armies and destroy our Government. Whenever that system is in hostility to the Government, it is, in my opinion, the duty of those conducting the war to strike down the system, and turn against the rebels the productive power that upholds the insurrection. Rightly organized in the recovered territory, the laborers of the rebel States will not only aid in holding fortified positions, but their labor will, as in India, free the white soldier from the most unwholesome exposure of the South. They will cultivate the corn and forage which will feed our cavalry and artillery horses, and save the country a portion of the enormous burden now attending their purchase and transport from the North.

A population of four millions true to the interests of the Union, with slight assistance from the army, will, under proper regulation and government, be of the greatest assistance in holding the territory once recovered. The principal staples of the South are the product exclusively of their labor. If protected upon the lands they have heretofore cultivated, with some organization, and with support from small detachments of loyal troops, they would not only produce much of what is needed to feed our armies and their trains, but they would forever cut off from the rebellion the resources of a country thus occupied.

On the 1st of January, 1863, the emancipation was made absolute in the Confederate States, with the exception of a few districts, by the proclamation of President Lincoln.

The proclamation closes with these words:

And by virtue of the power, and for the purpose aforesaid, I do order and declare that all persons held as slaves within said designated States and parts of States are and henceforward shall be free; and that the Executive Government of the United States, including the military and naval authorities thereof, will recognize and maintain the freedom of said persons.

And I hereby enjoin upon the people so declared to be free to abstain from all violence, unless in necessary self-defence; and I recommend to them that, in all cases when allowed, they labor faithfully for reasonable wages.

And I further declare and make known that such persons of suitable condition will be received into the armed service of the United States to garrison forts, positions, stations, and other places, and to man vessels of all sorts in said service.

And upon this act, sincerely believed to be an act of justice, warranted by the Constitution upon military necessity, I invoke the considerate judgment of mankind, and the gracious favor of Almighty God.

Thus the consummation of the original anti-slavery views was verbally reached. But it was attended with disunion, war, and blood.

The consequences of such a measure on the part of the Government depend to a certain extent upon its future action. It satisfied for the moment the extreme anti-slavery friends of the Administration. They, however, insisted that the military action of the Government should be made strictly to conform to this proclamation. How far they were successful the events of the year 1863 will demonstrate.

It is natural to suppose that the military operations of the Government could not escape the effects of this gradual change of policy, which was taking place in the Administration during 1862, especially as the Cabinet contained members who were desirous of seeing this change made. The singular inconsistency was presented of removing a commanding general of the army for certain consequences alleged to flow from his actions, while those consequences were declared in a degree to have created the "military necessity" which justified the Government in adopting the favorite measure of its political friends. For the military campaigns of 1862, *see* ARMY OPERATIONS. The effort, however, was made by the Government to secure an approval of its measures not only from the officers of the army and navy, but from all the people, by designating dissentients as "disloyal" and subjecting the boldest to a sudden and secret arrest and imprisonment. (*See* HABEAS CORPUS.) The dissentients were thereby cut off from exerting any influence whatever in favor of their peculiar views except by that last implement of constitutional liberty,—the secret ballot. The year closed with the friends of the Administration worsted at the polls at almost every election.

It is designed in this article to notice only the political action of the Government during the year. Whatever relates to its finances or foreign relations, which were conducted with much success, or to its immense army and great navy, or to its conduct of the war with the seceded States, will be found elsewhere under appropriate titles. So likewise the commerce of the country and the developments of the respective States. The legislation of Congress will be found elsewhere.

The appropriations made by Congress at the session closing in the summer of 1862, were summarily as follows:

Legislative, executive, and miscellaneous..	$13,997,594
Support of army for 1862	238,548,438
Support of navy for 1862	30,486,291
Diplomatic and consular	1,235,889
Army for 1862 and 1863	542,346,346
Navy for 1862 and 1863	42,741,338
Indian Department	2,117,962
Post Office Department	14,744,800
Military Academy	156,211
Fortifications	7,036,000
Invalid and other pensions	1,450,600
Treaty with Hanover	44,497
Total	$894,905,966

The act passed at the same session for the collection of taxes in the seceded States, was expected to give the United States the complete title to all property of its enemies in those States which could be seized and held. It provided that in all States where obstruction was made to the collection of the taxes by reason of the war, they become chargeable upon all lands within the same, which may thereby be forfeited to the United States, and a summary sale of the same "in fee simple, free and discharged from all prior liens, incumbrances, right, title, and claim whatsoever."

Another act was passed, bestowing pensions upon invalid soldiers and the relatives of those who died:

Every soldier discharged for wounds received in service, or sickness contracted after the day of his enlistment, is entitled to an Invalid Pension.

A full pension for a soldier is $8 per month from the day of his discharge, if he applies for it within one year from the date of his discharge. If he is not fully disabled, he is not entitled to a full pension, but to that portion of a pension corresponding with his disability. If he is but one fourth disabled, he is entitled to that portion of a pension. Pensions are based on the soldier's degree of disability at the time he makes his application.

Pensions are payable each year, on the fourth of March and the fourth of September.

Widows of officers, soldiers, or seamen, dying of wounds received or of disease contracted in the military or naval service, are entitled to pensions, to date from the day of the soldier's death; also children, under 16 years of age, of such deceased person, if there is no widow surviving, or from the time of the widow's re-marriage.

Mothers of officers, soldiers, or seamen, deceased as aforesaid, providing the latter have left neither widow nor children under 16 years of age, and providing, also, that the mother was dependent, wholly or in part, on the deceased for support. The mother's dependence must be clearly established.

Sisters under 16 years of age of such deceased persons dependent on the latter, wholly or in part, for support, provided there are no rightful claimants of either of the three last preceding classes.

No class of persons is provided for by the pension law except the abovenamed five.

The soldier disabled by sickness is as much entitled to a pension as though he were wounded. Pensions will be granted as soon after they are applied for as the necessary proof can be made, and the necessary examination gone through with, if the claim is properly prepared. For other important acts *see* CONGRESS, U. S.

A treaty was negotiated with Great Britain and ratified unanimously by the Senate for the suppression of the slave trade. It defined and settled within specified limits the right of search, which had been a fruitful source of vexation between the two countries for many years. A similar treaty for the same object was once negotiated with Great Britain by Mr. John Q. Adams, and confirmed by the American Senate with a single amendment, striking out the privilege of search in American waters. This was not acceded to by England, and that treaty failed. Since that time various efforts to adjust the question have been made, but it has remained open—one party frequently exercising the right of visit, if not of search, the other resisting and complaining of it as an insult and aggression, often threatening serious misunderstanding between the two nations. In the present instance Great Britain accedes to the exception, and also confines the exercise of the search to particular vessels, stated in the treaty. *See* PUBLIC DOCUMENTS.

On the 21st of February the first execution under the Federal laws for the suppression of the slave trade took place in New York. The victim was Nathaniel Gordon, captain of the slaver Erie. He was a native of the State of Maine.

During the year diplomatic relations were opened with Hayti and St. Domingo, in compliance with an act of Congress.

At the close of the year but one sentiment animated the people of the Federal States—that was the restoration of the Union and the preservation of the integrity of the country. However much some portions of the citizens might differ from the Administration on minor questions growing out of the existing circumstances, yet such was the patriotism and the devotion of all to these leading objects, that the treasure expended and the lives sacrificed would be regarded as a drop compared with what would be expended if required to succeed.

Nothing had, however, taken place up to that time of the year which indicated any such change of views as would allow of an amicable agreement between the people and Government of the Confederate States and the people and Government of the Federal States on the great question at issue between them—that of negro slavery. To the North no prospect was presented of a close of the war and permanent peace, except by so far destroying the Southern people as to make further resistance an impossibility; to the South there was no prospect of achieving their independence through the weariness or exhaustion of the North, nor any inducement voluntarily to return to the Union, arising out of a change of views or a disposition to concession on the part of the Federal Government. The year 1863 began with fiery Mars in the ascendant.

V

VAN BUREN, MARTIN, ex-President of the United States, born at Kinderhook, Columbia co., N. Y., Dec. 5, 1782, died at his residence, Lindenwald, in the same town, July 24, 1862. He commenced the study of law at the age of 14, was admitted to the bar of Columbia county in 1803, and appointed surrogate of that county in 1808. In 1812, having been for some years prominent as a member of the democratic party, he was elected to the State Senate, where he gave a hearty support to the war with Great Britain. He was elected in 1814 attorney-general of the State, and in 1816 reëlected to the State Senate. In 1818 he effected a new organization of the democratic party of the State, known for many years afterward as the Albany Regency, in opposition to De Witt Clinton, whom he formerly supported. The next year he was removed from the attorney-generalship. In 1821 he was elected to the United States Senate, and the same year was chosen a member of the State Constitutional Convention. In 1827 he was again elected to the Senate, but resigned in 1828 on being chosen governor of New York, after the death of Governor Clinton. In March, 1829, he became a member of Gen. Jackson's Cabinet, as Secretary of State, and in April, 1831, was appointed minister to England, and entered upon his duties, but the Senate, in its next session (Dec. 1831), by the casting vote of John C. Calhoun, then Vice-President, rejected his nomination; he returned in 1832, and was elected the same year Vice-President. In 1836 he was chosen President by a large majority over Gen. Harrison. The period of his administration was one of great financial embarrassment to the country, the great commercial crisis of 1837 occurring at its very commencement. The passage of the Independent Treasury Bill, which he strong-

ly advocated, and other plans for relief to the country, were the most important of the legislative measures of his administration. He took vigorous measures to prevent American aid to the Canadian insurrection of 1838, better known as the Patriot War. In 1840 he was a candidate for reëlection, but was defeated by Gen. Harrison, the embarrassments of the people being attributed to the party whose standard bearer he was. In 1848 he was nominated as the candidate of the "Free Democracy," whose motto was the "Non-extension of Slavery to the Territories," for the Presidency, in opposition to Gen. Cass, who was the candidate of the regular democrats, and to Gen. Taylor, the candidate of the whig party. Gen. Taylor was elected in consequence of this division of his opponents. In 1853–1855 Mr. Van Buren made an extensive tour in Europe. For a more full account of Mr. Van Buren's political career and history *see* vol. xvi. New American Cyclopædia, p. 15, art. VAN BUREN, MARTIN.

VERMONT, the only State of the Union which has remained nearly stationary in population during the ten years ending June, 1860, is saved from an actual loss by only one third of one per cent. The actual increase of the population during that period was 978. (*See* UNITED STATES.)

The elections in the State take place annually on the 1st Tuesday of September. In 1862 the State officers and Legislature and members of Congress were elected. The voters of the State were divided into two parties, the republican and the democratic. A convention of delegates from the former was held at Montpelier, on the 9th of July, and nominated, for reëlection, as governor, Francis Holbrook; for lieutenant governor, Paul Dillingham; for treasurer, J. G. Page. The first and last were republicans, the second a democrat. The views of the convention were expressed by the adoption of resolutions "in favor of the confiscation of the slaves and property of rebels, urging the speedy and effectual suppression of the rebellion, approving the general policy of the national Administration, and pledging Vermont to furnish men and money to the last extent of her ability; tendering hearty thanks to the brave and patriotic soldiers in the field, and thanking Governor Holbrook for the prompt manner in which he tendered to the President Vermont's quota of 300,000 additional soldiers.

"Another resolution, accepting certain special acts of President Lincoln as pledges that the Government has cut itself free from all complicity with slavery, was, after an animated debate, adopted with but few dissenting voices."

A convention of delegates from the democratic party was subsequently held, which nominated for governor Benj. H. Smalley; lieutenant governor, E. A. Chapin; State treasurer, George Washburn. The views of the convention were expressed by the following resolutions, which were unanimously adopted:

Resolved, That in the present distracted state of our national affairs, and having continued confidence in the national and conservative principles and practices of the democratic party, we recommend to democrats the preservation of the democratic organization as one of the methods of patriotically saving the country.

Resolved, That it is the duty of every citizen in the present national crisis to support the Government in all constitutional efforts to subdue the existing rebellion and vindicate the authority of the Constitution over the whole country.

Resolved, That while we regret the existence of four or five millions of negroes in this country as slaves, we are unwilling to sacrifice the Constitution and the Union, or the interests of the white race, for the fancied or real grievances of the black race.

Resolved, That the abolition and radical opinions of a portion of the people of the North have been largely productive of the present war and national difficulties, and we record our hearty condemnation of the action of that class of our citizens in Congress or elsewhere.

The votes of the electors for 1862 were given as follows: republican, 30,032; democratic, 3,724. The majority of President Lincoln in 1860 over all others was 22,970. The Legislature elected was without any party division. It convened on the second Thursday in October. The message of the governor thus describes the political views of the people of the State:

It is an occasion for renewed congratulation that the people of Vermont have again shown their devotion to the cause of the Union by laying aside, almost unanimously, all considerations of a partisan character and uniting in earnest support of the national Government, which is charged with the high duty of defending and maintaining that sacred cause. The position of Vermont in this great life-struggle of the nation can neither be questioned nor misunderstood. The blood of her sons has reddened many battle-fields, and their valor and endurance have vindicated her historical renown. Her people admit no thought of concession to or compromise with the causeless and wicked rebellion now striking at the vitals of the nation, and their determination is fixed to endure and fight and sacrifice till the Government established by the wisdom, the patriotism, and blood of our fathers is restored in its beneficent and rightful sway over every portion of our Union.

The receipts into the State treasury for the year ending September 1, 1862, were $1,442,509, and the disbursements $1,218,250, leaving a balance in the treasury of $224,250. The liabilities of the State on September 1 were $1,164,977, and the resources $552,868, of which $234,988 is a balance due from the United States. The indebtedness of the State in excess of its resources is funded in State bonds, payable in ten years from June 1, 1860. The expenses of the ensuing year were estimated at $1,334,839.

Solomon Foot was reëlected by the Legislature as senator in Congress, and L. P. Polard was reëlected chief justice of the State.

The number of men sent to the army previous to the call in July for 300,000 men was 10,065. In answer to the call of July 4,164 volunteered, and in answer to the call for nine months' men 4,777 volunteered. The entire quota of the State was completed without a draft.

There are three colleges in the State, two theological schools, and three medical schools.

The number of academies in the State is 84, of private and select schools 292. The num-

ber of common school districts in the State is 2,928; the number of children between four and eighteen years of age 89,599; the number of them attending schools 63,728. The amount of public money distributed was $105,165.

VIRGINIA, the most populous of the Southern States, increased in the number of inhabitants 174,657 during the ten years ending June 1860. (*See* UNITED STATES for further details of the census.)

The State of Virginia, by its local position and resources, occupied the most prominent position in the Confederate States. The Confederate capital was located within her borders, and the strength of the Confederacy was exerted to preserve her from occupation by the Federal troops. The considerations which induced the State to secede from the Union were stated by the governor, in a message to the Legislature of the State, on the 6th of Jan. 1862, to have been as follows:

Virginia dissolved her connection with the Government of the United States on the 17th day of April last, having watched closely the political conduct of President Lincoln and his cabinet from the 4th of March preceding. A large portion of our people believed, from the revelations of his inaugural message, that he designed to subjugate the South, and much of his policy, as developed in the first six weeks of his administration, tended to confirm and strengthen this belief. The appearance of his proclamation, however, calling on Virginia and other States for volunteers, removed all doubts, and made it plain and palpable that subjugation was his object. He had revealed his purpose by the issue of his proclamation, to use Virginians, if possible, in coercing their Southern slaveholding brethren into submission to his will and obedience to his Government and authority. Virginia, seeing that the only hope of preserving her rights and honor as a State, and the liberties of her people, consisted in dissolving her connection with the Government of the United States and resuming her sovereignty, adopted that course, and subsequently determined to unite her destiny with her Southern sisters. She did so; and her convention, being at the time in session, adopted such ordinances and regulations as were necessary to protect her citizens against the machinations of enemies at home and the encroachments of enemies from abroad.

Events that have transpired since the 17th day of April last have more than confirmed the worst apprehensions of the people of Virginia, and have furnished an ample and complete justification for the secession of the State. All the wicked results apprehended when she seceded have been fearfully realized, and they now constitute an important chapter in the history of the stirring times in which we live.

Such were the considerations that influenced and determined the action of Virginia.

The term of office of the governor expires on Jan. 1, 1864. The Legislature of the State assembles annually at Richmond on the second Monday of January. Some matters of a general interest took place at the regular session in 1862. Two Senators were elected to the Confederate Congress, viz., R. M. T. Hunter and Wm. Ballard Preston. The other candidates nominated were James Barbour and Wm. C. Rives. The State convention had, at its last session, passed a bill providing for the enrollment of free negroes to be drafted to serve in the Confederate army for the term of one hundred and eighty days. A bill was passed subjecting the enrolling officers to a fine of fifty to a hundred dollars for neglect to discharge their duty. An amendment to reduce the time to one hundred and twenty days, out of regard to the families of the negroes, was rejected.

On the successes of the Federal troops in Kentucky and North Carolina, the governor sent a message to the Legislature, urging them to prepare for the danger which threatened. He said:

"A crisis is upon us. The results of recent reverses to our arms at Mill Springs, Fort Henry, and Roanoke Island appeal in the strongest terms to our patriotism, and demand an exhibition of all our energies, an uncompromising spirit, and stern and determined resolution.

The exigencies of the times are not duly appreciated by many of our people; the dangers which environ us are too lightly estimated. We must see and feel their imminence before we can be aroused to that action which is necessary to save us from alarming ills, and to avert evils which threaten our existence, our peace, and our organization as a government.

It cannot but be apparent to every mind that the object of our enemies is to cut off our southern connections by railroad and otherwise, and to defeat the transportation of troops from one point to another with certainty and celerity, as our necessities may demand. This result accomplished, and one great step will have been taken toward their success and our subjugation."

He further remarked that the capture of Richmond, which is the special purpose of the Federal Government, would be an irreparable blow to the Confederate cause, as the city was rendering it great aid by its mechanical and manufacturing resources. Therefore, in order to save that city and other cities, and prevent the subjugation of Virginia, he proposed that the male inhabitants of all the cities and towns be subjected to ordinary and extraordinary draft, by which means all males between the ages of sixteen and sixty would be available for the defence of the State. He also proposed that the Legislature should require all places of business to be closed at 2 o'clock P. M., and the whole force drafted as aforesaid to turn out for discipline and instruction.

On the call for troops by the Confederate Government, the Legislature passed a bill which provided for filling up the companies in the field to 100 men, authorized the governor to call for volunteers, and, if the requisite number was not obtained, to make a draft from the enrolled militia.

Even at this date the distillation of whiskey had increased to such an extent as to affect the supply of corn. Two hundred establishments had commenced within six months. Petitions from all quarters of the State were sent to the Legislature, requesting that its distillation should be prohibited. This was done by an act of that body.

An other act was passed prohibiting the issue of licenses to sell any kind of merchandise to foreign-born citizens who had not been naturalized. The reason of this was, because such persons, in order to avoid the draft for

soldiers put themselves under the protection of foreign consuls.

Another act prohibited the issue of licenses for a less period than a year, and annulled the permission to dealers to close out by auction. Instead of increasing, this measure diminished the State revenue. The first week in May was signalized as the great week of auctions in Richmond. Many first-class houses were thus closed. The blockade prevented these houses from replenishing their stocks of goods, but they would have continued in business with the remnants of their stock if they had been allowed to take out licenses for fractions of a year, and then sell out at auction.

The regular session of the Legislature closed in March, but an extra session was commenced soon after.

As the Federal army approached the capital, Richmond, the determination of the authorities to defend it increased. It was regarded as the point in which "centered the hopes and apprehensions of the South." The Legislature adopted a resolution relative to its defence, and the governor issued the following proclamation:

The General Assembly of this commonwealth having resolved that "the capital of the State shall be defended to the last extremity, if such defence is in accordance with the views of the President of the Confederate States, and having declared that whatever destruction and loss of property of the State or individuals shall thereby result will be cheerfully submitted to, and this action being warmly approved and seconded by the Executive,

Therefore, I do hereby request all officers who are out of service, from any cause, and all others who may be willing to unite in defending the capital of this State, to assemble this evening at the City Hall, at 5 o'clock, and proceed forthwith to organize a force to co-operate with the Tredegar battalion, and any other force which may be detailed for the purpose indicated. The organization, upon being reported to the Executive, will be recognized and properly officered, as prescribed by law, and be subject to the orders of the Governor, for local defence, under regulations to be hereafter prescribed.

Prompt and efficient action is absolutely necessary. We have a gallant army in the field, upon whom we fully and confidently rely; but no effort should be spared which can contribute to the noble object. The capital of Virginia must not be surrendered. Virginians must rally to the rescue.

Given under my hand and under the seal of the [L. S.] the Commonwealth, at Richmond, this 15th day of May, 1862, and in the eighty-sixth year of the Commonwealth.

JOHN LETCHER.

The following resolution relative to partisan rangers was adopted on May 17:

Whereas this General Assembly places a high estimate upon the value of the ranger or partisan service in prosecuting the present war to a successful issue, and regards it as perfectly legitimate, and it being understood that a Federal commander on the northern border of Virginia has intimated his purpose, if such service be not discontinued, to lay waste by fire the portion of our territory at present under his power:

Resolved by the General Assembly, That, in its opinion, the policy of employing such rangers and partisans ought to be carried out energetically, both by the authorities of this State and of the Confederate States, without the slightest regard to such threats.

A message of the governor to the Legislature at the beginning of this extra session, May 5, states that a conscription act has been passed by the Confederate Congress. His views in relation to it were thus expressed:

Since your adjournment the Confederate Congress have passed a conscription bill, which relieves the General Assembly, in a great measure, from the necessity of further legislation in regard to military matters. This bill divests the State authorities of all control over the troops of Virginia, and vests in the Confederate Government the power to enroll all persons between the ages of eighteen and thirty-five, organize them, commission the officers, call them into service, and dispose of them in such manner as they may deem advisable.

It is my deliberate conviction that this act is *unconstitutional*, but, taking into consideration the peculiar condition of affairs existing at the time of its passage, I forbear to debate the question at present. When the war is ended we can discuss these questions, and so settle them as to preserve the rights of the States. Harmony, unity, and conciliation are indispensable to success now, and I will, as the Executive of the State (protesting against it as an infringement of State rights), acquiesce in its passage, and respectfully and earnestly urge upon our people, as I have uniformly done, a prompt and cheerful response to its requirements. Drive the invader from our soil, establish the independence of the Southern Confederacy, and then we can mark, clearly and distinctly the line between State and Confederate authority.

The loss of slave property sustained by the citizens of the State at this time was estimated by the governor to exceed the loss from the destruction of cotton or any other species of property. The counties in Virginia which had been overrun contained an aggregate slave population of 80,728, valued at $45,000,000, which had been lost to the citizens.

The principle of emancipation with compensation proposed by President Lincoln in a message to Congress in March, attracted some attention at Richmond, and the following joint resolution indicative of some of the views entertained respecting it was introduced into the Senate:

The General Assembly of Virginia doth hereby declare that negroes in slavery in this State and the whole South (who are withal in a higher condition of civilization than any of their race has ever been elsewhere), having been a property of their masters for two hundred and forty years, by use and custom at first, and ever since by recognition of the public law in various forms, ought not to be, and cannot justly be, interfered with in that relation of property by the State, neither by the people in convention assembled to alter an existing constitution, or to form one for admission into the confederacy, nor by the representatives of the people in the State of the Confederate Legislature, nor by any means or mode which the popular majority might adopt; and that the State, whilst remaining republican in the structure of its government, can lawfully get rid of that species of property, if ever, only by the free consent of the individual owners, it being true, as the General Assembly doth further declare, that for the State, without the free consent of the owner, to deprive him of his identical property, by compelling him to accept a substituted value thereof, no matter how ascertained, or by the post nati policy, or in any other way not for the public use, but with a view to rid the State of such property already resident therein, and so to destroy the right of property in the subject, or to constrain the owner to send his slaves out of the State, or else to expatriate himself and carry them with him,

would contravene and frustrate the indispensable principles of free government; and whereas these Confederate States, being now all slaveholding, may be disturbed by some act of the majority in any one of them in derogation of the rights of the minority unless this doctrine above declared be interposed; therefore,

Resolved, by the General Assembly of Virginia, That the Governor of Virginia be, and he is hereby, requested to communicate this proceeding to the several governors of the Confederate States, and to request them to lay the same before their respective legislatures, and to request their concurrence therein in such way as they may severally deem best calculated to secure stability to the fundamental doctrine of Southern civilization which is hereby declared and proposed to be advanced.

Mr. Collier, the member who submitted the resolution, thus explained his purpose:

His reason for forbearing to ask a vote at this time, he said, was that he did not believe the public men of the South appreciate the doctrine announced. They do not appreciate it at its vital and most valuable point, which is its denial of the power of the majority, in making a constitution for a State, to disturb a pre-existing and resident property. The prevalence of this doctrine in the intelligence of the world can alone give the slaveholding States exemption from war. It is the repudiation of this doctrine that is at the top and bottom, and in all the circumference of the struggle in which we are engaged. If the principal sentiments asserted in that declaration, and from which the doctrine proposed as the practical result is educed, be not sound in the philosophy of the subject, and ought not to be adopted into the public law, then negro slavery ought to be abolished, and Divine wisdom will accomplish the deliverance. But, he said, he did believe the sentiments sound and the doctrine logically inevitable, and that negro slavery will exist in the countries governed by the white race until the native land of the black man shall have been civilized and Christianized. Mr. Collier said he would only now add the desire that every newspaper in the Confederacy, and as many elsewhere as will, would publish that declaration.

On the 10th of May the Legislature adjourned to the first Monday in December. But on the 15th of Sept. another special session was held. It was called together in reference to the scarcity of salt, which had become alarming. The proclamation of the governor calling an extra session thus explains the cause:

Whereas, it is represented by many citizens of this State that it is impossible to obtain supplies of the necessary article of salt, except at fabulous prices, and even then not in sufficient quantities to supply the demand, and a portion of the salt works of the Commonwealth, from which a large quantity of salt was derived, being in possession of the public enemy, and the remaining works, being owned by private persons and carried on by private enterprise, are insufficient to furnish the amount necessary for the consumption of our own people, and yet a large proportion of the annual product of the works is continually exported into the neighboring States:

And whereas the importation of foreign salt has been prevented by the blockade of our ports, and it is not probable that the demand can be supplied from that source; and the season is rapidly advancing when it will be necessary to salt up meats for the ensuing year to provide our armies and people with suitable provision; and the Legislature having made no appropriation of money to purchase or to manufacture this essential article, or to provide a remedy.

The result was the prohibition of the export of salt from the State, except upon contracts which had been previously made with the Confederate Government, until the State was supplied.

At this session the following resolutions were offered in the Senate, relative to President Lincoln's emancipation proclamation:

Whereas Abraham Lincoln, President of the United States, by his recent proclamation, is acting in stolid contempt of the principles of property in slaves of African descent, which is no less consecrated in their Federal Constitution than in ours, and is aiming, by his said proclamation, to excite a servile insurrection in our midst:

Resolved, therefore, That no person within this State shall be held to have committed any offence against the criminal laws thereof, or shall be tried, or imprisoned, or required by any magistrate, or judge, or police officer, to answer at any time for any act done in driving from the State, or putting to death by any means, any person, with or without arms, who may be found on our soil, aiding or abetting in any way to give effect in this State, or on its border, to the lawless and fiendish purposes of the said proclamation.

No action was taken upon it, and the Legislature, after a brief session, adjourned.

The new Constitution which had been drafted by the State convention was submitted to the voters of the State in March, and rejected.

The active state of hostilities within the limits of the State during the year interfered with all peaceful pursuits. The manufacturing industry of the people in the cities was occupied by the demands of the Confederate Government. Agriculture suffered by the reduction of laborers and the laying waste of the fields, except in those parts of the State removed from the scene of hostilities. Commerce was entirely cut off. The public institutions of education were closed, and the teachers became officers in the army. With wonderful earnestness and simplicity, Virginia sacrificed everything for the success of the Confederate Government. With the single exception that she would not allow conscripts to be taken from the camps of her militia, all the demands of the latter were acceded to. The spirit of ex-Gov. Floyd prevented this invasion of what was deemed her State rights. Her blood and treasure, however, were poured out as no State is recorded to have done either in ancient or modern history. She gave the Confederate service, from her own armories and stores, 75,000 rifles and muskets, 233 pieces of artillery, a magnificent armory, containing all the machinery necessary for manufacturing arms on a large scale, and, after draining her arms-bearing population to the dregs in service of the Confederacy, raised a force of her own people to drive the Federal troops from her western border, which the Confederate Government were either unable or unwilling to do.

VIRGINIA, WESTERN, which consists of the counties west of the Alleghany Mountains, has been represented in both houses of Congress and finally formed into an independent State. The proceedings which have been taken to reach this result of the formation of a new State out of a part of a State are so important as to require an accurate description.

In the winter of 1860–'61 the Legislature of the State of Virginia was convened in special session to consider the exigencies pressing upon the country in consequence of secession of the Gulf States. That Legislature passed a law directing the people of Virginia to elect delegates to a convention to be held on February 14th, at Richmond, to determine the duty of the State under the extraordinary circumstances with which she was surrounded. A vote was required to be taken at the same time when the delegates were elected, to decide whether, if the convention passed an ordinance of secession, it should be referred back to the people for their adoption or rejection. The majority of votes in favor of such reference was nearly sixty thousand. The convention assembled, an ordinance of secession was passed and formally referred to the people to be voted upon on the 4th Tuesday of May, 1861. The authorities of the State began to levy war against the United States on the next day after the passage of the ordinance, and Virginia was immediately annexed to the Confederate States, and their troops immediately occupied portions of the State. Mass meetings were immediately held in Western Virginia to take into consideration the best means of preserving their allegiance to the United States. A convention of nearly five hundred delegates assembled there early in May, 1861, which declared the ordinance of secession to be null and void; that its provision suspending the election of members of the Federal Government was a usurpation, and that if the ordinance of secession was ratified by a vote they recommended the election on June 4th of delegates to a general convention to be held on the 11th to devise such measures as the welfare of the people might demand. This convention met at Wheeling. Meantime nearly all the judicial and executive officers in that part of the State had fled to Richmond before the Federal forces. Legal protection to life, liberty, or property was given up. This convention declared the office of governor, &c., vacant, "by reason of those who occupied them having joined the rebellion," and proceeded to fill those offices. The action of this convention was not confined to Western Virginia, but intended to embrace the whole State. The governor elected thus stated the object of the convention:

> It was not the object of the Wheeling convention to set up any new government in the State, or separate, or other government than the one under which they had always lived. They made a single alteration in the Constitution of the State, which prescribes the number of delegates in the General Assembly which shall be necessary to constitute a quorum.

A declaration was made by the convention, and an ordinance adopted for the reorganization of the State Government. According to this ordinance the Government to be reorganized, either in its executive or legislative departments, was not for a part of the State, but for all of Virginia. In conformity with this ordinance a State Government was reorganized in all its branches in every county of the State not occupied by an armed foe.

On the 20th of August, 1861, the convention passed an ordinance "to provide for the formation of a new State out of a portion of the territory of this State." In compliance with its provisions delegates were elected to a constitutional convention which assembled at Wheeling, Nov. 26, 1861, and proceeded to draft a Constitution, which was submitted to the people on the first Thursday of April, 1862. The vote in favor was 18,862, that against it was 514.

The governor appointed by the convention of June, 1861, which declared the State offices vacant, now issued his proclamation convening an extra session of the Legislature, elected and organized under the same authority, and which claimed to be the Legislature of Virginia. This Legislature met on the 6th of May, 1862, and passed an act, giving its consent to the formation of a new State, and forwarded its consent to the Congress of the United States, together with an official copy of the Constitution adopted by the voters, and with the request that the said new State be admitted into the Union.

On the 31st of December, 1862, the following act of Congress was approved by the President:

An act for the admission of the State of "Western Virginia" into the Union, and for other purposes.

Whereas the people inhabiting that portion of Virginia known as West Virginia did, by a convention assembled in the city of Wheeling on the twenty-sixth of November, eighteen hundred and sixty-one, frame for themselves a Constitution, with a view of becoming a separate and independent State; and whereas at a general election held in the counties composing the territory aforesaid on the third day of May last, the said Constitution was approved and adopted by the qualified voters of the proposed State, and whereas the Legislature of Virginia, by an act passed on the thirteenth day of May, eighteen hundred and sixty-two, did give its consent to the formation of a new State within the jurisdiction of the said State of Virginia, to be known by the name of West Virginia, and to embrace the following named counties, to wit: Hancock, Brooke, Ohio, Marshall, Wetzel, Marion, Monongalia, Preston, Taylor, Tyler, Pleasants, Ritchie, Doddridge, Harrison, Wood, Jackson, Wirt, Roane, Calhoun, Gilmer, Barbour, Tucker, Lewis, Braxton, Upshur, Randolph, Mason, Putnam, Kanawha, Clay, Nicholas, Cabell, Wayne, Boone, Logan, Wyoming, Mercer, McDowell, Webster, Pocahontas, Fayette, Raleigh, Greenbrier, Monroe, Pendleton, Hardy, Hampshire, and Morgan; and whereas both the convention and the Legislature aforesaid have requested that the new State should be admitted into the Union, and the Constitution aforesaid being republican in form, Congress doth hereby consent that the said forty-eight counties may be formed into a separate and independent State. Therefore—

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the State of West Virginia be and is hereby declared to be one of the United States of America, and admitted into the Union on an equal footing with the original States in all respects whatever, and until the next general census, shall be entitled to three members in the House of Representatives of the United States: *Provided, always,* That this

act shall not take effect until after the proclamation of the President of the United States hereinafter provided for.

It being represented to Congress that since the convention of the twenty-sixth of November, eighteen hundred and sixty-one, that framed and proposed the Constitution for the said State of West Virginia, the people thereof have expressed a wish to change the seventh section of the eleventh article of said Constitution by striking out the same and inserting the following in its place, viz.: "The children of slaves born within the limits of this State after the fourth day of July, eighteen hundred and sixty-three, shall be free; and that all slaves within the said State who shall, at the time aforesaid, be under the age of ten years, shall be free when they arrive at the age of twenty-one years; and all slaves over ten and under twenty-one years, shall be free when they arrive at the age of twenty-five years; and no slave shall be permitted to come into the State for permanent residence therein:" Therefore,

SEC. 2. *Be it further enacted*, That whenever the people of West Virginia shall, through their said convention, and by a vote to be taken at an election to be held within the limits of the said State, at such time as the convention may provide, make and ratify the change aforesaid, and properly certify the same under the hand of the President of the Convention, it shall be lawful for the President of the United States to issue his proclamation stating the fact, and thereupon this act shall take effect and be in force from and after sixty days from the date of said proclamation.

Approved, Dec. 31, 1862.

These conditions were subsequently complied with by the citizens, and the President of the United States issued his proclamation accordingly:

The following is a provision of the Constitution of the United States:

New States may be admitted by the Congress into this Union; but no new States shall be formed or erected within the jurisdiction of any other State, nor any State be formed by the junction of two or more States, or parts of States, without the consent of the Legislatures of the States concerned, as well as of the Congress.

The following is the population of the counties embraced in this new State according to the census of 1860:

COUNTIES.	White population.	Slaves.	COUNTIES.	White population.	Slaves
Hancock	4,442	2	Lewis	7,736	280
Brooke	5,425	18	Gilmer	3,685	52
Ohio	22,196	100	Calhoun	2,492	9
Marshall	12,936	29	Braxton	4,885	104
Wetzel	6,691	10	Clay	1,761	21
Pleasants	2,926	15	Nicholas	4,470	154
Wood	10,791	176	Fayette	5,716	271
Jackson	8,240	55	Raleigh	3,291	57
Mason	8,752	386	Wyoming	2,797	64
Cabell	7,691	305	McDowell	1,535	..
Wayne	6,604	143	Mercer	6,428	862
Logan	4,789	148	Monroe	9,526	1,114
Boone	4,681	158	Greenbrier	10,499	1,525
Kanawha	13,787	2,184	Pocahontas	3,686	252
Roane	5,309	72	Webster	1,552	3
Wirt	3,728	23	Upshur	7,064	212
Ritchie	6,809	38	Randolph	4,793	183
Doddridge	5,168	34	Tucker	1,396	20
Tyler	6,488	18	Putnam	5,708	580

Preston	13,183	67	Morgan	3,613	94
Taylor	7,300	112			
Barbour	8,729	95	Total, 48 cos.	334,921	12,771

The officers of Western Virginia, at the close of the year, were Francis H. Pierpont, governor; Daniel Palsley, lieutenant-governor; Lucian A. Hugans, secretary; Campbell Tarr, treasurer.

On the 1st of November, 1862, these counties had furnished to the Federal army sixteen regiments of infantry, three regiments of cavalry, and one of artillery, or nearly 20,000 men.

W

WAKLEY, THOMAS, coroner for Middlesex, born in 1795, at South Devon, England, died at Madeira, whither he went for the benefit of his health, May 16, 1862. His earliest tastes were for the sea, and at ten years of age he took a voyage to Calcutta as a midshipman. Upon his return he relinquished his profession at his father's urgent request, and resolved to study medicine. With this object in view he went to a school at Wiveliscombe, and was subsequently apprenticed to an apothecary at Taunton. In 1815 he went to London to complete his medical training, and to attend Sir Astley Cooper's lectures on surgery at Guy's Hospital. In less than eighteen months after entering the hospital he passed his examination at the College of Surgeons, though he continued to attend the borough hospitals for two or three years after, and then settled in Argyle Street, London, in which locality he practised for about three years. In 1823 he retired from practice, and devoted himself to the establishment of the "Lancet," a medical journal, with which his name has been associated for nearly forty years. At the time of the establishment of the "Lancet" no clinical lectures were delivered in any of the London hospitals, nor were the cases of interest reported. The lectures at the medical schools were confined to the theories of disease and treatment, and the medical students had little opportunity of forming a practical acquaintance with the diagnosis and treatment of the medical and surgical cases they would meet in practice. Mr. Wakley determined to effect a reform in these particulars, and he commenced reporting the lectures of the most eminent professors of medicine and surgery, and the clinical instruction and hospital cases, with the consent of the lecturers when he could obtain it, and without it when he could not. This led to much opposition; he was several times prosecuted for reporting lectures, and, in one instance, removed by policemen from the amphitheatre, but in every case he eventually obtained decisions in his favor. He also effected other reforms in the manage-

ment and efficiency of the Royal College of Surgeons, and in the exercise of the duties of coroners. In short, he made the "Lancet" felt as a power which would be exercised on the side of right, the removal of abuses, and the reform of practices, which injured and dishonored the medical profession. In 1839 he was chosen coroner of Middlesex, which office he held until his death. His ability and eloquence, displayed on several occasions, led his friends to request that he would become a candidate for the representation of Finsbury in Parliament. He was defeated, however, in 1832, and again in 1834, but in January, 1835, was elected, and continued to hold his seat until 1852, when he retired from Parliamentary life. While in Parliament, he always spoke and voted for the abolition of all taxes upon knowledge, and was influential in obtaining a select committee to enquire into the state of medical education and practice, the report of which had great influence on the progress of medical reform.

WATER WORKS.—Boston, Cochituate Water Works. The expenditures, on account of the Water Works, to January 1, 1863, are $9,526,121.29, from which there should be deducted sundry credits by the city, and amounts received for water rates, $3,515,303.23, leaving the actual cost of the works, January 1, 1863, $6,010,818.06. The total amount received for water used during the year ending January 1, 1863, was $364,036.37. The average daily consumption of water during the year has been 16,600,000 gall., which daily consumption is 1,589,304 gall. less than in the year 1861. The consumption has decreased over one million gallons per day, but the receipts for water used during the year have considerably increased. This saving of water is mainly owing to the number of water meters placed in establishments where large quantities of water are used.

During $3\frac{1}{2}$ days in May, water was wasted from the lake into Sudbury river, amounting in all to 33,200,000 gallons, equal to about 2 days' supply for the city. This was the total amount of waste for the whole year.

During the year there has been a gain of 5 ft. of water in the lake, equal to about 60 days' supply—nearly $\frac{1}{5}$ of the number of days in the year—but there has been about $\frac{1}{5}$ more than the average annual rain fall, showing an amount used equal to the average annual rainfall, and also showing all that the lake can be relied on to furnish annually is used. More storage room is needed with the present means of supply, as well as a new source of supply.

According to Mr. J. P. Hall's measurements of rain fall in Boston, the average annual amount for 29 years previous to 1852 was 42.24 inches; and for $\frac{1}{3}$ of that time the annual amount was less than the average of 41 inches. In 1828 it was only 32.41 inches.

From 1852 to 1862, inclusive—51.61 inches. A similar increase has taken place, to a greater or less extent, at neighboring places.

Brooklyn Nassau Water Works.—Water has been introduced and distributed by means of these works since 1859, but it was not till May, 1862, that the whole works were completed and transferred by the contractors and constructing board to the city.

The works were constructed under the charge of James P. Kirkwood, Esq., chief engineer, by Messrs. H. S. Welles & Co., contractors. The sources of supply are several ponds along the south shore of Long Island, as follows:

Name of Pond.	Area of Pond and Grounds. Acres.	Water Surface. Acres.	Surface above Tide in feet.	Drainage Area. Square Miles.	Minimum Summer Delivery, N. Y. Gallons, per Diem.
Hempstead..	$26\frac{58}{100}$	$23\frac{52}{100}$	$10\frac{6}{10}$	$25\frac{79}{100}$	8,500,000
Rockville....	$15\frac{5}{10}$	8	12	$8\frac{31}{100}$	2,800,000
Valley Str'm.	$23\frac{2}{10}$	$17\frac{78}{100}$	$12\frac{8}{10}$	$6\frac{38}{100}$	2,600,000
Clear Stream.	$1\frac{8}{10}$	$1\frac{07}{100}$	$11\frac{5}{10}$	$8\frac{87}{100}$	800,000
Brookfield....	$11\frac{88}{100}$	$8\frac{75}{100}$	$15\frac{4}{10}$	$8\frac{87}{100}$	2,000,000
Jamaica.....	$67\frac{335}{1000}$	40	$7\frac{8}{10}$	$10\frac{88}{100}$	3,300,000
	$146\frac{295}{1000}$	$99\frac{12}{100}$		$60\frac{23}{100}$	20,000,000

The average rain fall over this drainage district has been, for the past 37 years, $39\frac{60}{100}$ inches.

The minimum rain fall was, in the year 1835, $28\frac{78}{100}$ inches. The maximum, in the year 1859, was $59\frac{68}{100}$.

Main Conduit.—This starts at Hempstead pond, and leads as directly as the character of the ground admits to the pump well—total length $12\frac{1}{2}$ miles; dimensions, 8 ft. 2 in. wide, by 6 ft. 4 in. high; the top is semicircular, and the bottom an invert of 1 ft. versed sine, side walls vertical 15 in. It is built this size, 2,092 ft. when it receives the water from Rockville pond by a circular conduit 2 ft. in diam. and 8 in. thick. The main conduit is here enlarged by increasing the width 6 in. and the height 3 in., and continues this size 14,094 ft., to the next branch, from Valley stream, $2\frac{1}{2}$ ft. diam. The main is here increased in width 6 in., and in height 3 in., and the entire arch is laid 12 in. thick: it continues this size 4,371 ft., to the next branch of the Clear Stream, 2 ft. in diam. The main is again increased in width 2 in. and in height 1 in., and thus continues 5,400 ft., to the Brookfield branch, 2 ft. diam. The main is here enlarged to a width of 9 ft. 8 inches, and a height of 7 ft. 1 inch., and thus continues over 13,500 feet., to the junction of Jamaica pond branch, $3\frac{1}{2}$ ft. diam., and 8 in. thick. The fall of the conduit to this point is 1 in 10,000. It is built wholly of brick, except in a few short pieces across embankments, where the side walls are strengthened by stone, and a spandrel backing. From this point to the pump well the conduit is 8 ft. 8 in. high, and

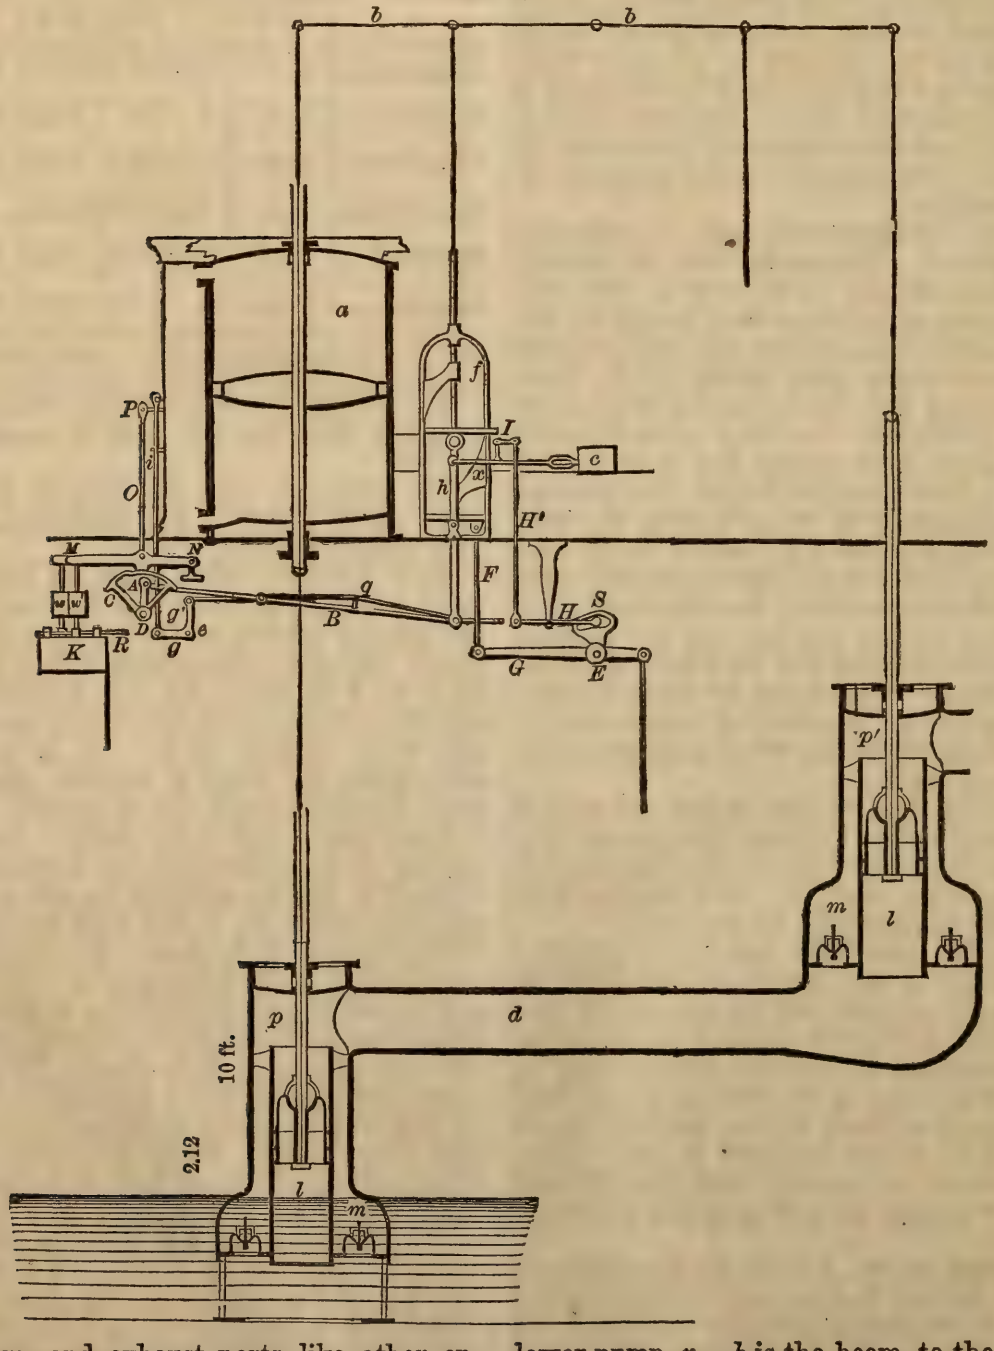
10 ft. wide, side walls 3 ft. high, with a fall of 6 in. to the mile: the distance is $4\frac{848}{1000}$ miles.

At the pump wells there are at present 2 engines erected, which, according to the contract, were each to afford a duty of not less than 600,000 lbs., raised 1 ft. high with 1 lb. of coal, and capacity of 10 million New York galls. of water to be raised into the reservoir in 16 continuous hours. The first engine was tested Jan. 1860, and the duty was found to be 607,982 lbs. ft. per lb. of coal; the capacity, for 16 hours, 10,293,102 gallons delivered into the reservoir; diameter of steam cylinder, 90 inches; length of stroke of piston and pumps, 10 ft.; diameter of barrel of pumps 36 in. The 2nd engine was tested in Jan. 1862, and the duty was found to be 619,037 lbs. ft. per lb. of coal, and the capacity, for 16 hours, 10,652,366 galls.; diameter of steam cylinder, 85 inches; stroke and diameter of pumps same as No. 1 engine.

The two engines differ somewhat in detail, but in general construction are represented by (Fig. 1), which is a section of the No. 2 engine. The engines were built by Messrs. Woodruff & Beach of Hartford, after designs by Mr. Wright.

In the fig. *a* is the steam cylinder with pis-

Fig. 1.



ton, steam, and exhaust ports, like other engines. In the bottom of the steam cylinder is a stuffing box, through which the steam piston rod passes, and is coupled below to the rod of lower pump, *p*. *b* is the beam, to the one end of which the piston rod is connected by a cross head and links. The upper pump rod is connected to the other end of beam in the

same manner as the steam piston rod. *f* is a frame moving with the beam in guides, which, in combination with the water cylinder, *c*, and roll levers, *h*, works the steam and exhaust valves. *e* is the lower rock shaft, which is connected to the upper or main rock shaft (hung in bearings between the side pipes) by the arms, *gg'*, and rod, *i*. The lower rock shaft is operated from the lower ends of the roll levers, *h*. The piston of the water cylinder, *c*, is connected to the roll lever near its upper end. *C* is a segment, one part of the face being formed on a longer radius than the other (the difference being equal to the lift of the steam valves), and fastened at the centre to the rock shaft *D*. This segment is adjustable by hand, and its office is to close the steam valves, early or late in the stroke, as may be required. The rock shaft *D* is connected, through the arm *A*, by the rod *B*, to an arm on the rock shaft *E*. This latter shaft is operated from the frame, *f*, by the rod *F*, and lever *G*. The valves of the water cylinder, *c*, are operated from the rock shaft *E*, by the cam arm *S*, and rods *H* and *H'*, and right angled arm, *I*. The steam valves are operated by the cataract, *K*, which consists of two small open water cylinders (one for each steam valve), fitted with pistons and weighted with the weights *w*, *w'*. Each plunger rod is connected to one end of a lever, *M*, the other end, *N*, being the fulcrum; this lever is connected to the steam valve stems by the rod *O*, and arm *P*. When the steam valve is closed, it is kept so by a latch bolt, *R*, inserted into a socket in its cataract plunger rod, the latch being moved into gear by a spring on the back of it, and withdrawn by an arm on the rock shaft *e*.

Assuming the piston in the steam cylinder to be at half stroke, and the lower steam valve being still open, the different parts of the gearing described above, and depending on the motion of the beam for theirs, will also be at half movement, but the cataract plunger attached to the lower steam valve will be at the bottom of its cylinder, and the latch, *R*, withdrawn. Now, when the piston has reached that part of the stroke when the lower steam valve ought to be close, and the remainder of the stroke be performed by the expanding steam, the closing face of the segment, *C*, moves under the lever, *M*, by the operation of its connecting rod and arm—as before described—closing the lower steam valve instantly through the rods *O* and *P*, at the same time carrying its cataract plunger to the top of its cylinder, being held there by the latch bolt. The piston continues moving upward until it has reached the point where the lower exhaust and upper steam valves should open: the former operation being performed by the inclined plane, *x*, on the inside of frame, *f*, coming in contact with the roll on the upper end of the lever *h*, moving it out of the perpendicular, at the same time giving a like movement in an opposite direction to the lower end of the lever, which opens—through the rod *q*, and the lower and upper rock shafts—the lower exhaust valve.

The water cylinder, *c*, now comes into play, finishing the operation by carrying the roll lever to its extreme movement quickly, liberating by its action through the rod *q*, and arm on rock shaft *e*, the latch-bolt of the upper steam valve cataract plunger, permitting the latter to fall open by the gravitation of its weighted plunger rod, and admitting steam on the upper side of the piston, checking it in its course, and forming a cushion; the valve still being open, the movement of the piston is reversed, and the downward stroke commenced. When the piston has reached the point of "cutting off," the upper valve is instantly closed by the same operation as that described above for the lower steam valve.

The lower pump, *P*, is placed in a well below the engine room floor, and directly under the steam cylinder; the upper pump, *p'*, is also beneath the floor, and connected directly to the opposite end of beam. This pump has a nozzle, *n*, to which the forcing main is joined. Each pump is constructed of two barrels, *l* and *m*; the inside one, *l*, being the working barrel, fitted with a bucket and double-beat valve, and the annular space between them being connected to the suction by 8 double-beat valves.

Their operation is as follows:

The lower pump on its up stroke lifts the water above its bucket through the connecting pipe, *d*, and through the annular valves and valve of descending bucket of upper pump, at the same time charging itself below its bucket by suction. On its down stroke, the upper pump is lifting the charge above its bucket, and filling the space below it by suction; the lower pump again ascends, performing the above operation, each pump moving on its up stroke a column of water about 36 inches in diameter, 10 feet toward the reservoir.

The total expense during the past year of pumping at Ridgewood, including all labor, fuel, repairs to engines and engine buildings, has been $\$23{,}976\ \frac{30}{100}$. The total number of gallons pumped into the reservoir, has been 1,962,131,200. This shows the cost of pumping, including all repairs to engines and engine buildings, to have been $\$12\ \frac{22}{100}$ per 1,000,000 gallons, or one cent and two mills per 1,000 gallons. This should be increased by the amount due to interest on the cost of the engines, engine house, pump well, coal sheds, railroad track, and engineer's house, which was about $300,000.

Engine No. 1 has been in operation during the year 2,137 hours, delivering 1,197,866,650 gallons. No. 2 has pumped 1,399 hours and delivered 774,641,700 gallons. It will be seen by this that the amount of water pumped the past year exceeds that of 1861 by $23\frac{1}{3}$ per cent. The amount of coal consumed when pumping, has been for engine No. 1, 3,376,550 lbs., and

for engine No. 2, 2,070,808 lbs. Duty in lbs. raised one foot high per pound of coal, for engine No. 1, 526,936 feet lbs., and for engine No. 2, 555,628 feet lbs.

The water is raised about 163 feet into the Ridgewood Reservoir, a double reservoir, constructed with earth banks whose inside slopes are lined with stone laid in cement.

The area of water surface is of the

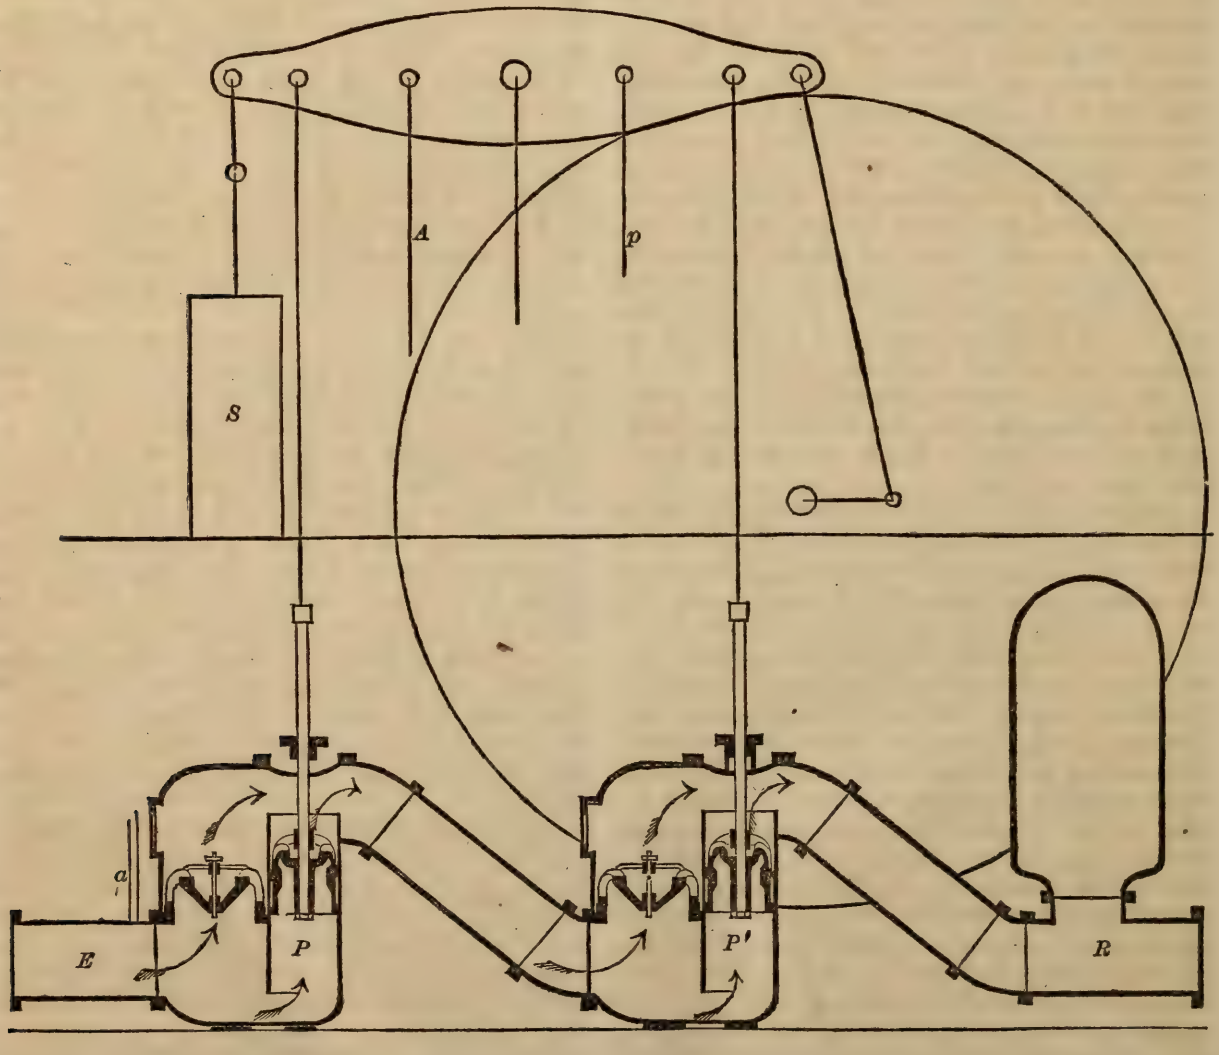
Eastern Division.....	11¼ acres.
Western "	13¾ "
Total water area.....	25¼ acres.

The height of the surface of the water, when the reservoir is full, or the water 20 feet in depth, is 170 feet above the Navy Yard high water mark. The total capacity of this reservoir, when full, is 161,000,000 gallons.

From the Ridgewood Reservoir the water is conveyed to the city by a single 36-inch main. For the supply of a portion of the city above the level of the Ridgewood Reservoir, another engine has been erected at Prospect Hill, with a reservoir at the summit, with earth embankments and brick and cement lining. Its area of water surface is 3⅓ acres; depth of water, 20 feet; capacity, 20,036,558 N. Y. gallons; height above mean tide, 198 feet. No distributing pipes are yet laid from this reservoir, but it is kept full as a store reservoir against accident to other parts of the work which might reduce the supply or diminish the head in the mains. The engine supplying this reservoir is represented in outline in (fig. 2).

The engine is of the crank and fly-wheel variety. The steam cylinder, *S*, is fitted with slide valves, and a cut-off controlled by a governor. The pumps are constructed on the same general principles and mode of action as the

Fig. 2.



pumps at Ridgewood. They are 2 pumps attached to opposite sides of the working beam; they have valves in their buckets, and in channels at the sides of the pump. The pumps are placed in a branch main, and the water flows into and through the pumps under a considerable head, variable with the draft upon the mains in other parts of the city. There are 2 air chambers: one shown at *R* on the rising main, the other, and a somewhat larger one, is connected by a branch pipe with the induction pipe at *E*. At *A* are the connections with the air pump. At *p* the connections of a small single-acting plunger pump to supply the boiler

feed, and return the injection water to the main. P is the lower pump; P' the upper.

STEAM CYLINDER.

Length of stroke,	4 ft. 6 in.
Diameter of cylinder,	24 inches.

PUMPS.

Length of stroke (average),	3.466 feet.
Diameter of barrels,	20¼ inches.

FLY WHEEL.

Diameter of,	20 feet.
Length of crank,	27 inches.

Duty pr. test, May, 1862, 649,577 lbs. ft. pr. lb. of coal, for 93 consecutive hours; capacity for the same time 14,557,027 N. Y. gallons delivered into the reservoir.

Cincinnati.—The average daily consumption has varied from 4,675,300 gallons in February, to 6,793,414 in August, the daily average for the year being 5,643,087 gallons, or about 37½ gallons per head, for a population of 150,000, supplied by the works. The rate as at present charged for manufacturers is 12 cents per 1,000 gallons, to be reduced after the 1st of July next to 9 cents per 1,000 gallons. The demands upon the works are steadily increasing, and the full capacity for supply will be taxed until the new engine is brought into operation. The water is pumped from the river by steam power, and additional works are in progression on which $134,000 have been spent during the last 2 years. The non-condensing engines of the Cincinnati works consist of two cylinders each 21 inches bore and 10 feet stroke. The two condensing engines have each a cylinder 45 inches diameter, and 8 feet stroke.

Detroit.—The expenditures to January 23d, 1863, for construction of water works was $621,283.51. The whole quantity distributed during the year 1862, 999,945,329 U. S. galls. Average daily distribution, 2,725,877 galls., or 45 galls. to each inhabitant of a population of 60,000. The water supply is by means of pumps from the Detroit river, and a new engine has been contracted for, and is nearly finished.

Wood Distribution Pipes.—Tamarack logs have been used for conveying water in this city for 35 years past. When the works were purchased and reconstructed by the city, in 1840, iron mains were used, but tamarack pipes were laid for general service, about ½ of which are still in use. The others were mostly removed to give place to iron pipes of greater capacity, and but few were removed in consequence of being decayed. Of the 18½ miles laid subsequently, 15 miles have failed through neglect in the selection of the logs, or laying them too near the surface of the ground, and have been removed. Consequently from 1852 to 1857 no logs were laid, when, in consequence of the rapid growth of the city and expansion of the settled portions of its limits, a demand was made to supply near 2,000 families residing in sparsely settled districts beyond the lines of water pipes. To supply them by means of even the minimum (4-inch) size iron pipe would have been unremunerative. An investigation was therefore made as to the failure of the wooden pipes, and it was found that the best logs were those that were first laid about 17 years before, which had been well selected, and laid at sufficient depth, and as the cost of wooden pipes was but ⅕ that of iron, at this reduced price, the water rates would repay the outlay. A small steam engine and Wykoff's tubular boring machine were bought, since which time 29 miles of logs have been laid, mostly in districts that could not otherwise have been supplied with water from the works with any present prospect of remuneration. The logs are sound green tamarack, not less than 6 inches diameter at the small end, and 8 feet in length. The joints are made with cast-iron thimbles, and the lines are laid 5 ft. below the surface of the earth, mostly on stiff compact clay, and when the soil is sandy the logs are bedded in clay. The entire cost per foot laid has been 15 $\frac{2}{10}$ cts., which includes the cost of shop, engine, and boring machine.

The average annual rain fall at Detroit for the past 23 years is 43 $\frac{1}{10}$ inches.

New Haven.—Water works have been recently completed for the supply of the city of New Haven, Conn. Water was introduced into the distributing mains Jan. 1, 1862, and there are now laid 24 miles of distributing pipes.

Mill River, the stream from which the supply of water is obtained, has a water shed of over 56 square miles, and a minimum flow of 12,000,000 gallons per day.

The water is backed up by the dam for about 2½ miles, forming Lake Whitney. During the past year the quantity of water in the lake has never been less than 500,000,000 gallons; its average depth is about 20 feet. The dam is a well-built structure of its kind, being laid up with heavy stones, protected from the action of the water by a layer of concrete and that again by a gravel bank. The pipe chamber, built of hydraulic masonry, contains the gate, screens, and pipe through which the water is conveyed into the pump house. The elevation of this pipe above the base of the dam is 17 feet, which leaves 13 feet of water available to the uses of the company, and this is the lowest point to which it is practicable to draw the supply.

The water of the lake, after passing through screens in the pipe chamber in the dam, enters the pump house through a 4-feet iron pipe. This pipe is surrounded by a brick arched culvert, of sufficient size to allow easy access to all parts, and connects with 2 large cast-iron tanks containing a series of gates. These tanks are again connected by cast-iron pipes with the two cast-iron fore bays, and also with the rear valve boxes of the pumps. From the forebays the water is conducted upon the wheels, through gates placed at various points, so that the surface water can be used upon the wheels, no matter what its elevation may be.

There are 2 pitch-back wheels 30 feet in diameter, constructed of wood and iron. The

buckets are 6 feet long, and of wrought iron, 80 in each wheel. The wheel shafts are 14 inches, and their bearings 12 inches in diameter. The power is communicated by a driving wheel to a pinion on the crank shaft, giving to the pump piston a stroke of five feet. The 2 crank shafts are furnished with a coupling, by means of which either pump can be worked by either wheel, or one pump by both wheels.

The pumps consist each of a single cylinder 16 inches in diameter. The ordinary velocity at which they are worked is 12 strokes per minute, delivering 1,000 gallons. The speed may be increased with safety so as to deliver 1,500 gallons per minute. From the pumps the water passes through the force main, of cast iron, 16 inches in diameter, and 3,100 feet long. The force main contains 2 check valves, one at an elevation of 30 feet, and the other near the reservoir.

The reservoir, situated on Sachem's Hill,. at an elevation of 125 feet above mean high water, is in the form of an ellipse, whose diameters at the water line are 488 and 244 feet, with a depth of 19 feet, the walls being carried up 4 feet above the water line. Its capacity is 10,000,000 gallons. It is built in two divisions. The bottom and inner slopes are covered with 18 inches of clay puddle; upon this is placed a layer of concrete 4 inches thick. The concrete on the sides is protected by a stone wall 12 in. thick, laid in cement. The outer slopes are turfed. The slope wall is covered by a coping 2 feet wide, and upon the top of the banks is a gravelled walk 6 feet wide. The whole width at top is 10 feet. The inner slopes 1 to 1, and the outer slopes $1\frac{1}{2}$ to 1. At the east end of the division bank is placed the influent chamber, which consists of two apartments. The water is delivered by the force main into one of these, which contains the screens; from thence it passes in pipes of cast iron, 12 inches in diameter, through the other apartment, which contains the gates into the reservoir, or by means of a wrought-iron and cement pipe 16 inches in diameter, into the effluent chamber. By the arrangement of these pipes and gates the flow of water is controlled and directed into either division of the reservoir, or into the effluent chamber, without passing through the reservoir, and a special casting, which may be placed in either chamber, so connects the force and distributing mains, that in the event of accident to both divisions of the reservoir and one of the chambers at the same time, the supply of water to the city will be uninterrupted.

The 16-inch distributing main connects with the effluent chamber; placed at the west end of the division bank, is a duplicate of the influent chamber, with the exception of its depth. This peculiar arrangement of chambers, pipes, and gates is very complete, and calculated to meet any emergency, providing amply for future enlargement of capacity, as well as for present use. It gives to the works when needed 2 16-inch force tubes; 2 16-inch and 2 12-inch distributing mains. Upon the occurrence of fire, at a time when, from any cause whatever, the water in the reservoir is low, the full head of 129 feet may be given without delay.

One third of the distribution is in cast-iron pipes, and the remainder is of the cement pipes manufactured by the Patent Water and Gas Pipe Company, Jersey City, New Jersey. The pipes are made from sheet iron, lined on the inside with cement, and coated on the outside with the same material. The lengths of pipe are connected by sheet-iron bands, similarly lined and coated with cement; the bore of the pipe presents an even surface throughout the entire length of pipe, and forms a conduit of uniform size.

New York *Croton Aqueduct.*—Various improvements, under the charge of A. W. Craven, chief engineer, have now been in progress for a series of years to increase the average supply and to guard against any contingencies of accident to the aqueduct or failure of supply from the river.

High Bridge Improvement.—As originally constructed, the supply was conducted across High Bridge by 2 siphon pipes of 3 feet in diameter, involving great loss of head, and consequent capacity of aqueduct on this side of Harlem River, and of supply. To obviate this a new pipe has been introduced.

The new pipe is 7 feet $6\frac{5}{8}$ inches interior diameter. It is made of wrought-iron plates, each 8 ft. by 6 ft., and $\frac{1}{2}$ an inch in thickness. These plates are butted together, and the joints made by horizontal and transverse straps on the outside, each strap being 9 inches in width and $\frac{1}{2}$ of an inch in thickness. There are 4 rows of $\frac{3}{4}$-inch rivets in each strap. In the interior, the rivets are countersunk to the plane of the pipe, thus affording a smooth surface and avoiding unnecessary friction. Both the exterior and interior surfaces are well painted, to preserve them from rust. The pipe is supported by cast-iron stanchions and saddles, placed between the 2 3-feet pipes now there. These stanchions are 12 feet apart longitudinally, and are of sufficient height to allow 2 feet of clear space, between the old pipes and the new one, for the free movement of workmen in repairs, &c. The tops of the stanchions or pedestals are $2\frac{1}{2}$ feet square, and are planed to a smooth and accurate surface, to permit the proper action of the rollers. At the centre of the bridge, the pipe rests upon the pedestal, without the intervention of rollers. For the rest of its length, in each direction from the centre, there are 3 cast-iron rollers on each stanchion. Upon these rollers rest the saddles, which come into immediate contact with and support the pipe itself. The base of each saddle is of the same size as the top of the pedestal, and is in a similar manner planed to a smooth and uniform surface.

At each end of the bridge, and built into the

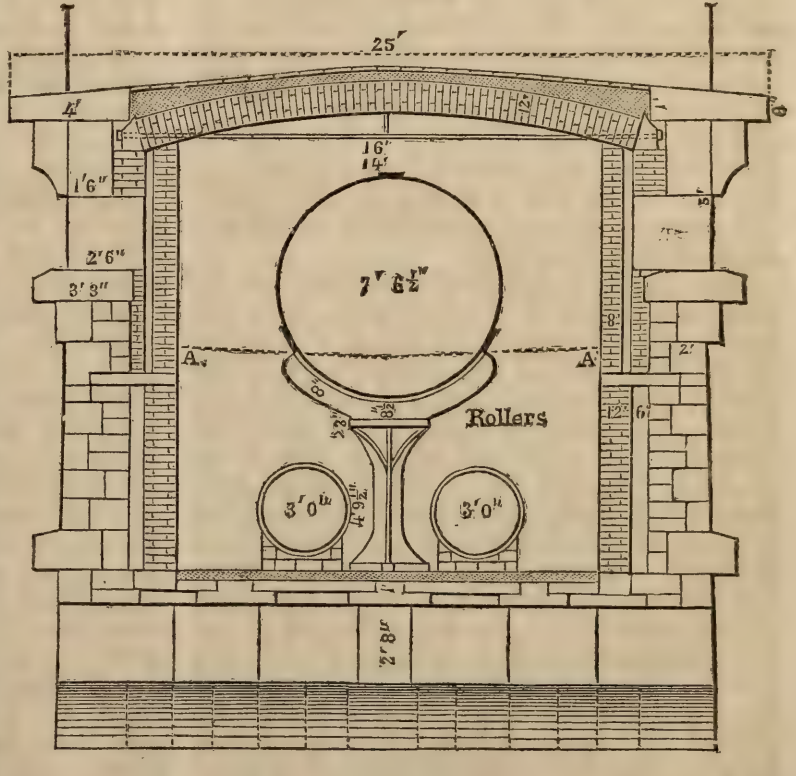
masonry connecting the pipe with the gate-house, there is a cast-iron cylinder, into which a cast-iron ring, which forms the end of the pipe, is inserted and fitted as a piston. Thus there is a movable joint at each end of the pipe, which, together with the rollers between the planed surfaces of the pedestals and saddles, fully provide for the longitudinal contraction and expansion of the pipe, under any variations of temperature to which it can be subjected. The three rollers on each pedestal are kept in their proper relative position to each other by an iron frame. The surfaces of contact in the pistons and cylinders, at the ends of the pipe, are faced with brass.

Fig. 3 represents a vertical and transverse section of the bridge, at the centre of one of the arches. It shows the former construction of the top of the bridge and the line of the former gravel covering over the pipes, and also shows the contemplated change in the sides and the proposed covering arch. All the masonry above the line of the old coping, and all the interior brick work, above the points marked A A, will be new work. When finished, the whole interior will be an open chamber, with sufficient space around all of the pipes for examination and repair. This chamber will be lighted and ventilated from the roof, and approached by doors, cut into the masonry at the sides of the north end of the bridge, which will be large enough to admit the introduction of cast-iron pipe or wrought-iron plate, or any other material for repairs. The roof will be of brick, abutting against cast-iron skew backs, kept in place by wrought-iron tie-rods. The arch will be made water tight by a covering of concrete and asphaltum.

To keep up the supply of water to the city during the progress of the work in connecting the new pipe, it was necessary to change the entrance gates of the old pipes, from the front to the side of each gate chamber, and to do this, also, without drawing off the water from the aqueduct and gate chambers. A caisson or coffer dam of wood was framed and sunk to its position, against the inner face of the west wall of each chamber, leaving a narrow space between the masonry and the inner face of the coffer dam. The water from this space was then pumped out. The west walls were then cut away and rebuilt, with the proper variation for new gates, and the reception of the mouth pieces for the two 3-feet pipes. From these points, two new lines of pipes were carried round, on the outside of the gate houses, and down to the floor of the bridge, to the point at which the removal of the old pipes was necessary. Here the pipes were, one at a time, cut off, and connected with the new lines leading into the side of the gate house. The water was then passed through the old pipes by these new connections, and the fronts of the gate houses were free for further operations. The masonry of almost the entire fronts (below the water line) was removed in the same manner it had been from the sides, and the new construction went on without interruption. During the whole of this work, there was at no time a stoppage of the entire flow of water into the city. It was not shut off at all, for any of the operations, at the gate-chambers themselves.

Manhattan Valley Improvements.—At this valley there is an interruption of the brick conduit similar to that at High Bridge. As originally constructed, the water was conducted across this valley in 2 3-ft. siphon pipes, to which was added, in 1853, a 4-ft. pipe. This year a fourth pipe has been added, 5 feet diam., of cast iron, in lengths of 12 ft. 5 in., and $1\frac{3}{8}$ inches in thickness. The average

Fig. 3.



weight of each length is 11,226 lbs., and the aggregate extent of this line, measured as laid, is 4,116 ft.

The New Reservoir.—The water was formally introduced into the new reservoir on the 19th of August, with a celebration by the civic authorities, and speeches from the mayor (Mr. Opdyke), and from Myndert Van Schaick, for many years president of the Croton board, and from many others. The reservoir is probably the largest purely artificial construction in the world. Its water surface, when full, is 96 acres, its depth 37 ft., and its capacity

1,029,000,000 N. Y. galls. It has been built on the most substantial plan and in the most careful and skilful manner possible. The puddle trench is carried down to and founded on the solid rock throughout its entire circuit. The interior slopes are protected by a facing of hydraulic masonry.

There are three gate houses. The first of these gate houses is that by means of which the water is taken out of the old aqueduct, at the corner of 9th av. and 92nd st. The old aqueduct has been opened for the space of 46 feet, and a chamber built, combining two sets of gates—one set permitting the water to pursue its old course through the old aqueduct to the present receiving reservoir at 85th st., and the other set diverting the water into the new junction aqueduct, which leads to the new reservoir. There are 5 gates to each channel, so arranged that all the water can be passed either into the old or new reservoir at pleasure, or a portion sent to each. From this junction gate house to the north gate house of the new reservoir, the aqueduct is 2,629 feet in length, and similar, in the form of its sectional area, to the old aqueduct. In order to carry this structure across the 9th av. and through 92nd st., without interfering with their grades, it was necessary to place it about 7 ft. below the regular level of the old aqueduct. When, therefore, the old aqueduct runs full, there will be a pressure on the top of the new one, due to that height. The masonry has been accordingly strengthened to meet this pressure.

The junction aqueduct terminates at the north gate house of the reservoir. This gate house, situated at the north end of the central or dividing bank of the reservoir, serves the double purpose of an inlet and an outlet gate house. The water is received into an induction chamber, which is furnished with 2 sets of gates, 5 in each set. Through these gates the water is discharged immediately into either or both of the divisions of the reservoir, at pleasure. Directly below the induction chamber are the inlet channels from the 2 divisions of the reservoir to the fore bays, which are the entrances to that portion of the gate house which is arranged for the discharge of the water into the city. These fore bays are divided into spaces 7 ft. in width by 12 ft. in length. The fore bays are built of granite. In front of the gates which let the water into the main outlet chambers, grooves are cut in the sides of the fore bays for a double set of screens of copper wire gauze, and for the insertion of temporary coffer dams, should they ever be required. Beyond the gates is the back bay, into which water passes from both divisions of the reservoir. This back bay is so arranged, however, that the whole of it can be filled with water from either division at pleasure. And, again, it can be divided in itself, so as to use but one portion of it at a time, should it be necessary. The rear wall of the back bay separates that portion of the gate houses into which the water flows from the portion of it called the pipe vault. In this wall are inserted the mouths of the outlet pipes. In the pipe vault beyond, and through which the pipes pass into the city, are the stop cocks controlling the pipes and other arrangements for division and shutting off water, should repairs to the stop cocks or pipes be required. The vault is entered from the top of the bank by a circular staircase, through a well large enough to admit the lowering of pipe, or stop cocks, or other material. Underneath the whole of this structure passes the main sewer, to receive the overfall of water from the waste weir, which is also included in the general plan of the gate houses.

Passing under the floor of the gate house, there is also a pipe, 3 ft. in diameter, leading from each division of the reservoir to the main sewer, at a point beyond the pipe vault. These pipes are not in any wise connected with the distribution pipes, but are intended only to draw off the water from either division, when necessary. 4 distribution pipes lead from this gate house to the upper part of the city, each 3 feet in diameter.

The south gate house is situated at the south end of the bank dividing the reservoir. It is arranged only for distribution, and has, therefore, no induction chamber for the purpose of delivering water into the reservoir. In all other respects it is similar in design and character of work to the north gate house, except that it has 6, instead of 4, outlet or distribution pipes, each of which is 4 ft. in diameter.

Both gate houses are built on the natural solid rock. The outer exposed walls and the sides of the fore bays, the openings for the gateways, screens, &c., the wells for the waste weirs and their approaches, the mouth pieces to the pipes, and the braces in the fore bays, are of granite. The walls under the banks are of gneiss and brick, the other face walls and arches are of brick, while the foundations and the interior of the walls are of concrete. The tops of all the walls of the gate houses are covered with a floor of granite 1 ft. in thickness. On this floor will be placed the gearing for working the gates below, a vertical distance of 44 ft. The gates and gate frames are of cast iron, with the sliding parts faced with brass. There are upper and lower sets of gates, by which a circulation in the water can be effected, and which at the same time will facilitate other operations. With a view to provide for every possible contingency, there is no portion of the whole work which cannot be examined and repaired without shutting off the water from the city for a moment.

There are now 5 main pipes supplying the city from the old receiving reservoir, as follows: 1, $2\frac{1}{2}$ ft. in diam., from the west side of the reservoir, passing down 8th av.; 1, $2\frac{1}{2}$ ft, in diam., from the east side, passing down 3d av; 2, each 3 ft. in diam., passing down the 5th

av., and 1 pipe, 3 ft. in diam. where it leaves the reservoir (but connected with the four-feet pipe immediately after), passing down the 4th avenue.

With these five pipes a corresponding number of the effluent or distributing pipes from the south gate house of the new reservoir are to be connected; so that, when this is done, the whole water distribution of the city can be supplied from both, or either of the reservoirs, at pleasure; and, so far as the new reservoir is concerned, with either division of it, as any emergency may require.

INTEREST ON CROTON DEBT.

Payable from Sinking Fund.

Surplus	$1,017,581 27		

Present debt, December 31, 1861 ..... $9,917,605 00

This statement shows that in three years the Croton revenue paid into the sinking fund nearly two and a half millions of dollars, and the sinking fund paid the interest on the then existing Croton debt of nearly one and a half millions of dollars, leaving $1,017,581.27 surplus; and that the present Croton debt is only $9,917,605, notwithstanding the very large aggregations of expenditures on improvements and repairs of the works which make the opinion credible, that the total amount of expenditures on the works exceeds $24,000,000, though the aqueduct and its dependencies cost originally, according to engineer Jarvis' last report, only $9,000,000.

PHILADELPHIA.—From early summer until about the middle of November, there was not sufficient water in the River Schuylkill, except at limited intervals, to drive the machinery at the old Fairmount Works. During this period, it has been only with the unremitting operation of the engines and pumps at their fullest capacity that the Kensington Spring Garden, and Twenty-fourth Ward Works have been enabled to supply their districts; and even then not always successfully, nor adequate to the demands of the population. Generally, there is no difficulty in furnishing a full supply to the entire city during seven months of the year, with the works and facilities at present in operation. But this is the utmost extent of their entire reliability, and during the warmer months, it is not without difficulty that an adequate supply can be maintained in any year.

The Fairmount Works.—The 8 old wooden wheels and their pumps were originally designed and intended to raise the water to an elevation of about 96 feet, and such was the service performed by them satisfactorily for some years after their completion; but, since the construction of the Corinthian Avenue Reservoir, making an additional altitude of 27 feet above that of the reservoirs, as designed in the original plan of the works, these pumps have frequently been much overworked.

On the security of the dam at Fairmount depends the entire ability of the Fairmount, Spring Garden, and Twenty-fourth Ward Works to supply their respective districts.

The new wheel house and machinery are completed, and the new pumps have been in operation at intervals since the month of June last, and work satisfactorily, but they cannot become fully available until the capacity of the ascending main is increased to a degree better corresponding to the area of the pumps. The six new pumps are each of 18 inches diameter, and the number of gallons pumped during the year was 3,564,724,753; average number of gallons raised per day was 9,766,369.

The engines and pumps at the *Spring Garden Works*, with one exception, are much worn, and their efficiency much impaired by constant and frequently excessive service, almost without interruption from the time of their construction. In 1862, Nos. 1, 2, and 3 pumped 1,897,391,360 gallons, and the Cornish engine, No. 4, pumped 1,141,136,060 gallons. In the performance of this work, the former three engines consumed 5,777,571 lbs. of coal, and the latter one engine consumed 2,547,161 lbs., and the number of gallons of water pumped during the year was 3,038,527,420; average number of gallons per day was 8,324,732. Average duty for the year, 32,998,333 pounds raised one foot high with 100 lbs. coal. Total amount of coal consumed by engines, 8,895,459 lbs.

The *Kensington Works* draw their supply from the Delaware. Such is the demand upon them that if it is decided that they shall be continued, it will be soon necessary to have an additional ascending main, of such capacity as to anticipate, at least in some measure, the greater demand that must arise. There are at present at these works two engines, one of which is a condensing engine, driving a pump of 19 inches diameter; the other is a non-condensing engine, driving a pump of 18 inches diameter. The single ascending main is 13,300 feet long, and 18 inches in diameter, being capable of carrying the water from one pump only. During the warm season, more water is required in the district than this one main can safely supply. The average maximum capacity of the pumps is rated at 3,000,000 gallons each per twenty-four hours. The daily demand has reached as high as 3,780,290 gallons, and the least demand in any day of the past year was 2,954,770 gallons, and the number of gallons of water pumped during the year was 909,126,-

440; average number of gallons pumped per day, 2,490,757.

Average duty for the year, 22,778,385 pounds raised one foot high by the consumption of 100 lbs. of anthracite coal. Total amount of coal consumed by engines, 1,662 tons 4 cwt. 1 qr.

Such is the rapid increase in the demand in the district supplied by the *Twenty-fourth Ward Works* that it is difficult to provide for it satisfactorily. On account of there being no reservoir, nor any other facilities for storage, and the fact that there is only one main from the works to the stand-pipe, the demand is supplied directly from the pumps, and requires the constant and unremitting operation of one engine, the other being kept in constant readiness in case of accidents. The number of gallons pumped during the year was 420,507,810; average number of gallons raised per day, 1,152,076.

Average duty for the year, 38,525,000 pounds raised one foot high by the consumption of 100 pounds of anthracite coal. Total amount of coal consumed by engines was 933 tons 18 cwt. 19 lbs.

Number of gallons pumped by all the works during the year, 7,932,886,423. Average number of gallons pumped each day, 21,733,935.

WINDISCHGRÄTZ, Alfred Zu Prince, formerly commander-in-chief of the Austrian armies, born in Brussels, May 11, 1787, died at Vienna, March 24, 1862. He entered the military service in 1804, received the command of the Cuirassiers of the Grand Duke of Constantine for his brilliant conduct at Leipsic, and distinguished himself during the campaign of 1814 at Troyes. He was promoted to be major-general in 1826, and made general of division and lieutenant field marshal in 1833. In 1848 he led the armies which bombarded Prague, Pesth, and the Austrian capital in succession, but meeting with reverses in Hungary he was driven from Buda-Pesth in 1849 by Görgey, and in April of that year was deprived of his command. Fierce and cruel, he never treated the Hungarians with the least leniency, and his latter days were saddened by seeing the principles against which he had fought so obstinately, carried out, at least partially, by the Government. On one occasion, during the first session of the Reichsrath, he ascended the tribune of the Upper Chamber, and prophesied new catastrophes, the necessary consequence, he said, of the statute of February, and announced his readiness to protect Austria as heretofore with his sword, but meeting with no response he retired henceforth to private life. In 1851 he published a work defending his conduct in the Hungarian campaign entitled "*Der Winterfeldzug Von* 1848–'9 *in Ungaru.*"

WISCONSIN, one of the most thriving Northwestern States, increased in population during the ten years ending June, 1860, 470,490, when the whole population was 775,881. (*See* United States.)

The Governor of the State, Harvey, was inaugurated on the 1st of January, 1862. He had been elected by the Republican voters on the first Thursday of November, 1861, by a majority of 8,320 over the Democratic candidate.

The Legislature convened on the 9th of January. The members of the Assembly and half of the Senate had been elected in November previous, and were divided as follows:

	Senate.	House.
Republicans	22	43
Democrats	11	34
Union	—	23

The governor in his message recommended economy in the expenditures, the introduction of military drill in public schools, and the establishment of an armory and arsenal at Milwaukie, on the Lake Michigan.

The following resolutions expressive of the views of the majority of the Legislature on Federal affairs were adopted with seven dissenting votes in the House and nine in the Senate:

Whereas, The language of joint resolution number 4, adopted by the Legislature of 1859, is in some of its parts identical with those of the Kentucky resolutions of 1798;

And whereas such language is liable to be so misconstrued and perverted as to lead to misapprehension of the purpose of its adoption, and to favor secession;

And whereas there is evidence in the fact of such Kentucky resolutions having been endorsed by and incorporated into and made part of several of the Democratic national and State platforms, and especially by that recently promulgated by the Democratic State Convention of Indiana, that the true intent and meaning of such language has been misconstrued and perverted; therefore,

Resolved by the Assembly, the Senate concurring, That we regard the action of the rebellious States of this Government, in their attempt to destroy the Union by the pretended lawful right of secession, as unwarranted by the spirit of the Constitution, and utterly subversive of the well-established principles of good government.

Resolved, That no State of this Union has a right to defy or resist the laws of the Federal Government, but should yield a willing and hearty support to the enforcement of the laws, unless such laws are unjust or deleterious in their operation, in which case the only rightful remedy lies in their repeal or lawful abrogation.

Resolved, That joint resolution number 4, of the Legislature of Wisconsin of the year 1859, in theory enunciates the dangerous doctrine of nullification and resistance to the lawfully constituted authority of the Federal Government, and is incompatible with the safety and perpetuity of the Union.

Resolved, That said joint resolution number 4, of the Legislature of this State of the year 1859, entitled "Joint resolution relative to the decision of the Supreme Court of Wisconsin," be and the same is hereby repealed.

On the 5th of April a resolution passed the House with one dissenting vote tendering to the President of the United States an unqualified approval of his course from the day of his inauguration.

A bill was brought before the Legislature at this session to repeal the "Personal Liberty" law of the State. But no final action was taken upon it until the extra session in July, when it was passed, and the law repealed. (*See* Annual Cyclopædia, 1861 — Personal

Liberty Laws.) This was the first instance among the Western States of the repeal of these obnoxious laws. At this same extra session resolutions were passed by a majority of fourteen which emphatically condemned all future anti-slavery agitation in the Northern States.

On the 19th of April, Governor Harvey was drowned at Savannah, in Tennessee, whither he had gone with hospital stores for the soldiers of the State who were wounded at the battle of Shiloh. He was succeeded by the lieutenant governor, Edward Salomon, a German-born citizen.

An election for six members of Congress took place on the first Thursday of November, when the votes were given as follows:

	Republican.	Democratic.
1st District.....	10,077	12,598
2d "	13,107	10,974
3d "	10,000	7,514
4th "	9,613	15,343
5th "	10,005	11,021
6th "	9,037	6,672

The Democratic candidates were elected in the 1st, 4th and 5th districts, and Republican candidates in the 2d, 3d and 6th districts.

The debt of the State previous to the war was $100,000. A loan for war purposes was authorized by the Legislature in extra session, May, 1861, of one million dollars. Of this loan $800,000 was taken by the bankers of the State, who paid 70 per cent. at once, and the balance in instalments of 1 per cent. every six months, giving their personal bonds as security for the payment, and depositing the State bonds with the Bank Comptroller as a basis for banking in place of the depreciated bonds of Southern States.

The number of banks in the State in May, 1862, was seventy, whose capital was $4,397,000; specie, $380,000; circulation, $4,600,000.

The length of the railroads in the State is 1,157 miles, cost $41,809,817.

There are nine colleges in the State, three theological seminaries, and a medical school. The number of common school districts is 4,558, and the number of children in attendance at the schools is 198,443, besides 8,000 estimated to be in attendance at private schools. The school fund of the State is derived from the proceeds of the sale of the sixteenth section of each township and an additional grant by Congress of 500,000 acres of land; 25 per cent. of the proceeds of sale of swamp and overflowed lands, and lands selected in lieu thereof (25 per cent. goes to the Normal School Fund); 5 per cent. of the proceeds of sales of Government public lands in the State (this has been withheld in consequence of a claim of Government against the State); 5 per cent. penalty as forfeiture for non-payment of interest on school land certificates and school fund loans; and the clear proceeds of all fines collected in the several counties for penal offences and for trespasses on State lands. The productive fund from the sale of these lands, &c., September 30, 1861, was $2,458,351 49, and there remained unsold and forfeited 454,775 acres of sixteenth section lands; forfeited lands of 1861, 219,000 acres; 125,000 acres unsold swamp lands; 118,750 acres of forfeited swamp lands; and 39,500 acres of forfeited swamp lands of 1861. There are also 140,000 acres of land claimed from Government, and sixteenth section and swamp land, yet unsurveyed. The lands as yet unsold will exceed 1,500,000 acres.

Previous to the 1st of July, 1862, the State had sent to the war nineteen regiments of infantry, three regiments of cavalry, and seven batteries of artillery and two companies of sharpshooters—numbering entire 24,653 men. Under the call for 300,000 men in July, six regiments were raised, and under the call for 300,000 nine months men about twelve regiments more. The attempts to complete the quota under the first call by drafting met with much opposition in some parts of the State. At Port Washington, in Ozaukee county, the commissioner was forced to flee for his life, the machinery for the draft was destroyed, and the houses of eight citizens who encouraged the draft were attacked and injured. A military detachment was sent to restore order. In Washington county serious disturbances occurred.

WOLFF, Joseph, D. D. LL.D., a traveller, author and clergyman of the Church of England; born at Weilersback, near Bamberg, Germany, in 1795; died at the vicarage, Isle Brewers, Somersetshire, England, May 2, 1862. He was the son of a Jewish rabbi, named David, and received the name Wolff from his parents, to which he prefixed "Joseph" when he became a Christian. While yet a child he manifested so strong a predilection for Christianity that the Jewish neighbors called him "the little Nazarene." At the age of 17, through the influence of Count Stolberg and Bishop Zeiler, he embraced the Roman Catholic faith, and was baptized by Leopold Zolder, a Benedictine abbot, near Prague, September 13, 1812. The next year he commenced the study of Arabic, Syriac and Chaldean, and the following year attended theological lectures in Vienna, enjoying the friendship of Profs. John, Friedrich, Von Schlegel, Werner, and Hofbaür, the General of the Redemptorist fathers. From 1814 to 1816 he studied at Tubingen, being supported by Prince Dalberg. His attention was here given to the study of the Oriental languages, for which he possessed a Jewish aptitude, together with ecclesiastical history and Biblical exegesis, under Professors Stendell, Schnurrer, and Flatt. He next travelled for a year in Switzerland and Italy, enjoying the society of Madame de Staël, Holstein, the historian, Niebuhr, Zschokke, Madame Kürdener and others. Toward the close of the same year, he was first received as a pupil of the Collegio Romano at Rome, and afterward transferred to the College of the Propaganda; but his spirit was too restless and dogmatic to accept without questioning all the teachings of

the Propagandist fathers, and in 1818 his religious views were declared erroneous, and he was expelled from Rome. He returned to Vienna, where, after consultation with F. Von Schlegel, Dr. Emanuel Veit, and Hofbaür, he entered the monastery of the Redemptorists at Val-Saint, near Fribourg; but his nature rebelled against unquestioning acquiescence in the theological *dicta* of the fathers, and after a few months he left Val-Saint and came to London, where he found the late Henry Drummond, M. P., whose acquaintance he had formed at Rome. He soon avowed his conversion to Protestantism, and, at Mr. Drummond's suggestion, went to Cambridge, and continued his Oriental studies under Prof. Lee, and also commenced a course of theological studies under the late Rev. Charles Simeon. In 1821, he set out for a tour in the East for the purpose of proclaiming the Gospel to Jews, Mohammedans, and Pagans, and ascertaining the condition of the Eastern Christians with a view to missionary labor among them. In this tour, which occupied him for five years, he visited Egypt, Mount Horeb, Mount Sinai, and Jerusalem, distributing copies of the Scriptures, and in his peculiar way discussing the merits of the Scriptures with all controversialists. He was at first supported by some of the charitable societies, but as his erratic habits occasioned some fault-finding, his friend Drummond after a time sustained him at his own expense. In 1826 he returned to England, and formed the acquaintance of Lady Georgiana Mary Walpole, daughter of the second Earl of Orford, whom he married in 1827, and with whom he set out almost immediately on a second missionary tour, visiting Malta, where his wife remained awaiting his return from Smyrna, the Ionian Islands, and Jerusalem, where he was poisoned by some bigoted Jews, and nearly lost his life. He returned, on his recovery, to Constantinople, where his wife met him, and soon set out again from that city for Bokhara, to search for the remains of the ten tribes. On his route he encountered the plague, was taken prisoner and sold as a slave, but was redeemed by the Persian Minister, Abbas Mirza. He resided at Bokhara for three months, preaching to his countrymen, and then set out for India by way of Khorassan. On his route he fell into the hands of the Kharijee, a robber tribe, who stripped him of everything he possessed, and to escape from them he made his way on foot and nearly naked through the mountain passes to Cabool, a distance of 600 miles. Finding friends at Cabool, he went on through the Punjaub, Lahore, Loodiana, and Simlah to Calcutta, preaching on his way at 130 stations. At Calcutta he was the guest of the governor general. From Calcutta he went to Masulipatam and Madras, and near the latter city was seized with cholera. On his recovery he visited Pondicherry, Tinnevelly, Goa, and Cochin China, visiting the Jews of those regions, and Bombay, and sailed from thence for Arabia, whence he crossed into Abyssinia, acquired the Amharic language, and in 1834 returned to England *via* Malta. In January, 1836, he visited Abyssinia again, and finding Bishop Gobat sick at Axum, brought him to Jiddah, and returned to Abyssinia, where the natives worshipped him as their new *abouna*, or patriarch. Leaving them he crossed into Arabia, visited the Rechabites in Yemen, and met a party of Wahabites in the mountains of Arabia, who horsewhipped him, because they could find nothing in the Arabic Bible, he had given them about Mohammed. Escaping from their hands, he sailed in the beginning of 1837 for Bombay, and thence for New York, where he arrived in August, 1837. While in the United States he was ordained deacon by Bishop Doane, visited the principal cities, preached before Congress, received the degree of D. D., and in January, 1838, sailed for England. He next visited Dublin, where he received priest's orders from the Bishop of Dromore, and settled as curate first at Southwaite and afterward at High Hoyland, in Yorkshire. In 1843, the news of the imprisonment of Col. Stoddart and Capt. Conolly (the latter a personal friend of Wolff, and one who had rendered him great service in one of his tours) reached England, and Dr. Wolff offered to attempt their release, or learn their fate. The British Government declined to send him officially, but individuals furnished the means, and he went out, passing through Persia in full clerical dress, with a Bible in his hand, and announcing himself as "Joseph Wolff, the grand dervish of England, Scotland, and Ireland, and of the whole of Europe and America," and reached Bokhara in safety, having learned, however, before arriving at that city that Stoddart and Conolly had been beheaded. At Bokhara he was made a prisoner by the emir who had put the English officers to death, and a day fixed for his execution; but the Persian ambassador interfered, and he made his escape, and was enabled to avoid the assassins who were sent after him by the emir. On his return to England he was presented to the vicarage of Isle Brewers, where he resided till his death, and by his persistent efforts succeeded in erecting a neat and commodious church. Lady Georgiana died January 16, 1859, and in May, 1861, he married a second wife, who survives him. Dr. Wolff was the author of the following works: "Journal of Missionary Labors," 1839; "Mission to Bokhara," 1846; "Missionary Labors and Researches," 1854; and "Travels and Adventures of Rev. Joseph Wolff, D. D., LL.D., 1860–61.

INDEX OF CONTENTS.

Africa, its political divisions, 1; explorations in, 2; affairs in Morocco, 2; Egypt, its internal affairs, 2; the ship canal at Suez, 3; Abyssinia, 3; Madagascar, 3; Zulu country, 3; Bight of Benin, 3; Liberia, 4; its cotton culture, 4.

Agriculture.—Crops of the Northern States, 4; short crop of western Europe, 4; exports of grain from the United States, 4; prices, 5; measures of Congress affecting agriculture, 5; agricultural college act, 5; agricultural department, 5; colleges of Michigan, Iowa, Pennsylvania, 6; studies at Pennsylvania College, 6; uses of machinery in agriculture, 7; fruit culture, 7; experience of fruit-growers, 7; favorite apples, 7; do. in different parts of the country, 7; do. pears, 8; grapes, 8; varieties, 8.

Alabama.—Increase of population, 8; other census statistics, 8; cotton at Mobile in 1861-'2, 8; mineral treasures, 9; orders of the governor to burn cotton, 9; appeal to the people for shot guns, 9; militia ordered out, 9; soldiers sent to the war, 9; advance of Gen. Mitchell into, 9; other expeditions into, 10; Confederate tax, 10.

AMES, Rev. Bishop, appointed commissioner to negotiate exchange of prisoners, 710.

Argentine Republic.—Situation, 10; boundaries, 10; government, 10; parties, 10; political divisions of the country, 10; population, 10.

Arkansas.—Census statistics, 10; military movements in, 11; poisoning of wells, 11; appeal of the governor to the people, 11; martial law, 11; skirmish near Searcy, 11; military governor appointed, 12; State election, 12; manufactures, 12.

Army, Confederate.—White male population of the Confederate States, 12; estimate of soldiers between eighteen and thirty-five years of age, 12; do. Confederate estimate, 12; volunteers in 1861, 13; quota, 13; another call for troops, 13; conscription law, 13; number obtained under it, 13; list of officers of the Confederate army, 13; condition of the troops in November, 1862, 14; appeal of the Governor of North Carolina for clothes and shoes, 15; straggling from the army, 16.

Army, United States.—Policy of the Government, 16; regular army, historical sketch of, 16; officers of each grade in 1862, 16; militia force, 17; how organized, 17; volunteers, 17; various calls for by the President, 18; number actually raised, 18; monthly pay of non-commissioned officers and privates, 18; pay and commissions allowed to officers, 19; materials for equipment of such a vast force, how obtained, 20; sanitary condition, 20; mortality, 20; proportion sick, 21; absentees, 21; orders to provost marshals to arrest them, 21; surgical department, 21; subsistence department, 21; ordnance department, issues of, 21; list of officers in the regular and volunteer service, 22, 23; casualties, 23.

Army Operations.—Number and position of the Federal forces, January, 1862, 24; number and positions of Confederate forces, January, 1862, 24; results of the previous year, 24; what required to organize and equip the Federal army, 25; plans of the Government for the war, 25; influence of railroads on military operations, 25; movements in Kentucky, 25; object of the Confederate officers, 25; defeat of Humphrey Marshall, 25; despatches of Col. Garfield, 25, 26; proclamation of Gen. Crittenden, 26; position at Mill Spring, 26; movements of Gen. Thomas, 27; defeat of Gen. Zollicoffer, 27; forces on each side, 27; thanks of the Government, 27; effect of the victory at the North, 27.

Reconnoissances in Kentucky, 28; plan of the campaign and force of Gen. Buell, 28; from what States, 28; naval force to coöperate, 28; gunboats, 28; order of the President for an advance of all the forces, 29; effect, 29; movements after the battle of Mill Spring, 29; advance upon Fort Henry, 29; its capture by the gunboats, 31; advance of the gunboats up the Tennessee into Alabama, 31; preparations for an attack on Fort Donelson, 31; forces of Gen. Grant, 32; Confederate force, 32; remarks of Senator Trumbull, 32; location of the fort, 32; attack by the gunboats, 33; conflict with the land forces, 33; summons to surrender, 33; surrender, 33; troops captured, 33; effects, 35; Clarksville surrendered, 35; advance of Gen. Buell, 36; address of Gen. Mitchell, 36; evacuation of Nashville, 36; it surrenders, 37; effect upon the Southern people, 37; address of Gen. Halleck to the troops, 37; movement of gunboats to Columbus, 37; its occupation, 37; proceedings at Nashville, and important events elsewhere, 38.

Expedition of Gen. Burnside, 38; sails from Fortress Monroe, 38; the storm, 39; its disasters, 39; address of Gen. Burnside, 39; advance up Pamlico Sound, 39; capture of Roanoke Island, 40; thanks of the President, 40; expedition to Elizabeth City, 40; address of Gen. Burnside and Com. Goldsborough to the people of North Carolina, 41; proclamation of Gov. Clark, 41; advance upon Newbern, 42; defeat of the Confederate force, 42; congratulations of Gen. Burnside, 42; movement toward Beaufort, 44; expedition to Washington, N. C.,

44; capture of Fort Macon, 44; advance toward Norfolk under Gen. Reno, 44; skirmishes, 44; expedition to the Dismal Swamp Canal, 45; subsequent movements of Gen. Burnside, 45.

Expedition to South Carolina, 45; movements against batteries at Seabrook Island, 46; approaches to Savannah, 46; explorations at Wall's Cut, 46; further reconnoissances, 47; Wilmington Narrows, 47; attack on the vessels under Com. Tatnall, 47; preparations to capture Fort Pulaski, 48; attack, 48; surrender, 49; expedition against Fernandina, 49; its capture, 51; expedition to Brunswick, Ga., 51; St. Simon's Sound, 51; St. John's River, 51; Jacksonville, its surrender, 51; Union proceedings, 51; report of Com. Dupont, 51; Mosquito Inlet, 52; movements toward Charleston, 52; Wappoo Creek, 53; movement against Hilton Head, 53.

Movements in Missouri, 53; skirmishes at Mount Zion and Fayette, 53; occupation of Springfield by Gen. Curtis, 54; advance into Arkansas, 54; report of Gen. S. Price, 54; driven from Cross Hollows, 54; address of Gen. Curtis to the people, 54; position and strength of his forces, 55; advance of Confederate forces, 56; preparations for the battle at Pea Ridge, 56; the battle, 56, 57; flag of truce, 57; correspondence, 57; retreat of the Confederate forces, 58; movements of Gen. Curtis, 58; advance to Batesville, 58; lack of supplies, 58; ten regiments sent to Corinth, 58; moves to Helena, 58; expedition down the Mississippi, 58; expedition to White River under Gen. Hovey, 58; subsequent operations in Arkansas, 58; Cross Hollow, 60; Cane Hill, 60; Crawford's Prairie, 60.

Expedition down the Mississippi under Com. Foote, 60; land and naval forces, 60; reaches Columbus, 60; Island No. 10, 60; its situation, 60; fortifications, 61; movement of Gen. Pope, 61; capture of New Madrid, 61; occupies Point Pleasant, 61; takes his army across the Mississippi, 61; gunboat Carondelet runs past the batteries on the island, 63; evacuation of Island No. 10, 63; capture of Confederate force, 63.

New Confederate line of defence, 63; gunboats move down the Mississippi, 63; anchor at Plum Point, 64; naval battle with Confederate gunboats, 64; evacuation of Fort Pillow, 65; Gen. Pope ordered to Corinth, 65; naval battle before Memphis, 65; surrender of Memphis, 66; expedition up the White River, 66.

Operations in Tennessee, 67; forces of Gen. Grant, 67; line of defence, 67; Confederate force, 67; movements of the Federal force, 67; plan of Gen. Buell, 68; Pittsburg Landing, 68; battle at Shiloh, 69, 70, 71, 72, 73; despatch of Gen. Beauregard, 73; message of President Davis to the Confederate Congress, 73; Gen. Halleck takes command and moves on Corinth, 74; its situation, 75; advances of the Federal army, 75; despatches of Gen. Halleck, 75; evacuation of Corinth, 76; Confederate works, 76; pursuit of the Confederate forces, 78; movements of Gen. Mitchell, 78; capture of Huntsville, 78: seizure of the railroad, 79; operations in Alabama, 79; close of operations in Tennessee, 80.

Situation in Virginia, 80; movements of Gen. Lander, 80; intended movements of Gen. Jackson, 80; attack at Blue's Gap, 81; march of Gen. Lander from Romney, 81; position of the Confederate army; 81; address of Gen. Beauregard, 81; do. of Gen. Johnson, 82; design of Gen. McClellan, 82; effects of the order of the President for a general movement of all the troops, 82; a decided injury, 82; opinion at Richmond on this order, 82; salvation of the Confederacy, 82; Federal movement at Harper's Ferry, 82; retreat of Confederate army commenced, 83; battle of Winchester, 83; new Confederate line, 83; order of the President dividing the army of the Potomac into corps, 84; assigning Gen. McClellan to the command, 84; effect, 84; address of Gen. McClellan, 84; exposure of his plans, 85; his position, 85; movement of troops begun, 86; number in the army of the Potomac, 86; withdrawal of Gen. Blenker's division, 86; reason, 86; Letter of President Lincoln, 86; withdrawal of Gen. McDowell's corps, 87; statements in the Senate, 87; statement of Gen. McClellan at a court martial, 88; his instructions to Gen. Wadsworth, 88; do. to Gen. Banks, 88-89; letter to Gen. Thomas, 89; further statements of Gen. McClellan in a court martial, 90; generals under command of Gen. McClellan, 90; countermanded, 90; order creating the Mountain Department, 90; do. Shenandoah, 90; do. Rappahannock. 90; duty assigned to Gen. McDowell to protect the capital, 90; movements of the army of the Potomac from Fortress Monroe, 90; Yorktown, 90; Gloucester, 90; progress of army, 92; attack of Vermont troops on the enemy's line, 93; sharpshooters, 93; operations of the siege, 93; evacuation of Yorktown, 94; causes to retard its capture, 94; guns captured, 94; situation of Williamsburg, 94; advance upon, 94; movements of Gen. McClellan, 94; misinformed of affairs in front, 94; fight before Williamsburg, 95; success of Gen. Hancock, 95; arrival of Gen. McClellan, 96; address to the troops, 96; advance of Gen. Franklin to West Point, 96; conflict, 96; aid of the gunboats, 96; delays at Williamsburg, 97; evacuation of Norfolk, 97; its occupation by Federal troops, 97; advance of Gen. McClellan's army, 98; description of the country, 98; concentration of Confederate forces, 99; skirmishing, 99; instructions from the War Department, 99; to Gen. McDowell to join Gen. McClellan, 99; movement under Gen. Porter upon Hanover Court House, 99; conflict, 100; opinion of Gen. McClellan on the effect of a junction with Gen. McDowell, 100; Prince de Joinville, 100; cause of the failure of Gen. McDowell to join Gen. McClellan, 100; advance of the former to Fredericksburg, 101; Gen. Shields sent to join Gen. McDowell, 101; orders from the War Department to Gen. McDowell how to proceed after the junction with Gen. Shields, 101; force of Gen. Shields, 101; joins Gen. McDowell, 101; ordered to fall back to relieve Gen. Banks, 100; correspondence, 101; Gen. Shields falls back, 102; Gen. Fremont's department, 102; his movements, 102; conflict at McDowell, 104; Gen. Fremont ordered to the relief of Gen. Banks, 104; order of the President, 104; his reply, 104; reaches Strasburg, 105; skirmish with Gen. Jackson's rear, 105; valley of the Shenandoah, 105; situation of Gen. Banks, 105; connection with the forces east, 105; the plan to capture Gen. Banks, 105; designs of the enemy, 105; movements of Gen. Jackson, 105-106; attack at Front Royal, 106; plan of Gen. Banks on hearing of it, 106; his movements, 106; retreats, 106; pursuit of Gen. Jackson, 106; fight at Winchester, 106; further retreat, 107; crossing of the Potomac, 107; address of Gen. Jackson to his troops, 107; panic occasioned by the attack at Front Royal, 107; extends to Washington, 107; alarm of the Government, 107; telegraphic despatch of the Secretary of War, 107; do. of Gov. Morgan of New York, 107; orders of Gov. Curtin of Pennsylvania, 107; proclamation of Gov. Andrew of Massachusetts, 108; order of Gov. Sprague of Rhode Island, 108; proclamation of the Governor of Ohio, 108; order of the Secretary of War taking military possession of the railroads, 108; excitement in the Northern States, 108; success of Gen. Jackson's movements, 108; advance upon Harper's Ferry, 108; attack by his rear guard, 109; retreat of Gen. Jackson, 109; of his rear, 109; position of Gens. Fremont and Shields, 109; Gen. Fremont attacks Gen. Jackson's rear guard, 110; movements of Gen. Shields, 110;

movements of Gens. Banks and Sigel, 110; Gen. Fremont attacks the rear of Gen. Jackson beyond Strasburg, 110; pursuit continued, 110; affair near Mt. Jackson, 111; conflict near Harrisonburg, 111; Col. Ashby killed, 111; battle at Cross Keys, 111; situation of Port Republic, 111; advance of Gen. Shields repulsed, 112; Gen. Jackson escapes, 112; Gen. Fremont reaches Port Republic, 112; force of Gen. Jackson, 113; advance of Gen. Heath in Western Virginia and defeat, 113; consequences of these movements to prevent reënforcements to Gen. McClellan, 113; order of Gen. McClellan to his troops, 113; crossing of the Chickahominy, 113; battle of Fair Oaks, 114, 115, 116; retreat of the Confederate troops, 116; difficulties in capturing the city, 116; Confederate march in the rear of Gen. McClellan, 117; another prospect of the coöperation of Gen. McDowell, 117; letters of Gen. McDowell, 118; address of President Davis to the Confederate army, 118; completion of the bridges across the Chickahominy, 118; advance of Gen. Hooker, 118; his recall, 118; reason, 118; plans of the Confederate generals, 118; flank march of Gen. Jackson, 119; position of Gen. McClellan's forces, 119; attack on his right, 119; firm resistance of Gen. Porter's corps, 121; crossing to the right bank of the Chickahominy, 121; opinion of Confederate officers, 121; further developments, 121; plans of the Federal general comprehended, 121; battle at Savage's Station, 122; do. at White Oak Swamp, 122; do. at Charles City Crossroads, 122; confusion of the Confederate troops, 122; "Onward to Richmond" shout of Federal troops, 122; desperate valor of Confederate troops, 122; attack of Gens. Wise and Holmes, 123; attack at Malvern Hill, 123; army at Harrison's Landing, 123; address of Gen. McClellan to his soldiers, 123; address of President Davis to Confederate army, 124; arrival of Gen. Halleck, 124; his views, 124; instructions to Gen. McClellan, 124; letter of Gen. McClellan, 124; reply of Gen. Halleck, 125; army of the Potomac withdrawn from the Peninsula, 126.

Gen. Pope assigned to command the army of Virginia, 126; Gen. Fremont resigns, 126; Gen. Pope's address, 126; his orders, 127; situation of his army, 127; plans of the Confederate officers, 128; call of the President for three hundred thousand men, 128; movement of Confederate troops, 128; skirmishing on the Rappahannock, 128; battle of Cedar Mountain, 130; capture of Louisa Court House, 130; nature of the country, 131; forces of Gen. Pope begin to fall back, 131; Rappahannock bridge, 131; attempts of Confederates to cross the Rappahannock, 131; dash on Catlett's Station, 132; advance of Confederate army, 132; Gen. Pope continues to fall back, 132; concentration of his forces, 133; attack at Manassas Junction, 133; attack on Bristow's Station, 133; further movements of the Confederate forces, 133; continued retreat of Gen. Pope, 133; battle near Manassas, 134; conflict near Gainesville, 134; battles near Bull Run, 135; despatch of Gen. Lee, 135; message of President Davis, 135; excitement at Washington and through the North, 136; Gen. Pope falls back to the heights of Germantown, 136; his correspondence with Gen. Lee, 136; retreat of Gen. Banks, 136; battle of Chantilly, 137; retreat of Gen. Pope's army to fortifications at Washington, 137.

Movements of the Confederate forces, 137; advance toward Maryland, 137; enter Frederick, 138; address of Gen. Lee to the citizens of Maryland, 138; evacuates Frederick and enters Hagerstown, 138; excitement in Pennsylvania, 138; activity in Maryland, 139; Gen. McClellan ordered to command the troops for the defence of Washington, 139; effect upon the troops, 139; advance sent forward into Maryland, 139; movements of Gen. Lee, 139; his order to Gen. Hill showing his plans, 140; advance of Gen. McClellan's forces, 140; enter Frederick, 140; pursue Confederate forces, 140; battle of South Mountain, 140, 141; movements at Harper's Ferry, 141; its surrender, 142; spoils taken, 142; battle at Antietam, 143, 144; losses, 144; retreat of the Confederate army from Maryland, 144.

Guerilla operations in Kentucky, 144; advance of Gen. E. K. Smith into Kentucky, 144; battle at Richmond, 144; removal of the Kentucky Legislature, 144; address of the governor, 145; proclamation of Gen. Smith, 145; movements of Gen. Buell, 145; advance of Gen. Bragg into Kentucky, 146; capture of Munfordsville, 146; object of Gen. Bragg's advance into Kentucky, 147; his address to the Kentuckians, 147; advance of Gen. Buell in pursuit, 149; battle of Perrysville, 149; Camp Dick Robinson, 149: spoils taken by Gen. Bragg, 150; his retreat and the pursuit, 150; result of the invasion of Kentucky, 151.

Cumberland Gap, its situation, 151; occupation by Confederate forces, 151; invasion by a Federal force, 151; its evacuation, 151; occupation by Gen. Morgan, 152; skirmishes, 152; evacuation by Gen. Morgan, 152.

Movements of Gen. Grant's forces in Tennessee and Mississippi, 152; dash upon Iuka, 153; movements of Federal forces upon Iuka, 153; its capture, 153; march of the Confederate forces upon Corinth, 154; position of the forces, 154; battle of Corinth, 155; retreat of the Confederate force, 156; pursuit, 156; address of Gen. Rosecrans, 156; advance of Gen. Grant's forces, 156; movement by a division of Gen. Curtis' army, 156; expedition from Helena, 157; capture of Holly Springs, 157; close of the second campaign in Kentucky and Tennessee, 158.

Gen. Rosecrans ordered to the command in Kentucky, 158; advance toward Nashville, 158; position of the Confederate forces, 158; Federal advance beyond Nashville, 159; position of the armies at Murfreesboro', 159; the battle at Murfreesboro', 159, 160, 161; losses, 161.

Conclusion of the campaign in Virginia, 161; position of the armies, 161; order to Gen. McClellan to cross the Potomac, 162; letter of Gen. Halleck to the Secretary of War, 162; causes of delay to advance, 163; advance of the troops, 163; the situation of the respective forces, 164; removal of Gen. McClellan, 164; his farewell to the troops, 164; the military aspect of affairs, 164; movement upon Fredericksburg, 165; that city summoned to surrender by Gen. Sumner, 165; correspondence, 166; concentration of Federal army, 166; delay of pontoons, 166; testimony of Gen. Burnside, 167; battle in the rear of Fredericksburg, 168, 169; retreat of the Federal forces, 170; despatches of Gen. Burnside, 170; address of Gen. Lee to his troops, 170; dash upon the Cumberland Gap, 171; attack upon Goldsboro', 171; fight at Pocotaglio, 172; at Baton Rouge, 172; summary of important military events, 172; results of the military operations of the year, 173.

Astronomical Phenomena and Progress. Asteroids, 173; comets, 174; new theory of, 174; nebulæ, 175; stars, 176; refraction, 176.

Blockade, its effectiveness, 193; letter of J. M. Mason to Earl Russell, 193; reports of British naval officers, 193; letter of Earl Russell to Lord Lyons, 193; views advanced in the House of Commons, 194; speech of the Solicitor-General, 194; speech of Lord Strathedon, 194; reply of Earl Russell on the effectiveness of the blockade, 195, 196; deliberate opinion of the British Government, 196; remarks of M. Regnait in the French Legislature, 196; reply of M. Billault, 196; memorial of British shipowners to the Secretary on Foreign Affairs, 197; reply of Earl Russell, 197.

BOCOCK, THOMAS S., speaker of the Confederate House, 257; his address, 257.

Border States.—Appeal of President Lincoln to, on emancipation, 721; replies of members of Congress, 722, 723, 724, 725.

Brazil, its situation, 197; provinces and population, 197; difficulty with Great Britain, 197; facts of the case, 197; another cause of complaint, 198; correspondence between the Governments of the two countries, 198; propositions for adjustment, 199; accepted under protest, 199, difficulty on the Amazon, 199; progress of the country, 199; commerce, 200.

BRODIE, BENJAMIN C., birth, 200; death, 200; education, 200; distinction as a surgeon, 200.

BROWN, JOSEPH E., Governor of Georgia, opposes conscription, 244; correspondence, 244.

BUCKLE, HENRY T., birth, 200; education, 200; pursuits, 200; writings, 201; death, 201.

BUELL, GEN. DON CARLOS, his force in Kentucky, 28.

Building Materials.—Tendency to decay, 201; investigation in England, 201; Westminister Palace examined, 201; extent and position of decay, 201; causes, 201; best means of prevention, 202; qualities of stone recommended for future use, 203; principles likely to be effective in accomplishing the preservation of stone, 203; various applications, 203; processes, 204; mode of decay overlooked, 205; preservation of timber, 205; processes used, 206.

BURNSIDE, GEN. AMBROSE E., commands expedition to North Carolina, 38; address to his troops, 39; address to the people of North Carolina, 41; advance upon Newbern, 42; congratulates his troops upon their success, 42; appointed to command the army of the Potomac, 164; his orders, 165; his testimony before a committee of Congress, 167; orders before Fredericksburg, 170.

BUTLER, GEN. BENJAMIN D., proceedings at New Orleans, 645; retires, 652.

C

California, its situation, 206; civil officers, 206; amendments to the State Constitution, 206; State debt, 206; revenue, 207; civil affairs, 207; floods in the State, 207; mines and mining, 207; agricultural products, 208; gold and silver exported, 208; population, 208.

CAMERON, SIMON, resigns as Secretary of War, 82; arrested on process of a court, 511.

CANNING, CHARLES JOHN, birth, 208; education, 208; public services, 208; death, 208.

Chemistry.—Elements, 208; cæsium, 208; rubidium, 208; thallium, 209; lithium, 209; compounds—hydruret of iron, 209; silicuretted hydrogen, 210; peroxide of potassium and sodium, 210; hydrofluosilicic acid, 210; hyperchloric acid, 210; combustion of hydrocarbons in air at ordinary temperature, 210; allotropic states—oxygen, 211; nitrification, 212; syntheses of organic substances, 213; alcohol, 213; dialysis, 214; transpiration, 215; applications of chemistry, 216; Webster's oxygen process, 216; potash for the animal kingdom, 216; copper paint, 216; aluminium bronze for philosophical instruments, 216; artificial plumbago, 217; determination of carbon in iron, 217; nitrogen in iron, 218; new fusible alloy, 218; cupreous acetylene, 218; improved matches, 218; India rubber varnish, 218; basis of artificial teeth, 218; guano polishing powder, 219; cement for rooms, 219; new system of bottling liquids, 219; new process of making vinegar, 219; new hydrometer 220; myrtle wax, 220; aniline colors, 220; Parkesine, 220; Australian oils and resins, 221; organic alkaloids, 221; refining sugar, 221; detection of picrotoxine, 221; oxygenated beverages, 221; preservation of meats, 222; rendering fabrics non-inflammable, 222; awards of the Exhibition of 1862, 222.

Chili, its situation, 222; provinces and population, 222; its claims to territory, 223; Araucanians, 223; tranquillity of the country, 223.

Cochin China, its boundaries, 223; population, 223; character of the country, 223; products, 223; difficulties with France, 224; military expeditions, 224; treaties, 224.

COLT, SAMUEL, birth, 225; death, 225; education, 225; pursuits, 225; inventions, 225; enterprise, 226; successes, 226; nature of his inventions, 226.

Commerce of the United States.—Demands for cotton, 227; movements in Kentucky and Tennessee, 227; operations at New Orleans, 227; comparison with other years, 228–229; opening the ports of North and South Carolina, 229; limits of the trade of the country, 229; exports from New York, 230–231; St. Mary's Canal, 230; influence of the operations of the banks, 231; rise in values, 231; imports of New York, 232; imports of cotton into Great Britain, 232; interruption to trade, 232; revenue at New York, 233; transfer of vessels to the English flag, 233; increase of foreign tonnage, 234; ocean steamers, 234; coastwise trade, 234.

Confederate States.—Population and resources under the census of 1860, 235; political proceedings from February,

1861, to January, 1862, 236; the Government weak and trembling for its existence in January, 1862, 237; influence of the Union policy of the Federal Government, 237; necessity of war to the Confederate States, 237; effects of it partially counteracted by moderate policy of Federal Government, 238; other causes to make the Confederate States weak, 238; disappointments in Europe, 238; success of the blockade, 238; call upon the people for arms, 238; attempts to rouse the people, 239; action of the State Legislatures, 239; of Confederate Congress, 239; Union sympathy at Richmond, 239; do. in Tennessee, 240; address of the Georgia members of Congress, 240; military plans, 241; inauguration of the permanent Government, 241; appeals to the people, 241; Confederate army, its condition, 242; conscription recommended to Congress, 242; furloughs revoked, 243; effect of the Federal military movements upon the Government and people, 243; the conscription act, 243; how executed, 243; its constitutionality questioned, 243; opposition at the South, 244; correspondence with the Governor of Georgia, 244; opinion of the Supreme Court of Georgia, 245; opposition in Alabama, 245; manner of executing the law, 245-246; rewards for the apprehension of deserters; 246; partisan rangers authorized, 247; the act, 247; instructions of the Secretary of War, 247; second conscription act, 247; its peculiar features, 247; calls for shot guns, sulphur, lead, and saltpetre, 248; order relative to bells of churches, 248; contributions of churches and individuals, 248; other sources for the supply of arms and munitions of war, 249; plans of defensive operations adopted by the Government, 249; preparations of the Confederate Government, 249; alarm at the approach of McClellan's army, 249; contraction of the line of defence, 250; object of the invasion of Maryland, 250; do. of Kentucky, 250; civil organization of the Confederate Government, 250; its finances, 250; loans, &c., 251; bonds and debt, 251-252; taxes, 253; plans to burn cotton, 253; manufactures, 254; postage system, 254; martial law, 254; foreign relations, 254; position at the close of 1862, 255; gradual exhaustion, 255, speech of Vice President Stephens, 255.

Congregationalists.—Numbers, 255; location, 255; enterprise, 255; numbers in England, 256; do. in British colonies, 256; missionaries, 256; similar churches in France, Italy, Switzerland, 256.

Congress, Confederate, its meeting and organization under the permanent constitution, 256; members, 256-257; address of the Speaker of the House, 257; votes cast for the President, 258; resolution offered in the House to abandon the defensive policy in the conduct of the war, 258; objected to as impeaching the Administration, 258; no people in a revolution ever adopted a defensive policy, 258; the generals have had the most liberal discretion, and the President not responsible, 259; Hannibal and the philosopher, 259; no disrespect intended, 259; more of an aggressive policy should have been adopted, 259; resolution laid on the table, 259; bill passed directing military commanders to destroy cotton, &c., 259; joint resolution relative to the war with the United States, 260; compensation of members, 260; resolution adopted to entertain no peace propositions excluding any portion of the soil of any Confederate State, 260; suspension of Gens. Floyd and Pillow, 260; a bill to curtail the cotton crop considered, 260; unconstitutional, 260; Congress cannot create a crime, 261; allowing cotton to fall into the hands of the enemy was giving him comfort, 261; cultivation of cotton should not be abandoned, 261; Congress no power to interfere with the internal affairs of the States, 261; the idea that cotton is king long since abandoned, 261; England will never interfere, 261; bill lost, 262; report on the surrender of Roanoke Island, 262; moneys transferred to the Confederate States Government by the several States, 262; appropriations for the Navy Department, 262; resolutions relative to the battle of Shiloh, 262; Treasury notes less than $5 authorized, 262; increase of clerks in the departments, 263; adjournment to August 18th, second session convened, 263; bills introduced, 263; remarks on the conscription act, 263; resolution to transact business with open doors rejected, 264; resolutions favoring an aggressive war, 264; also favoring a proclamation to the people of the Northwestern States, 264; vote of thanks to the commander at Drury's Bluff, 264; message from President Davis with despatches from Gen. Lee, 264; vote of thanks to Gen. Lee on crossing the Potomac, 265; amendment proposed, 265; Congress not prepared to invite the Government to invade the enemy's country, 265; after we have crossed the border we are told we ought to hesitate, 265; could not take the responsibility of advising an advance into Pennsylvania, 265; what the people wanted was an aggressive war, 265; could the army safely go into the heart of the North? 265; it is not a war of conquest, but of independence, 265; amendment lost, 265; further debate on the resolutions, 266; passed, 266; an additional resolution proposed as not intended to indicate a policy for the President, 266; reports of the committee on the opening of Southern markets to the Northwestern States, 267; majority report in favor, minority opposed, 267; bill to provide further for the public defence passed, 267; motion to reconsider, 267; remarks on the difficulties between the Government and the States relative to conscription, 268; retaliatory measures considered, 268; report of a committee with a bill, 269; minority report, 269; remarks on President Lincoln's proclamation, 269; another bill proposed, 269; whole matter disposed of, by a resolution to sustain the President, 270; sequestration bill considered, 270; is the bill constitutional? 270; this is no civil war, but a war of some sovereign States against others, 270; no such thing as a citizen of the Confederate States, 270; people a right to choose their own government, 270; you cannot hang a man as a traitor to a government that has been made without his consent, 270; further debate, 271, 272, 273; bill laid on the table, 273; appropriations, 274; issue of copper coin authorized, 274.

Congress of the United States, second session of Thirty-seventh, convened, 275; members, 275; views of the majority, 275; vote of thanks to Commander Wilkes passed in the House, 276; anti-slavery resolutions offered, 276; resolutions proposing a conference with the Southern States offered, 276; further resolutions relating to slavery, 277; confiscation bill introduced, 277; its features, 277; grants of power in the Constitution, 278; armies in the field, 278; necessity for some regulation to govern the commanders, 278; other reasons for the measure, 278; further resolutions offered, 279.

Resolution relative to the order of Gen. Halleck, 279; considered, 279; system of excluding slaves inaugurated in Western Virginia, 279; a disgrace to the profession of arms, 279; no authority from the President to issue these orders, 280; explanation of Gen. Halleck, 280; this order regarded most wise and salutary by the officers and soldiers, 280; policy of the administration to deliver up the slaves to their masters, 280; the contrary inferred from the President's message, 281; the administration has had no hand directly or indirectly in the order of Gen. Halleck, 281; letter from Gen. Halleck, 281.

Resolutions relative to the conduct of the war con-

sidered, 281; let the military arm strike that blow more effective for peace and freedom than armies or victories can be, 281; whether right or wrong the majority of the soldiers are opposed to this anti-slavery agitation, 281; worst kind of folly and wickedness to retain slavery, 281; does not the President stand pledged before the country and the world to the conservative policy? 282; further debate, 283; resolution referred, 283.

Resolution of inquiry relative to arrests, 283; what arrests is it proposed to consider, 284; the right thing done at the right time, 284; the Constitution confers all the power that is necessary to enable the Government to crush secession, 284; it is assumed that these persons are traitors, but who is to decide that? 284; what becomes of constitutional liberty? 284; let this thing be regulated by law, 285; the resolution carries an implied censure upon the Government, 285; the resolution eminently proper, 285; some investigation of these arrests should be made, 286; are we fighting for the Constitution? 286; when these arrests were made the loyal people of the country felt that they had a Government, 286; if this is not the proper mode to make arrests, then bring in a bill to regulate it, 286; who seeks to make it a censure on the administration? 286; no necessity to trample on the Constitution in order to maintain it, 287; the man who stops to inquire whether there is a law, when the house is burning, is unfit for a great place, 287; inappropriate time to adopt the resolution, 287; referred to the Judiciary Committee, 288.

Bill to raise a volunteer force in Kentucky considered, 288; more soldiers now than can be used, 288; reasons for the bill, 288; economy forbids it, 288; what does the bill propose? 289; if you change the object of the war you paralyze the army, 289; not a war for the emancipation of slaves, 289; what evidence that more soldiers are needed, 290; importance of the bill, 290; peculiar situation of Kentucky, 290; force of Kentucky in the field, 290; best reason in the world for believing there are not men enough, 291; those who refuse to vote troops, derelict, 291.

Resolution that none but persons of superior competency should be appointed generals considered, 291; not half the brigadiers needed, 292; enough general officers now, 292; the question of expense should be considered, 292; thousands of volunteers unfit for duty, 293.

Resolution relative to using the soldiers to surrender fugitives considered, 293.

Inquiry relative to passports for California considered, 294; letter of Secretary Seward, 294.

Resolution relative to the cause of the war considered, 295; no just cause of war at the South, 295; what was the primary inciting cause? 295; dissatisfaction with the principles and operation of democratic government, 295; white laborers at the South, 295, views of Southern men, 296, 297.

Resolution calling for a copy of the proclamation of Gen. Phelps considered, 298; desirable to know authoritatively and positively that it is not an act of the Government, 298; an offset to the proclamation of Sherman and orders of Halleck, 298; resolutions offered in the House, 299.

Resolution relative to disloyalty of persons in the employ of the Government considered, 299; correspondence with the secretaries, 299; their replies, 299.

Resolution to inquire into the loyalty of the Senator from Oregon before administering the oath, 300; understood to be an open and avowed supporter of secession, 300; no precedent for such a motion, 300; the times are those when we are compelled to make precedents, 301; it belongs to the Senate to make a precedent, 301; this is not a new state of things, 301; right and duty of the Senate to make the investigation, 301; what are the facts? 301; he has a right to be sworn in, 302; is not loyalty a qualification under the Constitution, 302; the case of Philip Barton Key in 1808, 302; the question of loyalty too indeterminate and rests upon opinion, 302; different views of loyalty, 302; would you admit a felon? 303; with credentials—yes, 303; credentials referred, 303.

Inquiry relative to Ball's Bluff, 303; object of the resolution, 304; the question is—will the House interfere in the conduct of the war? 304; the Constitution provides that the military shall be subject to the civil power, 304; the nation has failed rightly to interpret the providences of God, 305; when we cast this accursed slavery overboard God will give us success, 305; if the institution of slavery ever stands in the way of constitutional liberty the people of Kentucky will wipe it out, 306; further debate, 307.

Resolution for a tax considered, 307; for twenty-six years the question of slavery has been debated in this House, 308; prepare for the great question of finance, 308; the war power of the Government under no limitation, 308; the essential destruction of lives and property justifiable, right, and proper, 308; Government invested with the right of self-defence and self-preservation, 308; such the rights, what are the duties of the Government. 309; the most needed of all was an act to liberate the slaves, 309; have the constitutional power, 309; no boundaries to the power of Congress? 309; not one dollar, nor one man to be voted under such an interpretation of the Constitution, 310; Congress can provide for the common defence only in the manner that the Constitution points out, 310; if we are successful without an interference with slavery, we return from victory like the Thracian horse, bearing his master on his back, 311; if abolitionism rules, this will be a war of extermination and death all over the country, 311; the first summons from the Government read, 312; what did the President mean by alleging there should be no interference with property of any kind, 312; to judge from the debates it would appear that the President had no support from the party that elected him, 312; universal emancipation must be proclaimed to all, 313; when the Constitution is defied and set aside, it grants to the President and Congress a supplemental power increasing and varying according to the increasing and varying necessities of the nation, 313; if no other means were left to save the Government we have power under the Constitution and according to its express provision to declare a dictator, 313; the war power is our special property, 314; how it should be used, 314; declare the oppressed to go free, 314.

Better attend to providing the means and the men for putting down these enemies, 314; the conduct of a war is specially confined to the executive department, 315; what are the motives and ends of the Committee on the War, 315; the commander-in-chief has been before the committee, 315; they intend to usurp the prerogatives of the executive, 316; the largest latitude is given to the President, Secretaries of War and Navy in the conduct of the war, 316; is it intended to force the administration into a John Brown raid, 317.

Issue of treasury notes considered, 317; necessary to carry on the war, 317; legal tender, 317; a novel proposition, 318; impair the obligations of every contract, 318; Congress has not power to do it, 318; the financial plan of the Government, 318; not one sound precedent for a

paper currency, 318; Congress has the power to declare what shall be a legal tender, 319; point out the words in the Constitution, 319; Congress has not the power to debase coin, 320; three propositions the sum of the argument, 321; existence of the Government depends upon its successful finance, 321; we are to conform our action to the Constitution of the country as it is, 322; what is this legal tender? 322; what power in the Constitution, 322; to coin money, 322; regulate commerce, 322; imperative necessity brings out the latent powers of the Constitution, 323; is this measure necessary to suppress the enemy, 323; bill passed the House, 324; vote, 324; in the Senate the bill considered, 324; legal tender constitutional, 324; obligation of an oath to support the constitution, 324; proposed to make these notes a legal tender to pay private debts, 324; who compelled to take this money, 325; said to be incidental to a great variety of powers, 325; those who choose may exercise their own judgments on the constitutionality of the measure, 326; a palpable violation of the Constitution, 326; Constitution silent, 326; if the Constitution has failed to speak Congress has not, 326; bill passed, 327.

Bill to authorize the President to take possession of railroads and telegraph lines, 327; its object, 327; where the judiciary cease the military begin to operate, 328; an extraordinary bill, 328; where do you get authority to subject civil employés to the articles of war, 328; an unauthorized power, 328; what is the whole object of the bill? 328; the power to do these things exists, 328; the war power is vested in Congress, not in the President, 328; without our assent the President cannot exercise what powers he pleases in the conduct of the war, 329; extending martial law over railroads, 329; the first step which costs, 329; the doctrine of state necessity at all times dangerous, 330; bill passed, 330.

Resolutions for the expulsion of the Senators from Missouri, 330; report on, 331.

Resolution for the expulsion of Senator Bright of Indiana, 331; debate, 331, 332; passed, 332.

Bill to prohibit slavery in the Territories considered, 332; amendment offered, 333; effects of emancipation in the British West Indies, 333; what involved in the negro question, 334; this bill a part of a series of measures already initiated, 334; Congress has no power to emancipate a slave anywhere, 335; all the rights secured by the Constitution to the citizen exist in the District of Columbia as elsewhere, 335; on what terms can private property be taken, 335; statements of the Administration on the objects of the war, 335; have not the American people the right to relieve themselves from the guilt of upholding slavery, 336; protest in the name of Maryland, 336; views of Henry Clay, 336; cannot place expediency in the scale against justice, 337; has slavery a national existence at the capital? 337; shall money be paid for its abolition? 337; examination of the constitutional question, 338; it is denied that property can exist in a human being, 338; slavery exists by the law of nations, 339; the slave trade cannot be restricted except by positive legislation, 340; slave trade would have been a legitimate trade to the citizens if the Government had not declared it piracy, 340; opinions of the Supreme Court, 340, 341; the Constitution treats the slaves as persons as well as property, 342; property in a horse has its origin in force, 342; vote on the question, 343; inexpediency of the measure, 343; is not this the commencement of a great system? 344; vote on the bill in the House, 344; message of the President on the bill, 345.

Resolutions declaring the relations between the United States and the territory once occupied by certain States, 345; other resolutions on the same subject, 346.

Resolution relative to emancipation with compensation, 346; where is the power in the Constitution to appropriate money for this purpose? 346; too late to discuss that question, 347; an olive branch of peace, harmony, and good faith, 347; simply a declaration of opinion, 347; amendment offered, 348; the proposition of the President promises nothing, 348; is this power granted? 349; vote on the resolution, 349.

Bill relative to confiscation considered, 349; intended to operate on property, 349; competent for Congress to prescribe punishment, 349; further provisions and objects of the bill, 350; the right of confiscation relative to slaves, 351; further provisions of the bill, 351; what constitutional power to transport, colonize, and settle emancipated negroes, 351; what is to become of the Union men of the South with millions of freed slaves left to roam at large, 351; this measure can never secure peace, 352; shall we stand or fall by the Constitution or leave it and adventure on the wide sea of revolution? 352; this bill would liberate three million slaves at a blow, 352; effect upon the war, 353; pass this bill and all that is left of the Constitution is not worth much, 353; the supreme power of conducting war is in Congress, 353; no limit to the power of Congress, 353; it leaves to the citizens of the seceded States the ownership of nothing, 354; want of power, 354; Congress cannot interfere with slavery in the States, 355; wars should not be a revengeful policy, 355; ends for which the Constitution was made, 356; two classes of persons whose property is forfeited, 356; it will cut off the great market of the free States, 356; depriving a person of his property without process of law, 357; Congress no right to interfere with slavery in a State, 357; interfering with plighted faith, 358; subject referred to a select committee, 358; report, 358; the bill reported unconstitutional, 358; moved to except slaves, 358; liberation is not confiscation, 358; the term forfeiture, 359; a substitute, 359; votes on the amendments, 360; motion to strike out the section authorizing the President to issue a proclamation of emancipation, 360; Congress no power to authorize him, 360; inexpedient, 361; contest in the Senate on the bill, 362; the debate in the House, 362; the Constitution not to be trampled on, 362; the bills examined under the law of nations and the Constitution, 362, 363, 364, 365; contest in the Senate renewed, 366; not one single word or letter in the Constitution which gives Congress any power to do an act in the exigency of war, which it cannot do in times of peace, 366; the doctrine that would concentrate all power in the Executive most fatal, 367; indifferent whether the Federal or Confederate States triumph, 367; the war power of the Government explained, 367, 368; doctrines subversive of every principle of free government, 369; authority of the President over the army and navy, 369; has Congress authority to control or direct the President in the use of the military force, 369; fatal sophistry to deny it, 369; manner in which the proceedings of the Senate have been conducted, 370; vote on the bill, 370; a substitute moved, 371; vote, 371; committee of conference, 371; subsequent legislation on the measure, 371; amendments moved, 372; confiscation and forfeiture, 373, features of the bill, 373; explanatory provision, 374; adopted, 374; message of the President relative to the bill, 374.

Acts of a general nature passed, 375; number of representatives in Congress, 375; additional article of war, 375; abolition of slavery in the District of Columbia, 375; department of agriculture, 375; homesteads to settlers, 375; railroad and telegraph to the Pacific, 375; punishment of polygamy, 375; oath to be taken by public officers, 376.

Connecticut.—Its situation, 376; civil officers, 376; census returns, 376; institutions, 376; census statistics, 377; proceedings of the Legislature, 377; debt of the State, 377; troops furnished, 377.

Conscription in Confederate States.—Act recommended by President Davis, 242; its adoption, 243; features, 243; constitutionality, 243; opposition at the South, 243; correspondence of the Governor of Georgia, 244; opinion of the Supreme Court of Georgia, 245; opposition in Alabama, 245; desertions, 246; debate in Congress, 268.

CRITTENDEN, Gen. GEORGE B.—Address to the people of Kentucky, 27.

CURTIS, Gen.—Address to the people of the southwest, 54; correspondence with Gen. Van Dorn, 57; appointed to command the department of Missouri, 58.

D

DAVIS, President JEFFERSON.—Message on the capture of Fort Donelson, 35; message to Confederate Congress, 73; address to the army after the battle of Fair Oaks, 118; after seven days' battles, 134; message to Confederate Congress on despatch of Gen. Lee, 135; his inauguration at Richmond, 241; his views, 241; recommends a conscription law, 242; on its constitutionality, 243; letter to Gen. Lee respecting retaliatory measures, 715; his inaugural address, 732; message at the first session of the permanent Congress, 734; do. at the second session of the permanent Congress, 735; retaliatory proclamation, 736.

Decatur.—Its situation, 378; military movements at, 378.

Delaware.—Its situation, 378; State election, 378; census statistics, 378; troops sent to the war, 378.

Deserters, provost marshals to arrest, 21.

Diplomatic Correspondence of the United States.—With Great Britain, 379; case of the British consul at Charleston, 379; the right to obtain coal at Nassau, 379; steam gunboat Oreto, 380; proceedings relative to, 380; case of the Alabama, 381; proceedings relative to, 382; the charge of furnishing assistance to the Confederates, 383; duty to suppress them, 384; letter of Mr. Adams explaining his position, 385; belligerent rights accorded to the Confederate States, 385; case of the Emily St. Pierre, 386; treaty for the suppression of the slave trade, 387; correspondence with France, 387; anxiety for cotton, 387; condition of the manufacturing districts, 388; uniformity of policy, 388; conversation relative to mediation, 388; proposition of France to England and Russia, 389; mediation proposed by France to the United States, 389; reply of Mr. Seward, 390; correspondence with Spain, 392; reference to the treaty surrendering the right of search, 392.

Drury's Bluff, its position, 393; attack on, 393.

DUPONT, Com., commands expeditions on Florida coast, 49.

E

Earth.—Relative sunshine of different zones, 393; extent of the earth's atmosphere, 393; thickness of the earth's crust, 393; excentrality of the earth, 394; earthquake waves, 395.

Education.—Its diffusion in the United States, 395; primary education, 396; scholars and expense of schools in the United States, 396; secondary instruction, 396; higher education, 396; universities and colleges, 396; total expenditures in the United States, 397; object teaching, 397; origin, 398; progress, 398; Comenius, 398; Pestalozzi, 398; his views, 399; pupils and assistants, 399; the system in the Canadas and the United States, 400; books published, 400; method of teaching, 401; results, 401.

Electricity.—Measures of electric resistance, 402; Mathieson's unit of resistance, 402; Weber's proposed absolute standard, 402; electro-motive force of voltaic piles, 402; measures of electrical quantities, 403; proposed standard of electrical resistance, 403; influence of temperature on the conducting power of metals, 404; mechanical effects of powerful tension, 404; study of the electric spark by the aid of photography, 404; production of vibrations and musical sounds by electrolysis, 405; new experiments in electro-magnetism, 405; electricity developed during evaporization and effervescence, 405; experiment with the crural nerve of a frog, 406; electrical phenomena of Vesuvius, 406; Ritchie's electrical machines, 406; conducting power of pure and alloyed copper, 407; electric lights for lighthouses, 408; Way's electric light with mercury, 409; improvement in Holmes' magneto-electric light, 409; Serrin's electric light regulator, 410; Baker's apparatus for electric lights, 410; present desideratum in electric lights, 410; electric light signals, 410; application of electric light to mining purposes, 411; engraving by electricity, 411; electric despatch, 411; electric sounding apparatus, 411.

ELLET, CHARLES, jr.—Birth, 412; education, 412; pursuits, 412; death, 412.

Exhibition, British Industrial.—Results of the first opened, 412; disposal of the profits, 412; plan of that of 1862, 413; laying out of the works, 413; progress of the building, 413; the building, 414; the interior, 415; construction, 415; decoration of the building. 415; exhibition opened, 417.

Objects and articles exhibited, 418; mining, quarrying, and metallurgy, 418; chemical substances and pharmaceutical processes, 419; coal tar and lichen dyes, 420; substances used for food, 420; Indian products, 420; machinery, 421; traction engines, 421; Young's type composing machine, 423; folding, pressing, and stitching machine, 423; agricultural machines and implements, 423; civil engineering, architecture, and building contrivances, 424; models, weapons, 424; new cartridge, 425; marine engines, 425; gas engineering, 426; photography and photographic apparatus, 426; clocks and watches, 427; electric telegraphs and electrical apparatus, 427; surgical instruments and appliances, 428; sanitary appliances, 428; musical instruments, 428; miscellaneous machinery, 429; American machinery, 429; sewing machines, 431; flax and hemp, 431; silk and velvet, 432; woollen, worsted, and mixed fabrics, 432; tapestries, 432; printed and dyed fabrics, 432; lace making, 433; furs, feathers, and hair, 434; India rubber manufactures, 434; leather, including saddlery and harness, 435; paper making and stationery, 435; printing, 436; bookbinding, 436; educational works and appliances, 436; furniture and upholstery, 437; iron manufactures, 437; forged iron, 438; welding, 438; rolled iron, 438; sheet iron, 438; bars, rails, and girders, 439; armor plates, 439; Canadian iron, 439; iron in India, 439; Swedish boat plates, 440; galvanized metals, 440; Hereford screen, 440; chandeliers, gaseliers, and lamps, 441; locks and safes, 441; steel manufactures, 442; Krupp's cast steel, 442; Bessemer steel, 442; work in the precious metals, 443; aluminium articles, 443; jewelry, 443; glass, stained and fancy, 443; pottery, 445; substances used in manufactures, 445; British colonies, 445, 446, 447; Australian colonies, 447; French colonies, 449; South American States, 449; Japan, 450; China, 450; Egypt, 450; fine arts, 450; foreign paintings and sculpture, 450; review, 451.

F

Fayetteville.—Its situation, 451; population, 451; occupied by Federal troops, 451.

Felton, Cornelius C.—Birth, 452; education, 452; pursuits, 452; writings, 452; death, 452.

Fernandina.—Its situation, 452; capture, 452.

Finances of the United States.—Condition at the close of 1861, 452; loans, 452; views of the Secretary of the Treasury, 453; drafts on the banks, 453; position of the currency, 454; public deposits, 454; the currency act, 454; its effect, 455; wants of the Treasury, 455; certificates of indebtedness, 456; regulations respecting, 456; effect of the certificates, 456; a supplemental act, 457; purchase of coin, 457; contraction of the currency, 457; public debt, 458; interest paid in specie, 458; certificates of deposit, 459; mutilation of notes, 459; rules respecting, 459; exchange of bonds for old demand notes, 459; the tax law, 460; stamp revenue in one week, 460; principle of the law, 460; details of taxes, 461; change of the tariff, 461; expansion of paper currency, 461; effects, 461; disappearance of gold and silver, 462; shinplasters, 462; postage stamps, 462; stamp currency, 462; issues of, 462; necessities of the Treasury, 463; new loan bill, 463; resources of the Treasury, 462; its operations, 462–463; advance of stocks, 464; temporary loan of the banks, 464; bids, 465; receipts and expenditures for the year ending June 30th, 465; debt, January 1st, 1863, 466; remarks of the Secretary on the loans, 466; costs of the loans, 467; investments of surplus capital, 467; number of lenders, 468; effects of currency measures upon stocks and metals, 468; prices of produce, 469; cost of imports, 469; radical changes in trade, 469; foreign measures of the value of stocks, 470; consumption of gold and silver in manufactures, 470; specie in the Northern States, 471; specie movements in New York, 471; operations of the assay office at New York, 471, 472; influence of paper money on merchandise, 472; number of failures in the Northern States in 1862, 473; advance in railway freights, 473; prices of stocks in New York during the year, 474.

Fish, Hamilton, appointed commissioner to negotiate exchange of prisoners, 710.

Fitzroy, Admiral.—His system of weather forecasts and storm signals, 575.

Florida.—Population, 474; census returns, 474; Federal expeditions to, 474; troops withdrawn to Richmond, 474; occupation of Jacksonville, 475; plan for the armed colonization of, 475.

France.—Feeling of the people, 475; improvements of the Emperor at Paris, 475; his enterprises, 476; debt of France, 476; relations with Great Britain, 476; relations on the Continent, 476; do. with Mexico, 477; do. with the United States, 477; society of St. Vincent de Paul, 477; finances of France, 477; concessions, 477; effect of the American tariff, 478; state of the manufacturing districts, 478; statistics, 478; imports, 479; railroads, 479; army and navy, 479; postal service, 479.

Frederick.—Its situation, 479; population, 479; occupation by Confederate troops, 479; evacuation, 479.

Fredericksburg.—Its situation, 479; population, 479; evacuation by Confederate troops, 479; Federal occupation and evacuation, 479; battle at, 480.

Freedom of the Press.—Order of the Secretary of War relative to newspaper publications, 480; second order, 480; other orders, 480; restrictions on the press considered in Congress, 480; report of the committee, 480.

Frelinghuysen, Theodore.—Birth, 481; education, 481; pursuits, 481; death, 481.

Fremont, Gen. John C., assumes command in the Mountain Department, 102; his movements, 102; ordered to relieve Gen. Banks, 104; his reply, 104; his march, 104; resigns his command, 126.

Front Royal.—Its situation, 481; attack on the 1st Maryland at, 481.

G

Garfield, Col. John A., defeats Confederate force in Kentucky 25; his despatches, 25-26.
